---

Dan and Michael,

See page 1015 of the attached article. The figure shows the progression from SAV-phytoplankton dominance at lower N loading to Macroalgae-phytoplankton dominance

Valiela, I., Tomasky, G., Hauxwell, J., Cole, M.L., Cebrián, J., Kroeger, K.D., 2000. Operationalizing sustainability: management and risk assessment of land-derived nitrogen loads to estuaries. Ecol. Appl. 10, 1006-1023.

I also include a book chapter synthesizing a whole bunch of other stuff.

Hauxwell, J.J., Valiela, I., 2004. Effects of nutrient loading on shallow seagrass dominated coastal systems: patterns and processes., in: Nielsen, S.L., Banta, G.T., Pedersen, M.F. (Eds.), Estuarine nutrient cycling: the influence of primary producers. Kluwer Academic Publishers, Dordrecht, Boston, London, pp. 59-93.
