Navajo Generating Station (NGS): EPA Region 9 and OAR recently met with representatives of the Salt River Project, Central Arizona Project, Environmental Defense Fund, and Department of the Interior, to get a status update on an alternative to BART that has been developed by the SRP Technical Working Group over the past several months. The TWG originally intended to submit its alternative to us on July 16 for our consideration in our BART rulemaking, but has delayed submittal until July 19th.
