Likely too late - WSJ was asking this:

Just checking in – any word on my question? The exact wording was: Why does no one test for toxicity for this chemical – or, I'm told, the other 85,000 or so industrial chemicals in common use? Unlike pesticides and pharmaceuticals. I'm also curious if you think this incident exposes any gap in regulations, or if it's a one-off incident?

Allison - per our conversation, we sent the question in email directly to Wendy Cleland-Hamnett, Director of OPPT and Emily Dougherty on her staff.

Thank you.

Hi Alisha,

Just checking in – any word on my question? The exact wording was: Why does no one test for

toxicity for this chemical – or, I'm told, the other 85,000 or so industrial chemicals in common use? Unlike pesticides and pharmaceuticals.

I'm also curious if you think this incident exposes any gap in regulations, or if it's a one-off incident?

Thanks so much for your help today—it's greatly appreciated.

Best,

Rebecca

Hi there,

EPA is closely monitoring the chemical spill in Charleston and is working closely with FEMA and other federal partners who are responding to the incident. The Agency has deployed on-scene coordinators to assist with water sampling and stands ready to offer additional assistance to the State of West Virginia, who is leading the response on the spill.

Hi Alisha – just wanted to check in, when might the EPA have any more detail? I'm hoping to send in a memo in 45 minutes or so and would love to include something from EPA.

Thanks!

Rebecca
