Update #7, October 10, 2018

Preliminary results for the confirmation samples collected on Oct. 5 and 7, 2018, indicated that the chlorothalonil is still present in a limited area of the system. Craft-Turner WSC (WSC) is conducting targeted flushing of the system in this area, as well as assisting customers with additional flushing of the homes where samples indicated that chlorothalonil remains. The TCEQ will collect additional confirmation samples tomorrow for the original 10 homes.

Today, October 10th, TCEQ staff collected a new set of samples (35 sites in all) which are being provided to the EPA to test for Methylene bis-thiocyanate (MBT). The EPA runs samples in batches of 20, and anticipates they can have preliminary results by Friday for the first batch of samples.

Showers and drinking water remain available to the public.

Communications and Intergovernmental Relations worked through TDEM to assist the County on a news release in response to a number of calls from concerned citizens.

The WSC is hosting a public meeting on Monday October 15th, and has invited the TCEQ to assist in addressing questions from the public. Meeting notice attached.

Attached is TCEQ's October 10, 2018 news release.
