Notes:
Samples SG-1 through SG-3 collected on Sept. 4, 2009 by Mundell & Associates utilizing summa canisters and calibrated 24-hour flow regulators.
Samples AMP SS 01 through AMP SS 03 collected on May 27, 2010 utilizing summa canisters and calibrated 24-hour flow regulators.
Samples AMP SS 01 through AMP SS 03 analyzed by Environmental Science Corporation located in Mt. Juliet, Tennessee.
Screening Levels obtained from Appendix A, Table A-6 of the Remediation Closure Guide, dated March 22, 2012, with all applicable updates (last updated March 2018).
Sub-Slab Vapor Exposure Screening Levels were calculated by dividing the corresponding Indoor Air Screening Levels (RCG, updated March 2018) by 0.03, (assumed attenuation factor) as outlined in the IDEM Guidance Document *Attenuation Factors* dated September 29, 2016.
