Regional Freedom of information Office
U.S. EPA, Region 5
77 West Jackson Blvd. (MI-9J)
Chicago, IL. 60604-3590

In 2005 USA Today spent eight months using the governments most up to date model for tracking toxic chemicals to examine the impact of industrial pollution on the air outside schools across America. Essentially, USA Today used it to identify toxic hotspots. New Lisbon Correctional Institution was identified as one, of a list, of hotspots in Wisconsin.

Have the EPA done any subsequent studies regarding the NLCI hot spot? Have anything been done

to mitigate or neutralize this hot spot?
If theres any kind of study please send
me a copy of any & all information. Thank you.

I Remain,

Mr. Dante Cottrell
