Dear Madam,

I am writing to you about the Pilgrim Nuclear Facility in Plymouth, MA. I reside on Cape Cod, 23 miles from the facility, as the crow flies. It has already been announced that closure of the facility will occur in 4 years. Right now we are concerned about, unsafe running because it has been operating with an expired water discharge permit for over 20 years. Pilgrim draws in 500,000,000 gallons of water daily. It then increases its temperature by 32 degrees and discharges it back into the Bay. Cape Cod Bay has already seen an increase of 4 degrees between 1977 and 2012. In addition, an enormous amount of marine organisms

are being smoked in each day.
Please inspect Pilgrim and make sure that they follow best practices in order to protect our lives, our property, our health.
Thank you so much.

Yvonne Barocas
Wellfleet resident
