Dear Gina McCarthy,

EPA has been an advocate for Clean Air & Clean Water for over 40 years. We here on Cape Cod live on Cape Cod Bay and are very worried about the continued thermal pollution spilling out of Pilgrim Nuclear Power plant!

Pilgrim Plant has been operating with an expired water discharge permit for 20 years.

The plant's discharge has raised the bay temperature around the plant over 4°. Given its discharge permit is 20 years expired I urge EPA to follow through on its mandate to protect our environment & demand Entergy - the operator of the plant to either rebuild its cooling system to a recirculating one or shut down before 2019.

Sincerely,

[signature]
