Subject: Residential Williston ND data compared to MRLs, RfCs, and SLs
Date: 04/30/2012 11:33 AM
Attachments: schilke data.xlsx

Hi Lisa,

My colleague, Tricia Pfieffer, said she spoke to you regarding a citizen in ND who has been having a consulting company collect air data. Attached is a spreadsheet with results. These data are from one day (Feb 27, 2011) so conclusions can't be drawn from comparisons to the chronic health benchmarks at this point, but there is an exceedence of the acute MRL for benzene in her driveway. I anticipate receiving data from more sampling events for comparison with the chronic MRLs/RfCs.

email: Keteles.Kristen@epa.gov

The spreadsheet is color coded Red= ATSDR acute MRL, Orange= ATSDR intermediate MRL, **Yellow = ATSDR chronic MRL**, magenta= EPA chronic Reference Concentration, blue = EPA Residential Air Screening Level, purple= EPA Preliminary Remediation Goal.
