National Air Toxics Assessment (NATA): 2014 Results Summary

Briefing for Region 6

June 14, 2018

Key Messages

- NATA is a screening tool that identifies areas for further analysis
  - It does not single out one area of the country as having the highest risks
  - It uses estimates of emissions and computer models to approximate risks; it is not designed to determine actual health risks to individual people
- In the 2014 NATA results, Region 6 has 8 MSAs with cancer risks ≥ 100-in-1 million
  - Risks in all MSAs are driven by ethylene oxide emissions (except New Orleans-Metairie, which is also driven by chloroprene)
- OAR is currently discussing ways to address these risks

What is NATA?

- Screening-level characterization of air toxics across the nation
  - Nationwide assessment with census **tract** resolution (about 74,000 tracts)
  - Based on air quality modeling of emissions from: stationary, mobile, biogenic sources, and fires using the National Emissions Inventory
  - Ambient and exposure concentration estimates for 175 HAP plus diesel particulate matter (DPM)
  - Cancer and noncancer risk estimates for about 140 Clean Air Act hazardous air pollutants (HAP) with health data based on chronic exposures
- This is the 6th NATA (2014 NATA)
  - Previous assessments for inventory years 1996, 1999, 2002, 2005, 2011
- Primary NATA Uses
  - Planning tool for EPA, state/local/tribal organizations
    - To identify locations of interest for further study
    - To prioritize pollutants and emission sources/types
    - To inform monitoring programs
  - Serve partner needs by developing innovative data and communication tools

Limitations

- Emissions, modeled ambient concentrations, and estimated inhalation exposures are only from sources of outdoor origin via the inhalation route of exposure
- Results are more uncertain at finer geographic scales
  - Surrogates used to allocate mobile and nonpoint source emissions
- Results should not be used to compare risks among different areas of the country
  - Underlying emissions data vary in level of detail from state to state
- Results should not be compared among NATAs
  - Changes in results are due to actual emission changes as well as the use of different modeling and emissions processing techniques. In addition, other assessment inputs, such as meteorological data and health benchmark values, change over time.

2014 NATA Analytical Steps

Compile National Emissions Inventory (2014 NEI)

2014 NEI includes both stationary, mobile and natural sources (fires, biogenics).

NATA includes 175 HAP and diesel particulate from mobile sources.

Estimate ambient concentrations of air toxics across U.S.

Uses CMAQ and AERMOD to predict census tract ambient concentrations nationwide.

Estimate population exposures

Includes an exposure model (HAPEM7) to account for human activity data, commuting patterns, and near roadway exposures.

Characterize potential public health risks from inhalation

Census tract level cancer and noncancer risks nationwide.

Improvements & Updates for 2014

- Inventory:
  - ***Updated spatial allocation for mobile and nonpoint sources***
  - NEI improved in many areas e.g., oil & gas, onroad, nonroad, commercial marine vessels
  - Areas outside CMAQ domain (AK, HI, PR, VI) better characterized for AERMOD modeling
  - New emissions processing tool built for preparing AERMOD emissions
- Photochemical/Dispersion Modeling:
  - In CMAQ: improved boundary conditions and carbon tetrachloride treatment; nine more HAP modeled than in 2014
  - More spatially refined meteorology using prognostic meteorological modeling (WRF)
- Exposure Modeling:
  - New features of HAPEM 7, including updated population and commuting patterns, activity pattern data, and four additional commuting-related microenvironments
- Risk Characterization:
  - ***Updated health benchmarks – ethylene oxide, acrolein, benzo(a)pyrene***
- Outreach:
  - Updated Map App features
  - Potential story map

Pre-Release Results

Do not cite, quote or release

The NATA team is still performing QA/QC
of the data prior to public release

MSAs with Elevated Cancer Risks

Moving Forward

- Planned Release: Mid-August 2018
- Steps Before Release:

Ex. 5 Deliberative Process (DP)

Communications and Outreach

- HQ plans to prepare general materials on NATA and ethylene oxide, including:
  - Qs & As
  - Talking Points
  - Fact Sheet(s)
- We stand ready to support the region with developing any materials specific to their states/localities, including:
  - Regional talking points
  - Draft press releases
  - Other targeted materials as needed

Appendix

Results, Outreach, and Documentation

- Tabular results by pollutant and source type:
  - Emissions (facility, grid, county level)
  - Modeled ambient concentrations (census tract, county, state, national)
    - Ex. 5 Deliberative Process (DP)
  - Exposure concentrations (census tract, county, state, national)
    - Ex. 5 Deliberative Process (DP)
  - Cancer and noncancer risk driver summaries (census tract, county, state, national)

    Ex. 5 Deliberative Process (DP)
  - Generally used by researchers, data-savvy users
- Visual display of tabular results in interactive Map App
  - Can help users identify the sources and pollutants that contribute to potential risks in their community
  - Available on tablets and smartphones
  - Often used by the press
- Webpages with methods, results, FAQs and other references
- Technical support document and related documentation

Hi Guy,

I spoke with the permit writer and the confirmed that the facility installed new equipment in 2015. They think the emission reductions were a result of the modification to the facility.

Thanks,

Mike

Michael if you get a chance can you give me a call at 214-665-7242 regarding the Sterigenics facility in Santa Theresa.

You may or may not have heard, risk numbers associated with Ethylene Oxide have changed significantly and as a result, some of the Ethylene Oxide sources are showing up now in the coming National Air Toxics assessment.

We think based on the TRI data below and some permit info as well that the Sterigenics facility has reduced its emissions significantly and I just wanted to confirm that NMED is seeing the same thing.

Hi Jeff,
Steve Thompson is asking if the EtO emissions in TRI have been reduced by 83% in 2016 vs 2014. If you send the emissions for those 2 yrs, I can do the calc.

Thank you,
Anupa

Subject: Question FW: 2014/2016 EtO emissions from Sterginics in NM?

Are we supposed to confirm things with the state before providing input? This could be a potentially big task:

1. Ask Mort to give us 2014 and 2016 numbers from TRI for the facilities and ask Jeff to do the same with the emissions inventories.
2. See if those numbers match up
3. Contact the state to see if there were any permitting actions taken in that same time frame.
4. Get those permits and review to see if any emissions limits increases or capacity increases/decreases. Permit limits do not always reflect capacity changes because facilities will frequently keep the same limits while expanding capacity, or net out of changing limits by other changes.

I don't know if you want me to do all of that and when we can get permits from the state (I have been in the state databases to find stuff and it is slow going) and how long it will take if the state is not helping us by giving the relevant permits.

Names and Amounts of Chemicals Released to the Environment by Year.

For all releases estimated as a range, the mid-point of the range was used in these calculations. NR - signifies nothing reported for this facility by the corresponding medium. Rows with all "0" or "NR" values were not listed.

Chemical Name	Media	Unit Of Measure	2016	2015	2014	2013	2012	2011	2010	2009	2008	2007	2006	2005	2004	2003	2002	2001	2000	1999	1998	1997	1996	1995

Subject: 2014/2016 EtO emissions from Sterginics in NM?

Hi Jeff,
Steve Thompson is asking if the EtO emissions in TRI have been reduced by 83% in 2016 vs 2014. If you send the emissions for those 2 yrs, I can do the calc.

Thank you,
Anupa

Fyi – I made a new slide for you, just in case they get used again, although I don't think they will…

2014 NATA Version 2

Facilities in Region 6 (LA) w/ Elevated Risks

MSA Area Name (City, State)	Facility Name	Type of Facility	Potentially Applicable MACT Associated with EtO Emissions	Review
New Orleans-Metairie, LA (LaPlace, LA)*	Denka	Chemical plant	NA – P&R I	NA
New Orleans-Metairie, LA (New Hampton, LA)	BCP Ingredients	Chemical plant	NA – area	Facility - no changes
New Orleans-Metairie, LA (Hahnville, LA)	Union Carbide St. Charles	Chemical plant	HON	Facility – emissions changes for a flare
New Orleans-Metairie, LA (Reserve)	Air Products Reserve Plant (Evonik)	Chemical plant	NA – area	LA DEQ - no changes
Lake Charles, LA (Westlake)	Sasol Chemicals (USA) LLC – Lake Charles Chemical Complex	Chemical plant	HON	Corporate – no changes
Baton Rouge, LA (St. Gabriel, LA)	Taminco – St Gabriel Plant	Chemical plant	NA – area	LA DEQ - no changes

* For the LaPlace, LA area the primary risks are driven by emissions of chloroprene.

Hi Ted –

I have two questions for you.

First, can you please double check for me the name of the facility in the Lake Charles, LA MSA area that is driving the EtO risk?

Secondly, there is a facility – 5287111 – in Reserve, LA (which is in St. Charles Parish), the Air Products Performance Manufacturing Inc Reserve Plant. Can you please let me know what its tract risk is?

It is possible that I mixed up the two and it is possible that we left one off the list. I'm trying to help Fran figure out which is right.

Thanks!

Hi Anupa –

Thanks for your question. You're right, we have spoken with our AA, but the conversation is not yet over…

Regarding the emissions, as I shared with you previously, there are no new emissions, with the exception of a minor one (20 lbs out of 7 tons) for Texas Operations in Longview TX and possibly some updated emissions from Union Carbide St. Charles. We've been expecting some, so I've copied Jennifer Caparoso on this because if we have received new emissions for that facility, she will have them.

Thanks,
Darcie

For huntsman port neches, what were the emissions modeled for the NATA versus the 2016 TRI vs the permit allowables in the most recent TCEQ permit?

Hi Anupa –

I'm copying Madeleine on this since she is involved in a lot of the emissions related review as well.

Ex. 5 Deliberative Process (DP)

Thanks for bringing these points up Anupa. I think you're a few steps ahead of NATA and into the further investigation step of the process, which is great! As we continue moving forward, I'm sure we'll have more questions for you about the situations you've mentioned.

Thanks,
Darcie

Hi, I wasn't sure who I should send this to so I included you both.

On the R6 ppt slides for today's call, I noticed that for the Port Neches, tx plant the review column says "no changes" and under review it says "TCEQ – no changes". For the Santa Teresa NM plant, the review column says "emissions decreased."

I have reviewed the TRI data for both plants and:

Ex. 5 Deliberative Process (DP)

I am concerned that Ex. 5 Deliberative Process (DP)

Hi Anupa,

While not reflected in NATA, we received additional information from the Union Carbide St. Charles Facility that we are still evaluating and discussing with the facility. When we complete our analysis, if there are any changes, we will share them with you. We have not received any other emissions changes.

Hi Anupa –

Thanks for your question. You're right, we have spoken with our AA, but the conversation is not yet over…

Regarding the emissions, as I shared with you previously, there are no new emissions, with the exception of a minor one (20 lbs out of 7 tons) for Texas Operations in Longview TX and possibly some updated emissions from Union Carbide St. Charles. We've been expecting some, so I've copied Jennifer Caparoso on this because if we have received new emissions for that facility, she will have them.

Thanks,
Darcie

Not that it's a big deal, but just heard back from Darcie and she said that Sasol's risk number is around 132 at the tract level. It's kind of like splitting hairs over the number I gave you, but I wanted to make sure that you are kept in the loop with the best available information at the time.

Subject: EtO updates - can you get back to me today?

Hi Anupa,

Can you add notes to this spreadsheet to capture the status of the facilities you reached out to? New numbers and anything else worth noting. I know BCP said no change, and that AkzoNobel gave you lower numbers, so please add this and any other info. to the last column of the spreadsheet.

April Baiamonte from LDEQ is here at the workshop, so if you can update the spreadsheet today, that would be helpful.

Attachments: NATA 5 LA facilities.xlsx

Didn't the presentation say that they will be rolling out a new website with the results? I am a very average user of excel.

As far emissions by emission unit, this is info is in the state EI databases. See the attached spreadsheet for LA that I got by selecting the high risk facilities from the EIs that Jeff sent me. They also have the permit number and emission point number listed.

Subject: Helping the states get their NATA preview info.

Since the states will have a very short window of time to preview the NATA info., Steve thought it would be a good idea to have us help them find what they need on the SharePoint site that is being opened up to them today. There's a lot of content on the site, and it can be difficult to find key information. We'd like have R6 staff (Anupa and hopefully Josh and Cindy) extract information from the site that we can share with LA, TX, and NM. It might also be helpful for someone to call Darcie and ask her for some guidance.

It might be good to bring in other people if we need more help from power Excel users. I'm an average user, and I found it difficult to find key information. For example, when I was looking at the risk file by pollutant spreadsheet and wanted to see the tracts in our states with the highest EtO risks, I had to filter out the other states, the other pollutants, and the counties that had low risk (since all counties seem to be included). I'll admit I'm not a power Excel user, but I'm wondering if even a power user could find key information without a lot of effort.

What I think the states will want is the kind of information we've had in the V2 spreadsheet: facility-specific emissions and risk numbers, and ideally in greater detail than we've had so far (such as by emission unit at the facility). In my quick look at the SharePoint site, I didn't see any facility names—just tract risk.

Let us know what you think. Anupa is out on Friday, so if Josh or Cindy can start on this, that would be great. I'm also copying Jeff Yurk on this in case he can help us on this.

Here's the link to the SharePoint site:

Hi Darcie,

Are the states being given access to the same NATA Preview SharePoint site we've been using? Just want to make sure that we can share with them what's on the site if they have trouble downloading it.

Attachments: EtO spreadsheet for LDEQ all points.xlsx

When I went back through my files, I remembered that I had already created a spreadsheet for myself that was an amalgam of several spreadsheet and contains the emission point IDs as well as the permit numbers. When I check it against the V2 spreadsheet you said had the 8 facilities, I noticed that my version (which is based on several of Jeff Yurk's spreadsheets) lists Shell Chemical in Geismar while the V2 version lists BASF in Geismar. Maybe the V2 has been updated with current owner/operator. I called Darcie to ask which the correct owner operator and left her a message. But the permit numbers should be still be right as the facility would only apply for a name change to the state. But I wanted to point that out.

Eventually yes, but blocks inform tracts and OAQPS hasn't finalized the tracts yet.

If you can remove that text and re-send to me to share w/ LDEQ, that would be great.

Subject: RE: EtO spreadsheet for LDEQ

I think we should leave off that notation. The V2 list doesn't include Tract level V2 risk numbers, only Tract level V1 risk numbers, because OAQPS won't recalculate Tract level risk numbers until they get back changes during this round. The agency doesn't actually know which facilities will be at 100 in million or higher yet. Also, the V1 Tract level risk numbers in the V2 spreadsheet currently show Shell Geismar, BASF Geismar, Sasol, and Dow with numbers below 100.

Subject: EtO emission numbers

Robin Langdon of OAQPS called me after our conf. call yesterday, to discuss when OAQPS could provide us with the latest emission data for the 9 facilities on the slides OAQPS shared with us during the June 14 briefing. She said they need to brief Wehrum prior to sharing the latest information (risk numbers, etc.), but agreed to provide us the emission numbers on Monday. We can share the emissions data with the states, but she asked that EPA and the states hold off on reaching out to the facilities using this newest data until after the Wehrum briefing, which is set for next Wednesday.

Here is the current list of 9 EtO facilities:

Union Carbide Corp - St Charles Operations (Dow Chem.)	Louisiana
Port Neches Plant (Huntsman Corp.)	Texas
Air Products Performance Manufacturing Inc - Reserve Plant	Louisiana
Shell Technology Center Houston	Texas

BCP Ingredients Inc (Balchem Co.)	Louisiana
Taminco US Inc (Eastman Chemical Co.)	Louisiana
Santa Teresa Facility (Sterigenics)	New Mexico
Midwest Sterilization Corp	Texas
Texas Operations (Eastman Chemical Co.)	Texas

Hi Anupa –

I've double-checked with Madeleine and all the v2 emissions are the same as what you already have, with one exception and one expectation.

The exception is the TEXAS OPERATIONS facility in Longview TX. We received a change to a small release point (20 lbs out of 7 tons) that will not make a difference to overall risk so we did not make those changes.

We have an expectation of receiving new data from the Union Carbide facility in Taft LA but we have not yet received anything.

Hope that helps! If you need more, please let me know.

Thanks,
Darcie

Hi Cindy –

You guys are hitting all fronts! I've heard from Josh and Anupa as well, so please share with them too.

You are not missing anything; nothing has been sent. There is not any new emissions data from what is in that EtO spreadsheet. There has not been an official NATA update released. The only thing you have is the information in the slides at this point other than the EtO spreadsheet with our estimate of what risks to expect in v2. All that information is still current since no changes have been received for those facilities (as shown in the slides).

As for maps, there's the one in the slides with all the MSAs in Region 6 and then the one in the specific area in LA. Was there something else specific you're thinking of? Let me know.

Hope that helps somewhat.

Darcie

Good Morning, Darcie,

I'm just checking with you to see if there is an official NATA update that's been issued yet? All we've heard is the informal information sent to our Air Enforcement Section Chief Darrin Larson (see below;)
I feel like we should be doing something, and instead, we're waiting? We are trying to pull together maps showing these facilities, but I'm also guessing the professional map-makers there, probably already have detailed graphics?
Was something else sent out and did we miss it?
Thank you,
Cindy Parker

Subject: RE: Spreadsheet with the 9 EtO facilities

Oh thanks, I didn't know that. Are the underlying emissions amounts the same as the v2 spreadsheets we have? I think my management is looking for pollutant amounts. If they are the same then I can use the v2 ones that Ihave.

Thanks Darcie.

Subject: RE: Spreadsheet with the 9 EtO facilities

Hi Anupa –

There may be some confusion; there isn't a spreadsheet. The slides are it until we're able to share the entirety of v2 results (tract-level by pollutant and source group), as we did for v1.

Hope that helps,
Darcie

Hi Anupa –

Are you referring to the ones in the NATA slides? Those are the latest. Is there another piece of information that you need?

We're talking with our AA Thursday and hope to provide full results after that.

Thanks,
Darcie

Subject: Here is my table of EtO
Attachments: Anupa EtO.xlsx

All,
This is the table I generated for LA sources that are driving the risk. The yellow and the orange are Jeff's highlighting from the original spreadsheet, I have forgotten what he said they meant, I think the yellow means over the 100 in a million. As you can see, it already says what the numbers are based on – for me to give suggestions, I would have to get their calcs.

Subject: Re: Ethylene oxide facility in NM - NATA

So this statement appears to indicate that the current emissions are reduced from 3 tons to less than 1? Can you look up the Current TRI reported value?

Per Region V who contacted Sterigenics, emission reduction techniques were put into place by Sterigenics at this facility. TRI emissions reflect this- emissions went down by 83% between 2016 and 2014. TRI ID is 88008GRFFT2400A

Subject: Can you ask OAQPS for EtO emission numbers?

I gave Steve a quick update on the call yesterday, and he'd like to see if OAQPS is now in the position (after yesterday's Wehrum briefing) to give us the emissions data for the 9 facilities. Can you check with Darcie?

I would stress to her that while we have the EI data for all emission points for the 9 facilities (provided by Jeff), we don't have all of the updates to the emissions that may have been provided by the companies or trade associations.

Hi Darrin –

Welcome back!! Sadly, you haven't missed anything in terms of progress on NATA.

The V2 spreadsheet that you're referring to only contained *block* level estimates of ethylene oxide risks from *point* sources. The complete NATA results (which you don't have) contain *tract* level risks for all pollutants from *all* sources. At the time we shared that data with you, we did not have tract level results for V2, so we provided our best estimate (as explained in the accompanying document) of what the V2 tract risks would be when available. To do this we used the hybrid ratio of AERMOD & CMAQ for each tract from V1 (the block and tract level results for V1 were also provided in the spreadsheet for reference). But it was still only an estimate. That's why we provided all the facilities, not just those with a "yes." (Also, some regions are interested in high block level results even if they're not going to show up in NATA.)

Since we now have the full NATA results, we've been able to do a little digging into each census tract with an elevated risk and found the list of 9 facilities that we shared with you in the slides, mostly one per MSA. That doesn't mean that list is exhaustive. That just means that our first pass through found them. Ideally, you would do more digging when results are available, and you may find additional facilities you wish to examine. NATA just points out areas, not facilities, and is the starting point for further investigation. Does that help explain the difference in the two lists?

I know you're probably wondering when you'll have full results to start in on and I wish I could answer that question, but right now I do not know the answer. Once that happens, we'll be happy to work with you to try and "finalize" the list of facilities, however many happen to be on it. Thank you for not sharing the risk numbers with your states just yet. I remain optimistic that once we get the go ahead to share with you, we'll also be allowed to share the numbers with the states. Let us know if you have additional questions.

Thanks,
Darcie

Subject: RE: EtO emission numbers

Hi Robin and Darcie,

I'm back in the office and getting caught up, and trying to understand Darcie's response, which came in while I was out.

The V2 spreadsheet we had been using to plan and to brief our managers prior to the OAQPS June 14 briefing contained 20 EtO facilities in R6 states. It was a V2 spreadsheet Darcie sent to the regions on March 15, 2018. Of the 20 facilities, 13 had a yes in the column, "Is Census Tract Cancer Risk Expected to be > 100 in 1-million in V2?"

In the PowerPoint OAQPS used for the June 14 briefing, there are 9 EtO facilities listed with elevated risk, so our senior managers asked us why OAQPS had 9 EtO facilities in the PP and we had 13 in the V2 spreadsheet we had shared earlier. In advance of the briefing, OAQPS had mentioned that there was a revised list expected soon, so we all thought the list of 9 was the revised list. We shared the 9 names with the states (not the risk numbers), and asked you for the emission data to go with the 9.

Can you help us understand how you came up with the list of 9? If it's not based on new emission data, as we assumed, how did you cut the V2 list of 13 down to 9?

Thanks,

Darrin

Hi Cindy –

You guys are hitting all fronts! I've heard from Josh and Anupa as well, so please share with them too.

You are not missing anything; nothing has been sent. There is not any new emissions data from what is in that EtO spreadsheet. There has not been an official NATA update released. The only thing you have is the information in the slides at this point other than the EtO spreadsheet with our estimate of what risks to expect in v2. All that information is still current since no changes have been received for those facilities (as shown in the slides).

As for maps, there's the one in the slides with all the MSAs in Region 6 and then the one in the specific area in LA. Was there something else specific you're thinking of? Let me know.

Hope that helps somewhat.

Hi All

About PTE vs actual: NATA uses the NEI; NEI data are primarily provided by State, Local and Tribal Agencies (SLT). HAPs are submitted voluntarily. SLT are instructed to provide actual emissions for the year of the inventory (not PTE, not permitted).

About the review: Danielle Nesvacil (TCEQ) reviewed Port Neches and indicated no changes were needed to the 2014 NEI v1. I do not know what depth Danielle went into with her review, but we did need to follow up with her on Port Neches (and 4 other facilities) because she thought the deadline was August and it was June. Her email was as follows:

"No emissions updates are necessary to these five sites. All five sites have plants that use/manufacture ethylene oxide as process units on the site. I have more detail and can provide if you would like, but thisat's the summary version. PLease let me know if you have any questions."

Hi Anupa –

Thanks for your question. You're right, we have spoken with our AA, but the conversation is not yet over…

Regarding the emissions, as I shared with you previously, there are no new emissions, with the exception of a minor one (20 lbs out of 7 tons) for Texas Operations in Longview TX and possibly some updated emissions from Union Carbide St. Charles. We've been expecting some, so I've copied Jennifer Caparoso on this because if we have received new emissions for that facility, she will have them.

Thanks,
Darcie

Subject: RE: Data question on ppt for today's call

All: please remember that the NATA deals with the EI or TRI that was for 2014. This NATA report will relate only to the 2014 emissions or inventory for the projected risks.

The comparisons must remain in context. Additional information received after January 1, 2015, will be included in the calculations for the next round. This additional information is relevant in discussions about *corrective/compliance* actions.

Subject: Data question on ppt for today's call

On the R6 ppt slides for today's call, I noticed that for the Port Neches, tx plant the review column says "no changes" and under review it says "TCEQ – no changes". For the Santa Teresa NM plant, the review column says "emissions decreased."

I have reviewed the TRI data for both plants and:

1)

2)

Ex. 5 Deliberative Process (DP)

I am concerned that Ex. 5 Deliberative Process (DP)

Ex. 5 Deliberative Process (DP)

Subject: question - who has action item to revise spreadsheet for Sam?

At today's meeting, who came away with the action item to revise the spreadsheet? Were we going to do it? or you guys? Was Josh going to send you the doc he has with the parent company, and then you revise? Hmmm.
We don't want to use a different spreadsheet for Wren than we use for Sam.
We will be adding in company name in driver facility column, and hide Facility Type column. We will add a name to the spreadsheet titled "2014 Ethylene Oxide Facilities in Region 6", and date it. We will remove Denka, too.

Since we discussed this at the meeting this morning, and I'm not sure what was decided, this is what we're planning in preparation for briefing Wren.

Did we decide something else?

Thanks, Darrin.
Working on revising We Care for Wren today at 1:00. Have to coordinate getting toys together also this morning. I think Josh has the info already prepared. Yesterday was a blur. Today, hopefully less so.

Subject: Recommended Criteria for choosing facilities to focus on for early reductions under NATA

On yesterday's call, we were asked to recommend criteria for prioritizing facilities to work with for early reductions while HQs works on rule revisions.

Based largely on the charts below, I believe we should Ex. 5 Deliberative Process (DP)
Ex. 5 Deliberative Process (DP)

Three facilities would be the focus:

Ex. 5 Deliberative Process (DP)

I see this as having following advantages:

Ex. 5 Deliberative Process (DP)

Please let me know your thoughts because I imagine that enforcement will continue to carry a great deal of the load in investigating these facilities.

MSAs with Elevated Cancer Risks

2014 NATA Version 2

MSA	Primary Cancer Risk per million	Highest Risk Tract in MSA per million	MSA	Primary Cancer Risk per million	Highest Risk Tract in MSA per million
New Orleans-Metairie, LA**,†	19	2,000	Pittsburgh, PA**,†	3	100
Allentown-Bethlehem-Easton, PA-NJ	18	600	Charleston-North Charleston, SC	2	100
Chicago-Naperville-Elgin, IL-IN-WI†	11	300	Lake Charles, LA	2	100
Houston-The Woodlands-Sugar Land, TX	11	300	Marshall, TX	2	200
Baton Rouge, LA	9	200	Aguadilla-Isabela, PR	1	300
Beaumont-Port Arthur, TX	8	300	Cape Girardeau, MO-IL	1	200
Charleston, WV	6	400	Grand Rapids-Wyoming, MI	1	100
Denver-Aurora-Lakewood, CO†	4	500	Las Cruces, NM	1	200

Subject: R5 is reaching out to industry - EtO group call on Thursday, January 25: Call-in number and agenda

I sat in on today's call, and was glad I did.

R5's Acting RA was very concerned about the risk numbers, so they sent letters to two facilities w/ IRIS update info. for EtO, modeling numbers, and asking for the opportunity to discuss (and possibly do a site visit). They said they ran their own risk modeling so they wouldn't have to use the NATA numbers, and said it was something that wasn't difficult to do. One of the companies was Sterigenics, which has a facility in NM. Margaret Sieffert was the contact on the call today, and I'm going to get copies of the letters.

R5 also created a fact sheet for outreach to the health care sector. No other details provided – need to know more.

Subject: EtO group call on Thursday, January 25: Call-in number and agenda

Hello, EtO Group.

Here are the call-in info and an agenda for our call on January 25, from 3 p.m. to 4 p.m. Eastern time. If you have any additions to the agenda prior to the call, please let me know.

Call-in info

Time:	3 p.m. to 4 p.m. Eastern Time
Call-in number:	866-299-3188
Code:	2126373745

Agenda

1. Review schedule for the NEI v2 impacts- Ted, Madeleine
2. Update from each Region and HQ office on the call
3. Processes and controls in EtO and polyols & polyethers manufacturing- Brenda Shine has will join us to see if the group can benefit from her experience and knowledge on these subjects; and, if we can, then set up a next meeting for the topic.
4. Has each Region informed its management of its needs for this effort? Is this still a topic for an APM call?
5. Progress on outreach to industrial sectors- Margaret, R6 FAQs
6. Cost to measure EtO outside a facility fenceline for a model-to-monitor comparison study- Dave Shelow.

Thanks.
Carol

2014 NATA Release Coordination – Ethylene Oxide
August 2, 2018

- EPA Region 6 has nine facilities with risk exceeding 100 in 1,000,000 from air toxics associated with ethylene oxide (EtO) based on the 2014 EIs and TRIs.
    - Nine facilities have risk driven by ethylene oxide.
    - Four facilities are in Louisiana, four in Texas, and one in New Mexico.
- The national approach is to (1) prioritize a subset of facilities for action in the short-term, and (2) develop rulemaking based on ethylene oxide technologies and operations.
- In the short-term, based on the cumulative risk at the metropolitan statistical area (MSA) level, Region 6 proposes to address, at a minimum,
    - The New Orleans-Metarie, LA, MSA
        - Facilities that drive the risk (tract level): Union Carbide – St. Charles (risk 2,000), BCP Ingredients (risk 2,000), Air Products – Reserve (100)
        - Reason for prioritization: Cumulative risk of the New Orleans MSA (approximately 325 in 1,000,000) is highest in nation
    - The Beaumont-Port Arthur TX MSA
        - Facility that drives the risk (tract level): Port Neches Plant - Huntsman Corporation (risk 300)
        - Reason for prioritization: New information indicates that Port Neches Plant increased emissions from 10.8 tons per year (tpy) in 2014 to 38 tpy in 2017
- As Region 6 gathers information about EtO technologies, we need to engage the states without delay in planning. This may result in additional priority facilities.
- The States of Texas and Louisiana have requested coordination on the 2014 NATA; both may be able to provide assessments and obtain risk reductions from facilities quickly as they have authority for permitting and compliance for air toxics.
- The State of New Mexico has confirmed that the Santa Teresa facility installed new controls after the 2014 TRI, and the emissions have been reduced by 83%. Therefore, this facility is low priority for short-term action.

Message

From: Wakeland, Morton [wakeland.morton@epa.gov]
Sent: 8/8/2018 2:29:24 PM
To: TODD_A_MCLANE@HUNTSMAN.COM
Subject: Regarding your 2016 TRI Ethylene Oxide Air releases
Attachments: Huntsman_EthyleneOxide_2016.pdf

Importance: High

Good Morning Todd:

I sent an email to your previously regarding the TRI Program's Annual Data Quality checks for ethylene oxide.

Something else has been called to my attention and therefore this is a subsequent request separate from the previous email.

A review of what Huntsman reported to NEI (National Emissions Inventory) compared to what was reported to TRI for ethylene oxide is vastly different. It may be best to ask whoever does your NEI emissions calculations how they arrived at what was report for ethylene oxide.

Huntsman indicated for TRI reporting the basis of estimate for the fugitive and stack air releases for ethylene oxide as **"O"**

Part II. Chemical Identification Information

to through-put or equipment type (e.g., air emission factors).

O Estimate is based on other approaches such as engineering calculations (e.g., estimating volatilization using published mathematical formulas) or best engineering judgment. This would include applying estimated removal efficiency to a waste stream, even if the composition of the stream before treatment was fully identified through monitoring data.

For example, if 40 percent of stack emissions of the

It is important to realize that the accuracy and proficiency of release estimation will improve over time. However, submitters are not required to use new emission factors or estimation techniques to revise previous Form R submissions.

Section 5 Column C: Percent from Stormwater

This column relates only to Section 5.3 - discharges to receiving streams or water bodies. If your facility has monitoring data on the amount of the EPCRA Section 313 chemical in stormwater runoff (including unchanneled runoff), you must include

The amount reported in sections 5.1 and 5.2 are reproduced below for your convenience, from the 2016 ethylene oxide report.
In fact, I have attached a copy of the full Form R for ethylene oxide for your reference so you do not have to look for one.

SECTION 4. MAXIMUM AMOUNT OF THE TOXIC CHEMICAL ON-SITE AT ANY TIME DURING THE CALENDAR YEAR					
4.1	[06] (Enter two-digit code from instruction package.)				
SECTION 5. QUANTITY OF THE TOXIC CHEMICAL ENTERING EACH ENVIRONMENTAL MEDIUM ON-SITE					
			A. Total Release (pounds/year*) (Enter range code or estimate**)	B. Basis of Estimate (Enter code)	C. Percent from Stormwater
5.1	Fugitive or non-point air emissions	NA [ ]	16412	O	
5.2	Stack or point air emissions	NA [ ]	60836	O	
5.3	Discharges to receiving streams or water bodies (Enter one name per box)	NA [ ]			
	Stream or Water Body Name	Reach Code (optional)			
5.3.1	NECHES RIVER	12020003000223	0	O	0%

*For Dioxin and Dioxin-like Compounds, report in grams/year
**Range Codes: A=1-10 pounds; B=11-499 pounds; C=500-999 pounds.

Please provide Huntsman's calculations for the above reported amounts in sections 5.1 and 5.2. These calculations should be readily available per 40 C.F.R. 372.10 (Recordkeeping). Because this information should already be in your TRI files, please provide the requested information on or before Monday August 13, 2018.

NOTE: If these calculations are not readily available, this constitutes a violation of 40 C.F.R. 372.10.

Please include a step-by-step description of the calculation steps, and if needed, the reasoning behind any step or selection, e.g. an emission factor or why a certain formula was used.

Should you have any questions regarding this matter, feel free to contact me.
Thank you again for your cooperation in this matter.

Best week's wishes,
Mort Wakeland

TRI Facility ID Number 77651TXCCHHWY36 Toxic Chemical, Category, or Generic Name Ethylene oxide

WHERE TO SEND COMPLETED FORMS:	1. TRI Data Processing Center P.O. Box 10163 Fairfax, VA 22038	2. APPROPRIATE STATE OFFICE (See instructions in Appendix F)

This section only applies if you are revising or withdrawing a previously submitted form, otherwise leave blank:	Revision (Enter up to two code(s)) [ ][ ]	Withdrawal (Enter up to two code(s)) [ ][ ]

Important: See Instructions to determine when "Not Applicable (NA)" boxes should be checked.

Part I. FACILITY IDENTIFICATION INFORMATION

SECTION 1. REPORTING YEAR: 2016

SECTION 2. TRADE SECRET INFORMATION

2.1 Are you claiming the toxic chemical identified on page 2 trade secret? [ ] Yes (Answer question 2.2; attach substantiation forms) [X] NO (Do not answer 2.2; go to Section 3)	2.2 Is this copy [ ] Sanitized [ ] Unsanitized (Answer only if "Yes" in 2.1)	

SECTION 3. CERTIFICATION (Important: Read and sign after completing all form sections.)

I hereby certify that I have reviewed the attached documents and that, to the best of my knowledge and belief, the submitted information is true and complete and that the amounts and values in this report are accurate based on reasonable estimates using data available to the preparers of this report.

Name and official title of owner/operator or senior management official:	Signature:	Date Signed:
Chad Anderson Director of Manufacturing- PNO	Reference Copy: Copy of Record Resides in CDX	2017-06-30

SECTION 4. FACILITY IDENTIFICATION

4.1		TRI Facility ID Number	77651TXCCHHWY36
Facility or Establishment Name HUNTSMAN PETROCHEMICAL LLC PORT NECHES FACILITY			
Street 6001 HWY 366		Mailing Address (if different from physical street address) PO BOX 847	
City/County/Tribe/State/ZIP Code PORT NECHES / Jefferson / BIA Code: / TX / 77651		City/State/ZIP Code PORT NECHES / TX / 77651	Country (Non-US)

4.2	This report contains information for : (Important: check a or b; check c or d if applicable)	a. [X] An Entire facility	b. [ ] Part of a facility	c. [ ] A Federal facility	d. [ ] GOCO

4.3	Technical Contact name	ROBERT GRAY	Email Address ROBERT_E_GRAY@HUNTSMAN.COM	Telephone Number (include area code and ext.) 409-724-3533

Hey Darrin,

Here is a copy of the new spreadsheet. It also includes the name of the parent company for the Houston Plant.

Hey, Darrin,

Josh and I worked on this yesterday and put company names to the facilities on the spreadsheet. I don't think he's posted it, he was going to add facility type. He's already signed out for today, and has that info on the version we worked on.
Can we get you an answer tomorrow?
Cindy

Subject: 2014 NATA version 2 - DRAFT ethylene oxide point source risks

Hello –

You are receiving this email because you are a member of the ATRA EtO group or a NATA Regional Office lead or both. Either way, you know that in version 1 of the 2014 NATA we saw ethylene oxide emissions from point sources driving risks at the census tract level. Since that time, you have reviewed the data, worked with your states to review the data, and provided revisions back to us. We have incorporated those changes from V1 of the 2014 NATA and in preparation for version 2, have re-modeled the EtO-emitting point sources first. This is your first look at those results. **Please remember that risk results are not to be shared outside the Agency**.

The attached pdf document provides: 1) a summary of the events of the emissions review, 2) a regional count of facilities in the attached spreadsheet, and 3) an explanation of the data fields in the attached spreadsheet file. The attached spreadsheet contains a list of facilities that had a census *block* level cancer risk greater than 100-in-1 million in either version 1 (column J) or version 2 (column K). These are all provided so you can see how any data changes impacted the risk results. As you will see, there are still some facilities where we have estimated a census *tract* level cancer risk of greater than 100-in-1 million in version 2. These are indicated with a "Y" in column K. (An exact risk number is not provided because the estimates only take into account the AERMOD modeling; CMAQ is not yet complete so we have not combined the two results and we have given you our best estimate.)

We know that some of you are actively working with your states on the data review. Thank you for your time and effort doing that! There are some columns in the spreadsheet that may help focus your conversations, for example, column N, which provides information on how the EtO emissions were calculated for the process with the most emissions. And, our engineers are also working through their contacts to continue to verify the emissions and other inputs to the modeling. (If you need to contact them, Jennifer (chemical manufacturing) and Jonathan (sterilizers) are in the "CC" field.) There are columns in the spreadsheet to indicate what has been done and what type of changes have been received or are expected. **However, without additional information, there will likely be little change to these results.** If you have received additional info or revisions, please work with Madeleine to get those to us.

As you continue to work through this situation, please let us know if there's anything we can do to help or if there's additional data you need. We are happy to walk through this on the next ATRA call or set up a special purpose call. As always, if you have questions please feel free to contact me, Ted (palma.ted@epa.gov, 919-541-5470), or Madeleine (strum.madeleine@epa.gov, 919-541-2383).

Thank you,
Darcie

Subject: I spoke w/ Jennifer Caparoso - FW: Permits for Huntsman Port Neches

Hi Anupa,

Jennifer Caparoso called me today and said that if you still need the permits she has for Huntsman, just give her a call. I told her that you'd gotten info. from TCEQ and may not need them but that I'd leave that to you. (Btw – she also finds it very hard to find the right permits to get EtO info.) Her number is 919-541-4063.

She wanted to know more about what we're planning to do with the permits and more about what we're saying when we call the facilities. OAQPS is concerned about everyone staying on the same page/message. For the permits, I said we want to see how the permit addresses EtO (emission limits, etc.) and whether the reported emissions exceed the permit limits. For the calls to facilities that we were asked to do, I said you were asking them to confirm their 2014 EI amount. I mentioned that you had 2014, 2015, and 2016 TRI data for some of the facilities and that we were interested in knowing why the amounts went up or down (due to controls? Production decreases/increases? etc.). She said OAQPS is asking regions to limit what we ask about to just confirming the 2014 numbers. She also mentioned that the TRI staff are contacting facilities re: 2017 numbers (see the email Fran forwarded today). Let's talk more about this on Monday.

Steve—she's working on the MON RTR. I mentioned that it seemed like OAQPS would have the expertise/knowledge to help us understand the types of controls that might be available to reduce emissions for different types of facilities, so that as states/regions reach out to facilities, we don't all have invent the wheel. She said this was her understanding as well.

Darrin

Hi Darrin and Anupa –

It is my understanding that we do have *a* permit for Huntsman and I'll let Jennifer speak to which one it is. That may save you one step.

Hi Darcie,

We're planning to contact Huntsman to get permits for the Port Neches facility, and wanted to check with you first to see if OAQPS might already have them.

Thanks!

Subject: permits for Huntsman Port Neches

Darrin,
In order to better understand Huntsman Port Neches operations with respect to ethylene oxide, I would like to get the most current permits that cover any source (fugitive or point source) that emits ethylene oxide. Ideally I would also like to get the emissions calculations behind the emissions inventories or TRI numbers for 2016 and the emissions calculations behind the emissions limits, but I understand we may not want to ask for those right now.

Thanks.

July 26, 2018

Ed Nam
Director, Air and Radiation Division
United States Environmental Protection Agency, Region 5
77 W. Jackson Blvd., MS A-18J
Chicago, IL 60604

Dear Mr. Nam:

Since February 2018, ATSDR has met with U.S. EPA Region 5 Air and Radiation Division (ARD) staff regarding a change in the cancer risk basis for ethylene oxide (EtO) in the EPA Integrated Risk Information System (IRIS) and how that change affects general population risks estimated from EtO-emitting facilities in the draft 2014 National Air Toxics Assessment (NATA) update[1]. In December 2016, IRIS changed EtO's adult-based inhalation unit risk from 0.0001 per microgram per cubic meter ($\mu g/m^3$) to 0.003 per $\mu g/m^3$, a 30-fold increase in cancer potency. It also changed EtO's cancer weight-of-evidence descriptor from "probably carcinogenic to humans" to "carcinogenic to humans". These changes could result in many census tracts having estimated cancer risks that are greater than 1 in 10,000 from EtO exposure identified through the draft NATA modeling of air emissions across the United States.

Specifically, ARD decided to evaluate the implications of this change at two sites, Sterigenics International, Inc. (referred to in the letter as "*Sterigenics*") in Willowbrook, IL and the Elé Corporation in McCook, IL. This letter addresses EtO emissions from the Sterigenics facility. In June 2018, after the monitoring results were received and reviewed, ARD requested that ATSDR review air measurements of EtO and modeling results of EtO emissions from Sterigenics and specifically answer the question: *If modeled and measured ethylene oxide concentrations represent long term conditions, would they pose a public health problem for people living and working in Willowbrook?*

The air modeling data that U.S. EPA provided to ATSDR estimated potential short-term and long-term concentrations of EtO in ambient air surrounding the Sterigenics Corporation. Follow-up air monitoring data confirm the presence of elevated EtO at concentrations within a similar range to those estimated by the air modeling of Sterigenics emissions. Based on these measured and modeled concentrations and the proximity to residences and other commercial structures, cancer risks higher than 1 in 10,000 people may exist for some community members and workers exposed to airborne EtO in this community. If these measured and estimated concentrations represent chronic exposures

[1] The 2014 NATA is expected to be publicly available in the fall of 2018.

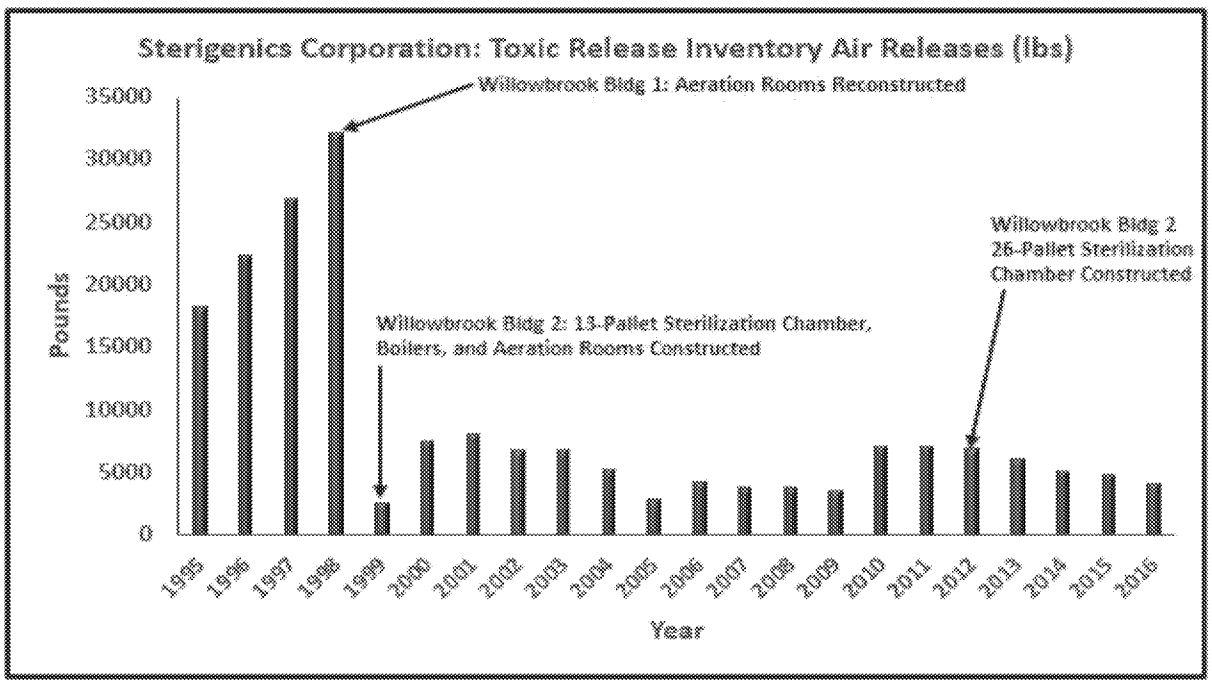
in the surrounding community (with higher exposures likely for workers of the facility), EtO emissions from the Sterigenics Corporation poses a public health hazard.

BACKGROUND

Sterigenics provides sterilization processes using gamma, ethylene oxide, Ebeam, and X-ray sterilization and operates 46 facilities in 13 countries (Sterigenics, 2018). The facility stores ethylene oxide that is sprayed into sealed chambers to sterilize medical equipment, pharmaceuticals, and food/spice products contained on 40" x 48" pallets. The sterilization chambers are contained in two buildings. Building 1 has fifteen chambers that can hold 1 to 13 pallets, while Building 2 has four sterilization chambers that can hold 13 to 26 pallets (Illinois EPA, 2017). Building 1 chambers were constructed in 1984, while Building 2 chambers were built in 1999 and 2012. Pollution control technology includes acid water scrubbers and dry bed reactors that convert the ethylene oxide to ethylene glycol after the sterilization process (Illinois EPA, 2015). Although back vents on the units have historically been uncontrolled, Sterigenics is currently in the process of installing pollution controls to control passive releases (ATSDR, 2018).

Figure 1 illustrates the total reported emissions in pounds per year (lbs/yr) of EtO from Sterigenics.

Figure 1. TRI Total Air Emissions Reported (in pounds), by Sterigenics Corporation for Ethylene Oxide, 1995-2016



[a]*Source: Toxic Release Inventory (TRI): https://www.epa.gov/enviro/tri-overview*

[b]*Dates for facility constructed and upgrades were identified according to Illinois EPA (2017) DRAFT/PROPOSED Clean Air Act Permit Program (CAAPP) Permit*

The emissions data show a substantial reduction in total air releases after 1998. No data are available before 1995 on ambient air releases, but the available data suggests that substantially higher ambient releases prior to 1995 were likely. The Building 1 sterilization chambers were constructed in 1984, therefore EtO has been emitted over the past 34 years from the Willowbrook facility.

Willowbrook, Illinois is a small suburb of Chicago with approximately 8,500 residents (U.S. Census, 2016). The Willowbrook industrial complex where Sterigenics is located is in a densely populated metropolitan area, with 19,271 people living within 1 mile of the facility boundary. There are four schools and one daycare facility within 1 mile of the facility. According to 2016 Census estimates, Willowbrook residents are predominately white (73.3%), non-Hispanic (66.6%), educated (97.7% graduate high school, and 48.9% graduated with a bachelor's degree or higher), and middle class (median household income was over $67,000 per year). Approximately 18.5% of the population is identified as Asian, and 6.3% as black.

ENVIRONMENTAL DATA

Air Modeling

U.S. EPA modeled short and long-term ambient EtO concentrations (AERMOD version 18081) to evaluate the potential impact of site emissions. These scenarios estimated a 5-year average to represent chronic exposures and maximum 1- and 8-hour averages to represent acute exposures at 882 community receptor points. An overlay of the modeling output is displayed in Figure 3, below. The statistical distributions of the modeled air concentrations are presented in Table 1.

Figure 3. AERMOD modeling output: 5-year average exposure estimates

Air Measurements

U.S. EPA collected 39 validated samples May 16th and May 17th, 2018. These samples were collected using SUMMA® canisters, and analyzed using U.S. EPA Compendium Method TO-15, Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air. A SUMMA® canister is an airtight, stainless-steel container with an inner surface that has been electro-polished and chemically deactivated. The laboratory is required to clean each canister and evacuate it to a high vacuum prior to shipping it to the sampling location. A canister can hold the vacuum for up to 30 days. The air being sampled is "drawn" into the canister by the high vacuum, thus eliminating the need for a pump. While opening the inlet orifice fills the canister in less than a minute, yielding an instantaneous "grab" sample, regulators can be added to the inlet orifice to draw the air into the canister over a designated period, ranging from 1 to 24-hours.

Of the 39 samples collected at 26 discrete locations (Figure 4), 18 were 12-hour samples, and 21 were grab samples (Table 2). Three of the 12-hour samples were collocated duplicates, and three of the grab samples were collocated duplicates. Grab samples generally had lower EtO concentrations than 12-hour averaged samples (U.S. EPA, 2018). However, all grab samples were collected between 10:20 am and 3:05 pm. ARD staff noted that higher EtO concentrations were measured overnight than during the day, and 12-hour samples were collected overnight in some locations. Since Sterigenics is a 24-hour operation, this may be due to calm meteorological conditions overnight with a higher potential for inversions. Given the elevated detections over a limited duration, additional long-term sampling is warranted to better characterize residential exposure to EtO.

Table 2. Statistical distribution of residential and commercial EtO air sampling*

Statistics	Grab samples (µg/m³)	12-hour samples (µg/m³)
Min	0.16	0.34
25th Percentile	0.24	0.69
50th Percentile	0.45	1.56
75th Percentile	1.34	4.39

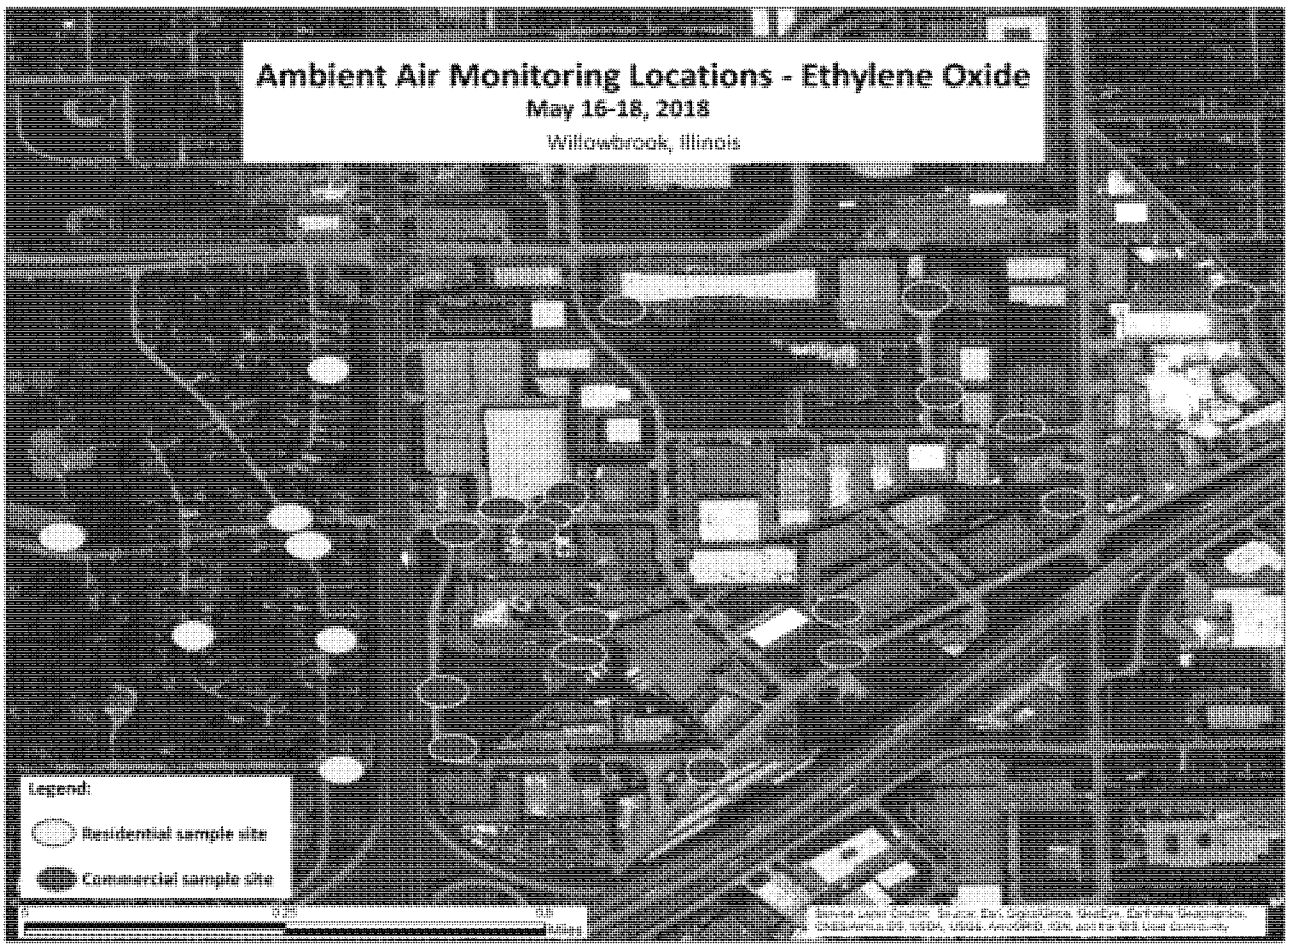
Geo Mean	0.62	1.74

N=21 grab samples, 18 12-hour samples

Figure 4. Ambient air samples near the Sterigenics facility, Willowbrook, IL



Source: U.S. EPA, Region 5

Figure 4, shows the location of discrete samples collected in the community. Given limited measured data presented in Table 2, ATSDR used the maximum 12-hour residential sample concentration and the maximum 12-hour commercial sample concentration to represent chronic upper bound residential (2.1 μg/m^3) and occupational (9.1 μg/m^3) exposures in the community. These concentrations represent maximums identified during a very temporally and spatially limited sampling campaign and actual average long-term exposures may be higher or lower.

HEALTH IMPLICATIONS

Overview for identifying contaminants of concern and evaluating risk

To evaluate EtO exposures near Sterigenics, ATSDR considered its own health-based comparison values as well as those published by other agencies. ATSDR uses comparison values for screening purposes to determine whether a pollutant should be evaluated further. A CV was identified for both an intermediate exposure duration (for non-cancer evaluation) as well as for a long-term (chronic) exposure duration (for which we considered both cancer and non-cancer health effects). In this evaluation, the air sampling results were compared to the ATSDR Cancer Risk Evaluation Guide (CREG) and environmental media evaluation guide (EMEG) and California EPA Reference Exposure Level (REL) for EtO.

- ***ATSDR CREGs*** are estimates of the concentrations of a carcinogen at which there is an elevated risk for one additional case of cancer in one million people exposed over a lifetime. ATSDR's CREG for EtO is calculated from the current U.S. EPA's adult-based inhalation unit risk value (0.003 (μg/m^3)$^{-1}$) and is based on U.S. EPA evaluations and assumptions about hypothetical cancer risks at low levels of exposure. ATSDR's CREG for EtO is 0.00021 μg/m^3.
- ***ATSDR inhalation minimal risk levels (MRL)/EMEGs*** are estimates of the concentrations of pollutants calculated that anyone could be exposed to where health effects are unlikely, based on chronic, intermediate, and acute exposures (those occurring longer than 365 days, between 14-365 days, and 14 days of exposure or less, respectively). For EtO, ATSDR only has an intermediate EMEG of 160 μg/m^3 (ATSDR, 1990).
- ***California RELs*** are concentrations that are unlikely to result in adverse non-cancer health effects. The chronic California REL for EtO is 30 μg/m^3 (California EPA, 2008).

All 5-year modeled and 12-hour measured averages exceeded the ATSDR CREG. Only maximum modeled concentrations exceeded intermediate or chronic non-cancer screening values. The following sections evaluate chronic non-cancer and cancer risks further.

Ethylene oxide properties

Ethylene oxide is a highly flammable gas that is highly reactive with nucleophilic substances such as water, alcohols, halides, amines, and sulfhydryl compounds. It is used as an intermediate in the production of ethylene glycol and surfactants as well as a fumigant for sterilizing foods and heat-sensitive medical equipment.

EtO is highly reactive, readily absorbed, and easily distributed in the human body. The absolute odor threshold has been reported in several studies to be about 470 milligrams per cubic meter (mg/m^3)

(or 470,000 μg/m^3), with acute health effects possible in the range of the odor threshold (NRC, 2010). Chronic exposures can result somatic cell damage at much lower concentrations (California EPA, 2008). EtO is mutagenic and causes chromosome damage in many species, including humans. EtO exposure has widely been studied in scientific literature and its adverse health impacts are well understood. The carcinogenic effects of EtO have been documented in human and animal studies (U.S. EPA 2016).

Acute and intermediate exposure and health effects

Acute and intermediate effects have mostly been documented in hospital workers or in other occupational settings that include sterilizing chambers. Short-term exposure (minutes to weeks or months) above the odor threshold of 470 mg/m^3 (into the thousands of mg/m^3) include primarily neurological effects (headache, dizziness, nausea, lethargy, fatigue, muscle weakness, numbness, memory loss, incoordination, etc.), respiratory irritation (irritation of the nasal cavity, sinuses, coughing, shortness of breath, wheezing, and bronchial constriction and hyperreactivity), excessive thirst and dry mouth, and gastrointestinal effects (vomiting, diarrhea, stomach spasms, etc.). Some studies reported skin rashes with short-term exposures (NRC, 2010).

All studies with documented health effects summarized above had substantially higher EtO concentrations than what was observed in measured and modeled data in this assessment. ATSDR does not have an acute health-based comparison value but does have an intermediate-duration health-based comparison value of 160 μg/m^3. No measured data and only the maximum 1-hour modeled concentration of EtO exceeded this value and modeled and measured concentrations of EtO in this investigation were well below the odor threshold. Thus, it is unlikely that the non-cancer health effects noted above would occur in the general or off-site worker populations.

Chronic exposure and health effects

Cancer effects

The U.S. EPA IRIS released an "Evaluation of the Inhalation Carcinogenicity of Ethylene Oxide" in December 2016. This evaluation summarizes the evidence that EtO is "carcinogenic to humans" through a mutagenic mode of action (MOA) and derives an inhalation unit risk value for EtO (U.S. EPA, 2016). Many studies have identified the genotoxic potential and mutagenic mode of action of EtO exposure via inhalation. There is clear evidence from multiple studies that EtO causes chromosomal aberrations, sister chromatic exchanges, and micronuclei in peripheral blood lymphocytes and bone marrow cells. Chromosomal aberrations and micronucleus frequency have been linked to increased risk of cancer in a number of large human studies (Jinot et al., 2017). Mice and rats exposed to EtO demonstrate cancers of the lymphohematopoietic system (cells involved in the production of lymphocytes and cells of blood, bone marrow, spleen, lymph nodes, and thymus), brain, lung, connective tissue, uterus, and mammary gland.

In humans, an increased incidence and mortality of breast and lymphohematopoietic system cancers have been observed in workers in the EtO manufacturing and in sterilizing facilities (U.S. EPA, 2016). U.S. EPA identified six studies evaluating breast cancer in women, with the largest being a study from the National Institute of Occupational Safety and Health (NIOSH) of over 18,000 workers (45% male, 55% female) in 14 commercial sterilization plants. The NIOSH study reported statistically significant

exposure-response relationships for breast cancer incidence and mortality (Steenland et al., 2004 and Steenland et al., 2004). From assessing these studies, U.S. EPA (2016) determined that there is sufficient evidence of a causal relationship between EtO exposure and breast cancer in women.

U.S. EPA used the cancer incidence data from the NIOSH study, using individual exposure estimates for 17,530 workers from 13 plants, to calculate an inhalation unit risk value. A linear low-dose extrapolation of the lowest effective concentration (LEC; defined here as the lower 95% confidence limit on the EC_{01}, the estimated effective concentration associated with 1% extra risk) for lymphoid cancer was calculated as 2.9×10^{-3} per $\mu g/m^3$. Using the same approach, the lifetime unit risk for breast cancer was calculated as 8.1×10^{-4} per $\mu g/m^3$. Combining the risk for lymphoid and breast cancers in females U.S. EPA adopted an inhalation unit risk of 2.99×10^{-3} per $\mu g/m^3$ (rounded to 3.0×10^{-3} per $\mu g/m^3$). These adult-exposure only unit risk estimates were then rescaled to a lifetime, using age-dependent adjustment factors (ADAF). ADAFs are used to incorporate the greater risk of early life exposure to chemicals that have a mutagenic MOA. When applying the ADAFs, EPA calculated an inhalation unit risk value over a 70-year lifetime of 5.0×10^{-3} per $\mu g/m^3$ (U.S. EPA, 2016). Cancer risk from measured and modeled EtO concentrations are estimated by multiplying the IUR by the EtO concentrations.

U.S. EPA Cancer Risk Estimates Reviewed by ATSDR

U.S. EPA Region 5 air modelers estimated cancer risk assuming a 70-year lifetime from measured and modeled data. Based on modeled EtO concentrations at over 882 specific locations around the Sterigenics facility, U.S. EPA used the 5-year average EtO concentrations to calculate lifetime cancer risks between 1.3×10^{-4} to 6.7×10^{-2}, with a geometric mean risk of 9.1×10^{-4}. Even though cancer risks are not generally calculated for short term exposures, the estimated cancer risks associated with the *measured* EtO air concentration (19 samples collected for 12 hours each) were similar (range: 7.9×10^{-4} to 4.5×10^{-2}, geometric mean: 7.7×10^{-3}; Table 3). Note that these cancer risks were calculated using the lifetime ADAF-adjusted IUR of 5.0×10^{-3} per $\mu g/m^3$.

Table 3. Range of measured and modeled EtO concentrations: U.S. EPA Cancer Risk Estimates

Statistics	Modeled 5-year ($\mu g/m^3$)	Modeled cancer risk range	12-hour samples ($\mu g/m^3$)	Measured cancer risk range*
Minimum	0.03	1.3E-04	0.16	7.9E-04
Maximum	13.32	6.7E-02	4.34	4.5E-02
Mean	0.32	1.6E-03	1.04	1.4E-02
Geometric Mean	0.18	9.1E-04	0.61	7.7E-03

**Cancer risk was calculated to estimate what long term exposures to the 12-hour concentration could look like if sustained long term and does not represent actual exposures.*

Cancer Risk Estimates Calculated by ATSDR

For ATSDR assessments, the reasonable maximum exposure (RME) scenario for residential exposure duration is 33 years over a lifetime of 78 years, so ATSDR calculated an IUR based on 33-year residential exposure using ADAFs. As mentioned previously, ATSDR's RME exposure point concentration (EPC) of 2.1 $\mu g/m^3$ was used as a reasonable estimate of exposure for the most exposed individual in the community. This EPC is the maximum residential sample concentration of EtO in the May 2018 data collection period. Given these assumptions, the cancer risk for this residential sample

location is **6.4 x 10^{-3}**—an additional lifetime risk of 6.4 cancers in a population of 1,000 residents who could be exposed to EtO emissions from Sterigenics. This cancer risk exceeds U.S. EPA's decision-making cancer risk range of 1.0 x 10^{-6} to 1.0 x 10^{-4}, and adds to the lifetime background cancer risk of an average American of 1 in 3 people (American Cancer Society, 2018).

Table 4. Site-specific ADAF calculations for residential exposure*

Age Range	ADAF	U.S. EPA unadjusted IUR	EPC (µg/m³)	Duration Adjustment	Partial Risk
0 to <2 yrs	10	2.99 x 10^{-3}	2.1	2 years/78 years	1.6 x 10^{-3}
2 to <16 yrs	3	2.99 x 10^{-3}	2.1	14 years/78 years	3.4 x 10^{-3}
16 to 33 yrs	3	2.99 x 10^{-3}	2.1	17 years/78 years	1.4 x 10^{-3}
				Lifetime Risk	**6.4 x 10^{-3}**

**Cancer risk was calculated to estimate what long term exposures to the 12-hour concentration could look like if sustained long term and does not represent actual exposures.*

Likewise, ATSDR assumed the maximum commercial 12-hour sample concentration in commercial sample locations of 9.1 µg/m³ to represent RME occupational exposures to workers in nearby facilities. Note that workers at the Sterigenics facility would be covered under the Occupational Safety and Health Administration (OSHA) EtO standard (29 CFR 1910.1047). For the off-site worker scenario, ATSDR assumed an 8.5-hour workday, 250 days a year, for 25 years (ATSDR, 2016), yielding an exposure factor (EF) of 0.08.

$$EF_{cancer,\ chronic} = \frac{8.5\frac{hr}{d} x\ 5\frac{d}{wk} x\ 50\frac{wk}{yr} x\ 25\ yr}{24\frac{hr}{d} x\ 7\frac{d}{wk} x\ 52.14\frac{wk}{yr} x\ 78\ yr} = 0.08$$

Cancer risk for workers can be calculated by multiplying the long-term air concentration by the IUR, adjusting the duration of exposure as appropriate using the exposure factor calculation, above:

$$Cancer\ risk = IUR\ x\ EPC\ (\mu g/m^3)\ x\ EF$$

For the maximum commercial concentration of 9.1 µg/m³, this risk equation yields a lifetime occupational cancer risk of 2.1 x 10^{-3}, or an increased risk of cancer for 2.1 people in a population of 1,000 workers from chronic exposures to Sterigenics emissions:

$$Cancer\ risk_{occupational} = 0.00299\ x\ 9.1\ \mu g/m^3\ x\ 0.08 = \mathbf{2.1\ x\ 10^{-3}}$$

While a more complete database from which to characterize exposure is preferable, we used U.S. EPA's limited data for the Sterigenics investigation and applied the standard ATSDR evaluation process. Note that in both ATSDR calculations, we made a very conservative assumption that a 12-hour sample represents long term exposure. We felt this assumption was warranted because the measured and modeled concentrations demonstrated consistency and provided support that this range of exposure is possible in the area surrounding Sterigenics.

Non-cancer effects

Workers exposed to ethylene oxide over a long-term duration experienced similar health effects to those exposed over shorter durations (California EPA, 2008). Workers exposed to levels of EtO at 8,500 $\mu g/m^3$ and higher over an average of 5-6.5 years demonstrated cognitive and motor impairment compared to unexposed controls. At lower levels of EtO exposure (145-300 $\mu g/m^3$), studies have shown evidence of hemoglobin adducts, DNA damage effects (i.e. sister chromatid exchanges), and hematological effects (i.e. increases in leukocytes and decreases in neutrophil counts; decreases in hematocrit and hemoglobin) (California EPA, 2008). No measured EtO concentrations from the residential or occupational sampling approached or exceeded effect levels in the long-term modeling estimates or the 12-hour samples being used as chronic exposure surrogates, therefore, non-cancer health effects are not expected. However, air sampling in this effort was extremely limited.

LIMITATIONS

ATSDR made several assumptions as part of this assessment that could lead to the over or underestimation of risk. Some limitations of this assessment include:

1. To calculate risks, ATSDR assumed that the concentrations measured during this assessment will continue, unchanged if no actions are taken, over 33 years for residents, and 25 years for workers.
2. ATSDR assumed that the very limited sampling investigation of 26 discrete locations over 2 days throughout the community represents typical exposure conditions from Sterigenics EtO emissions. Only one 12-hour residential sample was collected, and that sample was used to represent the RME residential chronic exposure estimate. EtO concentrations from grab samples at one other residential location were slightly higher than the 12-hour averaged sample collected at this property.
3. ATSDR assumed that the highest EtO concentration in the commercial area surrounding Sterigenics represents worst case off-site worker exposures. This is likely underestimating worker exposures for some employees in this area.
4. Due to a lack of long term sampling, the temporal trends of EtO emissions could not be evaluated. Fluctuations of seasons that affect temperatures, barometric pressure, wind speed and direction, and other potential factors that could influence the transport of EtO into the surrounding community were not assessed.

Despite these limitations, ATSDR acknowledges that the U.S. EPA modeling demonstrates similar concentration ranges to community air measurements. Thus, ATSDR believes the exposure estimates assumed in this assessment are reasonable. Historical emissions were higher before a substantial drop in 1999 with the construction of aeration rooms in Building 1. EtO cancer risks may have been substantially greater for the 14 years the facility operated before these emission controls were implemented, but historical risk cannot be evaluated with available emissions data.

Conclusions:

U.S. EPA asked ATSDR to answer the following question: *"If modeled and measured ethylene oxide concentrations represent long term conditions, would they pose a public health problem for people living and working in Willowbrook?"* U.S. EPA provided modeled and measured data for ATSDR to evaluate and render a health opinion.

It is ATSDR's conclusion that the data U.S. EPA provided suggests that residents and workers are exposed to elevated airborne EtO concentrations from facility emissions. It is difficult to assess long-term public health implications from facility emissions because there has been no historical air monitoring in the community. ATSDR assumed that these data represent long term exposures for area residents and workers. Specifically, ATSDR concludes the following:

1) If measured and modeled data represent typical EtO ambient concentrations in ambient air, *an elevated cancer risk exists* for residents and off-site workers in the Willowbrook community surrounding the Sterigenics facility. These elevated risks *present a public health hazard to these populations*.
2) Measured and modeled ethylene oxide concentrations in ambient air indicate that non-cancer health effects are unlikely for residents and off-site workers in the Willowbrook community surrounding the Sterigenics facility.

Recommendations:

1) ATSDR recommends that Sterigenics take immediate action to reduce EtO emissions at this facility.
2) ATSDR recommends that U.S. EPA work with the Sterigenics facility to initiate long-term air monitoring as soon as possible to measure ambient air levels of EtO. Ongoing air monitoring can demonstrate the effectiveness of actions taken by the company to reduce emissions and subsequent exposures in the community.
3) ATSDR recommends that IDPH investigate whether there are elevated cancers in the population surrounding the Sterigenics facility that are consistent with those associated with chronic EtO exposures.

Please do not hesitate to contact ATSDR Region 5 to discuss this assessment further or to request further public health assistance.

Sincerely,

Michelle Colledge, MPH, PhD

Hi Guy,

I spoke with the permit writer and the confirmed that the facility installed new equipment in 2015. They think the emission reductions were a result of the modification to the facility.

Thanks,

Mike

Michael if you get a chance can you give me a call at 214-665-7242 regarding the Sterigenics facility in Santa Theresa.

You may or may not have heard, risk numbers associated with Ethylene Oxide have changed significantly and as a result, some of the Ethylene Oxide sources are showing up now in the coming National Air Toxics assessment.

We think based on the TRI data below and some permit info as well that the Sterigenics facility has reduced its emissions significantly and I just wanted to confirm that NMED is seeing the same thing.

Hi Ted –

I have two questions for you.

First, can you please double check for me the name of the facility in the Lake Charles, LA MSA area that is driving the EtO risk?

Secondly, there is a facility – 5287111 – in Reserve, LA (which is in St. Charles Parish), the Air Products Performance Manufacturing Inc Reserve Plant. Can you please let me know what its tract risk is?

It is possible that I mixed up the two and it is possible that we left one off the list. I'm trying to help Fran figure out which is right.

Thanks!

Subject: double check for LA

Hi Ted –

I have two questions for you.

First, can you please double check for me the name of the facility in the Lake Charles, LA MSA area that is driving the EtO risk?

Secondly, there is a facility – 5287111 – in Reserve, LA (which is in St. Charles Parish), the Air Products Performance Manufacturing Inc Reserve Plant. Can you please let me know what its tract risk is?

It is possible that I mixed up the two and it is possible that we left one off the list. I'm trying to help Fran figure out which is right.

Thanks!
Darcie

Ahuja,

Good talking with you this morning. Per our discussion, I have reviewed the 2014 data and see no further changes needed. In 2014, the calculation was updated for the number of connectors and this update was submitted when filing that data in 2015. Let me know if you need anything else.

Thanks,

You guys can call me anytime. I like grey t-shirts ☺

I would go with what you know of the facility's rule applicability/type/operations/etc. That was our best attempt at sorting them into different bins. If you know better, go with that certainly. It also could be an area source, which potentially wouldn't be subject to the sterilizer MACT, which I think has a 1 tpy emissions rate to be included.

Subject: FW: LDEQNATA Q&A.docx

Darcie,
There is some confusion here about our BCP Ingredients facility. It is listed as a sterilizer, but not subject to MACT, etc. Is that a mistake, or is there some reason it's not subject to the alphabet soup? We read that they sterilize foodstuffs – spices, dog food, etc.
Thanks for your attention to this. Between the numbers of facilities shifting on various versions of spreadsheets, and things like this, there's a lot of confusion here –
Thank you.
Cindy and Josh
PS, we are looking into getting 'Call Darcie' tshirts!! So sorry we bug you a lot..... ☺

No, don't send separately to OAQPS. Fran asked that we do 1 send, so that's why the spreadsheet. Please update the spreadsheet, and I'll send it to OAQPS and cc everyone, and ask if they have questions about a specific entry. I think this is a cya exercise, as we are finding out – OAQPS has already verified numbers with many of the facilities we are talking to.

Hi Anupa,

Can you add notes to this spreadsheet to capture the status of the facilities you reached out to? New numbers and anything else worth noting. I know BCP said no change, and that AkzoNobel gave you lower numbers, so please add this and any other info. to the last column of the spreadsheet.

April Baiamonte from LDEQ is here at the workshop, so if you can update the spreadsheet today, that would be helpful.

Very basic spreadsheet, but thought it would be easier to track all the info. Anupa, if there are facilities you have not contacted, I can make a call later this morning. I have to do my peopleplus this morning, and that always is a major ordeal. I have to sign out around 1:00, but I'll be back on the clock tomorrow.
HQ had wanted this done by today. I talked with Guy yesterday and told him the ball was rolling, but we most likely would not be finished by today, because we are not hearing back from the facilities. Guy said just do your best and get it done when you can.
BTW, I also checked with my state monitoring folks to see if they had better contacts. The only response I got back was a Shell Tech Center contact and I will call that person this morning.

Let me know if questions

Hi, Danielle,
Here's where we are -

We are finalizing our NATA assessment and need to verify 2014 ethylene oxide emission numbers for these Texas facilities.

Shell Technology Center (that I asked you about earlier), Houston, 2014 ethylene oxide emissions of 0.5 tons

Eastman Chemical, Texas Operations in Longview, 2014 ethylene oxide emissions of 7.4 tons

Midwest Sterilization Corp, Laredo, 2014 ethylene oxide emissions of 7.9

Huntsman, Port Neches, 2014 ethylene oxide emissions of 10.8

Can you please confirm these numbers with these facilities? We need responses by COB today. If you are not able to do, can you please forward your contact information for these two facilities so that we can call? I have the Shell Tech Ctr contact already.

Thank you for your assistance,

My first shot at Q&A's

National Air Toxics Assessment (NATA): 2014 Results Summary

Briefing for LDEQ

August 14, 2018

What is NATA?

- Screening-level characterization of air toxics across the nation
  - Nationwide assessment with census **tract** resolution (about 74,000 tracts)
  - Based on air quality modeling of emissions from: stationary, mobile, biogenic sources, and fires using the National Emissions Inventory
  - Ambient and exposure concentration estimates for 175 HAP plus diesel particulate matter (DPM)
  - Cancer and noncancer risk estimates for about 140 Clean Air Act hazardous air pollutants (HAP) with health data based on chronic exposures
- This is the 6th NATA (2014 NATA)
  - Previous assessments for inventory years 1996, 1999, 2002, 2005, 2011
- Primary NATA Uses
  - Planning tool for EPA, state/local/tribal organizations
    - To identify locations of interest for further study
    - To prioritize pollutants and emission sources/types
    - To inform monitoring programs
  - Serve partner needs by developing innovative data and communication tools

Limitations

- Emissions, modeled ambient concentrations, and estimated inhalation exposures are only from sources of outdoor origin via the inhalation route of exposure
- Results are more uncertain at finer geographic scales
  - Surrogates used to allocate mobile and nonpoint source emissions
- Results should not be used to compare risks among different areas of the country
  - Underlying emissions data vary in level of detail from state to state
- Results should not be compared among NATAs
  - Changes in results are due to actual emission changes as well as the use of different modeling and emissions processing techniques. In addition, other assessment inputs, such as meteorological data and health benchmark values, change over time.

Ethylene Oxide Risks

- EtO emissions from point sources contribute at least 50% of cancer risks ≥ 100-in-1 million in 98 (of 106) census tracts in 18 (of 19) MSAs
- 93% of tracts with elevated risks are in four regions: 52% in Region 6, 25% in Region 3, 11% in Region 5, and 5% in Region 4
- Data review activities:
  - OAQPS contacted trade associations and facilities
  - Regional staff also contacted states and facilities
  - Any revised data received to date has been incorporated into NATA or evaluated for appropriateness for inclusion

Region 6 MSAs with Elevated Cancer Risks

2014 NATA Version 2

MSA Name	# Tracts
New Orleans-Metaire, LA	19
Beaumont-Port Arthur, TX	8
Laredo, TX	3
Marshall, TX	2
Lake Charles, LA	2
Baton Rouge, LA	9
Las Cruces, NM	1
Houston-The Woodlands-Sugar Land, TX	11

Blue dots are tracts with risk ≥ 100 in a million
Areas outlined in black are MSAs with elevated risk tracts

Facilities in LA w/ Elevated Risks

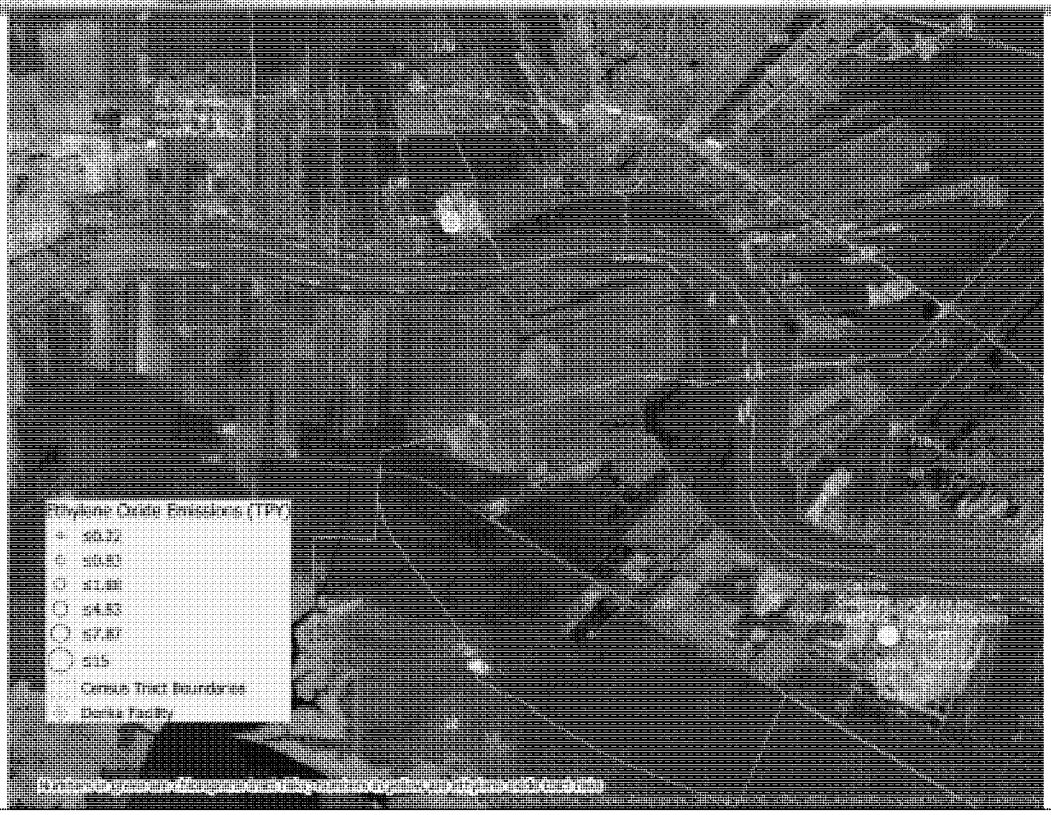
2014 NATA Version 2

MSA Area Name	Facility	Type of Facility	Potential Applicable MACT to Risk Driving Emissions	Review
New Orleans-Metairie, LA	Denka	Chemical plant	NA	n/a
	BCP Ingredients-New Hampton	Chemical plant	NA- Area	Facility. No changes.
	Union Carbide-St. Charles	Chemical plant	HON, Polyols	Facility. TBD.
	Air Products Reserve (Evonik)	Chemical plant	NA- Area	LDEQ-no changes
Lake Charles, LA	Sasol Chemicals	Chemical plant	HON	Corporate- No changes.
Baton Rouge, LA	Taminco	Chemical plant	NA - Area	LA DEQ. No changes.

6

Census Tracts Near LaPlace, LA w/ Elevated Cancer Risks from EtO and Chloroprene

2014 NATA Version 2



National Cancer Risk Results

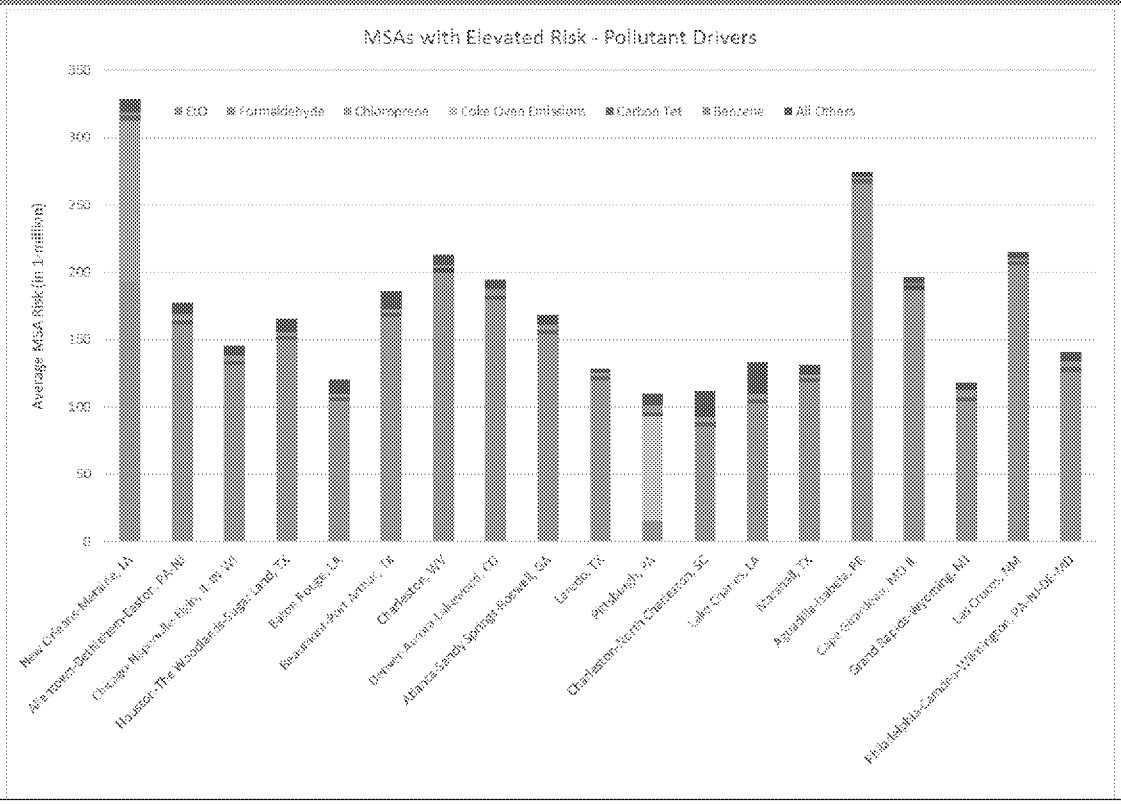
- Population-weighted, national-average cancer risk estimated to be **30-in-1 million**
- 106 tracts and 470,000 people estimated to have a cancer risk ≥ 100-in-1 million
- 19 MSAs estimated to have at least 1 census tract ≥ 100-in-1 million
- Tracts ≥ 100 in-1 million primarily driven by point source emissions
  - 57 of 106 tracts have risks ≥ 100-in-1 million from ethylene oxide ***alone***
- Other tract-level pollutant drivers include chloroprene, coke oven emissions, formaldehyde, chromium (VI) compounds
- Secondary formation (formaldehyde and acetaldehyde) estimated to contribute about 65 percent of the cancer risk nationwide

2011 NATA Results

- National-average cancer risk: 40-in-1 million
- 120 tracts, 500,000 people estimated to have cancer risk ≥ 100-in-1 million
- 12 MSAs with tracts ≥ 100-in-1 million

MSAs with Elevated Cancer Risks – Pollutant Drivers

2014 NATA Version 2



National Average Cancer Risk

2014 NATA Version 2

Pollutant Contributions (30-in-1 million)

Ethylene oxide (stationary source pollutant) is a new risk driver in 2014

Subject: RE: Huntsman Port Neches EO correction?

Kevin Cauble and Dannielle Nesvacil called me back. They explained that TRI includes all emissions including emission events, whereas what they report to NEI is routine emissions. Huntsman had several significant events in 2014 and when those are figured in the EI and TRI match exactly.

Subject: RE: Huntsman Port Neches EO correction?

In addition to Danielle Nesvacil who has reviewed emissions for NATA, I've recently worked with Jill Dickey (on a Combined Air Emissions Reporting Project) and she has indicated that TCEQ does compare with TRI as part of their QA – while emissions may be different due to unpermitted sources or TRI rounding, I am not sure that large differences like that would be explained by these factors.

Hope those contacts can help.

That is the number reported in the 2014 NEI (both version 1 and 2). I assume that it was state-reported (Madeleine – it says SLT in the "Data source" field).

Subject: Huntsman Port Neches EO correction?

Hi Darcie and Jennifer,

I had sent you email previously letting you know that the Huntsman Port Neches facility expanded capacity after 2014 and in 2016 their emissions were 38.6 tons but I did not check the 10.8 number you list as 2014 emissions against the TRI database.

When I check the TRI database, that says the EO emissions for 2014 are **21.2 tons.** Cindy Parker in R6 spoke to someone at the facility today and he stated that the 2014 EO emission are **21 tons**.

Where did the 10.8 tons come from?

Thanks,
Anupa

I've got non-stop meetings/conf. calls until 1 pm, but I just took a look at the slides.

I didn't get a spreadsheet from Erika—just the slides. Did you? If not, can you reach out to Darcie and ask her if she has a spreadsheet w/ updated numbers? The slides have names but not numbers.

I think we can tell Cheryl and Wren that we just got the slides and are seeing if we can get a spreadsheet with numbers, and are planning to share updated lists with the states (w/out risk). It would be good to share emission amounts, which aren't in the slides.

Subject: EtO emission numbers

Robin Langdon of OAQPS called me after our conf. call yesterday, to discuss when OAQPS could provide us with the latest emission data for the 9 facilities on the slides OAQPS shared with us during the June 14 briefing. She said they need to brief Wehrum prior to sharing the latest information (risk numbers, etc.), but agreed to provide us the emission numbers on Monday. We can share the emissions data with the states, but she asked that EPA and the states hold off on reaching out to the facilities using this newest data until after the Wehrum briefing, which is set for next Wednesday.

Here is the current list of 9 EtO facilities:

Union Carbide Corp - St Charles Operations (Dow Chem.)	Louisiana
Port Neches Plant (Huntsman Corp.)	Texas
Air Products Performance Manufacturing Inc - Reserve Plant	Louisiana
Shell Technology Center Houston	Texas
BCP Ingredients Inc (Balchem Co.)	Louisiana
Taminco US Inc (Eastman Chemical Co.)	Louisiana
Santa Teresa Facility (Sterigenics)	New Mexico
Midwest Sterilization Corp	Texas
Texas Operations (Eastman Chemical Co.)	Texas

Subject: RE: EtO spreadsheet for LDEQ

I think we should leave off that notation. The V2 list doesn't include Tract level V2 risk numbers, only Tract level V1 risk numbers, because OAQPS won't recalculate Tract level risk numbers until they get back changes during this round. The

agency doesn't actually know which facilities will be at 100 in million or higher yet. Also, the V1 Tract level risk numbers in the V2 spreadsheet currently show Shell Geismar, BASF Geismar, Sasol, and Dow with numbers below 100.

Subject: EtO spreadsheet for LDEQ

When I went back through my files, I remembered that I had already created a spreadsheet for myself that was an amalgam of several spreadsheet and contains the emission point IDs as well as the permit numbers. When I check it against the V2 spreadsheet you said had the 8 facilities, I noticed that my version (which is based on several of Jeff Yurk's spreadsheets) lists Shell Chemical in Geismar while the V2 version lists BASF in Geismar. Maybe the V2 has been updated with current owner/operator. I called Darcie to ask which the correct owner operator and left her a message. But the permit numbers should be still be right as the facility would only apply for a name change to the state. But I wanted to point that out.

That would seem likely—Sterigenics was at 135 in a million risk in V2, so they're on the lower end of the 100 in a million risk.

Anupa is waiting to hear back from Mort.

I just wanted to see if the 2016 TRI reflects a reduction in ETO emissions. We likely wouldn't need to re run the model. The model should behave linearly so an 83% reduction in emissions would approximate an equal reduction in risk.

Subject: RE: Ethylene oxide facility in NM - NATA

The NSR permit issued in 2014 says there was a 20% increase in capacity but they also captured previously uncontrolled emissions. The emissions controls they put in then on the sterilization chamber were upgraded also. The control efficiencies are 99% for the newly controlled and upgraded controls. But I do not have actuals (only the permitted limits).

Subject: Re: Ethylene oxide facility in NM - NATA

So this statement appears to indicate that the current emissions are reduced from 3 tons to less than 1? Can you look up the Current TRI reported value?

Per Region V who contacted Sterigenics, emission reduction techniques were put into place by Sterigenics at this facility. TRI emissions reflect this- emissions went down by 83% between 2016 and 2014. TRI ID is 88008GRFFT2400A

To: Ahuja, Anupa [ahuja.anupa@epa.gov]
Subject: RE: 2014/2016 EtO emissions from Sterginics in NM?

I found the TRI website but it keeps crashing my system. Before it crashed (for like the 5th time), the EtO emissions in Dona Ana county (where sterigenics is located) was 967 lbs for 2016 (= 0.48 ton). I am guessing there are no other facilities located there but my computer crashes before I can see the report. They only have data available for 2016 and 2015, both after the new controls were installed. Maybe Mort has access to historical (2014) data. Obviously the 0.48 ton is way less than the 6 ton combined limit, but since I can't get to the 2014 data, I have nothing to compare to see how much emissions went down.

Hi Jeff,
Steve Thompson is asking if the EtO emissions in TRI have been reduced by 83% in 2016 vs 2014. If you send the emissions for those 2 yrs, I can do the calc.

Thank you,
Anupa

All: please remember that the NATA deals with the EI or TRI that was for 2014. This NATA report will relate only to the 2014 emissions or inventory for the projected risks.

The comparisons must remain in context. Additional information received after January 1, 2015, will be included in the calculations for the next round. This additional information is relevant in discussions about *corrective/compliance* actions.

Subject: Emissions data

Hi Darcie,
Now that the Wehrum briefing is done, my management is asking if it would be possible for us to get the updated emissions data for the 9 facilities in R6? We have the 2014 emissions inventory data, but we would like to get the updates to the emissions that may have been provided by the companies.

Thank you,
Anupa

Hi Anupa –

I'm copying Madeleine on this since she is involved in a lot of the emissions related review as well.

Ex. 5 Deliberative Process (DP)

Thanks for bringing these points up Anupa. I think you're a few steps ahead of NATA and into the further investigation step of the process, which is great! As we continue moving forward, I'm sure we'll have more questions for you about the situations you've mentioned.

Thanks,
Darcie

Hi, I wasn't sure who I should send this to so I included you both.

On the R6 ppt slides for today's call, I noticed that for the Port Neches, tx plant the review column says "no changes" and under review it says "TCEQ – no changes". For the Santa Teresa NM plant, the review column says "emissions decreased."

I have reviewed the TRI data for both plants and:

1)

2)

Ex. 5 Deliberative Process (DP)

I am concerned that Ex. 5 Deliberative Process (DP)

Hi Anupa,

While not reflected in NATA, we received additional information from the Union Carbide St. Charles Facility that we are still evaluating and discussing with the facility. When we complete our analysis, if there are any changes, we will share them with you. We have not received any other emissions changes.

Subject: RE: Emissions data

Hi Anupa –

Thanks for your question. You're right, we have spoken with our AA, but the conversation is not yet over…

Regarding the emissions, as I shared with you previously, there are no new emissions, with the exception of a minor one (20 lbs out of 7 tons) for Texas Operations in Longview TX and possibly some updated emissions from Union Carbide St. Charles. We've been expecting some, so I've copied Jennifer Caparoso on this because if we have received new emissions for that facility, she will have them.

Thanks,
Darcie

Subject: EtO - notes from today's Wehrum call w/ Regions

The main thing discussed by Wehrum today was that we need to take a hybrid approach. A regulatory approach and other steps measures. He said that the risk levels are high enough that we need to considers steps beyond 112. We need to id. facilities where we need to do more than the regulatory approach. He discussed the need to gather more information, for both the reg. approach and to look at ways to reduce emissions.

We should talk next week, and then loop in Guy and Fran so we can further develop a strategy to share with Cheryl and Wren (and then Anne and David)/

On the call, it was also mentioned that ATSDR has drafted a letter to R5 re: the risk near the Sterigenics facility (1 in 10,000 risk, I believe they said). And they're starting to work on the communications strategy.

Hi, Justin, Margaret,

Wanted to let you know we briefed Wren yesterday on the NATA data review and analysis. Josh pulled the attached worksheet together for this briefing. Given the region's experience with chloroprene two years ago, Wren's questions centered mostly around the facilities, and their current permits. I have contacts at each of our states who are also reviewing the data, and confirming the reported emissions numbers with the facilities. I am hoping you can help us with the facilities' permits information and compliance history? We have Air Programs staff that we are working with, as well. It will take a team to help prepare the region for the public release of NATA data next spring.

I don't know how much you know/remember/are aware of, so if you know this, I apologize for repeating.

The next deadline is May 1 for the states to submit any change sheets for facilities requiring changes to their emissions data. This deadline is for all pollutants, except ethylene oxide. The deadline for changes for ethylene oxide numbers is June 1. By mid-June (hopefully) we should have the set of numbers that is what will be released to the public. We are planning on getting back in touch with Wren after the June 1 deadline, and at that time, we expect Wren to formally meet with other regional offices (EN, for example), and then Senior Staff.

Justin, please let me know if you have questions; this is a short summary, and I know we said not to clutter up your email box until you knew how involved you'd be. If you can assist with gathering additional facilities information, that would be great.

Margaret, Fran – I don't know what happened with Denka, because I wasn't involved, but wondering, as we gather info and need to easily share between offices, should we have a sharepoint page? Wondering about tracking/filing the volume of information we'll be gathering and sharing. Ideas?

PS, you didn't miss anything with the map ap webinar on Monday. I think the map ap will be a neat feature, and I do know we will need a map, but the webinar was a bust. Sometimes technology works in your favor, sometimes not. And I forgot to bring popcorn.

Thank you,
Cindy

Mike, all,

After hearing the criteria of 1000 in 1M risk for ethylene oxide for the targeted short term action, R6 requests that you remove Air Products Performance Manufacturing Inc—Reserve Plant, LA from the facilities' short-term action list. We can pull it in functionally after 2014 NATA is released, but prefer it is not included on the list. I discussed this with the R6 DRA, and he agrees.

ADDs,
Attached are two documents. Both are **close hold**, please do not share.

1. Draft list of facilities for discussion on Wednesday's special purpose call.

2. ATSDR letter mentioned by Region 5 on the last EtO call. Below some contextual information:

   In June, after conducting modeling and monitoring around an ethylene oxide source (Sterigenics) in the suburbs of Chicago, Region 5 requested that ATSDR review the results and specifically answer the question: If modeled and measured EtO concentrations represent long-term conditions, would they pose a public health problem for people living and working in Willowbrook?

   ATSDR's assessment of that question is provided in the attached letter consult. Please keep it close hold. Note their findings and recommendations are specific to the Sterigenics facility in Willowbrook, Illinois.

Fyi – I made a new slide for you, just in case they get used again, although I don't think they will…

2014 NATA Version 2

Facilities in Region 6 (LA) w/ Elevated Risks

MSA Area Name (City, State)	Facility Name	Type of Facility	Potentially Applicable MACT Associated with EtO Emissions	Review
New Orleans-Metairie, LA (LaPlace, LA)*	Denka	Chemical plant	NA – P&R I	NA
New Orleans-Metairie, LA (New Hampton, LA)	BCP Ingredients	Chemical plant	NA – area	Facility - no changes
New Orleans-Metairie, LA (Hahnville, LA)	Union Carbide St. Charles	Chemical plant	HON	Facility – emissions changes for a flare
New Orleans-Metairie, LA (Reserve)	Air Products Reserve Plant (Evonik)	Chemical plant	NA – area	LA DEQ - no changes
Lake Charles, LA (Westlake)	Sasol Chemicals (USA) LLC – Lake Charles Chemical Complex	Chemical plant	HON	Corporate – no changes
Baton Rouge, LA (St. Gabriel, LA)	Taminco – St Gabriel Plant	Chemical plant	NA – area	LA DEQ - no changes

* For the LaPlace, LA area the primary risks are driven by emissions of chloroprene.

Hi Ted –

I have two questions for you.

First, can you please double check for me the name of the facility in the Lake Charles, LA MSA area that is driving the EtO risk?

Secondly, there is a facility – 5287111 – in Reserve, LA (which is in St. Charles Parish), the Air Products Performance Manufacturing Inc Reserve Plant. Can you please let me know what its tract risk is?

It is possible that I mixed up the two and it is possible that we left one off the list. I'm trying to help Fran figure out which is right.

Thanks!

Subject: CLOSE HOLD: next steps on EtO facilities

ADDs,
Attached are two documents. Both are **close hold**, please do not share.

1. Draft list of facilities for discussion on Wednesday's special purpose call.

2. ATSDR letter mentioned by Region 5 on the last EtO call. Below some contextual information:

   In June, after conducting modeling and monitoring around an ethylene oxide source (Sterigenics) in the suburbs of Chicago, Region 5 requested that ATSDR review the results and specifically answer the question: If modeled and measured EtO concentrations represent long-term conditions, would they pose a public health problem for people living and working in Willowbrook?

   ATSDR's assessment of that question is provided in the attached letter consult. Please keep it close hold. Note their findings and recommendations are specific to the Sterigenics facility in Willowbrook, Illinois.

Subject: FW: Emerging Health Concern in Region 6 -ATSDR Health Consult on Ethylene Oxide

All,

Another piece to the puzzle. ATSDR in Region 5 released yesterday an ATSDR Health Consultation on an analysis of environmental air data associated with ethylene oxide emissions from a site identified as Sterigenics International, Inc., located in Willowbrook, Illinois. I'm including the link for your review. In summary, it appears air samples were collected in and around a facility and community in 2018. ATSDR findings concluded the site posed a public health hazard. https://www.atsdr.cdc.gov/HAC/pha/sterigenic/Sterigenics_International_Inc-508.pdf

Based on the EPA National Air Toxics Assessment (NATA) report, the assumptions might be made that similar facilities that release ethylene oxide emissions (producers/users) with similar air emission conditions as the Sterigenics site identified through NATA, might pose a health hazard if environmental sampling is conducted? Currently, I am unaware as far as next steps with respect to environmental agencies to collect or review any site specific environmental emission data from those site that use or produce ethylene oxide in Region 6, similar to the Illinois site. That issue, will more than likely will be addressed in the very near future.

In the meantime, prudent public health measures should continue to be crafted in Region 6. Continue coordination and collaboration with state health authorities and environmental agencies. Talking points addressing public

health/community health/occupational health concerns to should be developed and universally shared. Poison Control Centers should continue developing methodologies to address community health concerns to include occupational health exposure questions and prepare Specialist in Poison Information (SPI) to be able to address community health concerns. Medical/health referral mechanism should also be crafted to better assist the Poison Control Centers triage calls accordingly. Where to go for general questions, for example… acute, chronic, occupational, oncology, community health, environmental, pediatric, veterinary, media etc. Each state may want to start outlining a plan of action in order to stay ahead of any future environmental sampling on ethylene oxide that may result in a public health hazard finding. This is my professional opinion as your ATSDR Regional Representative.

As Poison Control Centers craft/develop role out strategies on addressing this issue. Can you please share with this group email so all are aware.

ATSDR R6 is here to offer any technical support needed by the State and Poison Centers.

Subject: Emerging Health Concern in Region 6 - EPA report on Ethylene Oxide and associated cancer rates

Greetings Region 6 Poison Control Center Directors and State Health Representative,

ATSDR Region 6 just became aware of a pending EPA report from the National Air Toxics Assessment (NATA) air modeling group, identifying **ethylene oxide** as an increased cancer risk to some communities. **This report will hit the streets tomorrow.** You can access this report through the web link provided in the talking points attachment. This will be a chronic health issue. And it appears the air releases are primarily from the manufacturing process and subsequent atmospheric air release associated with production of ethylene oxide. The air data was collected in 2014 and being summarized now for the public.

From the EPA National perspective, 19 cities were identified as having elevated cancers risk $\geq$ 100-in-1 million. Out of the 19 Cities, there were 8 Cities identified in our Region, Region 6. (New Orleans-Metairie, LA; Lake Charles, LA; Baton Rouge, LA; Marshall, TX; Beaumont-Port Arthur, TX; Houston-The Woodlands-Sugar

Land, TX; Laredo, TX; Las Cruces, NM). It was reported that fewer than 1% of the census tracts in the country (106 tracks in 19 metropolitan statistical areas) have the estimated cancer risk of ≥ 100-in-1 million.

In order to address potential community health concerns (citizens, clinicians, oncologist, community, family, children, etc.) I would like to propose the following strategy:

Public Health Strategy

1. Notify each State Health Authority and R6 PCC of pending EPA report. Share all talking points with the State Health Authority/PCC.
2. Stand up the Poison Control Centers in Region 6 to serve as the initial call center to collect any medical/health calls from the community concerned with ethylene oxide.
3. Poison Centers can triage public calls and determine level of escalation (State Health, City Health, EPA, ATSDR, DHHS, AOEC Clinic, etc).
4. Children's Health Questions can be directed to our R6 PEHSU- with Dr. Borron)
5. Request the Poison Control Center to create a computer code to allow for extraction of data calls from their system. (should be a national code)
6. Request the each State Poison Center to develop a situation report at the end of each week to capture/reflect number and kind of calls received by the public. Provided situation report to State Health authorities and federal agencies (weekly for now)
7. ATSDR R6 will work to draft template for Situation Report.
8. ATSDR R6 staff (Jennifer Lyke and CAPT Patrick Young) will serve as a liaison with R6 PCC/State Health and EPA to provide public health support.
   https://www.atsdr.cdc.gov/ToxProfiles/tp137.pdf
   https://www.atsdr.cdc.gov/toxfaqs/tfacts137.pdf

Suggested EPA Strategy to Support Public Health

1. Include key health stakeholders in information roll out process.
2. Share environmental data, information, maps etc. with key stakeholders.
3. Any information shared by EPA with the public on ethylene oxide, to direct public health/medical concerns to the Poison Control Center national phone number 1-800-222-1222.
4. EPA should coordinate with the American Association of Poison Control Centers (AAPCC) through Dr. Bannor, President of AAPCC and Dr. Mark Ryan, Louisiana PCC Director. Dr. Ryan can facilitate with other Poison Centers outside of Region 6 (National Perspective)

Respectfully,

CAPT Patrick Young, MS, RS
U.S. Public Health Service
ATSDR R6 Regional Rep
Division of Community Health Investigation
Dallas, Texas
214-665-8562 (o)

Talking Points on Upcoming NATA Release. Note: These are not for posting to web but will be covered in a fact sheet.

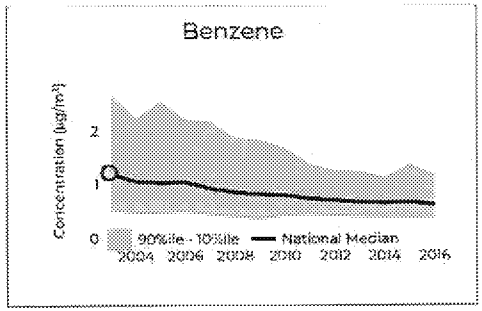
- **On Wednesday, EPA will release the National Air Toxics Assessment, or NATA, for 2014**.
- **NATA is EPA's air toxics screening tool**. It uses emissions information to estimate exposure and risk from breathing air toxics.
- The purpose of NATA is to help EPA, and state, local and tribal agencies decide if areas, pollutants or types of sources need to be examined further.
- **Nationwide, levels of air toxics are decreasing,**
    - EPA's recent trends report showed air toxic levels trending downward - i.e., ambient monitoring data show that many air toxic air pollutants, such as benzene, are declining at most sites
- **But local areas still face challenges, and this most recent NATA shows that a number of areas could have elevated cancer risks from long-term exposure (many years) to the chemical *ethylene oxide*.**
- **These elevated risks are largely driven by an EPA risk value that was updated in late 2016.**
- **The estimates in NATA are for chronic exposures over many decades. NATA does not estimate short-term (acute) or intermediate risks.**
    - Ethylene oxide is used to sterilize equipment and plastic devices that can't be sterilized with steam, such as medical devices. It also is used to make other chemicals.
        - One of those is ethylene glycol, which is used to make everyday products such as antifreeze, PVC plumbing pipe, vinyl flooring and plastics products, including recyclable plastic containers and bottles.
- **EPA does two things when we see elevated risks in NATA:**
    - **First, the Clean Air Act regulatory program for air toxics requires EPA to reduce significant risk. So the agency has begun reviewing its regulations for facilities that emit ethylene oxide.**
    - **Second, if risks appear to be high enough, EPA will take a closer look** -- getting more information to tell the agency if it needs to take action sooner.
- **EPA will post information on efforts to address ethylene oxide on the web. The address will be** [HYPERLINK "https://www.epa.gov/ethylene-oxide"]
- **The NATA website, including information on uses and limitations, will be posted at** [HYPERLINK "https://www.epa.gov/national-air-toxics-assessment"]

What is NATA?

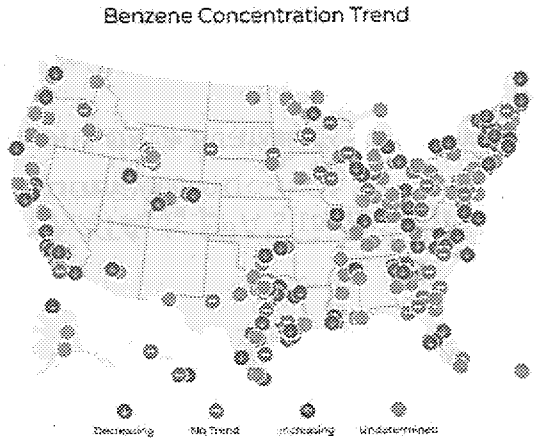
- The National Air Toxics Assessment, or NATA, is EPA's thorough review of air toxics in the United States, based on modeled air quality.
- NATA uses the best science and emissions data available to estimate health risks from air toxics.
- NATA is national in scale and intended as a *screening tool.*
- NATA can be used by the EPA and states/locals and tribes to help determine what pollutants or areas of the country to investigate further, to better understand risks.
- NATA should <u>not</u> be used:
  - to pinpoint risk or exposure values at a specific place (like a home or school);
  - to characterize or compare risks or exposures at local levels (such as between neighborhoods);
  - as the sole basis for risk reduction plans or regulations, or
  - to control specific sources or pollutants.

EPA-R6-2021-005139 6.7.2022 Prod ED_005994_00000460-00001

National air toxics trends are downward



Our Nation's Air: Status and Trends Through 2017 : Benzene (2003 – 2017)



EPA-R6-2021-005139 6.7.2022 Prod ED_005994_00000460-00002

2014 NATA Analytical Steps

Compile National Emissions Inventory (2014 NEI)

2014 NEI includes stationary, mobile and natural sources (fires, biogenics).

NATA includes 180 listed air toxics plus diesel particulate matter (PM)

Estimate ambient concentrations of air toxics across the U.S.

Uses CMAQ and AERMOD to predict census-tract ambient concentrations nationwide.

Estimate population exposures

Includes an exposure model (HAPEM7) to account for human activity data, commuting patterns, and near-roadway exposures.

Characterize potential public health risks from inhalation

Census-tract level cancer and noncancer risks nationwide.

EPA-R6-2021-005139 6.7.2022 Prod ED_005994_00000460-00003

What data are included in NATA?

- NATA provides screening-level estimates of the risk of cancer and other serious health effects from breathing (inhaling) air toxics.
- This helps show which air toxics and source types may contribute to health risks in certain places.
- NATA results are reported at the census tract level.
- The 2014 NATA includes estimates of ambient and exposure concentrations for 180 listed air toxics plus diesel PM, which we assess for noncancer effects only.

EPA-R6-2021-005139 6.7.2022 Prod ED_005994_00000460-00004

How can states/locals and tribes use NATA?

- States/locals and tribes can use NATA results to:
  - prioritize pollutants and emission source types;
  - identify locations for further, more detailed study;
  - get a starting point for local assessments;
  - focus community efforts;
  - inform monitoring programs;
  - prioritize sensitive locations for outdoor air toxics monitoring.

- Using NATA as an initial screening tool, air agencies can then study areas in more detail, focusing on where the risks to people may be greatest.
  - They may also choose to perform a smaller scale local assessment, which allows them to use more detailed data than we can in NATA.

EPA-R6-2021-005139 6.7.2022 Prod ED_005994_00000460-00005

** With the exception of New Orleans-Metairie, LA (chloroprene) and Pittsburgh, PA (coke oven emissions), the primary risks are driven by emissions of ethylene oxide from point sources.

† The following 5 MSAs were also in the 2011 NATA as MSAs with elevated cancer risks: Chicago-Naperville-Elgin, IL-IN-WI; Denver-Aurora-Lakewood, CO; New Orleans-Metairie, LA; Philadelphia-Camden-Wilmington, PA-NJ-DE-MD, and Pittsburgh, PA.

EPA-R6-2021-005139 6.7.2022 Prod ED_005994_00000460-00007

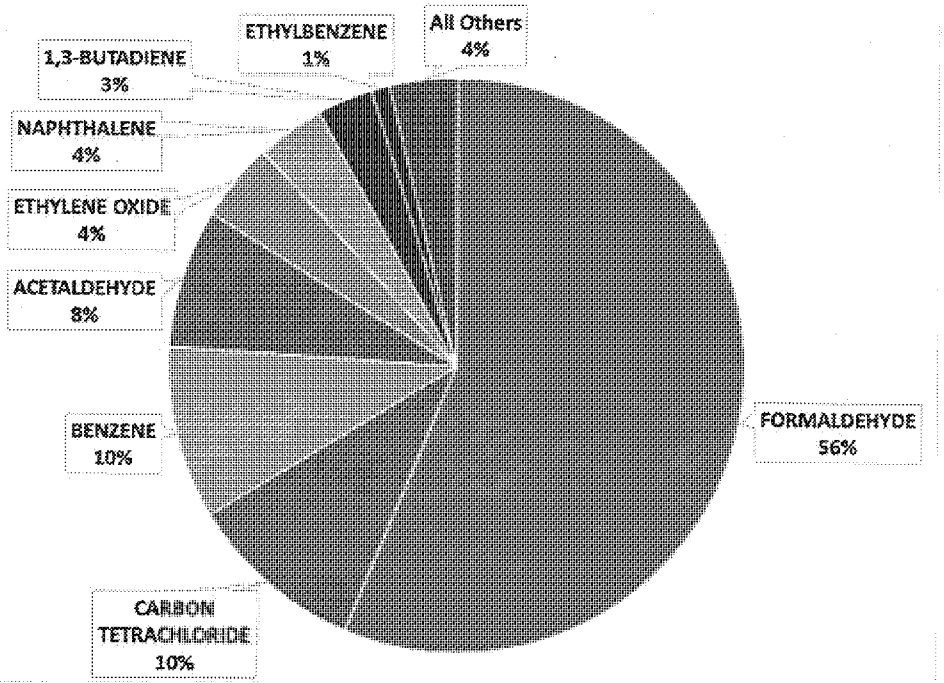
What NATA tells us

- National average cancer risk estimated to be 30-in-1 million.
- Fewer than 1% of the census tracts in the country (106 tracts in 19 metropolitan statistical areas) have an estimated cancer risk of ≥ 100-in-1 million.
- Tracts with estimated cancer risks of ≥ 100-in-1 million are primarily driven by point source emissions of ethylene oxide, chloroprene, and coke oven emissions.
- Secondary formation (formaldehyde and acetaldehyde) estimated to contribute about half of the national average cancer risk.
  - Secondary formation is from both anthropogenic (stationary and mobile) sources as well as biogenic sources.

EPA-R6-2021-005139 6.7.2022 Prod ED_005994_00000460-00008

National Average Cancer Risk Pollutant Contributions (30-in-1 million)

2014 NATA



EPA-R6-2021-005139 6.7.2022 Prod ED_005994_00000460-00009

New risk estimates for ethylene oxide

- EPA completed its review of available health information for ethylene oxide and classified ethylene oxide as a known human carcinogen in December 2016.
  - This work included an increase in the potency estimates for ethylene oxide, which are used to inform risk estimates in 2014 NATA.
- The 2014 NATA results suggest that ethylene oxide is a potential concern in several areas across the country.
- EPA has begun to gather additional information in identified areas, focusing first on those areas with the largest estimated potential for risk.

EPA-R6-2021-005139 6.7.2022 Prod ED_005994_00000460-00010

Next Steps

- 2014 NATA will be rolled out soon, on the following website: *https://www.epa.gov/nata*
- To keep you informed as the EPA works to address ethylene oxide, a separate website will be updated regularly. The address will be *https://www.epa.gov/ethylene-oxide*
- We will send you a link to the preview SharePoint site this afternoon.

Fran, would you send me a draft response? I have a 1 pm with David and would like to see if he agrees.

List our MSA, the 3 facilities, and our basis for this. Say that this is the minimum we will do in the short-term and both Texas and Lousiana have requested coordination now and that we agree that state coordination is needed without delay. The state coordination may lead to additional facility actions in the short term.

Subject: NATA regional Communication Coordination

Wren, Lisa, and Guy,
On an EtO subgroup call yesterday, the primary topic was the NATA roll-out.

- OAQPS is asking that each Region designate a lead communications coordinator for the NATA work. They are asking for this name by COB today (8/2/18) to be sent to Darcie Smith and Mike Koerber.

- OAQPS is asking that each Region determine which facilities greater than 10^{-4} risk will be the primary focus to start. They are asking for this information by COB today (8/2/18) to be sent to Darcie Smith and Mike Koerber. [NOTE: R6 has been in communication with Mike Koerber and will present this information on Monday 8/6/18.]
- OAQPS requested that the Regions define how they chose the facilities for priority. The probable reasons are:
    - highest cumulative risk within an MSA;
    - highest cumulative risk within a census tract;
    - highest EI;
    - largest population affected.
    - Other reasons should be described.
- The chart of facilities provided during the ADD meeting (attached) includes all identified EtO facilities with a risk greater than 100 in 1,000,000 for the census BLOCK level. Many of these are not above this risk at the Tract level.
- OAQPS will have calls with states prior to the NATA roll-out. No specific date for roll-out was provided. At this time, we can discuss with our states things dealing with emission inventories and operating status/units but no risk yet.

Fran, would you send me a draft response? I have a 1 pm with David and would like to see if he agrees.

List our MSA, the 3 facilities, and our basis for this. Say that this is the minimum we will do in the short-term and both Texas and Lousiana have requested coordination now and that we agree that state coordination is needed without delay. The state coordination may lead to additional facility actions in the short term.

Subject: NATA regional Communication Coordination

Wren, Lisa, and Guy,
On an EtO subgroup call yesterday, the primary topic was the NATA roll-out.

- OAQPS is asking that each Region designate a lead communications coordinator for the NATA work. They are asking for this name by COB today (8/2/18) to be sent to Darcie Smith and Mike Koerber.
- OAQPS is asking that each Region determine which facilities greater than 10^{-4} risk will be the primary focus to start. They are asking for this information by COB today (8/2/18) to be sent to Darcie Smith and Mike Koerber. [NOTE: R6 has been in communication with Mike Koerber and will present this information on Monday 8/6/18.]
- OAQPS requested that the Regions define how they chose the facilities for priority. The probable reasons are:
    - highest cumulative risk within an MSA;
    - highest cumulative risk within a census tract;
    - highest EI;
    - largest population affected.
    - Other reasons should be described.
- The chart of facilities provided during the ADD meeting (attached) includes all identified EtO facilities with a risk greater than 100 in 1,000,000 for the census BLOCK level. Many of these are not above this risk at the Tract level.
- OAQPS will have calls with states prior to the NATA roll-out. No specific date for roll-out was provided. At this time, we can discuss with our states things dealing with emission inventories and operating status/units but no risk yet.

Subject: RE: EtO emission numbers

Hi Darrin –

Welcome back!! Sadly, you haven't missed anything in terms of progress on NATA.

The V2 spreadsheet that you're referring to only contained *block* level estimates of ethylene oxide risks from *point* sources. The complete NATA results (which you don't have) contain *tract* level risks for all pollutants from *all* sources. At the time we shared that data with you, we did not have tract level results for V2, so we provided our best estimate (as explained in the accompanying document) of what the V2 tract risks would be when available. To do this we used the hybrid ratio of AERMOD & CMAQ for each tract from V1 (the block and tract level results for V1 were also provided in the spreadsheet for reference). But it was still only an estimate. That's why we provided all the facilities, not just those with a "yes." (Also, some regions are interested in high block level results even if they're not going to show up in NATA.)

Since we now have the full NATA results, we've been able to do a little digging into each census tract with an elevated risk and found the list of 9 facilities that we shared with you in the slides, mostly one per MSA. That doesn't mean that list is exhaustive. That just means that our first pass through found them. Ideally, you would do more digging when results are available, and you may find additional facilities you wish to examine. NATA just points out areas, not facilities, and is the starting point for further investigation. Does that help explain the difference in the two lists?

I know you're probably wondering when you'll have full results to start in on and I wish I could answer that question, but right now I do not know the answer. Once that happens, we'll be happy to work with you to try and "finalize" the list of facilities, however many happen to be on it. Thank you for not sharing the risk numbers with your states just yet. I remain optimistic that once we get the go ahead to share with you, we'll also be allowed to share the numbers with the states. Let us know if you have additional questions.

Thanks,
Darcie

Subject: RE: EtO emission numbers

Hi Robin and Darcie,

I'm back in the office and getting caught up, and trying to understand Darcie's response, which came in while I was out.

The V2 spreadsheet we had been using to plan and to brief our managers prior to the OAQPS June 14 briefing contained 20 EtO facilities in R6 states. It was a V2 spreadsheet Darcie sent to the regions on March 15, 2018. Of the 20 facilities, 13 had a yes in the column, "Is Census Tract Cancer Risk Expected to be > 100 in 1-million in V2?"

In the PowerPoint OAQPS used for the June 14 briefing, there are 9 EtO facilities listed with elevated risk, so our senior managers asked us why OAQPS had 9 EtO facilities in the PP and we had 13 in the V2 spreadsheet we had shared earlier. In advance of the briefing, OAQPS had mentioned that there was a revised list expected soon, so we all thought the list of 9 was the revised list. We shared the 9 names with the states (not the risk numbers), and asked you for the emission data to go with the 9.

Can you help us understand how you came up with the list of 9? If it's not based on new emission data, as we assumed, how did you cut the V2 list of 13 down to 9?

Thanks,

Darrin

Hi Cindy –

You guys are hitting all fronts! I've heard from Josh and Anupa as well, so please share with them too.

You are not missing anything; nothing has been sent. There is not any new emissions data from what is in that EtO spreadsheet. There has not been an official NATA update released. The only thing you have is the information in the slides at this point other than the EtO spreadsheet with our estimate of what risks to expect in v2. All that information is still current since no changes have been received for those facilities (as shown in the slides).

As for maps, there's the one in the slides with all the MSAs in Region 6 and then the one in the specific area in LA. Was there something else specific you're thinking of? Let me know.

Hope that helps somewhat.

Darcie

Good Morning, Darcie,

I'm just checking with you to see if there is an official NATA update that's been issued yet? All we've heard is the informal information sent to our Air Enforcement Section Chief Darrin Larson (see below;)
I feel like we should be doing something, and instead, we're waiting? We are trying to pull together maps showing these facilities, but I'm also guessing the professional map-makers there, probably already have detailed graphics?
Was something else sent out and did we miss it?
Thank you,
Cindy Parker

Subject: EtO emission numbers

Robin Langdon of OAQPS called me after our conf. call yesterday, to discuss when OAQPS could provide us with the latest emission data for the 9 facilities on the slides OAQPS shared with us during the June 14 briefing. She said they need to brief Wehrum prior to sharing the latest information (risk numbers, etc.), but agreed to provide us the emission numbers on Monday. We can share the emissions data with the states, but she asked that EPA and the states hold off on reaching out to the facilities using this newest data until after the Wehrum briefing, which is set for next Wednesday.

Here is the current list of 9 EtO facilities:

Union Carbide Corp - St Charles Operations (Dow Chem.)	Louisiana
Port Neches Plant (Huntsman Corp.)	Texas
Air Products Performance Manufacturing Inc - Reserve Plant	Louisiana
Shell Technology Center Houston	Texas
BCP Ingredients Inc (Balchem Co.)	Louisiana
Taminco US Inc (Eastman Chemical Co.)	Louisiana
Santa Teresa Facility (Sterigenics)	New Mexico
Midwest Sterilization Corp	Texas
Texas Operations (Eastman Chemical Co.)	Texas

Just got off an Air Division Director's call and OAQPS is really pressing to make sure the emissions numbers are confirmed because Bill W. wants to release the week of 8/27.

Looked like most folks were available.

I would like to discuss current status and see if we can divide and conquer.

Subject: RE: 2014/2016 EtO emissions from Sterginics in NM?

Thank you.

Not sure how this will be characterized when NATA is released. NATA is based on 2014 emissions and these reductions happened afterword. Best case we will get modeling based on newer emissions. More likely the data for Sterigenics will be footnoted to explain the more recent reductions.

We will keep you guys posted as we get closer to the release.

Hi Guy,

I spoke with the permit writer and the confirmed that the facility installed new equipment in 2015. They think the emission reductions were a result of the modification to the facility.

Thanks,

Mike

Michael if you get a chance can you give me a call at 214-665-7242 regarding the Sterigenics facility in Santa Theresa.

You may or may not have heard, risk numbers associated with Ethylene Oxide have changed significantly and as a result, some of the Ethylene Oxide sources are showing up now in the coming National Air Toxics assessment.

We think based on the TRI data below and some permit info as well that the Sterigenics facility has reduced its emissions significantly and I just wanted to confirm that NMED is seeing the same thing.

Starting with Reporting Year 2006, TRI Facilities began reporting NAICS codes, instead of SIC codes, to identify their Primary Business Activities.

NAICS Codes for 2016

NAICS CODE	PRIMARY	NAICS DESCRIPTION
561910	YES	Packaging and Labeling Services

Then here are the stack (point) and fugitive emissions for ethylene oxide – I see there are no reports for 2017, is site still active?

Names and Amounts of Chemicals Released to the Environment by Year.

For all releases estimated as a range, the mid-point of the range was used in these calculations. NR - signifies nothing reported for this facility by the corresponding medium. Rows with all "0" or "NR" values were not listed.

Chemical Name	Media	Unit Of Measure	2016	2015	2014	2013	2012	2011	2010	2009	2008	2007	2006	2005	2004	2003	2002	2001	2000	1999	1998	1997	1996	1995

Hi Jeff,
Steve Thompson is asking if the EtO emissions in TRI have been reduced by 83% in 2016 vs 2014. If you send the emissions for those 2 yrs, I can do the calc.

Thank you,
Anupa

Are you free this afternoon?

Have we received the additional requested information from OAQPS?

Ex. 5 Deliberative Process (DP)

LDEQ and TCEQ have both requested a coordinated effort and we need to make sure that OAQPS is aligned with bringing in the states now.

Subject: Recommended Criteria for choosing facilities to focus on for early reductions under NATA

On yesterday's call, we were asked to recommend criteria for prioritizing facilities to work with for early reductions while HQs works on rule revisions.

Based largely on the charts below, I believe we should Ex. 5 Deliberative Process (DP)

Ex. 5 Deliberative Process (DP)

Three facilities would be the focus:

Ex. 5 Deliberative Process (DP)

I see this as having following advantages:

Ex. 5 Deliberative Process (DP)

Please let me know your thoughts because I imagine that enforcement will continue to carry a great deal of the load in investigating these facilities.

Hi, Kelly,

We are finalizing our NATA assessment and need to verify 2014 ethylene oxide emission numbers for two Louisiana facilities.

Taminco, USA, Inc, St Gabriel, Iberville Parish, emissions of 1.1 tons

Sasol Chemicals, LLC, Westlake, Calcasieu Parish, emissions of 6.3 tons.

Can you please confirm these numbers with both of these facilities? We need responses by COB today. If you are not able to do this, can you please forward your contact information for these two facilities so that we can call?

Thank you,

Mike, all,

After hearing the criteria of 1000 in 1M risk for ethylene oxide for the targeted short term action, R6 requests that you remove Air Products Performance

Manufacturing Inc—Reserve Plant, LA from the facilities' short-term action list. We can pull it in functionally after 2014 NATA is released, but prefer it is not included on the list. I discussed this with the R6 DRA, and he agrees.

Attachments: 2014 NATA Results Summary_Special Purpose Call.pptx; 2014 NATA Results by Region.pptx
Location: Line 866-299-3188 code: 707-6865#

Start: 7/24/2018 7:00:00 PM
End: 7/24/2018 8:00:00 PM
Show Time As: Tentative

Required Attendees: Adams, Elizabeth; Arnold, David; Banister, Beverly; Bray, Dave; Conroy, David; Daly, Carl; Donaldson, Guy; Fernandez, Cristina; Filippelli, John; Hamjian, Lynne; Hamlin, Tim; Hastings, Janis; Hestmark, Martin; Iglesias, Ariel; Jay, Michael; Jones, Rhea; Kemker, Carol; Koerber, Mike; Kornylak, Vera S.; Lakin, Matt; Lewis, Josh; Mathias, Scott; Mooney, John; Moraff, Kenneth; Morales, Monica; Nam, Ed; Price, Lisa; Smith, John; Stenger, Wren; Tsirigotis, Peter; Wayland, Richard; Weber, Rebecca; Whitlow, Jeff; Wood, Anna; Wood, MelanieL; Langdon, Robin; Smith, Darcie; Truesdell, Raymond; Palma, Ted; Caparoso, Jennifer; Strum, Madeleine; Cozzie, David; Davis, Alison; Bremer, Kristen; Riha, Kristin; Rodman, Sonja; Anderson, Lea; Sasser, Erika
Optional Attendees: Verhalen, Frances; Bradley, Megan

Update: Adding materials.
Confirming the correct 3ET/12PT call.

Purpose: To discuss potential EtO health risks identified through NATA results, and next steps in the NATA process.

National Air Toxics Assessment (NATA): 2014 Results Summary

Special Purpose Call for Air Division Directors

July 24, 2018

Key Messages

- NATA is a screening tool that identifies areas for further analysis
  - It does not single out one area of the country as having the highest risks
  - It uses estimates of emissions and computer models to approximate risks; it is not designed to determine actual health risks to individual people

Ex. 5 Deliberative Process (DP)

- Nationwide, emissions of air toxics are decreasing, but local areas still face challenges

NATA Approach

- Screening-level characterization of air toxics across the nation
  - Nationwide assessment with census-**tract** resolution (about 74,000 tracts)
  - Based on air quality modeling of emissions from stationary, mobile, biogenic sources, and fires using the National Emissions Inventory (NEI)
  - Ambient and exposure concentration estimates for 175 HAP plus diesel particulate matter (DPM)
  - Cancer and noncancer risk estimates for about 140 Clean Air Act hazardous air pollutants (HAP) with health data based on chronic exposures
- This is the 6th NATA (2014 NATA)
  - Previous assessments for inventory years 1996, 1999, 2002, 2005, 2011
- Primary NATA Uses
  - Planning tool for EPA, state/local/tribal organizations
    - To identify locations of interest for further study
    - To prioritize pollutants and emission sources/types
    - To inform monitoring programs
  - Serve partner needs by developing innovative data and communication tools

Limitations

- Emissions, modeled ambient concentrations, and estimated inhalation exposures are only from outdoor sources via the inhalation route of exposure
- Results are more uncertain at finer geographic scales
  - Surrogates used to allocate mobile and nonpoint source emissions
- Results should not be used to compare risks among different areas of the country
  - Underlying emissions data vary in level of detail from state to state
- Results should not be compared between NATAs
  - Changes in results are due to actual emission changes as well as the use of different modeling and emissions processing techniques. In addition, other assessment inputs, such as meteorological data and health benchmark values, change over time.

2014 NATA Analytical Steps

Compile National Emissions Inventory (2014 NEI)

2014 NEI includes stationary, mobile and natural sources (fires, biogenics).

NATA includes 175 HAP and diesel particulate from mobile sources.

Estimate ambient concentrations of air toxics across the U.S.

Uses CMAQ and AERMOD to predict census-tract ambient concentrations nationwide.

Estimate population exposures

Includes an exposure model (HAPEM7) to account for human activity data, commuting patterns, and near-roadway exposures.

Characterize potential public health risks from inhalation

Census-tract level cancer and noncancer risks nationwide.

Improvements & Updates for 2014

- Inventory:
  - ***Updated spatial allocation for mobile and nonpoint sources***
  - NEI improved in many areas: e.g., oil & gas, onroad, nonroad, commercial marine vessels
  - Areas outside CMAQ domain (AK, HI, PR, VI) better characterized for AERMOD modeling
  - New emissions processing tool built for preparing AERMOD emissions
- Photochemical/Dispersion Modeling:
  - In CMAQ: improved boundary conditions and carbon tetrachloride treatment; nine more HAP modeled than for 2011 NATA
  - More spatially refined meteorology using prognostic meteorological modeling (WRF)
- Exposure Modeling:
  - New features of HAPEM 7, including updated population and commuting patterns, activity pattern data, and four additional commuting-related microenvironments
- Risk Characterization:
  - ***Updated health benchmarks – ethylene oxide, acrolein, benzo(a)pyrene***
- Outreach:
  - Updated Map App features
  - Potential story map

Pre-Release Results

Do not cite, quote or release

The NATA team is still performing QA/QC
of the data prior to public release

Ex. 5 Deliberative Process (DP)

MSAs with Elevated Cancer Risks

2014 NATA Version 2

Ex. 5 Deliberative Process (DP)

Ex. 5 Deliberative Process (DP)

Ethylene Oxide Risks

Ex. 5 Deliberative Process (DP)

- Data review activities:
  - OAQPS contacted trade associations and facilities
  - Regional staff also contacted states and facilities
  - Any revised data received to date has been incorporated into NATA or evaluated for appropriateness for inclusion

Facilities by Region w/Elevated Risks

2014 NATA Version 2

See separate file *2014 NATA Results by Region* for tables of facilities by region

Moving Forward

- Planned Release: Mid-August 2018
- Steps Before Release*:
  - July -- briefings for Office Directors, AAs, and Regions
  - July 9 (week of) – share NATA results with regions
  - July 16 (week of) – webinar with regions, outreach to specific states or facilities
  - July 23 (week of) – webinar with states, including Q&A session
  - Early August -- share results with state/local/tribal agencies for 2-week preview period

**These dates could change if new data is identified during the review. The timing of the state review is also flexible depending on what is needed for each state regarding EtO communications and outreach.*

Communications and Outreach

- HQ plans to prepare general materials on NATA and ethylene oxide, including:
  - Q & As
  - Talking points
  - Fact sheet(s)
- We stand ready to support the regions (and their states) by developing materials specific to your states/localities, including:
  - Regional talking points
  - Draft press releases
  - Other targeted materials as needed

Appendix

Results, Outreach, and Documentation

- Tabular results by pollutant and source type:
  - Emissions (facility, grid, county level)
  - Ex. 5 Deliberative Process (DP)
  - Generally used by researchers, data-savvy users
- Visual display of tabular results in interactive Map App
  - Can help users identify the sources and pollutants that contribute to potential risks in their community
  - Available on tablets and smartphones
  - Often used by the press
- Webpages with methods, results, FAQs and other references
- Technical support document and related documentation

State/Local/Tribal Outreach & Engagement

- NATA is developed with our regional and state/local/tribal partners, from NEI development through to NATA release, over multiple years

Building on Fran's talking points, how about these for NMED

- The NATA map highlights any metropolitan statistical area (MSA) that has a census tract where risks are estimated to be elevated.
- This does not mean the risks are elevated throughout the MSA.
- The elevated risk associated with the Las Cruces MSA results from elevated risk for a single Census tract in the Santa Teresa area.
- This Census tract contains a source of ethylene oxide, Sterigenics.
- While the NATA estimates do not have sufficient resolution to estimate the risk on a smaller than Census block scale, we note that the facility is not in close proximity to residential areas.
- importantly the Sterigenics facility has put in pollution control equipment that have reduced its emissions by 83% since the 2014 NATA estimate which is expected to address the elevated risk.

Subject: RE: ERRATA Change: can we have a pow-wow about NMED, pls?

When I spoke with Liz Kuehn yesterday, she wanted to know why she had an EPA email (from Josh and I) that Sterigenics wasn't a concern – it was not at the time, it's an old email – and then suddenly the second largest city in the state pops red, and the Sterigenics facility is 30 mi away. She questioned the MSA, and including Las Cruces in the Sterigenics area, meaning that the population of Las Cruces was at risk. And we had told her not to worry about Sterigenics. She had already spoken to Fran when she called me. I sent her to Darcie.
I don't know that we can change the MSA designation, but maybe some talking points to help them out?

Subject: ERRATA Change: can we have a pow-wow about NMED, pls?

- NATA map is located at the metropolitan statistical area (MSA) locale. Thus a facility in Santa Teresa is associated with the Las Cruces MSA.
- The assessment is for a specific area within the MSA. In this case, the elevated risk is associated with a facility in Santa Teresa.
- The facility in Santa Teresa shows modeled risk for residents to the west at approximately 1 mile. There may be a school in this area.
- EPA has added a notation to the MAP APP for Santa Teresa that indicates that the emissions are based on information from the 2014 EI or TRI and that these emissions have changed after the 2014 EI or TRI was submitted.

Subject: Specific facility information

Hi, Nevine,
We are searching for facility-specific information on 3 facilities on our NATA list. We will need to phone them about their emission numbers, so we are searching for the name of the facility health & safety supervisor at each facility.
Josh searched through ECHO yesterday looking for a name, and couldn't find it.
It's only 3 facilities, but this effort has created so much drama for us, you wouldn't believe it.

Is this something you could help us find in ECHO, or show us where to find it?

Thank you,

Subject: RE: Ethylene Oxide comments from R6 states during IRIS comment period

Darrin said he had heard that TCEQ submitted comments when our IRIS changes for EtO were going through the public participation process. So Fran is tracking it down.
That's all. And I expect it will end there, as its pretty clear none of the comments came from TCEQ or any of our state agencies. Don't sweat it.

Subject: RE: Ethylene Oxide comments from R6 states during IRIS comment period

Hi – apologies for the delayed response, I was out of the office yesterday.

All comments from states would have been put into the EtO Docket on regulations.gov. You can view all of the public comments on regulations.gov by searching for the EtO docket EPA-HQ-ORD-2006-0756. It looks like there were 51 public comments.

- Use the advance search and search by Docket Id (see below)
- From the results list – click on "Open Docket Folder" (see below)
- Scroll down to see the comments – some comments have attachments that are viewable

I should be able to download the metadata from the docket from the internal database fdms.gov. It looks like my password is currently invalid – I will try to get it straightened out today and will do my best to send you the list in a spreadsheet.

Feel free to reach out if you have questions.

Vicki

Subject: Ethylene Oxide comments from R6 states during IRIS comment period

John,
Do you know if any of the Region 6 states (AR, LA, NM, OK, or TX) submitted any comments during the ethylene oxide IRIS comment period? TCEQ asked for comments about toxicity data regarding ethylene oxide for their use last November.

Thank you, Fran

Darcie,
In looking at the numbers, it does not appear that there is a linear connection between the September and December cancer risk calculations – and there should be, if the only adjustment was the risk factor (x56). I am confused. Can you explain?

Subject: RE: NATA reviews

Hi Fran –

In December 2016, IRIS released a new URE for ethylene oxide that was 56 times more potent. We went ahead and included the value in our most recent round of point source modeling from December so that you guys would have time to review the results. Here's a link to the IRIS assessment, if you're interested: https://cfpub.epa.gov/ncea/iris2/chemicalLanding.cfm?substance_nmbr=1025

Madeleine has contacted LA about the Union Carbide facility, and a few others, and they have said they reviewed them and don't have any changes to the emissions. I'll forward you that email exchange.

As for risks, you want to be sure that you're also reviewing the files from December as that's where the EtO risks show up. For example, for the Union Carbide facility, it isn't 22 in 1 million, but rather 1766 in 1 million. (Sorry for the bad news!) I've pasted below the top facilities in LA.

Please feel free to contact Ted at (919) 541-5470 for additional information about risks at R6 facilities or contact any of us with additional questions.

Thanks,
Darcie

Subject: NATA reviews

We are starting the NATA data reviews (rebuilding institutional knowledge). And there is discussion about ethylene oxide.

What change in risk evaluation has occurred that is causing EtOx to pop? I have attached what we think is the facility with the highest emission for R6, and in LA near LaPlace.

My staff and I are playing catch up and appreciate your assistance in educating us on this topic.

Mike, all,

After hearing the criteria of 1000 in 1M risk for ethylene oxide for the targeted short term action, R6 requests that you remove Air Products Performance Manufacturing Inc—Reserve Plant, LA from the facilities' short-term action list. We can pull it in functionally after 2014 NATA is released, but prefer it is not included on the list. I discussed this with the R6 DRA, and he agrees.

Attachments: RY17-NA-Ethylene Oxide List-July2018.xlsx

Hi –

FYI.

As you know, we work with the TRI program to review data as part of NATA, for example for some of the facilities on the review list from 2014 version 1. And, the TRI program is currently reviewing 2017 submittals and has identified some facilities to go through "data quality calls" between now and the end of August. The attached spreadsheet contains a list of these facilities with respect to EtO emissions. We wanted to bring this to your attention, but please work with your regional TRI staff if you have questions about this list, the initial 2017 TRI submittal, or the result of the data quality calls.

Thanks,
Darcie

Subject: TRI 2017 initial data quality calls

This is the list of TRI facilities that will be going through "data quality calls" as a result of the 2017 TRI submittals. A data quality call is EPA-TRI program (or contractor) calling a facility and asking about the 2017 emissions/calculations etc. For example, if it is no longer reporting did it make a change that it is no longer required to report (threshold change, NAICS change, etc.).

Thanks, Guy. I looked at the facility spreadsheet, and the tract level risk numbers went up for several of the facilities in our region.

I added the facility names for Huntsman, Eastman, and Sterigenics to the spreadsheet and did and R6 sort (attached). It seems like it would be helpful for the states to have this information. Since the states already have the NEI info. for 2014, they'll know the emission amounts associated with the risk number.

Subject: FW: ethylene oxide emissions - NATA review

Checking up on a few things today:

1) Can we verify what the permit limits for the facilities discussed below are? I think they are on Nevine's chart. If not, we should ask her, if we have the permits posted, to verify what their EtO limits are.
2) I sent Nevine an email to check on permit limits for Bayport Underwood – it is the Pasadena location of Lyondell Basell. Will forward you the email I sent her.

If the reported emissions are below the permitted levels for these facilities, then they may drop off the list?

Another question – do you know if the change from census block to census tract is the only reason some of the facilities dropped off? That's the premise we've been working under, but I wonder?

Hope you had a good weekend.

Cindy

Hi Kelly
There are 2 more facilities (listed below) that I don't have a record of your reviewing. Can you let me know if these emissions (columns highlighted in yellow) are correct? These facilities cause the tract risk to exceed 100 in a million:

Note that details on the process/release point (modeling file) ethylene oxide emissions are attached.

Thanks!!!

Subject: ethylene oxide emissions - NATA review

Hi Kelly,

A number of Louisiana facilities have ethylene oxide (EtO) emission estimates that could result in highly elevated tract risks. As we indicated in our January 2014 NATA modeling update (email from Sally Dombrowski 1/27/2017), the cancer health benchmark for Ethylene Oxide (EtO) was updated by EPA in December 2016 (https://cfpub.epa.gov/ncea/iris2/chemicalLanding.cfm?substance_nmbr=1025) and cancer risk levels for this pollutant are approximately 50 times higher.

In terms of annual emissions, the largest is Union Carbide, at about 15 tons EO emissions.

State or Tribe	FIPS	County	EIS facility_id	agy_facility_id	facility_name
Louisiana	22089	St. Charles	7202911	2083	Union Carbide Operations
Louisiana	22047	Iberville	7451011	27495	BCP Ingredien Inc
Louisiana	22047	Iberville	5504811	3263	Taminco US Inc
Louisiana	22095	St. John the Baptist	5287111	13560	Air Products P Manufacturing Plant
Louisiana	22005	Ascension	8465611	2049	BASF Corp - Ge Site
Louisiana	22019	Calcasieu	8468011	3271	Sasol Chemica Charles Chemi

These (along with a few others)are all on the "Jan2017 Update" of the SharePoint check list https://usepa.sharepoint.com/sites/oar_Work/NATAREVIEW/2014Facility/Data/CheckList/checklist.xlsx?d=w276998ab32364c90a67e05342b2904ac

Have you verified the emissions and release parameters for these facilities?

Attached is the document we spoke of – the "updates to emissions" page. It contains where we know a facility has reduced emissions since 2014 (Sterigenics is in this bin) and other updates. This will be on the public-facing website.

I have spoken with Cindy about changes for the talking points.

And, I will look at the Map App and website later this afternoon, as we discussed, for any place the MSA name appears.

Thanks,
Darcie

Yes, same spreadsheet as here.
At the bottom of page 2 of the word document, is a chart that shows, by HQ count, how many facilities in each region. For R6, it shows 13. If you count up the 'yes' answers in column K of the spreadsheet, you also get 13.
Since the emissions are still estimates, until HQ gets confirmation, we went with 13. Thinking, its better to brief 'a number of facilities fell off the list', rather than expand the number. And, we thought Wren would also be hearing that number at the ADD meeting.
I can see how you got your 10. If you'd rather go with 10, that's good. Easy change.

Subject: 2014 NATA version 2 - DRAFT ethylene oxide point source risks

Hello –

You are receiving this email because you are a member of the ATRA EtO group or a NATA Regional Office lead or both. Either way, you know that in version 1 of the 2014 NATA we saw ethylene oxide emissions from point sources driving risks at the census tract level. Since that time, you have reviewed the data, worked with your states to review the data, and provided revisions back to us. We have incorporated those changes from V1 of the 2014 NATA and in preparation for version 2, have re-modeled the EtO-emitting point sources first. This is your first look at those results. **Please remember that risk results are not to be shared outside the Agency**.

The attached pdf document provides: 1) a summary of the events of the emissions review, 2) a regional count of facilities in the attached spreadsheet, and 3) an explanation of the data fields in the attached spreadsheet file. The attached spreadsheet contains a list of facilities that had a census *block* level cancer risk greater than 100-in-1 million in either version 1 (column J) or version 2 (column K). These are all provided so you can see how any data changes impacted the risk results. As you will see, there are still some facilities where we have estimated a census *tract* level

cancer risk of greater than 100-in-1 million in version 2. These are indicated with a "Y" in column K. (An exact risk number is not provided because the estimates only take into account the AERMOD modeling; CMAQ is not yet complete so we have not combined the two results and we have given you our best estimate.)

We know that some of you are actively working with your states on the data review. Thank you for your time and effort doing that! There are some columns in the spreadsheet that may help focus your conversations, for example, column N, which provides information on how the EtO emissions were calculated for the process with the most emissions. And, our engineers are also working through their contacts to continue to verify the emissions and other inputs to the modeling. (If you need to contact them, Jennifer (chemical manufacturing) and Jonathan (sterilizers) are in the "CC" field.) There are columns in the spreadsheet to indicate what has been done and what type of changes have been received or are expected. **However, without additional information, there will likely be little change to these results.** If you have received additional info or revisions, please work with Madeleine to get those to us.

As you continue to work through this situation, please let us know if there's anything we can do to help or if there's additional data you need. We are happy to walk through this on the next ATRA call or set up a special purpose call. As always, if you have questions please feel free to contact me, Ted (palma.ted@epa.gov, 919-541-5470), or Madeleine (strum.madeleine@epa.gov, 919-541-2383).

Thank you,
Darcie

1) Secretary Brown would like to see NATA maps. As of today, the maps are not available. However, we have the draft map from the 7/17/18 presentation that is close. . Cindy will be sending you a powerpoint. Slide #5 shows MSAs.
2) He is interested in details regarding the communication plan for NATA and particularly are how long are the States going to be able to review before the results are released to the public. Cindy will be sending you a powerpoint. Slide #8 shows Moving Forward timeline.
3) He is also interested in the modeling we have done for Denka. (Michael)

Steve called me to give me a heads up of things that came up from their meeting with Sec. Brown regarding Denka and NATA.

Secretary Brown will be in the Regional office on Wednesday 8/15 (apparently after being in Ada for a meeting and before the Love field meeting)

1) Secretary Brown would like to see NATA maps
2) He is interested in details regarding the communication plan for NATA and particularly are how long are the States going to be able to review before the results are released to the public.
3) He is also interested in the modeling we have done for Denka.

Steve believes he doesn't necessarily want the info sent to him but would like to see it on Wednesday when he is the office.

Fran, please pull the draft roll out strategy and send to me so I can have for Wednesday if necessary.
Also check on availability of Maps.

Michael,

Please work with Bob to pare down the modeling power point to something that could be present if necessary. We probably need it by Tuesday to show Wren.

FYI.
Note - the number of facilities on Darrin's spreadsheet is 20. The number of facilities mentioned in the We Care is 15. EN shared an earlier list of facilities, and we know some of them have dropped off - ie, Baxter Healthcare in AR - it dropped off when the data went from being sorted at tract level (V1) to block level (V2). But this particular spreadsheet was what EN shared with LDEQ, and since Anne was meeting/travelling/talking with Dr Brown, EN wanted to be sure Anne had the same info Dr Brown had.
I tell you this in case we have to explain this data in the future.
Josh - another fine example that, somehow, we need to be sure when data is pulled from spreadsheets we have tagged it, dated it, or named it somehow, so we know where that data came from and when it was pulled - that's just my two cents - some of the info on this spreadsheet is way old!!
Fran, should you hear any feedback from the RA's convo with LDEQ, can you share, pls? Curious to know the state's thoughts.

Cindy,

In case you get asked about the spreadsheet I just sent to David for Anne's use, it's all 20 facilities being evaluated for inclusion in NATA on the most recent list (V2), not just the 13 likely to remain on the list at this point (the number in the RA briefing paper). We shared w/ LDEQ the full list of LA facilities, and didn't want to cause confusion by leaving off the expected "no" facilities, especially since they're not off the list until they're officially off the list.

I've got non-stop meetings/conf. calls until 1 pm, but I just took a look at the slides.

I didn't get a spreadsheet from Erika—just the slides. Did you? If not, can you reach out to Darcie and ask her if she has a spreadsheet w/ updated numbers? The slides have names but not numbers.

I think we can tell Cheryl and Wren that we just got the slides and are seeing if we can get a spreadsheet with numbers, and are planning to share updated lists with the states (w/out risk). It would be good to share emission amounts, which aren't in the slides.

Subject: RE: NATA action items from today's call

Well I am hesitant to send to the States if we don't know why the numbers are different. I'm pretty sure I a right that its now showing total risk vs the EthOx specific risk shown below

Subject: RE: NATA action items from today's call

I'm not sure why the tract numbers are different. For Version 2, which is what we've been using for all of our spreadsheets, there wasn't a V2 tract number, just a reference to the V1 tract number, V2 and V1 block numbers, and a yes/no to the question as to whether it was likely to be above 100 at the tract level.

Facility Name	State	City	Facility Typ	V1 MIR @ block (in 1 million)	V2 MIR @ block (in 1 million)	V1 Max Tract Cancer Risk (in 1 million) (from EthOx specific tract file)	Is Census Tract Cancer Risk expected to be > 100 in 1-million in V2?	V1 EtO emissions (tons)	V2 EtO emissions (tons)
Union Carbide Corp - St Charles Operations (Dow Chem.)	Louisiana	Taft	Chemical Plant	1,760	1,680	662	Yes	15	15
PORT NECHES PLANT (Huntsman Corp.)	Texas	PORT NECHES	Chemical Plant	1,416	1,456	229	Yes	11	11
Air Products Performance Manufacturing Inc - Reserve Plant	Louisiana	Reserve	Chemical Plant	713	831	196	Yes	2	2
SHELL TECHNOLOGY CENTER HOUSTON	Texas	HOUSTON	Chemical Plant	422	291	195	Yes	0.5	0.5
BCP Ingredients Inc (Balchem Co.)	Louisiana	St. Gabriel	Sterilizer	2,255	2,539	144	Yes	3	3
Taminco US Inc (Eastman Chemical Co.)	Louisiana	St. Gabriel	Chemical Plant	1,099	1,330	144	Yes	1	1
Santa Teresa Facility (Sterigenics)	New Mexic	Santa Teresa	Sterilizer	136	135	131	Yes	3	3
Midwest Sterilization Corp	Texas	Laredo	Sterilizer	219	219	117	Yes	8	8
Sasol Chemicals (USA) LLC - Lake Charles Chemical Complex	Louisiana	Westlake	Chemical Plant	675	841	76	Yes	6	6
TEXAS OPERATIONS (Eastman Chemical Co.)	Texas	LONGVIEW	Chemical Plant	1,293	1,355	51	Yes	7	7

Subject: RE: NATA action items from today's call

Thanks, Guy. I looked at the facility spreadsheet, and the tract level risk numbers went up for several of the facilities in our region.

I added the facility names for Huntsman, Eastman, and Sterigenics to the spreadsheet and did and R6 sort (attached). It seems like it would be helpful for the states to have this information. Since the states already have the NEI info. for 2014, they'll know the emission amounts associated with the risk number.

ID	Facility	City	State	Region	V1 Tract	NATA tract	NATA block
7451011	BCP Ingredients Inc	St. Gabriel	Louisiana	06	144	2000	2,539

Subject: RE: Toy drive info, and your input needed

Sorry it's taken me so long to get back to you, this mother Trucking NATTS thing has sucked me into another quagmire. Is this some sort of test that Fran is doing on me? See how many big ticket items on person can take? (Denka, NATA, Air Toxics, now NATTS). Just kidding I'm fine with it. So for number 1:

1. I'll get to work on the spreadsheet like we talked about yesterday. As far as chemical properties of EtO I would say just the basics that we can pull from the EtO website that we have used in the past and maybe the fact that we know it is a component of antifreeze.
2. I'll do my best to look for boxes.
3. I'll work on the Angel Tree signs for ya. I'll send you a printers proof before I print them for your approval.

Anything else please let me know, I will be violently banging my head against my desk to knock some common sense into me. Talk to you later.

Subject: RE: Toy drive info, and your input needed

Yuck.
Here's what I need help with today:

1)briefing sheet for tomorrow. I'm going to start on bullets for the briefing sheet; will you do the spreadsheet portion? How much info should we need to include on the chemical properties of EtO?

2)scrounging up zerox paper boxes.

3)big boxes for the random gifts. Years past, we've used big boxes covered in Christmas wrapping paper; Janice said she thought they got thrown away? I've asked Debra if they have any.

4)adding Multimedia Division to the directional Angel Tree signs. Can you do this? The printer in the room beside my cube prints color, and we can print them there.

5)i don't know what else.

Ohh, thank you! I just have to get this briefing paper done; I knew I needed to be in the office to get the angels done, but I just couldn't. I've done nothing but this for the last 4 days. And we're so much better off than the CFC campaign. They're both a mess this year.

I will be in tomorrow and can help set up the Front Office, too.

If you don't mind doing the master list, that would be great. The cards for angels have a serial number on them, and that's what we need to record. The Forgottens don't have a name, they are for homeless centers, etc, apparently. Recommend looking what Rachel and Debra have done on 9, it really gelled for me when I saw their set up. Fran recommended adding a sticky note pad to the set up, so folks can write down what they're signing up for, so we will add that.
I think the master list needs to show serial number, which floor/contact it was distributed to. And then when completed, we can cross it off. And add others as we get them. For the Forgottens, maybe just 'male 14-24'? I glanced at them, but not closely. I don't know how many of each category we have. Maybe you can find something on the cards without a serial number that will help us track them?
They are in my lateral above my phone, and it is not locked. My cube is on 11th floor. If you go down the stairs on the gym side, and make a left, my cube is the first one on your right. I'm over in the corner by Karen McCormick's office and the Gulf of Mexico conf room, if that helps. I think I'm in 11.017, but not positive!
There are a few extra red bags, if any of our cards don't have them.
Thank you. Whew, a sigh of relief. Thank you.

I was going for 8:30 – tomorrow morning. I am flexing today. I know its inconvenient, but I have to write a briefing paper for tomorrow morning at 9, and I haven't been able to get it done in the office!!
Let me see if Josh and I, and maybe Melissa, can get the area set up tomorrow morning or at lunch; I'll touch base with them. At least get set up and started, you can refine and decorate better on Monday? Can you find some Xerox paper boxes?
The angels are in my lateral, but not yet ready to distribute. Could possibly get them to you today, would you prefer that? Need to get someone to prepare a master list of what we've been assigned before distribution. I just didn't have time yesterday I picked them up after 4:00pm.
Let me coordinate a bit and see what we can do.

HI Cindy,

Depending on what time you're scheduling the meeting, we can use Wren's conference room. I think I like the scratch off better than the tabs. Also, just fyi, I'm in the office today until 12:45 and then out till Monday. If need be, I can meet with you individually and get my angels to post, etc…

Subject: RE: Toy drive info, and your input needed

Another note – I'm adding 6MM to the flyers, so for those of us on floors with other divisions, our division folks can find their way to our angels. Melissa, I spoke with Lorena Vaughn yesterday, she's doing Regional Counsel's and will keep their stuff on the other side of the floor, so it shouldn't be a problem for you. But it will be important for 7th floor and 11th floor. We can add 6MM or Multimedia Division, or something like that to the directional signs, if you want.

Subject: Toy drive info, and your input needed

Everyone,
I've received our angels – I'll schedule a quick meeting tomorrow to hand them out to all.

FYI – Rachel Matthews, one of the regional coordinators from EN, has one of their areas set up on the 9th floor – stop by and take a look, if you can – it's in a half-cube area at the end of the hallway near the women's restroom. The red bags for the toy items fit nicely into a Xerox paper box, so if you get a chance today, try to scrounge up as many as you can find. Of course, the other division Toy Drive contacts are doing the same, so they may be hard to find! We got a nice mix of categories, just like we asked for.

One question for you: note the file attached 'sample AT tag display'. Instead of doing pull tabs like our Ads asked us to, the Enforcement Division is doing a list and people can just scratch off what item they choose to purchase for an angel. EN has these forms hanging up, with an ink pen attached. On the 11th floor, we are using a substandard cube, and I believe 13th floor is also using a cube as well. Tell me what you think – are the scratch offs ok to use, or do you think we

need to use the pull tabs? Both will satisfy the need to NOT have a person's name hanging on the wall. ***Let me know what you think about using the scratch off instead of the pull tab.***

For the signage – Mike Adams has drafted a flyer for us; I'm getting him corrections today and can print tomorrow, and will send file in case you want to print more, too. Directional signs above can be printed, too – if you don't have easy access to a color printer – they are few – let me know, I have one close by.

A few more specific instructions, and I'll go over them tomorrow. Shouldn't take but a few minutes – less than 30 minutes. I'll find a room and send invites.
Oh, James McDonald wishes for the CFC Campaign and the Toy Drive Campaign to join forces and host a regional office chili cookoff. I went to a meeting yesterday to begin discussing. If you'd like to represent MM Division and help organize a regional chili cookoff, let me know. I believe the date discussed was Nov 28. No money can be involved, so not sure how they will finance the costs of cups, bowls, spoons, etc. That's one of the details to be worked out. They also talked about a division competition for chili chefs. Again, if you'd like to be involved in organizing, let me know.
Thank you for jumping in to help with this year's Toy Drive – an Angel will appreciate your efforts on Christmas morning!
Cindy

Hi Cindy,

Thanks for your help on the phone today. We think we are looking for the Title V permit applications, but I think in some cases the NSR Permit applications may contain what we need. To explain, we're looking for release parameter information for the different release points at each facility. We need details like stack height, stack diameter, stack temperature, stack flow rate, stack velocity, latitude and longitude of each release point, and process level emissions in tons. I appreciate your help in obtaining any documents which contain this level of detail.

Site Name	Street Address	City	County	State
LION OIL COMPANY	1000 MCHENRY DRIVE	EL DORADO	Union	Arkansas
CLEAN HARBORS EL DORADO, LLC	309 AMERICAN CIRCLE	EL DORADO	Union	Arkansas

Good Morning, Darcie,

I'm just checking with you to see if there is an official NATA update that's been issued yet? All we've heard is the informal information sent to our Air Enforcement Section Chief Darrin Larson (see below;)
I feel like we should be doing something, and instead, we're waiting? We are trying to pull together maps showing these facilities, but I'm also guessing the professional map-makers there, probably already have detailed graphics?
Was something else sent out and did we miss it?
Thank you,
Cindy Parker

Subject: EtO emission numbers

Robin Langdon of OAQPS called me after our conf. call yesterday, to discuss when OAQPS could provide us with the latest emission data for the 9 facilities on the slides OAQPS shared with us during the June 14 briefing. She said they need to brief Wehrum prior to sharing the latest information (risk numbers, etc.), but agreed to provide us the emission numbers on Monday. We can share the emissions data with the states, but she asked that EPA and the states hold off on reaching out to the facilities using this newest data until after the Wehrum briefing, which is set for next Wednesday.

Here is the current list of 9 EtO facilities:

Union Carbide Corp - St Charles Operations (Dow Chem.)	Louisiana
Port Neches Plant (Huntsman Corp.)	Texas
Air Products Performance Manufacturing Inc - Reserve Plant	Louisiana
Shell Technology Center Houston	Texas
BCP Ingredients Inc (Balchem Co.)	Louisiana
Taminco US Inc (Eastman Chemical Co.)	Louisiana
Santa Teresa Facility (Sterigenics)	New Mexico
Midwest Sterilization Corp	Texas
Texas Operations (Eastman Chemical Co.)	Texas

Danielle

I made the benzidine change. I will tagged out the benzidine data in the 2014 NEI v1 so that it will not be used in the v2. Here is my tagging comment: **"NATA Change-per Brenda Shine, stack test was below detection and 1/2 detection limit was used. Agreed on by Danielle Nesvacil <danielle.nesvacil@tceq.texas.gov> "**

Nonpoint and comments on the v1 tract risks are due Aug 11. EtO was due June 1 but I still need your review on the "priority" facilities – as soon as possible. Since we still have a few outstanding facilities (Texas EtO) that have not yet been reviewed, we developed a priority list of point sources and I put them on the SharePoint site (they are in the data library-- https://usepa.sharepoint.com/sites/oar_Work/NATAREVIEW/2014%20NATA-%20Tract%20Risk%20Review/Data/Priorty%20Facility%20List%20-based%20on%20tract%20risk.xlsx?d=wf75d0016720b45deac34508675f6f362). I've asked Cindy about them but I know she is out of the office so I put them in the earlier email I sent to you.

Please let me know if you have EtO changes for these high priority facilities as soon as possible since I need to finish up the point changes for the NEI v2.

HI Madeleine--

Thanks for your email. I don't have access to change those emissions in EIS, I need to work with our database administrator, Adam Bullock (cc'd), to accomplish that. We'll start looking into it ASAP and keep you updated.

I was under the impression that the EtO revisions were due Aug 11-- am I way off base? I'm still working these due to covering for co-workers who are out for various reasons.

Let me know if you need anything from me sooner related to either of the above issues or another issue.

Thanks,
Danielle

Subject: RE: NATA Review

With all tests being BDL, at least within EPA programs that I've worked on (emission factors, inventories, and reg. development), we set those emissions at zero since there is no indication that the pollutant is emitted. I think it is worth the NATA checking in with Texas regarding these emissions, but perhaps this issue is already being vetted? Ted?

Stepping back, the issue with NATA is that the emissions are being reported to NEI by the states, and their conventions may not match ours. The good news is that we have a NATA review process before NATA is released, and issues such as this will hopefully be identified. To the extent that a number that is based on a non-detect ends up being of consequence, the review process is designed to dig deeper to see if risks identified are real or not.

I think Ted may be gone for the next week or so, so we may have to wait until the week after next for resolution.

Thanks!

Brian

Hi Guys—

Just wanted to make you aware of what Im seeing in the NATA v1 results—having recently done the Refinery RTR, I was interested in how the NATA results would compare; further, as part of our groups QA of emission data for the chemical sector source categories, many of which are collocated at Refineries, had access to the disaggregated NATA risk results where I found some refineries that were considerably over 100/million; the highest was ExxonMobil in Baytown,Tx, which wouldn't surprise anyone, but most of the risk, 343/410, in a million was attributed to benzidine from fugitive or miscellaneous sources;

The benzidine was in the inventory based on stack tests from the 2011 ICR that were **below the method detection limit** for benzidine but being conservative they reported levels of benzidine at half the detection limit.

We decided in the Refinery RTR process not to model pollutants that were BDL if they were not present in any tests above BDL. I had several conversations with Brian about this but it seems like this issue probably won't go away and I wonder if we could make sure our policy is sound and consistent on how we treat highly toxic compounds flagged below detection. I think Andrew is also asking similar questions in Ethylene. I wonder because it seems like the convention for inventories and reporting may be different than the convention for risk modeling.

So bottom line, are you guys aware of a definite policy with respect to the treatment of highly toxic compounds that are shown to be BDL or can we at least make sure we're on the same page.

Subject: RE: NATA Review

Hi Brenda:

After you told me where to look, I cut a portion of the NATA report and sent it to Diane Otto at EM Baytown; that helped her track down the source of the benzidine data used in the emission number.

The benzidine data comes from the second stage to the 2011 ICR (as Diane calls it the 114 from OAQPS); it's the result from follow-up testing EM did as part of the questions in the ICR.

Their testing data results were **below the method detection limit** for benzidine but being conservative they reported levels of benzidine at half the detection limit.

I hope this is helpful.

This is the NATA run, so I believe it came from the national emission inventory v1 and not a response to a 114. It was not in the Refinery ICR 114 conducted in 2011. Ted can verify but he may be out today. It might have to wait until he comes back.

Hi Brenda:

I was asked to look at the benzidine issue (raised in your email below) at ExxonMobil Baytown. I spoke to Diane Otto at the refinery to see if she could shed some light on the source(s). Diane is looking into it now. Based on my conversation with her it would be helpful for me to have the source document for the benzidine fugitive emissions; e.g. was it an emission inventory or a response to a 114?
Additionally I was thinking that it may be originating at the olefins plant at the ExxonMobil Chemical Plant with is part of the Baytown complex.

Subject: NATA Review

Hello Frances,

I was looking at some of the NATAv1 information and I noticed that one refinery (Exxon Mobil, Baytown, Texas) had a particularly high risk value (410 in a million)—of which 343/410 --- 84% of the high MIR is attributed to benzidine from fugitive or miscellaneous sources; I worked on the recently completed Refinery RTTR and I know that there was no benzidine reported from this facility during the refinery RTR process or the 2011 information collection request. Further, we tested for it from cat crackers and found all results below detection; I'd like to flag this value for you as you work with states to conduct the NATA review to see if it is real. I can tell you that one facility reported benzidine in the 2011 ICR (Exxon Baton Rouge) from catalytic reformer vent. Although we modeled this emission, we also tested for it in catalytic reformers and also found it to be below detection limits.

Thanks. If you have any questions let me know. I'm at 919 541 3608.

Attachments: 2ethyleneoxidefacilities.xlsx

Hi Kelly
There are 2 more facilities (listed below) that I don't have a record of your reviewing. Can you let me know if these emissions (columns highlighted in yellow) are correct? These facilities cause the tract risk to exceed 100 in a million:

Note that details on the process/release point (modeling file) ethylene oxide emissions are attached.

Thanks!!!

Madeleine,
I reviewed these emissions and they are all below the permitted limit, so I have no reason to doubt their validity. See the updates to the chart below.

Subject: ethylene oxide emissions - NATA review

Hi Kelly,

A number of Louisiana facilities have ethylene oxide (EtO) emission estimates that could result in highly elevated tract risks. As we indicated in our January 2014 NATA modeling update (email from Sally Dombrowski 1/27/2017), the cancer health benchmark for Ethylene Oxide (EtO) was updated by EPA in December 2016 (https://cfpub.epa.gov/ncea/iris2/chemicalLanding.cfm?substance_nmbr=1025) and cancer risk levels for this pollutant are approximately 50 times higher.

In terms of annual emissions, the largest is Union Carbide, at about 15 tons EO emissions.

State or Tribe	FIPS	County	EIS facility_id	agy_facility_id	facility_name
Louisiana	22089	St. Charles	7202911	2083	Union Carbide Operations
Louisiana	22047	Iberville	7451011	27495	BCP Ingredien Inc
Louisiana	22047	Iberville	5504811	3263	Taminco US Inc
Louisiana	22095	St. John the Baptist	5287111	13560	Air Products P Manufacturing Plant
Louisiana	22005	Ascension	8465611	2049	BASF Corp - Ge Site
Louisiana	22019	Calcasieu	8468011	3271	Sasol Chemica Charles Chemi

These (along with a few others)are all on the "Jan2017 Update" of the SharePoint check list
https://usepa.sharepoint.com/sites/oar_Work/NATAREVIEW/2014Facility/Data/CheckList/checklist.xlsx?d=w276998ab32364c90a67e05342b2904ac

Have you verified the emissions and release parameters for these facilities?

go to the folder "January 2017 Updates"

Note that the each pollutant is the same ratio – December/September but it may not be 56 because in addition to the EtO risk change, we updated the MET data which could have impacted the modeled concentrations/risk results.

Darcie,
In looking at the numbers, it does not appear that there is a linear connection between the September and December cancer risk calculations – and there should be, if the only adjustment was the risk factor (x56). I am confused. Can you explain?

Subject: RE: NATA reviews

Hi Fran –

In December 2016, IRIS released a new URE for ethylene oxide that was 56 times more potent. We went ahead and included the value in our most recent round of point source modeling from December so that you guys would have time to review the results. Here's a link to the IRIS assessment, if you're interested: https://cfpub.epa.gov/ncea/iris2/chemicalLanding.cfm?substance_nmbr=1025

Madeleine has contacted LA about the Union Carbide facility, and a few others, and they have said they reviewed them and don't have any changes to the emissions. I'll forward you that email exchange.

As for risks, you want to be sure that you're also reviewing the files from December as that's where the EtO risks show up. For example, for the Union Carbide facility, it isn't 22 in 1 million, but rather 1766 in 1 million. (Sorry for the bad news!) I've pasted below the top facilities in LA.

Please feel free to contact Ted at (919) 541-5470 for additional information about risks at R6 facilities or contact any of us with additional questions.

Thanks,
Darcie

We are starting the NATA data reviews (rebuilding institutional knowledge). And there is discussion about ethylene oxide.

What change in risk evaluation has occurred that is causing EtOx to pop? I have attached what we think is the facility with the highest emission for R6, and in LA near LaPlace.

My staff and I are playing catch up and appreciate your assistance in educating us on this topic.

Subject: RE: emissions and release point changes - follow up

Danielle,
Thanks for sending this. I am very close to implementing these changes -- I just have a few questions – sorry about not asking these earlier.

1. For

Texas	48439	Tarrant	17086911	MOSIER VALLEY COMPRESSOR STATOLN

In particular,

agy_facility_id	unit_id	process_id	agy_unit_id	agy_process_id
1747	113029013	159869014	000005	000005

The VOC changed from 5.0703 tons to 0.0004 tons but the HAP VOC for many HAPs far exceeds that. For example: methanol is 0.0027 tons, acetaldehyde is 0.0091 tons, xylenes is 0.00889 tons hexane is 0.0012 tons, acrolein is 0.0056 tons and naphthalene is 0.003595 tons. It also doesn't make sense to have 0 benzene and 0 toluene yet nonzero values of the more trace HAPs that are emitted from that SCC such as tetrachloroethylene, vinyl chloride, biphenyl, ethyl benzene, 1,3 butadiene, etc.

Same issue for the below unit/process -- where VOC is changed to 0.0603 but HAP VOC far exceed that (formaldehyde is 0.5159) .

agy_facility_id	unit_id	process_id	agy_unit_id	agy_process_id
1747	113028913	159868914	000004	000004

2. For the hexavalent chromium change--

State or Tribe	FIPS	county	facility_id	facility name
Texas	48113	Dallas	4899011	MARSHALL STREET FACILITY

You have a change to hexavalent chromium should I also adjust trivalent? Was total chromium tested and I apply the same speciation factor or was hexavalent tested and you have no value for trivalent?

Same question for

State or Tribe	FIPS	county	facility_id	facility name
Texas	48309	McLennan	6892011	Precise Hard Chrome

Thanks much!

Hi Danielle
Sorry for not getting back to you as fast on this one – I was sick a few days last week and now pretty overloaded between the EIS submissions and change sheets to process.

I appreciate your efforts in consolidating the change sheets and also for taking the time to put in the detailed helpful explanations and look into the TRI data. I do have follow up comments/questions that I've attached in the blue highlighted cells. Can we discuss these and your other questions at 11:30 central time (12:30 Eastern) on Monday? Also is part2 of 2 (i.e., the attached) the only change sheet I need to process? Also on the release point change sheet are there just the 2 release points from the below facility that need to be changed and can we work through what that change should be?

State or Tribe	region_cd	county	facility_id	facility name
Texas	48201	Harris	4167011	CB&I HOUSTON PLANT
Texas	48201	Harris	4167011	CB&I HOUSTON PLANT

Thanks and looking forward to hearing from you Monday.

Subject: RE: Texas Priority Facility Check List

Thank you so much for the quick reply.

I accidentally omitted the EtO updates in the Texas Process Change spreadsheet. I have attached a new version of this spreadsheet with the changes. We communicated these changes to Region 6 (Cindy Parker) well in advance of the deadline, but neglected to include them in the email yesterday. I sincerely apologize.

Could we talk sometime about one Texas site, Mosier Valley compressor station? The site submitted updated emissions, but the TCEQ database does ***not*** have the EIS ID entered for the generators (emissions units), and I'm having a hard time completing all of the updates for this facility. I'm not sure the best way to proceed.

Thanks so much for your patience,
Danielle

Subject: RE: Texas Priority Facility Check List

Hi Danielle,

The risks are different because they are reflecting the 2 different modeling results – Sept 2016 vs January 2017. If the facility was in the Change sheet in Sept 2016 because it was over 10 in a million, we didn't make any changes to the change sheet, even if the risks went up in the January 2017 modeling to over 100 in million. We did make sure any facility, that based on the January 2017 modeling was greater than 100 in a million would be in the check list.

If you go to the View 1 comparison on SharePoint https://usepa.sharepoint.com/sites/oar_Work/NATAREVIEW/2014Facility/Data/January%202017%20Updates/NATA%202014%20Point%20max%20risk%20and%20hi%20Comparison%20File%20Summary.xlsx?d=wd698831460d94a5299d9658139068f39 you will see the comparison between the Sept2016 and January 2017 results -- the change in risks were due to a change in MET data and/or the ethylene oxide unit risk estimate updated.

The reason we didn't update the process change sheet to put in the January risk information was that some states had already sent in their data based on the September 2016 review so we did not want to put in the same facility twice. In addition there were no emissions changes between Sept2016 and January2017.

If the facility was not over 10 in a million in September (so it wasn't in the change sheets in September) but changed to over 10 in a million in January then it got added to the change sheets in the https://usepa.sharepoint.com/sites/oar_Work/NATAREVIEW/2014Facility/Data/January%202017%20Updates/NATA%202014%20Point%20max%20risk%20and%20hi%20Comparison%20File%20Summary.xlsx?d=wd698831460d94a5299d9658139068f39 folder on SharePoint.

Subject: Texas Priority Facility Check List

Hi--

For many of the sites, the facility total max cancer risk in the Texas Priority Facility Check List does *not* match the facility total risk in the Texas Process Change spreadsheet.

For example, the Priority Checklist lists a facility total max cancer risk of 1316.24 for "TEXAS OPERATIONS" in Harrison County, whereas the Texas48_Chg_Process spreadsheet lists the max cancer risk as 37.4.

Which version of the spreadsheet has the correct max cancer risk ?

Thanks,
Danielle

Hi Cindy
You asked about other regions with EtO facilities and how they compare to Region 6 and that you need this information before Monday for a meeting with your managers.

Below shows number of facilities with modeled MIRs > 50 and 100 in a million by region.

	number of facil > 100 in a million
Row Labels	**Count of EIS facility_id**
EPA Region 1	3
EPA Region 2	5
EPA Region 3	7
EPA Region 4	15
EPA Region 5	17
EPA Region 6	20
EPA Region 7	5
EPA Region 8	6
EPA Region 9	5
Grand Total	**83**

	number of facil > 50 in a million
Row Labels	**Count of facility_name**
EPA Region 1	3
EPA Region 2	5
EPA Region 3	11
EPA Region 4	18
EPA Region 5	28
EPA Region 6	22
EPA Region 7	5
EPA Region 8	7
EPA Region 9	8
Grand Total	**107**

I've attached the workbooks I used to come up with these 2 tables in case you wanted to see the emissions and where they come from (what type of release points and processes at these facilities). View3 has the process/release point level of emissions/risks and at sub facility level (most detailed) at any facility that emits ethylene oxide. I removed information on other pollutants emitted at these facilities so it would be small enough to email. Column AG has the **sub-facility** emissions (you have to sum them by facility to get facility level emissions). The other sheets are facility-level summaries for ethylene oxide (just risks) at the facility level.

Subject: NATA facility sources of concern for ethylene oxide based on preliminary assessment

Column O (highlighted yellow) shows where the source-specific ethylene oxide cancer risk is greater than 100 in a million in the Region. Column AG (highlighted orange). There are hospitals in this list probably due to their proximity to census block centroids which were modeled to. Their assessment included to new toxicity number for ethylene oxide and also a new set of meteorological data than has been used in the past. The met data utilized is from a 12 Km grid generated nationwide that was generated for use with EPA's CMAC model and is now considered by OAQPS as state of the art. In talking with the NATA folks, it appear that the newer met data can effect risk data by a factor of 2 to 3 in either direction and applies to all chemicals.

Jeff

Column O (highlighted yellow) shows where the source-specific ethylene oxide cancer risk is greater than 100 in a million in the Region. Column AG (highlighted orange). There are hospitals in this list probably due to their proximity to census block centroids which were modeled to. Their assessment included to new toxicity number for ethylene oxide and also a new set of meteorological data than has been used in the past. The met data utilized is from a 12 Km grid generated nationwide that was generated for use with EPA's CMAC model and is now considered by OAQPS as state of the art. In talking with the NATA folks, it appear that the newer met data can effect risk data by a factor of 2 to 3 in either direction and applies to all chemicals.

Jeff

Subject: 2014 NATA version 2 - DRAFT ethylene oxide point source risks

Hello –

You are receiving this email because you are a member of the ATRA EtO group or a NATA Regional Office lead or both. Either way, you know that in version 1 of the 2014 NATA we saw ethylene oxide emissions from point sources driving risks at the census tract level. Since that time, you have reviewed the data, worked with your states to review the data, and provided revisions back to us. We have incorporated those changes from V1 of the 2014 NATA and in preparation for version 2, have re-modeled the EtO-emitting point sources first. This is your first look at those results. **Please remember that risk results are not to be shared outside the Agency**.

The attached pdf document provides: 1) a summary of the events of the emissions review, 2) a regional count of facilities in the attached spreadsheet, and 3) an explanation of the data fields in the attached spreadsheet file. The attached spreadsheet contains a list of facilities that had a census *block* level cancer risk greater than 100-in-1 million in either version 1 (column J) or version 2 (column K). These are all provided so you can see how any data changes impacted the risk results. As you will see, there are still some facilities where we have estimated a census *tract* level cancer risk of greater than 100-in-1 million in version 2. These are indicated with a "Y" in column K. (An exact risk number is not provided because the estimates only take into account the AERMOD modeling; CMAQ is not yet complete so we have not combined the two results and we have given you our best estimate.)

We know that some of you are actively working with your states on the data review. Thank you for your time and effort doing that! There are some columns in the spreadsheet that may help focus your conversations, for example, column N, which provides information on how the EtO emissions were calculated for the process with the most emissions. And, our engineers are also working through their contacts to continue to verify the emissions and other inputs to the modeling. (If you need to contact them, Jennifer (chemical manufacturing) and Jonathan (sterilizers) are in the "CC" field.) There are columns in the spreadsheet to indicate what has been done and what type of changes have been received or are expected. **However, without additional information, there will likely be little change to these results.** If you have received additional info or revisions, please work with Madeleine to get those to us.

As you continue to work through this situation, please let us know if there's anything we can do to help or if there's additional data you need. We are happy to walk through this on the next ATRA call or set up a special purpose call. As always, if you have questions please feel free to contact me, Ted (palma.ted@epa.gov, 919-541-5470), or Madeleine (strum.madeleine@epa.gov, 919-541-2383).

Thank you,
Darcie

Subject: Seeking information on facilities

Hi, Darrin,

I forwarded this to Margaret last week. I know she is out this week, and wanted to check in with you, as well.

OAQPS is looking for the permit applications for the facilities listed below. These facilities are R6 facilities with emissions of concern, we found through the NATA analysis. TCEQ has their permits online, but not the applications. In talking with Fran, this type of information was pulled together for Denka, and I think OAQPS is trying to get ahead of the curve a bit.

I don't know if Margaret has someone already working on this or not, and am wondering if your group would have access to the type of information OAQPS is searching for? From talking with Fran, it is the type of information we would eventually search out anyway, probably a little later down the road.

For clarification, OAQPS is searching for this:
"…release parameter information for the different release points at each facility…..details like stack height, stack diameter, stack temperature, stack flow rate, stack velocity, latitude and longitude of each release point, and process level emissions in tons."

I am hoping Enforcement, either your group or Margaret's group, has access to this type of information for these facilities?

Thank you,
Cindy

Subject: Phone call follow up

Hi Cindy,

Thanks for your help on the phone today. We think we are looking for the Title V permit applications, but I think in some cases the NSR Permit applications may contain what we need. To explain, we're looking for release parameter information for the different release points at each facility. We need details like stack height, stack diameter, stack temperature, stack flow rate, stack velocity, latitude and longitude of each release point, and process level emissions in tons. I appreciate your help in obtaining any documents which contain this level of detail.

Here ya go. Note the addressees. And it is a confusing spreadsheet, you need to refer to the pdf for explanations, such as for the column with Y or nothing.

Subject: RE: NATA reviews

Hi Fran –

In December 2016, IRIS released a new URE for ethylene oxide that was 56 times more potent. We went ahead and included the value in our most recent round of point source modeling from December so that you guys would have time to review the results. Here's a link to the IRIS assessment, if you're interested: https://cfpub.epa.gov/ncea/iris2/chemicalLanding.cfm?substance_nmbr=1025

Madeleine has contacted LA about the Union Carbide facility, and a few others, and they have said they reviewed them and don't have any changes to the emissions. I'll forward you that email exchange.

As for risks, you want to be sure that you're also reviewing the files from December as that's where the EtO risks show up. For example, for the Union Carbide facility, it isn't 22 in 1 million, but rather 1766 in 1 million. (Sorry for the bad news!) I've pasted below the top facilities in LA.

Please feel free to contact Ted at (919) 541-5470 for additional information about risks at R6 facilities or contact any of us with additional questions.

Thanks,
Darcie

Subject: NATA reviews

We are starting the NATA data reviews (rebuilding institutional knowledge). And there is discussion about ethylene oxide.

What change in risk evaluation has occurred that is causing EtOx to pop? I have attached what we think is the facility with the highest emission for R6, and in LA near LaPlace.

My staff and I are playing catch up and appreciate your assistance in educating us on this topic.

Ok. I have asked Fran to add this one. Do you have a basis for including it? Otherwise, Fran will prepare something to include.

Subject: Re: 2014 NATA short term facility action

Thanks Wren.

One addition would be to also add Port Neches, TX (Huntsman Port Neches) as a focus area.

Based upon the most recent emissions reporting for the facility (TRI), the emissions of ethylene oxide from this facility could currently be as high as 38 tpy. This would make this the largest source in the Region and would definitely significantly increase modeling risks. The 2014 NATA emissions that were modeled for the facility were 10.8 tpy.

Thanks,
Steve

Attachments: 2014 NATA R6 short-term action recommendation Aug 2 2018.docx

Here is a final draft. I think we have all the concerns addressed.

David, we took out mention of Denka since risk is NOT driven by ethylene oxide.

I will send this to OAR at 4 pm.

WREN STENGER
DIRECTOR, MULTIMEDIA DIVISION
EPA REGION 6 DALLAS, TEXAS
214.665.6583

2014 NATA Release Coordination – Ethylene Oxide
August 2, 2018

- EPA Region 6 has 10 facilities with risk exceeding 100 in 1,000,000 from air toxics associated with ethylene oxide (EtO) based on the 2014 EIs and TRIs.
    - Nine facilities have risk driven by ethylene oxide.
    - Four facilities are in Louisiana, four in Texas, and one in New Mexico.
- The national approach is to (1) prioritize a subset of facilities for action in the short-term, and (2) develop rulemaking based on ethylene oxide technologies and operations.
- In the short-term, based on the cumulative risk at the metropolitan statistical area (MSA) level, Region 6 proposes to address, at a minimum,
    - The New Orleans-Metarie, LA, MSA
        - Facilities that drive the risk (tract level): Union Carbide – St. Charles (risk 2,000), BCP Ingredients (risk 2,000), Air Products – Reserve (100)
        - Reason for prioritization: Cumulative risk of the New Orleans MSA (approximately 325 in 1,000,000) is highest in nation
    - The Beaumont-Port Arthur TX MSA
        - Facility that drives the risk (tract level): Port Neches Plant - Huntsman Corporation (risk 300)
        - Reason for prioritization: New information indicates that Port Neches Plant increased emissions from 10.8 tons per year (tpy) in 2014 to 38 tpy in 2017
- As Region 6 gathers information about EtO technologies, we need to engage the states without delay in planning. This may result in additional priority facilities.
- The States of Texas and Louisiana have requested coordination on the 2014 NATA; both may be able to provide assessments and obtain risk reductions from facilities quickly as they have authority for permitting and compliance for air toxics.
- The State of New Mexico has confirmed that the Santa Teresa facility installed new controls after the 2014 TRI, and the emissions have been reduced by 83%. Therefore, this facility is low priority for short-term action.

Good Morning, Jeff,
Re: my voicemail earlier –

Here is one email with information. We are particularly interested in the effects of ethylene oxide and at what levels. I'm sure the information below won't contain enough info for you – but I'm not sure exactly which information you do need? We have several worksheets on a sharepoint site, emissions data, and I can get you access to them, but if I could narrow it down for you, I'm happy to do that, too.

Fran mentioned you might call her, feel free to do that, too. I know you have helped Ruben in the past, and we appreciate your continued assistance.

This is what Anupa thought would be helpful to share with LDEQ. When you get a chance, let's discuss.

Subject: NATA 5 LA facilities

Attached is a spreadsheet for the five facilities in LA that details the EO emissions at each emission point at each facility as reported in the emissions inventory for 2104. The spreadsheet also contains the source description and permit number for each emission point.

All of the facilities on this list have been contacted by R6 and all but Union Carbide have confirmed the total EO emissions at their facility are the same as what was used by OAQPS in the modeling. Union Carbide has thus far not returned our phone calls.

Attachments: Ethylene Oxide NATA V2 w 061418 list LA.xlsx

This spreadsheet has the four LA facilities on the latest list of 9 R6 EtO facilities expected to be on the NATA list. The list of 9 was part of the PowerPoint OAQPS used to brief you and Wren on 6/14 (it's in the meeting invitation). OAQPS didn't provide updated emissions data, so this spreadsheet has the emissions data for the previous version (V2).

Here's the latest list of EtO facilities expected to be on the NATA list. OAQPS hasn't provided us the latest emission numbers (just the facility names), but I included the most recent emission numbers we have for reference.

Please let me know if you have any questions.

Darrin,
Can you please send Lourdes the updated list of LA facilities?

Thanks,
Steve

And finally, here's the NM facility. There was only one NM facility on the earlier version, and it's also the current version.

>> I found the TRI website but it keeps crashing my system. Before it crashed (for like the 5th time), the EtO emissions in Dona Ana county (where sterigenics is located) was 967 lbs for 2016 (= 0.48 ton). I am guessing there are no other facilities located there but my computer crashes before I can see the report. They only have data available for 2016 and 2015, both after the new controls were installed. Maybe Mort has access to historical (2014) data. Obviously the 0.48 ton is way less than the 6 ton combined limit, but since I can't get to the 2014 data, I have nothing to compare to see how much emissions went down.

Hi Jeff,
Steve Thompson is asking if the EtO emissions in TRI have been reduced by 83% in 2016 vs 2014. If you send the emissions for those 2 yrs, I can do the calc.

Thank you,
Anupa

Hi Aimee,

We mistakenly entered the EPA review start date tracking element for O3976/26441 ENBRIDGE PIPELINES TEXAS GATHERING LP, which resulted in the project showing up in the below report.

The public comment period actually started 5/24/18. EPA review should actually start on 6/12/18. The tracking elements are in the process of being updated and the project will be reflected in the next report.

Sorry for any inconvenience. Let me know if you have any questions.

Jesse

[SEQ CHAPTER \H \R 1]FEDERAL OPERATING PERMIT

A FEDERAL OPERATING PERMIT IS HEREBY ISSUED TO
Huntsman Petrochemical LLC

AUTHORIZING THE OPERATION OF
Huntsman Port Neches
E3/E6 Units
Petrochemical Manufacturing

LOCATED AT
Jefferson County, Texas
Latitude 29° 58' 5" Longitude 93° 55' 35"
Regulated Entity Number: RN100219252

This permit is issued in accordance with and subject to the Texas Clean Air Act (TCAA), Chapter 382 of the Texas Health and Safety Code and Title 30 Texas Administrative Code Chapter 122 (30 TAC Chapter 122), Federal Operating Permits. Under 30 TAC Chapter 122, this permit constitutes the permit holder's authority to operate the site and emission units listed in this permit. Operations of the site and emission units listed in this permit are subject to all additional rules or amended rules and orders of the Commission pursuant to the TCAA.

This permit does not relieve the permit holder from the responsibility of obtaining New Source Review authorization for new, modified, or existing facilities in accordance with 30 TAC Chapter 116, Control of Air Pollution by Permits for New Construction or Modification.

The site and emission units authorized by this permit shall be operated in accordance with 30 TAC Chapter 122, the general terms and conditions, special terms and conditions, and attachments contained herein.

This permit shall expire five years from the date of issuance. The renewal requirements specified in 30 TAC § 122.241 must be satisfied in order to renew the authorization to operate the site and emission units.

Permit No: O2286 Issuance Date: _____

Section **Page**

[TOC \o "1-3" \h \z \t "SOP_Heading1,1,SOP_Heading2,2,SOP_Heading2 + Centered,2,SOP_Heading1 + Centered,1"]

General Terms and Conditions

The permit holder shall comply with all terms and conditions contained in 30 TAC § 122.143 (General Terms and Conditions), 30 TAC § 122.144 (Recordkeeping Terms and Conditions), 30 TAC § 122.145 (Reporting Terms and Conditions), and 30 TAC § 122.146 (Compliance Certification Terms and Conditions).

In accordance with 30 TAC § 122.144(1), records of required monitoring data and support information required by this permit, or any applicable requirement codified in this permit, are required to be maintained for a period of five years from the date of the monitoring report, sample, or application unless a longer data retention period is specified in an applicable requirement. The five year record retention period supersedes any less stringent retention requirement that may be specified in a condition of a permit identified in the New Source Review Authorization attachment.

If the permit holder chooses to demonstrate that this permit is no longer required, a written request to void this permit shall be submitted to the Texas Commission on Environmental Quality (TCEQ) by the Responsible Official in accordance with 30 TAC § 122.161(e). The permit holder shall comply with the permit's requirements, including compliance certification and deviation reporting, until notified by the TCEQ that this permit is voided.

The permit holder shall comply with 30 TAC Chapter 116 by obtaining a New Source Review authorization prior to new construction or modification of emission units located in the area covered by this permit.

All reports required by this permit must include in the submittal a cover letter which identifies the following information: company name, TCEQ regulated entity number, air account number (if assigned), site name, area name (if applicable), and Air Permits Division permit number(s).

[SEQ CHAPTER \h \r 1]**Special Terms and Conditions:**

Emission Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting

1. Permit holder shall comply with the following requirements:

    A. Emission units (including groups and processes) in the Applicable Requirements Summary attachment shall meet the limitations, standards, equipment specifications, monitoring, recordkeeping, reporting, testing, and other requirements listed in the Applicable Requirements Summary attachment to assure compliance with the permit.

    B. The textual description in the column titled "Textual Description" in the Applicable Requirements Summary attachment is not enforceable and is not deemed as a substitute for the actual regulatory language. The Textual Description is provided for information purposes only.

    C. A citation listed on the Applicable Requirements Summary attachment, which has a notation [G] listed before it, shall include the referenced section and subsection for all commission rules, or paragraphs for all federal and state regulations and all subordinate paragraphs, subparagraphs and clauses, subclauses, and items contained within the referenced citation as applicable requirements.

    D. When a grouped citation, notated with a [G] in the Applicable Requirements Summary, contains multiple compliance options, the permit holder must keep records of when each compliance option was used.

E. Emission units subject to 40 CFR Part 63, Subpart PPP as identified in the attached Applicable Requirements Summary table are subject to 30 TAC Chapter 113, Subchapter C, § 113.730 which incorporates the 40 CFR Part 63 Subpart by reference.

2. The permit holder shall comply with the following sections of 30 TAC Chapter 101 (General Air Quality Rules):

   A. Title 30 TAC § 101.1 (relating to Definitions), insofar as the terms defined in this section are used to define the terms used in other applicable requirements

   B. Title 30 TAC § 101.3 (relating to Circumvention)

   C. Title 30 TAC § 101.8 (relating to Sampling), if such action has been requested by the TCEQ

   D. Title 30 TAC § 101.9 (relating to Sampling Ports), if such action has been requested by the TCEQ

   E. Title 30 TAC § 101.10 (relating to Emissions Inventory Requirements)

   F. Title 30 TAC § 101.201 (relating to Emission Event Reporting and Recordkeeping Requirements)

   G. Title 30 TAC § 101.211 (relating to Scheduled Maintenance, Start-up, and Shutdown Reporting and Recordkeeping Requirements)

   H. Title 30 TAC § 101.221 (relating to Operational Requirements)

   I. Title 30 TAC § 101.222 (relating to Demonstrations)

   J. Title 30 TAC § 101.223 (relating to Actions to Reduce Excessive Emissions)

3. Permit holder shall comply with the following requirements of 30 TAC Chapter 111:

   A. Visible emissions from stationary vents with a flow rate of less than 100,000 actual cubic feet per minute that are not listed in the Applicable Requirements Summary attachment for 30 TAC Chapter 111, Subchapter A, Division 1, shall not exceed 20% opacity averaged over a six minute period. The permit holder shall comply with the following requirements for stationary vents at the site subject to this standard:

      (i) Title 30 TAC § 111.111(a)(1)(B) (relating to Requirements for Specified Sources)

      (ii) Title 30 TAC § 111.111(a)(1)(E)

      (iii) Title 30 TAC § 111.111(a)(1)(F)(i), (ii), (iii), or (iv)

      (iv) For emission units with vent emissions subject to 30 TAC § 111.111(a)(1)(B), complying with 30 TAC § 111.111(a)(1)(F)(ii), (iii), or (iv), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146. These periodic monitoring requirements do not apply to vents that are not capable of producing visible emissions such as vents that emit only colorless VOCs; vents from non-fuming liquids; vents that provide passive ventilation, such as plumbing vents; or vent emissions from any other source that

does not obstruct the transmission of light. Vents, as specified in the "Applicable Requirements Summary" attachment, that are subject to the emission limitation of 30 TAC § 111.111(a)(1)(B) are not subject to the following periodic monitoring requirements:

(1) An observation of stationary vents from emission units in operation shall be conducted at least once during each calendar quarter unless the emission unit is not operating for the entire quarter.

(2) For stationary vents from a combustion source, if an alternative to the normally fired fuel is fired for a period greater than or equal to 24 consecutive hours, the permit holder shall conduct an observation of the stationary vent for each such period to determine if visible emissions are present. If such period is greater than 3 months, observations shall be conducted once during each quarter. Supplementing the normally fired fuel with natural gas or fuel gas to increase the net heating value to the minimum required value does not constitute creation of an alternative fuel.

(3) Records of all observations shall be maintained.

(4) Visible emissions observations of emission units operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of emission units operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions observations shall be made during times when the activities described in 30 TAC § 111.111(a)(1)(E) are not taking place. Visible emissions shall be determined with each stationary vent in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each stationary vent during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

(5) Compliance Certification:

(a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(1) and (a)(1)(B).

(b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(1)(F) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is

determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

(c) Some vents may be subject to multiple visible emission or monitoring requirements. All credible data must be considered when certifying compliance with this requirement even if the observation or monitoring was performed to demonstrate compliance with a different requirement.

B. For visible emissions from a building, enclosed facility, or other structure; the permit holder shall comply with the following requirements:

(i) Title 30 TAC § 111.111(a)(7)(A) (relating to Requirements for Specified Sources)

(ii) Title 30 TAC § 111.111(a)(7)(B)(i) or (ii)

(iii) For a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source subject to 30 TAC § 111.111(a)(7)(A), complying with 30 TAC § 111.111(a)(7)(B)(i) or (ii), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146:

(1) An observation of visible emissions from a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source which is required to comply with 30 TAC § 111.111(a)(7)(A) shall be conducted at least once during each calendar quarter unless the air emission source or enclosed facility is not operating for the entire quarter.

(2) Records of all observations shall be maintained.

(3) Visible emissions observations of air emission sources or enclosed facilities operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of air emission sources or enclosed facilities operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions shall be determined with each emissions outlet in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each emissions outlet during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

(4) Compliance Certification:

(a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(7) and (a)(7)(A)

(b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(7)(B) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

C. For visible emissions from all other sources not specified in 30 TAC § 111.111(a)(1), (4), or (7); the permit holder shall comply with the following requirements:

(i) Title 30 TAC § 111.111(a)(8)(A) (relating to Requirements for Specified Sources)

(ii) Title 30 TAC § 111.111(a)(8)(B)(i) or (ii)

(iii) For a source subject to 30 TAC § 111.111(a)(8)(A), complying with 30 TAC § 111.111(a)(8)(B)(i) or (ii), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146:

(1) An observation of visible emissions from a source which is required to comply with 30 TAC § 111.111(a)(8)(A) shall be conducted at least once during each calendar quarter unless the source is not operating for the entire quarter.

(2) Records of all observations shall be maintained.

(3) Visible emissions observations of sources operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of sources operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions shall be determined with each source in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each source during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer

visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

(4) Compliance Certification:

(a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(8) and (a)(8)(A)

(b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(8)(B) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

D. Certification of opacity readers determining opacities under Method 9 (as outlined in 40 CFR Part 60, Appendix A) to comply with opacity monitoring requirements shall be accomplished by completing the Visible Emissions Evaluators Course, or approved agency equivalent, no more than 180 days before the opacity reading.

E. For emission units with contributions from uncombined water, the permit holder shall comply with the requirements of 30 TAC § 111.111(b).

F. Emission limits on nonagricultural processes, except for the steam generators specified in 30 TAC § 111.153, shall comply with the following requirements:

(i) Emissions of PM from any source may not exceed the allowable rates as required in 30 TAC § 111.151(a) (relating to Allowable Emissions Limits)

(ii) Sources with an effective stack height (h_e) less than the standard effective stack height (H_e), must reduce the allowable emission level by multiplying it by $[h_e/H_e]^2$ as required in 30 TAC § 111.151(b)

(iii) Effective stack height shall be calculated by the equation specified in 30 TAC § 111.151(c)

4. For storage vessels maintaining working pressure as specified in 30 TAC Chapter 115, Subchapter B, Division 1: "Storage of Volatile Organic Compounds," the permit holder shall comply with the requirements of 30 TAC § 115.112(a)(1).

5. The permit holder shall comply with the following requirements of 30 TAC Chapter 115, Subchapter F, Division 3, Degassing of Storage Tanks, Transport Vessels and Marine Vessels:

A. For degassing of stationary VOC storage tanks, the permit holder shall comply with the following requirements:

(i) Title 30 TAC § 115.541(a) - (c) (relating to Emission Specifications)

(ii) Title 30 TAC § 115.541(f) (relating to Emission Specifications), for floating roof storage tanks

(iii) Title 30 TAC § 115.542(a) and (a)(1), (a)(2), (a)(3) or (a)(4) (relating to Control Requirements). Where the requirements of 30 TAC Chapter 115, Subchapter F contain multiple compliance options, the permit holder shall keep records of when each compliance option was used.

(iv) Title 30 TAC § 115.542(b) - (d), (relating to Control Requirements)

(v) Title 30 TAC § 115.543 (relating to Alternate Control Requirements)

(vi) Title 30 TAC § 115.544(a)(1) and (a)(2) (relating to Inspection, Monitoring, and Testing Requirements), for inspections

(vii) Title 30 TAC § 115.544(b) (relating to Inspection, Monitoring, and Testing Requirements), for monitoring

(viii) Title 30 TAC § 115.544(b)(1) and (b)(2) (relating to Inspection, Monitoring, and Testing Requirements), for monitoring of control devices

(ix) Title 30 TAC § 115.544(b)(2)(A) - (J) (relating to Inspection, Monitoring, and Testing Requirements), for monitoring (as appropriate to the control device)

(x) Title 30 TAC § 115.544(b)(3), (b)(4) and (b)(6) (relating to Inspection, Monitoring, and Testing Requirements), for VOC concentration or lower explosive limit threshold monitoring

(xi) Title 30 TAC § 115.544(c), and (c)(1) - (c)(3) (relating to Inspection, Monitoring, and Testing Requirements), for testing of control devices used to comply with 30 TAC § 115.542(a)(1)

(xii) Title 30 TAC § 115.545(1) - (7), (9) - (11) and (13) (relating to Approved Test Methods)

(xiii) Title 30 TAC § 115.546(a), (a)(1) and (a)(3) (relating to Recordkeeping and Notification Requirements), for recordkeeping

(xiv) Title 30 TAC § 115.546(a)(2) and (a)(2)(A) - (J) (relating to Recordkeeping and Notification Requirements), for recordkeeping (as appropriate to the control device)

(xv) Title 30 TAC § 115.546(a)(4) (relating to Recordkeeping and Notification Requirements), for recordkeeping of testing of control devices used to comply with 30 TAC § 115.542(a)(1)

(xvi) Title 30 TAC § 115.547(4) (relating to Exemptions)

6. The permit holder shall comply with the requirements of 30 TAC Chapter 113, Subchapter C, § 113.100 for units subject to any subpart of 40 CFR Part 63, unless otherwise stated in the applicable subpart.

Additional Monitoring Requirements

7. The permit holder shall comply with the periodic monitoring requirements as specified in the attached "Periodic Monitoring Summary" upon issuance of the permit. Except for, as applicable, monitoring malfunctions, associated repairs, and required quality assurance or control activities (including, as applicable, calibration checks and required zero and span adjustments), the permit holder shall conduct all monitoring in continuous operation (or shall collect data at all required intervals) at all times that the pollutant-specific emissions unit is operating. The permit holder may elect to collect monitoring data on a more frequent basis and average the data, consistent with the averaging time or minimum frequency specified in the "Periodic Monitoring Summary," for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis. In no event shall data be collected and used in particular instances to avoid reporting deviations. Deviations shall be reported according to 30 TAC § 122.145 (Reporting Terms and Conditions).

New Source Review Authorization Requirements

8. Permit holder shall comply with the requirements of New Source Review authorizations issued or claimed by the permit holder for the permitted area, including permits, permits by rule, standard permits, flexible permits, special permits, permits for existing facilities including Voluntary Emissions Reduction Permits and Electric Generating Facility Permits issued under 30 TAC Chapter 116, Subchapter I, or special exemptions referenced in the New Source Review Authorization References attachment. These requirements:

   A. Are incorporated by reference into this permit as applicable requirements

   B. Shall be located with this operating permit

   C. Are not eligible for a permit shield

9. The permit holder shall comply with the general requirements of 30 TAC Chapter 106, Subchapter A or the general requirements, if any, in effect at the time of the claim of any PBR.

10. The permit holder shall maintain records to demonstrate compliance with any emission limitation or standard that is specified in a permit by rule (PBR) or Standard Permit listed in the New Source Review Authorizations attachment. The records shall yield reliable data from the relevant time period that are representative of the emission unit's compliance with the PBR or Standard Permit. These records may include, but are not limited to, production capacity and throughput, hours of operation, safety data sheets (SDS), chemical composition of raw materials, speciation of air contaminant data, engineering calculations, maintenance records, fugitive data, performance tests, capture/control device efficiencies, direct pollutant monitoring (CEMS, COMS, or PEMS), or control device parametric monitoring. These records shall be made readily accessible and available as required by 30 TAC § 122.144. Any monitoring or recordkeeping data indicating noncompliance with the PBR or Standard Permit shall be considered and reported as a deviation according to 30 TAC § 122.145 (Reporting Terms and Conditions).

Compliance Requirements

11. The permit holder shall certify compliance in accordance with 30 TAC § 122.146. The permit holder shall comply with 30 TAC § 122.146 using at a minimum, but not limited to, the continuous or intermittent compliance method data from monitoring, recordkeeping, reporting, or testing

required by the permit and any other credible evidence or information. The certification period may not exceed 12 months and the certification must be submitted within 30 days after the end of the period being certified.

12. Permit holder shall comply with the following 30 TAC Chapter 117 requirements:

    A. The permit holder shall comply with the compliance schedules and submit written notification to the TCEQ Executive Director as required in 30 TAC Chapter 117, Subchapter H, Division 1:

        (i) For sources in the Beaumont-Port Arthur Nonattainment area, 30 TAC § 117.9000

13. Use of Emission Credits to comply with applicable requirements:

    A. Unless otherwise prohibited, the permit holder may use emission credits to comply with the following applicable requirements listed elsewhere in this permit:

        (i) Title 30 TAC Chapter 115

        (ii) Title 30 TAC Chapter 117

        (iii) Offsets for Title 30 TAC Chapter 116

    B. The permit holder shall comply with the following requirements in order to use the emission credits to comply with the applicable requirements:

        (i) The permit holder must notify the TCEQ according to 30 TAC § 101.306(c)-(d)

        (ii) The emission credits to be used must meet all the geographic, timeliness, applicable pollutant type, and availability requirements listed in 30 TAC Chapter 101, Subchapter H, Division 1

        (iii) The executive director has approved the use of the credit according to 30 TAC § 101.306(c)-(d)

        (iv) The permit holder keeps records of the use of credits towards compliance with the applicable requirements in accordance with 30 TAC § 101.302(g) and 30 TAC Chapter 122

        (v) Title 30 TAC § 101.305 (relating to Emission Reductions Achieved Outside the United States)

14. Use of Discrete Emission Credits to comply with the applicable requirements:

    A. Unless otherwise prohibited, the permit holder may use discrete emission credits to comply with the following applicable requirements listed elsewhere in this permit:

        (i) Title 30 TAC Chapter 115

        (ii) Title 30 TAC Chapter 117

        (iii) If applicable, offsets for Title 30 TAC Chapter 116

        (iv) Temporarily exceed state NSR permit allowables

B. The permit holder shall comply with the following requirements in order to use the credit to comply with the applicable requirements:

(i) The permit holder must notify the TCEQ according to 30 TAC § 101.376(d)

(ii) The discrete emission credits to be used must meet all the geographic, timeliness, applicable pollutant type, and availability requirements listed in 30 TAC Chapter 101, Subchapter H, Division 4

(iii) The executive director has approved the use of the discrete emission credits according to 30 TAC § 101.376(d)(1)(A)

(iv) The permit holder keeps records of the use of credits towards compliance with the applicable requirements in accordance with 30 TAC § 101.372(h) and 30 TAC Chapter 122

(v) Title 30 TAC § 101.375 (relating to Emission Reductions Achieved Outside the United States)

Risk Management Plan

15. For processes subject to 40 CFR Part 68 and specified in 40 CFR § 68.10, the permit holder shall comply with the requirements of the Accidental Release Prevention Provisions in 40 CFR Part 68. The permit holder shall submit to the appropriate agency either a compliance schedule for meeting the requirements of 40 CFR Part 68 by the date provided in 40 CFR § 68.10(a), or as part of the compliance certification submitted under this permit, a certification statement that the source is in compliance with all requirements of 40 CFR Part 68, including the registration and submission of a risk management plan.

Protection of Stratospheric Ozone

16. Permit holders at a site subject to Title VI of the FCAA Amendments shall meet the following requirements for protection of stratospheric ozone:

A. Any on site servicing, maintenance, and repair on refrigeration and nonmotor vehicle air-conditioning appliances using ozone-depleting refrigerants or non-exempt substitutes shall be conducted in accordance with 40 CFR Part 82, Subpart F. Permit holders shall ensure that repairs on or refrigerant removal from refrigeration and nonmotor vehicle air-conditioning appliances using ozone-depleting refrigerants are performed only by properly certified technicians using certified equipment. Records shall be maintained as required by 40 CFR Part 82, Subpart F.

B. The permit holder shall comply with 40 CFR Part 82, Subpart A for controlling the production, transformation, destruction, export or import of a controlled (ozone-depleting) substance or product as specified in 40 CFR § 82.1 - § 82.13 and the applicable Part 82 Appendices.

C. The permit holder shall comply with 40 CFR Part 82, Subpart H related to Halon Emissions Reduction requirements as specified in 40 CFR § 82.250 - § 82.270 and the applicable Part 82 Appendices.

D. The permit holder shall comply with 40 CFR Part 82, Subpart A, § 82.13 related to recordkeeping and reporting requirements for the production and consumption of ozone depleting substances.

Permit Location

17. The permit holder shall maintain a copy of this permit and records related to requirements listed in this permit on site.

Permit Shield (30 TAC § 122.148)

18. A permit shield is granted for the emission units, groups, or processes specified in the attached "Permit Shield." Compliance with the conditions of the permit shall be deemed compliance with the specified potentially applicable requirements or specified potentially applicable state-only requirements listed in the attachment "Permit Shield." Permit shield provisions shall not be modified by the executive director until notification is provided to the permit holder. No later than 90 days after notification of a change in a determination made by the executive director, the permit holder shall apply for the appropriate permit revision to reflect the new determination. Provisional terms are not eligible for this permit shield. Any term or condition, under a permit shield, shall not be protected by the permit shield if it is replaced by a provisional term or condition or the basis of the term and condition changes.

Applicable Requirements Summary 21

Note: A "none" entry may be noted for some emission sources in this permit's "Applicable Requirements Summary" under the heading of "Monitoring and Testing Requirements" and/or "Recordkeeping Requirements" and/or "Reporting Requirements." Such a notation indicates that there are no requirements for the indicated emission source as identified under the respective column heading(s) for the stated portion of the regulation when the emission source is operating under the conditions of the specified SOP Index Number. However, other relevant requirements pursuant to 30 TAC Chapter 122 including Recordkeeping Terms and Conditions (30 TAC § 122.144), Reporting Terms and Conditions (30 TAC § 122.145), and Compliance Certification Terms and Conditions (30 TAC § 122.146) continue to apply.

Additional Monitoring Requirements

Periodic Monitoring Summary **59**

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: E3NSCRB	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 111, Visible Emissions	SOP Index No.: R1111-01
Pollutant: Opacity	Main Standard: § 111.111(a)(1)(A)
Monitoring Information	
Indicator: Visible Emissions	
Minimum Frequency: once per quarter	
Averaging Period: n/a	
Deviation Limit: Opacity of more than 20% will be considered a deviation.	
Periodic Monitoring Text: Visible emissions observations shall be made and recorded. Note that to properly determine the presence of visible emissions, all sources must be in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 miles, away from the emission source during the observation. The observer shall select a position where the sun is not directly in the observer's eyes. If the observations cannot be conducted due to weather conditions, the date, time, and specific weather conditions shall be recorded. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. If visible emissions are observed, the permit holder shall report a deviation. As an alternative, the permit holder may determine the opacity consistent with Test Method 9, as soon as practicable, but no later than 24 hours after observing visible emissions. If a Test Method 9 is performed, the opacity limit is the corresponding opacity limit associated with the particulate matter standard in the underlying applicable requirement. If there is no corresponding opacity limit in the underlying applicable requirement, the maximum opacity will be established using the most recent performance test. If the result of the Test Method 9 is opacity above the corresponding opacity limit (associated with the particulate matter standard in the underlying applicable requirement or as identified as a result of a previous performance test to establish the maximum opacity limit), the permit holder shall report a deviation.

Permit Shield

Permit Shield **62**

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
E3TE3388	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 40 cubic meters (10,567 gallons).
E6TE614	N/A	40 CFR Part 60, Subpart Kb	Tank stores VOC (but not petroleum or petroleum liquids), but was constructed before 7/23/84 and has not been modified later than 7/23/84.
E6TE6212	N/A	40 CFR Part 60, Subpart Kb	Tank stores VOC (but not petroleum or petroleum liquids), but was constructed before 7/23/84 and has not been modified later than 7/23/84.
E6TE628A	N/A	40 CFR Part 60, Subpart Kb	Tank stores VOC (but not petroleum or petroleum liquids), but was constructed before 7/23/84 and has not been modified later than 7/23/84.
E6TE628B	N/A	40 CFR Part 60, Subpart Kb	Tank stores VOC (but not petroleum or petroleum liquids), but was constructed before 7/23/84 and has not been modified later than 7/23/84.
E6TE632	N/A	40 CFR Part 60, Subpart Kb	Tank stores VOC (but not petroleum or petroleum liquids), but was constructed before 7/23/84 and has not been modified later than 7/23/84.
GRPE3TK2	E3TE312, E3TE3128, E3TE313, E3TE314, E3TE3147, E3TE3148, E3TE3149, E3TE315, E3TE3150, E3TE3151, E3TE3152, E3TE3153,	40 CFR Part 60, Subpart Kb	Tank stores VOC (but not petroleum or petroleum liquids), but was constructed before 7/23/84 and has not been modified later than 7/23/84.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
	E3TE3154, E3TE3155, E3TE3358, E3TE3360, E3TE3361, E3TE3363, E3TE3364, E3TE3377, E3TE3378, E3TE3379, E3TE3380, E3TE344, E3TE391, E3TE392, E3TE393, E3TE394		
GRPE3TK4	E3TE3125, E3TE3374, E3TE3375, E3TE346, E3TE348	40 CFR Part 60, Subpart Kb	Tank stores VOC (but not petroleum or petroleum liquids), but was constructed before 7/23/84 and has not been modified later than 7/23/84.
GRPE6PV1	E6FE61, E6FE62, E6FE624, E6FE63, E6FE64	40 CFR Part 60, Subpart RRR	Reactor process is designed and operated as a batch operation
GRPE6TK3	E6TE61, E6TE610, E6TE611, E6TE62, E6TE63, E6TE64, E6TE65, E6TE66, E6TE67, E6TE68, E6TE69	40 CFR Part 60, Subpart Kb	Tank stores VOC (but not petroleum or petroleum liquids), but was constructed before 7/23/84 and has not been modified later than 7/23/84.
UEUL30	N/A	40 CFR Part 63, Subpart Q	Cooling tower is not operated with chromium-based water treatment chemicals

Acronym List **73**

Acronym List

The following abbreviations or acronyms may be used in this permit:

ACFM ..... actual cubic feet per minute
AMOC ..... alternate means of control
ARP ..... Acid Rain Program
ASTM ..... American Society of Testing and Materials
B/PA ..... Beaumont/Port Arthur (nonattainment area)
CAM ..... Compliance Assurance Monitoring
CD ..... control device
CEMS ..... continuous emissions monitoring system
CFR ..... Code of Federal Regulations
COMS ..... continuous opacity monitoring system
CVS ..... closed vent system
D/FW ..... Dallas/Fort Worth (nonattainment area)
EP ..... emission point
EPA ..... U.S. Environmental Protection Agency
EU ..... emission unit
FCAA Amendments ..... Federal Clean Air Act Amendments
FOP ..... federal operating permit
gr/100 scf ..... grains per 100 standard cubic feet
HAP ..... hazardous air pollutant
H/G/B ..... Houston/Galveston/Brazoria (nonattainment area)
H_2S ..... hydrogen sulfide
ID No. ..... identification number
lb/hr ..... pound(s) per hour
MACT ..... Maximum Achievable Control Technology (40 CFR Part 63)
MMBtu/hr ..... Million British thermal units per hour
NA ..... nonattainment
N/A ..... not applicable
NADB ..... National Allowance Data Base
NESHAP ..... National Emission Standards for Hazardous Air Pollutants (40 CFR Part 61)
NO_x ..... nitrogen oxides
NSPS ..... New Source Performance Standard (40 CFR Part 60)
NSR ..... New Source Review
ORIS ..... Office of Regulatory Information Systems
Pb ..... lead
PBR ..... Permit By Rule
PEMS ..... predictive emissions monitoring system
PM ..... particulate matter
ppmv ..... parts per million by volume
PRO ..... process unit
PSD ..... prevention of significant deterioration
psia ..... pounds per square inch absolute
SIP ..... state implementation plan
SO_2 ..... sulfur dioxide
TCEQ ..... Texas Commission on Environmental Quality
TSP ..... total suspended particulate
TVP ..... true vapor pressure
U.S.C. ..... United States Code
VOC ..... volatile organic compound

[SEQ CHAPTER \h \r 1]Statement of Basis of the Federal Operating Permit

Huntsman Petrochemical LLC

Site Name: Huntsman Port Neches
Area Name: E3/E6 Units
Physical Location: 2701 Spur 136
Nearest City: Port Neches
County: Jefferson

Permit Number: O2286
Project Type: Renewal

The North American Industry Classification System (NAICS) Code: 32511
NAICS Name: Petrochemical Manufacturing

This Statement of Basis sets forth the legal and factual basis for the draft permit conditions in accordance with 30 TAC §122.201(a)(4). Per 30 TAC §§ 122.241 and 243, the permit holder has submitted an application under § 122.134 for permit renewal. This document may include the following information:

A description of the facility/area process description;
A basis for applying permit shields;
A list of the federal regulatory applicability determinations;
A table listing the determination of applicable requirements;
A list of the New Source Review Requirements;
The rationale for periodic monitoring methods selected;
The rationale for compliance assurance methods selected;
A compliance status; and
A list of available unit attribute forms.

Prepared on: April 18, 2018

Operating Permit
Basis of Determination

Permit Area Process Description
E3 and E6 Units are part of Huntsman's Jefferson County Operations (JCO). JCO consists of several plants made up of many individual process units. In the E3 unit process, ethylene oxide is introduced into a kettle and is reacted. The E3 kettles are utilized for the production of surfactants in a batch process system. The duration of each batch process operation is approximately 5 to 12 hours. The kettle produces two types of surfactants: the L-series, and the N-series. The L-series produces alcohol ethoxylates, while the N-series produces alkyl phenyl ethoxylates. In addition, the E3 kettles also produce EO/PO block co-polymers (L-series).

In the E6 process, ethylene oxide is also introduced into a kettle, and is reacted. The E6 kettles are utilized for the production of surfactants in a batch process system. The duration of each batch process operation is approximately 4-12 hours. The kettle produces three types of surfactants: the L-series, the N-series, and the T-series. The L-series produces alcohol ethoxylates, the N-series produces alkyl phenyl ethoxylates, and the T-series produces tallow amine ethoxylates.

Finished products are stored in storage tanks at regulated temperatures. Products are shipped offsite in drums, railcar, or tank wagon.

FOPs at Site

The "application area" consists of the emission units and that portion of the site included in the application and this permit. Multiple FOPs may be issued to a site in accordance with 30 TAC § 122.201(e). When there is only one area for the site, then the application information and permit will include all units at the site. Additional FOPs that exist at the site, if any, are listed below.

Additional FOPs: O1320, O2287, O2288, O3056

Major Source Pollutants

The table below specifies the pollutants for which the site is a major source:

Major Pollutants	VOC, SO2, NOX, HAPS, CO

Reading State of Texas's Federal Operating Permit

The Title V Federal Operating Permit (FOP) lists all state and federal air emission regulations and New Source Review (NSR) authorizations (collectively known as "applicable requirements") that apply at a particular site or permit area (in the event a site has multiple FOPs). **The FOP does not authorize new emissions or new construction activities.** The FOP begins with an introductory page which is common to all Title V permits. This page gives the details of the company, states the authority of the issuing agency, requires the company to operate in accordance with this permit and 30 Texas Administrative Code (TAC) Chapter 122, requires adherence with NSR requirements of 30 TAC Chapter 116, and finally indicates the permit number and the issuance date.

This is followed by the table of contents, which is generally composed of the following elements. Not all permits will have all of the elements.

- General Terms and Conditions
- Special Terms and Conditions
  - Emissions Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting
  - Additional Monitoring Requirements
  - New Source Review Authorization Requirements
  - Compliance Requirements
  - Protection of Stratosphere Ozone

    - Permit Location
    - Permit Shield (30 TAC § 122.148)
- Attachments
    - Applicable Requirements Summary
        - Unit Summary
        - Applicable Requirements Summary
    - Additional Monitoring Requirements
    - Permit Shield
    - New Source Review Authorization References
    - Compliance Plan
    - Alternative Requirements
- Appendix A
    - Acronym list

General Terms and Conditions

The General Terms and Conditions are the same and appear in all permits. The first paragraph lists the specific citations for 30 TAC Chapter 122 requirements that apply to all Title V permit holders. The second paragraph describes the requirements for record retention. The third paragraph provides details for voiding the permit, if applicable. The fourth paragraph states that the permit holder shall comply with the requirements of 30 TAC Chapter 116 by obtaining a New Source Review authorization prior to new construction or modification of emission units located in the area covered by this permit. The fifth paragraph provides details on submission of reports required by the permit.

Special Terms and Conditions

Emissions Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting: The TCEQ has designated certain applicable requirements as site-wide requirements. A site-wide requirement is a requirement that applies uniformly to all the units or activities at the site. Units with only site-wide requirements are addressed on Form OP-REQ1 and are not required to be listed separately on a OP-UA Form or Form OP-SUM. Form OP-SUM must list all units addressed in the application and provide identifying information, applicable OP-UA Forms, and preconstruction authorizations. The various OP-UA Forms provide the characteristics of each unit from which applicable requirements are established. Some exceptions exist as a few units may have both site-wide requirements and unit specific requirements.

Other conditions: The other entries under special terms and conditions are in general terms referring to compliance with the more detailed data listed in the attachments.

Attachments

Applicable Requirements Summary: The first attachment, the Applicable Requirements Summary, has two tables, addressing unit specific requirements. The first table, the Unit Summary, includes a list of units with applicable requirements, the unit type, the applicable regulation, and the requirement driver. The intent of the requirement driver is to inform the reader that a given unit may have several different operating scenarios and the differences between those operating scenarios.

The applicable requirements summary table provides the detailed citations of the rules that apply to the various units. For each unit and operating scenario, there is an added modifier called the "index number," detailed citations specifying monitoring and testing requirements, recordkeeping requirements, and reporting requirements. The data for this table are based on data supplied by the applicant on the OP-SUM and various OP-UA forms.

Additional Monitoring Requirement: The next attachment includes additional monitoring the applicant must perform to ensure compliance with the applicable standard. Compliance assurance monitoring (CAM) is often required to provide a reasonable assurance of compliance with applicable emission limitations/standards for large emission units that use control devices to achieve compliance with applicant requirements. When necessary, periodic monitoring (PM) requirements are specified for certain parameters (i.e. feed rates, flow rates, temperature, fuel type and consumption, etc.) to determine if a term and condition or emission unit is operating within specified limits to control emissions. These additional monitoring approaches may be required for two reasons. First, the applicable rules do not adequately specify monitoring requirements (exception- Maximum Achievable Control Technology Standards (MACTs) generally have

sufficient monitoring), and second, monitoring may be required to fill gaps in the monitoring requirements of certain applicable requirements. In situations where the NSR permit is the applicable requirement requiring extra monitoring for a specific emission unit, the preferred solution is to have the monitoring requirements in the NSR permit updated so that all NSR requirements are consolidated in the NSR permit.

Permit Shield. A permit may or may not have a permit shield, depending on whether an applicant has applied for, and justified the granting of, a permit shield. A permit shield is a special condition included in the permit document stating that compliance with the conditions of the permit shall be deemed compliance with the specified potentially applicable requirement(s) or specified applicable state-only requirement(s).

New Source Review Authorization References: All activities which are related to emissions in the state of Texas must have a NSR authorization prior to beginning construction. This section lists all units in the permit and the NSR authorization that allowed the unit to be constructed or modified. Units that do not have unit specific applicable requirements other than the NSR authorization do not need to be listed in this attachment. While NSR permits are not physically a part of the Title V permit, they are legally incorporated into the Title V permit by reference. Those NSR permits whose emissions exceed certain PSD/NA thresholds must also undergo a Federal review of federally regulated pollutants in addition to review for state regulated pollutants.

Compliance Plan: A permit may have a compliance schedule attachment for listing corrective actions plans for any emission unit that is out of compliance with an applicable requirement.

Alternative Requirements: This attachment will list any alternative monitoring plans or alternative means of compliance for applicable requirements that have been approved by the EPA Administrator and/or the TCEQ Executive Director.

Appendix A

Acronym list: This attachment lists the common acronyms used when discussing the FOPs.

Stationary vents subject to 30 TAC Chapter 111, Subchapter A, § 111.111(a)(1)(B) addressed in the Special Terms and Conditions

The site contains stationary vents with a flowrate less than 100,000 actual cubic feet per minute (acfm) which are limited, over a six-minute average, to 20% opacity as required by 30 TAC § 111.111(a)(1)(B). As a site may have a large number of stationary vents that fall into this category, they are not required to be listed individually in the permit's Applicable Requirement Summary. This is consistent with EPA's White Paper for Streamlined Development of Part 70 Permit Applications, July 10, 1995, that states that requirements that apply identically to emission units at a site can be treated on a generic basis such as source-wide opacity limits.

Periodic monitoring is specified in Special Term and Condition 3 for stationary vents subject to 30 TAC § 111.111(a)(1)(B) to verify compliance with the 20% opacity limit. These vents are not expected to produce visible emissions during normal operation. The TCEQ evaluated the probability of these sources violating the opacity standards and determined that there is a very low potential that an opacity standard would be exceeded. It was determined that continuous monitoring for these sources is not warranted as there would be very limited environmental benefit in continuously monitoring sources that have a low potential to produce visible emissions. Therefore, the TCEQ set the visible observation monitoring frequency for these sources to once per calendar quarter.

The TCEQ has exempted vents that are not capable of producing visible emissions from periodic monitoring requirements. These vents include sources of colorless VOCs, non-fuming liquids, and other materials that cannot produce emissions that obstruct the transmission of light. Passive ventilation vents, such as plumbing vents, are also included in this category. Since this category of vents are not capable of producing opacity due to the physical or chemical characteristics of the emission source, periodic monitoring is not required as it would not yield any additional data to assure compliance with the 20% opacity standard of 30 TAC § 111.111(a)(1)(B).

In the event that visible emissions are detected, either through the quarterly observation or other credible evidence, such as observations from company personnel, the permit holder shall either report a deviation or perform a Test Method 9 observation to determine the opacity consistent with the 6-minute averaging time specified in 30 TAC § 111.111(a)(1)(B). An additional provision is included to monitor combustion sources more frequently than quarterly if alternate fuels are

burned for periods greater than 24 consecutive hours. This will address possible emissions that may arise when switching fuel types.

The applicant opted to comply with the more stringent 20% opacity standard under 30 TAC § 111.111(a)(1)(B) for all stationary vents that are subject to the 30% opacity standard under 30 TAC § 111.111(a)(1)(A).

Stationary Vents subject to 30 TAC Chapter 111 not addressed in the Special Terms and Conditions

All other stationary vents subject to 30 TAC Chapter 111 not covered in the Special Terms and Conditions are listed in the permit's Applicable Requirement Summary. The basis for the applicability determinations for these vents are listed in the Determination of Applicable Requirements table.

Federal Regulatory Applicability Determinations

The following chart summarizes the applicability of the principal air pollution regulatory programs to the permit area:

Regulatory Program	Applicability (Yes/No)
Prevention of Significant Deterioration (PSD)	No
Nonattainment New Source Review (NNSR)	No
Minor NSR	Yes
40 CFR Part 60 - New Source Performance Standards	No
40 CFR Part 61 - National Emission Standards for Hazardous Air Pollutants (NESHAPs)	No
40 CFR Part 63 - NESHAPs for Source Categories	Yes
Title IV (Acid Rain) of the Clean Air Act (CAA)	No
Title V (Federal Operating Permits) of the CAA	Yes
Title VI (Stratospheric Ozone Protection) of the CAA	Yes
CSAPR (Cross-State Air Pollution Rule)	No

Basis for Applying Permit Shields

An operating permit applicant has the opportunity to specifically request a permit shield to document that specific applicable requirements do not apply to emission units in the permit. A permit shield is a special condition stating that compliance with the conditions of the permit shall be deemed compliance with the specified potentially applicable requirements or specified potentially applicable state-only requirements. A permit shield has been requested in the application for specific emission units. For the permit shield requests that have been approved, the basis of determination for regulations that the owner/operator need not comply with are located in the "Permit Shield" attachment of the permit.

Insignificant Activities

In general, units not meeting the criteria for inclusion on either Form OP-SUM or Form OP-REQ1 are not required to be addressed in the operating permit application. Examples of these types of units include, but are not limited to, the following:

1. Office activities such as photocopying, blueprint copying, and photographic processes.
2. Sanitary sewage collection and treatment facilities other than those used to incinerate wastewater treatment plant sludge. Stacks or vents for sanitary sewer plumbing traps are also included.
3. Food preparation facilities including, but not limited to, restaurants and cafeterias used for preparing food or beverages primarily for consumption on the premises.
4. Outdoor barbecue pits, campfires, and fireplaces.
5. Laundry dryers, extractors, and tumblers processing bedding, clothing, or other fabric items generated primarily at the premises. This does not include emissions from dry cleaning systems using perchloroethylene or petroleum solvents.
6. Facilities storing only dry, sweet natural gas, including natural gas pressure regulator vents.
7. Any air separation or other industrial gas production, storage, or packaging facility. Industrial gases, for purposes of this list, include only oxygen, nitrogen, helium, neon, argon, krypton, and xenon.
8. Storage and handling of sealed portable containers, cylinders, or sealed drums.
9. Vehicle exhaust from maintenance or repair shops.
10. Storage and use of non-VOC products or equipment for maintaining motor vehicles operated at the site (including but not limited to, antifreeze and fuel additives).
11. Air contaminant detectors and recorders, combustion controllers and shut-off devices, product analyzers, laboratory analyzers, continuous emissions monitors, other analyzers and monitors, and emissions associated with sampling activities. Exception to this category includes sampling activities that are deemed fugitive emissions and under a regulatory leak detection and repair program.
12. Bench scale laboratory equipment and laboratory equipment used exclusively for chemical and physical analysis, including but not limited to, assorted vacuum producing devices and laboratory fume hoods.
13. Steam vents, steam leaks, and steam safety relief valves, provided the steam (or boiler feedwater) has not contacted other materials or fluids containing regulated air pollutants other than boiler water treatment chemicals.
14. Storage of water that has not contacted other materials or fluids containing regulated air pollutants other than boiler water treatment chemicals.
15. Well cellars.
16. Fire or emergency response equipment and training, including but not limited to, use of fire control equipment including equipment testing and training, and open burning of materials or fuels associated with firefighting training.
17. Crucible or pot furnaces with a brim full capacity of less than 450 cubic inches of any molten metal.
18. Equipment used exclusively for the melting or application of wax.
19. All closed tumblers used for the cleaning or deburring of metal products without abrasive blasting, and all open tumblers with a batch capacity of 1,000 lbs. or less.
20. Shell core and shell mold manufacturing machines.
21. Sand or investment molds with a capacity of 100 lbs. or less used for the casting of metals;
22. Equipment used for inspection of metal products.
23. Equipment used exclusively for rolling, forging, pressing, drawing, spinning, or extruding either hot or cold metals by some mechanical means.
24. Instrument systems utilizing air, natural gas, nitrogen, oxygen, carbon dioxide, helium, neon, argon, krypton, and xenon.
25. Battery recharging areas.
26. Brazing, soldering, or welding equipment.

Determination of Applicable Requirements

The tables below include the applicability determinations for the emission units, the index number(s) where applicable, and all relevant unit attribute information used to form the basis of the applicability determination. The unit attribute information is a description of the physical properties of an emission unit which is used to determine the requirements to

which the permit holder must comply. For more information about the descriptions of the unit attributes specific Unit Attribute Forms may be viewed at [HYPERLINK "http://www.tceq.texas.gov/permitting/air/nav/air_all_ua_forms.html"].

A list of unit attribute forms is included at the end of this document. Some examples of unit attributes include construction date; product stored in a tank; boiler fuel type; etc.. Generally, multiple attributes are needed to determine the requirements for a given emission unit and index number. The table below lists these attributes in the column entitled "Basis of Determination." Attributes that demonstrate that an applicable requirement applies will be the factual basis for the specific citations in an applicable requirement that apply to a unit for that index number. The TCEQ Air Permits Division has developed flowcharts for determining applicability of state and federal regulations based on the unit attribute information in a Decision Support System (DSS). These flowcharts can be accessed via the internet at [HYPERLINK "http://www.tceq.texas.gov/permitting/air/nav/air_supportsys.html"]. The Air Permits Division staff may also be contacted for assistance at (512) 239-1250.

The attributes for each unit and corresponding index number provide the basis for determining the specific legal citations in an applicable requirement that apply, including emission limitations or standards, monitoring, recordkeeping, and reporting. The rules were found to apply or not apply by using the unit attributes as answers to decision questions found in the flowcharts of the DSS. Some additional attributes indicate which legal citations of a rule apply. The legal citations that apply to each emission unit may be found in the Applicable Requirements Summary table of the draft permit. There may be some entries or rows of units and rules not found in the permit, or if the permit contains a permit shield, repeated in the permit shield area. These are sets of attributes that describe negative applicability, or; in other words, the reason why a potentially applicable requirement does not apply.

If applicability determinations have been made which differ from the available flowcharts, an explanation of the decisions involved in the applicability determination is specified in the column "Changes and Exceptions to RRT." If there were no exceptions to the DSS, then this column has been removed.

The draft permit includes all emission limitations or standards, monitoring, recordkeeping and reporting required by each applicable requirement. If an applicable requirement does not require monitoring, recordkeeping, or reporting, the word "None" will appear in the Applicable Requirements Summary table. If additional periodic monitoring is required for an applicable requirement, it will be explained in detail in the portion of this document entitled "Rationale for Compliance Assurance Monitoring (CAM)/ Periodic Monitoring Methods Selected."

When attributes demonstrate that a unit is not subject to an applicable requirement, the applicant may request a permit shield for those items. The portion of this document entitled "Basis for Applying Permit Shields" specifies which units, if any, have a permit shield.

Operational Flexibility

When an emission unit has multiple operating scenarios, it will have a different index number associated with each operating condition. This means that units are permitted to operate under multiple operating conditions. The applicable requirements for each operating condition are determined by a unique set of unit attributes. For example, a tank may store two different products at different points in time. The tank may, therefore, need to comply with two distinct sets of requirements, depending on the product that is stored. Both sets of requirements are included in the permit, so that the permit holder may store either product in the tank.

Determination of Applicable Requirements

Unit ID	Regulation	Index Number	Basis of Determination*	Changes and Exceptions to DSS**
E3TE3381	30 TAC Chapter 115, Storage of VOCs	R5112-00a	Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Tank Description = Tank does not require emission controls Product Stored = VOC other than crude oil or condensate True Vapor Pressure = True vapor pressure is less than 1.0 psia Storage Capacity = Capacity is greater than 1,000 gallons but less than or equal to 25,000 gallons	
E3TE3386	30 TAC Chapter 115, Storage of VOCs	R5112-00c	Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. * - The “unit attributes” or operating conditions that determine what requirements apply
** - Notes changes made to the automated results from the DSS, and a brief explanation why

NSR Versus Title V FOP

The state of Texas has two Air permitting programs, New Source Review (NSR) and Title V Federal Operating Permits. The two programs are substantially different both in intent and permit content.

NSR is a preconstruction permitting program authorized by the Texas Clean Air Act and Title I of the Federal Clean Air Act (FCAA). The processing of these permits is governed by 30 Texas Administrative Code (TAC) Chapter 116.111. The Title V Federal Operating Program is a federal program authorized under Title V of the FCAA that has been delegated to the state of Texas to administer and is governed by 30 TAC Chapter 122. The major differences between the two permitting programs are listed in the table below:

NSR Permit	Federal Operating Permit(FOP)
Issued Prior to new Construction or modification of an existing facility	For initial permit with application shield, can be issued after operation commences; significant revisions require approval prior to operation.
Authorizes air emissions	Codifies existing applicable requirements, does not authorize new emissions
Ensures issued permits are protective of the environment and human health by conducting a health effects review and that requirement for best available control technology (BACT) is implemented.	Applicable requirements listed in permit are used by the inspectors to ensure proper operation of the site as authorized. Ensures that adequate monitoring is in place to allow compliance determination with the FOP.
Up to two Public notices may be required. Opportunity for public comment and contested case hearings for some authorizations.	One public notice required. Opportunity for public comments. No contested case hearings.
Applies to all point source emissions in the state.	Applies to all major sources and some non-major sources identified by the EPA.
Applies to facilities: a portion of site or individual emission sources	One or multiple FOPs cover the entire site (consists of multiple facilities)
Permits include terms and conditions under which the applicant must construct and operate its various equipment and processes on a facility basis.	Permits include terms and conditions that specify the general operational requirements of the site; and also include codification of all applicable requirements for emission units at the site.
Opportunity for EPA review for Federal Prevention of Significant Deterioration (PSD) and Nonattainment (NA) permits for major sources.	Opportunity for EPA review, Affected states review, and a Public petition period for every FOP.
Permits have a table listing maximum emission limits for pollutants	Permit has an applicable requirements table and Periodic Monitoring (PM) / Compliance Assurance Monitoring (CAM) tables which document applicable monitoring requirements.
Permits can be altered or amended upon application by company. Permits must be issued before construction or modification of facilities can begin.	Permits can be revised through several revision processes, which provide for different levels of public notice and opportunity to comment. Changes that would be significant revisions require that a revised permit be issued before those changes can be operated.
NSR permits are issued independent of FOP requirements.	FOP are independent of NSR permits, but contain a list of all NSR permits incorporated by reference

[SEQ CHAPTER \h \r 1]New Source Review Requirements

Below is a list of the New Source Review (NSR) permits for the permitted area. These NSR permits are incorporated by reference into the operating permit and are enforceable under it. These permits can be found in the main TCEQ file room,

located on the first floor of Building E, 12100 Park 35 Circle, Austin, Texas. In addition, many of the permits are accessible online through the link provided below. The Public Education Program may be contacted at 1-800-687-4040 or the Air Permits Division (APD) may be contacted at 1-512-239-1250 for help with any question.

Additionally, the site contains emission units that are permitted by rule under the requirements of 30 TAC Chapter 106, Permits by Rule. Registrations submitted by permittees are also available online through the link provided below. The following table specifies the permits by rule that apply to the site.

The status of air permits, applications, and Permits by Rule (PBR) registrations may be found by performing the appropriate search of the databases located at the following website:

[HYPERLINK "http://www.tceq.texas.gov/permitting/air/nav/air_status_permits.html"]

Details on how to search the databases are available in the **Obtaining Permit Documents** section below.

Number: 106.264	Version No./Date: 09/04/2000
Number: 106.472	Version No./Date: 09/04/2000

Emission Units and Emission Points

In air permitting terminology, any source capable of generating emissions (for example, an engine or a sandblasting area) is called an Emission Unit. For purposes of Title V, emission units are specifically listed in the operating permit when they have applicable requirements other than New Source Review (NSR), or when they are listed in the permit shield table.

The actual physical location where the emissions enter the atmosphere (for example, an engine stack or a sand-blasting yard) is called an emission point. For New Source Review preconstruction permitting purposes, every emission unit has an associated emission point. Emission limits are listed in an NSR permit, associated with an emission point. This list of emission points and emission limits per pollutant is commonly referred to as the “Maximum Allowable Emission Rate Table” or “MAERT for short. Specifically, the MAERT lists the Emission Point Number (EPN) that identifies the emission point, followed immediately by the Source Name, identifying the emission unit that is the source of those emissions on this table.

Thus, by reference, an emission unit in a Title V operating permit is linked by reference number to an NSR authorization, and its related emission point.

Monitoring Sufficiency

Federal and state rules, 40 CFR § 70.6(a)(3)(i)(B) and 30 TAC § 122.142(c) respectively, require that each federal operating permit include additional monitoring for applicable requirements that lack periodic or instrumental monitoring (which may include recordkeeping that serves as monitoring) that yields reliable data from a relevant time period that are representative of the emission unit's compliance with the applicable emission limitation or standard. Furthermore, the federal operating permit must include compliance assurance monitoring (CAM) requirements for emission sources that meet the applicability criteria of 40 CFR Part 64 in accordance with 40 CFR § 70.6(a)(3)(i)(A) and 30 TAC § 122.604(b).

With the exception of any emission units listed in the Periodic Monitoring or CAM Summaries in the FOP, the TCEQ Executive Director has determined that the permit contains sufficient monitoring, testing, recordkeeping, and reporting requirements that assure compliance with the applicable requirements. If applicable, each emission unit that requires additional monitoring in the form of periodic monitoring or CAM is described in further detail under the Rationale for CAM/PM Methods Selected section following this paragraph.

Rationale for Compliance Assurance Monitoring (CAM)/ Periodic Monitoring Methods Selected

Periodic Monitoring:

The Federal Clean Air Act requires that each federal operating permit include monitoring sufficient to assure compliance with the terms and conditions of the permit. Most of the emission limits and standards applicable to emission units at Title V sources include adequate monitoring to show that the units meet the limits and standards. For those requirements that do not include monitoring, or where the monitoring is not sufficient to assure compliance, the federal operating permit must include such monitoring for the emission units affected. The following emission units are subject to periodic monitoring requirements because the emission units are subject to an emission limitation or standard for an air pollutant (or surrogate thereof) in an applicable requirement that does not already require monitoring, or the monitoring for the applicable requirement is not sufficient to assure compliance:

Unit/Group/Process Information	
ID No.: E3NSCRB	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 111, Visible Emissions	SOP Index No.: R1111-01
Pollutant: Opacity	Main Standard: § 111.111(a)(1)(A)
Monitoring Information	
Indicator: Visible Emissions	
Minimum Frequency: once per quarter	
Averaging Period: n/a	
Deviation Limit: Opacity of more than 20% will be considered a deviation.	
Basis of monitoring: The option to perform opacity readings or visible emissions to demonstrate compliance is consistent with EPA Reference Test Method 9 and 22. Opacity and visible emissions have been used as an indicator of particulate emissions in many federal rules including 40 CFR Part 60, Subpart F and Subpart HH. In addition, use of these indicators is consistent with the EPA's "Compliance Assurance Monitoring (CAM) Technical Guidance Document" (August 1998). Monitoring specifications and procedures for the opacity are consistent with federal requirements and include the EPA's Test Method 9 for determining opacity by visual observations and the requirements of 40 CFR § 60.13 for a continuous opacity monitoring system (COMS). The monitoring specifications and procedures for the visible emissions monitoring are similar to "EPA Reference Method 22" procedures.

Monitoring Information	
Indicator: Visible Emissions	
Minimum Frequency: once per quarter	
Averaging Period: n/a	
Deviation Limit: Opacity of more than 20% will be considered a deviation.	
Basis of monitoring: The option to perform opacity readings or visible emissions to demonstrate compliance is consistent with EPA Reference Test Method 9 and 22. Opacity and visible emissions have been used as an indicator of particulate emissions in many federal rules including 40 CFR Part 60, Subpart F and Subpart HH. In addition, use of these indicators is consistent with the EPA's "Compliance Assurance Monitoring (CAM) Technical Guidance Document" (August 1998). Monitoring specifications and procedures for the opacity are consistent with federal requirements and include the EPA's Test Method 9 for determining opacity by visual observations and the requirements of 40 CFR § 60.13 for a continuous opacity monitoring system (COMS). The monitoring specifications and procedures for the visible emissions monitoring are similar to "EPA Reference Method 22" procedures.	

Obtaining Permit Documents

The New Source Review Authorization References table in the FOP specifies all NSR authorizations that apply at the permit area covered by the FOP. Individual NSR permitting files are located in the TCEQ Central File Room (TCEQ Main Campus located at 12100 Park 35 Circle, Austin, Texas, 78753, Building E, Room 103). They can also be obtained electronically from TCEQ's Central File Room Online ([HYPERLINK "https://www.tceq.texas.gov/goto/cfr-online"]). Guidance documents that describe how to search electronic records, including Permits by Rule (PBRs) or NSR permits incorporated by reference into an FOP, archived in the Central File Room server are available at [HYPERLINK "https://www.tceq.texas.gov/permitting/air/nav/air_status_permits.html"]

All current PBRs are contained in Chapter 106 and can be viewed at the following website:

[HYPERLINK "https://www.tceq.texas.gov/permitting/air/permitbyrule/air_pbr_index.html"]

Previous versions of 30 TAC Chapter 106 PBRs may be viewed at the following website:

[HYPERLINK "http://www.tceq.texas.gov/permitting/air/permitbyrule/historical_rules/old106list/index106.html"]

Historical Standard Exemption lists may be viewed at the following website:

[HYPERLINK "http://www.tceq.texas.gov/permitting/air/permitbyrule/historical_rules/oldselist/se_index.html"]

Additional information concerning PBRs is available on the TCEQ website:

[HYPERLINK "https://www.tceq.texas.gov/permitting/air/nav/air_pbr.html"]

Compliance Review

1. In accordance with 30 TAC Chapter 60, the compliance history was reviewed on March 9, 2018.

Site rating: 17.31 / Satisfactory Company rating: 7.46 / Satisfactory
(High < 0.10; Satisfactory ≥ 0.10 and ≤ 55; Unsatisfactory > 55)

2. Has the permit changed on the basis of the compliance history or site/company rating? ..... No

Site/Permit Area Compliance Status Review

1. Were there any out-of-compliance units listed on Form OP-ACPS? ..... No
2. Is a compliance plan and schedule included in the permit? ..... No

Available Unit Attribute Forms

[SEQ CHAPTER \h \r 1]Statement of Basis of the Federal Operating Permit

The Dow Chemical Company

Site Name: Dow Texas Operations - Freeport
Area Name: Specialty Chemicals 2
Physical Location: 2301 N Brazosport Blvd
Nearest City: Freeport
County: Brazoria

Permit Number: O2221
Project Type: Significant Revision

The North American Industry Classification System (NAICS) Code: 32519
NAICS Name: Other Basic Organic Chemical Manufacturing

This Statement of Basis sets forth the legal and factual basis for the draft changes to the permit conditions resulting from the significant revision project in accordance with 30 TAC §122.201(a)(4). The applicant has submitted an application for a significant permit revision per §§ 122.219-211. This document may include the following information:

A description of the facility/area process description;
A description of the revision project;
A basis for applying permit shields;
A list of the federal regulatory applicability determinations;
A table listing the determination of applicable requirements;
A list of the New Source Review Requirements;
The rationale for periodic monitoring methods selected;
The rationale for compliance assurance methods selected;
A compliance status; and
A list of available unit attribute forms.

Prepared on: January 30, 2018

Operating Permit
Basis of Determination

Description of Revisions

- The following emission unit IDs, their corresponding applicable requirements, and preconstruction authorizations were added to the permit.
  - B39GMFU1, B39GMFU2, B39GMFU3 - 40 CFR Part 63, Subpart FFFF
  - B39GMLR1, B39GMLR2 - 30 TAC Chapter 115, Loading and Unloading of VOC
  - B39GMSP215, B39GMSP220, B39GMSP226, B39GMSP228, B39SP245, B39SP265 - 30 TAC Chapter 115, Water Separation
  - B39GMST264, B39GMST70A, B39GMST70B, B39GMST75A, B39GMST75B, B39GMST801, B39GMST828, B39GMWT257, B39ST285 - 30 TAC Chapter 115, Storage of VOCs
  - B39GMVH290 - 30 TAC Chapter 115, Vent Gas Controls and 40 CFR Part 63, Subpart FFFF
  - B39PT290 and B39RX210 - 30 TAC Chapter 115, Vent Gas Controls
  - PROGMA - 30 TAC Chapter 115, Subchapter E, Division 6 and 40 CFR Part 63, Subpart FFFF

- Existing Periodic Monitoring Summaries for B13PGD631, B13PGD660, B13SCPOLY, B17SV384, B43IPD141, B43IPR101A, B43IPR101B, B43IPRX1, and B43IPV132 for 30 TAC Chapter 115, Vent Gas Controls were revised to include a revised deviation limit and periodic monitoring text.

- New Source Review (NSR) permit number 104144 was added to the NSR Authorization References table.

Permit Area Process Description

Industrial Polyglycol - is made up of one 10,000 gallon reactor and other associated equipment where all the reactions occur. In addition, the plant includes two 10,000 gallon filter feed tanks, the spray chiller, a storage tank farm, and distribution facilities for such functions as drumming, bagging and loading. The process starts with an initiator containing an oxide in the presence of a catalyst and heat to produce a higher molecular weight polymer with physical properties desirable to the customer's specifications.

Polyglycol 1 - consists of seven kettle reactors ranging in size from 2,000 to 10,000 gallons, finishing systems, and storage tank farms. The process starts by charging a kettle with an initiator and a catalyst. The kettle is heated and fed a specific amount of oxide determined by the recipe of the product. As the oxide reacts down, the crude polyglycol is neutralized without removing the catalyst. The product is further filtered to remove remaining water and unreacted oxide. An eighth kettle is used to blend a base stock ester with antioxidants and corrosion inhibitors to produce three different compressor lubricants.

Aminoethylethanolamine (AEEA) - Ethylene oxide (EO) and excess ethylenediamine (EDA) are reacted to form AEEA. The reactor outlet stream passes through a soaker to act as a digestion stage to complete the oxide reaction. Water and excess EDA are removed through a stripping tray column and recycled to the EDA feed tank. Water with trace amounts of EDA is treated and analyzed at the Wastewater Treatment Plant.
The bottoms stream proceeds to a specified tower to separate the AEEA from heavier byproducts. The AEEA stream is condensed and stored for loading.

Methyldiethanolamine (MDEA) - EO is reacted with an excess of methyl amine (MA) to produce a mixture of monomethylethanolamine (MMEA) and MDEA. A small stream of carbon dioxide is charged to the MA feed tank to prevent formation of MDEA ethers in the reactor. The first separation packed tower removes excess MA from the reactor products. The bottom stream separates MMEA to send it back to the feed tanks. The MDEA product is condensed and transferred to the finish storage tank.

FOPs at Site

The "application area" consists of the emission units and that portion of the site included in the application and this permit. Multiple FOPs may be issued to a site in accordance with 30 TAC § 122.201(e). When there is only one area for the site, then the application information and permit will include all units at the site. Additional FOPs that exist at the site, if any, are listed below.

Additional FOPs: O2203, O2206, O2211, O2212, O2213, O2215, O2216, O2217, O2218, O2219, O2220, O2311, O2697, O3777, O3905, O3949

Major Source Pollutants

The table below specifies the pollutants for which the site is a major source:

Major Pollutants	VOC, SO2, PM, NOX, HAPS, CO

Reading State of Texas's Federal Operating Permit

The Title V Federal Operating Permit (FOP) lists all state and federal air emission regulations and New Source Review (NSR) authorizations (collectively known as "applicable requirements") that apply at a particular site or permit area (in the event a site has multiple FOPs). **The FOP does not authorize new emissions or new construction activities.** The FOP begins with an introductory page which is common to all Title V permits. This page gives the details of the company, states the authority of the issuing agency, requires the company to operate in accordance with this permit and 30 Texas Administrative Code (TAC) Chapter 122, requires adherence with NSR requirements of 30 TAC Chapter 116, and finally indicates the permit number and the issuance date.

This is followed by the table of contents, which is generally composed of the following elements. Not all permits will have all of the elements.

- General Terms and Conditions
- Special Terms and Conditions
  - Emissions Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting
  - Additional Monitoring Requirements
  - New Source Review Authorization Requirements
  - Compliance Requirements
  - Protection of Stratosphere Ozone
  - Permit Location
  - Permit Shield (30 TAC § 122.148)
- Attachments
  - Applicable Requirements Summary
    - Unit Summary
    - Applicable Requirements Summary
  - Additional Monitoring Requirements
  - Permit Shield
  - New Source Review Authorization References
  - Compliance Plan
  - Alternative Requirements
- Appendix A
  - Acronym list

General Terms and Conditions

The General Terms and Conditions are the same and appear in all permits. The first paragraph lists the specific citations for 30 TAC Chapter 122 requirements that apply to all Title V permit holders. The second paragraph describes the requirements for record retention. The third paragraph provides details for voiding the permit, if applicable. The fourth paragraph states that the permit holder shall comply with the requirements of 30 TAC Chapter 116 by obtaining a New Source Review authorization prior to new construction or modification of emission units located in the area covered by this permit. The fifth paragraph provides details on submission of reports required by the permit.

Special Terms and Conditions

Emissions Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting. The TCEQ has designated certain applicable requirements as site-wide requirements. A site-wide requirement is a requirement that applies uniformly to all the units or activities at the site. Units with only site-wide requirements are addressed on Form OP-REQ1 and are not required to be listed separately on a OP-UA Form or Form OP-SUM. Form OP-SUM must list all units addressed in the application and provide identifying information, applicable OP-UA Forms, and preconstruction authorizations. The various OP-UA Forms provide the characteristics of each unit from which applicable requirements are established. Some exceptions exist as a few units may have both site-wide requirements and unit specific requirements.

Other conditions. The other entries under special terms and conditions are in general terms referring to compliance with the more detailed data listed in the attachments.

Attachments

Applicable Requirements Summary. The first attachment, the Applicable Requirements Summary, has two tables, addressing unit specific requirements. The first table, the Unit Summary, includes a list of units with applicable requirements, the unit type, the applicable regulation, and the requirement driver. The intent of the requirement driver is to inform the reader that a given unit may have several different operating scenarios and the differences between those operating scenarios.

The applicable requirements summary table provides the detailed citations of the rules that apply to the various units. For each unit and operating scenario, there is an added modifier called the "index number," detailed citations specifying monitoring and testing requirements, recordkeeping requirements, and reporting requirements. The data for this table are based on data supplied by the applicant on the OP-SUM and various OP-UA forms.

Additional Monitoring Requirement. The next attachment includes additional monitoring the applicant must perform to ensure compliance with the applicable standard. Compliance assurance monitoring (CAM) is often required to provide a reasonable assurance of compliance with applicable emission limitations/standards for large emission units that use control devices to achieve compliance with applicant requirements. When necessary, periodic monitoring (PM) requirements are specified for certain parameters (i.e. feed rates, flow rates, temperature, fuel type and consumption, etc.) to determine if a term and condition or emission unit is operating within specified limits to control emissions. These additional monitoring approaches may be required for two reasons. First, the applicable rules do not adequately specify monitoring requirements (exception- Maximum Achievable Control Technology Standards (MACTs) generally have sufficient monitoring), and second, monitoring may be required to fill gaps in the monitoring requirements of certain applicable requirements. In situations where the NSR permit is the applicable requirement requiring extra monitoring for a specific emission unit, the preferred solution is to have the monitoring requirements in the NSR permit updated so that all NSR requirements are consolidated in the NSR permit.

Permit Shield. A permit may or may not have a permit shield, depending on whether an applicant has applied for, and justified the granting of, a permit shield. A permit shield is a special condition included in the permit document stating that compliance with the conditions of the permit shall be deemed compliance with the specified potentially applicable requirement(s) or specified applicable state-only requirement(s).

New Source Review Authorization References. All activities which are related to emissions in the state of Texas must have a NSR authorization prior to beginning construction. This section lists all units in the permit and the NSR authorization that allowed the unit to be constructed or modified. Units that do not have unit specific applicable requirements other than the NSR authorization do not need to be listed in this attachment. While NSR permits are not physically a part of the Title V permit, they are legally incorporated into the Title V permit by reference. Those NSR permits whose emissions exceed certain PSD/NA thresholds must also undergo a Federal review of federally regulated pollutants in addition to review for state regulated pollutants.

Compliance Plan. A permit may have a compliance schedule attachment for listing corrective actions plans for any emission unit that is out of compliance with an applicable requirement.

Alternative Requirements. This attachment will list any alternative monitoring plans or alternative means of compliance for applicable requirements that have been approved by the EPA Administrator and/or the TCEQ Executive Director.

Appendix A

Acronym list. This attachment lists the common acronyms used when discussing the FOPs.

Stationary vents subject to 30 TAC Chapter 111, Subchapter A, § 111.111(a)(1)(B) addressed in the Special Terms and Conditions

The site contains stationary vents with a flowrate less than 100,000 actual cubic feet per minute (acfm) which are limited, over a six-minute average, to 20% opacity as required by 30 TAC § 111.111(a)(1)(B). As a site may have a large number of stationary vents that fall into this category, they are not required to be listed individually in the permit's Applicable Requirement Summary. This is consistent with EPA's White Paper for Streamlined Development of Part 70 Permit Applications, July 10, 1995, that states that requirements that apply identically to emission units at a site can be treated on a generic basis such as source-wide opacity limits.

Periodic monitoring is specified in Special Term and Condition 3 for stationary vents subject to 30 TAC § 111.111(a)(1)(B) to verify compliance with the 20% opacity limit. These vents are not expected to produce visible emissions during normal operation. The TCEQ evaluated the probability of these sources violating the opacity standards and determined that there is a very low potential that an opacity standard would be exceeded. It was determined that continuous monitoring for these sources is not warranted as there would be very limited environmental benefit in continuously monitoring sources that have a low potential to produce visible emissions. Therefore, the TCEQ set the visible observation monitoring frequency for these sources to once per calendar quarter.

The TCEQ has exempted vents that are not capable of producing visible emissions from periodic monitoring requirements. These vents include sources of colorless VOCs, non-fuming liquids, and other materials that cannot produce emissions that obstruct the transmission of light. Passive ventilation vents, such as plumbing vents, are also included in this category. Since this category of vents are not capable of producing opacity due to the physical or chemical characteristics of the emission source, periodic monitoring is not required as it would not yield any additional data to assure compliance with the 20% opacity standard of 30 TAC § 111.111(a)(1)(B).

In the event that visible emissions are detected, either through the quarterly observation or other credible evidence, such as observations from company personnel, the permit holder shall either report a deviation or perform a Test Method 9 observation to determine the opacity consistent with the 6-minute averaging time specified in 30 TAC § 111.111(a)(1)(B). An additional provision is included to monitor combustion sources more frequently than quarterly if alternate fuels are burned for periods greater than 24 consecutive hours. This will address possible emissions that may arise when switching fuel types.

The applicant opted to comply with the more stringent 20% opacity standard under 30 TAC § 111.111(a)(1)(B) for all stationary vents that are subject to the 30% opacity standard under 30 TAC § 111.111(a)(1)(A).

Federal Regulatory Applicability Determinations

The following chart summarizes the applicability of the principal air pollution regulatory programs to the permit area:

Regulatory Program	Applicability (Yes/No)
Prevention of Significant Deterioration (PSD)	No
Nonattainment New Source Review (NNSR)	No
Minor NSR	Yes
40 CFR Part 60 - New Source Performance Standards	Yes
40 CFR Part 61 - National Emission Standards for Hazardous Air Pollutants (NESHAPs)	No
40 CFR Part 63 - NESHAPs for Source Categories	Yes
Title IV (Acid Rain) of the Clean Air Act (CAA)	No
Title V (Federal Operating Permits) of the CAA	Yes
Title VI (Stratospheric Ozone Protection) of the CAA	Yes
CSAPR (Cross-State Air Pollution Rule)	No

Basis for Applying Permit Shields

An operating permit applicant has the opportunity to specifically request a permit shield to document that specific applicable requirements do not apply to emission units in the permit. A permit shield is a special condition stating that compliance with the conditions of the permit shall be deemed compliance with the specified potentially applicable requirements or specified potentially applicable state-only requirements. A permit shield has been requested in the application for specific emission units. For the permit shield requests that have been approved, the basis of determination for regulations that the owner/operator need not comply with are located in the “Permit Shield” attachment of the permit.

Insignificant Activities

In general, units not meeting the criteria for inclusion on either Form OP-SUM or Form OP-REQ1 are not required to be addressed in the operating permit application. Examples of these types of units include, but are not limited to, the following:

1. Office activities such as photocopying, blueprint copying, and photographic processes.
2. Sanitary sewage collection and treatment facilities other than those used to incinerate wastewater treatment plant sludge. Stacks or vents for sanitary sewer plumbing traps are also included.
3. Food preparation facilities including, but not limited to, restaurants and cafeterias used for preparing food or beverages primarily for consumption on the premises.
4. Outdoor barbecue pits, campfires, and fireplaces.
5. Laundry dryers, extractors, and tumblers processing bedding, clothing, or other fabric items generated primarily at the premises. This does not include emissions from dry cleaning systems using perchloroethylene or petroleum solvents.
6. Facilities storing only dry, sweet natural gas, including natural gas pressure regulator vents.

7. Any air separation or other industrial gas production, storage, or packaging facility. Industrial gases, for purposes of this list, include only oxygen, nitrogen, helium, neon, argon, krypton, and xenon.
8. Storage and handling of sealed portable containers, cylinders, or sealed drums.
9. Vehicle exhaust from maintenance or repair shops.
10. Storage and use of non-VOC products or equipment for maintaining motor vehicles operated at the site (including but not limited to, antifreeze and fuel additives).
11. Air contaminant detectors and recorders, combustion controllers and shut-off devices, product analyzers, laboratory analyzers, continuous emissions monitors, other analyzers and monitors, and emissions associated with sampling activities. Exception to this category includes sampling activities that are deemed fugitive emissions and under a regulatory leak detection and repair program.
12. Bench scale laboratory equipment and laboratory equipment used exclusively for chemical and physical analysis, including but not limited to, assorted vacuum producing devices and laboratory fume hoods.
13. Steam vents, steam leaks, and steam safety relief valves, provided the steam (or boiler feedwater) has not contacted other materials or fluids containing regulated air pollutants other than boiler water treatment chemicals.
14. Storage of water that has not contacted other materials or fluids containing regulated air pollutants other than boiler water treatment chemicals.
15. Well cellars.
16. Fire or emergency response equipment and training, including but not limited to, use of fire control equipment including equipment testing and training, and open burning of materials or fuels associated with firefighting training.
17. Crucible or pot furnaces with a brim full capacity of less than 450 cubic inches of any molten metal.
18. Equipment used exclusively for the melting or application of wax.
19. All closed tumblers used for the cleaning or deburring of metal products without abrasive blasting, and all open tumblers with a batch capacity of 1,000 lbs. or less.
20. Shell core and shell mold manufacturing machines.
21. Sand or investment molds with a capacity of 100 lbs. or less used for the casting of metals;
22. Equipment used for inspection of metal products.
23. Equipment used exclusively for rolling, forging, pressing, drawing, spinning, or extruding either hot or cold metals by some mechanical means.
24. Instrument systems utilizing air, natural gas, nitrogen, oxygen, carbon dioxide, helium, neon, argon, krypton, and xenon.
25. Battery recharging areas.
26. Brazing, soldering, or welding equipment.

Determination of Applicable Requirements

The tables below include the applicability determinations for the emission units, the index number(s) where applicable, and all relevant unit attribute information used to form the basis of the applicability determination. The unit attribute information is a description of the physical properties of an emission unit which is used to determine the requirements to which the permit holder must comply. For more information about the descriptions of the unit attributes specific Unit Attribute Forms may be viewed at [HYPERLINK "http://www.tceq.texas.gov/permitting/air/nav/air_all_ua_forms.html"].

A list of unit attribute forms is included at the end of this document. Some examples of unit attributes include construction date; product stored in a tank; boiler fuel type; etc.. Generally, multiple attributes are needed to determine the requirements for a given emission unit and index number. The table below lists these attributes in the column entitled "Basis of Determination." Attributes that demonstrate that an applicable requirement applies will be the factual basis for the specific citations in an applicable requirement that apply to a unit for that index number. The TCEQ Air Permits Division has developed flowcharts for determining applicability of state and federal regulations based on the unit attribute information in a Decision Support System (DSS). These flowcharts can be accessed via the internet at [HYPERLINK "http://www.tceq.texas.gov/permitting/air/nav/air_supportsys.html"]. The Air Permits Division staff may also be contacted for assistance at (512) 239-1250.

The attributes for each unit and corresponding index number provide the basis for determining the specific legal citations in an applicable requirement that apply, including emission limitations or standards, monitoring, recordkeeping, and reporting. The rules were found to apply or not apply by using the unit attributes as answers to decision questions found in the flowcharts of the DSS. Some additional attributes indicate which legal citations of a rule apply. The legal citations that apply to each emission unit may be found in the Applicable Requirements Summary table of the draft permit. There

may be some entries or rows of units and rules not found in the permit, or if the permit contains a permit shield, repeated in the permit shield area. These are sets of attributes that describe negative applicability, or; in other words, the reason why a potentially applicable requirement does not apply.

If applicability determinations have been made which differ from the available flowcharts, an explanation of the decisions involved in the applicability determination is specified in the column "Changes and Exceptions to RRT." If there were no exceptions to the DSS, then this column has been removed.

The draft permit includes all emission limitations or standards, monitoring, recordkeeping and reporting required by each applicable requirement. If an applicable requirement does not require monitoring, recordkeeping, or reporting, the word "None" will appear in the Applicable Requirements Summary table. If additional periodic monitoring is required for an applicable requirement, it will be explained in detail in the portion of this document entitled "Rationale for Compliance Assurance Monitoring (CAM)/ Periodic Monitoring Methods Selected."

When attributes demonstrate that a unit is not subject to an applicable requirement, the applicant may request a permit shield for those items. The portion of this document entitled "Basis for Applying Permit Shields" specifies which units, if any, have a permit shield.

Operational Flexibility

When an emission unit has multiple operating scenarios, it will have a different index number associated with each operating condition. This means that units are permitted to operate under multiple operating conditions. The applicable requirements for each operating condition are determined by a unique set of unit attributes. For example, a tank may store two different products at different points in time. The tank may, therefore, need to comply with two distinct sets of requirements, depending on the product that is stored. Both sets of requirements are included in the permit, so that the permit holder may store either product in the tank.

Unit ID	Regulation	Index Number	Basis of Determination*	Changes and Exceptions to DSS**
B13PGHE101	40 CFR Part 63, Subpart PPP	63PPP-01	Unit Type = Emission Point Heat Exchanger subject to 40 CFR Part 63, Subpart PPP	No DSS is available for this regulation. Citations were determined from an analysis of the rule text and the basis of determination.
B13PGHE102	40 CFR Part 63, Subpart PPP	63PPP-01	Unit Type = Emission Point Heat Exchanger subject to 40 CFR Part 63, Subpart PPP	No DSS is available for this regulation. Citations were determined from an analysis of the rule text and the basis of determination.
B13PGR2	40 CFR Part 63, Subpart PPP	63PPP-01	Unit Type = Emission Point Process vent subject to 40 CFR Part 63, Subpart PPP	No DSS is available for this regulation. Citations were determined from an analysis of the rule text and the basis of determination.
B13PGR5	40 CFR Part 63, Subpart PPP	63PPP-01	Unit Type = Emission Point Process vent subject to 40 CFR Part 63, Subpart PPP	No DSS is available for this regulation. Citations were determined from an analysis of the rule text and the basis of determination.
B13PGR7	40 CFR Part 63, Subpart PPP	63PPP-01	Unit Type = Emission Point Process vent subject to 40 CFR Part 63, Subpart PPP	No DSS is available for this regulation. Citations were determined from an analysis of the rule text and the basis of determination.

VOC Concentration/Emission Rate @ Max Operating Conditions = The VOC concentration or emission rate is less than the applicable exemption limit at maximum actual operating conditions and the alternate recordkeeping requirements of 30 TAC § 115.126(4) are being selected.	
B13PGST67	30 TAC Chapter 115, Vent Gas Controls	R5121-01	Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Combined 24-Hour VOC Weight = Combined VOC weight is less than or equal to 100 pounds (45.4 kg). VOC Concentration/Emission Rate @ Max Operating Conditions = The VOC concentration or emission rate is less than the applicable exemption limit at maximum actual operating conditions and the alternate recordkeeping requirements of 30 TAC § 115.126(4) are being selected.	
B13PGST850	30 TAC Chapter 115, Vent Gas Controls	R5121-01	Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Combined 24-Hour VOC Weight = Combined VOC weight is less than or equal to 100 pounds (45.4 kg). VOC Concentration/Emission Rate @ Max Operating Conditions = The VOC concentration or emission rate is less than the applicable exemption limit at maximum actual operating conditions and the alternate recordkeeping requirements of 30 TAC § 115.126(4) are being selected.	
B13PGSV2	40 CFR Part 63, Subpart FFFF	63FFFF-01	Emission Standard = The vent stream is Group 2 (not designated as Group 1 and determined to not be Group 1). Recovery Device = The TRE index is maintained using a recovery device. Existing Source = The source is an existing source (commenced construction on or before April 4, 2002). TRE Index Threshold = The TRE index is greater than the applicable threshold (i.e., 5.0 for existing source or 8.0 for new source).	
B13PGVJ3	30 TAC Chapter 115, Vent Gas Controls	R5121-01	Alternate Control Requirement = Alternate control is not used. Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Control Device Type = Direct flame incinerator in which the vent gas stream is burned at a temperature or at least 1300° F (704 C). Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. VOC Concentration/Emission Rate @ Max Operating Conditions = Either the VOC concentration or emission rate is greater than the applicable exemption limit at maximum

			actual operating conditions or the alternate recordkeeping requirements of 30 TAC § 115.126(4) are not being selected.	
B13PGVJ3	30 TAC Chapter 115, Vent Gas Controls	R5121-02	Alternate Control Requirement = Alternate control is not used. Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Control Device Type = Direct flame incinerator in which the vent gas stream is burned at a temperature or at least 1300° F (704 C). Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. VOC Concentration/Emission Rate @ Max Operating Conditions = Either the VOC concentration or emission rate is greater than the applicable exemption limit at maximum actual operating conditions or the alternate recordkeeping requirements of 30 TAC § 115.126(4) are not being selected.	
B13SCPOLY	30 TAC Chapter 115, Vent Gas Controls	R5121-01	Alternate Control Requirement = Alternate control is not used. Control Device Type = Vapor recovery system, as defined in 30 TAC § 115.10, other than an afterburner, blast furnace combustion device, boiler, catalytic or direct flame incinerator, carbon adsorption system, chiller, flare or vapor combustor. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. VOC Concentration/Emission Rate @ Max Operating Conditions = Either the VOC concentration or emission rate is greater than the applicable exemption limit at maximum actual operating conditions or the alternate recordkeeping requirements of 30 TAC § 115.126(4) are not being selected.	
B17SV384	30 TAC Chapter 115, Vent Gas Controls	R5121-01	Alternate Control Requirement = Alternate control is not used. Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Total Design Capacity = Total design capacity is greater than or equal to 1,100 tons per year for all chemicals produced within that unit. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Flow Rate or VOC Concentration = Flow rate is greater than or equal to 0.011 scm/min or the VOC concentration is greater than or equal to 500 ppmv. 40 CFR 60 Subpart NNN Requirements = The distillation unit vent gas stream satisfies neither of the following requirements of 40 CFR Part 60, Subpart NNN: TRE index value is greater than 8.0; or TRE index value is greater than 1.0 without the use of VOC emission control devices. Control Device Type = Vapor recovery system, as defined in 30 TAC § 115.10, other than	

Unit ID	Regulation	Index Number	Basis of Determination*	Changes and Exceptions to DSS**
			an afterburner, blast furnace combustion device, boiler, catalytic or direct flame incinerator, carbon adsorption system, chiller, flare or vapor combustor. Vent Type = Vent gas stream originates from a synthetic organic chemical manufacturing industry reactor process or distillation operation, as defined in 30 TAC § 115.10. 40 CFR 60 Subpart RRR Requirements = The reactor process vent gas stream satisfies neither of the following requirements of 40 CFR Part 60, Subpart RRR: TRE index value is greater than 8.0; or TRE index value is greater than 1.0 without the use of VOC emission control devices.	
B17SV384	40 CFR Part 63, Subpart G	63G-01	Alternate Monitoring Parameters = The EPA Administrator has not approved alternate monitoring parameters or alternate monitoring parameters are not used. Control Device = Absorber used as a recovery device. Overlap = Title 40 CFR Part 63, Subpart G only Group 1 = The process vent is a Group 2 process vent. Continuous Monitoring = Complying with the continuous monitoring requirements of 40 CFR §§ 63.114, 63.117, and 63.118. Halogenated = Vent stream is not halogenated. HAP Concentration = HAP concentration is greater than or equal to 50 ppm. By-pass Lines = The vent system does not contain by-pass lines that can divert the vent stream from the control device. Flow Rate = Flow rate is greater than or equal to 0.005 scm/min or the owner or operator is not electing to demonstrate this flow rate. Electing Control = Not electing to control the process vent to the levels required in 40 CFR § 63.113(a)(1) or (a)(2). MACT TRE Index Value = TRE index value is greater than 1.0 and less than or equal to 4.0 as calculated using the procedures of 40 CFR § 63.115(d).	
B39GMVH290	30 TAC Chapter 115, Vent Gas Controls	R5121-01	Alternate Control Requirement = Alternate control is not used. Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Control Device Type = Vapor recovery system, as defined in 30 TAC § 115.10, other than an afterburner, blast furnace combustion device, boiler, catalytic or direct flame incinerator, carbon adsorption system, chiller, flare or vapor combustor. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule.	
B39GMVH290	40 CFR Part 63, Subpart FFFF	63FFFF-01	Emission Standard = The vent stream is Group 2 (not designated as Group 1 and determined to not be Group 1). Recovery Device = The TRE index is maintained using a recovery device. Existing Source = The source is an existing source (commenced construction on or

			63.100 CMPU = The MCPU is not a CMPU defined in § 63.100. New Source = The MCPU is an existing affected source. PUG = The MCPU is not part of a process unit group (PUG). G2/<1000 lb/yr = The process does not include Group 2 batch process vents and/or uncontrolled hydrogen halide and halogen HAP emissions from the sum of all batch and continuous process vents less than 1,000 lb/yr. Startup 2002 = The affected source initial startup was before April 4, 2002. PP Alt = The MCPU is complying with the emission limitations and work practice standards contained in Tables 1 through 7. Batch Process Vents = The source does not include batch process vents.	
PROPGE	40 CFR Part 63, Subpart F	63F-01	Applicable Chemicals = The chemical manufacturing process unit manufactures, as a primary product, one or more of the chemicals listed in 40 CFR § 63.100(b)(1)(i) or 40 CFR § 63.100(b)(1)(ii). Intervening Cooling Fluid = There is no intervening cooling fluid containing less than 5 percent by weight of total HAPs listed in Table 4 of 40 CFR Part 63, Subpart F, between the process and cooling water. Table 2 HAP = The chemical manufacturing process unit uses as a reactant or manufactures, as a product or co-product, one or more of the organic hazardous air pollutants in Table 2. Table 4 HAP Content = The recirculating heat exchange system is not used exclusively to cool process fluids that contain less than 5 percent by weight of total HAPs listed in Table 4 of title 40 CFR Part 63, Subpart F. Alternate Means of Emission Limitation = No alternative means of emission limitation has been approved by the EPA Administrator to achieve a reduction in organic HAP emission or no alternate has been requested. NPDES Permit = The once-through heat exchange system is not subject to NPDES permit with an allowable discharge limit of 1 part per million or less above influent concentration or 10 percent or less above influent concentration. Meets 40 CFR 63.104(a)(4)(i)-(iv) = The once-through heat exchange system is not subject to an NPDES permit that meets 40 CFR § 63.104(a)(4)(i) - (iv). Heat Exchange System = A heat exchange system is utilized. Table 9 HAP Content = The once-through heat exchange system is not used exclusively to cool process fluids that contain less than 5 percent by weight of total HAPs listed in Table 9 of 40 CFR Part 63, Subpart G. Cooling Water Monitored = The cooling water is being monitored for the presence of one or more HAPs or other representative substances whose presence in cooling water indicates a leak. Cooling Water Pressure = The heat exchange system is not operated with the minimum pressure on the cooling water side at least 35 kilopascals greater than the maximum pressure on the process side.	

* - The “unit attributes” or operating conditions that determine what requirements apply
** - Notes changes made to the automated results from the DSS, and a brief explanation why

NSR Versus Title V FOP

The state of Texas has two Air permitting programs, New Source Review (NSR) and Title V Federal Operating Permits. The two programs are substantially different both in intent and permit content.

NSR is a preconstruction permitting program authorized by the Texas Clean Air Act and Title I of the Federal Clean Air Act (FCAA). The processing of these permits is governed by 30 Texas Administrative Code (TAC) Chapter 116.111. The Title V Federal Operating Program is a federal program authorized under Title V of the FCAA that has been delegated to the state of Texas to administer and is governed by 30 TAC Chapter 122. The major differences between the two permitting programs are listed in the table below:

NSR Permit	Federal Operating Permit(FOP)
Issued Prior to new Construction or modification of an existing facility	For initial permit with application shield, can be issued after operation commences; significant revisions require approval prior to operation.
Authorizes air emissions	Codifies existing applicable requirements, does not authorize new emissions
Ensures issued permits are protective of the environment and human health by conducting a health effects review and that requirement for best available control technology (BACT) is implemented.	Applicable requirements listed in permit are used by the inspectors to ensure proper operation of the site as authorized. Ensures that adequate monitoring is in place to allow compliance determination with the FOP.
Up to two Public notices may be required. Opportunity for public comment and contested case hearings for some authorizations.	One public notice required. Opportunity for public comments. No contested case hearings.
Applies to all point source emissions in the state.	Applies to all major sources and some non-major sources identified by the EPA.
Applies to facilities: a portion of site or individual emission sources	One or multiple FOPs cover the entire site (consists of multiple facilities)
Permits include terms and conditions under which the applicant must construct and operate its various equipment and processes on a facility basis.	Permits include terms and conditions that specify the general operational requirements of the site; and also include codification of all applicable requirements for emission units at the site.
Opportunity for EPA review for Federal Prevention of Significant Deterioration (PSD) and Nonattainment (NA) permits for major sources.	Opportunity for EPA review, Affected states review, and a Public petition period for every FOP.
Permits have a table listing maximum emission limits for pollutants	Permit has an applicable requirements table and Periodic Monitoring (PM) / Compliance Assurance Monitoring (CAM) tables which document applicable monitoring requirements.
Permits can be altered or amended upon application by company. Permits must be issued before construction or modification of facilities can begin.	Permits can be revised through several revision processes, which provide for different levels of public notice and opportunity to comment. Changes that would be significant revisions require that a revised permit be issued before those changes can be operated.
NSR permits are issued independent of FOP requirements.	FOP are independent of NSR permits, but contain a list of all NSR permits incorporated by reference

[SEQ CHAPTER \h \r 1]New Source Review Requirements

Below is a list of the New Source Review (NSR) permits for the permitted area. These NSR permits are incorporated by reference into the operating permit and are enforceable under it. These permits can be found in the main TCEQ file room,

located on the first floor of Building E, 12100 Park 35 Circle, Austin, Texas. The Public Education Program may be contacted at 1-800-687-4040 or the Air Permits Division (APD) may be contacted at 1-512-239-1250 for help with any question.

Additionally, the site contains emission units that are permitted by rule under the requirements of 30 TAC Chapter 106, Permits by Rule. The following table specifies the permits by rule that apply to the site. All current permits by rule are contained in Chapter 106. Outdated 30 TAC Chapter 106 permits by rule may be viewed at the following Web site:

[HYPERLINK "http://www.tceq.texas.gov/permitting/air/permitbyrule/historical_rules/old106list/index106.html"]

Outdated Standard Exemption lists may be viewed at the following Web site:

[HYPERLINK "http://www.tceq.texas.gov/permitting/air/permitbyrule/historical_rules/oldselist/se_index.html"]

The status of air permits and applications and a link to the Air Permits Remote Document Server is located at the following Web site:

[HYPERLINK "http://www.tceq.texas.gov/permitting/air/nav/air_status_permits.html"]

Emission Units and Emission Points

In air permitting terminology, any source capable of generating emissions (for example, an engine or a sandblasting area) is called an Emission Unit. For purposes of Title V, emission units are specifically listed in the operating permit when they have applicable requirements other than New Source Review (NSR), or when they are listed in the permit shield table.

The actual physical location where the emissions enter the atmosphere (for example, an engine stack or a sand-blasting yard) is called an emission point. For New Source Review preconstruction permitting purposes, every emission unit has an associated emission point. Emission limits are listed in an NSR permit, associated with an emission point. This list of emission points and emission limits per pollutant is commonly referred to as the “Maximum Allowable Emission Rate Table”, or “MAERT” for short. Specifically, the MAERT lists the Emission Point Number (EPN) that identifies the emission

point, followed immediately by the Source Name, identifying the emission unit that is the source of those emissions on this table.

Thus, by reference, an emission unit in a Title V operating permit is linked by reference number to an NSR authorization, and its related emission point.

Monitoring Sufficiency

Federal and state rules, 40 CFR § 70.6(a)(3)(i)(B) and 30 TAC § 122.142(c) respectively, require that each federal operating permit include additional monitoring for applicable requirements that lack periodic or instrumental monitoring (which may include recordkeeping that serves as monitoring) that yields reliable data from a relevant time period that are representative of the emission unit's compliance with the applicable emission limitation or standard. Furthermore, the federal operating permit must include compliance assurance monitoring (CAM) requirements for emission sources that meet the applicability criteria of 40 CFR Part 64 in accordance with 40 CFR § 70.6(a)(3)(i)(A) and 30 TAC § 122.604(b).

With the exception of any emission units listed in the Periodic Monitoring or CAM Summaries in the FOP, the TCEQ Executive Director has determined that the permit contains sufficient monitoring, testing, recordkeeping, and reporting requirements that assure compliance with the applicable requirements. If applicable, each emission unit that requires additional monitoring in the form of periodic monitoring or CAM is described in further detail under the Rationale for CAM/PM Methods Selected section following this paragraph.

Rationale for Compliance Assurance Monitoring (CAM)/ Periodic Monitoring Methods Selected

Periodic Monitoring:

The Federal Clean Air Act requires that each federal operating permit include monitoring sufficient to assure compliance with the terms and conditions of the permit. Most of the emission limits and standards applicable to emission units at Title V sources include adequate monitoring to show that the units meet the limits and standards. For those requirements that do not include monitoring, or where the monitoring is not sufficient to assure compliance, the federal operating permit must include such monitoring for the emission units affected. The following emission units are subject to periodic monitoring requirements because the emission units are subject to an emission limitation or standard for an air pollutant (or surrogate thereof) in an applicable requirement that does not already require monitoring, or the monitoring for the applicable requirement is not sufficient to assure compliance:

Unit/Group/Process Information	
ID No.: B13PGD631	
Control Device ID No.: B13PGSV22	Control Device Type: Absorber (Direct Absorption)
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Vent Gas Controls	SOP Index No.: R5121-01
Pollutant: VOC	Main Standard: § 115.121(a)(1)
Monitoring Information	
Indicator: Liquid flow rate	
Minimum Frequency: Once per week	
Averaging Period: n/a*	
Deviation Limit: 5 gallons per minute	
Basis of monitoring: The option to monitor the liquid flow rate, liquid supply pressure, and the liquid flow rate and gas flow rate are provided as monitoring options because monitoring these parameters can indicate malfunctions in the liquid pumping equipment, blockage of pipes or spray nozzles.	

*The permit holder may elect to collect monitoring data on a more frequent basis and calculate the average as specified by the minimum frequency, for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis and shall not be collected and used in particular instances to avoid reporting deviations.

Unit/Group/Process Information	
ID No.: B13PGD631	
Control Device ID No.: B13PGSV22	Control Device Type: Absorber (Direct Absorption)
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Vent Gas Controls	SOP Index No.: R5121-01
Pollutant: VOC	Main Standard: § 115.121(a)(1)
Monitoring Information	
Indicator: Visual Inspection	
Minimum Frequency: Once per month	
Averaging Period: n/a	
Deviation Limit: Any inspection data which indicates that the scrubber is not in compliance with 115.121(a)(1).	
Basis of monitoring: It is widely practiced and accepted to use work practice as a monitoring option to demonstrate compliance. Preventive maintenance and visual inspections of control equipment, as recommended by the manufacturer, conducted by the owner or operator can ensure that the unit is operating properly. The work practice requirements prescribe that preventive maintenance and/or visual inspections be performed and recorded in a log. This option ensures that the owner or operator is adequately maintaining the control equipment.	

Unit/Group/Process Information	
ID No.: B13PGD660	
Control Device ID No.: B13PGSV22	Control Device Type: Absorber (Direct Absorption)

Compliance Review

1. In accordance with 30 TAC Chapter 60, the compliance history was reviewed on January 8, 2018.
   Site rating: 0.00 / High Company rating: 0.57 / Satisfactory
   (High < 0.10; Satisfactory ≥ 0.10 and < 55; Unsatisfactory > 55)
2. Has the permit changed on the basis of the compliance history or site/company rating? ..... No

[SEQ CHAPTER \H \R 1]FEDERAL OPERATING PERMIT

A FEDERAL OPERATING PERMIT IS HEREBY ISSUED TO
The Dow Chemical Company

AUTHORIZING THE OPERATION OF
Dow Texas Operations - Freeport
Specialty Chemicals 2
Other Basic Organic Chemical Manufacturing

LOCATED AT
Brazoria County, Texas
Latitude 28° 58' 57" Longitude 95° 21' 10"
Regulated Entity Number: RN100225945

This permit is issued in accordance with and subject to the Texas Clean Air Act (TCAA), Chapter 382 of the Texas Health and Safety Code and Title 30 Texas Administrative Code Chapter 122 (30 TAC Chapter 122), Federal Operating Permits. Under 30 TAC Chapter 122, this permit constitutes the permit holder's authority to operate the site and emission units listed in this permit. Operations of the site and emission units listed in this permit are subject to all additional rules or amended rules and orders of the Commission pursuant to the TCAA.

This permit does not relieve the permit holder from the responsibility of obtaining New Source Review authorization for new, modified, or existing facilities in accordance with 30 TAC Chapter 116, Control of Air Pollution by Permits for New Construction or Modification.

The site and emission units authorized by this permit shall be operated in accordance with 30 TAC Chapter 122, the general terms and conditions, special terms and conditions, and attachments contained herein.

This permit shall expire five years from the date of issuance. The renewal requirements specified in 30 TAC § 122.241 must be satisfied in order to renew the authorization to operate the site and emission units.

Permit No: O2221 Issuance Date: December 17, 2014

For the Commission

[TOC \o "1-3" \h \z \t "SOP_Heading1,1,SOP_Heading2,2,SOP_Heading2 + Centered,2,SOP_Heading1 + Centered,1"]

General Terms and Conditions

The permit holder shall comply with all terms and conditions contained in 30 TAC § 122.143 (General Terms and Conditions), 30 TAC § 122.144 (Recordkeeping Terms and Conditions), 30 TAC § 122.145 (Reporting Terms and Conditions), and 30 TAC § 122.146 (Compliance Certification Terms and Conditions).

In accordance with 30 TAC § 122.144(1), records of required monitoring data and support information required by this permit, or any applicable requirement codified in this permit, are required to be maintained for a period of five years from the date of the monitoring report, sample, or application unless a longer data retention period is specified in an applicable requirement. The five year record retention period supersedes any less stringent retention requirement that may be specified in a condition of a permit identified in the New Source Review Authorization attachment.

If the permit holder chooses to demonstrate that this permit is no longer required, a written request to void this permit shall be submitted to the Texas Commission on Environmental Quality (TCEQ) by the Responsible Official in accordance with 30 TAC § 122.161(e). The permit holder shall comply with the permit's requirements, including compliance certification and deviation reporting, until notified by the TCEQ that this permit is voided.

The permit holder shall comply with 30 TAC Chapter 116 by obtaining a New Source Review authorization prior to new construction or modification of emission units located in the area covered by this permit.

All reports required by this permit must include in the submittal a cover letter which identifies the following information: company name, TCEQ regulated entity number, air account number (if assigned), site name, area name (if applicable), and Air Permits Division permit number(s).

[SEQ CHAPTER \h \r 1]**Special Terms and Conditions:**

Emission Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting

1. Permit holder shall comply with the following requirements:

   A. Emission units (including groups and processes) in the Applicable Requirements Summary attachment shall meet the limitations, standards, equipment specifications, monitoring, recordkeeping, reporting, testing, and other requirements listed in the Applicable Requirements Summary attachment to assure compliance with the permit.

   B. The textual description in the column titled "Textual Description" in the Applicable Requirements Summary attachment is not enforceable and is not deemed as a substitute for the actual regulatory language. The Textual Description is provided for information purposes only.

   C. A citation listed on the Applicable Requirements Summary attachment, which has a notation [G] listed before it, shall include the referenced section and subsection for all commission rules, or paragraphs for all federal and state regulations and all subordinate paragraphs, subparagraphs and clauses, subclauses, and items contained within the referenced citation as applicable requirements.

   D. When a grouped citation, notated with a [G] in the Applicable Requirements Summary, contains multiple compliance options, the permit holder must keep records of when each compliance option was used.

   E. Emission units subject to 40 CFR Part 63, Subparts F, G, H, PPP and FFFF as identified in the attached Applicable Requirements Summary table are subject to 30 TAC Chapter

113, Subchapter C, § 113.110, § 113.120, § 113.130, § 113.730, and § 113.890 respectively which incorporate the 40 CFR Part 63 Subparts by reference.

2. The permit holder shall comply with the following sections of 30 TAC Chapter 101 (General Air Quality Rules):

   A. Title 30 TAC § 101.1 (relating to Definitions), insofar as the terms defined in this section are used to define the terms used in other applicable requirements

   B. Title 30 TAC § 101.3 (relating to Circumvention)

   C. Title 30 TAC § 101.8 (relating to Sampling), if such action has been requested by the TCEQ

   D. Title 30 TAC § 101.9 (relating to Sampling Ports), if such action has been requested by the TCEQ

   E. Title 30 TAC § 101.10 (relating to Emissions Inventory Requirements)

   F. Title 30 TAC § 101.201 (relating to Emission Event Reporting and Recordkeeping Requirements)

   G. Title 30 TAC § 101.211 (relating to Scheduled Maintenance, Start-up, and Shutdown Reporting and Recordkeeping Requirements)

   H. Title 30 TAC § 101.221 (relating to Operational Requirements)

   I. Title 30 TAC § 101.222 (relating to Demonstrations)

   J. Title 30 TAC § 101.223 (relating to Actions to Reduce Excessive Emissions)

3. Permit holder shall comply with the following requirements of 30 TAC Chapter 111:

   A. Visible emissions from stationary vents with a flow rate of less than 100,000 actual cubic feet per minute and constructed either before or after January 31, 1972 that are not listed in the Applicable Requirements Summary attachment for 30 TAC Chapter 111, Subchapter A, Division 1 , shall not exceed 20% opacity averaged over a six minute period. The permit holder shall comply with the following requirements for stationary vents at the site subject to this standard:

      (i) Title 30 TAC § 111.111(a)(1)(B) (relating to Requirements for Specified Sources)

      (ii) Title 30 TAC § 111.111(a)(1)(E)

      (iii) Title 30 TAC § 111.111(a)(1)(F)(i), (ii), (iii), or (iv)

      (iv) For emission units with vent emissions subject to 30 TAC § 111.111(a)(1)(B), complying with 30 TAC § 111.111(a)(1)(F)(ii), (iii), or (iv), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146. These periodic monitoring requirements do not apply to vents that are not capable of producing visible emissions such as vents that emit only colorless VOCs; vents from non-fuming liquids; vents that provide passive ventilation, such as plumbing vents; or vent emissions from any other source that

does not obstruct the transmission of light. Vents, as specified in the "Applicable Requirements Summary" attachment, that are subject to the emission limitation of 30 TAC § 111.111(a)(1)(B) are not subject to the following periodic monitoring requirements:

(1) An observation of stationary vents from emission units in operation shall be conducted at least once during each calendar quarter unless the emission unit is not operating for the entire quarter.

(2) For stationary vents from a combustion source, if an alternative to the normally fired fuel is fired for a period greater than or equal to 24 consecutive hours, the permit holder shall conduct an observation of the stationary vent for each such period to determine if visible emissions are present. If such period is greater than 3 months, observations shall be conducted once during each quarter. Supplementing the normally fired fuel with natural gas or fuel gas to increase the net heating value to the minimum required value does not constitute creation of an alternative fuel.

(3) Records of all observations shall be maintained.

(4) Visible emissions observations of emission units operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of emission units operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions observations shall be made during times when the activities described in 30 TAC § 111.111(a)(1)(E) are not taking place. Visible emissions shall be determined with each stationary vent in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each stationary vent during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

(5) Compliance Certification:

(a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(1) and (a)(1)(B).

(b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(1)(F) to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the

applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

(c) Some vents may be subject to multiple visible emission or monitoring requirements. All credible data must be considered when certifying compliance with this requirement even if the observation or monitoring was performed to demonstrate compliance with a different requirement.

B. For visible emissions from a building, enclosed facility, or other structure; the permit holder shall comply with the following requirements:

(i) Title 30 TAC § 111.111(a)(7)(A) (relating to Requirements for Specified Sources)

(ii) Title 30 TAC § 111.111(a)(7)(B)(i) or (ii)

(iii) For a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source subject to 30 TAC § 111.111(a)(7)(A), complying with 30 TAC § 111.111(a)(7)(B)(i) or (ii), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146:

(1) An observation of visible emissions from a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source which is required to comply with 30 TAC § 111.111(a)(7)(A) shall be conducted at least once during each calendar quarter unless the air emission source or enclosed facility is not operating for the entire quarter.

(2) Records of all observations shall be maintained.

(3) Visible emissions observations of air emission sources or enclosed facilities operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of air emission sources or enclosed facilities operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions shall be determined with each emissions outlet in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each emissions outlet during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

(4) Compliance Certification:

(a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(7) and (a)(7)(A)

(b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(7)(B) to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

C. For visible emissions from all other sources not specified in 30 TAC § 111.111(a)(1), (4), or (7); the permit holder shall comply with the following requirements:

(i) Title 30 TAC § 111.111(a)(8)(A) (relating to Requirements for Specified Sources)

(ii) Title 30 TAC § 111.111(a)(8)(B)(i) or (ii)

(iii) For a source subject to 30 TAC § 111.111(a)(8)(A), complying with 30 TAC § 111.111(a)(8)(B)(i) or (ii), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146:

(1) An observation of visible emissions from a source which is required to comply with 30 TAC § 111.111(a)(8)(A) shall be conducted at least once during each calendar quarter unless the source is not operating for the entire quarter.

(2) Records of all observations shall be maintained.

(3) Visible emissions observations of sources operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of sources operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions shall be determined with each source in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each source during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be

evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

(4) Compliance Certification:

(a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(8) and (a)(8)(A)

(b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(8)(B) to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

D. Certification of opacity readers determining opacities under Method 9 (as outlined in 40 CFR Part 60, Appendix A) to comply with opacity monitoring requirements shall be accomplished by completing the Visible Emissions Evaluators Course, or approved agency equivalent, no more than 180 days before the opacity reading.

E. For emission units with contributions from uncombined water, the permit holder shall comply with the requirements of 30 TAC § 111.111(b).

F. Emission limits on nonagricultural processes, except for the steam generators specified in 30 TAC § 111.153, shall comply with the following requirements:

(i) Emissions of PM from any source may not exceed the allowable rates as required in 30 TAC § 111.151(a) (relating to Allowable Emissions Limits)

(ii) Sources with an effective stack height (h_e) less than the standard effective stack height (H_e), must reduce the allowable emission level by multiplying it by $[h_e/H_e]^2$ as required in 30 TAC § 111.151(b)

(iii) Effective stack height shall be calculated by the equation specified in 30 TAC § 111.151(c)

G. Outdoor burning, as stated in 30 TAC § 111.201, shall not be authorized unless the following requirements are satisfied:

(i) Title 30 TAC § 111.207 (relating to Exception for Recreation, Ceremony, Cooking, and Warmth)

(ii) Title 30 TAC § 111.219 (relating to General Requirements for Allowable Outdoor Burning)

(iii) Title 30 TAC § 111.221 (relating to Responsibility for Consequences of Outdoor Burning)

4. For storage vessels maintaining working pressure as specified in 30 TAC Chapter 115, Subchapter B, Division 1: Storage of Volatile Organic Compounds, the permit holder shall comply with the requirements of 30 TAC § 115.112(e)(1).

5. The permit holder shall comply with the following requirements for units subject to any subpart of 40 CFR Part 60, unless otherwise stated in the applicable subpart:

   A. Title 40 CFR § 60.7 (relating to Notification and Recordkeeping)

   B. Title 40 CFR § 60.8 (relating to Performance Tests)

   C. Title 40 CFR § 60.11 (relating to Compliance with Standards and Maintenance Requirements)

   D. Title 40 CFR § 60.12 (relating to Circumvention)

   E. Title 40 CFR § 60.13 (relating to Monitoring Requirements)

   F. Title 40 CFR § 60.14 (relating to Modification)

   G. Title 40 CFR § 60.15 (relating to Reconstruction)

   H. Title 40 CFR § 60.19 (relating to General Notification and Reporting Requirements)

6. The permit holder shall comply with the requirements of 30 TAC Chapter 113, Subchapter C, § 113.100 for units subject to any subpart of 40 CFR Part 63, unless otherwise stated in the applicable subpart.

7. For the chemical manufacturing process specified in 40 CFR Part 63, Subpart F, the permit holder shall comply with 40 CFR § 63.103(a) (relating to General Compliance, Reporting, and Recordkeeping Provisions) (Title 30 TAC Chapter 113, Subchapter C, § 113.110 incorporated by reference).

8. For the chemical manufacturing facilities with a 40 CFR Part 63, Subpart G Group 2 wastewater stream, the permit holder shall comply with (Title 30 TAC Chapter 113, Subchapter C, § 113.120 incorporated by reference):

   A. Title 40 CFR § 63.132(a), (a)(1), and (a)(1)(i) (relating to Process Wastewater Provisions - General)

   B. Title 40 CFR § 63.146(b)(1) (relating to Process Wastewater Provisions - Reporting)

   C. Title 40 CFR § 63.147(b)(8) (relating to Process Wastewater Provisions - Recordkeeping)

9. For the chemical manufacturing facilities subject to leak detection requirements in 40 CFR Part 63, Subpart G, the permit holder shall comply with the following requirements (Title 30 TAC Chapter 113, Subchapter C, § 113.120 incorporated by reference):

   A. General Leak Detection Requirements:

      (i) Title 40 CFR § 63.148(d)(1) - (3), and (e) (relating to Leak Inspection Provisions)

(ii) Title 40 CFR § 63.148(c), (g), (g)(2), (h), and (h)(2) (relating to Leak Inspection Provisions), for monitoring and testing requirements

(iii) Title 40 CFR §§ 63.148(g)(2), (h)(2), (i)(1) - (2), (i)(4)(i) - (viii), (i)(5), and 63.152(a)(1) - (5), for recordkeeping requirements

(iv) Title 40 CFR §§ 63.148(j), 63.151(a)(6)(i) - (iii), (b)(1) - (2), (j)(1) - (3), 63.152(a)(1) - (5), (b), (b)(1)(i) - (ii), and (b)(4), for reporting requirements

B. For closed vent system or vapor collection systems constructed of hard piping:

(i) Title 40 CFR § 63.148(b)(1)(ii) (relating to Leak Inspection Provisions), for monitoring and testing requirements

(ii) Title 40 CFR § 63.148(i)(6) (relating to Leak Inspection Provisions), for recordkeeping requirements

10. For the Off-Site Waste and Recovery Operations specified in 40 CFR Part 63, Subpart DD, the permit holder shall comply with the following requirements (Title 30 TAC Chapter 113, Subchapter C, § 113.350 incorporated by reference):

A. Requirements specified with reference to 40 CFR Part 63, Subpart A:

(i) Title 40 CFR § 63.680(f) for applicability of the General Provisions of Subpart A

(ii) Title 40 CFR § 63.696(a) (relating to Recordkeeping Requirements)

(iii) Title 40 CFR § 63.697(a) (relating to Reporting Requirements)

11. For the Off-Site Waste and Recovery Operations specified in 40 CFR Part 63, Subpart DD, at sites where the total annual quantity of HAP in the off-site material received is less than 1 megagram per year, the permit holder shall comply with the requirements of 40 CFR § 63.680(d)(1) - (3) (Title 30 TAC Chapter 113, Subchapter C, § 113.350 incorporated by reference).

12. For process unit PROPGA subject to the Group 2 wastewater stream requirements in 40 CFR Part 63, Subpart PPP, the permit holder shall comply with the following requirements (Title 30 TAC Chapter 113, Subchapter C, § 113.730 incorporated by reference):

A. Title 40 CFR § 63.105(b) - (e) (relating to Maintenance Wastewater Requirements), as required by Title 40 CFR § 63.1433(b) and (b)(1) - (3)

B. Title 40 CFR § 63.132(a), (a)(1), and (a)(1)(i) (relating to Process Wastewater Provisions - General) as required by Title 40 CFR § 63.1433(a)

C. Title 40 CFR § 63.1439(a) - (e) (relating to General Recordkeeping and Reporting Requirements)

13. For miscellaneous chemical process facilities subject to maintenance wastewater requirements as specified in 40 CFR § 63.2485, Table 7, the permit holder shall comply with the requirements of 40 CFR § 63.105 (relating to Maintenance Wastewater Requirements) (Title 30 TAC Chapter 113, Subchapter C, § 113.890 incorporated by reference).

14. For miscellaneous chemical process facilities with Group 2 wastewater streams subject to wastewater operations requirements in 40 CFR Part 63, Subpart FFFF, the permit holder shall

comply with the requirements of 40 CFR § 63.132(a), (a)(1), (a)(1)(i), and (a)(3) as specified in § 63.2485(a) (Title 30 TAC Chapter 113, Subchapter C, § 113.890 incorporated by reference).

15. For the transfer of site remediation materials subject to 40 CFR Part 63, Subpart GGGGG off-site to another facility, the permit holder shall comply with the following requirements (Title 30 TAC, Subchapter C, § 113.1160 incorporated by reference):

    A. Title 40 CFR § 63.7936(a), for the transfer of site remediation materials

    B. Title 40 CFR § 63.7936(b)(1), for transfer to a landfill or land disposal unit

    C. Title 40 CFR § 63.7936(b)(2), for transfer to a facility subject to 40 CFR Part 63, Subpart DD

    D. Title 40 CFR § 63.7936(b)(3), (b)(3)(i) - (iv), for transfer to a facility managing the site remediation material according to the requirements of 40 CFR Part 63, Subpart GGGGG

16. For containers managing remediation materials subject to 40 CFR Part 63, Subpart GGGGG, the permit holder shall comply with the following requirements (Title 30 TAC Chapter 113, Subchapter C, § 113.1160 incorporated by reference):

    A. Title 40 CFR § 63.922(b)(1) - (3), (c), (d), (d)(1) - (5), (e), and (f), (f)(1) - (4) (relating to Standards - Container Level 1 Controls)

    B. Title 40 CFR § 63.923(b)(1) - (3), (c), (d), (d)(1) - (5), (e), and (f), (f)(1) - (4) (relating to Standards - Container Level 2 Controls)

    C. Title 40 CFR § 63.925(a)(1) - (8), and (b)(1) - (3) (relating to Test Methods and Procedures)

    D. Title 40 CFR § 63.926(a)(1) - (3) (relating to Inspection and Monitoring Requirements)

    E. Title 40 CFR § 63.7901(b) and (b)(1), for initial demonstration of compliance

    F. Title 40 CFR § 63.7901(b)(2), for initial demonstration of compliance

    G. Title 40 CFR § 63.7901(c), (c)(1), and (c)(2), for initial demonstration of compliance

    H. Title 40 CFR § 63.7901(d), and (d)(1) - (4), for initial demonstration of compliance

    I. Title 40 CFR § 63.7903(b) and (b)(1), for continuous demonstration of compliance

    J. Title 40 CFR § 63.7903(b)(2), (b)(2)(i), (b)(2)(ii), for continuous demonstration of compliance

    K. Title 40 CFR § 63.7903(c)(4), (c)(4)(i), and (c)(4)(ii), for continuous demonstration of compliance

    L. Title 40 CFR § 63.7903(d)(5), (d)(5)(i), and (d)(5)(ii), for continuous demonstration of compliance

    M. Title 40 CFR § 63.7952(c), for recordkeeping

Additional Monitoring Requirements

17. The permit holder shall comply with the periodic monitoring requirements as specified in the attached "Periodic Monitoring Summary" upon issuance of the permit. Except for, as applicable, monitoring malfunctions, associated repairs, and required quality assurance or control activities (including, as applicable, calibration checks and required zero and span adjustments), the permit holder shall conduct all monitoring in continuous operation (or shall collect data at all required intervals) at all times that the pollutant-specific emissions unit is operating. The permit holder may elect to collect monitoring data on a more frequent basis and average the data, consistent with the averaging time specified in the "Periodic Monitoring Summary," for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis. In no event shall data be collected and used in particular instances to avoid reporting deviations. Deviations shall be reported according to 30 TAC § 122.145 (Reporting Terms and Conditions).

New Source Review Authorization Requirements

18. Permit holder shall comply with the requirements of New Source Review authorizations issued or claimed by the permit holder for the permitted area, including permits, permits by rule, standard permits, flexible permits, special permits, permits for existing facilities including Voluntary Emissions Reduction Permits and Electric Generating Facility Permits issued under 30 TAC Chapter 116, Subchapter I, or special exemptions referenced in the New Source Review Authorization References attachment. These requirements:

    A. Are incorporated by reference into this permit as applicable requirements

    B. Shall be located with this operating permit

    C. Are not eligible for a permit shield

19. The permit holder shall comply with the general requirements of 30 TAC Chapter 106, Subchapter A or the general requirements, if any, in effect at the time of the claim of any PBR.

20. The permit holder shall maintain records to demonstrate compliance with any emission limitation or standard that is specified in a permit by rule (PBR) or Standard Permit listed in the New Source Review Authorizations attachment. The records shall yield reliable data from the relevant time period that are representative of the emission unit's compliance with the PBR or Standard Permit. These records may include, but are not limited to, production capacity and throughput, hours of operation, material safety data sheets (MSDS), chemical composition of raw materials, speciation of air contaminant data, engineering calculations, maintenance records, fugitive data, performance tests, capture/control device efficiencies, direct pollutant monitoring (CEMS, COMS, or PEMS), or control device parametric monitoring. These records shall be made readily accessible and available as required by 30 TAC § 122.144.

    A. If applicable, monitoring of control device performance or general work practice standards shall be made in accordance with the TCEQ Periodic Monitoring Guidance document.

    B. Any monitoring or recordkeeping data indicating noncompliance with the PBR or Standard Permit shall be considered and reported as a deviation according to 30 TAC § 122.145 (Reporting Terms and Conditions).

Compliance Requirements

21. The permit holder shall certify compliance in accordance with 30 TAC § 122.146. The permit holder shall comply with 30 TAC § 122.146 using at a minimum, but not limited to, the continuous or intermittent compliance method data from monitoring, recordkeeping, reporting, or testing required by the permit and any other credible evidence or information. The certification period may not exceed 12 months and the certification must be submitted within 30 days after the end of the period being certified.

22. Use of Emission Credits to comply with applicable requirements:

    A. Unless otherwise prohibited, the permit holder may use emission credits to comply with the following applicable requirements listed elsewhere in this permit:

        (i) Title 30 TAC Chapter 115

        (ii) Title 30 TAC Chapter 117

        (iii) Offsets for Title 30 TAC Chapter 116

    B. The permit holder shall comply with the following requirements in order to use the emission credits to comply with the applicable requirements:

        (i) The permit holder must notify the TCEQ according to 30 TAC § 101.306(c)(2)

        (ii) The emission credits to be used must meet all the geographic, timeliness, applicable pollutant type, and availability requirements listed in 30 TAC Chapter 101, Subchapter H, Division 1

        (iii) The executive director has approved the use of the credit according to 30 TAC § 101.306(c)(2)

        (iv) The permit holder keeps records of the use of credits towards compliance with the applicable requirements in accordance with 30 TAC § 101.302(g) and 30 TAC Chapter 122

23. Use of Discrete Emission Credits to comply with the applicable requirements:

    A. Unless otherwise prohibited, the permit holder may use discrete emission credits to comply with the following applicable requirements listed elsewhere in this permit:

        (i) Title 30 TAC Chapter 115

        (ii) Title 30 TAC Chapter 117

        (iii) If applicable, offsets for Title 30 TAC Chapter 116

        (iv) Temporarily exceed state NSR permit allowables

    B. The permit holder shall comply with the following requirements in order to use the credit to comply with the applicable requirements:

        (i) The permit holder must notify the TCEQ according to 30 TAC § 101.376(d)

(ii) The discrete emission credits to be used must meet all the geographic, timeliness, applicable pollutant type, and availability requirements listed in 30 TAC Chapter 101, Subchapter H, Division 4

(iii) The executive director has approved the use of the discrete emission credits according to 30 TAC § 101.376(d)(1)(A)

(iv) The permit holder keeps records of the use of credits towards compliance with the applicable requirements in accordance with 30 TAC § 101.372(h) and 30 TAC Chapter 122

Risk Management Plan

24. For processes subject to 40 CFR Part 68 and specified in 40 CFR § 68.10, the permit holder shall comply with the requirements of the Accidental Release Prevention Provisions in 40 CFR Part 68. The permit holder shall submit to the appropriate agency either a compliance schedule for meeting the requirements of 40 CFR Part 68 by the date provided in 40 CFR § 68.10(a), or as part of the compliance certification submitted under this permit, a certification statement that the source is in compliance with all requirements of 40 CFR Part 68, including the registration and submission of a risk management plan.

Protection of Stratospheric Ozone

25. Permit holders at a site subject to Title VI of the FCAA Amendments shall meet the following requirements for protection of stratospheric ozone.

A. Any on site servicing, maintenance, and repair on refrigeration and nonmotor vehicle air-conditioning appliances using ozone-depleting refrigerants or non-exempt substitutes shall be conducted in accordance with 40 CFR Part 82, Subpart F. Permit holders shall ensure that repairs on or refrigerant removal from refrigeration and nonmotor vehicle air-conditioning appliances using ozone-depleting refrigerants are performed only by properly certified technicians using certified equipment. Records shall be maintained as required by 40 CFR Part 82, Subpart F.

B. The permit holder shall comply with 40 CFR Part 82, Subpart A for controlling the production, transformation, destruction, export or import of a controlled (ozone-depleting) substance or product as specified in 40 CFR § 82.1 - § 82.13 and the applicable Part 82 Appendices.

C. The permit holder shall comply with 40 CFR Part 82, Subpart A, § 82.13 related to recordkeeping and reporting requirements for the production and consumption of ozone depleting substances.

Permit Location

26. The permit holder shall maintain a copy of this permit and records related to requirements listed in this permit on site.

Permit Shield (30 TAC § 122.148)

27. A permit shield is granted for the emission units, groups, or processes specified in the attached "Permit Shield." Compliance with the conditions of the permit shall be deemed compliance with the specified potentially applicable requirements or specified potentially applicable state-only requirements listed in the attachment "Permit Shield." Permit shield provisions shall not be modified by the executive director until notification is provided to the permit holder. No later than

90 days after notification of a change in a determination made by the executive director, the permit holder shall apply for the appropriate permit revision to reflect the new determination. Provisional terms are not eligible for this permit shield. Any term or condition, under a permit shield, shall not be protected by the permit shield if it is replaced by a provisional term or condition or the basis of the term and condition changes.

Applicable Requirements Summary

Unit Summary **16**

Applicable Requirements Summary **33**

Note: A "none" entry may be noted for some emission sources in this permit's "Applicable Requirements Summary" under the heading of "Monitoring and Testing Requirements" and/or "Recordkeeping Requirements" and/or "Reporting Requirements." Such a notation indicates that there are no requirements for the indicated emission source as identified under the respective column heading(s) for the stated portion of the regulation when the emission source is operating under the conditions of the specified SOP Index Number. However, other relevant requirements pursuant to 30 TAC Chapter 122 including Recordkeeping Terms and Conditions (30 TAC § 122.144), Reporting Terms and Conditions (30 TAC § 122.145), and Compliance Certification Terms and Conditions (30 TAC § 122.146) continue to apply.

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: B13PGD631	
Control Device ID No.: B13PGSV22	Control Device Type: Absorber (Direct Absorption)
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Vent Gas Controls	SOP Index No.: R5121-01
Pollutant: VOC	Main Standard: § 115.121(a)(1)
Monitoring Information	
Indicator: Liquid flow rate	
Minimum Frequency: Once per week	
Averaging Period: n/a*	
Deviation Limit: 5 gallons per minute	
Periodic Monitoring Text: Measure and record the liquid flow rate. Establish a minimum liquid flow rate using the most recent performance test, manufacturer's recommendations, engineering calculations, and/or historical data. The monitoring instrumentation shall be maintained, calibrated, and operated in accordance with manufacturer's specifications or other written procedures. Any monitoring data below the minimum limit shall be considered and reported as a deviation.	

*The permit holder may elect to collect monitoring data on a more frequent basis and calculate the average as specified by the minimum frequency, for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis and shall not be collected and used in particular instances to avoid reporting deviations.

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: B13PGD631	
Control Device ID No.: B13PGSV22	Control Device Type: Absorber (Direct Absorption)
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Vent Gas Controls	SOP Index No.: R5121-01
Pollutant: VOC	Main Standard: § 115.121(a)(1)
Monitoring Information	
Indicator: Visual Inspection	
Minimum Frequency: Once per month	
Averaging Period: n/a	
Deviation Limit: Any inspection data which indicates that the scrubber is not in compliance with 115.121(a)(1).	
Periodic Monitoring Text: A monthly visual inspection of the scrubber inlet piping and outlet piping for cracks or leaks will be done monthly. Records shall be maintained of the visual inspections. Any defects detected in the scrubbing system shall be documented and repaired as soon as practicable.

Monitoring Information	
Indicator: Visual Inspection	
Minimum Frequency: Once per month	
Averaging Period: n/a	
Deviation Limit: Any inspection data which indicates that the scrubber is not in compliance with 115.121(a)(1).	
Periodic Monitoring Text: A monthly visual inspection of the scrubber inlet piping and outlet piping for cracks or leaks will be done monthly. Records shall be maintained of the visual inspections. Any defects detected in the scrubbing system shall be documented and repaired as soon as practicable.	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: B17SV384	
Control Device ID No.: B17SV384	Control Device Type: Absorber (Direct Absorption)
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Vent Gas Controls	SOP Index No.: R5121-01
Pollutant: VOC	Main Standard: § 115.121(a)(2)
Monitoring Information	
Indicator: Liquid flow rate	
Minimum Frequency: Once per week	
Averaging Period: n/a*	
Deviation Limit: 450 gallons per hour	
Periodic Monitoring Text: Measure and record the liquid flow rate. Establish a minimum liquid flow rate using the most recent performance test, manufacturer's recommendations, engineering calculations, and/or historical data. The monitoring instrumentation shall be maintained, calibrated, and operated in accordance with manufacturer's specifications or other written procedures. Any monitoring data below the minimum limit shall be considered and reported as a deviation.	

*The permit holder may elect to collect monitoring data on a more frequent basis and calculate the average as specified by the minimum frequency, for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis and shall not be collected and used in particular instances to avoid reporting deviations.

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: B17SV384	
Control Device ID No.: B17SV384	Control Device Type: Absorber (Direct Absorption)
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Vent Gas Controls	SOP Index No.: R5121-01
Pollutant: VOC	Main Standard: § 115.121(a)(2)
Monitoring Information	
Indicator: Visual Inspection	
Minimum Frequency: Once per month	
Averaging Period: n/a	
Deviation Limit: Any inspection data which indicates that the scrubber is not in compliance with 115.121(a)(1).	
Periodic Monitoring Text: A monthly visual inspection of the scrubber inlet piping and outlet piping for cracks or leaks will be done monthly. Records shall be maintained of the visual inspections. Any defects detected in the scrubbing system shall be documented and repaired as soon as practicable.	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: B39GMVH290	
Control Device ID No.: B39GMSV290	Control Device Type: Wet Scrubber
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Vent Gas Controls	SOP Index No.: R5121-01
Pollutant: VOC	Main Standard: § 115.122(a)(1)
Monitoring Information	
Indicator: Liquid Flow Rate	
Minimum Frequency: once per week	
Averaging Period: n/a	
Deviation Limit: Liquid flow rate shall be no less than 300 gallons per hour.	
Periodic Monitoring Text: Measure and record the liquid flow rate. The monitoring instrumentation shall be maintained, calibrated and operated in accordance with manufacturer's specifications or other written procedures. Any monitoring data below the minimum limit shall be considered and reported as a deviation.	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: B39GMVH290	
Control Device ID No.: B39GMSV290	Control Device Type: Wet Scrubber
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Vent Gas Controls	SOP Index No.: R5121-01
Pollutant: VOC	Main Standard: § 115.122(a)(1)
Monitoring Information	
Indicator: Liquid Inlet Temperature	
Minimum Frequency: once per week	
Averaging Period: n/a	
Deviation Limit: Liquid Flow Inlet Temperature: 60 degrees Celsius	
Periodic Monitoring Text: Measure and record the liquid flow inlet temperature. Establish a maximum liquid flow inlet temperature using the most recent performance test, manufacturer's recommendations, engineering calculations, and/or historical data. Any monitoring data above the maximum limit shall be considered and reported as a deviation.	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: B39PT290	
Control Device ID No.: B39GMSV290	Control Device Type: Wet Scrubber
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Vent Gas Controls	SOP Index No.: R5121-01
Pollutant: VOC	Main Standard: § 115.122(a)(1)
Monitoring Information	
Indicator: Liquid Inlet Temperature	
Minimum Frequency: once per week	
Averaging Period: n/a	
Deviation Limit: Liquid Flow Inlet Temperature: 60 degrees Celsius	
Periodic Monitoring Text: Measure and record the liquid flow inlet temperature. Establish a maximum liquid flow inlet temperature using the most recent performance test, manufacturer's recommendations, engineering calculations, and/or historical data. Any monitoring data above the maximum limit shall be considered and reported as a deviation.

Control Device ID No.: B39GMSV290	Control Device Type: Wet Scrubber
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Vent Gas Controls	SOP Index No.: R5121-01
Pollutant: VOC	Main Standard: § 115.122(a)(1)
Monitoring Information	
Indicator: Liquid Flow Rate	
Minimum Frequency: once per week	
Averaging Period: n/a	
Deviation Limit: Liquid flow rate shall be no less than 300 gallons per hour.	
Periodic Monitoring Text: Measure and record the liquid flow rate. The monitoring instrumentation shall be maintained, calibrated and operated in accordance with manufacturer's specifications or other written procedures. Any monitoring data below the minimum limit shall be considered and reported as a deviation.

Monitoring Information	
Indicator: Liquid Flow Rate	
Minimum Frequency: once per week	
Averaging Period: n/a	
Deviation Limit: Liquid flow rate shall be no less than 300 gallons per hour.	
Periodic Monitoring Text: Measure and record the liquid flow rate. The monitoring instrumentation shall be maintained, calibrated and operated in accordance with manufacturer's specifications or other written procedures. Any monitoring data below the minimum limit shall be considered and reported as a deviation.	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: B39RX210	
Control Device ID No.: B39GMSV290	Control Device Type: Wet Scrubber
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Vent Gas Controls	SOP Index No.: R5121-01
Pollutant: VOC	Main Standard: § 115.122(a)(1)
Monitoring Information	
Indicator: Liquid Inlet Temperature	
Minimum Frequency: once per week	
Averaging Period: n/a	
Deviation Limit: Liquid Flow Inlet Temperature: 60 degrees Celsius	
Periodic Monitoring Text: Measure and record the liquid flow inlet temperature. Establish a maximum liquid flow inlet temperature using the most recent performance test, manufacturer's recommendations, engineering calculations, and/or historical data. Any monitoring data above the maximum limit shall be considered and reported as a deviation.	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: B43IPD141	
Control Device ID No.: B43IPSV1	Control Device Type: Absorber (Direct Absorption)
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Vent Gas Controls	SOP Index No.: R5121-01
Pollutant: VOC	Main Standard: § 115.121(a)(1)
Monitoring Information	
Indicator: Liquid flow rate	
Minimum Frequency: Once per week	
Averaging Period: n/a*	
Deviation Limit: 4 gallons per minute	
Periodic Monitoring Text: Measure and record the liquid flow rate. Establish a minimum liquid flow rate using the most recent performance test, manufacturer's recommendations, engineering calculations, and/or historical data. The monitoring instrumentation shall be maintained, calibrated, and operated in accordance with manufacturer's specifications or other written procedures. Any monitoring data below the minimum limit shall be considered and reported as a deviation.	

*The permit holder may elect to collect monitoring data on a more frequent basis and calculate the average as specified by the minimum frequency, for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis and shall not be collected and used in particular instances to avoid reporting deviations.

Permit Shield

Permit Shield **152**

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
B13PGE32	N/A	40 CFR Part 60, Subpart III	Not an air oxidation reactor
B13PGE32	N/A	40 CFR Part 60, Subpart RRR	Not a SOCMI chemical reactor process
B13PGR1	N/A	40 CFR Part 60, Subpart III	Not an air oxidation reactor
B13PGR1	N/A	40 CFR Part 60, Subpart RRR	Not an SOCMI chemical reactor process
B13PGR2	N/A	40 CFR Part 60, Subpart III	Not an air oxidation reactor
B13PGR2	N/A	40 CFR Part 60, Subpart RRR	Not a SOCMI chemical reactor process
B13PGR3	N/A	40 CFR Part 60, Subpart III	Not an air oxidation reactor
B13PGR3	N/A	40 CFR Part 60, Subpart RRR	Not a SOCMI chemical reactor process
B13PGR5	N/A	40 CFR Part 60, Subpart III	Not an air oxidation reactor
B13PGR5	N/A	40 CFR Part 60, Subpart RRR	Not a SOCMI chemical reactor process
B13PGR6	N/A	40 CFR Part 60, Subpart III	Not an air oxidation reactor
B13PGR6	N/A	40 CFR Part 60, Subpart RRR	Not a SOCMI chemical reactor process
B13PGR7	N/A	40 CFR Part 60, Subpart III	Not an air oxidation reactor
B13PGR7	N/A	40 CFR Part 60, Subpart RRR	Not a SOCMI chemical reactor process
B13PGR8	N/A	40 CFR Part 60, Subpart III	Not an air oxidation reactor
B13PGR8	N/A	40 CFR Part 60, Subpart RRR	Not a SOCMI chemical reactor process
B13PGR9	N/A	40 CFR Part 60, Subpart III	Not an air oxidation reactor
B13PGR9	N/A	40 CFR Part 60, Subpart RRR	Not a SOCMI chemical reactor process
B13PGST001	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST001	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
B13PGST001	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19800 gallons
B13PGST001	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST001	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST001	N/A	40 CFR Part 63, Subpart FFFF	Does not store OHAP
B13PGST001	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST001	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST003	N/A	40 CFR Part 60, Subpart K	Does not store petroleum liquids
B13PGST003	N/A	40 CFR Part 60, Subpart Ka	Does not store petroleum liquids
B13PGST003	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19800 gallons
B13PGST003	N/A	40 CFR Part 61, Subpart FF	Does not store or contain benzene waste
B13PGST003	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST003	N/A	40 CFR Part 63, Subpart FFFF	Does not store organic HAP
B13PGST003	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST003	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST004	N/A	40 CFR Part 60, Subpart K	Does not store petroleum liquids
B13PGST004	N/A	40 CFR Part 60, Subpart Ka	Does not store petroleum liquids
B13PGST004	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19800 gallons
B13PGST004	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST004	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST004	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
B13PGST004	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST007	N/A	40 CFR Part 60, Subpart Kb	VOC TVP < 0.5 psia
B13PGST007	N/A	40 CFR Part 61, Subpart FF	Does not store or contain benzene waste
B13PGST007	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST007	N/A	40 CFR Part 63, Subpart FFFF	Does not store organic HAP
B13PGST007	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST007	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST01	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST01	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST01	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19800 gallons
B13PGST01	N/A	40 CFR Part 61, Subpart FF	Does not store or contain benzene waste
B13PGST01	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST01	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST01	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST16C	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST16C	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST16C	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19800 gallons
B13PGST16C	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST16C	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST16C	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
B13PGST16C	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST16D	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST16D	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST16D	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19800 gallons
B13PGST16D	N/A	40 CFR Part 61, Subpart FF	Does not store or contain benzene waste
B13PGST16D	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST16D	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST16D	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST19	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST19	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST19	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19800 gallons
B13PGST19	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST19	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST19	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility

B13PGST217	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST22	N/A	40 CFR Part 60, Subpart K	Does not store petroleum liquids
B13PGST22	N/A	40 CFR Part 60, Subpart Ka	Does not store petroleum liquids
B13PGST22	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B13PGST22	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST22	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST22	N/A	40 CFR Part 63, Subpart FFFF	Does not store organic HAP

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
B13PGST22	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST22	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST222	N/A	40 CFR Part 63, Subpart FFFF	Surge control vessel which does not meet the definition of a Group 1 storage tank.
B13PGST223	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST223	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST223	N/A	40 CFR Part 60, Subpart Kb	Storage capacity is < 19,800 gallons
B13PGST223	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST223	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST223	N/A	40 CFR Part 63, Subpart FFFF	Surge control vessel which does not meet the definition of a Group 1 storage tank.
B13PGST223	N/A	40 CFR Part 63, Subpart G	Not an SOCMI facility
B13PGST223	N/A	40 CFR Part 63, Subpart OO	No applicable subpart within 60, 61, or 63 reference this subpart
B13PGST224	N/A	40 CFR Part 63, Subpart FFFF	Surge control vessel which does not meet the definition of a Group 1 storage tank.
B13PGST225	N/A	40 CFR Part 63, Subpart FFFF	Surge control vessel which does not meet the definition of a Group 1 storage tank.
B13PGST226	N/A	40 CFR Part 63, Subpart FFFF	Surge control vessel which does not meet the definition of a Group 1 storage tank.
B13PGST227	N/A	40 CFR Part 63, Subpart FFFF	Surge control vessel which does not meet the definition of a Group 1 storage tank.
B13PGST228	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
B13PGST228	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST228	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B13PGST228	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST228	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST228	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST228	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST229	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST229	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST229	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B13PGST229	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST229	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST229	N/A	40 CFR Part 63, Subpart FFFF	Does not store OHAP
B13PGST229	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST229	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST23	N/A	40 CFR Part 60, Subpart K	Does not store petroleum liquids
B13PGST23	N/A	40 CFR Part 60, Subpart Ka	Does not store petroleum liquids
B13PGST23	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B13PGST23	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST23	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST23	N/A	40 CFR Part 63, Subpart FFFF	Does not store OHAP

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
B13PGST23	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST23	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST240	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST240	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST240	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B13PGST240	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST240	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST240	N/A	40 CFR Part 63, Subpart FFFF	Does not store OHAP
B13PGST240	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST240	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST241	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST241	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST241	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B13PGST241	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST241	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST241	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST241	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST242	N/A	40 CFR Part 63, Subpart FFFF	Surge control vessel which does not meet the definition of a Group 1 storage tank.
B13PGST243	N/A	40 CFR Part 63, Subpart FFFF	Surge control vessel which does not meet the definition of a Group 1 storage tank.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
B13PGST244	N/A	40 CFR Part 63, Subpart FFFF	Surge control vessel which does not meet the definition of a Group 1 storage tank.
B13PGST245	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST245	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST245	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B13PGST245	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST245	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST245	N/A	40 CFR Part 63, Subpart FFFF	Does not store OHAP
B13PGST245	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST245	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST246	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST246	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST246	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B13PGST246	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST246	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST246	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST246	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST253	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST253	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST253	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
B13PGST253	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST253	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST253	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST253	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST254	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST254	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST254	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons

B13PGST266	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
B13PGST268	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST268	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST268	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B13PGST268	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST268	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST268	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST268	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST269	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST269	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST269	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B13PGST269	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST269	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST269	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST269	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST27	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST27	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST27	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B13PGST27	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST27	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST27	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
B13PGST27	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST28	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST28	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST28	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B13PGST28	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST28	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST28	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST28	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST3	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST3	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST3	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B13PGST3	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST3	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST3	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST3	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST306	N/A	40 CFR Part 60, Subpart K	Does not store petroleum liquids
B13PGST306	N/A	40 CFR Part 60, Subpart Ka	Does not store petroleum liquids
B13PGST306	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B13PGST306	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST306	N/A	40 CFR Part 61, Subpart Y	Does not store benzene

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
B13PGST306	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST306	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST308	N/A	40 CFR Part 60, Subpart K	Does not store petroleum liquids
B13PGST308	N/A	40 CFR Part 60, Subpart Ka	Does not store petroleum liquids
B13PGST308	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B13PGST308	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST308	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST308	N/A	40 CFR Part 63, Subpart FFFF	Does not store OHAP
B13PGST308	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST308	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST309	N/A	40 CFR Part 60, Subpart K	Does not store petroleum liquids
B13PGST309	N/A	40 CFR Part 60, Subpart Ka	Does not store petroleum liquids
B13PGST309	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B13PGST309	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST309	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST309	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST309	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST40	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST40	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST40	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
B13PGST40	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST40	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST40	N/A	40 CFR Part 63, Subpart FFFF	Does not store OHAP
B13PGST40	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST40	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST41	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST41	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST41	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B13PGST41	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST41	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST41	N/A	40 CFR Part 63, Subpart FFFF	Does not store OHAP
B13PGST41	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST41	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST44	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST44	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST44	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B13PGST44	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST44	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST44	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST44	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
B13PGST45	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST45	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST45	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B13PGST45	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST45	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST45	N/A	40 CFR Part 63, Subpart FFFF	Does not store OHAP
B13PGST45	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST45	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST501	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST501	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST501	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B13PGST501	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST501	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST501	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST501	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST506	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST506	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST506	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B13PGST506	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST506	N/A	40 CFR Part 61, Subpart Y	Does not store benzene

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
B13PGST506	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST506	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST508	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST508	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST508	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B13PGST508	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST508	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST508	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST508	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST55	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST55	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST55	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B13PGST55	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST55	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST55	N/A	40 CFR Part 63, Subpart FFFF	Does not store OHAP
B13PGST55	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST55	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST56	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST56	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST56	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
B13PGST56	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST56	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST56	N/A	40 CFR Part 63, Subpart FFFF	Does not store OHAP
B13PGST56	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST56	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST57	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST57	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST57	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B13PGST57	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST57	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST57	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST57	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST58	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST58	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST58	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B13PGST58	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST58	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST58	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST58	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST661	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
B13PGST661	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST661	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B13PGST661	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST661	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST661	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST661	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST662	N/A	40 CFR Part 63, Subpart FFFF	Surge control vessel which does not meet the definition of a Group 1 storage tank.
B13PGST663	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST663	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST663	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B13PGST663	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene
B13PGST663	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST663	N/A	40 CFR Part 63, Subpart FFFF	Does not store OHAP
B13PGST663	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST663	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST664	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST664	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST664	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B13PGST664	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
B13PGST664	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST664	N/A	40 CFR Part 63, Subpart FFFF	Does not store OHAP
B13PGST664	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST664	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST668	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST668	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST668	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B13PGST668	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST668	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST668	N/A	40 CFR Part 63, Subpart FFFF	Does not store OHAP
B13PGST668	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST668	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST669	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST669	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST669	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B13PGST669	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST669	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST669	N/A	40 CFR Part 63, Subpart FFFF	Does not store OHAP
B13PGST669	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST669	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
B13PGST671	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST671	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST671	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B13PGST671	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST671	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST671	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST671	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST701	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST701	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST701	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B13PGST701	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST701	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST701	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility.
B13PGST701	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST702	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST702	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST702	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B13PGST702	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST702	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST702	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
B13PGST702	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST703	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST703	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST703	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B13PGST703	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST703	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST703	N/A	40 CFR Part 63, Subpart FFFF	Does not store OHAP
B13PGST703	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST703	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST803	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST803	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST803	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B13PGST803	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST803	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST803	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST803	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST870	N/A	40 CFR Part 60, Subpart K	Storage capacity < 40,000 gallons
B13PGST870	N/A	40 CFR Part 60, Subpart Ka	Storage capacity < 40,000 gallons
B13PGST870	N/A	40 CFR Part 60, Subpart Kb	Design capacity < 19,800 gallons
B13PGST870	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
B13PGST870	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST870	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST870	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST871	N/A	40 CFR Part 60, Subpart K	Storage capacity < 40,000 gallons
B13PGST871	N/A	40 CFR Part 60, Subpart Ka	Storage capacity < 40,000 gallons
B13PGST871	N/A	40 CFR Part 60, Subpart Kb	Design capacity < 19,800 gallons
B13PGST871	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST871	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST871	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST871	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGST901	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B13PGST901	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B13PGST901	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B13PGST901	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGST901	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGST901	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGST901	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGSTT7A	N/A	40 CFR Part 60, Subpart K	Does not store petroleum liquids
B13PGSTT7A	N/A	40 CFR Part 60, Subpart Ka	Does not store petroleum liquids
B13PGSTT7A	N/A	40 CFR Part 60, Subpart Kb	Design capacity < 19,800 gallons

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
B13PGSTT7A	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B13PGSTT7A	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B13PGSTT7A	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B13PGSTT7A	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B13PGT11	N/A	40 CFR Part 60, Subpart NNN	Not a SOCMI chemical distillation process
B13PGT12	N/A	40 CFR Part 60, Subpart NNN	Not a SOCMI chemical distillation process
B13PGT13	N/A	40 CFR Part 60, Subpart NNN	Not a SOCMI chemical distillation process
B13PGT20	N/A	40 CFR Part 60, Subpart NNN	Not a SOCMI chemical distillation process
B13PGT21	N/A	40 CFR Part 60, Subpart NNN	Not a SOCMI chemical distillation process
B17PEPT351	N/A	40 CFR Part 60, Subpart K	Storage capacity < 40,000 gallons
B17PEPT351	N/A	40 CFR Part 60, Subpart Ka	Storage capacity < 40,000 gallons
B17PEPT351	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B17PEPT351	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B17PEPT352	N/A	40 CFR Part 60, Subpart K	Storage capacity < 40,000 gallons
B17PEPT352	N/A	40 CFR Part 60, Subpart Ka	Storage capacity < 40,000 gallons
B17PEPT352	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B17PEPT352	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B17PEST012	N/A	40 CFR Part 60, Subpart K	Storage capacity < 40,000 gallons
B17PEST012	N/A	40 CFR Part 60, Subpart Ka	Storage capacity < 40,000 gallons
B17PEST012	N/A	40 CFR Part 60, Subpart Kb	Maximum true vapor pressure <3.5 kPa

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
B17PEST012	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B17PEST012	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B17PEST015	N/A	40 CFR Part 60, Subpart K	Does not store petroleum liquids
B17PEST015	N/A	40 CFR Part 60, Subpart Ka	Does not store petroleum liquids
B17PEST015	N/A	40 CFR Part 60, Subpart Kb	Maximum true vapor pressure <3.5 kPa
B17PEST015	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B17PEST015	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B17PEST01A	N/A	40 CFR Part 60, Subpart K	Does not store petroleum liquids
B17PEST01A	N/A	40 CFR Part 60, Subpart Ka	Does not store petroleum liquids
B17PEST01A	N/A	40 CFR Part 60, Subpart Kb	Maximum true vapor pressure <3.5 kPa
B17PEST01A	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B17PEST01A	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B17PEST364	N/A	40 CFR Part 60, Subpart K	Storage capacity < 40,000 gallons
B17PEST364	N/A	40 CFR Part 60, Subpart Ka	Storage capacity < 40,000 gallons
B17PEST364	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B17PEST364	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B17PEST365	N/A	40 CFR Part 60, Subpart K	Storage capacity < 40,000 gallons
B17PEST365	N/A	40 CFR Part 60, Subpart Ka	Storage capacity < 40,000 gallons
B17PEST365	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B17PEST365	N/A	40 CFR Part 61, Subpart Y	Does not store benzene

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
B17PEST365	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B17PEST371	N/A	40 CFR Part 60, Subpart K	Storage capacity < 40,000 gallons
B17PEST371	N/A	40 CFR Part 60, Subpart Ka	Storage capacity < 40,000 gallons
B17PEST371	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B17PEST371	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B17PEST371	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B17PEST372	N/A	40 CFR Part 60, Subpart K	Storage capacity < 40,000 gallons
B17PEST372	N/A	40 CFR Part 60, Subpart Ka	Storage capacity < 40,000 gallons
B17PEST372	N/A	40 CFR Part 60, Subpart Kb	Storage capacity < 19,800 gallons
B17PEST372	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B17PEST372	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B17PGFU2	N/A	40 CFR Part 60, Subpart VV	Not an affected facility producing chemicals listed in 60.489
B17PGST010	N/A	40 CFR Part 60, Subpart Kb	VOC TVP < 0.5 psia
B17PGST010	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B17PGST010	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B17PGST010	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B17PGST010	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B17PGST011	N/A	40 CFR Part 60, Subpart Kb	VOC TVP < 0.5 psia
B17PGST011	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B17PGST011	N/A	40 CFR Part 61, Subpart Y	Does not store benzene

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
B17PGST011	N/A	40 CFR Part 63, Subpart FFFF	Does not store OHAP
B17PGST011	N/A	40 CFR Part 63, Subpart G	Not A SOCMI facility
B17PGST011	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B17PGST012	N/A	40 CFR Part 60, Subpart Kb	VOC TVP < 0.5 psia
B17PGST012	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B17PGST012	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B17PGST012	N/A	40 CFR Part 63, Subpart FFFF	Does not store OHAP
B17PGST012	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B17PGST012	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B17PGST013	N/A	40 CFR Part 60, Subpart Kb	VOC TVP < 0.5 psia
B17PGST013	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B17PGST013	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B17PGST013	N/A	40 CFR Part 63, Subpart FFFF	Does not store OHAP
B17PGST013	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B17PGST013	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B17PGST014	N/A	40 CFR Part 60, Subpart Kb	VOC TVP < 0.5 psia
B17PGST014	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B17PGST014	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B17PGST014	N/A	40 CFR Part 63, Subpart FFFF	Does not store OHAP
B17PGST014	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
B17PGST014	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B17PGST015	N/A	40 CFR Part 60, Subpart Kb	VOC TVP < 0.5 psia
B17PGST015	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B17PGST015	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B17PGST015	N/A	40 CFR Part 63, Subpart FFFF	Does not store OHAP
B17PGST015	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B17PGST015	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B17PGT201A	N/A	40 CFR Part 60, Subpart Kb	VOC TVP < 0.5 psia
B17PGT201A	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B17PGT201A	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B17PGT201A	N/A	40 CFR Part 63, Subpart FFFF	Does not store OHAP
B17PGT201A	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B17PGT201A	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B17PGT201B	N/A	40 CFR Part 60, Subpart Kb	VOC TVP < 0.5 psia
B17PGT201B	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B17PGT201B	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B17PGT201B	N/A	40 CFR Part 63, Subpart G	Not SOCMI facility
B17PGT201B	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B43IPFU1	N/A	40 CFR Part 60, Subpart VV	Facility not constructed or modified after 01/05/1981
B43IPRX1	N/A	40 CFR Part 60, Subpart III	Not an air oxidation reactor

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
B43IPRX1	N/A	40 CFR Part 60, Subpart RRR	Not a SOCMI chemical reactor process
B43IPST03A	N/A	40 CFR Part 60, Subpart K	Does not store petroleum liquids
B43IPST03A	N/A	40 CFR Part 60, Subpart Ka	Does not store petroleum liquids
B43IPST03A	N/A	40 CFR Part 60, Subpart Kb	Design capacity < 19,800 gallons
B43IPST03A	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B43IPST03A	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B43IPST03A	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B43IPST03A	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B43IPST03B	N/A	40 CFR Part 60, Subpart K	Does not store petroleum liquids
B43IPST03B	N/A	40 CFR Part 60, Subpart Ka	Does not store petroleum liquids
B43IPST03B	N/A	40 CFR Part 60, Subpart Kb	Design capacity < 19,800 gallons
B43IPST03B	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B43IPST03B	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B43IPST03B	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B43IPST03B	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B43IPST104	N/A	40 CFR Part 60, Subpart K	Does not store petroleum liquids
B43IPST104	N/A	40 CFR Part 60, Subpart Ka	Does not store petroleum liquids
B43IPST104	N/A	40 CFR Part 60, Subpart Kb	Design capacity < 19,800 gallons
B43IPST104	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B43IPST104	N/A	40 CFR Part 61, Subpart Y	Does not store benzene

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
B43IPST104	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B43IPST104	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B43IPST105	N/A	40 CFR Part 60, Subpart K	Does not store petroleum liquids
B43IPST105	N/A	40 CFR Part 60, Subpart Ka	Does not store petroleum liquids
B43IPST105	N/A	40 CFR Part 60, Subpart Kb	Design capacity < 19,800 gallons
B43IPST105	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B43IPST105	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B43IPST105	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B43IPST105	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B43IPST106	N/A	40 CFR Part 60, Subpart K	Does not store petroleum liquids
B43IPST106	N/A	40 CFR Part 60, Subpart Ka	Does not store petroleum liquids
B43IPST106	N/A	40 CFR Part 60, Subpart Kb	Design capacity < 19,800 gallons
B43IPST106	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B43IPST106	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B43IPST106	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B43IPST106	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B43IPST107	N/A	40 CFR Part 60, Subpart K	Does not store petroleum liquids
B43IPST107	N/A	40 CFR Part 60, Subpart Ka	Does not store petroleum liquids
B43IPST107	N/A	40 CFR Part 60, Subpart Kb	Design capacity < 19,800 gallons
B43IPST107	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
B43IPST107	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B43IPST107	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B43IPST107	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B43IPST108	N/A	40 CFR Part 60, Subpart K	Does not store petroleum liquids
B43IPST108	N/A	40 CFR Part 60, Subpart Ka	Does not store petroleum liquids
B43IPST108	N/A	40 CFR Part 60, Subpart Kb	Design capacity < 19,800 gallons
B43IPST108	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B43IPST108	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B43IPST108	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B43IPST108	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B43IPST109	N/A	40 CFR Part 60, Subpart K	Does not store petroleum liquids
B43IPST109	N/A	40 CFR Part 60, Subpart Ka	Does not store petroleum liquids
B43IPST109	N/A	40 CFR Part 60, Subpart Kb	Design capacity < 19,800 gallons
B43IPST109	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B43IPST109	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B43IPST109	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B43IPST109	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B43IPST111	N/A	40 CFR Part 60, Subpart K	Does not store petroleum liquids
B43IPST111	N/A	40 CFR Part 60, Subpart Ka	Does not store petroleum liquids
B43IPST111	N/A	40 CFR Part 60, Subpart Kb	Design capacity < 19,800 gallons

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
B43IPST111	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B43IPST111	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B43IPST111	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B43IPST111	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B43IPST113	N/A	40 CFR Part 60, Subpart K	Does not store petroleum liquids
B43IPST113	N/A	40 CFR Part 60, Subpart Ka	Does not store petroleum liquids
B43IPST113	N/A	40 CFR Part 60, Subpart Kb	Design capacity < 19,800 gallons
B43IPST113	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B43IPST113	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B43IPST113	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B43IPST113	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B43IPST114	N/A	40 CFR Part 60, Subpart K	Does not store petroleum liquids
B43IPST114	N/A	40 CFR Part 60, Subpart Ka	Does not store petroleum liquids
B43IPST114	N/A	40 CFR Part 60, Subpart Kb	Design capacity < 19,800 gallons
B43IPST114	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B43IPST114	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B43IPST114	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B43IPST114	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B43IPST117	N/A	40 CFR Part 60, Subpart K	Does not store petroleum liquids
B43IPST117	N/A	40 CFR Part 60, Subpart Ka	Does not store petroleum liquids

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
B43IPST117	N/A	40 CFR Part 60, Subpart Kb	Design capacity < 19,800 gallons
B43IPST117	N/A	40 CFR Part 60, Subpart Y	Does not store benzene
B43IPST117	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B43IPST117	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B43IPST117	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B43IPST121	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B43IPST121	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B43IPST121	N/A	40 CFR Part 60, Subpart Kb	Design capacity < 19,800 gallons
B43IPST121	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B43IPST121	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B43IPST121	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B43IPST121	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B43IPST122	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons
B43IPST122	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B43IPST122	N/A	40 CFR Part 60, Subpart Kb	Design capacity < 19,800 gallons
B43IPST122	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B43IPST122	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B43IPST122	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B43IPST122	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B43IPST123	N/A	40 CFR Part 60, Subpart K	Storage capacity is < 40,000 gallons

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
B43IPST123	N/A	40 CFR Part 60, Subpart Ka	Storage capacity is < 40,000 gallons
B43IPST123	N/A	40 CFR Part 60, Subpart Kb	Design capacity < 19,800 gallons
B43IPST123	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B43IPST123	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B43IPST123	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B43IPST123	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B43IPST127	N/A	30 TAC Chapter 115, Storage of VOCs	Tank capacity is less than 1,000 gallons.
B43IPST127	N/A	40 CFR Part 60, Subpart K	Storage capacity < 40,000 gallons
B43IPST127	N/A	40 CFR Part 60, Subpart Ka	Storage capacity < 40,000 gallons
B43IPST127	N/A	40 CFR Part 60, Subpart Kb	Design capacity < 19,800 gallons
B43IPST127	N/A	40 CFR Part 60, Subpart Y	Does not store benzene
B43IPST127	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B43IPST127	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B43IPST127	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart
B43IPST130	N/A	30 TAC Chapter 115, Storage of VOCs	Tank capacity is less than 1,000 gallons.
B43IPST130	N/A	40 CFR Part 60, Subpart Kb	VOC TVP < 0.5 psia
B43IPST130	N/A	40 CFR Part 61, Subpart FF	Does not contain or store benzene waste
B43IPST130	N/A	40 CFR Part 61, Subpart Y	Does not store benzene
B43IPST130	N/A	40 CFR Part 63, Subpart G	Not a SOCMI facility
B43IPST130	N/A	40 CFR Part 63, Subpart OO	No applicable subparts within 60, 61, or 63 reference this subpart

New Source Review Authorization References

The New Source Review authorizations listed in the table below are applicable requirements under 30 TAC Chapter 122 and enforceable under this operating permit.

Title 30 TAC Chapter 116 Permits, Special Permits, and Other Authorizations (Other Than Permits By Rule, PSD Permits, or NA Permits) for the Application Area.	
Authorization No.: 104144	Issuance Date: 04/20/2017
Authorization No.: 18561	Issuance Date: 12/15/2011
Authorization No.: 75751	Issuance Date: 08/16/2007
Permits By Rule (30 TAC Chapter 106) for the Application Area	
Number: 106.261	Version No./Date: 09/04/2000
Number: 106.261	Version No./Date: 11/01/2003
Number: 106.262	Version No./Date: 09/04/2000
Number: 106.262	Version No./Date: 11/01/2003
Number: 106.263	Version No./Date: 11/01/2001
Number: 106.472	Version No./Date: 09/04/2000
Number: 106.476	Version No./Date: 09/04/2000
Number: 106.478	Version No./Date: 09/04/2000

New Source Review Authorization References by Emissions Unit

The following is a list of New Source Review (NSR) authorizations for emission units. The NSR authorizations are applicable requirements under 30 TAC Chapter 122 and enforceable under this operating permit.

Unit/Group/Process ID No.	Emission Unit Name/Description	New Source Review Authorization
B13PGD530	D-530 KNOCK OUT POT	18561
B13PGD631	D-631 T-21 TOWER REFLUX DRUM	18561
B13PGD660	D-660 T-20 TOWER REFLUX DRUM	18561
B13PGE32	E-32 REACTOR	18561
B13PGFU1	AREA FUGITIVES (POLY MDEA AEEA)	18561, 106.261/11/01/2003, 106.262/11/01/2003, 106.472/09/04/2000, 106.476/09/04/2000, 106.478/09/04/2000
B13PGHE101	E-101 HEAT EXCHANGER	18561
B13PGHE102	E-102 HEAT EXCHANGER	18561
B13PGHE60	E-60 HEAT EXCHANGER	18561
B13PGLR1	POLY#1/AEEA RAILCAR LOADING	18561, 75751, 106.261/11/01/2003, 106.262/11/01/2003
B13PGLR2	POLY#1/AEEA TANK TRUCK" LOADING	18561, 75751, 106.261/11/01/2003, 106.262/11/01/2003
B13PGPT34	D-34 PROCESS VESSEL	18561
B13PGPT601	D-601 MIXING POT	18561
B13PGR1	KR-1 REACTOR	18561
B13PGR2	KR-2 REACTOR	18561
B13PGR3	KR-3 REACTOR	18561, 106.261/11/01/2003, 106.262/11/01/2003, 106.472/09/04/2000, 106.476/09/04/2000, 106.478/09/04/2000
B13PGR5	KR-5 REACTOR	18561
B13PGR6	KR-6 PROCESS VESSEL	18561
B13PGR7	KR-7 REACTOR	18561
B13PGR8	KR-8 REACTOR	18561

New Source Review Authorization References by Emissions Unit

The following is a list of New Source Review (NSR) authorizations for emission units. The NSR authorizations are applicable requirements under 30 TAC Chapter 122 and enforceable under this operating permit.

Unit/Group/Process ID No.	Emission Unit Name/Description	New Source Review Authorization
B13PGR9	KR-9 REACTOR	18561
B13PGRX1	POLYGLYCOL AMINES TANK VENT	18561
B13PGS955	PGA REACTOR SYS 4 STRIPPER PROCESS" VENT	18561
B13PGST001	D-1001 POLYGLYCOL STORAGE TANK	18561
B13PGST003	D-2003 POLYGLYCOL STORAGE TANK	18561
B13PGST004	D-2004 STORAGE TANK	18561
B13PGST007	D-2007 POLYGLYCOL STORAGE TANK	18561
B13PGST01	D-201 OLOA PROCESS VESSEL	18561

Appendix A

Acronym List 200

Acronym List

The following abbreviations or acronyms may be used in this permit:

ACFM ..... actual cubic feet per minute
AMOC ..... alternate means of control
ARP ..... Acid Rain Program
ASTM ..... American Society of Testing and Materials
B/PA ..... Beaumont/Port Arthur (nonattainment area)
CAM ..... Compliance Assurance Monitoring
CD ..... control device
COMS ..... continuous opacity monitoring system
CVS ..... closed-vent system
D/FW ..... Dallas/Fort Worth (nonattainment area)
DR ..... Designated Representative
EIP ..... El Paso (nonattainment area)
EP ..... emission point
EPA ..... U.S. Environmental Protection Agency
EU ..... emission unit
FCAA Amendments ..... Federal Clean Air Act Amendments
FOP ..... federal operating permit
GF ..... grandfathered
gr/100 scf ..... grains per 100 standard cubic feet
HAP ..... hazardous air pollutant
H/G/B ..... Houston/Galveston/Brazoria (nonattainment area)
H_2S ..... hydrogen sulfide
ID No. ..... identification number
lb/hr ..... pound(s) per hour
MMBtu/hr ..... Million British thermal units per hour
MRRT ..... monitoring, recordkeeping, reporting, and testing
NA ..... nonattainment
N/A ..... not applicable
NADB ..... National Allowance Data Base
NO_x ..... nitrogen oxides
NSPS ..... New Source Performance Standard (40 CFR Part 60)
NSR ..... New Source Review
ORIS ..... Office of Regulatory Information Systems
Pb ..... lead
PBR ..... Permit By Rule
PM ..... particulate matter
ppmv ..... parts per million by volume
PSD ..... prevention of significant deterioration
RO ..... Responsible Official
SO_2 ..... sulfur dioxide
TCEQ ..... Texas Commission on Environmental Quality
TSP ..... total suspended particulate
TVP ..... true vapor pressure
U.S.C. ..... United States Code
VOC ..... volatile organic compound

Subject: Data on Huntsman Ethylene Oxide

Aimee,

Here's what I've gotten so far (spreadsheet attached).

First, I got a list of all of the EPNs that had reported EO emissions in our 2017 emissions inventory using our central registry query page:
http://www15.tceq.texas.gov/crpub/
There were 30 EPN's total with routine EO emissions, and 40 more with only non-routine EO emissions.

Then I got a list of all active air permits and PBRs (from the same database) at the site.

I narrowed your list down to 14 case-by-case permits and 142 PBR's. I looked at the MRT's from the permits and copied down all of the EPN's. I cross tabulated them to tie the routine EO-emitting EPN's and was able to get permits for 18 of them (you can probably do a better job with a human eye [I just used a computer]).

Feel free to call tomorrow if I can help further as you research the permits. I may be able to do a batch download of some basic files (e.g., technical review summary for a PBR), so please check in with me tomorrow about ways we can refine your search.

Best,

Jesse Lovegren, Ph.D., P.E.

Subject: Eastman Chemical, Texas City - O-1400 Title V Renewal Application
Attachments: O-1400 Renewal Searchable 12-6-2017.pdf

Good morning,

As requested by EPA Region 6 office, Eastman Chemical, Texas City Inc. is submitting a copy of its FOP O-1400 renewal application. The attached document has been converted to a searchable Adobe Acrobat (pdf) file.

If you have questions, please don't hesitate to contact me.

Thanks,

Foluke Jegede

Subject: Permit Renewal Application, SOP O-1400
Eastman Chemical Texas City, Inc. – Acct. No. GB-0060-B
CN600126288, RN100212620

Eastman Chemical Texas City, Inc. (Eastman) is submitting the enclosed application for renewal of TCEQ SOP O-1400. The following documents are attached:

- Form OP-CRO1
- Form OP-1
- Form OP-2 with attachments detailing provisional terms and conditions,
- Form OP-SUMR,
- Form OP-ACPS,
- Unit Attribute Forms OP-UA2, OP-UA3, OP-UA15, OP-UA17,
- Form OP-REQ1, and
- Form OP-REQ3

We appreciate your review of this application. If you or your staff have any questions, please contact me at (409) 942-3510 or Jeff Barnwell at (409) 942-3461.

Sincerely,

Foluke Jegede
Environmental Representative – Eastman Chemical Texas City, Inc.

Form OP-CRO1
Certification by Responsible Official
Federal Operating Permit Program

All initial permit application, revision, renewal, and reopening submittals requiring certification must be addressed using this form. Updates to site operating permit (SOP) and temporary operating permit (TOP) applications, other than public notice verification materials, must be certified prior to authorization of public notice or start of public announcement. Updates to general operating permit (GOP) applications must be certified prior to receiving an authorization to operate under a GOP.

A.	Site Name: Texas City Operations (TCO)							
B.	Regulated Entity Reference Number (RN): RN100212620							
C.	Primary Account Number for Site: GB-0060-B							
D.	Indicate affected state(s) required to review permit application: *(Check the appropriate box[es].)*							
AR ☐ CO ☐ KS ☐ LA ☐ NM ☐ OK ☐ N/A ☒								
E.	Indicate all pollutants for which the site is a major source based on the site's potential to emit:							
Pollutant	**VOC**	**NO_X**	**SO_2**	**PM_{10}**	**CO**	**Pb**	**HAPS**	**Other** ☐
Major at the Site *(YES/NO)*:	No	Yes	No	No	Yes	No	No	
F.	Is the source a non-major source subject to the Federal Operating Permit Program?							☐ YES ☒ NO
G.	Is the site within a local program area jurisdiction?							☒ YES ☐ NO
H.	Will emissions averaging be used to comply with any Subpart of 40 CFR Part 63?							☐ YES ☒ NO
I.	Indicate the 40 CFR Part 63 Subpart(s) that will use emissions averaging:							
III.	**Permit Type**							
A.	Type of Permit Requested: *(Select only one response)*							
Site Operating Permit (SOP) ☒ Temporary Operating Permit (TOP) ☐ General Operating Permit (GOP) ☐								
IV.	**Initial Application Information** *(Complete for Initial Issuance Applications only.)*							
A.	Is this submittal an abbreviated or a full application?							☐ Abbreviated ☐ Full
B.	If this is a full application, is the submittal a follow-up to an abbreviated application?							☐ YES ☐ NO
C.	If this is an abbreviated application, is this an early submittal for a combined SOP and Acid Rain permit?							☐ YES ☐ NO
D.	Has a copy of this application been submitted (or is being submitted) to EPA? (Refer to the form instructions for additional information.)							☐ YES ☐ NO

Texas Commission on Environmental Quality
Federal Operating Permit Program
Application for Permit Revision/Renewal
Form OP-2
Table 1

Date: 12/06/2017	**Permit No.:** O-1400	**Account No.:** GB-0060-B	**Regulated Entity No.:** RN100212620
Area Name: Methanol and Acetic Acid Units	**Company Name:** Eastman Chemical Texas City, Inc.	**Customer Reference No.:** CN600126288	

For Submissions to EPA *(SOP renewal, minor revision, and significant revision applications only)*

Has a copy of this application been submitted (or is being submitted) to EPA? *(Refer to the form instructions for additional information.)* ☒ YES ☐ NO

I. Application Type

Indicate the type of application:

☒ Renewal ☐ Streamlined Revision *Must include provisional terms and conditions as explained in the instructions.*)

☐Significant Revision ☐ Revision Requesting Prior Approval ☐ Administrative Revision ☐ Response to Reopening

II. Qualification Statement

For SOP Revisions Only	The referenced changes qualify for the marked revision type.	☐ YES ☐ NO
For GOP Revisions Only	The permitted area continues to qualify for a GOP.	☐ YES ☐ NO

III. Major Source Pollutants *(Complete this section if the permit revision is due to a change at the site or change in regulations.)*

Indicate all pollutants for which the site is a major source based on the site's potential to emit after the change is operated:

Pollutant	**VOC**	**NO_x**	**SO_2**	**PM_{10}**	**CO**	**Pb**	**HAPs**	**Other** ☐
Major at the Site *(YES/NO)*:								

IV. Reference Only Requirements *(For reference only.)*

Has the applicant paid emissions fees for the most recent agency fiscal year (September 1 - August 31)?	☒ YES ☐ NO ☐ N/A
RO is opting out of electronic correspondence from TCEQ (*otherwise leave blank*):	☐ Opt-Out of E-mailed Docs

V. Delinquent Fees and Penalties

Notice: This form will not be processed until all delinquent fees and/or penalties owed the TCEQ or the Office of the Attorney General on behalf of the TCEQ are paid in accordance with the Delinquent Fee and penalty protocol.

Form OP-ACPS
Application Compliance Plan and Schedule

Date: 12/06/2017	**Regulated Entity No.:** RN100212620	**Permit No.:** O-1400
Company Name: Eastman Chemical Texas City, Inc.	**Area Name:** Methanol and Acetic Acid Units	

- Part 1 of this form must be submitted with all initial FOP applications and renewal applications.
- The Responsible Official must use Form OP-CRO1 (Certification by Responsible Official) to certify information contained in this form in accordance with 30 TAC § 122.132(d)(8).

Part 1

A.	**Compliance Plan — Future Activity Committal Statement**	
The *Responsible Official* commits, utilizing reasonable effort, to the following: As the responsible official it is my intent that all emission units shall continue to be in compliance with all applicable requirements they are currently in compliance with, and all emission units shall be in compliance by the compliance dates with any applicable requirements that become effective during the permit term.		
B.	**Compliance Certification - Statement for Units in Compliance*** **(Indicate response by entering an "X" in the appropriate column)**	
1.	With the exception of those emission units listed in the Compliance Schedule section of this form (Part 2, below), and based, at minimum, on the compliance method specified in the associated applicable requirements, are all emission units addressed in this application in compliance with all their respective applicable requirements as identified in this application?	☒ YES ☐ NO
2.	Are there any non-compliance situations addressed in the Compliance Schedule Section of this form (Part 2)?	☐ YES ☒ NO
3.	If the response to Item B.2, above, is "Yes," indicate the total number of Part 2 attachments included in this submittal. *(For reference only)*	
*	*For Site Operating Permits (SOPs), the complete application should be consulted for applicable requirements and their corresponding emission units when assessing compliance status.* *For General Operating Permits (GOPs), the application documentation, particularly Form OP-REQ1 should be consulted as well as the requirements contained in the appropriate General Permits portion of 30 TAC Chapter 122.* *Compliance should be assessed based, at a minimum, on the required monitoring, testing, record keeping, and/or reporting requirements, as appropriate, associated with the applicable requirement in question.*

Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

I.	**Title 30 TAC Chapter 111 - Control of Air Pollution from Visible Emissions and Particulate Matter**		
	A. Visible Emissions		
♦	1.	The application area includes stationary vents constructed on or before January 31, 1972.	☐ YES ☒ NO
♦	2.	The application area includes stationary vents constructed after January 31, 1972. *If the responses to Questions I.A.1 and I.A.2 are both "NO," go to Question I.A.6.* *If the response to Question I.A.1 is "NO" and the response to Question I.A.2 is "YES," go to Question I.A.4.*	☒ YES ☐ NO
♦	3.	The application area is opting to comply with the requirements for stationary vents constructed after January 31, 1972 for vents in the application area constructed on or before January 31, 1972.	☐ YES ☐ NO
♦	4.	All stationary vents are addressed on a unit specific basis. *If the response to Question I.A.4 is "YES," go to Question I.A.5.*	☐ YES ☒ NO
♦	5.	Test Method 9 (40 CFR Part 60, Appendix A, Method 9 - Visual Determination of the Opacity of Emissions from Stationary Sources) is used to determine opacity of emissions in the application area.	☒ YES ☐ NO
♦	6.	The application area includes structures subject to 30 TAC § 111.111(a)(7)(A).	☐ YES ☒ NO
♦	7.	The application area includes sources, other than those specified in 30 TAC § 111.111(a)(1), (4), or (7), subject to 30 TAC § 111.111(a)(8)(A).	☒ YES ☐ NO
♦	8.	Emissions from units in the application area include contributions from uncombined water.	☒ YES ☐ NO
♦	9.	The application area is located in the City of El Paso, including Fort Bliss Military Reservation, and includes solid fuel heating devices subject to 30 TAC § 111.111(c).	☐ YES ☐ NO ☒ N/A

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

I.	**Title 30 TAC Chapter 111 - Control of Air Pollution from Visible Emissions and Particulate Matter (continued)**		
	B. Materials Handling, Construction, Roads, Streets, Alleys, and Parking Lots		
	1.	Items a - d determines applicability of any of these requirements based on geographical location.	
♦	a.	The application area is located within the City of El Paso.	☐ YES ☒ NO
♦	b.	The application area is located within the Fort Bliss Military Reservation, except areas specified in 30 TAC § 111.141.	☐ YES ☒ NO
♦	c.	The application area is located in the portion of Harris County inside the loop formed by Beltway 8.	☐ YES ☒ NO
♦	d.	The application area is located in the area of Nueces County outlined in Group II state implementation plan (SIP) for inhalable particulate matter adopted by the TCEQ on May 13, 1988.	☐ YES ☒ NO
	If there is any "YES" response to Questions I.B.1.a - d, answers Questions I.B.2.a - d. If all responses to Questions I.B.1.a-d are "NO," go to Section I.C.		
	2.	Items a - d determine the specific applicability of these requirements.	
♦	a.	The application area is subject to 30 TAC § 111.143.	☐ YES ☐ NO
♦	b.	The application area is subject to 30 TAC § 111.145.	☐ YES ☐ NO
♦	c.	The application area is subject to 30 TAC § 111.147.	☐ YES ☐ NO
♦	d.	The application area is subject to 30 TAC § 111.149.	☐ YES ☐ NO
	C. Emissions Limits on Nonagricultural Processes		
♦	1.	The application area includes nonagricultural processes subject to 30 TAC § 111.151.	☒ YES ☐ NO
	2.	The application area includes vents from a nonagricultural process that are subject additional monitoring requirements. *If the response to Question I.C.2 is "NO," go to Question I.C.4.*	☐ YES ☒ NO
	3.	All vents from nonagricultural processes in the application area are subject to additional monitoring requirements.	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

I.	**Title 30 TAC Chapter 111 - Control of Air Pollution from Visible Emissions and Particulate Matter (continued)**		
	C.	**Emissions Limits on Nonagricultural Processes (continued)**	
	4.	The application area includes oil or gas fuel-fired steam generators subject to 30 TAC §§ 111.153(a) and 111.153(c).	☐ YES ☒ NO
	5.	The application area includes oil or gas fuel-fired steam generators that are subject to additional monitoring requirements. *If the response to Question I.C.5 is "NO," go to Question I.C.7.*	☐ YES ☒ NO
	6.	All oil or gas fuel-fired steam generators in the application area are subject to additional monitoring requirements.	☐ YES ☐ NO
	7.	The application area includes solid fossil fuel-fired steam generators subject to 30 TAC §§ 111.153(a) and 111.153(b).	☐ YES ☒ NO
	8.	The application area includes solid fossil fuel-fired steam generators that are subject to additional monitoring requirements. *If the response to Question I.C.8 is "NO," go to Section I.D.*	☐ YES ☒ NO
	9.	All solid fossil fuel-fired steam generators in the application area are subject to additional monitoring requirements.	☐ YES ☐ NO
	D.	**Emissions Limits on Agricultural Processes**	
	1.	The application area includes agricultural processes subject to 30 TAC § 111.171.	☐ YES ☒ NO
	E.	**Outdoor Burning**	
♦	1.	Outdoor burning is conducted in the application area. *If the response to Question I.E.1 is "NO," go to Section II.*	☐ YES ☒ NO
♦	2.	Fire training is conducted in the application area and subject to the exception provided in 30 TAC § 111.205.	☐ YES ☐ NO
♦	3.	Fires for recreation, ceremony, cooking, and warmth are used in the application area and subject to the exception provided in 30 TAC § 111.207.	☐ YES ☐ NO
♦	4.	Disposal fires are used in the application area and subject to the exception provided in 30 TAC § 111.209.	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

I.	**Title 30 TAC Chapter 111 - Control of Air Pollution from Visible Emissions and Particulate Matter (continued)**		
	E.	**Outdoor Burning (continued)**	
♦	5.	Prescribed burning is used in the application area and subject to the exception provided in 30 TAC § 111.211.	☐ YES ☐ NO
♦	6.	Hydrocarbon burning is used in the application area and subject to the exception provided in 30 TAC § 111.213.	☐ YES ☐ NO
♦	7.	The application area has received the TCEQ Executive Director approval of otherwise prohibited outdoor burning according to 30 TAC § 111.215.	☐ YES ☐ NO
II.	**Title 30 TAC Chapter 112 - Control of Air Pollution from Sulfur Compounds**		
	A.	**Temporary Fuel Shortage Plan Requirements**	
	1.	The application area includes units that are potentially subject to the temporary fuel shortage plan requirements of 30 TAC §§ 112.15 - 112.18.	☐ YES ☒ NO
III.	**Title 30 TAC Chapter 115 - Control of Air Pollution from Volatile Organic Compounds**		
	A.	**Applicability**	
♦	1.	The application area is located in the Houston/Galveston/Brazoria area, Beaumont/Port Arthur area, Dallas/Fort Worth area, El Paso area, or a covered attainment county as defined by 30 TAC § 115.10. *See instructions for inclusive counties. If the response to Question III.A.1 is "NO," go to Section IV.*	☒ YES ☐ NO
	B.	**Storage of Volatile Organic Compounds**	
♦	1.	The application area includes storage tanks, reservoirs, or other containers capable of maintaining working pressure sufficient at all times to prevent any VOC vapor or gas loss to the atmosphere.	☐ YES ☒ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

III. Title 30 TAC Chapter 115 - Control of Air Pollution from Volatile Organic Compounds (continued)		
C. Industrial Wastewater		
1.	The application area includes affected VOC wastewater streams of an affected source category, as defined in 30 TAC § 115.140. *If the response to Question III.C.1 is "NO" or "N/A," go to Section III.D.*	☐ YES ☒ NO ☐ N/A
2.	The application area is located at a petroleum refinery in the Beaumont/Port Arthur or Houston/Galveston/Brazoria area. *If the response to Question III.C.2 is "YES" and the refinery is in the Beaumont/Port Arthur area, go to Section III.D.*	☐ YES ☐ NO
3.	The application area is complying with the provisions of 40 CFR Part 63, Subpart G, as an alternative to complying with this division (relating to Industrial Wastewater). *If the response to Question III.C.3 is "YES," go to Section III.D.*	☐ YES ☐ NO
4.	The application area is located at a plant with an annual VOC loading in wastewater, as determined in accordance with 30 TAC § 115.148, less than or equal to 10 Mg (11.03 tons). *If the response to Question III.C.4 is "YES," go to Section III.D.*	☐ YES ☐ NO
5.	The application area includes wastewater drains, junction boxes, lift stations, or weirs that are subject to the control requirements of 30 TAC § 115.142(1).	☐ YES ☐ NO
6.	The application area includes wastewater drains, junction boxes, lift stations, or weirs that handle streams chosen for exemption under 30 TAC § 115.147(2).	☐ YES ☐ NO
7.	The application area includes wastewater drains, junction boxes, lift stations, or weirs that have an executive director approved exemption under 30 TAC § 115.147(4).	☐ YES ☐ NO
D. Loading and Unloading of VOCs		
♦ 1.	The application area includes VOC loading operations.	☐ YES ☒ NO
♦ 2.	The application area includes VOC transport vessel unloading operations. *For GOP applications, if the responses to Questions III.D.1 - D.2 are "NO," go to Section III.E.*	☐ YES ☒ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

III.	**Title 30 TAC Chapter 115 - Control of Air Pollution from Volatile Organic Compounds (continued)**		
	D.	**Loading and Unloading of VOCs (continued)**	
♦	3.	Transfer operations at motor vehicle fuel dispensing facilities are the only VOC transfer operations conducted in the application area.	☐ YES ☐ NO
	E.	**Filling of Gasoline Storage Vessels (Stage I) for Motor Vehicle Fuel Dispensing Facilities**	
♦	1.	The application area includes one or more motor vehicle fuel dispensing facilities and gasoline is transferred from a tank-truck tank into a stationary storage container. *If the response to Question III.E.1 is "NO," go to Section III.F.*	☐ YES ☒ NO
♦	2.	Transfers to stationary storage containers used exclusively for the fueling of agricultural implements are the only transfer operations conducted at facilities in the application area.	☐ YES ☐ NO
♦	3.	All transfers at facilities in the application area are made into stationary storage containers with internal floating roofs, external floating roofs, or their equivalent. *If the response to Question III.E.2 and/or E.3 is "YES," go to Section III.F.*	☐ YES ☐ NO
♦	4.	The application area is located in a covered attainment county as defined in 30 TAC § 115.10. *If the response to Question III.E.4 is "NO," go to Question III.E.9.*	☐ YES ☐ NO
♦	5.	Stationary gasoline storage containers with a nominal capacity less than or equal to 1,000 gallons are located at the facility.	☐ YES ☐ NO
♦	6.	Stationary gasoline storage containers with a nominal capacity greater than 1,000 gallons are located at the facility.	☐ YES ☐ NO
♦	7.	At facilities located in covered attainment counties other than Bastrop, Bexar, Caldwell, Comal, Guadalupe, Hays, Travis, Williamson, or Wilson County, transfers are made to stationary storage tanks greater than 1000 gallons located at a facility which has dispensed less than 100,000 gallons of gasoline in a calendar month after October 31, 2014. *If the response to Question III.E.7 is "YES," go to Section III.F.*	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

III.	**Title 30 TAC Chapter 115 - Control of Air Pollution from Volatile Organic Compounds (continued)**		
	E.	**Filling of Gasoline Storage Vessels (Stage I) for Motor Vehicle Fuel Dispensing Facilities (continued)**	
♦	8.	At facilities located in Bastrop, Bexar, Caldwell, Comal, Guadalupe, Hays, Travis, Williamson, or Wilson County, transfers are made to stationary storage tanks greater than 1000 gallons located at a facility which has dispensed no more than 25,000 gallons of gasoline in a calendar month after December 31, 2004. *If the response to Question III.E.8 is "YES," go to Section III.F.*	☐ YES ☐ NO
♦	9.	Transfers are made to stationary storage tanks located at a motor vehicle fuel dispensing facility which has dispensed no more than 10,000 gallons of gasoline in any calendar month after January 1, 1991 and for which construction began prior to November 15, 1992.	☐ YES ☐ NO
♦	10.	Transfers are made to stationary storage tanks located at a motor vehicle fuel dispensing facility which has dispensed more than 10,000 gallons of gasoline in any calendar month after January 1, 1991 and for which construction began prior to November 15, 1992.	☐ YES ☐ NO
♦	11.	Transfers are made to stationary storage tanks located at a motor vehicle fuel dispensing facility which commenced construction on or after November 15, 1992.	☐ YES ☐ NO
♦	12.	At facilities located in Ellis, Johnson, Kaufman, Parker, or Rockwall County, transfers are made to stationary storage tanks located at a facility which has dispensed at least 10,000 gallons of gasoline but less than 125,000 gallons of gasoline in a calendar month after April 30, 2005.	☐ YES ☐ NO
	F.	**Control of VOC Leaks from Transport Vessels (Complete this section for GOP applications for GOPs 511, 512, 513 and 514 only)**	
♦	1.	Tank-truck tanks are filled with, or emptied of, gasoline at a facility that is subject to 30 TAC § 115.214(a)(1)(C) or 115.224(2) within the application area.	☐ YES ☐NO ☐ N/A

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

III.	**Title 30 TAC Chapter 115 - Control of Air Pollution from Volatile Organic Compounds (continued)**		
	F.	**Control of VOC Leaks from Transport Vessels (Complete this section for GOP applications for GOPs 511, 512, 513 and 514 only) (continued)**	
♦	2.	Tank-truck tanks are filled with non-gasoline VOCs having a TVP greater than or equal to 0.5 psia under actual storage conditions at a facility subject to 30 TAC § 115.214(a)(1)(C) within the application area.	☐ YES ☐ NO ☐ N/A
♦	3.	Tank-truck tanks are filled with, or emptied of, gasoline at a facility that is subject to 30 TAC § 115.214(b)(1)(C) or 115.224(2) within the application area.	☐ YES ☐ NO ☐ N/A
	G.	**Control of Vehicle Refueling Emissions (Stage II) at Motor Vehicle Fuel Dispensing Facilities**	
♦	1.	The application area includes one or more motor vehicle fuel dispensing facilities and gasoline is transferred from a stationary storage container into motor vehicle fuel tanks. *If the response to Question III.G.1 is "NO" or "N/A," go to Section III.H.*	☐ YES ☒ NO ☐ N/A
♦	2.	The application area includes facilities that began construction on or after November 15, 1992 and prior to May 16, 2012.	☐ YES ☐ NO
♦	3.	The application area includes facilities that began construction prior to November 15, 1992. *If the responses to Questions III.G.2 and Question III.G.3 are both "NO," go to Section III.H.*	☐ YES ☐ NO
♦	4.	The application area includes only facilities that have a monthly throughput of less than 10,000 gallons of gasoline.	☐ YES ☐ NO
♦	5.	The decommissioning of all Stage II vapor recovery control equipment located in the application area has been completed and the decommissioning notice submitted.	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

III.	**Title 30 TAC Chapter 115 - Control of Air Pollution from Volatile Organic Compounds (continued)**		
	H.	**Control Of Reid Vapor Pressure (RVP) of Gasoline**	
♦	1.	The application area includes stationary tanks, reservoirs, or other containers holding gasoline that may ultimately be used in a motor vehicle in El Paso County. *If the response to Question III.H.1 is "NO" or "N/A," go to Section III.I.*	☐ YES ☐ NO ☒ N/A
♦	2.	The application area includes stationary tanks, reservoirs, or other containers holding gasoline that will be used exclusively for the fueling of agricultural implements.	☐ YES ☐ NO
♦	3.	The application area includes a motor vehicle fuel dispensing facility.	☐ YES ☐ NO
♦	4.	The application area includes stationary tanks, reservoirs, or other containers holding gasoline and having a nominal capacity of 500 gallons or less.	☐ YES ☐ NO
	I.	**Process Unit Turnaround and Vacuum-Producing Systems in Petroleum Refineries**	
	1.	The application area is located at a petroleum refinery.	☐ YES ☒ NO
	J.	**Surface Coating Processes (Complete this section for GOP applications only.)**	
♦	1.	Surface coating operations (other than those performed on equipment located on-site and in-place) that meet the exemption specified in 30 TAC § 115.427(a)(3)(A) or 115.427(b)(1) are performed in the application area.	☐ YES ☐ NO ☐ N/A

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

III.	**Title 30 TAC Chapter 115 - Control of Air Pollution from Volatile Organic Compounds (continued)**		
	K.	**Cutback Asphalt**	
	1.	Conventional cutback asphalt containing VOC solvents for the paving of roadways, driveways, or parking lots, is used or specified for use in the application area by a state, municipal, or county agency. *If the response to Question III.K.1 is "N/A," go to Section III.L.*	☐ YES ☒ NO ☐ N/A
	2.	The use, application, sale, or offering for sale of conventional cutback asphalt containing VOC solvents for the paving of roadways, driveways, or parking lots occurs in the application area.	☐ YES ☒ NO ☐ N/A
	3.	Asphalt emulsion is used or produced within the application area.	☐ YES ☒ NO
	4.	The application area is using an alternate control requirement as specified in 30 TAC § 115.513. *If the response to Question III.K.4 is "NO," go to Section III.L.*	☐ YES ☒ NO
	5.	The application area uses, applies, sells, or offers for sale asphalt concrete, made with cutback asphalt, that meets the exemption specified in 30 TAC § 115.517(1).	☐ YES ☐ NO
	6.	The application area uses, applies, sells, or offers for sale cutback asphalt that is used solely as a penetrating prime coat.	☐ YES ☐ NO
	7.	The applicant using cutback asphalt is a state, municipal, or county agency.	☐ YES ☐ NO
	L.	**Degassing of Storage Tanks, Transport Vessels and Marine Vessels**	
♦	1.	The application area includes degassing operations for stationary, marine, and/or transport vessels. *If the response to Question III.L.1 is "NO" or "N/A," go to Section III.M.*	☒ YES ☐ NO ☐ N/A
♦	2.	Degassing of only ocean-going, self-propelled VOC marine vessels is performed in the application area. *If the response to Question III.L.2 is "YES," go to Section III.M.*	☐ YES ☒ NO ☐ N/A

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

III.	**Title 30 TAC Chapter 115 - Control of Air Pollution from Volatile Organic Compounds (continued)**		
	L.	**Degassing of Storage Tanks, Transport Vessels and Marine Vessels (continued)**	
♦	3.	Degassing of stationary VOC storage vessels with a nominal storage capacity of 1,000,000 gallons or more and a vapor space partial pressure greater than or equal to 0.5 psia of VOC is performed in the application area.	☒ YES ☐ NO ☐ N/A
♦	4.	Degassing of stationary VOC storage vessels with a nominal storage capacity of 250,000 gallons or more, or a nominal storage capacity of 75,000 gallons and storing materials with a true vapor pressure greater than 2.6 psia, and a vapor space partial pressure greater than or equal to 0.5 psia of VOC is performed in the application area.	☒ YES ☐ NO ☐ N/A
♦	5.	Degassing of VOC transport vessels with a nominal storage capacity of 8,000 gallons or more and a vapor space partial pressure greater than or equal to 0.5 psia of VOC is performed in the application area.	☐ YES ☐ NO
♦	6.	Degassing of VOC marine vessels with a nominal storage capacity of 10,000 barrels (420,000 gallons) or more and a vapor space partial pressure greater than or equal to 0.5 psia of VOC is performed in the application area.	☐ YES ☒ NO ☐ N/A
♦	7.	Degassing of VOC marine vessels with a nominal storage capacity of 10,000 barrels (420,000 gallons) and a vapor space partial pressure ≥ 0.5 psia that have sustained damage as specified in 30 TAC § 115.547(5) is performed in the application area.	☐ YES ☒ NO ☐ N/A
	M.	**Petroleum Dry Cleaning Systems**	
	1.	The application area contains one or more petroleum dry cleaning facilities that use petroleum based solvents.	☐ YES ☒ NO ☐ N/A

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

III. Title 30 TAC Chapter 115 - Control of Air Pollution from Volatile Organic Compounds (continued)		
N. Vent Gas Control (Highly-reactive volatile organic compounds (HRVOC)		
1.	The application area includes one or more vent gas streams containing HRVOC.	☐ YES ☒ NO ☐ N/A
2.	The application area includes one or more flares that emit or have the potential to emit HRVOC. *If the responses to Questions III.N.1 and III.N.2 are both "NO" or "N/A," go to Section III.O. If the response to Question III.N.1 is "YES," continue with Question III.N.3.*	☐ YES ☒ NO ☐ N/A
3.	All vent streams in the application area that are routed to a flare contain less than 5.0% HRVOC by weight at all times.	☐ YES ☐ NO
4.	All vent streams in the application area that are not routed to a flare contain less than 100 ppmv HRVOC at all times. *If the responses to Questions III.N.3 and III.N.4 are both "NO," go to Section III.O.*	☐ YES ☐ NO
5.	The application area contains pressure relief valves that are not controlled by a flare.	☐ YES ☐ NO
6.	The application area has at least one vent stream which has no potential to emit HRVOC.	☐ YES ☐ NO
7.	The application area has vent streams from a source described in 30 TAC § 115.727(c)(3)(A) - (H).	☐ YES ☐ NO
O. Cooling Tower Heat Exchange Systems (HRVOC)		
1.	The application area includes one or more cooling tower heat exchange systems that emit or have the potential to emit HRVOC.	☐ YES ☒ NO ☐ N/A

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

IV.	**Title 30 TAC Chapter 117 - Control of Air Pollution from Nitrogen Compounds**		
	A.	**Applicability**	
♦	1.	The application area is located in the Houston/Galveston/Brazoria, Beaumont/Port Arthur, or Dallas/Fort Worth Eight-Hour area. *For SOP applications, if the response to Question IV.A.1 is "YES," complete Sections IV.B - IV.F and IV.H.* *For GOP applications for GOPs 511, 512, 513, or 514, if the response to Question IV.A.1 is "YES," go to Section IV.F.* *For GOP applications for GOP 517, if the response to Question IV.A.1 is "YES," complete Sections IV.C and IV.F.* *For GOP applications, if the response to Question IV.A.1 is "NO," go to Section VI.*	☒ YES ☐ NO
	2.	The application area is located in Bexar, Comal, Ellis, Hays, or McLennan County and includes a cement kiln. *If the response to Question IV.A.2 is "YES," go to Question IV.H.1.*	☐ YES ☐ NO
	3.	The application area includes a utility electric generator in an east or central Texas county. *See instructions for a list of counties included.* *If the response to Question IV.A.3 is "YES," go to Question IV.G.1.* *If the responses to Questions IV.A.1 - 3 are all "NO," go to Question IV.H.1.*	☐ YES ☐ NO
	B.	**Utility Electric Generation in Ozone Nonattainment Areas**	
	1.	The application area includes units specified in 30 TAC §§ 117.1000, 117.1200, or 117.1300. *If the response to Question IV.B.1 is "NO," go to Question IV.C.1.*	☐ YES ☒ NO
	2.	The application area is complying with a System Cap in 30 TAC §§ 117.1020 or 117.1220.	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

IV.	**Title 30 TAC Chapter 117 - Control of Air Pollution from Nitrogen Compounds (continued)**		
	C.	**Commercial, Institutional, and Industrial Sources in Ozone Nonattainment Areas**	
♦	1.	The application area is located at a site subject to 30 TAC Chapter 117, Subchapter B and includes units specified in 30 TAC §§ 117.100, 117.300, or 117.400. *For SOP applications, if the response to Question IV.C.1 is "NO," go to Question IV.D.1.* *For GOP applications for GOP 517, if the response to Question IV.C.1 is "NO," go to Section IV.F.*	☒ YES ☐ NO
♦	2.	The application area is located at a site that was a major source of NO_X before November 15, 1992.	☒ YES ☐ NO ☐ N/A
♦	3.	The application area includes an electric generating facility required to comply with the System Cap in 30 TAC § 117.320.	☐ YES ☒ NO
	D.	**Adipic Acid Manufacturing**	
	1.	The application area is located at, or part of, an adipic acid production unit.	☐ YES ☒ NO ☐ N/A
	E.	**Nitric Acid Manufacturing - Ozone Nonattainment Areas**	
	1.	The application area is located at, or part of, a nitric acid production unit.	☐ YES ☒ NO ☐ N/A
	F.	**Combustion Control at Minor Sources in Ozone Nonattainment Areas - Boilers, Process Heaters, Stationary Engines and Gas Turbines**	
♦	1.	The application area is located at a site that is a minor source of NO_X in the Houston/Galveston/Brazoria or Dallas/Fort Worth Eight-Hour areas (except for Wise County). *For SOP applications, if the response to Question IV.F.1 is "NO," go to Question IV.G.1.* *For GOP applications, if the response to Question IV.F.1 is "NO," go to Section VI.*	☐ YES ☒ NO
♦	2.	The application area is located in the Houston/Galveston/Brazoria area and has units that qualify for an exemption under 30 TAC § 117.2003(a).	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

IV.	**Title 30 TAC Chapter 117 - Control of Air Pollution from Nitrogen Compounds (continued)**		
	F.	**Combustion Control at Minor Sources in Ozone Nonattainment Areas - Boilers, Process Heaters, Stationary Engines and Gas Turbines (continued)**	
♦	3.	The application area is located in the Houston/Galveston/Brazoria area and has units that qualify for an exemption under 30 TAC § 117.2003(b).	☐ YES ☐ NO
♦	4.	The application area is located in the Dallas/Fort Worth Eight-Hour area (except for Wise County) and has units that qualify for an exemption under 30 TAC § 117.2103.	☐ YES ☐ NO
♦	5.	The application area has units subject to the emission specifications under 30 TAC §§ 117.2010 or 30 TAC § 117.2110.	☐ YES ☐ NO
	G.	**Utility Electric Generation in East and Central Texas**	
	1.	The application area includes utility electric power boilers and/or stationary gas turbines (including duct burners used in turbine exhaust ducts) that were placed into service before December 31, 1995. *If the response to Question IV.G.1 is "NO," go to Question IV.H.1.*	☐ YES ☒ NO
	2.	The application area is complying with the System Cap in 30 TAC § 117.3020.	☐ YES ☐ NO
	H.	**Multi-Region Combustion Control - Water Heaters, Small Boilers, and Process Heaters**	
	1.	The application area includes a manufacturer, distributor, retailer or installer of natural gas fired water heaters, boilers or process heaters with a maximum rated capacity of 2.0 MMBtu/hr or less. *If the response to question IV.H.1 is "NO," go to Section V.*	☐ YES ☒ NO
	2.	All water heaters, boilers or process heaters manufactured, distributed, retailed or installed qualify for an exemption under 30 TAC § 117.3203.	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

V.	**Title 40 Code of Federal Regulations Part 59 (40 CFR Part 59) - National Volatile Organic Compound Emission Standards for Consumer and Commercial Products**	
A.	**Subpart B - National Volatile Organic Compound Emission Standards for Automobile Refinish Coatings**	
1.	The application area manufactures automobile refinish coatings or coating components and sells or distributes these coatings or coating components in the United States.	☐ YES ☒ NO
2.	The application area imports automobile refinish coatings or coating components, manufactured on or after January 11, 1999, and sells or distributes these coatings or coating components in the United States. *If the responses to Questions V.A.1 and V.A.2 are both "NO," go to Section V.B.*	☐ YES ☒ NO
3.	All automobile refinish coatings or coating components manufactured or imported by the application area meet one or more of the exemptions specified in 40 CFR § 59.100(c)(1) - (6).	☐ YES ☐ NO
B.	**Subpart C - National Volatile Organic Compound Emission Standards for Consumer Products**	
1.	The application area manufactures consumer products for sale or distribution in the United States.	☐ YES ☒ NO
2.	The application area imports consumer products manufactured on or after December 10, 1998 and sells or distributes these consumer products in the United States.	☐ YES ☒ NO
3.	The application area is a distributor of consumer products whose name appears on the label of one or more of the products. *If the responses to Questions V.B.1 - V.B.3 are all "NO," go to Section V.C.*	☐ YES ☒ NO
4.	All consumer products manufactured, imported, or distributed by the application area meet one or more of the exemptions specified in 40 CFR § 59.201(c)(1) - (7).	☐YES ☐NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

V.	**Title 40 Code of Federal Regulations Part 59 (40 CFR Part 59) - National Volatile Organic Compound Emission Standards for Consumer and Commercial Products (continued)**		
	C.	**Subpart D - National Volatile Organic Compound Emission Standards for Architectural Coatings**	
	1.	The application area manufactures or imports architectural coatings for sale or distribution in the United States.	☐ YES ☒ NO
	2.	The application area manufactures or imports architectural coatings that are registered under the Federal Insecticide, Fungicide, and Rodenticide Act. *If the responses to Questions V.C.1-2 are both "NO," go to Section V.D.*	☐ YES ☒ NO
	3.	All architectural coatings manufactured or imported by the application area meet one or more of the exemptions specified in 40 CFR §59.400(c)(1)-(5).	☐ YES ☐ NO
	D.	**Subpart E - National Volatile Organic Compound Emission Standards for Aerosol Coatings**	
	1.	The application area manufactures or imports aerosol coating products for sale or distribution in the United States.	☐ YES ☒ NO
	2.	The application area is a distributor of aerosol coatings for resale or distribution in the United States.	☐ YES ☒ NO
	E.	**Subpart F - Control of Evaporative Emissions From New and In-Use Portable Fuel Containers**	
	1.	The application area manufactures or imports portable fuel containers for sale or distribution in the United States. *If the response to Question V.E.1 is "NO," go to Section VI.*	☐ YES ☒ NO
	2.	All portable fuel containers manufactured or imported by the application area meet one or more of the exemptions specified in 40 CFR § 59.605(a) - (c).	☐ YES ☐ NO
VI.	**Title 40 Code of Federal Regulations Part 60 - New Source Performance Standards**		
	A.	**Applicability**	
♦	1.	The application area includes a unit(s) that is subject to one or more 40 CFR Part 60 subparts. *If the response to Question VI.A.1 is "NO," go to Section VII.*	☒ YES ☐ NO
	B.	**Subpart Y - Standards of Performance for Coal Preparation and Processing Plants**	
	1.	The application area is located at a coal preparation and processing plant. *If the response to Question VI.B.1 is "NO," go to Section VI.C.*	☐ YES ☒ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VI.	**Title 40 Code of Federal Regulations Part 60 - New Source Performance Standards (continued)**		
	B.	**Subpart Y - Standards of Performance for Coal Preparation and Processing Plants (continued)**	
	2.	The coal preparation and processing plant has a design capacity greater than 200 tons per day (tpd). *If the response to Question VI.B.2 is "NO," go to Section VI.C.*	☐ YES ☐ NO
	3.	The plant has an option to enforceably limit its operating level to less than 200 tpd and is choosing this option. *If the response to Question VI.B.3 is "YES," go to Section VI.C.*	☐ YES ☐ NO
	4.	The plant contains an open storage pile, as defined in § 60.251, as an affected facility. *If the response to Question VI.B.4 is "NO," go to Section VI.C.*	☐ YES ☐ NO
	5.	The open storage pile was constructed, reconstructed or modified after May 27, 2009.	☐ YES ☐ NO
	C.	**Subpart GG - Standards of Performance for Stationary Gas Turbines (GOP applicants only)**	
♦	1.	The application area includes one or more stationary gas turbines that have a heat input at peak load greater than or equal to 10 MMBtu/hr (10.7GJ/hr), based on the lower heating value of the fuel fired. *If the response to Question VI.C.1 is "NO" or "N/A," go to Section VI.D.*	☐ YES ☐ NO ☐ N/A
♦	2.	One or more of the affected facilities were constructed, modified, or reconstructed after October 3, 1977 and prior to February 19, 2005. *If the response to Question VI.C.2 is "NO," go to Section VI.D.*	☐ YES ☐ NO
♦	3.	One or more stationary gas turbines in the application area are using a previously approved alternative fuel monitoring schedule as specified in 40 CFR § 60.334(h)(4).	☐ YES ☐ NO
♦	4.	The exemption specified in 40 CFR § 60.332(e) is being utilized for one or more stationary gas turbines in the application area.	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VI.	**Title 40 Code of Federal Regulations Part 60 - New Source Performance Standards (continued)**		
	C.	**Subpart GG - Standards of Performance for Stationary Gas Turbines (GOP applicants only) (continued)**	
♦	5.	One or more stationary gas turbines subject to 40 CFR Part 60, Subpart GG in the application area is injected with water or steam for the control of nitrogen oxides.	☐ YES ☐ NO
	D.	**Subpart XX - Standards of Performance for Bulk Gasoline Terminals**	
	1.	The application area includes bulk gasoline terminal loading racks. *If the response to Question VI.D.1 is "NO," go to Section VI.E.*	☐ YES ☒ NO ☐ N/A
	2.	One or more of the loading racks were constructed or modified after December 17, 1980.	☐ YES ☐ NO
	E.	**Subpart LLL - Standards of Performance for Onshore Natural Gas Processing: Sulfur Dioxide (SO_2) Emissions**	
♦	1.	The application area includes affected facilities identified in 40 CFR § 60.640(a) that process natural gas (onshore). *For SOP applications, if the response to Question VI.E.1 is "NO," go to Section VI.F.* *For GOP applications, if the response to Question VI.E.1 is "NO" or "N/A," go to Section VI.H.*	☐ YES ☒ NO
♦	2.	The affected facilities commenced construction or modification after January 20, 1984 and on or before August 23, 2011. *For SOP applications, if the response to Question VI.E.2 is "NO," go to Section VI.F.* *For GOP applications, if the response to Question VI.E.2 is "NO," go to Section VI.H.*	☐ YES ☐ NO
♦	3.	The application area includes a gas sweetening unit with a design capacity greater than or equal to 2 long tons per day (LTPD) of hydrogen sulfide but operates at less than 2 LTPD. *For SOP applications, if the response to Question VI.E.3 is "NO," go to Section VI.F.* *For GOP applications, if the response to Question VI.E.3 is "NO," go to Section VI.H.*	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VI.	**Title 40 Code of Federal Regulations Part 60 - New Source Performance Standards (continued)**		
	E.	**Subpart LLL - Standards of Performance for Onshore Natural Gas Processing: Sulfur Dioxide (SO_2) Emissions (continued)**	
♦	4.	Federally enforceable operating limits have been established in the preconstruction authorization limiting the gas sweetening unit to less than 2 LTPD. *For SOP applications, if the response to Question VI.E.4. is "NO," go to Section VI.F.* *For GOP applications, if the response to Question VI.E.4. is "NO," go to Section VI.H.*	☐ YES ☐ NO
♦	5.	Please provide the Unit ID(s) for the gas sweetening unit(s) that have established federally enforceable operating limits in the space provided below.	
	F.	**Subpart OOO - Standards of Performance for Nonmetallic Mineral Processing Plants**	
	1.	The application area includes affected facilities identified in 40 CFR § 60.670(a)(1) that are located at a fixed or portable nonmetallic mineral processing plant. *If the response to Question VI.F.1 is "NO," go to Section VI.G.*	☐ YES ☒ NO
	2.	Affected facilities identified in 40 CFR § 60.670(a)(1) and located in the application area are subject to 40 CFR Part 60, Subpart OOO.	☐ YES ☐ NO
	G.	**Subpart QQQ - Standards of Performance for VOC Emissions from Petroleum Refinery Wastewater Systems**	
	1.	The application area is located at a petroleum refinery and includes one or more of the affected facilities identified in 40 CFR § 60.690(a)(2) - (4) for which construction, modification, or reconstruction was commenced after May 4, 1987. *If the response to Question VI.G.1 is "NO," go to Section VI.H.*	☐ YES ☒ NO
	2.	The application area includes storm water sewer systems.	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VI.	**Title 40 Code of Federal Regulations Part 60 - New Source Performance Standards (continued)**		
	G.	**Subpart QQQ - Standards of Performance for VOC Emissions from Petroleum Refinery Wastewater Systems (continued)**	
	3.	The application area includes ancillary equipment which is physically separate from the wastewater system and does not come in contact with or store oily wastewater.	☐ YES ☐ NO
	4.	The application area includes non-contact cooling water systems.	☐ YES ☐ NO
	5.	The application area includes individual drain systems. *If the response to Question VI.G.5 is "NO," go to Section VI.H.*	☐ YES ☐ NO
	6.	The application area includes one or more individual drain systems that meet the exemption specified in 40 CFR § 60.692-2(d).	☐ YES ☐ NO
	7.	The application area includes completely closed drain systems.	☐ YES ☐ NO
	H.	**Subpart AAAA - Standards of Performance for Small Municipal Waste Incineration Units for Which Construction Commenced After August 30, 1999 or for Which Modification or Reconstruction Commenced on or After June 6, 2004**	
♦	1.	The application area includes at least one small municipal waste incineration unit, other than an air curtain incinerator. *If the response to Question VI.H.1. is "N/A," go to Section VI.I. If the response to Question VI.H.1 is "NO," go to Question VI.H.4.*	☐ YES ☐ NO ☒ N/A
♦	2.	The application area includes at least one small municipal waste incineration unit, other than an air curtain incinerator, constructed after August 30, 1999 or modified or reconstructed on or after June 6, 2006.	☐ YES ☐ NO
♦	3.	The application area includes at least one small municipal waste incineration unit, other than an air curtain incinerator, constructed before August 30, 1999 and not modified or reconstructed on or after June 6, 2006.	☐ YES ☐ NO
♦	4.	The application area includes at least one air curtain incinerator. *If the response to Question VI.H.4 is "NO," go to Section VI.I.*	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400

VI. Title 40 Code of Federal Regulations Part 60 - New Source Performance Standards (continued)			
	J. Subpart EEEE - Standards of Performance for Other Solid Waste Incineration Units for Which Construction Commenced After December 9, 2004 or for Which Modification or Reconstruction Commenced on or After June 16, 2006		
♦	1.	The application area includes at least one very small municipal waste incineration unit or institutional incineration unit, other than an air curtain incinerator. *If the response to Question VI.J.1 is "N/A," go to Section VI.K.1. If the response to Question VI.J.1 is "NO," go to Question VI.J.4.*	☐ YES ☐ NO ☒ N/A
♦	2.	The application area includes at least one very small municipal waste incineration unit, other than an air curtain incinerator, constructed after December 9, 2004 or modified or reconstructed on or after June 16, 2006.	☐ YES ☐ NO
♦	3.	The application area includes at least one very small municipal waste incineration unit, other than an air curtain incinerator, constructed before December 9, 2004 and not modified or reconstructed on or after June 16, 2006.	☐ YES ☐ NO
♦	4.	The application area includes at least one air curtain incinerator. *If the response to Question VI.J.4 is "NO," go to Section VII.*	☐ YES ☐ NO
♦	5.	The application area includes at least one air curtain incinerator constructed after December 9, 2004 or modified or reconstructed on or after June 16, 2006. *If the response to Question VI.J.5 is "NO," go to Question VI.J.7.*	☐ YES ☐ NO
♦	6.	All air curtain incinerators constructed after December 9, 2004 or modified or reconstructed on or after June 16, 2006 combust only wood waste, clean lumber, or yard waste or a mixture of these materials.	☐ YES ☐ NO
♦	7.	The application area includes at least one air curtain incinerator constructed before December 9, 2004 and not modified or reconstructed on or after June 16, 2006.	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VI.	**Title 40 Code of Federal Regulations Part 60 - New Source Performance Standards (NSPS) (continued)**		
	J.	**Subpart EEEE - Standards of Performance for Other Solid Waste Incineration Units for Which Construction Commenced After December 9, 2004 or for Which Modification or Reconstruction Commenced on or After June 16, 2006 (continued)**	
♦	8.	All air curtain incinerators constructed before December 9, 2004 and not modified or reconstructed on or after June 16, 2006 combust only wood waste, clean lumber, or yard waste or a mixture of these materials.	☐ YES ☐ NO
♦	9.	The air curtain incinerator is located at an institutional facility and is a distinct operating unit of the institutional facility that generated the waste.	☐ YES ☐ NO
♦	10.	The air curtain incinerator burns less than 35 tons per day of wood waste, clean lumber, or yard waste or a mixture of these materials.	☐ YES ☐ NO
	K.	**Subpart OOOO - Standards of Performance for Crude Oil and Natural Gas Production, Transmission and Distribution**	
♦	1.	The application area includes one or more of the onshore affected facilities listed in 40 CFR § 60.5365(a)-(g) that are subject to 40 CFR Part 60, Subpart OOOO.	☐ YES ☒ NO
VII.	**Title 40 Code of Federal Regulations Part 61 - National Emission Standards for Hazardous Air Pollutants**		
	A.	**Applicability**	
♦	1.	The application area includes a unit(s) that is subject to one or more 40 CFR Part 61 subparts. *If the response to Question VII.A.1 is "NO" or "N/A," go to Section VIII.*	☒ YES ☐ NO ☐ N/A
	B.	**Subpart F - National Emission Standard for Vinyl Chloride**	
	1.	The application area is located at a plant which produces ethylene dichloride by reaction of oxygen and hydrogen chloride with ethylene, vinyl chloride by any process, and/or one or more polymers containing any fraction of polymerized vinyl chloride.	☐ YES ☒ NO
	C.	**Subpart J - National Emission Standard for Benzene Emissions for Equipment Leaks (Fugitive Emission Sources) of Benzene (Complete this section for GOP applications only)**	
♦	1.	The application area includes equipment in benzene service.	☐ YES ☒ NO ☐ N/A

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VII. Title 40 Code of Federal Regulations Part 61 - National Emission Standards for Hazardous Air Pollutants (continued)		
D. Subpart L - National Emission Standard for Benzene Emissions from Coke By-Product Recovery Plants		
1.	The application area is located at a coke by-product recovery plant and includes one or more of the affected sources identified in 40 CFR § 61.130(a) - (b). *If the response to Question VII.D.1 is "NO," go to Section VII.E.*	☐ YES ☒ NO
2.	The application area includes equipment in benzene service as determined by 40 CFR § 61.137(b).	☐ YES ☐ NO
3.	The application area has elected to comply with the provisions of 40 CFR § 61.243-1 and 40 CFR § 61.243-2.	☐ YES ☐ NO
E. Subpart M - National Emission Standard for Asbestos		
Applicability		
1.	The application area includes sources, operations, or activities specified in 40 CFR §§ 61.143, 61.144, 61.146, 61.147, 61.148, or 61.155. *If the response to Question VII.E.1 is "NO," go to Section VII.F.*	☐ YES ☒ NO
Roadway Construction		
2.	The application area includes roadways constructed or maintained with asbestos tailings or asbestos-containing waste material.	☐ YES ☐ NO
Manufacturing Commercial Asbestos		
3.	The application area includes a manufacturing operation using commercial asbestos. *If the response to Question VII.E.3 is "NO," go to Question VII.E.4.*	☐ YES ☐ NO
a.	Visible emissions are discharged to outside air from the manufacturing operation	☐ YES ☐ NO
b.	An alternative emission control and waste treatment method is being used that has received prior U.S. Environmental Protection Agency (EPA) approval.	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VII. Title 40 Code of Federal Regulations Part 61 - National Emission Standards for Hazardous Air Pollutants (continued)		
E. Subpart M - National Emission Standard for Asbestos (continued)		
***Manufacturing Commercial Asbestos* (continued)**		
c.	Asbestos-containing waste material is processed into non-friable forms.	☐ YES ☐ NO
d.	Asbestos-containing waste material is adequately wetted.	☐ YES ☐ NO
e.	Alternative filtering equipment is being used that has received EPA approval.	☐ YES ☐ NO
f.	A high efficiency particulate air (HEPA) filter is being used that is certified to be at least 99.97% efficient for 0.3 micron particles	☐ YES ☐ NO
g.	The EPA has authorized the use of wet collectors designed to operate with a unit contacting energy of at least 9.95 kilopascals.	☐ YES ☐ NO
Asbestos Spray Application		
4.	The application area includes operations in which asbestos-containing materials are spray applied. *If the response to Question VII.E.4 is "NO," go to Question VII.E.5.*	☐ YES ☐ NO
a.	Asbestos fibers are encapsulated with a bituminous or resinous binder during spraying and are not friable after drying. *If the response to Question VII.E.4.a is "YES," go to Question VII.E.5.*	☐ YES ☐ NO
b.	Spray-on applications on buildings, structures, pipes, and conduits do not use material containing more than 1% asbestos.	☐ YES ☐ NO
c.	An alternative emission control and waste treatment method is being used that has received prior EPA approval.	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VII. Title 40 Code of Federal Regulations Part 61 - National Emission Standards for Hazardous Air Pollutants (continued)		
E. Subpart M - National Emission Standard for Asbestos (continued)		
***Asbestos Spray Application* (continued)**		
d.	Asbestos-containing waste material is processed into non-friable forms.	☐ YES ☐ NO
e.	Asbestos-containing waste material is adequately wetted.	☐ YES ☐ NO
f.	Alternative filtering equipment is being used that has received EPA approval.	☐ YES ☐ NO
g.	A HEPA filter is being used that is certified to be at least 99.97% efficient for 0.3 micron particles.	☐ YES ☐ NO
h.	The EPA has authorized the use of wet collectors designed to operate with a unit contacting energy of at least 9.95 kilopascals.	☐ YES ☐ NO
Fabricating Commercial Asbestos		
5.	The application area includes a fabricating operation using commercial asbestos. *If the response to Question VII.E.5 is "NO," go to Question VII.E.6.*	☐ YES ☐ NO
a.	Visible emissions are discharged to outside air from the manufacturing operation.	☐ YES ☐ NO
b.	An alternative emission control and waste treatment method is being used that has received prior EPA approval.	☐ YES ☐ NO
c.	Asbestos-containing waste material is processed into non-friable forms.	☐ YES ☐ NO
d.	Asbestos-containing waste material is adequately wetted.	☐ YES ☐ NO
e.	Alternative filtering equipment is being used that has received EPA approval.	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VII. Title 40 Code of Federal Regulations Part 61 - National Emission Standards for Hazardous Air Pollutants (continued)		
E. Subpart M - National Emission Standard for Asbestos (continued)		
***Fabricating Commercial Asbestos* (continued)**		
	f. A HEPA filter is being used that is certified to be at least 99.97% efficient for 0.3 micron particles.	☐ YES ☐ NO
	g. The EPA has authorized the use of wet collectors designed to operate with a unit contacting energy of at least 9.95 kilopascals.	☐ YES ☐ NO
Non-sprayed Asbestos Insulation		
	6. The application area includes insulating materials (other than spray applied insulating materials) that are either molded and friable or wet-applied and friable after drying.	☐ YES ☐ NO
Asbestos Conversion		
	7. The application area includes operations that convert regulated asbestos-containing material and asbestos-containing waste material into nonasbestos (asbestos-free) material.	☐ YES ☐ NO
F. Subpart P - National Emission Standard for Inorganic Arsenic Emissions from Arsenic Trioxide and Metallic Arsenic Production Facilities		
	1. The application area is located at a metallic arsenic production plant or at an arsenic trioxide plant that processes low-grade arsenic bearing materials by a roasting condensation process.	☐ YES ☒ NO
G. Subpart BB - National Emission Standard for Benzene Emissions from Benzene Transfer Operations		
	1. The application area is located at a benzene production facility and/or bulk terminal. *If the response to Question VII.G.1 is "NO," go to Section VII.H.*	☐ YES ☒ NO
	2. The application area includes benzene transfer operations at marine vessel loading racks.	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VII. Title 40 Code of Federal Regulations Part 61 - National Emission Standards for Hazardous Air Pollutants (continued)		
G. Subpart BB - National Emission Standard for Benzene Emissions from Benzene Transfer Operations (continued)		
3.	The application area includes benzene transfer operations at railcar loading racks.	☐ YES ☐ NO
4.	The application area includes benzene transfer operations at tank-truck loading racks.	☐ YES ☐ NO
H. Subpart FF - National Emission Standard for Benzene Waste Operations		
Applicability		
1.	The application area includes a chemical manufacturing plant, coke by-product recovery plant, or petroleum refinery facility as defined in § 61.341.	☒ YES ☐ NO
2.	The application area is located at a hazardous waste treatment, storage, and disposal (TSD) facility site as described in 40 CFR § 61.340(b). *If the responses to Questions VII.H.1 and VII.H.2 are both "NO," go to Section VIII.*	☐ YES ☒ NO
3.	The application area is located at a site that has no benzene onsite in wastes, products, byproducts, or intermediates. *If the response to Question VII.H.3 is "YES," go to Section VIII.*	☐ YES ☒ NO
4.	The application area is located at a site having a total annual benzene quantity from facility waste less than 1 megagram per year (Mg/yr). *If the response to Question VII.H.4 is "YES," go to Section VIII*	☒ YES ☐ NO
5.	The application area is located at a site having a total annual benzene quantity from facility waste greater than or equal to 1 Mg/yr but less than 10 Mg/yr. *If the response to Question VII.H.5 is "YES," go to Section VIII.*	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VII. Title 40 Code of Federal Regulations Part 61 - National Emission Standards for Hazardous Air Pollutants (continued)		
H. Subpart FF - National Emission Standard for Benzene Waste Operations (continued)		
***Applicability* (continued)**		
6.	The flow-weighted annual average benzene concentration of each waste stream at the site is based on documentation.	☐ YES ☐ NO
7.	The application area has waste streams with flow-weighted annual average water content of 10% or greater.	☐ YES ☐ NO
Waste Stream Exemptions		
8.	The application area has waste streams that meet the exemption specified in 40 CFR § 61.342(c)(2) (the flow-weighted annual average benzene concentration is less than 10 ppmw).	☐ YES ☐ NO
9.	The application area has waste streams that meet the exemption specified in 40 CFR § 61.342(c)(3) because process wastewater has a flow rate less than 0.02 liters per minute or an annual wastewater quantity less than 10 Mg/yr.	☐ YES ☐ NO
10.	The application area has waste streams that meet the exemption specified in 40 CFR § 61.342(c)(3) because the total annual benzene quantity is less than or equal to 2 Mg/yr.	☐ YES ☐ NO
11.	The application area transfers waste off-site for treatment by another facility.	☐ YES ☐ NO
12.	The application area is complying with 40 CFR § 61.342(d).	☐ YES ☐ NO
13.	The application area is complying with 40 CFR § 61.342(e). *If the response to Question VII.H.13 is "NO," go to Question VII.H.15.*	☐ YES ☐ NO
14.	The application area has facility waste with a flow weighted annual average water content of less than 10%.	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VII. Title 40 Code of Federal Regulations Part 61 - National Emission Standards for Hazardous Air Pollutants (continued)		
H. Subpart FF - National Emission Standard for Benzene Waste Operations (continued)		
Container Requirements		
15.	The application area has containers, as defined in 40 CFR § 61.341, that receive non-exempt benzene waste. *If the response to Question VII.H.15 is "NO," go to Question VII.H.18.*	☐ YES ☐ NO
16.	The application area is an alternate means of compliance to meet the 40 CFR § 61.345 requirements for containers. *If the response to Question VII.H.16 is "YES," go to Question VII.H.18.*	☐ YES ☐ NO
17.	Covers and closed-vent systems used for containers operate such that the container is maintained at a pressure less than atmospheric pressure.	☐ YES ☐ NO
Individual Drain Systems		
18.	The application area has individual drain systems, as defined in 40 CFR § 61.341, that receive or manage non-exempt benzene waste. *If the response to Question VII.H.18 is "NO," go to Question VII.H.25.*	☐ YES ☐ NO
19.	The application area is using an alternate means of compliance to meet the 40 CFR § 61.346 requirements for individual drain systems. *If the response to Question VII.H.19 is "YES," go to Question VII.H.25.*	☐ YES ☐ NO
20.	The application area has individual drain systems complying with 40 CFR § 61.346(a). *If the response to Question VII.H.20 is "NO," go to Question VII.H.22.*	☐ YES ☐ NO
21.	Covers and closed-vent systems used for individual drain systems operate such that the individual drain system is maintained at a pressure less than atmospheric pressure.	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VII.	**Title 40 Code of Federal Regulations Part 61 - National Emission Standards for Hazardous Air Pollutants (continued)**		
	H.	**Subpart FF - National Emission Standard for Benzene Waste Operations (continued)**	
		***Individual Drain Systems* (continued)**	
	22.	The application area has individual drain systems complying with 40 CFR § 61.346(b). *If the response to Question VII.H.22 is "NO," go to Question VII.H.25.*	☐ YES ☐ NO
	23.	Junction boxes in the individual drain systems are equipped with a system to prevent the flow of organic vapors from the junction box vent pipe to the atmosphere during normal operation.	☐ YES ☐ NO
	24.	Junction box vent pipes in the individual drain systems are connected to a closed-vent system and control device.	☐ YES ☐ NO
		Remediation Activities	
	25.	Remediation activities take place at the application area subject to 40 CFR Part 61, Subpart FF.	☐ YES ☐ NO
VIII.	**Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories**		
	A.	**Applicability**	
♦	1.	The application area includes a unit(s) that is subject to one or more 40 CFR Part 63 subparts other than subparts made applicable by reference under subparts in 40 CFR Part 60, 61 or 63. *See instructions for 40 CFR Part 63 subparts made applicable only by reference.*	☒ YES ☐ NO
	B.	**Subpart F - National Emission Standards for Organic Hazardous Air Pollutants from the Synthetic Organic Chemical Manufacturing Industry**	
	1.	The application area is located at a plant site that is a major source as defined in the Federal Clean Air Act § 112(a). *If the response to Question VIII.B.1 is "NO," go to Section VIII.D.*	☒ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)		
B. Subpart F - National Emission Standards for Organic Hazardous Air Pollutants from the Synthetic Organic Chemical Manufacturing Industry (continued)		
2.	The application area is located at a site that includes at least one chemical manufacturing process unit, as defined in 40 CFR § 63.101, that manufactures as a primary product one or more of the chemicals listed in 40 CFR § 63.100(b)(1)(i) or (b)(1)(ii). *If the response to Question VIII.B.2 is "NO," go to Section VIII.D.*	☒ YES ☐ NO
3.	The application area is located at a site that includes at least one chemical manufacturing process unit, as defined in 40 CFR § 63.101, that manufactures as a primary product one or more of the chemicals listed in 40 CFR § 63.100(b)(1)(i) or (b)(1)(ii) and uses as a reactant or manufactures as a product, or co-product, one or more of the organic hazardous air pollutants listed in table 2 of 40 CFR Part 63, Subpart F.	☒ YES ☐ NO
4.	The application area includes a chemical manufacturing process unit, as defined in 40 CFR § 63.101, that manufactures as a primary product one or more of the chemicals listed in 40 CFR § 63.100(b)(1)(i) or (b)(1)(ii) and uses as a reactant or manufactures as a product, or co-product, one or more of the organic hazardous air pollutants listed in table 2 of 40 CFR Part 63, Subpart F.	☒ YES ☐ NO
5.	The application area includes a chemical manufacturing process unit, as defined in 40 CFR § 63.101, that manufactures as a primary product one or more of the chemicals listed in 40 CFR § 63.100(b)(1)(i) or (b)(1)(ii) and does <u>not</u> use as a reactant or manufacture as a product, or co-product, one or more of the organic hazardous air pollutants listed in table 2 of 40 CFR Part 63, Subpart F. *If the response to Questions VIII.B.3, B.4 and B.5 are all "NO," go to Section VIII.D.*	☐ YES ☒ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)		
C. Subpart G - National Emission Standards for Organic Hazardous Air Pollutants from the Synthetic Organic Chemical Manufacturing Industry for Process Vents, Storage Vessels, Transfer Operations, and Wastewater		
Applicability		
1.	The application area is located at a site that is subject to 40 CFR 63, Subpart F and the application area includes process vents, storage vessels, transfer racks, or waste streams associated with a chemical manufacturing process subject to 40 CFR 63, Subpart F. *If the response to Question VIII.C.1 is "NO," go to Section VIII.D.*	☒ YES ☐ NO
2.	The application area includes fixed roofs, covers, and/or enclosures that are required to comply with 40 CFR § 63.148.	☒ YES ☐ NO
3.	The application area includes vapor collection systems or closed-vent systems that are required to comply with 40 CFR § 63.148. *If the response to Question VIII.C.3 is "NO," go to Question VIII.C.8.*	☒ YES ☐ NO
4.	The application area includes vapor collection systems or closed-vent systems that are constructed of hard-piping.	☒ YES ☐ NO
5.	The application area includes vapor collection systems or closed-vent systems that contain bypass lines that could divert a vent stream away from a control device and to the atmosphere. *If the response to Question VIII.C.5 is "NO," go to Question VIII.C.8.*	☒ YES ☐ NO
Vapor Collection and Closed Vent Systems		
6.	Flow indicators are installed, calibrated, maintained, and operated at the entrances to bypass lines in the application area.	☒ YES ☐ NO
7.	Bypass lines in the application area are secured in the closed position with a car-seal or a lock-and-key type configuration.	☒ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)		
C. Subpart G - National Emission Standards for Organic Hazardous Air Pollutants from the Synthetic Organic Chemical Manufacturing Industry for Process Vents, Storage Vessels, Transfer Operations, and Wastewater (continued)		
Transfer Racks		
8.	The application area includes Group 1 transfer racks that load organic HAPs.	☐ YES ☒ NO
Process Wastewater Streams		
9.	The application area includes process wastewater streams. *If the response to Question VIII.C.9 is "NO," go to Question VIII.C.31.*	☒ YES ☐ NO
10.	The application area includes process wastewater streams that are also subject to the provisions of 40 CFR Part 61, Subpart FF. *If the response to Question VIII.C.10 is "NO," go to Question VIII.C.12.*	☒ YES ☐ NO
11.	The application area includes process wastewater streams that are complying with 40 CFR §§ 63.110(e)(1)(i) and (e)(1)(ii).	☐ YES ☒ NO
12.	The application area includes process wastewater streams that are also subject to the provisions of 40 CFR Part 61, Subpart F. *If the response to Question VIII.C.12 is "NO," go to Question VIII.C.14.*	☐ YES ☒ NO
13.	The application area includes process wastewater streams utilizing the compliance option specified in 40 CFR § 63.110(f)(4)(ii).	☐ YES ☐ NO
14.	The application area includes process wastewater streams that are also subject to the provisions of 40 CFR Parts 260 through 272. *If the response to Question VIII.C.14 is "NO," go to Question VIII.C.17.*	☐ YES ☒ NO
15.	The application area includes process wastewater streams complying with 40 CFR § 63.110(e)(2)(i).	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)		
C. Subpart G - National Emission Standards for Organic Hazardous Air Pollutants from the Synthetic Organic Chemical Manufacturing Industry for Process Vents, Storage Vessels, Transfer Operations, and Wastewater (continued)		
***Process Wastewater Streams* (continued)**		
16.	The application are includes process wastewater streams complying with 40 CFR § 63.110(e)(2)(ii).	☐ YES ☐ NO
17.	The application area includes process wastewater streams, located at existing sources, that are designated as Group 1; are required to be treated as Group 1 under 40 CFR § 63.110; or are determined to be Group 1 for Table 9 compounds.	☐ YES ☒ NO
18.	The application area includes process wastewater streams, located at existing sources that are Group 2.	☒ YES ☐ NO
19.	The application area includes process wastewater streams, located at new sources, that are designated as Group 1; required to be treated as Group 1 under 40 CFR § 63.110; or are determined to be Group 1 for Table 8 or Table 9 compounds.	☐ YES ☒ NO
20.	The application area includes process wastewater streams, located at new sources that are Group 2 for both Table 8 and Table 9 compounds.	☐ YES ☒ NO
21.	All Group 1 wastewater streams at the site are demonstrated to have a total source mass flow rate of less than 1 MG/yr. *If the response to Question VIII.C.21 is "YES," go to Question VIII.C.31.*	☐ YES ☐ NO ☒ N/A
22.	The site has untreated and/or partially treated Group 1 wastewater streams demonstrated to have a total source mass flow rate of less than 1 MG/yr. *If the response to Question VIII.C.22 is "NO," go to Question VIII.C.24.*	☐ YES ☐ NO ☒ N/A
23.	The application area includes waste management units that receive or manage a partially treated Group 1 wastewater stream prior to or during treatment.	☐ YES ☒ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)		
C. Subpart G - National Emission Standards for Organic Hazardous Air Pollutants from the Synthetic Organic Chemical Manufacturing Industry for Process Vents, Storage Vessels, Transfer Operations, and Wastewater (continued)		
***Drains* (continued)**		
29.	The application area includes individual drain systems that are complying with 40 CFR § 63.136 through the use of cover and, if vented, closed vent systems and control devices.	☐ YES ☐ NO
30.	The application area includes individual drain systems that are complying with 40 CFR § 63.136 through the use of water seals or tightly fitting caps or plugs.	☐ YES ☐ NO
31.	The application area includes drains, drain hubs, manholes, lift stations, trenches, or pipes that are part of a chemical manufacturing process unit that meets the criteria of 40 CFR § 63.100(b). *If the response to Question VIII.C.31 is "NO," go to Question VIII.C.36.*	☒ YES ☐ NO
32.	The application area includes drains, drain hubs, manholes, lift stations, trenches or pipes (that are part of a chemical manufacturing process unit) that meet the criteria listed in 40 CFR § 63.149(d). *If the response to Question VIII.C.32 is "NO," go to Question VIII.C.36.*	☐ YES ☒ NO
33.	The application area includes drains, drain hubs, manholes, lift stations, trenches, or pipes that convey water with a total annual average concentration greater than or equal to 10,000 parts per million by weight of compounds listed in 40 CFR Part 63 Subpart G, Table 9, at any flow rate.	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)		
C. Subpart G-National Emission Standards for Organic Hazardous Air Pollutants from the Synthetic Organic Chemical Manufacturing Industry for Process Vents, Storage Vessels, Transfer Operation, and Wastewater (continued)		
***Drains* (continued)**		
34.	The application area includes drains, drain hubs, manholes, lift stations, trenches or pipes that convey water with a total annual average concentration greater than or equal to 1,000 parts per million by weight of compounds listed in 40 CFR Part 63 Subpart G, Table 9, at an annual average flow rate greater than or equal to 10 liters per minute.	☐ YES ☐ NO
35.	The application area includes drains, drain hubs, manholes, lift stations, trenches or pipes that are part of a chemical manufacturing process unit that is subject to the new source requirements of 40 CFR § 63.100(l)(1) or (l)(2); and the equipment conveys water with a total annual average concentration greater than or equal to 10 parts per million by weight of compounds listed in 40 CFR Part 63 Subpart G, Table 8, at an average annual flow rate greater than or equal to 0.02 liter per minute.	☐ YES ☐ NO
Gas Streams		
36.	The application area includes gas streams meeting the characteristics of 40 CFR § 63.107(b) - (h) or the criteria of 40 CFR § 63.113(i) and are transferred to a control device not owned or operated by the applicant.	☐ YES ☒ NO
37.	The applicant is unable to comply with 40 CFR §§ 63.113 - 63.118 for one or more reasons described in 40 CFR § 63.100(q)(1), (3), or (5).	☐ YES ☒ NO
D. Subpart N - National Emission Standards for Chromium Emissions From Hard and Decorative Chromium Electroplating and Chromium Anodizing Tanks		
1.	The application area includes chromium electroplating or chromium anodizing tanks located at hard chromium electroplating, decorative chromium electroplating, and/or chromium anodizing operations.	☐ YES ☒ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)		
E.	**Subpart O - Ethylene Oxide Emissions Standards for Sterilization Facilities**	
1.	The application area includes sterilization facilities where ethylene oxide is used in the sterilization or fumigation of materials. *If the response to Question VIII.E.1 is "NO," go to Section VIII.F.*	☐ YES ☒ NO
2.	Sterilization facilities located in the application area are subject to 40 CFR Part 63, Subpart O. *If the response to Question VIII.E.2 is "NO," go to Section VIII.F.*	☐ YES ☐ NO
3.	The sterilization source has used less than 1 ton (907 kg) of ethylene oxide within all consecutive 12-month periods after December 6, 1996.	☐ YES ☐ NO
4.	The sterilization source has used less than 10 tons (9070 kg) of ethylene oxide within all consecutive 12-month periods after December 6, 1996.	☐ YES ☐ NO
F.	**Subpart Q - National Emission Standards for Industrial Process Cooling Towers**	
1.	The application area includes industrial process cooling towers. *If the response to Question VIII.F.1 is "NO," go to Section VIII.G.*	☒ YES ☐ NO
2.	Chromium-based water treatment chemicals have been used on or after September 8, 1994.	☐ YES ☒ NO
G.	**Subpart R - National Emission Standards for Gasoline Distribution Facilities (Bulk Gasoline Terminals and Pipeline Breakout Stations)**	
1.	The application area includes a bulk gasoline terminal.	☐ YES ☒ NO
2.	The application area includes a pipeline breakout station. *If the responses to Questions VIII.G.1 and VIII.G.2 are both "NO," go to Section VIII.H.*	☐ YES ☒ NO
3.	The bulk gasoline terminal or pipeline breakout station is located within a contiguous area and under common control with another bulk gasoline terminal or a pipeline breakout station. *If the response to Question VIII.G.3 is "YES," go to Question VIII.G.9.*	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)		
G. Subpart R - National Emission Standards for Gasoline Distribution Facilities (Bulk Gasoline Terminals and Pipeline Breakout Stations) (continued)		
4.	The bulk gasoline terminal or pipeline breakout station is located within a contiguous area and under common control with sources, other than bulk gasoline terminals or pipeline breakout stations that emit or have the potential to emit HAPs. *If the response to Question VIII.G.4 is "YES," go to Question VIII.G.9.*	☐ YES ☐ NO
5.	The value 0.04(OE) is less than 5% of the value of the bulk gasoline terminal emissions screening factor (ET) or the pipeline breakout station emissions screening factor (Ep). *If the response to Question VIII.G.5 is "NO," go to Question VIII.G.9.*	☐ YES ☐ NO ☐ N/A
6.	Emissions screening factor less than 0.5 (ET or EP < 0.5). *If the response to Question VIII.G.6 is "YES," go to Section VIII.H.*	☐ YES ☐ NO ☐ N/A
7.	Emissions screening factor greater than or equal to 0.5, but less than 1.0 (0.5 ≤ ET or EP < 1.0). *If the response to Question VIII.G.7 is "YES," go to Section VIII.H*	☐ YES ☐ NO ☐ N/A
8.	Emissions screening factor greater than or equal to 1.0 (ET or EP ≥ 1.0). *If the response to Question VIII.G.8 is "YES," go to Question VIII.G.10.*	☐ YES ☐ NO ☐ N/A
9.	The site at which the application area is located is a major source of HAP. *If the response to Question VIII.G.9 is "NO," go to Section VIII.H*	☐ YES ☐ NO
10.	The application area is using an alternative leak monitoring program as described in 40 CFR § 63.424(f).	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)		
H. Subpart S - National Emission Standards for Hazardous Air Pollutants from the Pulp and Paper Industry		
1.	The application area includes processes that produce pulp, paper, or paperboard and are located at a plant site that is a major source of HAPs as defined in 40 CFR § 63.2. *If the response to Question VIII.H.1 is "NO," go to Section VIII.I.*	☐ YES ☒ NO
2.	The application area uses processes and materials specified in 40 CFR § 63.440(a)(1) - (3). *If the response to Question VIII.H.2 is "NO," go to Section VIII.I.*	☐ YES ☐ NO
3.	The application area includes one or more sources subject to 40 CFR Part 63, Subpart S that are existing sources. *If the response to Question VIII.H.3 is "NO," go to Section VIII.I.*	☐ YES ☐ NO
4.	The application area includes one or more kraft pulping systems that are existing sources.	☐ YES ☐ NO
5.	The application area includes one or more dissolving-grade bleaching systems that are existing sources at a kraft or sulfite pulping mill.	☐ YES ☐ NO
6.	The application area includes bleaching systems that are existing sources and are complying with the Voluntary Advanced Technology Incentives Program for Effluent Limitation Guidelines in 40 CFR § 430.24. *If the response to Question VIII.H.6 is "NO," go to Section VIII.I.*	☐ YES ☐ NO
7.	The application area includes bleaching systems that are complying with 40 CFR § 63.440(d)(3)(i).	☐ YES ☐ NO
8.	The application area includes bleaching systems that are complying with 40 CFR § 63.440(d)(3)(ii).	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)		
I.	**Subpart T - National Emission Standards for Halogenated Solvent Cleaning**	
1.	The application area includes an individual batch vapor, in-line vapor, in-line cold, and/or batch cold solvent cleaning machine that uses a hazardous air pollutant (HAP) solvent, or any combination of halogenated HAP solvents, in a total concentration greater than 5% by weight, as a cleaning and/or drying agent.	☐ YES ☒ NO
2.	The application area is located at a major source and includes solvent cleaning machines, qualifying as affected facilities, that use perchloroethylene, trichloroethylene or methylene chloride.	☐ YES ☒ NO
3.	The application area is located at an area source and includes solvent cleaning machines, other than cold batch cleaning machines, that use perchloroethylene, trichloroethylene or methylene chloride.	☐ YES ☒ NO
J.	**Subpart U - National Emission Standards for Hazardous Air Pollutant Emissions: Group 1 Polymers and Resins**	
1.	The application area includes elastomer product process units and/or wastewater streams and wastewater operations that are associated with elastomer product process units. *If the response to Question VIII.J.1 is "NO," go to Section VIII.K.*	☐ YES ☒ NO
2.	Elastomer product process units and/or wastewater streams and wastewater operations located in the application area are subject to 40 CFR Part 63, Subpart U. *If the response to Question VIII.J.2 is "NO," go to Section VIII.K.*	☐ YES ☐ NO
3.	The application area includes process wastewater streams that are designated as Group 1 or are determined to be Group 1 for organic HAPs as defined in 40 CFR § 63.482.	☐ YES ☐ NO
4.	The application area includes process wastewater streams that are Group 2 for organic HAPs as defined in 40 CFR § 63.482.	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)		
J. Subpart U - National Emission Standards for Hazardous Air Pollutant Emissions: Group 1 Polymers and Resins (continued)		
5.	All Group 1 wastewater streams at the site are demonstrated to have a total source mass flow rate of less than 1 MG/yr. *If the response to Question VIII.J.5 is "YES," go to Question VIII.J.15.*	☐ YES ☐ NO
6.	The site has untreated and/or partially treated Group 1 wastewater streams demonstrated to have a total source mass flow rate of less than 1 MG/yr. *If the response to Question VIII.J.6 is "NO," go to Question VIII.J.8.*	☐ YES ☐ NO
7.	The application area includes waste management units that receive or manage a partially treated Group 1 wastewater stream prior to or during treatment.	☐ YES ☐ NO
8.	Group 1 wastewater streams or residual removed from Group 1 wastewater streams are transferred to an on-site treatment operation that is not owned or operated by the owner or operator of the source generating the waste stream or residual.	☐ YES ☐ NO
9.	Group 1 wastewater streams or residual removed from Group 1 wastewater streams are transferred to an off-site treatment operation. *If the responses to Questions VIII.J.8 - VIII.J.9 are both "NO," go to Question VIII.J.11.*	☐ YES ☐ NO
10.	The application area includes waste management units that receive or manage a Group 1 wastewater stream or a residual removed from a Group 1 wastewater stream prior to shipment or transport.	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)	
J. Subpart U - National Emission Standards for Hazardous Air Pollutant Emissions: Group 1 Polymers and Resins (continued)	
Containers	
11. The application area includes containers that receive, manage, or treat a Group 1 wastewater stream or a residual removed from a Group 1 wastewater stream.	☐ YES ☐ NO
Drains	
12. The application area includes individual drain systems that receive or manage a Group 1 wastewater stream or a residual removed from a Group 1 wastewater stream. *If the response to Question VIII.J.12 is "NO," go to Question VIII.J.15.*	☐ YES ☐ NO
13. The application area includes individual drain systems that are complying with 40 CFR § 63.136 through the use of cover and, if vented, closed vent systems and control devices.	☐ YES ☐ NO
14. The application area includes individual drain systems that are complying with 40 CFR § 63.136 through the use of water seals or tightly fitting caps or plugs.	☐ YES ☐ NO
15. The application area includes drains, drain hubs, manholes, lift stations, trenches, or pipes that are part of an elastomer product process unit. *If the response to Question VIII.J.15 is "NO," go to Section VIII.K.*	☐ YES ☐ NO
16. The application area includes drains, drain hubs, manholes, lift stations, trenches or pipes that meet the criteria listed in 40 CFR § 63.149(d) and § 63.501(a)(12). *If the response to Question VIII.J.16 is "NO," go to Section VIII.K.*	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)		
J. Subpart U - National Emission Standards for Hazardous Air Pollutant Emissions: Group 1 Polymers and Resins (continued)		
***Drains* (continued)**		
17.	The application area includes drains, drain hubs, manholes, lift stations, trenches, or pipes that convey water with a total annual average concentration greater than or equal to 10,000 parts per million by weight of compounds meeting the definition of organic HAP in 40 CFR § 63.482, at any flow rate.	☐ YES ☐ NO
18.	The application area includes drains, drain hubs, manholes, lift stations, trenches or pipes that convey water with a total annual average concentration greater than or equal to 1,000 parts per million by weight of compounds meeting the definition of organic HAP in 40 CFR § 63.482, at an annual average flow rate greater than or equal to 10 liters per minute.	☐ YES ☐ NO
19.	The application area includes drains, drain hubs, manholes, lift stations, trenches or pipes that are part of an elastomer product process unit that is a new affected source or part of a new affected source and the equipment conveys water with a total annual average concentration greater than or equal to 10 parts per million by weight of compounds meeting the definition of organic HAP in 40 CFR § 63.482, at an average annual flow rate greater than or equal to 0.02 liter per minute.	☐ YES ☐ NO
K. Subpart W - National Emission Standards for Hazardous Air Pollutants for Epoxy Resins Production and Non-nylon Polyamides Production		
1.	The manufacture of basic liquid epoxy resins (BLR) and/or manufacture of wet strength resins (WSR) is conducted in the application area. *If the response to Question VIII.K.1 is "NO" or "N/A," go to Section VIII.L.*	☐ YES ☒ NO ☐ N/A
2.	The application area includes a BLR and/or WSR research and development facility.	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)		
L.	**Subpart X - National Emission Standards for Hazardous Air Pollutants from Secondary Lead Smelting**	
1.	The application area includes one or more of the affected sources in 40 CFR § 63.541(a) that are located at a secondary lead smelter. *If the response to Question VIII.L.1 is "NO" or "N/A," go to Section VIII.M.*	☐ YES ☒ NO ☐ N/A
2.	The application area is using and approved alternate to the requirements of § 63.545(c)(1)-(5) for control of fugitive dust emission sources.	☐ YES ☐ NO
M.	**Subpart Y - National Emission Standards for Marine Tank Vessel Loading Operations**	
1.	The application area includes marine tank vessel loading operations that are specified in 40 CFR § 63.560 and located at an affected source as defined in 40 CFR § 63.561.	☐ YES ☒ NO
N.	**Subpart CC - National Emission Standards for Hazardous Air Pollutants from Petroleum Refineries**	
	Applicability	
1.	The application area includes petroleum refining process units and/or related emission points that are specified in 40 CFR § 63.640(c)(1) - (c)(7). *If the response to Question VIII.N.1 is "NO," go to Section VIII.O.*	☐ YES ☒ NO
2.	All petroleum refining process units/and or related emission points within the application area are specified in 40 CFR § 63.640(g)(1) - (g)(7). *If the response to Question VIII.N.2 is "YES," go to Section VIII.O.*	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)		
N. Subpart CC - National Emission Standards for Hazardous Air Pollutants from Petroleum Refineries (continued)		
***Applicability* (continued)**		
3.	The application area is located at a plant site that is a major source as defined in the Federal Clean Air Act § 112(a). *If the response to Question VIII.N.3 is "NO," go to Section VIII.O.*	☐ YES ☐ NO
4.	The application area is located at a plant site which emits or has equipment containing/contacting one or more of the HAPs listed in table 1 of 40 CFR Part 63, Subpart CC. *If the response to Question VIII.N.4 is "NO," go to Section VIII.O.*	☐ YES ☐ NO
5.	The application area includes Group 1 wastewater streams that are not conveyed, stored, or treated in a wastewater stream management unit that also receives streams subject to the provisions of 40 CFR §§ 63.133 - 63.147 of Subpart G wastewater provisions section.	☐ YES ☐ NO
6.	The application area includes Group 2 wastewater streams that are not conveyed, stored, or treated in a wastewater stream management unit that also receives streams subject to the provisions of 40 CFR §§ 63.133 - 63.147 of Subpart G wastewater provisions section.	☐ YES ☐ NO
7.	The application area includes Group 1 or Group 2 wastewater streams that are conveyed, stored, or treated in a wastewater stream management unit that also receives streams subject to the provisions of 40 CFR §§ 63.133 - 63.147 of Subpart G wastewater provisions section. *If the response to Question VIII.N.7 is "NO," go to Section VIII.O.*	☐ YES ☐ NO
8.	The application area includes Group 1 or Group 2 wastewater streams that are complying with 40 CFR § 63.640(o)(2)(i).	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)		
N. Subpart CC - National Emission Standards for Hazardous Air Pollutants from Petroleum Refineries (continued)		
***Applicability* (continued)**		
9.	The application area includes Group 1 or Group 2 wastewater streams that are complying with 40 CFR § 63.640(o)(2)(ii). *If the response to Question VIII.N.9 is "NO," go to Section VIII.O.*	☐ YES ☐ NO
10.	The application area includes Group 2 wastewater streams or organic streams whose benzene emissions are subject to control through the use of one or more treatment processes or waste management units under the provisions of 40 CFR Part 61, Subpart FF on or after December 31, 1992.	☐ YES ☐ NO
Containers, Drains, and other Appurtenances		
11.	The application area includes containers that are subject to the requirements of 40 CFR § 63.135 as a result of complying with 40 CFR § 63.640(o)(2)(ii).	☐ YES ☐ NO
12.	The application area includes individual drain systems that are subject to the requirements of 40 CFR § 63.136 as a result of complying with 40 CFR § 63.640(o)(2)(ii).	☐ YES ☐ NO
O. Subpart DD - National Emission Standards for Off-site Waste and Recovery Operations		
1.	The application area is located at a plant site receiving material that meets the criteria for off-site material as specified in 40 CFR § 63.680(b)(1). *If the response to Question VIII.O.1 is "NO" or "N/A," go to Section VIII.P*	☐ YES ☒ NO ☐ N/A
2.	Materials specified in 40 CFR § 63.680(b)(2) are received at the application area.	☐ YES ☐ NO
3.	The application area has a waste management operation receiving off-site material and is regulated under 40 CFR Part 264 or Part 265.	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)		
O. Subpart DD - National Emission Standards for Off-site Waste and Recovery Operations (continued)		
4.	The application area has a waste management operation treating wastewater which is an off-site material and is exempted under 40 CFR §§ 264.1(g)(6) or 265.1(c)(10).	☐ YES ☐ NO
5.	The application area has an operation subject to Clean Water Act, § 402 or § 307(b) but is not owned by a "state" or "municipality."	☐ YES ☐ NO
6.	The predominant activity in the application area is the treatment of wastewater received from off-site.	☐ YES ☐ NO
7.	The application area has a recovery operation that recycles or reprocesses hazardous waste which is an off-site material and is exempted under 40 CFR §§ 264.1(g)(2) or 265.1(c)(6).	☐ YES ☐ NO
8.	The application area has a recovery operation that recycles or reprocesses used solvent which is an off-site material and is not part of a chemical, petroleum, or other manufacturing process that is required to use air emission controls by another subpart of 40 CFR Part 63 or Part 61.	☐ YES ☐ NO
9.	The application area has a recovery operation that re-refines or reprocesses used oil which is an off-site material and is regulated under 40 CFR Part 279, Subpart F (Standards for Used Oil Processors and Refiners).	☐ YES ☐ NO
10.	The application area is located at a site where the total annual quantity of HAPs in the off-site material is less than 1 megagram per year. *If the response to Question VIII.O.10 is "YES," go to Section VIII.P.*	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)		
O. Subpart DD - National Emission Standards for Off-site Waste and Recovery Operations (continued)		
11.	The application area receives offsite materials with average VOHAP concentration less than 500 ppmw at the point of delivery that are not combined with materials having a VOHAP concentration of 500 ppmw or greater. *If the response to Question VIII.O.11 is "NO," go to Question VIII.O.14.*	☐ YES ☐ NO
12.	VOHAP concentration is determined by direct measurement.	☐ YES ☐ NO
13.	VOHAP concentration is based on knowledge of the off-site material.	☐ YES ☐ NO
14.	The application area includes an equipment component that is a pump, compressor, and agitator, pressure relief device, sampling connection system, open-ended valve or line, valve, connector or instrumentation system. *If the response to Question VIII.O.14 is "NO," go to Question VIII.O.17.*	☐ YES ☐ NO
15.	An equipment component in the application area contains or contacts off-site material with a HAP concentration greater than or equal to 10% by weight.	☐ YES ☐ NO
16.	An equipment component in the application area is intended to operate 300 hours or more during a 12-month period.	☐ YES ☐ NO
17.	The application area includes containers that manage non-exempt off-site material.	☐ YES ☐ NO
18.	The application area includes individual drain systems that manage non-exempt off-site materials.	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)			
	P.	**Subpart GG - National Emission Standards for Aerospace Manufacturing and Rework Facilities**	
	1.	The application area includes facilities that manufacture or rework commercial, civil, or military aerospace vehicles or components. *If the response to Question VIII.P.1 is "NO" or "N/A," go to Section VIII.Q.*	☐ YES ☒ NO ☐ N/A
	2.	The application area includes one or more of the affected sources specified in 40 CFR § 63.741(c)(1) - (7).	☐ YES ☐ NO
	Q.	**Subpart HH - National Emission Standards for Hazardous Air Pollutants From Oil and Natural Gas Production Facilities.**	
♦	1.	The application area contains facilities that process, upgrade or store hydrocarbon liquids that are located at oil and natural gas production facilities prior to the point of custody transfer.	☐ YES ☒ NO
♦	2.	The application area contains facilities that process, upgrade or store natural gas prior to the point at which natural gas enters the natural gas transmission and storage source category or is delivered to a final end user. *For SOP applications, if the responses to Questions VIII.Q.1 and VIII.Q.2 are both "NO," go to Section VIII.R.* *For GOP applications, if the responses to Questions VIII.Q.1 and VIII.Q.2 are both "NO," go to Section VIII.Z.*	☐ YES ☒ NO
♦	3.	The application area contains only facilities that exclusively process, store or transfer black oil as defined in § 63.761. *For SOP applications, if the response to Question VIII.Q.3 is "YES," go to Section VIII.R.* *For GOP applications, if the response to Question VIII.Q.3 is "YES," go to Section VIII.Z.*	☐ YES ☐ NO
♦	4.	The application area is located at a site that is a major source of HAP. *If the response to Question VIII.Q.4 is "NO," go to Question VIII.Q.6.*	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)			
	Q.	**Subpart - HH - National Emission Standards for Hazardous Air Pollutants From Oil and Natural Gas Production Facilities (continued)**	
♦	5.	The application area contains only a facility, prior to the point of custody transfer, with facility-wide actual annual average natural gas throughput less than 18.4 thousand standard cubic meters (649,789.9 ft^3) per day and a facility-wide actual annual average hydrocarbon liquid throughput less the 39,700 liters (10,487.6 gallons) per day. *For SOP applications, if the response to Question VIII.Q.5 is "YES," go to Section VIII.R.* *For GOP applications, if the response to Question VIII.Q.5 is "YES," go to Section VIII.Z.* *For all applications, if the response to Question VIII.Q.5 is "NO," go to Question VIII.Q.9.*	☐ YES ☐ NO
♦	6.	The application area includes a triethylene glycol (TEG) dehydration unit. *For SOP applications, f the answer to Question VIII.Q.6 is "NO," go to Section VIII.R. For GOP applications, if the response to Question VIII.Q.6 is "NO," go to Section VIII.Z.*	☐ YES ☐ NO
♦	7.	The application area is located at a site that is within the boundaries of UA plus offset or a UC, as defined in 40 CFR § 63.761.	☐ YES ☐ NO
♦	8.	The site has actual emissions of 5 tons per year or more of a single HAP, or 12.5 tons per year or more of a combination of HAP.	☐ YES ☐ NO
♦	9.	Emissions for major source determination are being estimated based on the maximum natural gas or hydrocarbon liquid throughput as calculated in § 63.760(a)(1)(i)-(iii).	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)		
R.	**Subpart II - National Emission Standards for Shipbuilding and Ship Repair (Surface Coating)**	
1.	The application area includes shipbuilding or ship repair operations. *If the response to Question VIII.R.1 is "NO," go to Section VIII.S.*	☐ YES ☒ NO
2.	Shipbuilding or ship repair operations located in the application area are subject to 40 CFR Part 63, Subpart II.	☐ YES ☐ NO
S.	**Subpart JJ - National Emission Standards for Wood Furniture Manufacturing Operations**	
1.	The application area includes wood furniture manufacturing operations and/or wood furniture component manufacturing operations. *If the response to Question VIII.S.1 is "NO" or "N/A," go to Section VIII.T.*	☐ YES ☒ NO ☐ N/A
2.	The application area meets the definition of an "incidental wood manufacturer" as defined in 40 CFR § 63.801.	☐ YES ☐ NO
T.	**Subpart KK - National Emission Standards for the Printing and Publishing Industry**	
1.	The application area includes publication rotogravure, product and packaging rotogravure, or wide-web flexographic printing presses.	☐ YES ☒ NO ☐ N/A
U.	**Subpart PP - National Emission Standards for Containers**	
1.	The application area includes containers for which another 40 CFR Part 60, 61, or 63 subpart references the use of 40 CFR Part 63, Subpart PP for the control of air emissions. *If the response to Question VIII.U.1 is "NO," go to Section VIII.V.*	☐ YES ☒ NO
2.	The application area includes containers using Container Level 1 controls.	☐ YES ☐ NO
3.	The application area includes containers using Container Level 2 controls.	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)		
U. Subpart PP - National Emission Standards for Containers (continued)		
4.	The application area includes containers using Container Level 3 controls.	☐ YES ☐ NO
V. Subpart RR - National Emission Standards for Individual Drain Systems		
1.	The application area includes individual drain systems for which another 40 CFR Part 60, 61, or 63 subpart references the use of 40 CFR Part 63, Subpart RR for the control of air emissions.	☐ YES ☒ NO
W. Subpart YY - National Emission Standards for Hazardous Air Pollutants for Source Categories - Generic Maximum Achievable Control Technology Standards		
1.	The application area includes an acetal resins production process unit; an acrylic and modacrylic fiber production process unit complying with 40 CFR § 63.1103(b)(3)(i); or an existing polycarbonate production process.	☐ YES ☒ NO
2.	The application area includes process wastewater streams generated from an acetal resins production process unit; an acrylic and modacrylic fiber production process unit complying with 40 CFR § 63.1103(b)(3)(i); or an existing polycarbonate production process. *If the responses to Questions VIII.W.1 and VIII.W.2 are both "NO," go to Question VIII.W.20.*	☐ YES ☒ NO
3.	The application area includes process wastewater streams that are designated as Group 1 or are determined to be Group 1 under the requirements of 40 CFR § 63.132(c).	☐ YES ☐ NO
4.	The application area includes process wastewater streams that are determined to be Group 2 under the requirements of 40 CFR § 63.132(c).	☐ YES ☐ NO
5.	All Group 1 wastewater streams at the site are determined to have a total source mass flow rate of less than 1 MG/yr.	☐ YES ☐ NO
6.	The site has untreated and/or partially treated Group 1 wastewater streams demonstrated to have a total source mass flow rate of less than 1 MG/yr. *If the response to Question VIII.W.6 is "NO," go to Question VIII.W.8.*	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)		
W. Subpart YY - National Emission Standards for Hazardous Air Pollutants for Source Categories - Generic Maximum Achievable Control Technology Standards (continued)		
7.	The application area includes waste management units that receive or manage a partially treated Group 1 wastewater stream prior to or during treatment.	☐ YES ☐ NO
8.	Group 1 wastewater streams or residual removed from Group 1 wastewater streams are transferred to an on-site treatment operation that is not owned or operated by the owner or operator of the source generating the waste stream or residual.	☐ YES ☐ NO
9.	Group 1 wastewater streams or residual removed from Group 1 wastewater streams are transferred to an off-site treatment operation. *If the responses to Questions VIII.W.8 and W.9 are both "NO," go to Question VIII.W.11.*	☐ YES ☐ NO
10.	The application area includes waste management units that receive or manage a Group 1 wastewater stream or a residual removed from a Group 1 wastewater stream prior to shipment or transport.	☐ YES ☐ NO
11.	The application area includes containers that receive, manage, or treat a Group 1 wastewater stream or a residual removed from a Group 1 wastewater stream.	☐ YES ☐ NO
12.	The application area includes individual drain systems that receive, manage, or treat a Group 1 wastewater stream or a residual removed from a Group 1 wastewater stream. *If the response to Question VIII.W.12 is "NO," go to Question VIII.W.15.*	☐ YES ☐ NO
13.	The application area includes individual drain systems that are complying with 40 CFR § 63.136 through the use of covers and, if vented, closed vent systems and control devices.	☐ YES ☐ NO
14.	The application area includes individual drain systems that are complying with 40 CFR § 63.136 through the use of water seals or tightly fitting caps or plugs.	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)		
W. Subpart YY - National Emission Standards for Hazardous Air Pollutants for Source Categories - Generic Maximum Achievable Control Technology Standards (continued)		
15.	The application area includes drains, drain hubs, manholes, lift stations, trenches, or pipes that are part of an acetal resins production process unit; an acrylic and modacrylic fiber production process unit complying with 40 CFR § 63.1103(b)(3)(i); or an existing polycarbonate production process unit. *If the response to Question VIII.W.15 is "NO," go to Question VIII.W.20.*	☐ YES ☐ NO
16.	The application area includes drains, drain hubs, manholes, lift stations, trenches or pipes that meet the criteria listed in 40 CFR § 63.1106(c)(1) - (3). *If the response to Question VIII.W.16 is "NO," go to Question VIII.W.20.*	☐ YES ☐ NO
17.	The application area includes drains, drain hubs, manholes, lift stations, trenches or pipes that convey water with a total annual average concentration greater than or equal to 10,000 parts per million by weight of compounds meeting the definition of organic HAP in Table 9 to 40 CFR Part 60, Subpart G, at any flow rate.	☐ YES ☐ NO
18.	The application area includes drains, drain hubs, manholes, lift stations, trenches or pipes that convey water with a total annual average concentration greater than or equal to 1,000 parts per million by weight of compounds meeting the definition of organic HAP in Table 9 to 40 CFR Part 60, Subpart G, at an annual average flow rate greater than or equal to 10 liters per minute.	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)		
W. Subpart YY - National Emission Standards for Hazardous Air Pollutants for Source Categories - Generic Maximum Achievable Control Technology Standards (continued)		
19.	The application area includes drains, drain hubs, manholes, lift stations, trenches or pipes that are part of an acrylic resins or acrylic and modacrylic fiber production process unit that is part of a new affected source or is a new affected source and the equipment conveys water with a total annual average concentration greater than or equal to 10 ppmw of compounds meeting the definition of organic HAP in Table 9 to 40 CFR Part 60, Subpart G, at an average annual flow rate greater than or equal to 0.02 liter per minute.	☐ YES ☐ NO
20.	The application area includes an ethylene production process unit.	☐ YES ☒ NO ☐ N/A
21.	The application area includes waste streams generated from an ethylene production process unit. *If the responses to Questions VIII.W.20 and VIII.W.21 are both "NO" or "N/A," go to Question VIII.W.54.*	☐ YES ☒ NO ☐ N/A
22.	The waste stream(s) contains at least one of the chemicals listed in 40 CFR § 63.1103(e), Table 7(g)(1). *If the response to Question VIII.W.22 is "NO," go to Question VIII.W.54.*	☐ YES ☐ NO
23.	Waste stream(s) are transferred off-site for treatment. *If the response to Question VIII.W.23 is "NO," go to Question VIII.W.25.*	☐ YES ☐ NO
24.	The application area has waste management units that treat or manage waste stream(s) prior to transfer off-site for treatment. *If the response to Question VIII.W.24 is "NO," go to Question VIII.W.54.*	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)		
X. Subpart JJJ - National Emission Standards for Hazardous Air Pollutant Emissions: Group IV Polymers and Resins (continued)		
***Drains* (continued)**		
19.	The application area includes drains, drain hubs, manholes, lift stations, trenches or pipes that meet the criteria listed in 40 CFR § 63.149(d) and § 63.1330(b)(12). *If the response to Question VIII.X.19 is "NO," go to Section VIII.Y.*	☐ YES ☐ NO
20.	The application area includes drains, drain hubs, manholes, lift stations, trenches, or pipes that convey water with a total annual average concentration greater than or equal to 10,000 parts per million by weight of compounds meeting the definition of organic HAP in 40 CFR § 63.1312, at any flow rate.	☐ YES ☐ NO
21.	The application area includes drains, drain hubs, manholes, lift stations, trenches or pipes that convey water with a total annual average concentration greater than or equal to 1,000 parts per million by weight of compounds meeting the definition of organic HAP in 40 CFR § 63.1312, at an annual average flow rate greater than or equal to 10 liters per minute.	☐ YES ☐ NO
22.	The application area includes drains, drain hubs, manholes, lift stations, trenches or pipes that are part of an thermoplastic product process unit that is a new affected source or part of a new affected source and the equipment conveys water with a total annual average concentration greater than or equal to 10 parts per million by weight of compounds meeting the definition of organic HAP in 40 CFR § 63.1312, at an average annual flow rate greater than or equal to 0.02 liter per minute	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)		
Y.	**Subpart UUU - National Emission Standards for Hazardous Air Pollutants for Petroleum Refineries: Catalytic Cracking Units, Catalytic reforming Units, and Sulfur Recovery Units.**	
1.	The application area is subject to 40 CFR Part 63, Subpart UUU - National Emission Standards for Hazardous Air Pollutants for Petroleum Refineries: Catalytic Cracking Units, Catalytic reforming Units, and Sulfur Recovery Units.	☐ YES ☒ NO
Z.	**Subpart AAAA - National Emission Standards for Hazardous Air Pollutants for Municipal Solid Waste (MSW) Landfills.**	
♦ 1.	The application area is subject to 40 CFR Part 63, Subpart AAAA - National Emission Standards for Hazardous Air Pollutants for Municipal Solid Waste Landfills.	☐ YES ☒ NO
AA.	**Subpart FFFF - National Emission Standards for Hazardous Air Pollutants for Miscellaneous Organic Chemical Production and Processes (MON)**	
1.	The application area is located at a site that includes process units that manufacture as a primary product one or more of the chemicals listed in 40 CFR § 63.2435(b)(1).	☒ YES ☐ NO
2.	The application area is located at a plant site that is a major source as defined in FCAA § 112(a).	☐ YES ☒ NO
3.	The application area is located at a site that includes miscellaneous chemical manufacturing process units (MCPU) that process, use or generate one or more of the organic hazardous air pollutants listed in § 112(b) of the Clean Air Act or hydrogen halide and halogen HAP. *If the response to Question VIII.AA.1, AA.2 or AA.3 is "NO," go to Section VIII.BB.*	☒ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)		
AA. Subpart FFFF - National Emission Standards for Hazardous Air Pollutants for Miscellaneous Organic Chemical Production and Processes (MON) (continued)		
4.	The application area includes process vents, storage vessels, transfer racks, or waste streams associated with a miscellaneous chemical manufacturing process subject to 40 CFR 63, Subpart FFFF. *If the response to Question VIII.AA.4 is "NO," go to Section VIII.BB.*	☐ YES ☐ NO
5.	The application area includes process wastewater streams. *If the response to Question VIII.AA.5 is "NO," go to Question VIII.AA.18.*	☐ YES ☐ NO
6.	The application area includes process wastewater streams that are designated as Group 1 or are determined to be Group 1 for compounds listed in Table 8 of 40 CFR Part 63, Subpart G or Table 8 and Table 9, as appropriate, of 40 CFR Part 63, Subpart FFFF.	☐ YES ☐ NO
7.	The application area includes process wastewater streams that are Group 2 for compounds listed in Table 8 or Table 8 and Table 9, as appropriate, of 40 CFR Part 63, Subpart FFFF.	☐ YES ☐ NO
8.	All Group 1 wastewater streams at the site are demonstrated to have a total source mass flow rate of less than 1 MG/yr. *If the response to Question VIII.AA.8 is "YES," go to Section VIII.BB.*	☐ YES ☐ NO
9.	The site has untreated and/or partially treated Group 1 wastewater streams demonstrated to have a total source mass flow rate of less than 1 MG/yr. *If the response to Question VIII.AA.9 is "NO," go to Question VIII.AA.11.*	☐ YES ☐ NO
10.	The application area includes waste management units that receive or manage a partially treated Group 1 wastewater stream prior to or during treatment.	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)		
AA. Subpart FFFF - National Emission Standards for Hazardous Air Pollutants for Miscellaneous Organic Chemical Production and Processes (MON) (continued)		
11.	Group 1 wastewater streams or residual removed from Group 1 wastewater streams are transferred to an on-site treatment operation that is not owned or operated by the owner or operator of the source generating the waste stream or residual.	☐ YES ☐ NO
12.	Group 1 wastewater streams or residual removed from Group 1 wastewater streams are transferred to an off-site treatment operation. *If the responses to Questions VIII.AA.11 and VIII.AA.12 are both "NO," go to Question VIII.AA.18.*	☐ YES ☐ NO
13.	Group 1 wastewater streams are transferred to an offsite treatment facility meeting the requirements of 40 CFR § 63.138(h). *If the response to Question VIII.AA.13 is "NO," go to Question VIII.AA.15.*	☐ YES ☐ NO
14.	The option to document in the notification of compliance status report that the wastewater will be treated in a facility meeting the requirements of 40 CFR § 63.138(h) is elected.	☐ YES ☐ NO
15.	Group 1 wastewater streams or residuals with a total annual average concentration of compounds in Table 8 of 40 CFR Part 63, Subpart FFFF less than 50 ppmw are transferred offsite. *If the response to Question VIII.AA.15 is "NO," go to Question VIII.AA.17.*	☐ YES ☐ NO
16.	The transferor is demonstrating that less than 5 percent of the HAP in Table 9 of 40 CFR Part 63, Subpart FFFF is emitted from waste management units up to the activated sludge unit.	☐ YES ☐ NO
17.	The application area includes waste management units that receive or manage a Group 1 wastewater stream or a residual removed from a Group 1 wastewater stream prior to shipment or transport.	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)		
AA. Subpart FFFF - National Emission Standards for Hazardous Air Pollutants for Miscellaneous Organic Chemical Production and Processes (MON) (continued)		
18.	The application area includes containers that receive, manage, or treat a Group 1 wastewater stream or a residual removed from a Group 1 wastewater stream.	☐ YES ☐ NO
19.	The application area includes individual drain systems that receive or manage a Group 1 wastewater stream or a residual removed from a Group 1 wastewater stream. *If the response to Question VIII.AA.19 is "NO," go to Question VIII.AA.22.*	☐ YES ☐ NO
20.	The application area includes individual drain systems that are complying with 40 CFR § 63.136 through the use of cover and, if vented, closed vent systems and control devices.	☐ YES ☐ NO
21.	The application area includes individual drain systems that are complying with 40 CFR § 63.136 through the use of water seals or tightly fitting caps or plugs.	☐ YES ☐ NO
22.	The application area includes drains, drain hubs, manholes, lift stations, trenches, or pipes that are part of a chemical manufacturing process unit that meets the criteria of 40 CFR § 63.100(b). *If the response to Question VIII.AA.22 is "NO," go to Section VIII.BB.*	☐ YES ☐ NO
23.	The application area includes drains, drain hubs, manholes, lift stations, trenches or pipes (that are part of a miscellaneous chemical manufacturing process unit) that meet the criteria listed in 40 CFR § 63.149(d). *If the response to Question VIII.AA.23 is "NO," go to Section VIII.BB.*	☐ YES ☐ NO
24.	The application area includes drains, drain hubs, manholes, lift stations, trenches or pipes that convey water with a total annual average concentration of compounds in table 8 of 40 CFR Part 63, Subpart FFFF is greater than or equal to 10,000 ppmw at any flow rate, and the total annual load of compounds in table 8 of 40 CFR Part 63, Subpart FFFF is greater than or equal to 200 lb/yr.	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)		
AA. Subpart FFFF - National Emission Standards for Hazardous Air Pollutants for Miscellaneous Organic Chemical Production and Processes (MON) (continued)		
25.	The application area includes drains, drain hubs, manholes, lift stations, trenches, or pipes that convey water with a total annual average concentration of compounds in table 8 of 40 CFR Part 63, Subpart FFFF is greater than or equal to 1,000 ppmw, and the annual average flow rate is greater than or equal to 1 liter per minute.	☐ YES ☐ NO
26.	The application area includes drains, drain hubs, manholes, lift stations, trenches or pipes that are part of a chemical manufacturing process unit that is subject to the new source requirements of 40 CFR § 63.2445(a); and the equipment conveys water with a combined total annual average concentration of compounds in tables 8 and 9 of 40 CFR Part 63, Subpart FFFF is greater than or equal to 30,000 ppmw, and the combined total annual load of compounds in tables 8 and 9 to this subpart is greater than or equal to 1 tpy.	☐ YES ☐ NO
BB. Subpart GGGG - National Emission Standards for Hazardous Air Pollutants for: Solvent Extractions for Vegetable Oil Production.		
1.	The application area includes a vegetable oil production process that: is by itself a major source of HAP emissions or, is collocated within a plant site with other sources that are individually or collectively a major source of HAP emissions.	☐ YES ☒ NO
CC. Subpart GGGGG - National Emission Standards for Hazardous Air Pollutants: Site Remediation		
1.	The application area includes a facility at which a site remediation is conducted. *If the answer to Question VIII.CC.1 is "NO," go to Section VIII.DD.*	☐ YES ☒ NO
2.	The application area is located at a site that is a major source of HAP. *If the answer to Question VIII.CC.2 is "NO," go to Section VIII.DD.*	☐ YES ☐ NO
3.	All site remediation's qualify for one of the exemptions contained in 40 CFR § 63.7881(b)(1) through (6). *If the answer to Question VIII.CC.3 is "YES," go to Section VIII.DD.*	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)		
CC. Subpart GGGGG - National Emission Standards for Hazardous Air Pollutants: Site Remediation (continued)		
4.	Prior to beginning site remediation activities it was determined that the total quantity of HAP listed in Table 1 of Subpart GGGGG that will be removed during all site remediations will be less than 1 Mg/yr. *If the answer to Question VIII.CC.4 is "YES," go to Section VIII.DD.*	☐ YES ☐ NO
5.	The site remediation will be completed within 30 consecutive calendar days.	☐ YES ☐ NO
6.	No site remediation will exceed 30 consecutive calendar days. *If the answer to Question VIII.CC.6 is "YES," go to Section VIII.DD.*	☐ YES ☐ NO
7.	Site remediation materials subject to 40 CFR Part 63, Subpart GGGGG are transferred from the application area to an off-site facility.	☐ YES ☐ NO
8.	All site remediation materials subject to 40 CFR Part 63, Subpart GGGGG are transferred from the application area to an off-site facility. *If the answer to Question VIII.CC.8 is "YES," go to Section VIII.DD.*	☐ YES ☐ NO
9.	The application area includes containers that manage site remediation materials subject to 40 CFR Part 63, Subpart GGGGG. *If the response to Question VIII.CC.9 is "NO," go to Question VIII.CC.14.*	☐ YES ☐ NO
10.	The application area includes containers using Container Level 1 controls as specified in 40 CFR § 63.922(b).	☐ YES ☐ NO
11.	The application area includes containers with a capacity greater than 0.46 m^3 that meet the requirements of 40 CFR § 63.7900(b)(3)(i) and (ii).	☐ YES ☐ NO
12.	The application area includes containers using Container Level 2 controls as specified in 40 CFR § 63.923(b).	☐ YES ☐ NO
13.	The application area includes containers using Container Level 3 controls as specified in 40 CFR § 63.924(b).	☐ YES ☐ NO
14.	The application area includes individual drain systems complying with the requirements of 40 CFR § 63.962.	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)		
DD. Subpart BBBBBB - National Emission Standards for Hazardous Air Pollutants for Source Category: Gasoline Distribution Bulk Terminals, Bulk Plants and Pipeline Facilities		
1.	The application area is located at a site that is an area source of hazardous air pollutants. *If the answer to Question DD.1 is "NO," go to Section VIII.FF.*	☒ YES ☐ NO
2.	The application area includes a pipeline breakout station, as defined in 40 CFR Part 63, Subpart BBBBBB, not subject to the control requirements of 40 CFR Part 63, Subpart R.	☐ YES ☒ NO
3.	The application area includes a pipeline pumping station as defined in 40 CFR Part 63, Subpart BBBBBB.	☐ YES ☒ NO
4.	The application area includes a bulk gasoline plant as defined in 40 CFR Part 63, Subpart BBBBBB. *If the answer to Question VIII.DD.4 is "NO," go to Question VIII.DD.6.*	☐ YES ☒ NO
5.	The bulk gasoline plant was operating, prior to January 10, 2010, in compliance with an enforceable State, local or tribal rule or permit that requires submerged fill as specified in 40 CFR § 63.11086(a).	☐ YES ☐ NO
6.	The application area includes a bulk gasoline terminal, as defined in 40 CFR Part 63, Subpart BBBBBB, not subject to the control requirements of 40 CFR Part 63, Subpart R or Subpart CC. *If the answer to Question VIII.DD.6 is "NO," go to Section VIII.EE.*	☐ YES ☒ NO
7.	The bulk gasoline terminal has a throughput of less than 250,000 gallons per day. *If the answer to Question VIII.DD.7 is "YES," go to Section VIII.EE.*	☐ YES ☐ NO
8.	The bulk gasoline terminal loads gasoline into gasoline cargo tanks other than railcar cargo tanks.	☐ YES ☐ NO
9.	The bulk gasoline terminal loads gasoline into railcar cargo tanks. *If the answer to Question VIII.DD.9 is "NO," go to Section VIII.EE.*	☐ YES ☐ NO
10.	The bulk gasoline terminal loads gasoline into railcar cargo tanks which do not collect vapors from a vapor balance system.	☐ YES ☐ NO
11.	The bulk gasoline terminal loads gasoline into railcar cargo tanks which collect vapors from a vapor balance system and that system complies with a Federal, State, local, tribal rule or permit.	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)			
	EE. Subpart CCCCCC - National Emission Standards for Hazardous Air Pollutants for Source Category: Gasoline Dispensing Facilities		
♦	1.	The application area is located at a site that is an area source of hazardous air pollutants.	☒ YES ☐ NO
	2.	The application area includes at least one gasoline dispensing facility as defined in 40 CFR § 63.11132. *If the answer to Question VIII.EE.2 is "NO," go to Section VIII.FF.*	☒ YES ☐ NO
	3.	The application area includes at least one gasoline dispensing facility with a monthly throughput of less than 10,000 gallons.	☒ YES ☐ NO
	4.	The application area includes at least one gasoline dispensing facility where gasoline is dispensed from a fixed gasoline storage tank into a portable gasoline tank for the on-site delivery and subsequent dispensing into other gasoline-fueled equipment.	☒ YES ☐ NO
	FF. Recently Promulgated 40 CFR Part 63 Subparts		
♦	1.	The application area is subject to one or more promulgated 40 CFR Part 63 subparts not addressed on this form. *If the response to Question VIII.EE.1 is "NO," go to Section IX. A list of promulgated 40 CFR Part 63 subparts not otherwise addressed on OP-REQ1 is included in the instructions*	☐ YES ☒ NO
♦	2.	Provide the Subpart designation (i.e. Subpart EEE) in the space provided below.	
IX. Title 40 Code of Federal Regulations Part 68 (40 CFR Part 68) - Chemical Accident Prevention Provisions			
	A. Applicability		
♦	1.	The application area contains processes subject to 40 CFR Part 68, Chemical Accident Prevention Provisions, and specified in 40 CFR § 68.10.	☒ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

X.	**Title 40 Code of Federal Regulations Part 82 (40 CFR Part 82) - Protection of Stratospheric Ozone**		
	A.	**Subpart A - Production and Consumption Controls**	
♦	1.	The application area is located at a site that produces, transforms, destroys, imports, or exports a controlled substance or product.	☐ YES ☒ NO ☐ N/A
	B.	**Subpart B - Servicing of Motor Vehicle Air Conditioners**	
♦	1.	Servicing, maintenance, and/or repair of fleet vehicle air conditioning systems using ozone-depleting refrigerants is conducted in the application area.	☐ YES ☒ NO
	C.	**Subpart C - Ban on Nonessential Products Containing Class I Substances and Ban on Nonessential Products Containing or Manufactured with Class II Substances**	
♦	1.	The application area sells or distributes one or more nonessential products (which release a Class I or Class II substance) that are subject to 40 CFR Part 82, Subpart C.	☐ YES ☒ NO ☐ N/A
	D.	**Subpart D - Federal Procurement**	
♦	1.	The application area is owned/operated by a department, agency, or instrumentality of the United States.	☐ YES ☒ NO ☐ N/A
	E.	**Subpart E - The Labeling of Products Using Ozone Depleting Substances**	
♦	1.	The application area includes containers in which a Class I or Class II substance is stored or transported prior to the sale of the Class I or Class II substance to the ultimate consumer.	☐ YES ☒ NO ☐ N/A
♦	2.	The application area is a manufacturer, importer, wholesaler, distributor, or retailer of products containing a Class I or Class II substance.	☐ YES ☒ NO ☐ N/A
♦	3.	The application area is a manufacturer, importer, wholesaler, distributor, or retailer of products manufactured with a process that uses a Class I or Class II substance.	☐ YES ☒ NO ☐ N/A

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

X.	**Title 40 Code of Federal Regulations Part 82 (40 CFR Part 82) - Protection of Stratospheric Ozone (continued)**		
	F.	**Subpart F - Recycling and Emissions Reduction**	
♦	1.	Servicing, maintenance, and/or repair on refrigeration and non-motor vehicle air condition appliances using ozone-depleting refrigerants or non-exempt substitutes is conducted in the application area.	☒ YES ☐ NO
♦	2.	Disposal of appliances (including motor vehicle air conditioners) or refrigerant or non-exempt substitute reclamation occurs in the application area.	☐ YES ☒ NO ☐ N/A
♦	3.	The application area manufactures appliances or refrigerant recycling and recovery equipment.	☐ YES ☒NO ☐ N/A
	G.	**Subpart G - Significant New Alternatives Policy Program**	
♦	1.	The application area manufactures, formulates, or creates chemicals, product substitutes, or alternative manufacturing processes that are intended for use as a replacement for a Class I or Class II compound. *If the response to Question X.G.1 is "NO," go to Section X.H.*	☐ YES ☒ NO ☐ N/A
♦	2.	All substitutes produced by the application area meet one or more of the exemptions in 40 CFR § 82.176(b)(1) - (7).	☐ YES ☐ NO ☐ N/A
	H.	**Subpart H -Halon Emissions Reduction**	
♦	1.	Testing, servicing, maintaining, repairing, or disposing of equipment containing halons is conducted in the application area.	☐ YES ☐ NO ☐ N/A
♦	2.	Disposal of halons or manufacturing of halon blends is conducted in the application area.	☐ YES ☐ NO ☐ N/A
XI.	**Miscellaneous**		
	A.	**Requirements Reference Tables (RRT) and Flowcharts**	
	1.	The application area contains units that are potentially subject to a regulation for which the TCEQ has not developed an RRT and flowchart.	☐ YES ☒ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

XI.	**Miscellaneous (continued)**		
	B.	**Forms**	
♦	1.	The application area contains units that are potentially subject to a regulation for which the TCEQ has not developed a unit attribute form. *If the response to Question XI.B.1 is "NO" or "N/A," go to Section XI.C.*	☐ YES ☒ NO ☐ N/A
♦	2.	Provide the Part and Subpart designation for the federal rule(s) or the Chapter, Subchapter, and Division designation for the State regulation(s) in the space provided below.	
	C.	**Emission Limitation Certifications**	
♦	1.	The application area includes units for which federally enforceable emission limitations have been established by certification.	☒ YES ☐ NO
	D.	**Alternative Means of Control, Alternative Emission Limitation or Standard, or Equivalent Requirements**	
	1.	The application area is located at a site that is subject to a site specific requirement of the state implementation plan (SIP).	☐ YES ☒ NO
	2.	The application area includes units located at the site that are subject to a site specific requirement of the SIP.	☐ YES ☒ NO
	3.	The application area includes units which demonstrate compliance by using an alternative means of control, alternative emission limitation or standard or equivalent requirements approved by the EPA Administrator. *If the response to QuestionXI.D.3 is "YES," please include a copy of the approval document with the application.*	☐ YES ☒ NO
	4.	The application area includes units which demonstrate compliance by using an alternative means of control, alternative emission limitation or standard or equivalent requirements approved by the TCEQ Executive Director. *If the response to QuestionXI.D.3 is "YES," please include a copy of the approval document with the application.*	☐ YES ☒ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

XI. Miscellaneous (continued)		
E. Title IV - Acid Rain Program		
1.	The application area includes emission units subject to the Acid Rain Program (ARP), including the Opt-In Program.	☐ YES ☒ NO
2.	The application area includes emission units qualifying for the new unit exemption under 40 CFR § 72.7.	☐ YES ☒ NO
3.	The application area includes emission units qualifying for the retired unit exemption under 40 CFR § 72.8.	☐ YES ☒ NO
F. Cross-State Air Pollution Rule (CSAPR)		
1.	The application area includes emission units subject to the requirements of the Cross-State Air Pollution Rule Trading Program. *If the response to Question XI.F.1 is "NO," go to Section XI.G.*	☐ YES ☒ NO
2.	The application area includes units that are complying with the CEMS requirements of 40 CFR Part 75, Subpart B and Subpart H for SO_2, NO_X, and heat input.	☐ YES ☐ NO
3.	The application area includes gas or oil-fired units that are complying with the CEMS requirements of 40 CFR Part 75, Subpart H for NO_X, and the monitoring requirements of 40 CFR Part 75, Appendix D for SO_2 and heat input.	☐ YES ☐ NO
4.	The application area includes gas or oil-fired peaking units that are complying with the monitoring requirements of 40 CFR Part 75, Appendix E for NO_X, and the monitoring requirements of 40 CFR Part 75,Appendix D for SO_2 and heat input.	☐ YES ☐ NO
5.	The application area includes gas or oil-fired units that are complying with the Low Mass Emissions monitoring requirements of 40 CFR § 75.19 for SO_2, NO_X, and heat input.	☐ YES ☐ NO
6.	The application area includes units that are complying with EPA-approved alternative monitoring system requirements of 40 CFR Part 75, Subpart E for SO_2, NO_X, and heat input.	☐ YES ☐ NO
7.	The application area includes emission units that qualify for a CSAPR retired unit exemption.	☐ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

XI.	**Miscellaneous (continued)**		
	G.	**Permit Shield (SOP Applicants Only)**	
	1.	A permit shield for negative applicability entries on Form OP-REQ2 (Negative Applicable Requirement Determinations) is being requested or already exists in the permit.	☒ YES ☐ NO
	H.	**GOP Type (Complete this section for GOP applications only)**	
♦	1.	The application area is applying for initial issuance, revision, or renewal of an oil and gas general operating permit under GOP No. 511 - Oil and Gas General Operating Permit for Brazoria, Chambers, Collin, Dallas, Denton, El Paso, Ellis, Fort Bend, Galveston, Hardin, Harris, Jefferson, Johnson, Kaufman, Liberty, Montgomery, Orange, Parker, Rockwall, Tarrant, Waller, and Wise Counties.	☐ YES ☐ NO
♦	2.	The application area is applying for initial issuance, revision, or renewal of an oil and gas general operating permit under GOP No. 512 - Oil and Gas General Operating Permit for Gregg, Nueces, and Victoria Counties.	☐ YES ☐ NO
♦	3.	The application area is applying for initial issuance, revision, or renewal of an oil and gas general operating permit under GOP No. 513 - Oil and Gas General Operating Permit for Aransas, Bexar, Calhoun, Matagorda, San Patricio, and Travis Counties.	☐ YES ☐ NO
♦	4.	The application area is applying for initial issuance, revision, or renewal of an oil and gas general operating permit under GOP No. 514 - Oil and Gas General Operating Permit for All Texas Counties Except Aransas, Bexar, Brazoria, Calhoun, Chambers, Collin, Dallas, Denton, El Paso, Ellis, Fort Bend, Galveston, Gregg, Hardin, Harris, Jefferson, Johnson, Kaufman, Liberty, Matagorda, Montgomery, Nueces, Orange, Parker, Rockwall, San Patricio, Tarrant, Travis, Victoria, Waller, and Wise County.	☐ YES ☐ NO
♦	5.	The application area is applying for initial issuance, revision, or renewal of a solid waste landfill general operating permit under GOP No. 517 - Municipal Solid Waste Landfill general operating permit.	☐ YES ☐ NO
	I.	**Title 30 TAC Chapter 101, Subchapter H**	
♦	1.	The application area is located in a nonattainment area. *If the response to Question XI.I.1 is "NO," go to question XI.I.3.*	☒ YES ☐ NO
♦	2.	The applicant has or will generate emission reductions to be credited in the TCEQ Emissions Banking and Trading Program.	☒ YES ☐ NO ☐ N/A

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

XI.	**Miscellaneous (continued)**		
	I.	**Title 30 TAC Chapter 101, Subchapter H (continued)**	
♦	3.	The applicant has or will generate discrete emission reductions to be credited in the TCEQ Emissions Banking and Trading Program.	☐ YES ☒ NO ☐ N/A
♦	4.	The application area is located at a site in the Houston/Galveston/Brazoria nonattainment area where the facilities have a collective uncontrolled design capacity to emit 10 tpy or more of NO_X.	☒ YES ☐ NO
♦	5.	The application area includes an electric generating facility permitted under 30 TAC Chapter 116, Subchapter I.	☐ YES ☒ NO
♦	6.	The application area is located at a site in the Houston/Galveston/Brazoria nonattainment area and the site has a potential to emit more than 10 tpy of highly-reactive volatile organic compounds (HRVOC) from facilities covered under 30 TAC Chapter 115, Subchapter H, Divisions 1 and 2.	☐ YES ☒ NO
♦	7.	The application area is located at a site in the Houston/Galveston/Brazoria nonattainment area, the site has a potential to emit 10 tpy or less of HRVOC from covered facilities and the applicant is opting to comply with the requirements of 30 TAC Chapter 101, Subchapter H, Division 6, Highly Reactive VOC Emissions Cap and Trade Program.	☐ YES ☒ NO
	J.	**Periodic Monitoring**	
♦	1.	The applicant or permit holder is submitting at least one periodic monitoring proposal described on Form OP-MON in this application.	☐ YES ☒ NO
♦	2.	The permit currently contains at least one periodic monitoring requirement. *If the responses to Questions XI.J.1 and XI.J.2 are both "NO," go to Section XI.K.*	☐ YES ☒ NO
♦	3.	All periodic monitoring requirements are being removed from the permit with this application.	☐ YES ☐ NO
	K.	**Compliance Assurance Monitoring**	
♦	1.	The application area includes at least one unit that does not meet the CAM exemptions in 40 CFR § 64.2(b) for all applicable requirements that it is subject to, and the unit has a pre-control device potential to emit greater than or equal to the amount in tons per year required in a site classified as a major source. *If the response to Question XI.K.1 is "NO," go to Section XI.L.*	☒ YES ☐ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

XI.	**Miscellaneous (continued)**		
	K.	**Compliance Assurance Monitoring (continued)**	
♦	2.	The unit or units defined by XI.K.1 are using a control device to comply with an applicable requirement. *If the response to Question XI.K.2 is "NO," go to Section XI.L.*	☐ YES ☐ NO
♦	3.	The permit holder has submitted a CAM proposal on Form OP-MON in a previous application.	☒ YES ☐ NO
♦	4.	The owner/operator or permit holder is submitting a CAM proposal on Form OP-MON according to the deadlines for submittals in 40 CFR § 64.5 in this application. *If the responses to Questions XI.K.3 and XI.K.4 are both "NO," go to Section XI.L.*	☐ YES ☒ NO
	5.	The owner/operator or permit holder is submitting a CAM implementation plan and schedule to be incorporated as enforceable conditions in the permit.	☐ YES ☒ NO
	6.	Provide the unit identification numbers for the units for which the applicant is submitting a CAM implementation plan and schedule in the space below.	
♦	7.	At least one unit defined by XI.K.1 and XI.K.2 is using a CEMS, COMS or PEMS meeting the requirements of 40 CFR § 64.3(d)(2).	☒ YES ☐ NO
♦	8.	All units defined by XI.K.1 and XI.K.2 are using a CEMS, COMS or PEMS meeting the requirements of 40 CFR § 64.3(d)(2). *If the response to Question XI.K.8 is "YES," go to Section XI.L.*	☒ YES ☐ NO
♦	9.	The CAM proposal as described by question XI.K.3 or XI.K.4 addresses particulate matter or opacity.	☐ YES ☐ NO
♦	10.	The CAM proposal as described by question XI.K.3 or XI.K.4 addresses VOC.	☐ YES ☐ NO
♦	11.	The control device in the CAM proposal as described by question XI.K.3 or XI.K.4 has a bypass.	☐ YES ☐ NO
	L.	**Title 30 TAC Chapter 113, Subchapter D, Division 5 - Emission Guidelines and Compliance Times**	
♦	1.	The application area includes at least one air curtain incinerator that commenced construction on or before December 9, 2004. *If the response to Question XI.L.1 is "NO," or "N/A," go to Section XII.*	☐ YES ☒ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

	L.	**Title 30 TAC Chapter 113, Subchapter D, Division 5 - Emission Guidelines and Compliance Times**	
♦	2.	All air curtain incinerators constructed on or before December 9, 2004 combust only wood waste, clean lumber, or yard waste or a mixture of these materials.	☐ YES ☐ NO
XII.	**New Source Review (NSR) Authorizations**		
	A.	**Waste Permits with Air Addendum**	
♦	1.	The application area includes a Municipal Solid Waste Permit or an Industrial Hazardous Waste with an Air Addendum. *If the response to XII.A.1 is "YES," include the waste permit numbers and issuance date in Section XII.J.*	☐ YES ☒ NO
	B.	**Air Quality Standard Permits**	
♦	1.	The application area includes at least one Air Quality Standard Permit NSR authorization. *If the response to XII.B.1 is "NO," go to Section XII.C. If the response to XII.B.1 is "YES," be sure to include the standard permit's registration numbers in Section XII.H, and answer XII.B.2 - B.16 as appropriate.*	☒ YES ☐ NO
♦	2.	The application area includes at least one "State Pollution Control Project" Air Quality Standard Permit NSR authorization under 30 TAC § 116.617.	☐ YES ☒ NO
♦	3.	The application area includes at least one non-rule Air Quality Standard Permit for Pollution Control Projects NSR authorization.	☒ YES ☐ NO
♦	4.	The application area includes at least one "Installation and/or Modification of Oil and Gas Facilities" Air Quality Standard Permit NSR authorization under 30 TAC § 116.620.	☐ YES ☒ NO
♦	5.	The application area includes at least one non-rule Air Quality Standard Permit for Oil and Gas Handling and Production Facilities NSR authorization.	☐ YES ☒ NO
♦	6.	The application area includes at least one "Municipal Solid Waste Landfill" Air Quality Standard Permit NSR authorization under 30 TAC § 116.621.	☐ YES ☒ NO
♦	7.	The application area includes at least one "Municipal Solid Waste Landfill Facilities and Transfer Stations" Standard Permit authorization under 30 TAC Chapter 330, Subchapter U.	☐ YES ☒ NO
	8.	The application area includes at least one "Concrete Batch Plant" Air Quality Standard Permit NSR authorization.	☐ YES ☒ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400
Area Name: Methanol and Acetic Acid Units	Customer Reference No.: 600126288	

For SOP applications, answer ALL questions unless otherwise directed.
♦ *For GOP applications, answer ONLY these questions unless otherwise directed.*

XII. New Source Review (NSR) Authorizations (continued)			
	B. Air Quality Standard Permits (continued)		
♦	9.	The application area includes at least one "Concrete Batch Plant with Enhanced Controls" Air Quality Standard Permit NSR authorization.	☐ YES ☒ NO
♦	10.	The application area includes at least one "Hot Mix Asphalt Plant" Air Quality Standard Permit NSR authorization.	☐ YES ☒ NO
♦	11.	The application area includes at least one "Rock Crusher" Air Quality Standard Permit NSR authorization.	☐ YES ☒ NO
♦	12.	The application area includes at least one "Electric Generating Unit" Air Quality Standard Permit NSR authorization. *If the response to XII.B.12 is "NO," go to Question XII.B.15.*	☐ YES ☒ NO
♦	13.	For purposes of "Electric Generating Unit" Air Quality Standard Permit, the application area is located in the East Texas Region.	☐ YES ☐ NO
♦	14.	For purposes of "Electric Generating Unit" Air Quality Standard Permit, the application area is located in the West Texas Region.	☐ YES ☐ NO
♦	15.	The application area includes at least one "Boiler" Air Quality Standard Permit NSR authorization.	☐ YES ☒ NO
♦	16.	The application area includes at least one "Sawmill" Air Quality Standard Permit NSR authorization.	☐ YES ☒ NO
	C. Flexible Permits		
	1.	The application area includes at least one Flexible Permit NSR authorization.	☐ YES ☒ NO
	D. Multiple Plant Permits		
	1.	The application area includes at least one Multi-Plant Permit NSR authorization.	☐ YES ☒ NO

Date: 12/06/2017	RN No.: RN100212620	Permit No.: O-1400

Jesse,

Thanks for getting this together so fast! I truly appreciate it!

Thanks,
Aimee

Subject: Data on Huntsman Ethylene Oxide

Aimee,

Here's what I've gotten so far (spreadsheet attached).

First, I got a list of all of the EPNs that had reported EO emissions in our 2017 emissions inventory using our central registry query page:
http://www15.tceq.texas.gov/crpub/
There were 30 EPN's total with routine EO emissions, and 40 more with only non-routine EO emissions.

Then I got a list of all active air permits and PBRs (from the same database) at the site.

I narrowed your list down to 14 case-by-case permits and 142 PBR's. I looked at the MRT's from the permits and copied down all of the EPN's. I cross tabulated them to tie the routine EO-emitting EPN's and was able to get permits for 18 of them (you can probably do a better job with a human eye [I just used a computer]).

Feel free to call tomorrow if I can help further as you research the permits. I may be able to do a batch download of some basic files (e.g., technical review summary for a PBR), so please check in with me tomorrow about ways we can refine your search.

Best,

Jesse Lovegren, Ph.D., P.E.

Subject: Texas PSD/Title V Monthly Call on Tuesday, July 18th at 10:00 am
Attachments: Summary of Call 7-18-17_NSR.docx; Summary of Call 7-18-17_TitleV.docx; Copy of TurbineTable_May 2017.xlsx; Projects Summaries 6-15-17 to 7-17-17.docx; Projects Summaries 5-15-17 to 6-15-17.docx; Projects Summaries 4-17-17 to 5-15-17.docx

Attached are summaries of my notes for the call held on July 18, 2017. The current turbine table is attached. Also attached are the projects summaries for May, June, and July. Since we didn't have calls in May and June, there are no call summaries for these two months. However, I still sent project summaries to EPA; those are attached for your information.

Please let me know if you have any questions.

Summary for Texas PSD/Title V (5/15/17 to 6/15/2017)

Issuance

- Lyondell Chemical Company (Pasadena, Harris County); Permit Nos. 137789 (initial) and N244 (initial) issued on 6/7/17. The company requested authorization to construct a new ethers unit to make methyl and ethyl tertiary butyl ethers from various raw materials comprised primarily of tertiary butyl alcohol, methanol, and ethanol. Prominent sources of air emissions include process vents and heaters, a cooling tower, storage vessels, process fugitive components in various liquid and gas services, and MSS emissions. Ancillary equipment/processes include diesel engines, loading operations, and sampling analyzers. With a 45.35 tpy project increase, nonattainment review is applicable only to VOCs.

Major Modification

- Alamo Cement Company (San Antonio, Bexar County); Permit Nos. 6758 (amendment), PSDTX145M2 (amendment), and GHGPSDTX143 (initial) authorized on 6/13/17. The company requested authorization for an additional Portland Cement kiln at an existing major site, which will result in the production of an additional 1.28 million tons of clinker per year. PSD was triggered for CO, $PM/PM_{10}/PM_{2.5}$, VOCs, and GHGs. The company is taking a federally enforceable NO_X limit on the existing kiln for a 923 tpy NO_X reduction and to net out of federal review for NO_X.

Second Notice

- Magellan Terminals Holdings, L.P. (Pasadena, Harris County); Permit Nos. 142261 (initial) and N254 (initial). Second public notice was authorized on 6/6/17 for these initial permits. The company is proposing to construct a marine terminal in Pasadena. The Pasadena Terminal will be constructed in four phases consisting of the following: internal floating roof storage tanks, horizontal fixed roof storage tanks, vertical fixed roof storage tanks, pressurized butane tanks, marine loading vapor recovery units (VRUs), marine loading fugitives, a truck loading VRU, truck unloading, equipment component fugitives, fire water pump engines, sumps, and tank landing vapor combustion units. Emissions from MSS activities associated with the new construction are also being authorized by this project. The terminal is located in a moderate nonattainment area for ozone, and a federal nonattainment review is required for VOCs.

Projects of Interest

Flexible Permits

Nothing additional from 5/15/17 to 6/15/17.

Portland Cement Plants

See information above under "Major Modification" for Alamo Cement Company.

Power Plants

Nothing additional from 5/15/17 to 6/15/17.

Contested Projects

NSR:

- GCGV Asset Holding LLC (Gregory, San Patricio County); Permit Nos. 146425 (initial), PSDTX1518 (initial), and GHGPSDTX170 (initial). After being authorized for first public notice on 5/11/17, a total of 50 public comments, including public hearing requests and meeting requests were received for these initial permits between 5/15/17 and 6/12/17. The company is proposing to construct a new chemicals manufacturing complex, including an Ethylene Plant (Steam Cracking process) that will run ethane, two low-pressure polyethylene units (most likely "swing" units that can produce either HDPE or LLDPE), a glycols plant (producing monoethylene glycol via ethylene oxide), a wastewater treatment plant, and truck and railcar logistics. An air separations unit and marine terminal are also associated with the project, but the company currently believes that these will belong to different sites.

Title V:

- A RTC letter for Permit O1440 Phillips 66 Company (Renewal, 20016) was sent to EPA for review on 5/25/17. The 45-day review period started on 5/30/17.
- TCEQ received comments from EIP on the renewal draft permit for Luminant Generation Company LLC, Sandow Steam Electric Station (FOP O54/Project 21871) on 5/12/17.

[SEQ CHAPTER \h \r 1]Statement of Basis of the Federal Operating Permit

Eastman Chemical Company

Site Name: Eastman Chemical Company Texas Operations
Area Name: C5 - Ethylene Glycol
Physical Location: 300 Kodak Blvd
Nearest City: Longview
County: Harrison

Permit Number: O1974
Project Type: Minor Revision

Standard Industrial Classification (SIC) Code: 2869
SIC Name: Industrial Organic Chemicals

This Statement of Basis sets forth the legal and factual basis for the draft changes to the permit conditions resulting from the minor revision project in accordance with 30 TAC §122.201(a)(4). The applicant has submitted an application for a minor permit revision per §§ 122.215-217. This document may include the following information:

A description of the facility/area process description;
A description of the revision project;
A basis for applying permit shields;
A list of the federal regulatory applicability determinations;
A table listing the determination of applicable requirements;
A list of the New Source Review Requirements;
The rationale for periodic monitoring methods selected;
The rationale for compliance assurance methods selected;
A compliance status; and
A list of available unit attribute forms.

Prepared on: June 27, 2016

Operating Permit
Basis of Determination

Description of Revisions

The FOP minor revision project includes revising EP037D516 unit subject to NSPS NNN regulations based on an OP-UA17 form submittal and updating the unit's preconstruction authorization. A previously granted permit shield from NSPS NNN applicability for the same unit is deleted.

Permit Area Process Description

This application area, Area C5, Ethylene Glycol, consists of two ethylene oxide/ethylene glycol plants and two solvents plants.

The two ethylene oxide/ethylene glycol plants produce ethylene oxide and ethylene glycols from ethylene and oxygen in a continuous process. The process steps include reaction, separation, product storage and product transfer. Emission units are reactors, process tanks, distillation units, process cooling towers and storage tanks; and emission control devices are flares. There are fugitive equipment leaks, heat exchanger leaks and wastewater. The types of emissions are volatile organic compounds (VOCs) and hazardous air pollutants (HAPs).

The solvents plants manufacture ethylene glycol ethers from ethylene oxide and alcohols or other glycols ethers. The manufacturing steps include materials storage, reaction, separation, product storage and product transfer. Emission units are reactors, process tanks, distillation units and storage tanks. There are fugitive equipment leaks, heat exchanger leaks and wastewater. The types of emissions are volatile organic compounds (VOCs) and hazardous air pollutants (HAPs).

FOPs at Site

The "application area" consists of the emission units and that portion of the site included in the application and this permit. Multiple FOPs may be issued to a site in accordance with 30 TAC § 122.201(e). When there is only one area for the site, then the application information and permit will include all units at the site. Additional FOPs that exist at the site, if any, are listed below.

Additional FOPs: O1436, O1968, O1970, O1971, O1972, O1973, O1975, O1976, O1977, O1978, O1979, O1981, O1982

Major Source Pollutants

The table below specifies the pollutants for which the site is a major source:

Major Pollutants	VOC, SO2, PM, NOX, HAPS, CO, GHG

Reading State of Texas's Federal Operating Permit

The Title V Federal Operating Permit (FOP) lists all state and federal air emission regulations and New Source Review (NSR) authorizations (collectively known as "applicable requirements") that apply at a particular site or permit area (in the event a site has multiple FOPs). **The FOP does not authorize new emissions or new construction activities.** The FOP begins with an introductory page which is common to all Title V permits. This page gives the details of the company, states the authority of the issuing agency, requires the company to operate in accordance with this permit and 30 Texas Administrative Code (TAC) Chapter 122, requires adherence with NSR requirements of 30 TAC Chapter 116, and finally indicates the permit number and the issuance date.

This is followed by the table of contents, which is generally composed of the following elements. Not all permits will have all of the elements.

- General Terms and Conditions
- Special Terms and Conditions
    - Emissions Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting
    - Additional Monitoring Requirements
    - New Source Review Authorization Requirements
    - Compliance Requirements
    - Protection of Stratosphere Ozone
    - Permit Location
    - Permit Shield (30 TAC § 122.148)
- Attachments
    - Applicable Requirements Summary
        - Unit Summary
        - Applicable Requirements Summary
    - Additional Monitoring Requirements
    - Permit Shield
    - New Source Review Authorization References
    - Compliance Plan
    - Alternative Requirements
- Appendix A
    - Acronym list

General Terms and Conditions

The General Terms and Conditions are the same and appear in all permits. The first paragraph lists the specific citations for 30 TAC Chapter 122 requirements that apply to all Title V permit holders. The second paragraph describes the requirements for record retention. The third paragraph provides details for voiding the permit, if applicable. The fourth paragraph states that the permit holder shall comply with the requirements of 30 TAC Chapter 116 by obtaining a New Source Review authorization prior to new construction or modification of emission units located in the area covered by this permit. The fifth paragraph provides details on submission of reports required by the permit.

Special Terms and Conditions

Emissions Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting. The TCEQ has designated certain applicable requirements as site-wide requirements. A site-wide requirement is a requirement that applies uniformly to all the units or activities at the site. Units with only site-wide requirements are addressed on Form OP-REQ1 and are not required to be listed separately on a OP-UA Form or Form OP-SUM. Form OP-SUM must list all units addressed in the application and provide identifying information, applicable OP-UA Forms, and preconstruction authorizations. The various OP-UA Forms provide the characteristics of each unit from which applicable requirements are established. Some exceptions exist as a few units may have both site-wide requirements and unit specific requirements.

Other conditions. The other entries under special terms and conditions are in general terms referring to compliance with the more detailed data listed in the attachments.

Attachments

Applicable Requirements Summary. The first attachment, the Applicable Requirements Summary, has two tables, addressing unit specific requirements. The first table, the Unit Summary, includes a list of units with applicable requirements, the unit type, the applicable regulation, and the requirement driver. The intent of the

requirement driver is to inform the reader that a given unit may have several different operating scenarios and the differences between those operating scenarios.

The applicable requirements summary table provides the detailed citations of the rules that apply to the various units. For each unit and operating scenario, there is an added modifier called the "index number," detailed citations specifying monitoring and testing requirements, recordkeeping requirements, and reporting requirements. The data for this table are based on data supplied by the applicant on the OP-SUM and various OP-UA forms.

Additional Monitoring Requirement. The next attachment includes additional monitoring the applicant must perform to ensure compliance with the applicable standard. Compliance assurance monitoring (CAM) is often required to provide a reasonable assurance of compliance with applicable emission limitations/standards for large emission units that use control devices to achieve compliance with applicant requirements. When necessary, periodic monitoring (PM) requirements are specified for certain parameters (i.e. feed rates, flow rates, temperature, fuel type and consumption, etc.) to determine if a term and condition or emission unit is operating within specified limits to control emissions. These additional monitoring approaches may be required for two reasons. First, the applicable rules do not adequately specify monitoring requirements (exception- Maximum Achievable Control Technology Standards (MACTs) generally have sufficient monitoring), and second, monitoring may be required to fill gaps in the monitoring requirements of certain applicable requirements. In situations where the NSR permit is the applicable requirement requiring extra monitoring for a specific emission unit, the preferred solution is to have the monitoring requirements in the NSR permit updated so that all NSR requirements are consolidated in the NSR permit.

Permit Shield. A permit may or may not have a permit shield, depending on whether an applicant has applied for, and justified the granting of, a permit shield. A permit shield is a special condition included in the permit document stating that compliance with the conditions of the permit shall be deemed compliance with the specified potentially applicable requirement(s) or specified applicable state-only requirement(s).

New Source Review Authorization References. All activities which are related to emissions in the state of Texas must have a NSR authorization prior to beginning construction. This section lists all units in the permit and the NSR authorization that allowed the unit to be constructed or modified. Units that do not have unit specific applicable requirements other than the NSR authorization do not need to be listed in this attachment. While NSR permits are not physically a part of the Title V permit, they are legally incorporated into the Title V permit by reference. Those NSR permits whose emissions exceed certain PSD/NA thresholds must also undergo a Federal review of federally regulated pollutants in addition to review for state regulated pollutants.

Compliance Plan. A permit may have a compliance schedule attachment for listing corrective actions plans for any emission unit that is out of compliance with an applicable requirement.

Alternative Requirements. This attachment will list any alternative monitoring plans or alternative means of compliance for applicable requirements that have been approved by the EPA Administrator and/or the TCEQ Executive Director.

Appendix A

Acronym list. This attachment lists the common acronyms used when discussing the FOPs.

Stationary vents subject to 30 TAC Chapter 111, Subchapter A, § 111.111(a)(1)(B) addressed in the Special Terms and Conditions

The site contains stationary vents with a flowrate less than 100,000 actual cubic feet per minute (acfm) and constructed after January 31, 1972 which are limited, over a six-minute average, to 20% opacity as required by

30 TAC § 111.111(a)(1)(B). As a site may have a large number of stationary vents that fall into this category, they are not required to be listed individually in the permit's Applicable Requirement Summary. This is consistent with EPA's White Paper for Streamlined Development of Part 70 Permit Applications, July 10, 1995, that states that requirements that apply identically to emission units at a site can be treated on a generic basis such as source-wide opacity limits.

Periodic monitoring is specified in Special Term and Condition 3 for stationary vents subject to 30 TAC § 111.111(a)(1)(B) to verify compliance with the 20% opacity limit. These vents are not expected to produce visible emissions during normal operation. The TCEQ evaluated the probability of these sources violating the opacity standards and determined that there is a very low potential that an opacity standard would be exceeded. It was determined that continuous monitoring for these sources is not warranted as there would be very limited environmental benefit in continuously monitoring sources that have a low potential to produce visible emissions. Therefore, the TCEQ set the visible observation monitoring frequency for these sources to once per calendar quarter.

The TCEQ has exempted vents that are not capable of producing visible emissions from periodic monitoring requirements. These vents include sources of colorless VOCs, non-fuming liquids, and other materials that cannot produce emissions that obstruct the transmission of light. Passive ventilation vents, such as plumbing vents, are also included in this category. Since this category of vents are not capable of producing opacity due to the physical or chemical characteristics of the emission source, periodic monitoring is not required as it would not yield any additional data to assure compliance with the 20% opacity standard of 30 TAC § 111.111(a)(1)(B).

In the event that visible emissions are detected, either through the quarterly observation or other credible evidence, such as observations from company personnel, the permit holder shall either report a deviation or perform a Test Method 9 observation to determine the opacity consistent with the 6-minute averaging time specified in 30 TAC § 111.111(a)(1)(B). An additional provision is included to monitor combustion sources more frequently than quarterly if alternate fuels are burned for periods greater than 24 consecutive hours. This will address possible emissions that may arise when switching fuel types.

Stationary Vents subject to 30 TAC Chapter 111 not addressed in the Special Terms and Conditions

All other stationary vents subject to 30 TAC Chapter 111 not covered in the Special Terms and Conditions are listed in the permit's Applicable Requirement Summary. The basis for the applicability determinations for these vents are listed in the Determination of Applicable Requirements table.

Federal Regulatory Applicability Determinations

The following chart summarizes the applicability of the principal air pollution regulatory programs to the permit area:

Regulatory Program	Applicability (Yes/No)
Prevention of Significant Deterioration (PSD)	No
Nonattainment New Source Review (NNSR)	No
Minor NSR	Yes
40 CFR Part 60 - New Source Performance Standards	Yes

40 CFR Part 61 - National Emission Standards for Hazardous Air Pollutants (NESHAPs)	No
40 CFR Part 63 - NESHAPs for Source Categories	Yes
Title IV (Acid Rain) of the Clean Air Act (CAA)	No
Title V (Federal Operating Permits) of the CAA	Yes
Title VI (Stratospheric Ozone Protection) of the CAA	No
CAIR (Clean Air Interstate Rule)	No

Basis for Applying Permit Shields

An operating permit applicant has the opportunity to specifically request a permit shield to document that specific applicable requirements do not apply to emission units in the permit. A permit shield is a special condition stating that compliance with the conditions of the permit shall be deemed compliance with the specified potentially applicable requirements or specified potentially applicable state-only requirements. A permit shield has been requested in the application for specific emission units. For the permit shield requests that have been approved, the basis of determination for regulations that the owner/operator need not comply with are located in the "Permit Shield" attachment of the permit.

Insignificant Activities

In general, units not meeting the criteria for inclusion on either Form OP-SUM or Form OP-REQ1 are not required to be addressed in the operating permit application. Examples of these types of units include, but are not limited to, the following:

1. Office activities such as photocopying, blueprint copying, and photographic processes.
2. Sanitary sewage collection and treatment facilities other than those used to incinerate wastewater treatment plant sludge. Stacks or vents for sanitary sewer plumbing traps are also included.
3. Food preparation facilities including, but not limited to, restaurants and cafeterias used for preparing food or beverages primarily for consumption on the premises.
4. Outdoor barbecue pits, campfires, and fireplaces.
5. Laundry dryers, extractors, and tumblers processing bedding, clothing, or other fabric items generated primarily at the premises. This does not include emissions from dry cleaning systems using perchloroethylene or petroleum solvents.
6. Facilities storing only dry, sweet natural gas, including natural gas pressure regulator vents.
7. Any air separation or other industrial gas production, storage, or packaging facility. Industrial gases, for purposes of this list, include only oxygen, nitrogen, helium, neon, argon, krypton, and xenon.
8. Storage and handling of sealed portable containers, cylinders, or sealed drums.
9. Vehicle exhaust from maintenance or repair shops.
10. Storage and use of non-VOC products or equipment for maintaining motor vehicles operated at the site (including but not limited to, antifreeze and fuel additives).
11. Air contaminant detectors and recorders, combustion controllers and shut-off devices, product analyzers, laboratory analyzers, continuous emissions monitors, other analyzers and monitors, and emissions associated with sampling activities. Exception to this category includes sampling activities that are deemed fugitive emissions and under a regulatory leak detection and repair program.
12. Bench scale laboratory equipment and laboratory equipment used exclusively for chemical and physical analysis, including but not limited to, assorted vacuum producing devices and laboratory fume hoods.

13. Steam vents, steam leaks, and steam safety relief valves, provided the steam (or boiler feedwater) has not contacted other materials or fluids containing regulated air pollutants other than boiler water treatment chemicals.
14. Storage of water that has not contacted other materials or fluids containing regulated air pollutants other than boiler water treatment chemicals.
15. Well cellars.
16. Fire or emergency response equipment and training, including but not limited to, use of fire control equipment including equipment testing and training, and open burning of materials or fuels associated with firefighting training.
17. Crucible or pot furnaces with a brim full capacity of less than 450 cubic inches of any molten metal.
18. Equipment used exclusively for the melting or application of wax.
19. All closed tumblers used for the cleaning or deburring of metal products without abrasive blasting, and all open tumblers with a batch capacity of 1,000 lbs. or less.
20. Shell core and shell mold manufacturing machines.
21. Sand or investment molds with a capacity of 100 lbs. or less used for the casting of metals;
22. Equipment used for inspection of metal products.
23. Equipment used exclusively for rolling, forging, pressing, drawing, spinning, or extruding either hot or cold metals by some mechanical means.
24. Instrument systems utilizing air, natural gas, nitrogen, oxygen, carbon dioxide, helium, neon, argon, krypton, and xenon.
25. Battery recharging areas.
26. Brazing, soldering, or welding equipment.

Determination of Applicable Requirements

The tables below include the applicability determinations for the emission units, the index number(s) where applicable, and all relevant unit attribute information used to form the basis of the applicability determination. The unit attribute information is a description of the physical properties of an emission unit which is used to determine the requirements to which the permit holder must comply. For more information about the descriptions of the unit attributes specific Unit Attribute Forms may be viewed at [HYPERLINK "http://www.tceq.texas.gov/permitting/air/nav/air_all_ua_forms.html"].

A list of unit attribute forms is included at the end of this document. Some examples of unit attributes include construction date; product stored in a tank; boiler fuel type; etc.. Generally, multiple attributes are needed to determine the requirements for a given emission unit and index number. The table below lists these attributes in the column entitled "Basis of Determination." Attributes that demonstrate that an applicable requirement applies will be the factual basis for the specific citations in an applicable requirement that apply to a unit for that index number. The TCEQ Air Permits Division has developed flowcharts for determining applicability of state and federal regulations based on the unit attribute information in a Decision Support System (DSS). These flowcharts can be accessed via the internet at [HYPERLINK "http://www.tceq.texas.gov/permitting/air/nav/air_supportsys.html"]. The Air Permits Division staff may also be contacted for assistance at (512) 239-1250.

The attributes for each unit and corresponding index number provide the basis for determining the specific legal citations in an applicable requirement that apply, including emission limitations or standards, monitoring, recordkeeping, and reporting. The rules were found to apply or not apply by using the unit attributes as answers to decision questions found in the flowcharts of the DSS. Some additional attributes indicate which legal citations of a rule apply. The legal citations that apply to each emission unit may be found in the Applicable Requirements Summary table of the draft permit. There may be some entries or rows of units and rules not found in the permit, or if the permit contains a permit shield, repeated in the permit shield area. These are sets of attributes that describe negative applicability, or; in other words, the reason why a potentially applicable requirement does not apply.

If applicability determinations have been made which differ from the available flowcharts, an explanation of the decisions involved in the applicability determination is specified in the column "Changes and Exceptions to RRT." If there were no exceptions to the DSS, then this column has been removed.

The draft permit includes all emission limitations or standards, monitoring, recordkeeping and reporting required by each applicable requirement. If an applicable requirement does not require monitoring, recordkeeping, or reporting, the word "None" will appear in the Applicable Requirements Summary table. If additional periodic monitoring is required for an applicable requirement, it will be explained in detail in the portion of this document entitled "Rationale for Compliance Assurance Monitoring (CAM)/ Periodic Monitoring Methods Selected."

When attributes demonstrate that a unit is not subject to an applicable requirement, the applicant may request a permit shield for those items. The portion of this document entitled "Basis for Applying Permit Shields" specifies which units, if any, have a permit shield.

Operational Flexibility
When an emission unit has multiple operating scenarios, it will have a different index number associated with each operating condition. This means that units are permitted to operate under multiple operating conditions. The applicable requirements for each operating condition are determined by a unique set of unit attributes. For example, a tank may store two different products at different points in time. The tank may, therefore, need to comply with two distinct sets of requirements, depending on the product that is stored. Both sets of requirements are included in the permit, so that the permit holder may store either product in the tank.

Determination of Applicable Requirements

Unit ID	Regulation	Index Number	Basis of Determination*
EP037T543A	40 CFR Part 63, Subpart G	63G-0007	MACT Subpart F/G Applicability = The unit is a Group 2 vessel. NESHAP Subpart Y Applicability = The unit is not subject to 40 CFR Part 61, Subpart Y. NSPS Subpart Kb Applicability = The unit is not subject to 40 CFR Part 60, Subpart Kb.

* - The "unit attributes" or operating conditions that determine what requirements apply

NSR Versus Title V FOP

The state of Texas has two Air permitting programs, New Source Review (NSR) and Title V Federal Operating Permits. The two programs are substantially different both in intent and permit content.

NSR is a preconstruction permitting program authorized by the Texas Clean Air Act and Title I of the Federal Clean Air Act (FCAA). The processing of these permits is governed by 30 Texas Administrative Code (TAC) Chapter 116.111. The Title V Federal Operating Program is a federal program authorized under Title V of the FCAA that has been delegated to the state of Texas to administer and is governed by 30 TAC Chapter 122. The major differences between the two permitting programs are listed in the table below:

NSR Permit	Federal Operating Permit(FOP)
Issued Prior to new Construction or modification of an existing facility	For initial permit with application shield, can be issued after operation commences; significant revisions require approval prior to operation.
Authorizes air emissions	Codifies existing applicable requirements, does not authorize new emissions
Ensures issued permits are protective of the environment and human health by conducting a health effects review and that requirement for best available control technology (BACT) is implemented.	Applicable requirements listed in permit are used by the inspectors to ensure proper operation of the site as authorized. Ensures that adequate monitoring is in place to allow compliance determination with the FOP.
Up to two Public notices may be required. Opportunity for public comment and contested case hearings for some authorizations.	One public notice required. Opportunity for public comments. No contested case hearings.
Applies to all point source emissions in the state.	Applies to all major sources and some non-major sources identified by the EPA.
Applies to facilities: a portion of site or individual emission sources	One or multiple FOPs cover the entire site (consists of multiple facilities)
Permits include terms and conditions under which the applicant must construct and operate its various equipment and processes on a facility basis.	Permits include terms and conditions that specify the general operational requirements of the site; and also include codification of all applicable requirements for emission units at the site.
Opportunity for EPA review for Federal Prevention of Significant Deterioration (PSD) and Nonattainment (NA) permits for major sources.	Opportunity for EPA review, Affected states review, and a Public petition period for every FOP.
Permits have a table listing maximum emission limits for pollutants	Permit has an applicable requirements table and Periodic Monitoring (PM) / Compliance Assurance Monitoring (CAM) tables which document applicable monitoring requirements.
Permits can be altered or amended upon application by company. Permits must be issued before construction or modification of facilities can begin.	Permits can be revised through several revision processes, which provide for different levels of public notice and opportunity to comment. Changes that would be significant revisions require that a revised permit be issued before those changes can be operated.
NSR permits are issued independent of FOP requirements.	FOP are independent of NSR permits, but contain a list of all NSR permits incorporated by reference

[SEQ CHAPTER \h \r 1]New Source Review Requirements

Below is a list of the New Source Review (NSR) permits for the permitted area. These NSR permits are incorporated by reference into the operating permit and are enforceable under it. These permits can be found in the main TCEQ file room, located on the first floor of Building E, 12100 Park 35 Circle, Austin, Texas. The Public Education Program may be contacted at 1-800-687-4040 or the Air Permits Division (APD) may be contacted at 1-512-239-1250 for help with any question.

Additionally, the site contains emission units that are permitted by rule under the requirements of 30 TAC Chapter 106, Permits by Rule. The following table specifies the permits by rule that apply to the site. All current permits by rule are contained in Chapter 106. Outdated 30 TAC Chapter 106 permits by rule may be viewed at the following Web site:

[HYPERLINK "http://www.tceq.texas.gov/permitting/air/permitbyrule/historical_rules/old106list/index106.html"]

Outdated Standard Exemption lists may be viewed at the following Web site:

[HYPERLINK "http://www.tceq.texas.gov/permitting/air/permitbyrule/historical_rules/oldselist/se_index.html"]

The status of air permits and applications and a link to the Air Permits Remote Document Server is located at the following Web site:

Number: 106.478	Version No./Date: 09/04/2000

Emission Units and Emission Points

In air permitting terminology, any source capable of generating emissions (for example, an engine or a sandblasting area) is called an Emission Unit. For purposes of Title V, emission units are specifically listed in the operating permit when they have applicable requirements other than New Source Review (NSR), or when they are listed in the permit shield table.

The actual physical location where the emissions enter the atmosphere (for example, an engine stack or a sand-blasting yard) is called an emission point. For New Source Review preconstruction permitting purposes, every emission unit has an associated emission point. Emission limits are listed in an NSR permit, associated with an emission point. This list of emission points and emission limits per pollutant is commonly referred to as the "Maximum Allowable Emission Rate Table", or "MAERT" for short. Specifically, the MAERT lists the Emission Point Number (EPN) that identifies the emission point, followed immediately by the Source Name, identifying the emission unit that is the source of those emissions on this table.

Thus, by reference, an emission unit in a Title V operating permit is linked by reference number to an NSR authorization, and its related emission point.

Monitoring Sufficiency

Federal and state rules, 40 CFR § 70.6(a)(3)(i)(B) and 30 TAC § 122.142(c) respectively, require that each federal operating permit include additional monitoring for applicable requirements that lack periodic or instrumental monitoring (which may include recordkeeping that serves as monitoring) that yields reliable data from a relevant time period that are representative of the emission unit's compliance with the applicable emission limitation or standard. Furthermore, the federal operating permit must include compliance assurance monitoring (CAM) requirements for emission sources that meet the applicability criteria of 40 CFR Part 64 in accordance with 40 CFR § 70.6(a)(3)(i)(A) and 30 TAC § 122.604(b).

With the exception of any emission units listed in the Periodic Monitoring or CAM Summaries in the FOP, the TCEQ Executive Director has determined that the permit contains sufficient monitoring, testing, recordkeeping, and reporting requirements that assure compliance with the applicable requirements. If applicable, each emission unit that requires additional monitoring in the form of periodic monitoring or CAM is described in further detail under the Rationale for CAM/PM Methods Selected section following this paragraph.

Rationale for Compliance Assurance Monitoring (CAM)/ Periodic Monitoring Methods Selected

Periodic Monitoring:

The Federal Clean Air Act requires that each federal operating permit include monitoring sufficient to assure compliance with the terms and conditions of the permit. Most of the emission limits and standards applicable to emission units at Title V sources include adequate monitoring to show that the units meet the limits and standards. For those requirements that do not include monitoring, or where the monitoring is not sufficient to assure compliance, the federal operating permit must include such monitoring for the emission units affected.

The following emission units are subject to periodic monitoring requirements because the emission units are subject to an emission limitation or standard for an air pollutant (or surrogate thereof) in an applicable requirement that does not already require monitoring, or the monitoring for the applicable requirement is not sufficient to assure compliance:

Unit/Group/Process Information	
ID No.: EP036U1	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 111, Visible Emissions	SOP Index No.: R1111-0003
Pollutant: OPACITY	Main Standard: § 111.111(a)(1)(A)
Monitoring Information	
Indicator: Visible Emissions	
Minimum Frequency: once per calendar quarter	
Averaging Period: n/a	
Deviation Limit: There shall be no visible emissions. If visible emissions are observed, the permit holder shall either report a deviation or perform Test Method 9 within 24 hours and opacity shall not exceed 30%.	
Basis of monitoring: The option to perform opacity readings or visible emissions to demonstrate compliance is consistent with EPA Reference Test Method 9 and 22. Monitoring specifications and procedures for the opacity are consistent with federal requirements and include the EPA's Test Method 9 for determining opacity by visual observations. The monitoring specifications and procedures for the visible emissions monitoring are similar to "EPA Reference Method 22" procedures.	

Unit/Group/Process Information	
ID No.: EP037U501	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 111, Visible Emissions	SOP Index No.: R1111-0004
Pollutant: OPACITY	Main Standard: § 111.111(a)(1)(B)
Monitoring Information	
Indicator: Visible Emissions	
Minimum Frequency: once per calendar quarter	
Averaging Period: n/a	
Deviation Limit: There shall be no visible emissions. If visible emissions are observed, the permit holder shall either report a deviation or perform Test Method 9 within 24 hours and opacity shall not exceed 20%.	
Basis of monitoring: The option to perform opacity readings or visible emissions to demonstrate compliance is consistent with EPA Reference Test Method 9 and 22. Monitoring specifications and procedures for the opacity are consistent with federal requirements and include the EPA's Test Method 9 for determining opacity by visual observations. The monitoring specifications and procedures for the visible emissions monitoring are similar to "EPA Reference Method 22" procedures.

[SEQ CHAPTER \H \R 1]FEDERAL OPERATING PERMIT

A FEDERAL OPERATING PERMIT IS HEREBY ISSUED TO
Eastman Chemical Company

AUTHORIZING THE OPERATION OF
Eastman Chemical Company Texas Operations
C5 - Ethylene Glycol
Industrial Organic Chemicals

LOCATED AT
Harrison County, Texas
Latitude 32° 26' 15" Longitude 94° 41' 37"
Regulated Entity Number: RN100219815

This permit is issued in accordance with and subject to the Texas Clean Air Act (TCAA), Chapter 382 of the Texas Health and Safety Code and Title 30 Texas Administrative Code Chapter 122 (30 TAC Chapter 122), Federal Operating Permits. Under 30 TAC Chapter 122, this permit constitutes the permit holder's authority to operate the site and emission units listed in this permit. Operations of the site and emission units listed in this permit are subject to all additional rules or amended rules and orders of the Commission pursuant to the TCAA.

This permit does not relieve the permit holder from the responsibility of obtaining New Source Review authorization for new, modified, or existing facilities in accordance with 30 TAC Chapter 116, Control of Air Pollution by Permits for New Construction or Modification.

The site and emission units authorized by this permit shall be operated in accordance with 30 TAC Chapter 122, the general terms and conditions, special terms and conditions, and attachments contained herein.

This permit shall expire five years from the date of issuance. The renewal requirements specified in 30 TAC § 122.241 must be satisfied in order to renew the authorization to operate the site and emission units.

Permit No: O1974 Issuance Date: November 12, 2014

[ADVANCE \x 144]For the Commission

Table of Contents

Section **Page**

[TOC \o "1-3" \h \z \t "SOP_Heading1,1,SOP_Heading2,2,SOP_Heading2 + Centered,2,SOP_Heading1 + Centered,1"]

General Terms and Conditions

The permit holder shall comply with all terms and conditions contained in 30 TAC § 122.143 (General Terms and Conditions), 30 TAC § 122.144 (Recordkeeping Terms and Conditions), 30 TAC § 122.145 (Reporting Terms and Conditions), and 30 TAC § 122.146 (Compliance Certification Terms and Conditions).

In accordance with 30 TAC § 122.144(1), records of required monitoring data and support information required by this permit, or any applicable requirement codified in this permit, are required to be maintained for a period of five years from the date of the monitoring report, sample, or application unless a longer data retention period is specified in an applicable requirement. The five year record retention period supersedes any less stringent retention requirement that may be specified in a condition of a permit identified in the New Source Review Authorization attachment.

If the permit holder chooses to demonstrate that this permit is no longer required, a written request to void this permit shall be submitted to the Texas Commission on Environmental Quality (TCEQ) by the Responsible Official in accordance with 30 TAC § 122.161(e). The permit holder shall comply with the permit's requirements, including compliance certification and deviation reporting, until notified by the TCEQ that this permit is voided.

The permit holder shall comply with 30 TAC Chapter 116 by obtaining a New Source Review authorization prior to new construction or modification of emission units located in the area covered by this permit.

All reports required by this permit must include in the submittal a cover letter which identifies the following information: company name, TCEQ regulated entity number, air account number (if assigned), site name, area name (if applicable), and Air Permits Division permit number(s).

[SEQ CHAPTER \h \r 1]Special Terms and Conditions: Emission Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting

1. Permit holder shall comply with the following requirements:

    A. Emission units (including groups and processes) in the Applicable Requirements Summary attachment shall meet the limitations, standards, equipment specifications, monitoring, recordkeeping, reporting, testing, and other requirements listed in the Applicable Requirements Summary attachment to assure compliance with the permit.

    B. The textual description in the column titled "Textual Description" in the Applicable Requirements Summary attachment is not enforceable and is not deemed as a substitute for the actual regulatory language. The Textual Description is provided for information purposes only.

C. A citation listed on the Applicable Requirements Summary attachment, which has a notation [G] listed before it, shall include the referenced section and subsection for all commission rules, or paragraphs for all federal and state regulations and all subordinate paragraphs, subparagraphs and clauses, subclauses, and items contained within the referenced citation as applicable requirements.

D. When a grouped citation, notated with a [G] in the Applicable Requirements Summary, contains multiple compliance options, the permit holder must keep records of when each compliance option was used.

E. Emission units subject to 40 CFR Part 63, Subpart F, G, H and FFFF as identified in the attached Applicable Requirements Summary table are subject to 30 TAC Chapter 113, Subchapter C, §§ 113.110, 113.120, 113.130 and 113.890 respectively which incorporates the 40 CFR Part 63 Subpart by reference.

2. The permit holder shall comply with the following sections of 30 TAC Chapter 101 (General Air Quality Rules):

A. Title 30 TAC § 101.1 (relating to Definitions), insofar as the terms defined in this section are used to define the terms used in other applicable requirements

B. Title 30 TAC § 101.3 (relating to Circumvention)

C. Title 30 TAC § 101.8 (relating to Sampling), if such action has been requested by the TCEQ

D. Title 30 TAC § 101.9 (relating to Sampling Ports), if such action has been requested by the TCEQ

E. Title 30 TAC § 101.10 (relating to Emissions Inventory Requirements)

F. Title 30 TAC § 101.201 (relating to Emission Event Reporting and Recordkeeping Requirements)

G. Title 30 TAC § 101.211 (relating to Scheduled Maintenance, Start-up, and Shutdown Reporting and Recordkeeping Requirements)

H. Title 30 TAC § 101.221 (relating to Operational Requirements)

I. Title 30 TAC § 101.222 (relating to Demonstrations)

J. Title 30 TAC § 101.223 (relating to Actions to Reduce Excessive Emissions)

3. Permit holder shall comply with the following requirements of 30 TAC Chapter 111:

A. Visible emissions from stationary vents with a flow rate of less than 100,000 actual cubic feet per minute and constructed after January 31, 1972 that are not listed in the Applicable Requirements Summary attachment for 30 TAC Chapter 111, Subchapter A, Division 1 , shall not exceed 20% opacity averaged over a six-minute period. The permit holder shall comply with the following requirements for stationary vents at the site subject to this standard:

(i) Title 30 TAC § 111.111(a)(1)(B) (relating to Requirements for Specified Sources)

(ii) Title 30 TAC § 111.111(a)(1)(E)

(iii) Title 30 TAC § 111.111(a)(1)(F)(i), (ii), (iii), or (iv)

(iv) For emission units with vent emissions subject to 30 TAC § 111.111(a)(1)(B), complying with 30 TAC § 111.111(a)(1)(F)(ii), (iii), or (iv), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146. These periodic monitoring requirements do not apply to vents that are not capable of producing visible emissions such as vents that emit only colorless VOCs; vents from non-fuming liquids; vents that provide passive ventilation, such as plumbing vents; or vent emissions from any other source that does not obstruct the transmission of light. Vents, as specified in the "Applicable Requirements Summary" attachment, that are subject to the emission limitation of 30 TAC § 111.111(a)(1)(B) are not subject to the following periodic monitoring requirements:

(1) An observation of stationary vents from emission units in operation shall be conducted at least once during each calendar quarter unless the emission unit is not operating for the entire quarter.

(2) For stationary vents from a combustion source, if an alternative to the normally fired fuel is fired for a period greater than or equal to 24 consecutive hours, the permit holder shall conduct an observation of the stationary vent for each such period to determine if visible emissions are present. If such period is greater than 3 months, observations shall be conducted once during each quarter. Supplementing the normally fired fuel with natural gas or fuel gas to increase the net heating value to the minimum

required value does not constitute creation of an alternative fuel.

(3) Records of all observations shall be maintained.

(4) Visible emissions observations of emission units operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of emission units operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions observations shall be made during times when the activities described in 30 TAC § 111.111(a)(1)(E) are not taking place. Visible emissions shall be determined with each stationary vent in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each stationary vent during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

(5) Compliance Certification:

(a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(1) and (a)(1)(B).

(b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(1)(F) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement.

However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

(c) Some vents may be subject to multiple visible emission or monitoring requirements. All credible data must be considered when certifying compliance with this requirement even if the observation or monitoring was performed to demonstrate compliance with a different requirement.

B. Certification of opacity readers determining opacities under Method 9 (as outlined in 40 CFR Part 60, Appendix A) to comply with opacity monitoring requirements shall be accomplished by completing the Visible Emissions Evaluators Course, or approved agency equivalent, no more than 180 days before the opacity reading.

C. For emission units with contributions from uncombined water, the permit holder shall comply with the requirements of 30 TAC § 111.111(b).

D. Emission limits on nonagricultural processes, except for the steam generators specified in 30 TAC § 111.153, shall comply with the following requirements:

(i) Emissions of PM from any source may not exceed the allowable rates as required in 30 TAC § 111.151(a) (relating to Allowable Emissions Limits)

(ii) Sources with an effective stack height (h_e) less than the standard effective stack height (H_e), must reduce the allowable emission level by multiplying it by $[h_e/H_e]^2$ as required in 30 TAC § 111.151(b)

(iii) Effective stack height shall be calculated by the equation specified in 30 TAC § 111.151(c)

4. The permit holder shall comply with the following requirements for units subject to any subpart of 40 CFR Part 60, unless otherwise stated in the applicable subpart:

A. Title 40 CFR § 60.7 (relating to Notification and Recordkeeping)

B. Title 40 CFR § 60.8 (relating to Performance Tests)

C. Title 40 CFR § 60.11 (relating to Compliance with Standards and Maintenance Requirements)

D. Title 40 CFR § 60.12 (relating to Circumvention)

E. Title 40 CFR § 60.13 (relating to Monitoring Requirements)

F. Title 40 CFR § 60.14 (relating to Modification)

G. Title 40 CFR § 60.15 (relating to Reconstruction)

H. Title 40 CFR § 60.19 (relating to General Notification and Reporting Requirements)

5. The permit holder shall comply with the requirements of 30 TAC Chapter 113, Subchapter C, § 113.100 for units subject to any subpart of 40 CFR Part 63, unless otherwise stated in the applicable subpart.

6. For the chemical manufacturing process specified in 40 CFR Part 63, Subpart F, the permit holder shall comply with 40 CFR § 63.103(a) (relating to General Compliance, Reporting, and Recordkeeping Provisions) (Title 30 TAC Chapter 113, Subchapter C, § 113.110 incorporated by reference).

7. For the chemical manufacturing facilities with a 40 CFR Part 63, Subpart G Group 2 wastewater stream, the permit holder shall comply with (Title 30 TAC Chapter 113, Subchapter C, § 113.120 incorporated by reference):

   A. Title 40 CFR § 63.132(a), (a)(1), and (a)(1)(i) (relating to Process Wastewater Provisions - General)

   B. Title 40 CFR § 63.146(b)(1) (relating to Process Wastewater Provisions - Reporting)

   C. Title 40 CFR § 63.147(b)(8) (relating to Process Wastewater Provisions - Recordkeeping)

8. For the chemical manufacturing facilities subject to leak detection requirements in 40 CFR Part 63, Subpart G, the permit holder shall comply with the following requirements (Title 30 TAC Chapter 113, Subchapter C, § 113.120 incorporated by reference):

   A. General Leak Detection Requirements:

      (i) Title 40 CFR § 63.148(d)(1) - (3), and (e) (relating to Leak Inspection Provisions)

      (ii) Title 40 CFR § 63.148(c), (g), (g)(2), (h), and (h)(2) (relating to Leak Inspection Provisions), for monitoring and testing requirements

      (iii) Title 40 CFR §§ 63.148(g)(2), (h)(2), (i)(1) - (2), (i)(4)(i) - (viii), (i)(5), and 63.152(a)(1) - (5), for recordkeeping requirements

(iv) Title 40 CFR §§ 63.148(j), 63.151(a)(6)(i) - (iii), (b)(1) - (2), (j)(1) - (3), 63.152(a)(1) - (5), (b), (b)(1)(i) - (ii), and (b)(4), for reporting requirements

9. For miscellaneous chemical process facilities subject to maintenance wastewater requirements as specified in 40 CFR § 63.2485, Table 7, the permit holder shall comply with the requirements of 40 CFR § 63.105 (relating to Maintenance Wastewater Requirements) (Title 30 TAC Chapter 113, Subchapter C, § 113.890 incorporated by reference).

10. For site remediation projects subject to 40 CFR Part 63, Subpart GGGGG that are completed within 30 consecutive calendar days the permit holder shall comply with 40 CFR § 63.7884(b), (b)(1) - (3) (Title 30 TAC, Subchapter C, § 113.1160 incorporated by reference).

11. The permit holder shall comply with certified registrations submitted to the TCEQ for purposes of establishing federally enforceable emission limits. A copy of the certified registration shall be maintained with the permit. Records sufficient to demonstrate compliance with the established limits shall be maintained. The certified registration and records demonstrating compliance shall be provided, on request, to representatives of the appropriate TCEQ regional office and any local air pollution control agency having jurisdiction over the site. The permit holder shall submit updated certified registrations when changes at the site require establishment of new emission limits. If changes result in emissions that do not remain below major source thresholds, the permit holder shall submit a revision application to codify the appropriate requirements in the permit.

Additional Monitoring Requirements

12. The permit holder shall comply with the periodic monitoring requirements as specified in the attached "Periodic Monitoring Summary" upon issuance of the permit. Except for, as applicable, monitoring malfunctions, associated repairs, and required quality assurance or control activities (including, as applicable, calibration checks and required zero and span adjustments), the permit holder shall conduct all monitoring in continuous operation (or shall collect data at all required intervals) at all times that the pollutant-specific emissions unit is operating. The permit holder may elect to collect monitoring data on a more frequent basis and average the data, consistent with the averaging time specified in the "Periodic Monitoring Summary," for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis. In no event shall data be collected and used in particular instances to avoid reporting deviations. Deviations shall be reported according to 30 TAC § 122.145 (Reporting Terms and Conditions).

New Source Review Authorization Requirements

13. Permit holder shall comply with the requirements of New Source Review authorizations issued or claimed by the permit holder for the permitted area, including permits, permits by rule, standard permits, flexible permits, special permits, permits for existing facilities including Voluntary Emissions Reduction Permits and Electric Generating Facility Permits issued under 30 TAC Chapter 116, Subchapter I, or special exemptions referenced in the New Source Review Authorization References attachment. These requirements:

    A. Are incorporated by reference into this permit as applicable requirements

    B. Shall be located with this operating permit

    C. Are not eligible for a permit shield

14. The permit holder shall comply with the general requirements of 30 TAC Chapter 106, Subchapter A or the general requirements, if any, in effect at the time of the claim of any PBR.

15. The permit holder shall maintain records to demonstrate compliance with any emission limitation or standard that is specified in a permit by rule (PBR) or Standard Permit listed in the New Source Review Authorizations attachment. The records shall yield reliable data from the relevant time period that are representative of the emission unit's compliance with the PBR or Standard Permit. These records may include, but are not limited to, production capacity and throughput, hours of operation, material safety data sheets (MSDS), chemical composition of raw materials, speciation of air contaminant data, engineering calculations, maintenance records, fugitive data, performance tests, capture/control device efficiencies, direct pollutant monitoring (CEMS, COMS, or PEMS), or control device parametric monitoring. These records shall be made readily accessible and available as required by 30 TAC § 122.144.

    A. If applicable, monitoring of control device performance or general work practice standards shall be made in accordance with the TCEQ Periodic Monitoring Guidance document.

    B. Any monitoring or recordkeeping data indicating noncompliance with the PBR or Standard Permit shall be considered and reported as a deviation according to 30 TAC § 122.145 (Reporting Terms and Conditions).

Compliance Requirements

16. The permit holder shall certify compliance in accordance with 30 TAC § 122.146. The permit holder shall comply with 30 TAC § 122.146 using at a minimum, but not limited to, the continuous or intermittent compliance method data from monitoring, recordkeeping, reporting, or testing required by the permit and any other credible evidence or information. The certification period may not exceed

12 months and the certification must be submitted within 30 days after the end of the period being certified.

17. Use of Discrete Emission Credits to comply with the applicable requirements:

    A. Unless otherwise prohibited, the permit holder may use discrete emission credits to comply with the following applicable requirements listed elsewhere in this permit:

        (i) Title 30 TAC Chapter 115

        (ii) Title 30 TAC Chapter 117

        (iii) If applicable, offsets for Title 30 TAC Chapter 116

        (iv) Temporarily exceed state NSR permit allowables

    B. The permit holder shall comply with the following requirements in order to use the credit to comply with the applicable requirements:

        (i) The permit holder must notify the TCEQ according to 30 TAC § 101.376(d)

        (ii) The discrete emission credits to be used must meet all the geographic, timeliness, applicable pollutant type, and availability requirements listed in 30 TAC Chapter 101, Subchapter H, Division 4

        (iii) The executive director has approved the use of the discrete emission credits according to 30 TAC § 101.376(d)(1)(A)

        (iv) The permit holder keeps records of the use of credits towards compliance with the applicable requirements in accordance with 30 TAC § 101.372(h) and 30 TAC Chapter 122

Risk Management Plan

18. For processes subject to 40 CFR Part 68 and specified in 40 CFR § 68.10, the permit holder shall comply with the requirements of the Accidental Release Prevention Provisions in 40 CFR Part 68. The permit holder shall submit to the appropriate agency either a compliance schedule for meeting the requirements of 40 CFR Part 68 by the date provided in 40 CFR § 68.10(a), or as part of the compliance certification submitted under this permit, a certification statement that the source is in compliance with all requirements of 40 CFR Part 68, including the registration and submission of a risk management plan.

Permit Location

19. The permit holder shall maintain a copy of this permit and records related to requirements listed in this permit on site.

Permit Shield (30 TAC § 122.148)

20. A permit shield is granted for the emission units, groups, or processes specified in the attached "Permit Shield." Compliance with the conditions of the permit shall be deemed compliance with the specified potentially applicable requirements or specified potentially applicable state-only requirements listed in the attachment "Permit Shield." Permit shield provisions shall not be modified by the executive director until notification is provided to the permit holder. No later than 90 days after notification of a change in a determination made by the executive director, the permit holder shall apply for the appropriate permit revision to reflect the new determination. Provisional terms are not eligible for this permit shield. Any term or condition, under a permit shield, shall not be protected by the permit shield if it is replaced by a provisional term or condition or the basis of the term and condition changes.

Applicable Requirements Summary 17

Note: A "none" entry may be noted for some emission sources in this permit's "Applicable Requirements Summary" under the heading of "Monitoring and Testing Requirements" and/or "Recordkeeping Requirements" and/or "Reporting Requirements." Such a notation indicates that there are no requirements for the indicated emission source as identified under the respective column heading(s) for the stated portion of the regulation when the emission source is operating under the conditions of the specified SOP Index Number. However, other relevant requirements pursuant to 30 TAC Chapter 122 including Recordkeeping Terms and Conditions (30 TAC § 122.144), Reporting Terms and Conditions (30 TAC § 122.145), and Compliance Certification Terms and Conditions (30 TAC § 122.146) continue to apply.

Unit Summary

Unit/Group/ Process ID No.	Unit Type	Group/Inclusive Units	SOP Index No.	Regulation	Requirement Driver
EP036FG1	FUGITIVE EMISSION UNITS	N/A	63H-0001	40 CFR Part 63, Subpart H	No changing attributes.
EP036U1	EMISSION POINTS/STATIONARY VENTS/PROCESS VENTS	N/A	R1111-0003	30 TAC Chapter 111, Visible Emissions	No changing attributes.
EP037D513	DISTILLATION OPERATIONS	N/A	60NNN-0001	40 CFR Part 60, Subpart NNN	No changing attributes.
EP037D514	DISTILLATION OPERATIONS	N/A	60NNN-0001	40 CFR Part 60, Subpart NNN	No changing attributes.
EP037D516	DISTILLATION OPERATIONS	N/A	60NNN-0001	40 CFR Part 60, Subpart NNN	No changing attributes.
EP037FG1	FUGITIVE EMISSION UNITS	N/A	63H-0002	40 CFR Part 63, Subpart H	No changing attributes.
EP037T543A	STORAGE TANKS/VESSELS	N/A	63G-0007	40 CFR Part 63, Subpart G	No changing attributes.
EP037T543B	STORAGE TANKS/VESSELS	N/A	63G-0008	40 CFR Part 63, Subpart G	No changing attributes.
EP037U501	EMISSION POINTS/STATIONARY VENTS/PROCESS VENTS	N/A	R1111-0004	30 TAC Chapter 111, Visible Emissions	No changing attributes.
EP038D101R	EMISSION POINTS/STATIONARY VENTS/PROCESS VENTS	N/A	63G-0001	40 CFR Part 63, Subpart G	No changing attributes.

Additional Monitoring Requirements

Periodic Monitoring Summary..... 37

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: EP036U1	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 111, Visible Emissions	SOP Index No.: R1111-0003
Pollutant: OPACITY	Main Standard: § 111.111(a)(1)(A)
Monitoring Information	
Indicator: Visible Emissions	
Minimum Frequency: once per calendar quarter	
Averaging Period: n/a	
Deviation Limit: There shall be no visible emissions. If visible emissions are observed, the permit holder shall either report a deviation or perform Test Method 9 within 24 hours and opacity shall not exceed 30%.	
Periodic Monitoring Text: Visible emissions observations shall be made and recorded. Note that to properly determine the presence of visible emissions, all sources must be in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 miles, away from the emission source during the observation. The observer shall select a position where the sun is not directly in the observer's eyes. If the observations cannot be conducted due to weather conditions, the date, time, and specific weather conditions shall be recorded. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. If visible emissions are observed, the permit holder shall report a deviation. As an alternative, the permit holder may determine the opacity consistent with Test Method 9, as soon as practicable, but no later than 24 hours after observing visible emissions. If the result of the Test Method 9 is opacity above the opacity limit in the applicable requirement, the permit holder shall report a deviation.

Unit/Group/Process Information	
ID No.: EP037U501	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 111, Visible Emissions	SOP Index No.: R1111-0004
Pollutant: OPACITY	Main Standard: § 111.111(a)(1)(B)
Monitoring Information	
Indicator: Visible Emissions	
Minimum Frequency: once per calendar quarter	
Averaging Period: n/a	
Deviation Limit: There shall be no visible emissions. If visible emissions are observed, the permit holder shall either report a deviation or perform Test Method 9 within 24 hours and opacity shall not exceed 20%.	
Periodic Monitoring Text: Visible emissions observations shall be made and recorded. Note that to properly determine the presence of visible emissions, all sources must be in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 miles, away from the emission source during the observation. The observer shall select a position where the sun is not directly in the observer's eyes. If the observations cannot be conducted due to weather conditions, the date, time, and specific weather conditions shall be recorded. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. If visible emissions are observed, the permit holder shall report a deviation. As an alternative, the permit holder may determine the opacity consistent with Test Method 9, as soon as practicable, but no later than 24 hours after observing visible emissions. If the result of the Test Method 9 is opacity above the opacity limit in the applicable requirement, the permit holder shall report a deviation.	

Permit Shield

Permit Shield 40

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
EP036D10	N/A	40 CFR Part 60, Subpart NNN	Unit not constructed, modified, or reconstructed after 12/30/83.
EP036D10	N/A	40 CFR Part 63, Subpart G	Unit does not have a process vent; stream discharges to a fuel gas system.
EP036D11	N/A	40 CFR Part 60, Subpart NNN	Unit not constructed, modified, or reconstructed after 12/30/83.
EP036D11	N/A	40 CFR Part 63, Subpart G	Distillation system does not have a process vent; gas stream does not remain in the gas phase per §63.107(f).
EP036D13	N/A	40 CFR Part 60, Subpart NNN	Unit not constructed, modified, or reconstructed after 12/30/83.
EP036D13	N/A	40 CFR Part 63, Subpart G	Distillation system does not have a process vent; gas stream does not remain in the gas phase per §63.107(f).
EP036D16	N/A	40 CFR Part 60, Subpart NNN	Unit not constructed, modified, or reconstructed after 12/30/83.
EP036D16	N/A	40 CFR Part 63, Subpart G	Distillation system does not have a process vent; gas stream does not remain in the gas phase per §63.107(f).
EP036D19	N/A	40 CFR Part 60, Subpart NNN	Unit not constructed, modified, or reconstructed after 12/30/83.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
EP036D19	N/A	40 CFR Part 63, Subpart G	Distillation system does not have a process vent; gas stream does not remain in the gas phase per §63.107(f).
EP036D20	N/A	40 CFR Part 60, Subpart NNN	Unit not constructed, modified, or reconstructed after 12/30/83.
EP036D20	N/A	40 CFR Part 63, Subpart G	Distillation system does not have a process vent; gas stream does not remain in the gas phase per §63.107(f).

EP105T40	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
EP105T40	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
EP105T40	N/A	40 CFR Part 63, Subpart G	Unit is part of an affected CMPU but does not meet the definition of a storage vessel per §63.101 since the unit does not contain organic HAP.
EP105T40	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
EP105T50	N/A	40 CFR Part 60, Subpart K	Unit does not store a petroleum liquid.
EP105T50	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
EP105T50	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
			grade benzene.
EP105T50	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
EP105T50	N/A	40 CFR Part 63, Subpart G	Unit is part of an affected CMPU but does not meet the definition of a storage vessel per §63.101 since the unit does not contain organic HAP.
EP105T50	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
EP105T53	N/A	40 CFR Part 60, Subpart K	Unit does not store a petroleum liquid.
EP105T53	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
EP105T53	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
EP105T53	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
EP105T53	N/A	40 CFR Part 63, Subpart G	Unit is part of an affected CMPU but does not meet the definition of a storage vessel per §63.101 since the unit does not contain organic HAP.
EP105T53	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
EP105T540	N/A	40 CFR Part 60, Subpart K	Unit capacity is less than 151,412 liters

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
			(40,000 gallons).
EP105T540	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
EP105T540	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
EP105T540	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
EP105T540	N/A	40 CFR Part 63, Subpart G	Unit is part of an affected CMPU but does not meet the definition of a storage vessel per §63.101 since the unit does not contain organic HAP.
EP105T540	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
EP141FL1	N/A	40 CFR Part 60, Subpart A	Unit not used to comply with part 60 or 61 standards.
EP141FL1	N/A	40 CFR Part 63, Subpart A	Unit not required by relevant part 63 standard.
PROEOEG1	N/A	40 CFR Part 63, Subpart FFFF	The MCPU is an affected source or part of an affected source under another MACT standard and does not include any process vents as identified in §63.100(j)(4).
PROEOEG1	N/A	40 CFR Part 63, Subpart YY	Process is not listed as a source category

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
			in Table 1 to §63.1100(a).
PROEOEG2	N/A	40 CFR Part 63, Subpart FFFF	The MCPU is an affected source or part of an affected source under another MACT standard and does not include any process vents as identified in §63.100(j)(4).

PROES2	N/A	40 CFR Part 63, Subpart YY	Process is not listed as a source category in Table 1 to §63.1100(a).
SD020T116	N/A	40 CFR Part 60, Subpart K	Unit does not store a petroleum liquid.
SD020T116	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
SD020T116	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
SD020T116	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
SD020T116	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
SD021T137	N/A	40 CFR Part 60, Subpart K	Unit does not store a petroleum liquid.
SD021T137	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
SD021T137	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
SD021T137	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
SD021T137	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
SD093T2	N/A	40 CFR Part 60, Subpart K	Unit does not store a petroleum liquid.
SD093T2	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
SD093T2	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
SD093T2	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
SD093T2	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
SD098T3	N/A	40 CFR Part 60, Subpart K	Unit does not store a petroleum liquid.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
SD098T3	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
SD098T3	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
SD098T3	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
SD098T3	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
SD098T4	N/A	40 CFR Part 60, Subpart K	Unit does not store a petroleum liquid.
SD098T4	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
SD098T4	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
SD098T4	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
SD098T4	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
SD098T5	N/A	40 CFR Part 60, Subpart K	Unit does not store a petroleum liquid.
SD098T5	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
SD098T5	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
SD098T5	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
SD098T5	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
SD098T6	N/A	40 CFR Part 60, Subpart K	Unit does not store a petroleum liquid.
SD098T6	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
SD098T6	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
SD098T6	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
SD098T6	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
SD098T7	N/A	40 CFR Part 60, Subpart K	Unit does not store a petroleum liquid.
SD098T7	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
SD098T7	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
SD098T7	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
SD098T7	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
SD098T8	N/A	40 CFR Part 60, Subpart K	Unit does not store a petroleum liquid.
SD098T8	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
SD098T8	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
SD098T8	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
SD098T8	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
SD099T14	N/A	40 CFR Part 60, Subpart Ka	Unit does not store a petroleum liquid.
SD099T14	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
SD099T14	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
SD099T14	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
SD099T14	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
SD099T15	N/A	40 CFR Part 60, Subpart Ka	Unit does not store a petroleum liquid.
SD099T15	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
SD099T15	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
SD099T15	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
SD099T15	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
SD101T21	N/A	40 CFR Part 60, Subpart K	Unit does not store a petroleum liquid.
SD101T21	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
SD101T21	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
SD101T21	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
SD101T21	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).

New Source Review Authorization References by Emissions Unit

The following is a list of New Source Review (NSR) authorizations for emission units listed elsewhere in this operating permit. The NSR authorizations are applicable requirements under 30 TAC Chapter 122 and enforceable under this operating permit.

Unit/Group/Process ID No.	Emission Unit Name/Description	New Source Review Authorization
EP038WW1	SOLVENTS PLANT NO. 1 WASTEWATER	52985
EP038WW2	SOLVENTS PLANT NO. 2 WASTEWATER	6419
EP039T109	ES-1 MIXED ALCOHOLS TANK	52985
EP039T110	ES-2 CRUDE GLYCOL ETHERS STORAGE TANK	6419
EP039T111	ES-2 HIGH BOILER STORAGE TANK	6419, 106.261/11/01/2003
EP039T112	ES-1 PROPYL HIGH BOILERS STORAGE TANK	52985, 106.472/09/04/2000
EP039T113	ES-1 CRUDE PROPYL ETHERS STORAGE TANK	52985
EP039T606A	ES-2 MONO RUNDOWN TANK	6419, 106.472/09/04/2000
EP039T606B	ES-2 MONO RUNDOWN TANK	6419, 106.264/03/14/1997
EP039T613	ES-2 ALCOHOL FEED TANK	6419, 106.262/09/04/2000
EP039T614	ES-2 ALCOHOL FEED TANK	6419
EP104FL1	EO/EG PLANT NO. 2 FLARE	1329, 84724, 106.183/09/04/2000
EP104T161	EO/EG PLANT NO. 2 FLARE TANK	1329
EP104T51	EG-2 EG STORAGE TANK	1329, 106.261/11/01/2003, 106.262/11/01/2003
EP104T52	EG-1 CRUDE GLYCOLS STORAGE TANK	49363, 106.261/11/01/2003, 106.262/11/01/2003
EP104T56	EG-2 DEG STORAGE TANK	1329, 106.261/11/01/2003, 106.262/11/01/2003

New Source Review Authorization References by Emissions Unit

The following is a list of New Source Review (NSR) authorizations for emission units listed elsewhere in this operating permit. The NSR authorizations are applicable requirements under 30 TAC Chapter 122 and enforceable under this operating permit.

Unit/Group/Process ID No.	Emission Unit Name/Description	New Source Review Authorization
EP104T57	EG-2 POLYGLYCOL RUNDOWN TANK	1329, 106.261/11/01/2003, 106.262/11/01/2003
EP105T11A	EO-1/2 EO RUNDOWN TANK	1329, 49363
EP105T11B	EO-1/2 EO RUNDOWN TANK	1329, 49363
EP105T40	EO-1 KEROSENE STORAGE TANK	49363
EP105T50	EG-1 TEG STORAGE TANK	49363, 106.261/11/01/2003, 106.262/11/01/2003, 106.472/09/04/2000
EP105T53	EG-1 TTG STORAGE TANK	49363, 106.261/11/01/2003, 106.262/11/01/2003
EP105T540	EO-2 KEROSENE STORAGE TANK	1329, 106.472/09/04/2000
EP141FL1	EO-2 EMERGENCY FLARE	1329, 84724, 106.183/09/04/2000
PROEOEG1	EO/EG PLANT NO. 1 PROCESS	49363
PROEOEG2	EO/EG PLANT NO. 2 PROCESS	1329
PROES1	SOLVENTS PLANT NO. 1 PROCESS	52985
PROES2	SOLVENTS PLANT NO. 2 PROCESS	6419
SD020T116	ES-2 EP STORAGE TANK	6419, 106.472/09/04/2000
SD021T137	ES-2 DE STORAGE TANK	106.472/09/04/2000
SD093T2	ES-2 EP STORAGE TANK	6419, 106.472/09/04/2000
SD098T3	ES-2 DB STORAGE TANK	6419, 106.472/09/04/2000

New Source Review Authorization References by Emissions Unit

The following is a list of New Source Review (NSR) authorizations for emission units listed elsewhere in this operating permit. The NSR authorizations are applicable requirements under 30 TAC Chapter 122 and enforceable under this operating permit.

Unit/Group/Process ID No.	Emission Unit Name/Description	New Source Review Authorization
SD098T4	ES-2 DB STORAGE TANK	6419, 106.472/09/04/2000
SD098T5	ES-2 DP STORAGE TANK	6419, 106.472/09/04/2000
SD098T6	ES-2 EEH STORAGE TANK	6419, 106.472/09/04/2000
SD098T7	ES-2 DTB STORAGE TANK	6419, 106.472/09/04/2000
SD098T8	ES-2 DTE STORAGE TANK	6419, 106.472/09/04/2000
SD099T14	ES-2 EB STORAGE TANK	6419, 106.472/09/04/2000
SD099T15	ES-2 EB STORAGE TANK	6419, 106.472/09/04/2000
SD101T21	ES-2 EEH STORAGE TANK	106.472/09/04/2000

Appendix A

Acronym List 92

Acronym List

The following abbreviations or acronyms may be used in this permit:

ACFM ..... actual cubic feet per minute
AMOC ..... alternate means of control
ARP ..... Acid Rain Program
ASTM ..... American Society of Testing and Materials
B/PA ..... Beaumont/Port Arthur (nonattainment area)
CAM ..... Compliance Assurance Monitoring
CD ..... control device
COMS ..... continuous opacity monitoring system
CVS ..... closed-vent system
D/FW ..... Dallas/Fort Worth (nonattainment area)
DR ..... Designated Representative
ElP ..... El Paso (nonattainment area)
EP ..... emission point
EPA ..... U.S. Environmental Protection Agency
EU ..... emission unit
FCAA Amendments ..... Federal Clean Air Act Amendments
FOP ..... federal operating permit
GF ..... grandfathered
gr/100 scf ..... grains per 100 standard cubic feet
HAP ..... hazardous air pollutant
H/G/B ..... Houston/Galveston/Brazoria (nonattainment area)
H_2S ..... hydrogen sulfide
ID No. ..... identification number
lb/hr ..... pound(s) per hour
MMBtu/hr ..... Million British thermal units per hour
MRRT ..... monitoring, recordkeeping, reporting, and testing
NA ..... nonattainment
N/A ..... not applicable
NADB ..... National Allowance Data Base
NO_x ..... nitrogen oxides
NSPS ..... New Source Performance Standard (40 CFR Part 60)
NSR ..... New Source Review
ORIS ..... Office of Regulatory Information Systems
Pb ..... lead
PBR ..... Permit By Rule
PM ..... particulate matter
ppmv ..... parts per million by volume
PSD ..... prevention of significant deterioration
RO ..... Responsible Official
SO_2 ..... sulfur dioxide
TCEQ ..... Texas Commission on Environmental Quality
TSP ..... total suspended particulate
TVP ..... true vapor pressure
U.S.C. ..... United States Code
VOC ..... volatile organic compound

[SEQ CHAPTER \h \r 1]Statement of Basis of the Federal Operating Permit

Celanese Ltd.

Site Name: Clear Lake Plant
Area Name: Ethylene Oxide/Ethylene Glycol
Physical Location: PO Box 58190
Nearest City: Houston
County: Harris

Permit Number: O1986
Project Type: Renewal

Standard Industrial Classification (SIC) Code: 2869
SIC Name: Industrial Organic Chemicals

This Statement of Basis sets forth the legal and factual basis for the draft permit conditions in accordance with 30 TAC §122.201(a)(4). Per 30 TAC §§ 122.241 and 243, the permit holder has submitted an application under § 122.134 for permit renewal. This document may include the following information:

A description of the facility/area process description;
A basis for applying permit shields;
A list of the federal regulatory applicability determinations;
A table listing the determination of applicable requirements;
A list of the New Source Review Requirements;
The rationale for periodic monitoring methods selected;
The rationale for compliance assurance methods selected;
A compliance status; and
A list of available unit attribute forms.

Prepared on: April 21, 2017

Operating Permit
Basis of Determination

Permit Area Process Description

Ethylene Oxide (EO) Unit
EO is made by catalytic direct oxidation of ethylene with pure oxygen. The reaction is exothermic, and heat is removed from the reactors using high-grade kerosene. Reactor effluent gases are cooled and sent to EO absorber columns where EO is recovered in water. Remaining gases are recycled back to the reactors. CO2 is the main byproduct of the reaction, and a portion of the recycle gas stream is circulated through a CO2 removal system. CO2 removed from the stream goes to an incinerator, and remaining gas goes back to recycle. Water containing the absorbed EO goes to a stripper, and the EO overhead is purified by distillation. Water is recovered and recycled as lean absorbent to the EO absorber. Purified EO is the finished product.

Ethylene Glycol (EG) Unit
EG is made by the non-catalytic liquid phase hydrolysis of EO with water in reactors. EG is concentrated in three stages, and excess water is removed and recycled back to the reactors. The concentrated EG goes to purification columns, where EG is separated and sent to product storage. Heavier glycols are further purified and sent to product storage.

FOPs at Site
The "application area" consists of the emission units and that portion of the site included in the application and this permit. Multiple FOPs may be issued to a site in accordance with 30 TAC § 122.201(e). When there is only one area for the site, then the application information and permit will include all units at the site. Additional FOPs that exist at the site, if any, are listed below.

Additional FOPs: O1893, O3678

Major Source Pollutants
The table below specifies the pollutants for which the site is a major source:

Major Pollutants	VOC, SO2, PM, NOX, HAPS, CO

Reading State of Texas's Federal Operating Permit

The Title V Federal Operating Permit (FOP) lists all state and federal air emission regulations and New Source Review (NSR) authorizations (collectively known as "applicable requirements") that apply at a particular site or permit area (in the event a site has multiple FOPs). **The FOP does not authorize new emissions or new construction activities.** The FOP begins with an introductory page which is common to all Title V permits. This page gives the details of the company, states the authority of the issuing agency, requires the company to operate in accordance with this permit and 30 Texas Administrative Code (TAC) Chapter 122, requires adherence with NSR requirements of 30 TAC Chapter 116, and finally indicates the permit number and the issuance date.

This is followed by the table of contents, which is generally composed of the following elements. Not all permits will have all of the elements.

- General Terms and Conditions
- Special Terms and Conditions
  - Emissions Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting
  - Additional Monitoring Requirements
  - New Source Review Authorization Requirements

    - Compliance Requirements
    - Protection of Stratosphere Ozone
    - Permit Location
    - Permit Shield (30 TAC § 122.148)
- Attachments
    - Applicable Requirements Summary
        - Unit Summary
        - Applicable Requirements Summary
    - Additional Monitoring Requirements
    - Permit Shield
    - New Source Review Authorization References
    - Compliance Plan
    - Alternative Requirements
- Appendix A
    - Acronym list

General Terms and Conditions

The General Terms and Conditions are the same and appear in all permits. The first paragraph lists the specific citations for 30 TAC Chapter 122 requirements that apply to all Title V permit holders. The second paragraph describes the requirements for record retention. The third paragraph provides details for voiding the permit, if applicable. The fourth paragraph states that the permit holder shall comply with the requirements of 30 TAC Chapter 116 by obtaining a New Source Review authorization prior to new construction or modification of emission units located in the area covered by this permit. The fifth paragraph provides details on submission of reports required by the permit.

Special Terms and Conditions

Emissions Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting. The TCEQ has designated certain applicable requirements as site-wide requirements. A site-wide requirement is a requirement that applies uniformly to all the units or activities at the site. Units with only site-wide requirements are addressed on Form OP-REQ1 and are not required to be listed separately on a OP-UA Form or Form OP-SUM. Form OP-SUM must list all units addressed in the application and provide identifying information, applicable OP-UA Forms, and preconstruction authorizations. The various OP-UA Forms provide the characteristics of each unit from which applicable requirements are established. Some exceptions exist as a few units may have both site-wide requirements and unit specific requirements.

Other conditions. The other entries under special terms and conditions are in general terms referring to compliance with the more detailed data listed in the attachments.

Attachments

Applicable Requirements Summary. The first attachment, the Applicable Requirements Summary, has two tables, addressing unit specific requirements. The first table, the Unit Summary, includes a list of units with applicable requirements, the unit type, the applicable regulation, and the requirement driver. The intent of the requirement driver is to inform the reader that a given unit may have several different operating scenarios and the differences between those operating scenarios.

The applicable requirements summary table provides the detailed citations of the rules that apply to the various units. For each unit and operating scenario, there is an added modifier called the "index number," detailed citations specifying monitoring and testing requirements, recordkeeping requirements, and reporting requirements. The data for this table are based on data supplied by the applicant on the OP-SUM and various OP-UA forms.

Additional Monitoring Requirement. The next attachment includes additional monitoring the applicant must perform to ensure compliance with the applicable standard. Compliance assurance monitoring (CAM) is often

required to provide a reasonable assurance of compliance with applicable emission limitations/standards for large emission units that use control devices to achieve compliance with applicant requirements. When necessary, periodic monitoring (PM) requirements are specified for certain parameters (i.e. feed rates, flow rates, temperature, fuel type and consumption, etc.) to determine if a term and condition or emission unit is operating within specified limits to control emissions. These additional monitoring approaches may be required for two reasons. First, the applicable rules do not adequately specify monitoring requirements (exception- Maximum Achievable Control Technology Standards (MACTs) generally have sufficient monitoring), and second, monitoring may be required to fill gaps in the monitoring requirements of certain applicable requirements. In situations where the NSR permit is the applicable requirement requiring extra monitoring for a specific emission unit, the preferred solution is to have the monitoring requirements in the NSR permit updated so that all NSR requirements are consolidated in the NSR permit.

Permit Shield. A permit may or may not have a permit shield, depending on whether an applicant has applied for, and justified the granting of, a permit shield. A permit shield is a special condition included in the permit document stating that compliance with the conditions of the permit shall be deemed compliance with the specified potentially applicable requirement(s) or specified applicable state-only requirement(s).

New Source Review Authorization References. All activities which are related to emissions in the state of Texas must have a NSR authorization prior to beginning construction. This section lists all units in the permit and the NSR authorization that allowed the unit to be constructed or modified. Units that do not have unit specific applicable requirements other than the NSR authorization do not need to be listed in this attachment. While NSR permits are not physically a part of the Title V permit, they are legally incorporated into the Title V permit by reference. Those NSR permits whose emissions exceed certain PSD/NA thresholds must also undergo a Federal review of federally regulated pollutants in addition to review for state regulated pollutants.

Compliance Plan. A permit may have a compliance schedule attachment for listing corrective actions plans for any emission unit that is out of compliance with an applicable requirement.

Alternative Requirements. This attachment will list any alternative monitoring plans or alternative means of compliance for applicable requirements that have been approved by the EPA Administrator and/or the TCEQ Executive Director.

Appendix A

Acronym list. This attachment lists the common acronyms used when discussing the FOPs.

Stationary vents subject to 30 TAC Chapter 111, Subchapter A, § 111.111(a)(1)(B) addressed in the Special Terms and Conditions

The site contains stationary vents with a flowrate less than 100,000 actual cubic feet per minute (acfm) and constructed after January 31, 1972 which are limited, over a six-minute average, to 20% opacity as required by 30 TAC § 111.111(a)(1)(B). As a site may have a large number of stationary vents that fall into this category, they are not required to be listed individually in the permit's Applicable Requirement Summary. This is consistent with EPA's White Paper for Streamlined Development of Part 70 Permit Applications, July 10, 1995, that states that requirements that apply identically to emission units at a site can be treated on a generic basis such as source-wide opacity limits.

Periodic monitoring is specified in Special Term and Condition 3 for stationary vents subject to 30 TAC § 111.111(a)(1)(B) to verify compliance with the 20% opacity limit. These vents are not expected to produce visible emissions during normal operation. The TCEQ evaluated the probability of these sources violating the opacity standards and determined that there is a very low potential that an opacity standard would be exceeded. It was determined that continuous monitoring for these sources is not warranted as there would be very limited environmental benefit in continuously monitoring sources that have a low potential to produce visible emissions. Therefore, the TCEQ set the visible observation monitoring frequency for these sources to once per calendar quarter.

The TCEQ has exempted vents that are not capable of producing visible emissions from periodic monitoring requirements. These vents include sources of colorless VOCs, non-fuming liquids, and other materials that cannot produce emissions that obstruct the transmission of light. Passive ventilation vents, such as plumbing vents, are also included in this category. Since this category of vents are not capable of producing opacity due to the physical or chemical characteristics of the emission source, periodic monitoring is not required as it would not yield any additional data to assure compliance with the 20% opacity standard of 30 TAC § 111.111(a)(1)(B).

In the event that visible emissions are detected, either through the quarterly observation or other credible evidence, such as observations from company personnel, the permit holder shall either report a deviation or perform a Test Method 9 observation to determine the opacity consistent with the 6-minute averaging time specified in 30 TAC § 111.111(a)(1)(B). An additional provision is included to monitor combustion sources more frequently than quarterly if alternate fuels are burned for periods greater than 24 consecutive hours. This will address possible emissions that may arise when switching fuel types.

Federal Regulatory Applicability Determinations

The following chart summarizes the applicability of the principal air pollution regulatory programs to the permit area:

Regulatory Program	Applicability (Yes/No)
Prevention of Significant Deterioration (PSD)	No
Nonattainment New Source Review (NNSR)	No
Minor NSR	Yes
40 CFR Part 60 - New Source Performance Standards	Yes
40 CFR Part 61 - National Emission Standards for Hazardous Air Pollutants (NESHAPs)	Yes
40 CFR Part 63 - NESHAPs for Source Categories	Yes
Title IV (Acid Rain) of the Clean Air Act (CAA)	No
Title V (Federal Operating Permits) of the CAA	Yes
Title VI (Stratospheric Ozone Protection) of the CAA	Yes
CSAPR (Cross-State Air Pollution Rule)	No

Basis for Applying Permit Shields

An operating permit applicant has the opportunity to specifically request a permit shield to document that specific applicable requirements do not apply to emission units in the permit. A permit shield is a special condition stating that compliance with the conditions of the permit shall be deemed compliance with the specified potentially applicable requirements or specified potentially applicable state-only requirements. A permit shield has been requested in the application for specific emission units. For the permit shield requests that have been approved, the basis of determination for regulations that the owner/operator need not comply with are located in the “Permit Shield” attachment of the permit.

Insignificant Activities

In general, units not meeting the criteria for inclusion on either Form OP-SUM or Form OP-REQ1 are not required to be addressed in the operating permit application. Examples of these types of units include, but are not limited to, the following:

1. Office activities such as photocopying, blueprint copying, and photographic processes.
2. Sanitary sewage collection and treatment facilities other than those used to incinerate wastewater treatment plant sludge. Stacks or vents for sanitary sewer plumbing traps are also included.
3. Food preparation facilities including, but not limited to, restaurants and cafeterias used for preparing food or beverages primarily for consumption on the premises.
4. Outdoor barbecue pits, campfires, and fireplaces.
5. Laundry dryers, extractors, and tumblers processing bedding, clothing, or other fabric items generated primarily at the premises. This does not include emissions from dry cleaning systems using perchloroethylene or petroleum solvents.
6. Facilities storing only dry, sweet natural gas, including natural gas pressure regulator vents.
7. Any air separation or other industrial gas production, storage, or packaging facility. Industrial gases, for purposes of this list, include only oxygen, nitrogen, helium, neon, argon, krypton, and xenon.
8. Storage and handling of sealed portable containers, cylinders, or sealed drums.
9. Vehicle exhaust from maintenance or repair shops.
10. Storage and use of non-VOC products or equipment for maintaining motor vehicles operated at the site (including but not limited to, antifreeze and fuel additives).
11. Air contaminant detectors and recorders, combustion controllers and shut-off devices, product analyzers, laboratory analyzers, continuous emissions monitors, other analyzers and monitors, and emissions associated with sampling activities. Exception to this category includes sampling activities that are deemed fugitive emissions and under a regulatory leak detection and repair program.
12. Bench scale laboratory equipment and laboratory equipment used exclusively for chemical and physical analysis, including but not limited to, assorted vacuum producing devices and laboratory fume hoods.
13. Steam vents, steam leaks, and steam safety relief valves, provided the steam (or boiler feedwater) has not contacted other materials or fluids containing regulated air pollutants other than boiler water treatment chemicals.
14. Storage of water that has not contacted other materials or fluids containing regulated air pollutants other than boiler water treatment chemicals.
15. Well cellars.
16. Fire or emergency response equipment and training, including but not limited to, use of fire control equipment including equipment testing and training, and open burning of materials or fuels associated with firefighting training.
17. Crucible or pot furnaces with a brim full capacity of less than 450 cubic inches of any molten metal.
18. Equipment used exclusively for the melting or application of wax.
19. All closed tumblers used for the cleaning or deburring of metal products without abrasive blasting, and all open tumblers with a batch capacity of 1,000 lbs. or less.
20. Shell core and shell mold manufacturing machines.
21. Sand or investment molds with a capacity of 100 lbs. or less used for the casting of metals;
22. Equipment used for inspection of metal products.
23. Equipment used exclusively for rolling, forging, pressing, drawing, spinning, or extruding either hot or cold metals by some mechanical means.
24. Instrument systems utilizing air, natural gas, nitrogen, oxygen, carbon dioxide, helium, neon, argon, krypton, and xenon.
25. Battery recharging areas.
26. Brazing, soldering, or welding equipment.

Determination of Applicable Requirements

The tables below include the applicability determinations for the emission units, the index number(s) where applicable, and all relevant unit attribute information used to form the basis of the applicability

determination. The unit attribute information is a description of the physical properties of an emission unit which is used to determine the requirements to which the permit holder must comply. For more information about the descriptions of the unit attributes specific Unit Attribute Forms may be viewed at [HYPERLINK "http://www.tceq.texas.gov/permitting/air/nav/air_all_ua_forms.html"].

A list of unit attribute forms is included at the end of this document. Some examples of unit attributes include construction date; product stored in a tank; boiler fuel type; etc.. Generally, multiple attributes are needed to determine the requirements for a given emission unit and index number. The table below lists these attributes in the column entitled "Basis of Determination." Attributes that demonstrate that an applicable requirement applies will be the factual basis for the specific citations in an applicable requirement that apply to a unit for that index number. The TCEQ Air Permits Division has developed flowcharts for determining applicability of state and federal regulations based on the unit attribute information in a Decision Support System (DSS). These flowcharts can be accessed via the internet at [HYPERLINK "http://www.tceq.texas.gov/permitting/air/nav/air_supportsys.html"]. The Air Permits Division staff may also be contacted for assistance at (512) 239-1250.

The attributes for each unit and corresponding index number provide the basis for determining the specific legal citations in an applicable requirement that apply, including emission limitations or standards, monitoring, recordkeeping, and reporting. The rules were found to apply or not apply by using the unit attributes as answers to decision questions found in the flowcharts of the DSS. Some additional attributes indicate which legal citations of a rule apply. The legal citations that apply to each emission unit may be found in the Applicable Requirements Summary table of the draft permit. There may be some entries or rows of units and rules not found in the permit, or if the permit contains a permit shield, repeated in the permit shield area. These are sets of attributes that describe negative applicability, or; in other words, the reason why a potentially applicable requirement does not apply.

If applicability determinations have been made which differ from the available flowcharts, an explanation of the decisions involved in the applicability determination is specified in the column "Changes and Exceptions to RRT." If there were no exceptions to the DSS, then this column has been removed.

The draft permit includes all emission limitations or standards, monitoring, recordkeeping and reporting required by each applicable requirement. If an applicable requirement does not require monitoring, recordkeeping, or reporting, the word "None" will appear in the Applicable Requirements Summary table. If additional periodic monitoring is required for an applicable requirement, it will be explained in detail in the portion of this document entitled "Rationale for Compliance Assurance Monitoring (CAM)/ Periodic Monitoring Methods Selected."

When attributes demonstrate that a unit is not subject to an applicable requirement, the applicant may request a permit shield for those items. The portion of this document entitled "Basis for Applying Permit Shields" specifies which units, if any, have a permit shield.

Operational Flexibility
When an emission unit has multiple operating scenarios, it will have a different index number associated with each operating condition. This means that units are permitted to operate under multiple operating conditions. The applicable requirements for each operating condition are determined by a unique set of unit attributes. For example, a tank may store two different products at different points in time. The tank may, therefore, need to comply with two distinct sets of requirements, depending on the product that is stored. Both sets of requirements are included in the permit, so that the permit holder may store either product in the tank.

Determination of Applicable Requirements

Unit ID	Regulation	Index Number	Basis of Determination*
32MN1138	30 TAC Chapter 117, Subchapter B	R7ICI-1	Fuel Flow Monitoring = Unit is a diesel engine operating with a run time meter and using monthly fuel use records maintained for each engine per 30 TAC §§ 117.140(a)(2)(C), 117.340(a)(2)(C) or 117.440(a)(2)(C). NOx Emission Limitation = Title 30 TAC §§ 117.310(d)(3) and 117.310(a)(9) CO Emission Limitation = Title 30 TAC § 117.310(c)(1) 3 g/hp-hr option CO Averaging Method = Complying with the applicable emission limit using a block one-hour average. CO Monitoring System = Emissions monitored by means other than a CEMS or PEMS. EGF System Cap Unit = Engine is not used as an electric generating facility to generate electricity for sale to the electric grid. Type of Service = Used exclusively in emergency situations [claiming the emergency service exemption under 30 TAC §§ 117.103(a)(6)(D), 117.203(a)(6)(D), 117.303(a)(6)(D) or 117.403(a)(7)(D)] Fuel Fired = Petroleum-based diesel fuel NOx Averaging Method = Complying with the applicable emission limit using a block one-hour average. NOx Reduction = None ESAD Date Placed in Service = Placed into service before October 1, 2001 and has not been modified, reconstructed or relocated on or after October 1, 2001. NOx Monitoring System = Maximum emission rate testing in accordance with 30 TAC § 117.8000 Diesel HP Rating = Horsepower rating is 300 hp or greater, but less than 600 hp.
32MN1138	40 CFR Part 63, Subpart ZZZZ	63ZZZZ	HAP Source = Any stationary source or group of stationary sources of hazardous air pollutants meeting the definition of a major source as described in 40 CFR § 63.2. Brake HP = Stationary RICE with a brake HP greater than or equal to 300 HP and less than or equal to 500 HP. Construction/Reconstruction Date = Commenced construction or reconstruction before December 19, 2002. Displacement = The stationary CI RICE has a displacement less than 30 liters per cylinder and uses diesel fuel. Service Type = Emergency use where the RICE operates or is contractually obligated to be available for more than 15 hours per calendar year as specified in 40 CFR §63.6640(f)(2)(ii)-(iii) or that operates for the purpose specified in 40 CFR §63.6640(f)(4)(ii). Stationary RICE Type = Compression ignition engine
32SU0006	30 TAC Chapter 115, Storage of VOCs	R5115-1	Today's Date = Today's date is March 1, 2013 or later. Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Tank Description = Tank does not require emission controls True Vapor Pressure = True vapor pressure is less than 1.0 psia Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is greater than 40,000 gallons
32SU0016A	30 TAC Chapter 115, Storage of VOCs	R5115-1	Today's Date = Today's date is March 1, 2013 or later. Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Tank Description = Tank does not require emission controls True Vapor Pressure = True vapor pressure is less than 1.0 psia

Unit ID	Regulation	Index Number	Basis of Determination*
			Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is greater than 40,000 gallons
32SUAREA	30 TAC Chapter 115, Storage of VOCs	R5115-1	Today's Date = Today's date is March 1, 2013 or later. Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Tank Description = Tank does not require emission controls True Vapor Pressure = True vapor pressure is less than 1.0 psia Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is greater than 40,000 gallons
32V1182	30 TAC Chapter 115, Storage of VOCs	30TAC-01	Today's Date = Today's date is March 1, 2013 or later. Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Tank Description = Tank does not require emission controls True Vapor Pressure = True vapor pressure is less than 1.0 psia Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is greater than 1,000 gallons but less than or equal to 25,000 gallons
32V1182	40 CFR Part 60, Subpart Kb	60Kb-01	Product Stored = Petroleum liquid (other than petroleum or condensate) Storage Capacity = Capacity is less than 10,600 gallons (40,000 liters)
32V145	30 TAC Chapter 115, Storage of VOCs	30TAC-01	Today's Date = Today's date is March 1, 2013 or later. Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Tank Description = Tank does not require emission controls True Vapor Pressure = True vapor pressure is less than 1.0 psia Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is greater than 40,000 gallons
32V145	40 CFR Part 60, Subpart Kb	60Kb-01	Product Stored = Volatile organic liquid Storage Capacity = Capacity is greater than or equal to 39,900 gallons (151,000 liters) Maximum True Vapor Pressure = True vapor pressure is less than 0.5 psia
32V193	30 TAC Chapter 115, Storage of VOCs	R5112-1	Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Tank Description = Tank using a vapor recovery system (VRS) True Vapor Pressure = True vapor pressure is greater than or equal to 1.5 psia Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is greater than 40,000 gallons Control Device Type = Other vapor recovery unit
32V193	30 TAC Chapter 115, Storage of	R5112-2	Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance

Unit ID	Regulation	Index Number	Basis of Determination*
	VOCs		with applicable control requirements or exemption criteria. Tank Description = Tank using a vapor recovery system (VRS) True Vapor Pressure = True vapor pressure is greater than or equal to 1.5 psia Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is greater than 40,000 gallons Control Device Type = Other vapor recovery unit
32V193	40 CFR Part 63, Subpart G	63G119-1	MACT Subpart F/G Applicability = The unit is a Group 1 vessel (as defined in Table 5 for existing sources or Table 6 for new sources of 40 CFR 63, Subpart G). Closed Vent System = Closed vent system is routing emissions to a process or fuel gas system, or is subject to § 63.148 of Subpart G NESHAP Subpart Y Applicability = The unit is not subject to 40 CFR Part 61, Subpart Y. Hard Piping = The closed vent system is constructed of hard piping. Bypass Lines = Closed vent system has no by-pass lines. Maximum TVP = Maximum true vapor pressure of the total organic HAP in the liquid is greater than or equal to 11.11 psi (76.6 kPa) Emission Control Type = Emissions routed to a process
32V194	30 TAC Chapter 115, Storage of VOCs	R5112-1	Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Tank Description = Tank using a vapor recovery system (VRS) True Vapor Pressure = True vapor pressure is greater than or equal to 1.5 psia Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is greater than 40,000 gallons Control Device Type = Other vapor recovery unit
32V194	30 TAC Chapter 115, Storage of VOCs	R5112-2	Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Tank Description = Tank using a vapor recovery system (VRS) True Vapor Pressure = True vapor pressure is greater than or equal to 1.5 psia Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is greater than 40,000 gallons Control Device Type = Other vapor recovery unit
32V194	40 CFR Part 63, Subpart G	63G119-1	MACT Subpart F/G Applicability = The unit is a Group 1 vessel (as defined in Table 5 for existing sources or Table 6 for new sources of 40 CFR 63, Subpart G). Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Tank Description = Tank does not require emission controls True Vapor Pressure = True vapor pressure is less than 1.0 psia Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is greater than 40,000 gallons
33V343	40 CFR Part 63, Subpart G	63G119-1	MACT Subpart F/G Applicability = The unit is a Group 2 vessel. NESHAP Subpart Y Applicability = The unit is not subject to 40 CFR Part 61, Subpart Y.

Unit ID	Regulation	Index Number	Basis of Determination*
			NSPS Subpart Kb Applicability = The unit is not subject to 40 CFR Part 60, Subpart Kb.
33V365	30 TAC Chapter 115, Storage of VOCs	30TAC-01	Today's Date = Today's date is March 1, 2013 or later. Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Tank Description = Tank does not require emission controls True Vapor Pressure = True vapor pressure is less than 1.0 psia Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is greater than 1,000 gallons but less than or equal to 25,000 gallons
33V365	40 CFR Part 60, Subpart Kb	60Kb-01	Product Stored = Volatile organic liquid Storage Capacity = Capacity is less than 10,600 gallons (40,000 liters)
33V366	30 TAC Chapter 115, Storage of VOCs	R5115-1	Today's Date = Today's date is March 1, 2013 or later. Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Tank Description = Tank does not require emission controls True Vapor Pressure = True vapor pressure is less than 1.0 psia Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is greater than 40,000 gallons
33V366	40 CFR Part 63, Subpart G	63G119-1	MACT Subpart F/G Applicability = The unit is a Group 2 vessel. NESHAP Subpart Y Applicability = The unit is not subject to 40 CFR Part 61, Subpart Y. NSPS Subpart Kb Applicability = The unit is not subject to 40 CFR Part 60, Subpart Kb.
36V1171	30 TAC Chapter 115, Storage of VOCs	30TAC-01	Today's Date = Today's date is March 1, 2013 or later. Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Tank Description = Tank does not require emission controls True Vapor Pressure = True vapor pressure is less than 1.0 psia Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is greater than 1,000 gallons but less than or equal to 25,000 gallons
36V1171	40 CFR Part 60, Subpart Kb	60Kb-01	Product Stored = Volatile organic liquid Storage Capacity = Capacity is less than 10,600 gallons (40,000 liters)
32EOLD	30 TAC Chapter 115, Loading and Unloading of VOC	R5211-1	Chapter 115 Control Device Type = Control device other than a flare, vapor combustor, catalytic incinerator, direct flame incinerator, chiller, or carbon adsorption system. Chapter 115 Facility Type = Facility type other than a gasoline terminal, gasoline bulk plant, motor vehicle fuel dispensing facility or marine terminal. Alternate Control Requirement (ACR) = No alternate control requirements are being utilized. Vapor Tight = Not all liquid and vapor lines are equipped with fittings which make vapor-tight connections that close automatically when disconnected. Product Transferred = Volatile organic compounds other than liquefied petroleum gas and gasoline.

Unit ID	Regulation	Index Number	Basis of Determination*
			Transfer Type = Loading and unloading. True Vapor Pressure = True vapor pressure greater than or equal to 0.5 psia. Daily Throughput = Daily throughput not determined since 30 TAC § 115.217(a)(2)(A) or 30 TAC § 115.217(b)(3)(A) exemption is not utilized. Control Options = Vapor control system that maintains a control efficiency of at least 90%.
32EOLD	40 CFR Part 63, Subpart G	63G126-1	Transfer Rack Type = Group 1 transfer rack (as defined in 40 CFR § 63.111). Vapor Balancing System = A vapor balancing system is not being used to reduce emissions of organic hazardous air pollutants. Emissions Routing = Emissions of organic hazardous air pollutants are routed to a fuel gas system or to a process where the organic hazardous air pollutants meet one or more of the ends specified in 40 CFR § 63.126(b)(4)(i) - (iv). Bypass Lines = The vent system does not contain by-pass lines that could divert a vent stream flow away from the control device. Closed Vent System = Closed vent system is operated and maintained under negative pressure.
33EGLD	30 TAC Chapter 115, Loading and Unloading of VOC	R5211-1	Chapter 115 Facility Type = Facility type other than a gasoline terminal, gasoline bulk plant, motor vehicle fuel dispensing facility or marine terminal. Alternate Control Requirement (ACR) = No alternate control requirements are being utilized. Product Transferred = Volatile organic compounds other than liquefied petroleum gas and gasoline. Transfer Type = Loading and unloading. True Vapor Pressure = True vapor pressure less than 0.5 psia.
33EGLD	40 CFR Part 63, Subpart G	63G126-1	Transfer Rack Type = Group 2 transfer rack (as defined in 40 CFR § 63.111). Subject to Subpart BB = The transfer rack is not subject to 40 CFR Part 61, Subpart BB.
33UNITLD	30 TAC Chapter 115, Loading and Unloading of VOC	R5211-1	Chapter 115 Facility Type = Facility type other than a gasoline terminal, gasoline bulk plant, motor vehicle fuel dispensing facility or marine terminal. Alternate Control Requirement (ACR) = No alternate control requirements are being utilized. Product Transferred = Volatile organic compounds other than liquefied petroleum gas and gasoline. Transfer Type = Loading and unloading. True Vapor Pressure = True vapor pressure less than 0.5 psia.
33UNITLD	30 TAC Chapter 115, Loading and Unloading of VOC	R5211-2	Chapter 115 Control Device Type = No control device. Chapter 115 Facility Type = Facility type other than a gasoline terminal, gasoline bulk plant, motor vehicle fuel dispensing facility or marine terminal. Alternate Control Requirement (ACR) = No alternate control requirements are being utilized. Vapor Tight = Not all liquid and vapor lines are equipped with fittings which make vapor-tight connections that close automatically when disconnected. Product Transferred = Volatile organic compounds other than liquefied petroleum gas and gasoline. Transfer Type = Loading and unloading. True Vapor Pressure = True vapor pressure greater than or equal to 0.5 psia. Daily Throughput = Daily throughput not determined since 30 TAC § 115.217(a)(2)(A) or 30 TAC § 115.217(b)(3)(A) exemption is not utilized. Control Options = Vapor balance system.

Unit ID	Regulation	Index Number	Basis of Determination*
33UNITLD	40 CFR Part 63, Subpart G	63G126-1	Transfer Rack Type = Group 2 transfer rack (as defined in 40 CFR § 63.111). Subject to Subpart BB = The transfer rack is not subject to 40 CFR Part 61, Subpart BB.
32FLR0001	30 TAC Chapter 111, Visible Emissions	R1111-1	Acid Gases Only = Flare is not used only as an acid gas flare as defined in 30 TAC § 101.1. Emergency/Upset Conditions Only = Flare is used under conditions other than emergency or upset conditions.
32FLR0001	30 TAC Chapter 111, Visible Emissions	R1111-2	Acid Gases Only = Flare is not used only as an acid gas flare as defined in 30 TAC § 101.1. Emergency/Upset Conditions Only = Flare is used only under emergency or upset conditions.
32FLR0001	30 TAC Chapter 115, HRVOC Vent Gas	R5722-1	Monitoring Requirements = Flare is complying with the continuous monitoring requirements of § 115.725(d). Out of Service = Flare was not permanently out of service by April 1, 2006. Total Gas Stream = Flare receives a total gas stream with greater than 100 ppmv HRVOC at some time. Gas Stream Concentration = Flare receives a gas stream containing 5% or greater HRVOC by weight at some time. Multi-Purpose Usage = Flare is used for abatement of emissions from scheduled or unscheduled maintenance, startup or shutdown activities AND as an emergency flare. Flow Rate = Flow rate of the gas routed to the flare is determined using process knowledge and engineering calculations. Alternative Monitoring = No alternative monitoring and test methods are used. Physical Seal = Flare is equipped with a flow monitor or indicator. Monitoring Operations = Using the flow monitoring requirements in § 115.725(d)(1) §115.725(h)(4) Alternative = Using the continuous monitoring requirements in § 115.725(d)(2). Minor Modificaiton = No minor modifications to the monitoring and test methods are used. Tank Service = Flare is not in dedicated service for storage tanks with 95% or greater of an individual HRVOC. Flare Type = Flare is in multi-purpose service.
EOEGFUG	30 TAC Chapter 115, HRVOC Fugitive Emissions	R5780-1	Agitators = The fugitive unit does not contain agitators. Alternative Work Practice in § 115.358 = No components are complying with the alternative work practice requirements in 30 TAC § 115.358. Compressor Seals = The fugitive unit contains compressor seals. Open-ended Valves or Lines = The fugitive unit contains open-ended valves or lines. Process Drains = The fugitive unit contains process drains. Title 30 TAC §115.780 Applicable = The fugitive unit contains a defined process and Highly Reactive VOC. Valves (not pressure relief, open-ended or bypass line valves) = The fugitive unit contains valves other than pressure relief, open-ended or bypass line valves. ACR = No open-ended valves or lines are complying with an alternate control requirement. Less Than 250 Components at Site = The fugitive unit is located at a site with at least 250 fugitive components in VOC service. Weight Percent HRVOC = Components in the fugitive unit contact process fluids that contain less than 5.0% HRVOC by weight and process fluids that contain HRVOC at 5.0%, or greater, by weight on an annual average basis. Complying with § 115.781(b)(9) = Process drains are complying with the requirements of § 115.781(b)(9). Pumps with Shaft Seal System = No pumps are equipped with a shaft sealing system that prevents or detects emission of VOC from the seal.

Unit ID	Regulation	Index Number	Basis of Determination*
			Bypass Line Valves = The fugitive unit contains bypass line valves. Compressors with Shaft Seal System = No compressors are equipped with a shaft sealing system that prevents or detects emission of VOC from the seal. Flanges or Other Connectors = The fugitive unit contains flanges or other connectors. Heat Exchanger Heads, etc. = The fugitive unit contains heat exchanger heads, sight glasses, meters, gauges, sampling connections, bolter manways, hatches, sump covers, junction vent boxes or covers and seals on VOC water separators. Pressure Relief Valves = The fugitive unit contains pressure relief valves. Pump Seals = The fugitive unit does not contain pump seals. ACR = No pressure relief valves are complying with an alternate control requirement. Agitators with Shaft Seal System = No agitators are equipped with a shaft sealing system that prevents or detects emission of VOC from the seal. Complying with § 115.781(b)(9) = Pressure relief valves are complying with the requirements of § 115.781(b)(9).
EOEGFUG	30 TAC Chapter 115, Pet. Refinery & Petrochemicals	R5352-1	Agitators = The fugitive unit does not contain agitators. Components Utilizing Alternative Work Practice in § 115.358 = No components in the fugitive unit are using the alternative work practice under § 115.358. Compressor Seals = The fugitive unit contains compressor seals. Flanges = The fugitive unit contains flanges. Open-ended Valves = The fugitive unit contains open-ended valves. Pressure Relief Valves = The fugitive unit contains pressure relief valves. Process Drains = The fugitive unit has process drains. Pump Seals = The fugitive unit contains pump seals. Rupture Disks = The fugitive unit has pressure relief valves equipped with rupture disks. Title 30 TAC § 115.352 Applicable = Site is a petroleum refinery, synthetic organic chemical, polymer resin or methyl tert-butyl ether manufacturing process or a natural gas/gasoline processing operation as defined in 30 TAC 115.10. Valves (other than pressure relief and open-ended) = The fugitive unit contains valves other than pressure relief valves or open-ended valves or lines. Alternate Control Requirement = The TCEQ Executive Director has not approved an alternate method for demonstrating and documenting continuous compliance with an alternate control requirement or exemption criteria for flanges or no alternate has been requested. Instrumentation Systems = The fugitive unit has instrumentation systems, as defined in 40 CFR § 63.161, that meet 40 CFR § 63.169. Less Than 250 Components at Site = Fugitive unit not located at site with less than 250 fugitive components. Sampling Connection Systems = The fugitive unit has sampling connection systems, as defined in 40 CFR § 63.161, that meet 40 CFR § 63.169. Weight Percent VOC = All components contact a process fluid that contains greater than or equal to 10% VOC by weight. 50% by Volume = Compressors are not in hydrogen service or are in hydrogen service and the hydrogen content cannot be reasonably expected to always exceed 50% by volume. Complying wIth § 115.352(1) = No valves are complying with § 115.352(1). Complying With § 115.352(1) = No open-ended valves and lines are complying with § 115.352(1). Complying with 30 TAC § 115.352(1) = Process drains are not complying with the requirements in 30 TAC § 115.352(1).

Unit ID	Regulation	Index Number	Basis of Determination*
			Complying with 30 TAC § 115.352(1) = Flanges are complying with the requirements in 30 TAC § 115.352(1). Reciprocating Compressors Or Positive Displacement Pumps = The fugitive unit does not have reciprocating compressors or positive displacement pumps used in natural gas/gasoline processing operations. Shaft Seal System = Pump seals are not equipped with a shaft seal system that prevents or detects emission of VOC from the seal. TVP 0.002 PSIA or Less = The fugitive unit has components or systems that contact a process fluid containing VOC having a true vapor pressure less than or equal to 0.002 psia at 68 degrees Fahrenheit. Shaft Seal System = Compressors are not equipped with a shaft sealing system that prevents or detects emission of VOC from the seal. TVP of Process Fluid VOC <= 0.044 psia at 68° F = No valves contact a process fluid with a TVP less than or equal to 0.044 psia at 68° F. TVP of Process Fluid VOC <= 0.044 PSIA AT 68° F = Process drains do not contact a process fluid containing VOC having a true vapor pressures less than or equal to 0.044 psia at 68 degrees Fahrenheit. TVP of Process Fluid VOC <= 0.044 PSIA AT 68□° F = Flanges do not contact a process fluid containing VOC having a true vapor pressures less than or equal to 0.044 psia at 68 degrees Fahrenheit. Complying with 30 TAC § 115.352(1) = No pump seals are complying with the requirements in 30 TAC § 115.352(1). TVP of Process Fluid VOC <= 0.044 PSIA AT 68□° F = Compressor seals do not contact a process fluid containing VOC having a true vapor pressures less than or equal to 0.044 psia at 68 degrees Fahrenheit. TVP of Process Fluid VOC > 0.044 psia at 68° F = Valves contact a process fluid with a TVP greater than 0.044 psia at 68° F. TVP of Process Fluid VOC > 0.044 PSIA AT 68° F = Flanges contact a process fluid containing VOC having a TVP greater than 0.044 psia at 68 degrees Fahrenheit. Complying With § 115.352(1) = No compressor seals are complying with the requirements in 30 TAC § 115.352(1).
EOEGFUG	30 TAC Chapter 115, Pet. Refinery & Petrochemicals	R5352-2	Agitators = The fugitive unit does not contain agitators. Components Utilizing Alternative Work Practice in § 115.358 = No components in the fugitive unit are using the alternative work practice under § 115.358. Compressor Seals = The fugitive unit does not contain compressor seals. Flanges = The fugitive unit contains flanges. Open-ended Valves = The fugitive unit contains open-ended valves. Pressure Relief Valves = The fugitive unit does not contain pressure relief valves. Process Drains = The fugitive unit has process drains. Pump Seals = The fugitive unit contains pump seals. Rupture Disks = The fugitive unit has pressure relief valves equipped with rupture disks. Title 30 TAC § 115.352 Applicable = Site is a petroleum refinery, synthetic organic chemical, polymer resin or methyl tert-butyl ether manufacturing process or a natural gas/gasoline processing operation as defined in 30 TAC 115.10. Valves (other than pressure relief and open-ended) = The fugitive unit contains valves other than pressure relief valves or open-ended valves or lines. Alternate Control Requirement = The TCEQ Executive Director has not approved an alternate method for demonstrating and documenting continuous compliance with an alternate control requirement or exemption criteria for flanges or no alternate has been requested. Instrumentation Systems = The fugitive unit has instrumentation systems, as defined in 40 CFR § 63.161, that meet 40 CFR § 63.169.

Unit ID	Regulation	Index Number	Basis of Determination*
			Less Than 250 Components at Site = Fugitive unit not located at site with less than 250 fugitive components. Sampling Connection Systems = The fugitive unit has sampling connection systems, as defined in 40 CFR § 63.161, that meet 40 CFR § 63.169. Weight Percent VOC = All components contact a process fluid that contains greater than or equal to 10% VOC by weight. Complying wIth § 115.352(1) = No valves are complying with § 115.352(1). Complying With § 115.352(1) = No open-ended valves and lines are complying with § 115.352(1). Complying with 30 TAC § 115.352(1) = Process drains are not complying with the requirements in 30 TAC § 115.352(1). Complying with 30 TAC § 115.352(1) = Flanges are complying with the requirements in 30 TAC § 115.352(1). On-Line Monitor = Speciated strippable HRVOC concentration is being determined by sampling.
32MT9	30 TAC Chapter 115, HRVOC Cooling Towers	R5760-1	Cooling Tower Heat Exchange System Exemptions = Each individual heat exchanger of the cooling tower heat exchange system does not have greater than 100 ppmw HRVOCs in the process side fluid.
32ANALYZER	30 TAC Chapter 115, Vent Gas Controls	R5121-1	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a non-combustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule.

Unit ID	Regulation	Index Number	Basis of Determination*
			Combined 24-Hour VOC Weight = Combined VOC weight is less than or equal to 100 pounds (45.4 kg). VOC Concentration = VOC concentration is greater than or equal to 612 ppmv. VOC Concentration/Emission Rate @ Max Operating Conditions = The VOC concentration or emission rate is less than the applicable exemption limit at maximum actual operating conditions and the alternate recordkeeping requirements of 30 TAC § 115.126(4) are being selected.
32MAINAN	30 TAC Chapter 115, HRVOC Vent Gas	R5720-1	Alternative Monitoring = Not using alternative monitoring and testing methods. HRVOC Concentration = The vent gas stream has a HRVOC concentration of at least 100 ppmv at some times. Max Flow Rate = The vent gas stream has a maximum potential flow rate greater than 100 dry standard cubic feet per hour (ft3/hr). Exempt Date = The vent gas stream is not exempt. Minor Modification = Not using any minor modification to the monitoring and testing methods of the rule. Vent Gas Stream Control = Vent gas stream is uncontrolled. Process Knowledge = Process knowledge and engineering calculations are used to determine HRVOC emissions during emission events and scheduled startup, shutdown, and maintenance activities. Waived Testing = The executive director has not waived testing for identical vents. Testing Requirements = Continuous emissions monitoring system in lieu of testing requirements in § 115.725(a).
32MAINAN	30 TAC Chapter 115, Vent Gas Controls	R5121-1	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a non-combustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Combined 24-Hour VOC Weight = Combined VOC weight is less than or equal to 100 pounds (45.4 kg). VOC Concentration = VOC concentration is greater than or equal to 612 ppmv. VOC Concentration/Emission Rate @ Max Operating Conditions = The VOC concentration or emission rate is less than the applicable exemption limit at maximum actual operating conditions and the alternate recordkeeping requirements of 30 TAC § 115.126(4) are being selected.
32MAINT	30 TAC Chapter 115, HRVOC Vent Gas	R5720-1	HRVOC Concentration = The vent gas stream has a HRVOC concentration of at least 100 ppmv at some times. Max Flow Rate = The vent gas stream has a maximum potential flow rate greater than 100 dry standard cubic feet per hour (ft3/hr). Exempt Date = The vent gas stream is not exempt. Vent Gas Stream Control = Vent gas stream is controlled by a flare.
32MAINT	30 TAC Chapter 115, Vent Gas Controls	R5121-1	Alternate Control Requirement = Alternate control is not used. Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a non-combustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Control Device Type = Smokeless flare Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule.

Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a non-combustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Flow Rate or VOC Concentration = Flow rate is less than 0.011 scm/min or the VOC concentration is less than 500 ppmv. 40 CFR 60 Subpart NNN Requirements = The distillation unit vent gas stream satisfies neither of the following requirements of 40 CFR Part 60, Subpart NNN: TRE index value is greater than 8.0; or TRE index value is greater than 1.0 without the use of VOC emission control devices. Vent Type = Vent gas stream originates from a synthetic organic chemical manufacturing industry reactor process or distillation operation, as defined in 30 TAC § 115.10. 40 CFR 60 Subpart RRR Requirements = The reactor process vent gas stream satisfies neither of the following requirements of 40 CFR Part 60, Subpart RRR: TRE index value is greater than 8.0; or TRE index value is greater than 1.0 without the use of VOC emission control devices.
33T106OH	40 CFR Part 63, Subpart G	63G113-1	Control Device = No recovery device. Overlap = Title 40 CFR Part 63, Subpart G only Group 1 = The process vent is a Group 2 process vent. Halogenated = Vent stream is not halogenated. Regulation = Owners or operator is required to comply only with the requirements of 40 CFR Part 63, Subpart G. HAP Concentration = HAP concentration is not needed to determine applicability. By-pass Lines = The vent system contains by-pass lines that can divert the vent stream from the control device. Flow Rate = Flow rate is not needed to determine applicability. Electing Control = Not electing to control the process vent to the levels required in 40 CFR § 63.113(a)(1) or (a)(2). Flow Indicator = By-pass line valve is secured with a car-seal or lock-and-key type configuration. MACT TRE Index Value = TRE index value is greater than 4.0 as calculated using the procedures of 40 CFR § 63.115(d).
32T111OH	40 CFR Part 60, Subpart NNN	60NNN-1	Subpart NNN Chemicals = The distillation unit produces any chemical listed in 40 CFR § 60.667 as a product, co-product, by-product, or intermediate. Total Resource Effectiveness = TRE index value greater than 8.0 not from a halogenated vent stream.

Unit ID	Regulation	Index Number	Basis of Determination*
			Construction/Modification Date = After December 30, 1983. Subpart NNN Control Device = Condenser. Vent Type = Distillation unit not discharging vent stream into a vapor recovery system. Distillation Unit Type = Does not qualify for any exemption under § 60.660(c)(1)-(3). Total Design Capacity = 1 gigagram per year or greater. Vent Stream Flow Rate = Flow rate greater than or equal to 0.008 scm/min. Organic Monitoring Device = A recovery device specific monitoring device is used to demonstrate compliance with the TRE index value limit of § 60.662(c).
PRO32EOEG	40 CFR Part 63, Subpart F	63F102-1	Applicable Chemicals = The chemical manufacturing process unit manufactures, as a primary product, one or more of the chemicals listed in 40 CFR § 63.100(b)(1)(i) or 40 CFR § 63.100(b)(1)(ii). Table 2 HAP = The chemical manufacturing process unit uses as a reactant or manufactures, as a product or co-product, one or more of the organic hazardous air pollutants in Table 2. Alternate Means of Emission Limitation = No alternative means of emission limitation has been approved by the EPA Administrator to achieve a reduction in organic HAP emission or no alternate has been requested. Heat Exchange System = No heat exchange system is utilized.
PRO32EOHE	40 CFR Part 63, Subpart F	63F104-1	Applicable Chemicals = The chemical manufacturing process unit manufactures, as a primary product, one or more of the chemicals listed in 40 CFR § 63.100(b)(1)(i) or 40 CFR § 63.100(b)(1)(ii). Intervening Cooling Fluid = There is no intervening cooling fluid containing less than 5 percent by weight of total HAPs listed in Table 4 of 40 CFR Part 63, Subpart F, between the process and cooling water. Table 2 HAP = The chemical manufacturing process unit uses as a reactant or manufactures, as a product or co-product, one or more of the organic hazardous air pollutants in Table 2. Table 4 HAP Content = The recirculating heat exchange system is not used exclusively to cool process fluids that contain less than 5 percent by weight of total HAPs listed in Table 4 of title 40 CFR Part 63, Subpart F. Alternate Means of Emission Limitation = No alternative means of emission limitation has been approved by the EPA Administrator to achieve a reduction in organic HAP emission or no alternate has been requested. NPDES Permit = The once-through heat exchange system is not subject to NPDES permit with an allowable discharge limit of 1 part per million or less above influent concentration or 10 percent or less above influent concentration. Meets 40 CFR 63.104(a)(4)(i)-(iv) = The once-through heat exchange system is not subject to an NPDES permit that meets 40 CFR § 63.104(a)(4)(i) - (iv). Heat Exchange System = A heat exchange system is utilized. Table 9 HAP Content = The once-through heat exchange system is not used exclusively to cool process fluids that contain less than 5 percent by weight of total HAPs listed in Table 9 of 40 CFR Part 63, Subpart G. Cooling Water Monitored = The cooling water is being monitored for the presence of one or more HAPs or other representative substances whose presence in cooling water indicates a leak. Cooling Water Pressure = The heat exchange system is not operated with the minimum pressure on the cooling water side at least 35 kilopascals greater than the maximum pressure on the process side.

* - The "unit attributes" or operating conditions that determine what requirements apply

NSR Versus Title V FOP

The state of Texas has two Air permitting programs, New Source Review (NSR) and Title V Federal Operating Permits. The two programs are substantially different both in intent and permit content.

NSR is a preconstruction permitting program authorized by the Texas Clean Air Act and Title I of the Federal Clean Air Act (FCAA). The processing of these permits is governed by 30 Texas Administrative Code (TAC) Chapter 116.111. The Title V Federal Operating Program is a federal program authorized under Title V of the FCAA that has been delegated to the state of Texas to administer and is governed by 30 TAC Chapter 122. The major differences between the two permitting programs are listed in the table below:

NSR Permit	Federal Operating Permit(FOP)
Issued Prior to new Construction or modification of an existing facility	For initial permit with application shield, can be issued after operation commences; significant revisions require approval prior to operation.
Authorizes air emissions	Codifies existing applicable requirements, does not authorize new emissions
Ensures issued permits are protective of the environment and human health by conducting a health effects review and that requirement for best available control technology (BACT) is implemented.	Applicable requirements listed in permit are used by the inspectors to ensure proper operation of the site as authorized. Ensures that adequate monitoring is in place to allow compliance determination with the FOP.
Up to two Public notices may be required. Opportunity for public comment and contested case hearings for some authorizations.	One public notice required. Opportunity for public comments. No contested case hearings.
Applies to all point source emissions in the state.	Applies to all major sources and some non-major sources identified by the EPA.
Applies to facilities: a portion of site or individual emission sources	One or multiple FOPs cover the entire site (consists of multiple facilities)
Permits include terms and conditions under which the applicant must construct and operate its various equipment and processes on a facility basis.	Permits include terms and conditions that specify the general operational requirements of the site; and also include codification of all applicable requirements for emission units at the site.
Opportunity for EPA review for Federal Prevention of Significant Deterioration (PSD) and Nonattainment (NA) permits for major sources.	Opportunity for EPA review, Affected states review, and a Public petition period for every FOP.
Permits have a table listing maximum emission limits for pollutants	Permit has an applicable requirements table and Periodic Monitoring (PM) / Compliance Assurance Monitoring (CAM) tables which document applicable monitoring requirements.
Permits can be altered or amended upon application by company. Permits must be issued before construction or modification of facilities can begin.	Permits can be revised through several revision processes, which provide for different levels of public notice and opportunity to comment. Changes that would be significant revisions require that a revised permit be issued before those changes can be operated.
NSR permits are issued independent of FOP requirements.	FOP are independent of NSR permits, but contain a list of all NSR permits incorporated by reference

[SEQ CHAPTER \h \r 1]New Source Review Requirements

Below is a list of the New Source Review (NSR) permits for the permitted area. These NSR permits are incorporated by reference into the operating permit and are enforceable under it. These permits can be found in the main TCEQ file room, located on the first floor of Building E, 12100 Park 35 Circle, Austin, Texas. The Public Education Program may be contacted at 1-800-687-4040 or the Air Permits Division (APD) may be contacted at 1-512-239-1250 for help with any question.

Additionally, the site contains emission units that are permitted by rule under the requirements of 30 TAC Chapter 106, Permits by Rule. The following table specifies the permits by rule that apply to the site. All current permits by rule are contained in Chapter 106. Outdated 30 TAC Chapter 106 permits by rule may be viewed at the following Web site:

[HYPERLINK "http://www.tceq.texas.gov/permitting/air/permitbyrule/historical_rules/old106list/index106.html"]

Outdated Standard Exemption lists may be viewed at the following Web site:

[HYPERLINK "http://www.tceq.texas.gov/permitting/air/permitbyrule/historical_rules/oldselist/se_index.html"]

The status of air permits and applications and a link to the Air Permits Remote Document Server is located at the following Web site:

[HYPERLINK "http://www.tceq.texas.gov/permitting/air/nav/air_status_permits.html"]

Emission Units and Emission Points

In air permitting terminology, any source capable of generating emissions (for example, an engine or a sandblasting area) is called an Emission Unit. For purposes of Title V, emission units are specifically listed in the operating permit when they have applicable requirements other than New Source Review (NSR), or when they are listed in the permit shield table.

The actual physical location where the emissions enter the atmosphere (for example, an engine stack or a sand-blasting yard) is called an emission point. For New Source Review preconstruction permitting purposes, every emission unit has an associated emission point. Emission limits are listed in an NSR permit, associated with an emission point. This list of emission points and emission limits per pollutant is commonly referred to as the "Maximum Allowable Emission Rate Table", or "MAERT" for short. Specifically, the MAERT lists the Emission Point Number (EPN) that identifies the emission point, followed immediately by the Source Name, identifying the emission unit that is the source of those emissions on this table.

Thus, by reference, an emission unit in a Title V operating permit is linked by reference number to an NSR authorization, and its related emission point.

Monitoring Sufficiency

Federal and state rules, 40 CFR § 70.6(a)(3)(i)(B) and 30 TAC § 122.142(c) respectively, require that each federal operating permit include additional monitoring for applicable requirements that lack periodic or instrumental monitoring (which may include recordkeeping that serves as monitoring) that yields reliable data from a relevant time period that are representative of the emission unit's compliance with the applicable emission limitation or standard. Furthermore, the federal operating permit must include compliance assurance monitoring (CAM) requirements for emission sources that meet the applicability criteria of 40 CFR Part 64 in accordance with 40 CFR § 70.6(a)(3)(i)(A) and 30 TAC § 122.604(b).

With the exception of any emission units listed in the Periodic Monitoring or CAM Summaries in the FOP, the TCEQ Executive Director has determined that the permit contains sufficient monitoring, testing, recordkeeping, and reporting requirements that assure compliance with the applicable requirements. If applicable, each emission unit that requires additional monitoring in the form of periodic monitoring or CAM is described in further detail under the Rationale for CAM/PM Methods Selected section following this paragraph.

Rationale for Compliance Assurance Monitoring (CAM)/ Periodic Monitoring Methods Selected

Compliance Assurance Monitoring (CAM):

Compliance Assurance Monitoring (CAM) is a federal monitoring program established under Title 40 Code of Federal Regulations Part 64 (40 CFR Part 64).

Emission units are subject to CAM requirements if they meet the following criteria:

1. the emission unit is subject to an emission limitation or standard for an air pollutant (or surrogate thereof) in an applicable requirement;

2. the emission unit uses a control device to achieve compliance with the emission limitation or standard specified in the applicable requirement; and

3. the emission unit has the pre-control device potential to emit greater than or equal to the amount in tons per year for a site to be classified as a major source.

The following table(s) identify the emission unit(s) that are subject to CAM:

Unit/Group/Process Information	
ID No.: 32V156OH	
Control Device ID No.: 26UTLFLR	Control Device Type: Flare
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Vent Gas Controls	SOP Index No.: R5121-UF
Pollutant: VOC	Main Standard: § 115.122(a)(1)
Monitoring Information	
Indicator: Pilot Flame	
Minimum Frequency: Continuous	
Averaging Period: n/a	
Deviation Limit: No Pilot Flame	
Basis of CAM: It is widely practiced and accepted to monitor the flare pilot flame by closed circuit cameras, thermocouples and visual inspection. The presence of the pilot flame demonstrates that VOC emissions are combusted. Monitoring the presence of a pilot flame is required in many federal rules, including: 40 CFR Part 60, Subparts K, III, NNN, QQQ, and RRR; 40 CFR Part 61, Subparts BB and FF; and 40 CFR Part 63, Subparts G, R, W, DD, and HH.	

Unit/Group/Process Information	
ID No.: 32V181OH	
Control Device ID No.: 26UTLFLR	Control Device Type: Flare
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Vent Gas Controls	SOP Index No.: R5121-1
Pollutant: VOC	Main Standard: § 115.122(a)(1)
Monitoring Information	
Indicator: Pilot Flame	
Minimum Frequency: Continuous	
Averaging Period: n/a	
Deviation Limit: No Pilot Flame	
Basis of CAM: It is widely practiced and accepted to monitor the flare pilot flame by closed circuit cameras, thermocouples and visual inspection. The presence of the pilot flame demonstrates that VOC emissions are combusted. Monitoring the presence of a pilot flame is required in many federal rules, including: 40 CFR Part 60, Subparts K, III, NNN, QQQ, and RRR; 40 CFR Part 61, Subparts BB and FF; and 40 CFR Part 63, Subparts G, R, W, DD, and HH.	

Unit/Group/Process Information	
ID No.: 32V182OH	
Control Device ID No.: 26UTLFLR	Control Device Type: Flare
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Vent Gas Controls	SOP Index No.: R5121-1
Pollutant: VOC	Main Standard: § 115.122(a)(1)
Monitoring Information	
Indicator: Pilot Flame	
Minimum Frequency: Continuous	
Averaging Period: n/a	
Deviation Limit: No Pilot Flame	
Basis of CAM: It is widely practiced and accepted to monitor the flare pilot flame by closed circuit cameras, thermocouples and visual inspection. The presence of the pilot flame demonstrates that VOC emissions are combusted. Monitoring the presence of a pilot flame is required in many federal rules, including: 40 CFR Part 60, Subparts K, III, NNN, QQQ, and RRR; 40 CFR Part 61, Subparts BB and FF; and 40 CFR Part 63, Subparts G, R, W, DD, and HH.	

Unit/Group/Process Information	
ID No.: 32V219OH	
Control Device ID No.: 60MN108INC	Control Device Type: Thermal Incinerator (Direct Flame Incinerator/Regenerative Thermal Oxidizer)
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Vent Gas Controls	SOP Index No.: R5121-108
Pollutant: VOC	Main Standard: § 115.122(a)(1)
Monitoring Information	
Indicator: Combustion Temperature / Exhaust Gas Temperature	
Minimum Frequency: once per day	
Averaging Period: n/a*	
Deviation Limit: Minimum Combustion Temperature = 1585 degrees Fahrenheit	
Basis of CAM: It is widely practiced and accepted to use performance tests, manufacturer's recommendations, engineering calculations and/or historical data to establish a minimum temperature for thermal incinerators. This minimum temperature must be maintained in order for the proper destruction efficiency. Operation below the minimum combustion temperature will result in incomplete combustion and potential noncompliance with emission limitations and/or standards. The monitoring of the combustion temperature of a thermal incinerator is commonly required in federal and state rules, including: 40 CFR Part 60, Subparts III, NNN, QQQ, and RRR; 40 CFR Part 61, Subparts BB and FF; 40 CFR Part 63, Subparts G, R, DD, EE, and HH; and 30 TAC Chapter 115.	

*The permit holder may elect to collect monitoring data on a more frequent basis and calculate the average as specified by the minimum frequency, for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis and shall not be collected and used in particular instances to avoid reporting deviations.

Unit/Group/Process Information	
ID No.: 32V219OH	
Control Device ID No.: 60MN109INC	Control Device Type: Thermal Incinerator (Direct Flame Incinerator/Regenerative Thermal Oxidizer)
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Vent Gas Controls	SOP Index No.: R5121-109
Pollutant: VOC	Main Standard: § 115.122(a)(1)
Monitoring Information	
Indicator: Combustion Temperature / Exhaust Gas Temperature	
Minimum Frequency: once per day	
Averaging Period: n/a*	
Deviation Limit: Minimum Combustion Temperature = 1585 degrees Fahrenheit	
Basis of CAM: It is widely practiced and accepted to use performance tests, manufacturer's recommendations, engineering calculations and/or historical data to establish a minimum temperature for thermal incinerators. This minimum temperature must be maintained in order for the proper destruction efficiency. Operation below the minimum combustion temperature will result in incomplete combustion and potential noncompliance with emission limitations and/or standards. The monitoring of the combustion temperature of a thermal incinerator is commonly required in federal and state rules, including: 40 CFR Part 60, Subparts III, NNN, QQQ, and RRR; 40 CFR Part 61, Subparts BB and FF; 40 CFR Part 63, Subparts G, R, DD, EE, and HH; and 30 TAC Chapter 115.	

*The permit holder may elect to collect monitoring data on a more frequent basis and calculate the average as specified by the minimum frequency, for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis and shall not be collected and used in particular instances to avoid reporting deviations.

Compliance Review

1. In accordance with 30 TAC Chapter 60, the compliance history was reviewed on April 3, 2017.
   Site rating: 0.21 / Satisfactory Company rating: 0.74 / Satisfactory
   (High < 0.10; Satisfactory ≥ 0.10 and ≤ 55; Unsatisfactory > 55)
2. Has the permit changed on the basis of the compliance history or site/company rating? .....No

Site/Permit Area Compliance Status Review

1. Were there any out-of-compliance units listed on Form OP-ACPS?.....No
2. Is a compliance plan and schedule included in the permit? .....No

[SEQ CHAPTER \H \R 1]FEDERAL OPERATING PERMIT

A FEDERAL OPERATING PERMIT IS HEREBY ISSUED TO
Celanese Ltd.

AUTHORIZING THE OPERATION OF
Clear Lake Plant
Ethylene Oxide/Ethylene Glycol
Industrial Organic Chemicals

LOCATED AT
Harris County, Texas
Latitude 29° 37' 17" Longitude 95° 3' 50"
Regulated Entity Number: RN100227016

This permit is issued in accordance with and subject to the Texas Clean Air Act (TCAA), Chapter 382 of the Texas Health and Safety Code and Title 30 Texas Administrative Code Chapter 122 (30 TAC Chapter 122), Federal Operating Permits. Under 30 TAC Chapter 122, this permit constitutes the permit holder's authority to operate the site and emission units listed in this permit. Operations of the site and emission units listed in this permit are subject to all additional rules or amended rules and orders of the Commission pursuant to the TCAA.

This permit does not relieve the permit holder from the responsibility of obtaining New Source Review authorization for new, modified, or existing facilities in accordance with 30 TAC Chapter 116, Control of Air Pollution by Permits for New Construction or Modification.

The site and emission units authorized by this permit shall be operated in accordance with 30 TAC Chapter 122, the general terms and conditions, special terms and conditions, and attachments contained herein.

This permit shall expire five years from the date of issuance. The renewal requirements specified in 30 TAC § 122.241 must be satisfied in order to renew the authorization to operate the site and emission units.

Permit No: O1986 Issuance Date: _____

Table of Contents

Section **Page**

[TOC \o "1-3" \h \z \t "SOP_Heading1,1,SOP_Heading2,2,SOP_Heading2 + Centered,2,SOP_Heading1 + Centered,1"]

General Terms and Conditions

The permit holder shall comply with all terms and conditions contained in 30 TAC § 122.143 (General Terms and Conditions), 30 TAC § 122.144 (Recordkeeping Terms and Conditions), 30 TAC § 122.145 (Reporting Terms and Conditions), and 30 TAC § 122.146 (Compliance Certification Terms and Conditions).

In accordance with 30 TAC § 122.144(1), records of required monitoring data and support information required by this permit, or any applicable requirement codified in this permit, are required to be maintained for a period of five years from the date of the monitoring report, sample, or application unless a longer data retention period is specified in an applicable requirement. The five year record retention period supersedes any less stringent retention requirement that may be specified in a condition of a permit identified in the New Source Review Authorization attachment.

If the permit holder chooses to demonstrate that this permit is no longer required, a written request to void this permit shall be submitted to the Texas Commission on Environmental Quality (TCEQ) by the Responsible Official in accordance with 30 TAC § 122.161(e). The permit holder shall comply with the permit's requirements, including compliance certification and deviation reporting, until notified by the TCEQ that this permit is voided.

The permit holder shall comply with 30 TAC Chapter 116 by obtaining a New Source Review authorization prior to new construction or modification of emission units located in the area covered by this permit.

All reports required by this permit must include in the submittal a cover letter which identifies the following information: company name, TCEQ regulated entity number, air account number (if assigned), site name, area name (if applicable), and Air Permits Division permit number(s).

[SEQ CHAPTER \h \r 1]Special Terms and Conditions:

Emission Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting

1. Permit holder shall comply with the following requirements:

    A. Emission units (including groups and processes) in the Applicable Requirements Summary attachment shall meet the limitations, standards, equipment specifications, monitoring, recordkeeping, reporting, testing, and other requirements listed in the Applicable Requirements Summary attachment to assure compliance with the permit.

    B. The textual description in the column titled "Textual Description" in the Applicable Requirements Summary attachment is not enforceable and is not deemed as a substitute for the actual regulatory language. The Textual Description is provided for information purposes only.

    C. A citation listed on the Applicable Requirements Summary attachment, which has a notation [G] listed before it, shall include the referenced section and subsection for all commission rules, or paragraphs for all federal and state regulations and all subordinate paragraphs, subparagraphs and clauses, subclauses, and items contained within the referenced citation as applicable requirements.

D. When a grouped citation, notated with a [G] in the Applicable Requirements Summary, contains multiple compliance options, the permit holder must keep records of when each compliance option was used.

E. Emission units subject to 40 CFR Part 63, Subpart F as identified in the attached Applicable Requirements Summary table are subject to 30 TAC Chapter 113, Subchapter C, §113.110 which incorporates the 40 CFR Part 63 Subpart by reference.

F. Emission units subject to 40 CFR Part 63, Subpart G as identified in the attached Applicable Requirements Summary table are subject to 30 TAC Chapter 113, Subchapter C, §113.120 which incorporates the 40 CFR Part 63 Subpart by reference.

G. Emission units subject to 40 CFR Part 63, Subpart H as identified in the attached Applicable Requirements Summary table are subject to 30 TAC Chapter 113, Subchapter C, §113.130 which incorporates the 40 CFR Part 63 Subpart by reference.

H. Emission units subject to 40 CFR Part 63, Subpart ZZZZ as identified in the attached Applicable Requirements Summary table are subject to 30 TAC Chapter 113, Subchapter C, §113.1090 which incorporates the 40 CFR Part 63 Subpart by reference.

I. For the purpose of generating emission reduction credits through 30 TAC Chapter 101, Subchapter H, Division 1 (Emission Credit Banking and Trading), the permit holder shall comply with the following requirements:

(i) Title 30 TAC § 101.302 (relating to General Provisions)

(ii) Title 30 TAC § 101.303 (relating to Emission Reduction Credit Generation Certification)

(iii) Title 30 TAC § 101.304 (relating to Mobile Emission Reduction Credit Generation and Certification)

(iv) Title 30 TAC § 101.309 (relating to Emission Credit Banking and Trading)

(v) The terms and conditions by which the emission limits are established to generate the reduction credit are applicable requirements of this permit

J. The permit holder shall comply with the following 30 TAC Chapter 101, Subchapter H, Division 3 (Mass Emission Cap and Trade Program) Requirements:

(i) Title 30 TAC § 101.352 (relating to General Provisions)

(ii) Title 30 TAC § 101.353 (relating to Allocation of Allowances)

(iii) Title 30 TAC § 101.354 (relating to Allowance Deductions)

(iv) Title 30 TAC § 101.356 (relating to Allowance Banking and Trading)

(v) Title 30 TAC § 101.358 (relating to Emission Monitoring and Compliance Demonstration)

(vi) Title 30 TAC § 101.359 (relating to Reporting)

(vii) Title 30 TAC § 101.360 (relating to Level of Activity Certification)

(viii) The terms and conditions by which the emission limits are established to meet or exceed the cap are applicable requirements of this permit

K. For the purpose of generating discrete emission reduction credits through 30 TAC Chapter 101, Subchapter H, Division 4 (Discrete Emission Credit Banking and Trading), the permit holder shall comply with the following requirements:

(i) Title 30 TAC § 101.372 (relating to General Provisions)

(ii) Title 30 TAC § 101.373 (relating to Discrete Emission Reduction Credit Generation and Certification)

(iii) Title 30 TAC § 101.374 (relating to Mobile Discrete Emission Reduction Credit Generation and Certification)

(iv) Title 30 TAC § 101.378 (relating to Discrete Emission Credit Banking and Trading)

(v) The terms and conditions by which the emission limits are established to generate the discrete reduction credit are applicable requirements of this permit

L. The permit holder shall comply with the following 30 TAC Chapter 101, Subchapter H, Division 6 (Highly Reactive Volatile Organic Compound Emissions Cap and Trade Program) requirements:

(i) Title 30 TAC § 101.393 (relating to General Provisions)

(ii) Title 30 TAC § 101.394 (relating to Allocation of Allowances)

(iii) Title 30 TAC § 101.396 (relating to Allowance Deductions)

(iv) Title 30 TAC § 101.399 (relating to Allowance Banking and Trading)

(v) Title 30 TAC § 101.400 (relating to Reporting)

(vi) The terms and conditions by which the emission limits are established to meet or exceed the cap are applicable requirements of this permit

2. The permit holder shall comply with the following sections of 30 TAC Chapter 101 (General Air Quality Rules):

A. Title 30 TAC § 101.1 (relating to Definitions), insofar as the terms defined in this section are used to define the terms used in other applicable requirements

B. Title 30 TAC § 101.3 (relating to Circumvention)

C. Title 30 TAC § 101.8 (relating to Sampling), if such action has been requested by the TCEQ

D. Title 30 TAC § 101.9 (relating to Sampling Ports), if such action has been requested by the TCEQ

E. Title 30 TAC § 101.10 (relating to Emissions Inventory Requirements)

F. Title 30 TAC § 101.201 (relating to Emission Event Reporting and Recordkeeping Requirements)

G. Title 30 TAC § 101.211 (relating to Scheduled Maintenance, Start-up, and Shutdown Reporting and Recordkeeping Requirements)

H. Title 30 TAC § 101.221 (relating to Operational Requirements)

I. Title 30 TAC § 101.222 (relating to Demonstrations)

J. Title 30 TAC § 101.223 (relating to Actions to Reduce Excessive Emissions)

3. Permit holder shall comply with the following requirements of 30 TAC Chapter 111:

A. Visible emissions from stationary vents with a flow rate of less than 100,000 actual cubic feet per minute and constructed after January 31, 1972 that are not listed in the Applicable Requirements Summary attachment for 30 TAC Chapter 111, Subchapter A, Division 1 , shall not exceed 20% opacity averaged over a six-minute period. The permit holder shall comply with the following requirements for stationary vents at the site subject to this standard:

(i) Title 30 TAC § 111.111(a)(1)(B) (relating to Requirements for Specified Sources)

(ii) Title 30 TAC § 111.111(a)(1)(E)

(iii) Title 30 TAC § 111.111(a)(1)(F)(i), (ii), (iii), or (iv)

(iv) For emission units with vent emissions subject to 30 TAC § 111.111(a)(1)(B), complying with 30 TAC § 111.111(a)(1)(F)(ii), (iii), or (iv), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146. These periodic monitoring requirements do not apply to vents that are not capable of producing visible emissions such as vents that emit only colorless VOCs; vents from non-fuming liquids; vents that provide passive ventilation, such as plumbing vents; or vent emissions from any other source that does not obstruct the transmission of light. Vents, as specified in the "Applicable Requirements Summary" attachment, that are subject to the emission limitation of 30 TAC § 111.111(a)(1)(B) are not subject to the following periodic monitoring requirements:

(1) An observation of stationary vents from emission units in operation shall be conducted at least once during each calendar quarter unless the emission unit is not operating for the entire quarter.

(2) For stationary vents from a combustion source, if an alternative to the normally fired fuel is fired for a period greater than or equal to 24 consecutive hours, the permit holder shall conduct an observation of the stationary vent for each such period to determine if visible emissions are present. If such period is greater than 3 months, observations shall be conducted once during each quarter. Supplementing the normally fired fuel with natural gas or fuel gas to increase the net heating value to the minimum required value does not constitute creation of an alternative fuel.

(3) Records of all observations shall be maintained.

(4) Visible emissions observations of emission units operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of emission units operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions observations shall be made during times when the activities described in 30 TAC § 111.111(a)(1)(E) are not taking place. Visible emissions shall be determined with each stationary vent in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each stationary vent during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

(5) Compliance Certification:

(a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(1) and (a)(1)(B).

(b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(1)(F) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is

performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

(c) Some vents may be subject to multiple visible emission or monitoring requirements. All credible data must be considered when certifying compliance with this requirement even if the observation or monitoring was performed to demonstrate compliance with a different requirement.

B. Certification of opacity readers determining opacities under Method 9 (as outlined in 40 CFR Part 60, Appendix A) to comply with opacity monitoring requirements shall be accomplished by completing the Visible Emissions Evaluators Course, or approved agency equivalent, no more than 180 days before the opacity reading.

C. For solid fuel heating devices, the permit holder shall comply with the requirements of 30 TAC § 111.111(c).

4. For storage vessels maintaining working pressure as specified in 30 TAC Chapter 115, Subchapter B, Division 1: Storage of Volatile Organic Compounds, the permit holder shall comply with the requirements of 30 TAC § 115.112(e)(1).

5. The permit holder shall comply with the following requirements of 30 TAC Chapter 115, Subchapter F, Division 3, Degassing of Storage Tanks, Transport Vessels and Marine Vessels:

A. For degassing of stationary VOC storage tanks, the permit holder shall comply with the following requirements:

(i) Title 30 TAC § 115.541(a) - (c) (relating to Emission Specifications)

(ii) Title 30 TAC § 115.541(f) (relating to Emission Specifications), for floating roof storage tanks

(iii) Title 30 TAC § 115.542(a) and (a)(1), (a)(2), (a)(3) or (a)(4) (relating to Control Requirements). Where the requirements of 30 TAC Chapter 115, Subchapter F contain multiple compliance options, the permit holder shall keep records of when each compliance option was used.

(iv) Title 30 TAC § 115.542(b) - (d), (relating to Control Requirements)

(v) Title 30 TAC § 115.543 (relating to Alternate Control Requirements)

(vi) Title 30 TAC § 115.544(a)(1) and (a)(2) (relating to Inspection, Monitoring, and Testing Requirements), for inspections

(vii) Title 30 TAC § 115.544(b) (relating to Inspection, Monitoring, and Testing Requirements), for monitoring

(viii) Title 30 TAC § 115.544(b)(1) and (b)(2) (relating to Inspection, Monitoring, and Testing Requirements), for monitoring of control devices

(ix) Title 30 TAC § 115.544(b)(2)(A) - (J) (relating to Inspection, Monitoring, and Testing Requirements), for monitoring (as appropriate to the control device)

(x) Title 30 TAC § 115.544(b)(3), (b)(4) and (b)(6) (relating to Inspection, Monitoring, and Testing Requirements), for VOC concentration or lower explosive limit threshold monitoring

(xi) Title 30 TAC § 115.544(c), and (c)(1) - (c)(3) (relating to Inspection, Monitoring, and Testing Requirements), for testing of control devices used to comply with 30 TAC § 115.542(a)(1)

(xii) Title 30 TAC § 115.545(1) - (7), (9) - (11) and (13) (relating to Approved Test Methods)

(xiii) Title 30 TAC § 115.546(a), (a)(1) and (a)(3) (relating to Recordkeeping and Notification Requirements), for recordkeeping

(xiv) Title 30 TAC § 115.546(a)(2) and (a)(2)(A) - (J) (relating to Recordkeeping and Notification Requirements), for recordkeeping (as appropriate to the control device)

(xv) Title 30 TAC § 115.546(a)(4) (relating to Recordkeeping and Notification Requirements), for recordkeeping of testing of control devices used to comply with 30 TAC § 115.542(a)(1)

(xvi) Title 30 TAC § 115.546(b) (relating to Recordkeeping and Notification Requirements), for notification

(xvii) Title 30 TAC § 115.547(4) (relating to Exemptions)

B. For the degassing of all transport vessels with a nominal capacity of 8,000 gallons or more, the permit holder shall comply with the following requirements:

(i) Title 30 TAC § 115.541(a) - (c) and (d) (relating to Emission Specifications)

(ii) Title 30 TAC § 115.542(a) and (a)(1), (a)(2), (a)(3) or (a)(4) (relating to Control Requirements). Where the requirements of 30 TAC Chapter 115, Subchapter F contain multiple compliance options, the permit holder shall keep records of when each compliance option was used.

(iii) Title 30 TAC § 115.542(b), (c) and (e) (relating to Control Requirements)

(iv) Title 30 TAC § 115.543 (relating to Alternate Control Requirements)

(v) Title 30 TAC § 115.544(a)(1) and (a)(2) (relating to Inspection, Monitoring, and Testing Requirements), for inspections

(vi) Title 30 TAC § 115.544(b) (relating to Inspection, Monitoring, and Testing Requirements), for monitoring

(vii) Title 30 TAC § 115.544(b)(1) and (b)(2) (relating to Inspection, Monitoring, and Testing Requirements), for monitoring of control devices

(viii) Title 30 TAC § 115.544(b)(2)(A) - (J) (relating to Inspection, Monitoring, and Testing Requirements), for monitoring (as appropriate to the control device)

(ix) Title 30 TAC § 115.544(b)(3), (b)(4) and (b)(6) (relating to Inspection, Monitoring, and Testing Requirements), for VOC concentration or lower explosive limit threshold monitoring

(x) Title 30 TAC § 115.544(c), and (c)(1) - (c)(3) (relating to Inspection, Monitoring, and Testing Requirements), for testing of control devices used to comply with 30 TAC § 115.542(a)(1)

(xi) Title 30 TAC § 115.545(1) - (11) and (13) (relating to Approved Test Methods)

(xii) Title 30 TAC § 115.546(a), (a)(1) and (a)(3) (relating to Recordkeeping and Notification Requirements), for recordkeeping

(xiii) Title 30 TAC § 115.546(a)(2) and (a)(2)(A) - (J) (relating to Recordkeeping and Notification Requirements), for recordkeeping (as appropriate to the control device)

(xiv) Title 30 TAC § 115.546(a)(4) (relating to Recordkeeping and Notification Requirements), for recordkeeping of testing of control devices used to comply with 30 TAC § 115.542(a)(1)

(xv) Title 30 TAC § 115.546(b) (relating to Recordkeeping and Notification Requirements), for notification

6. The permit holder shall comply with the following requirements of 30 TAC Chapter 115, Subchapter H, Division 1 for pressure relief devices not controlled by a flare:

A. Title 30 TAC § 115.725(c)

B. Title 30 TAC § 115.725(c)(1), (c)(1)(A) - (C)

C. Title 30 TAC § 115.725(c)(2)

D. Title 30 TAC § 115.725(c)(3), (c)(3)(A) - (E)

E. Title 30 TAC § 115.725(c)(4)

F. Title 30 TAC § 115.725(l)

G. Title 30 TAC § 115.726(c), (c)(1) - (4)

7. The permit holder shall comply with the requirements of 30 TAC § 115.726(e)(3)(A) for vent streams having no potential to emit HRVOC.

8. The permit holder shall comply with the requirements of 30 TAC § 115.726(e)(3)(A) for vent streams from sources exempt under 30 TAC § 115.727(c)(3).

9. The permit holder shall comply with the following requirements for units subject to any subpart of 40 CFR Part 60, unless otherwise stated in the applicable subpart:

   A. Title 40 CFR § 60.7 (relating to Notification and Recordkeeping)

   B. Title 40 CFR § 60.8 (relating to Performance Tests)

   C. Title 40 CFR § 60.11 (relating to Compliance with Standards and Maintenance Requirements)

   D. Title 40 CFR § 60.12 (relating to Circumvention)

   E. Title 40 CFR § 60.13 (relating to Monitoring Requirements)

   F. Title 40 CFR § 60.14 (relating to Modification)

   G. Title 40 CFR § 60.15 (relating to Reconstruction)

   H. Title 40 CFR § 60.19 (relating to General Notification and Reporting Requirements)

10. The permit holder shall comply with the following requirements for units subject to any subpart of 40 CFR Part 61, unless otherwise stated in the applicable subpart:

   A. Title 40 CFR § 61.05 (relating to Prohibited Activities)

   B. Title 40 CFR § 61.07 (relating to Application for Approval of Construction or Modification)

   C. Title 40 CFR § 61.09 (relating to Notification of Start-up)

   D. Title 40 CFR § 61.10 (relating to Source Reporting and Request Waiver)

   E. Title 40 CFR § 61.12 (relating to Compliance with Standards and Maintenance Requirements)

   F. Title 40 CFR § 61.13 (relating to Emissions Tests and Waiver of Emission Tests)

   G. Title 40 CFR § 61.14 (relating to Monitoring Requirements)

   H. Title 40 CFR § 61.15 (relating to Modification)

   I. Title 40 CFR § 61.19 (relating to Circumvention)

11. For facilities where no benzene is present onsite in wastes, products, by-products or intermediates, the permit holder shall comply with the reporting requirement in 40 CFR § 61.357(a).

12. The permit holder shall comply with the requirements of 30 TAC Chapter 113, Subchapter C, § 113.100 for units subject to any subpart of 40 CFR Part 63, unless otherwise stated in the applicable subpart.

13. For the chemical manufacturing process specified in 40 CFR Part 63, Subpart F, the permit holder shall comply with 40 CFR § 63.103(a) (relating to General Compliance,

Reporting, and Recordkeeping Provisions) (Title 30 TAC Chapter 113, Subchapter C, § 113.110 incorporated by reference).

14. For the chemical manufacturing facilities with a 40 CFR Part 63, Subpart G Group 2 wastewater stream, the permit holder shall comply with (Title 30 TAC Chapter 113, Subchapter C, § 113.120 incorporated by reference):

    A. Title 40 CFR § 63.132(a), (a)(1), and (a)(1)(i) (relating to Process Wastewater Provisions - General)

    B. Title 40 CFR § 63.146(b)(1) (relating to Process Wastewater Provisions - Reporting)

    C. Title 40 CFR § 63.147(b)(8) (relating to Process Wastewater Provisions - Recordkeeping)

15. For the transfer of gas streams having the characteristics specified in § 63.107(b) - (h) or § 63.107(i) the permit holder shall comply with the following requirements:

    A. Title 40 CFR § 63.113(i) (relating to Process Vent Provisions - Reference Control Technology).

    B. Title 40 CFR § 63.152(b)(6), (c)(4)(iv) and (d)(4) (relating to General Reporting and Continuous Records).

16. For the transfer of Group 1 wastewater streams or residuals from Group 1 wastewater streams the permit holder shall comply with the following requirements:

    A. Title 40 CFR § 63.132(g) (relating to Process Wastewater Provisions - General)

    B. Title 40 CFR § 63.152(b)(5) and (c)(4)(iv) (relating to General Reporting and Continuous Records)

17. For the chemical manufacturing facilities subject to leak detection requirements in 40 CFR Part 63, Subpart G, the permit holder shall comply with the following requirements (Title 30 TAC Chapter 113, Subchapter C, § 113.120 incorporated by reference):

    A. General Leak Detection Requirements:

        (i) Title 40 CFR § 63.148(d)(1) - (3), and (e) (relating to Leak Inspection Provisions)

        (ii) Title 40 CFR § 63.148(c), (g), (g)(2), (h), and (h)(2) (relating to Leak Inspection Provisions), for monitoring and testing requirements

        (iii) Title 40 CFR §§ 63.148(g)(2), (h)(2), (i)(1) - (2), (i)(4)(i) - (viii), (i)(5), and 63.152(a)(1) - (5), for recordkeeping requirements

        (iv) Title 40 CFR §§ 63.148(j), 63.151(a)(6)(i) - (iii), (b)(1) - (2), (j)(1) - (3), 63.152(a)(1) - (5), (b), (b)(1)(i) - (ii), and (b)(4), for reporting requirements

    B. For closed vent system or vapor collection systems constructed of hard piping:

(i) Title 40 CFR § 63.148(b)(1)(ii) (relating to Leak Inspection Provisions), for monitoring and testing requirements
