FROM: Karen Greig, E&E

TO: Tom Crow

DATE: 3/11/83

SUBJECT: Tri-Cities Landfill Preliminary Assessment

~~cc:~~

I asked Tom about the status of improvements to the landfill that were recommended by SCS Engineers in their April 25, 1980, report. He said that the improvements have been completed.

- Groundwater Monitoring Program: 2 wells were put in and monitoring for heavy metals, nitrates, ammonia and COD ~~were~~ was performed for about a year and then stopped for a year. Now they've started the monitoring program this month. He said no contamination problems have been discovered thru this program.
- Methane Gas Monitoring Program: Tom said the program was set up and no gas migration was detected. He does not know if the monitoring is still going on.
- Site Security: Fencing has been put up and a full-time manager is always on site.
- Flood Protection - The new berms held up during a 30,000 cfs flood that occurred this winter. He believes they are adequate.

ecology and environment

- over -

Tom's opinion is that there is no hazardous waste activity currently at the landfill and he does not believe that the site poses any hazard.
