Re: Discharge Permit No. 00845
Buckner Creek
Barina (08322) Lease, Well No. 1
Cistern, North Field
Fayette County, Texas

J. 23-24

Dear Mr. Reiter:

This is your authority from the Railroad Commission of Texas to discharge produced water from the referenced leases to a stock pond thence to Buckner Creek in Fayette County, Texas. This authority is granted in accordance with Statewide Rule 8 and based on the information contained in your application dated April 22, 2009 and subsequent information received on May 21, 2012. This authority is subject to the following conditions:

1. This permit authorizes the discharge of water produced only from the referenced leases and well.

2. **This permit is effective for 5 years from the date of the renewal and will expire on May 24, 2017.**

3. Surface waters shall be maintained so that oil, grease, or related residue will not produce a visible film of oil or globules of grease on the surface or coat the banks or bottoms of the watercourse. No discharge of floating solids or visible foam in other than trace amounts. At no time shall the discharge cause a sheen on the receiving water.

4. Water treatment vessels and equipment shall be maintained in good operating condition for the duration of the permit.

5. The discharge point shall be clearly marked with the name of the operator, the discharge permit number, and the referenced lease name and number.

6. The discharged water must meet the limitations specified in the attached "Effluent Limitations and Monitoring Requirements". The water must be sampled and analyzed as indicated and the results must be submitted quarterly to the Railroad Commission Houston District Office and to the Technical Permitting Section in Austin. If there is no discharge during a particular month or quarter under this permit, submit your quarterly report stating "no discharge" for that month or quarter. Reports must be submitted no later than the 28th day of the month following each reporting period.

→ 23-24

7. All quarterly reports must be certified as follows: "I declare under penalties prescribed in Section 91.143, Natural Resources Code, that I am authorized to make this report, that this report was prepared by me or under my direct supervision and direction, and that data and facts stated therein are true and complete to the best of my knowledge."

8. Changes affecting this permit, such as leases or wells being added or deleted or a change in water treatment, must be reported to the Technical Permitting Section in Austin in order for the Commission to determine whether a permit amendment is necessary.

9. This permit is non-transferable without the consent of the Commission.

10. Any skimming pits to be used in conjunction with this facility must be permitted separately by the filing of Form H-11 and the supporting data.

11. In the event any of these conditions are not met, this permit is subject to modification, suspension, or cancellation by the Commission.

A permit from the U. S. Environmental Protection Agency (EPA) is required for this type of discharge under the National Pollutant Discharge Elimination System (NPDES). Contact EPA Region 6 in Dallas for more information.

If you have any questions, please contact Michael Sims at (512) 463-5405.

Sincerely yours,

Michael Sims
