Subject: Readings from Grayback forest products and GU High School
Date: Wednesday, May 27, 2015 6:26:00 PM

Tracy and Brooks took MultiRAE up to screen some props upgradient of Elkhorn.

Grayback Forest Products building was all above grade slab. We could find virtually no bare dirt anywhere. We got readings from outdoor drains, bare soil under shed, inside shops and garages. We detected only VOCs at 500-600 next to the chain saw workshop.

No hits at the HS despite great access to subgradient areas, bare soil and visible water in wells.
