This is good, but having said this I would suggest that you look in detail at the Surgeon General Report on Smoking and the IOM Report on Presumptive Decision-making for Vets. I mention these be cause these are Jon Samet written and organized, i.e. the models of how formaldehyde might look and be considered. I think this closer to these models that formaldehyde is the more Jon will like is. I think its useful to note that the review of the data for cancer is about 180 pages only.

The introduction is both and introduction and executive summary, is 12 pages and has the following ouline.

Chapter 1. Introduction, Evaluation of Evidence on Mechanisms of Disease Production, and Summary *1*

Introduction *3*
Evaluation of Evidence on Mechanisms of Disease Production *5*
Mechanisms of Action: Necessary, Sufficient, or Neither *7*
Description of Evidence on Mechanisms of Disease Production *8*
Scientific Basis of the Report *8*
Development of the Report *8*
Major Conclusions *9*
Chapter Conclusions *9*
References *12*

I have included minor comments. Formaldehyde intro material cote 071522 comments.docx

Oops - I'm sorry, I was changing the file but not changing the file name. There's a more recent version that incorporates initial comments from Vince that I can attach here. Sorry!

---

I would welcome comments or thoughts from any of you on this cut at an intro chapter to start to respond to the NAS Committee comments about wanting more of a roadmap at the beginning of the assessment.

If you have any comments, please send them by July 31 to Barbara Glenn, but "cc" me and to Vince. As we discussed in senior staff, the comments could also be useful to Vince as he drafts something for broader use.

If you want to instead send "reply to all" and keep a dialogue going, please do. But, for lengthy or detailed omments it is probably better to send them to Barbara and let her work on a next draft with the benefit of those.

(My thanks for Mary Ross for helping us to initially get this ball rolling.)

Thanks

David Bussard
