TDS and Chloride DMR Data For LA0049492 ran 04 2014.xls

Hi Sonja,

As follow-up to our conversation this morning, I was able to pull together some info for you regarding a couple of Texas oil storage facilities with brine discharges that have had biomonitoring requirements for one or more permit cycles (see attached). They are both currently being reissued by EPA R6 and are currently @ public notice (see link below). Also, attached above is the TDS & chloride data pulled from ICIS for LOOP.
