Hey Gary, thanks!

Jon

ps, I'll discuss with Frank Cardiello, but I expect we'll revise the ARARs table and send back to Ashland and you in redline.

Subject: LCP Site, FS Report Redline

Good afternoon Jon.

Per the discussions during our conference call on July 18, 2013, attached is a redline version of the Feasibility Study Report for the LCP Site.

The revisions reflect the response to comments sent to the USEPA on May 7, 2013, as well as the subsequent discussion during the July 18 conference call.

Along with the text we have attached the tables from the Executive Summary, the COPC and PRG tables, and the figure with the depth intervals of visible mercury added. Other tables, such as the detailed cost estimates, contain similar information to what is summarized in the Executive summary tables, and most of the figures are unchanged. However, if there is anything else that you would like to review in advance of the final submittal, please let us know.

In your electronic mail message of July 18, 2013, you indicated that EPA would be revising the ARAR table. We are uncertain as to whether you intended to send a markup or needed the active Word® file. In the event it helps, we have attached the Word® file for your use. We would appreciate it, if you do use the Word® file, if you would return it as a redline so that Ashland's review of the changes will be facilitated.

Please let us know if you have questions or comments, or need anything else.

Thank you.
