(ii) Title 40 CFR § 63.148(i)(6) (relating to Leak Inspection Provisions), for recordkeeping requirements

C. For facilities operating flow indicators:

(i) Title 40 CFR § 63.148(f)(1) (relating to Leak Inspection Provisions), for monitoring and testing requirements

(ii) Title 40 CFR § 63.148(f)(1), (i)(3)(i) (relating to Leak Inspection Provisions), for recordkeeping requirements

(iii) Title 40 CFR § 63.148(j)(2) (relating to Leak Inspection Provisions), for reporting requirements

D. For facilities not operating flow indicators:

(i) Title 40 CFR § 63.148(f)(2) (relating to Leak Inspection Provisions), for monitoring and testing requirements

(ii) Title 40 CFR § 63.148(i)(3)(ii) (relating to Leak Inspection Provisions), for recordkeeping requirements

(iii) Title 40 CFR § 63.148(j)(3) (relating to Leak Inspection Provisions), for reporting requirements

18. The permit holder shall comply with certified registrations submitted to the TCEQ for purposes of establishing federally enforceable emission limits. A copy of the certified registration shall be maintained with the permit. Records sufficient to demonstrate compliance with the established limits shall be maintained. The certified registration and records demonstrating compliance shall be provided, on request, to representatives of the appropriate TCEQ regional office and any local air pollution control agency having jurisdiction over the site. The permit holder shall submit updated certified registrations when changes at the site require establishment of new emission limits. If changes result in emissions that do not remain below major source thresholds, the permit holder shall submit a revision application to codify the appropriate requirements in the permit.

Additional Monitoring Requirements

19. Unless otherwise specified, the permit holder shall comply with the compliance assurance monitoring requirements as specified in the attached "CAM Summary" upon issuance of the permit. In addition, the permit holder shall comply with the following:

A. The permit holder shall comply with the terms and conditions contained in 30 TAC § 122.147 (General Terms and Conditions for Compliance Assurance Monitoring).

B. The permit holder shall report, consistent with the averaging time identified in the "CAM Summary," deviations as defined by the deviation limit in the "CAM Summary." Any monitoring data below a minimum limit or above a maximum limit, that is collected in accordance with the requirements specified in

40 CFR § 64.7(c), shall be reported as a deviation. Deviations shall be reported according to 30 TAC § 122.145 (Reporting Terms and Conditions).

C. The permit holder may elect to collect monitoring data on a more frequent basis and average the data, consistent with the averaging time specified in the "CAM Summary," for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis. In no event shall data be collected and used in particular instances in order to avoid reporting deviations. All monitoring data shall be collected in accordance with the requirements specified in 40 CFR § 64.7(c).

D. The permit holder shall operate the monitoring, identified in the attached "CAM Summary," in accordance with the provisions of 40 CFR § 64.7.

E. The permit holder shall comply with the requirements of 40 CFR § 70.6(a)(3)(ii)(A) and 30 TAC § 122.144(1)(A)-(F) for documentation of all required inspections.

New Source Review Authorization Requirements

20. Permit holder shall comply with the requirements of New Source Review authorizations issued or claimed by the permit holder for the permitted area, including permits, permits by rule, standard permits, flexible permits, special permits, permits for existing facilities including Voluntary Emissions Reduction Permits and Electric Generating Facility Permits issued under 30 TAC Chapter 116, Subchapter I, or special exemptions referenced in the New Source Review Authorization References attachment. These requirements:

    A. Are incorporated by reference into this permit as applicable requirements

    B. Shall be located with this operating permit

    C. Are not eligible for a permit shield

21. The permit holder shall comply with the general requirements of 30 TAC Chapter 106, Subchapter A or the general requirements, if any, in effect at the time of the claim of any PBR.

22. The permit holder shall maintain records to demonstrate compliance with any emission limitation or standard that is specified in a permit by rule (PBR) or Standard Permit listed in the New Source Review Authorizations attachment. The records shall yield reliable data from the relevant time period that are representative of the emission unit's compliance with the PBR or Standard Permit. These records may include, but are not limited to, production capacity and throughput, hours of operation, safety data sheets (SDS), chemical composition of raw materials, speciation of air contaminant data, engineering calculations, maintenance records, fugitive data, performance tests, capture/control device efficiencies, direct pollutant monitoring (CEMS, COMS, or PEMS), or control device parametric monitoring. These records shall be made readily accessible and available as required by 30 TAC § 122.144. Any monitoring or recordkeeping data indicating noncompliance with the PBR or Standard Permit shall be considered and reported as a deviation according to 30 TAC § 122.145 (Reporting Terms and Conditions).

Compliance Requirements

23. The permit holder shall certify compliance in accordance with 30 TAC § 122.146. The permit holder shall comply with 30 TAC § 122.146 using at a minimum, but not limited to, the continuous or intermittent compliance method data from monitoring, recordkeeping, reporting, or testing required by the permit and any other credible evidence or information. The certification period may not exceed 12 months and the certification must be submitted within 30 days after the end of the period being certified.

24. Permit holder shall comply with the following 30 TAC Chapter 117 requirements:

    A. The permit holder shall comply with the compliance schedules and submit written notification to the TCEQ Executive Director as required in 30 TAC Chapter 117, Subchapter H, Division 1:

        (i) For sources in the Houston-Galveston-Brazoria Nonattainment area, 30 TAC § 117.9020:

            (1) Title 30 TAC § 117.9020(2)(A), (C), and (D)

    B. The permit holder shall comply with the Initial Control Plan unit listing requirement in 30 TAC § 117.350(c) and (c)(1).

    C. The permit holder shall comply with the requirements of 30 TAC § 117.354 for Final Control Plan Procedures for Attainment Demonstration Emission Specifications and 30 TAC § 117.356 for Revision of Final Control Plan.

25. Use of Emission Credits to comply with applicable requirements:

    A. Unless otherwise prohibited, the permit holder may use emission credits to comply with the following applicable requirements listed elsewhere in this permit:

        (i) Title 30 TAC Chapter 115

        (ii) Title 30 TAC Chapter 117

        (iii) Offsets for Title 30 TAC Chapter 116

    B. The permit holder shall comply with the following requirements in order to use the emission credits to comply with the applicable requirements:

        (i) The permit holder must notify the TCEQ according to 30 TAC § 101.306(c)-(d)

        (ii) The emission credits to be used must meet all the geographic, timeliness, applicable pollutant type, and availability requirements listed in 30 TAC Chapter 101, Subchapter H, Division 1

        (iii) The executive director has approved the use of the credit according to 30 TAC § 101.306(c)-(d)

(iv) The permit holder keeps records of the use of credits towards compliance with the applicable requirements in accordance with 30 TAC § 101.302(g) and 30 TAC Chapter 122

(v) Title 30 TAC § 101.305 (relating to Emission Reductions Achieved Outside the United States)

26. Use of Discrete Emission Credits to comply with the applicable requirements:

A. Unless otherwise prohibited, the permit holder may use discrete emission credits to comply with the following applicable requirements listed elsewhere in this permit:

(i) Title 30 TAC Chapter 115

(ii) Title 30 TAC Chapter 117

(iii) If applicable, offsets for Title 30 TAC Chapter 116

(iv) Temporarily exceed state NSR permit allowables

B. The permit holder shall comply with the following requirements in order to use the credit to comply with the applicable requirements:

(i) The permit holder must notify the TCEQ according to 30 TAC § 101.376(d)

(ii) The discrete emission credits to be used must meet all the geographic, timeliness, applicable pollutant type, and availability requirements listed in 30 TAC Chapter 101, Subchapter H, Division 4

(iii) The executive director has approved the use of the discrete emission credits according to 30 TAC § 101.376(d)(1)(A)

(iv) The permit holder keeps records of the use of credits towards compliance with the applicable requirements in accordance with 30 TAC § 101.372(h) and 30 TAC Chapter 122

(v) Title 30 TAC § 101.375 (relating to Emission Reductions Achieved Outside the United States)

Risk Management Plan

27. For processes subject to 40 CFR Part 68 and specified in 40 CFR § 68.10, the permit holder shall comply with the requirements of the Accidental Release Prevention Provisions in 40 CFR Part 68. The permit holder shall submit to the appropriate agency either a compliance schedule for meeting the requirements of 40 CFR Part 68 by the date provided in 40 CFR § 68.10(a), or as part of the compliance certification submitted under this permit, a certification statement that the source is in compliance with all requirements of 40 CFR Part 68, including the registration and submission of a risk management plan.

Protection of Stratospheric Ozone

28. Permit holders at a site subject to Title VI of the FCAA Amendments shall meet the following requirements for protection of stratospheric ozone:

    A. Any on site servicing, maintenance, and repair on refrigeration and nonmotor vehicle air-conditioning appliances using ozone-depleting refrigerants or non-exempt substitutes shall be conducted in accordance with 40 CFR Part 82, Subpart F. Permit holders shall ensure that repairs on or refrigerant removal from refrigeration and nonmotor vehicle air-conditioning appliances using ozone-depleting refrigerants are performed only by properly certified technicians using certified equipment. Records shall be maintained as required by 40 CFR Part 82, Subpart F.

    B. The permit holder shall comply with 40 CFR Part 82, Subpart F related to the disposal requirements for appliances using Class I or Class II (ozone-depleting) substances or non-exempt substitutes as specified in 40 CFR §§ 82.150 - 82.166 and the applicable Part 82 Appendices.

Permit Location

29. The permit holder shall maintain a copy of this permit and records related to requirements listed in this permit on site.

Permit Shield (30 TAC § 122.148)

30. A permit shield is granted for the emission units, groups, or processes specified in the attached "Permit Shield." Compliance with the conditions of the permit shall be deemed compliance with the specified potentially applicable requirements or specified potentially applicable state-only requirements listed in the attachment "Permit Shield." Permit shield provisions shall not be modified by the executive director until notification is provided to the permit holder. No later than 90 days after notification of a change in a determination made by the executive director, the permit holder shall apply for the appropriate permit revision to reflect the new determination. Provisional terms are not eligible for this permit shield. Any term or condition, under a permit shield, shall not be protected by the permit shield if it is replaced by a provisional term or condition or the basis of the term and condition changes.

Unit Summary 18

Applicable Requirements Summary 34

Note: A "none" entry may be noted for some emission sources in this permit's "Applicable Requirements Summary" under the heading of "Monitoring and Testing Requirements" and/or "Recordkeeping Requirements" and/or "Reporting Requirements." Such a notation indicates that there are no requirements for the indicated emission source as identified under the respective column heading(s) for the stated portion of the regulation when the emission source is operating under the conditions of the specified SOP Index Number. However, other relevant requirements pursuant to 30 TAC Chapter 122 including Recordkeeping Terms and Conditions (30 TAC § 122.144), Reporting Terms and Conditions (30 TAC § 122.145), and Compliance Certification Terms and Conditions (30 TAC § 122.146) continue to apply.

CAM Summary

Unit/Group/Process Information	
ID No.: 32V156OH	
Control Device ID No.: 26UTLFLR	Control Device Type: Flare
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Vent Gas Controls	SOP Index No.: R5121-UF
Pollutant: VOC	Main Standard: § 115.122(a)(1)
Monitoring Information	
Indicator: Pilot Flame	
Minimum Frequency: Continuous	
Averaging Period: n/a	
Deviation Limit: No Pilot Flame	
CAM Text: Monitor the presence of a flare pilot flame using a thermocouple or other equivalent device to detect the presence of a flame or using an alarm that uses a thermocouple or other equivalent device to detect the absence of a flame. Maintain records of alarm events and duration of alarm events. Each monitoring device shall be accurate to within manufacturer's recommendations. Each monitoring device shall be calibrated at a frequency in accordance with the manufacturer's specifications or other written procedures that provide an adequate assurance that the device is calibrated accurately.

CAM Summary

Unit/Group/Process Information	
ID No.: 32V219OH	
Control Device ID No.: 60MN108INC	Control Device Type: Thermal Incinerator (Direct Flame Incinerator/Regenerative Thermal Oxidizer)
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Vent Gas Controls	SOP Index No.: R5121-108
Pollutant: VOC	Main Standard: § 115.122(a)(1)
Monitoring Information	
Indicator: Combustion Temperature / Exhaust Gas Temperature	
Minimum Frequency: once per day	
Averaging Period: n/a*	
Deviation Limit: Minimum Combustion Temperature = 1585 degrees Fahrenheit	
CAM Text: The monitoring device should be installed in the combustion chamber or immediately downstream of the combustion chamber. Each monitoring device shall be calibrated at a frequency in accordance with the manufacturer's specifications, other written procedures that provide an adequate assurance that the device is calibrated accurately, or at least annually, whichever is more frequent, and shall be accurate to within one of the following: ± 0.75% of the temperature being measured expressed in degrees Celsius; or ± 2.5 degrees Celsius.	

*The permit holder may elect to collect monitoring data on a more frequent basis and calculate the average as specified by the minimum frequency, for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis and shall not be collected and used in particular instances to avoid reporting deviations.

Permit Shield

Permit Shield 102

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
32EORX	N/A	40 CFR Part 60, Subpart RRR	Was not constructed, reconstructed or modified after 6/29/90
32MT3	N/A	40 CFR Part 63, Subpart Q	Cooling tower not operated with chromium-based water treatment chemicals on or after 9/8/94
32MT4	N/A	40 CFR Part 63, Subpart Q	Cooling tower not operated with chromium-based water treatment chemicals on or after 9/8/94
32MT9	N/A	40 CFR Part 63, Subpart Q	Cooling tower not operated with chromium-based water treatment chemicals on or after 9/8/94
32SU0006	N/A	40 CFR Part 60, Subpart K	Vessel does not store petroleum liquid.
32SU0016A	N/A	40 CFR Part 60, Subpart K	Vessel does not store petroleum liquid.
32SUAREA	N/A	40 CFR Part 60, Subpart K	Vessel does not store petroleum liquid.
32T168OH	N/A	40 CFR Part 60, Subpart NNN	Was not constructed, reconstructed or modified after 12/30/83.
32V1182	N/A	40 CFR Part 60, Subpart Kb	Storage vessel has a design capacity <75m3 (19,800 gal).
32V144OH	N/A	40 CFR Part 60, Subpart NNN	Facility does not meet the definition of a “distillation operation”.
32V144OH	N/A	40 CFR Part 63, Subpart G	Vent does not originate in a distillation or reaction process and thus does not meet “process vent” definition”.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
32V145	N/A	40 CFR Part 60, Subpart Kb	Storage vessel has a capacity greater than 151 cubic meters, and stores a material with a true vapor pressure less than 0.5 psia.
32V156OH	N/A	40 CFR Part 63, Subpart G	Vent contains < 50ppmw HAP and thus does not meet “process vent” definition.
32V181OH	N/A	40 CFR Part 60, Subpart NNN	Facility does not meet the definition of a “distillation operation”.
32V181OH	N/A	40 CFR Part 63, Subpart G	Vent does not originate in a distillation or reaction process and thus does not meet “process vent” definition.
32V182OH	N/A	40 CFR Part 60, Subpart NNN	Facility does not meet the definition of a “distillation operation”.
32V182OH	N/A	40 CFR Part 63, Subpart G	Vent does not originate in a distillation or reaction process and thus does not meet “process vent” definition.
32V193	N/A	40 CFR Part 60, Subpart Kb	A MACT G storage vessel that is also subject to NSPS Kb is only required to comply with the provisions of MACT G.
32V194	N/A	40 CFR Part 60, Subpart Kb	A MACT G storage vessel that is also subject to NSPS Kb is only required to comply with the provisions of MACT G.
32V195	N/A	40 CFR Part 60, Subpart Kb	A MACT G storage vessel that is also subject to NSPS Kb is only required to

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination

			comply with the provisions of MACT G.
32V219OH	N/A	40 CFR Part 60, Subpart NNN	Facility does not meet the definition of a “distillation operation”.
32V219OH	N/A	40 CFR Part 63, Subpart G	Vent does not originate in a distillation or reaction process and thus does not meet “process vent” definition.
32V220	N/A	40 CFR Part 60, Subpart Kb	Storage vessel has a capacity greater than 151 cubic meters, and stores a material with a true vapor pressure less than 0.5 psia.
32V222	N/A	40 CFR Part 60, Subpart Kb	Storage vessel has a capacity greater than 151 cubic meters, and stores a material with a true vapor pressure less than 0.5 psia.
32V306	N/A	40 CFR Part 60, Subpart Kb	A MACT G storage vessel that is also subject to NSPS Kb is only required to comply with the provisions of MACT G.
32V34	N/A	40 CFR Part 60, Subpart Kb	A MACT G storage vessel that is also subject to NSPS Kb is only required to comply with the provisions of MACT G.
32V761OH	N/A	40 CFR Part 60, Subpart NNN	Facility does not meet the definition of a “distillation operation”.
32V761OH	N/A	40 CFR Part 63, Subpart G	Vent does not originate in a distillation or reaction process and thus does not meet

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
			"process vent" definition.
33EGRX	N/A	40 CFR Part 60, Subpart RRR	Was not constructed, reconstructed, or modified after 6/29/90.
33V149	N/A	40 CFR Part 60, Subpart K	Vessel does not store petroleum liquid.
33V168	N/A	40 CFR Part 60, Subpart Kb	A MACT G storage vessel that is also subject to NSPS Kb is only required to comply with the provisions of MACT G.
33V169	N/A	40 CFR Part 60, Subpart Kb	A MACT G storage vessel that is also subject to NSPS Kb is only required to comply with the provisions of MACT G.
33V170	N/A	40 CFR Part 60, Subpart Kb	Storage vessel has a capacity greater than 151 cubic meters, and stores a material with a true vapor pressure less than 0.5 psia.
33V171	N/A	40 CFR Part 60, Subpart Kb	Storage vessel has a capacity greater than 151 cubic meters, and stores a material with a true vapor pressure less than 0.5 psia.
33V172	N/A	40 CFR Part 60, Subpart Kb	Storage vessel has a design capacity less than 75 cubic meters (19,800 gallons).
33V173	N/A	40 CFR Part 60, Subpart Kb	Storage vessel has a capacity greater than 151 cubic meters, and stores a material with a true vapor pressure less than 0.5 psia.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
33V174	N/A	40 CFR Part 60, Subpart Kb	Storage vessel has a capacity greater than 151 cubic meters, and stores a material with a true vapor pressure less than 0.5 psia.
33V191	N/A	40 CFR Part 60, Subpart Kb	A MACT G storage vessel that is also subject to NSPS Kb is only required to comply with the provisions of MACT G.
33V192	N/A	40 CFR Part 60, Subpart Kb	A MACT G storage vessel that is also subject to NSPS Kb is only required to comply with the provisions of MACT G.
33V198	N/A	40 CFR Part 60, Subpart Kb	Storage vessel has a capacity greater than 151 cubic meters, and stores a material with a true vapor pressure less than 0.5 psia.
33V200	N/A	40 CFR Part 60, Subpart Kb	Storage vessel has a capacity greater than 151 cubic meters, and stores a material with a true vapor pressure less than 0.5 psia.
33V201	N/A	40 CFR Part 60, Subpart Kb	Storage vessel has a capacity greater than 151 cubic meters, and stores a material with a true vapor pressure less than 0.5 psia.
33V225	N/A	40 CFR Part 60, Subpart Kb	A MACT G storage vessel that is also subject to NSPS Kb is only required to comply with the provisions of MACT G.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
33V23	N/A	40 CFR Part 60, Subpart Kb	Storage vessel has a capacity greater than 151 cubic meters, and stores a material with a true vapor pressure less than 0.5 psia.
33V24	N/A	40 CFR Part 60, Subpart Kb	Storage vessel has a capacity greater than 151 cubic meters, and stores a material with a true vapor pressure less than 0.5 psia.
33V343	N/A	40 CFR Part 60, Subpart Kb	A MACT G storage vessel that is also subject to NSPS Kb is only required to comply with the provisions of MACT G.
33V365	N/A	40 CFR Part 60, Subpart Kb	Storage vessel has a capacity greater than 151 cubic meters, and stores a material with a true vapor pressure less than 0.5 psia.
33V366	N/A	40 CFR Part 60, Subpart Kb	A MACT G storage vessel that is also subject to NSPS Kb is only required to comply with the provisions of MACT G.
36V1171	N/A	40 CFR Part 60, Subpart Kb	Storage vessel has a capacity greater than 151 cubic meters, and stores a material with a true vapor pressure less than 0.5 psia.
EOEGFUG	N/A	40 CFR Part 60, Subpart VV	Was not constructed, reconstructed or modified after 1/5/81.

New Source Review Authorization References by Emissions Unit

The following is a list of New Source Review (NSR) authorizations for emission units listed elsewhere in this operating permit. The NSR authorizations are applicable requirements under 30 TAC Chapter 122 and enforceable under this operating permit.

Unit/Group/Process ID No.	Emission Unit Name/Description	New Source Review Authorization
32ANALYZER	ANALYZER VENT	106.261/11/01/2003, 106.262/11/01/2003
32EOLD	EO LOADING RACK	55046
32EORX	EO REACTORS	55046
32FLR0001	EMERGENCY AND MAINTENANCE FLARE	55046
32MAINAN	ANALYZER VENT	55046
32MAINT	MAINTENANCE VENT	55046
32MN1138	UPS GENERATOR DIESEL ENGINE	106.511/09/04/2000
32MT3	UTILITY COOLING TOWER	55046
32MT4	UTILITY COOLING TOWER	55046
32MT9	PROCESS COOLING TOWER	55046
32OXYAN	ANALYZER VENT	55046
32SU0006	STORAGE VESSEL	55046
32SU0016A	STORAGE VESSEL	55046
32SUAREA	STORAGE VESSEL	55046
32T111OH	RECOVERY TOWER	55046
32T168OH	RECOVERY TOWER	55046
32UGCAN	ANALYZER VENT	55046
32V1182	STORAGE VESSEL	55046
32V144OH	PROCESS VENT	55046

New Source Review Authorization References by Emissions Unit

The following is a list of New Source Review (NSR) authorizations for emission units listed elsewhere in this operating permit. The NSR authorizations are applicable requirements under 30 TAC Chapter 122 and enforceable under this operating permit.

Unit/Group/Process ID No.	Emission Unit Name/Description	New Source Review Authorization
32V145	STORAGE VESSEL	55046
32V150OH	DISTILLATION UNIT	55046
32V156OH	DISTILLATION UNIT	55046
32V176OH	DISTILLATION UNIT	55046
32V181OH	GUARD BED VENT	55046
32V182OH	GUARD BED VENT	55046

Appendix A

Acronym List 115

Acronym List

The following abbreviations or acronyms may be used in this permit:

ACFM ..... actual cubic feet per minute
AMOC ..... alternate means of control
ARP ..... Acid Rain Program
ASTM ..... American Society of Testing and Materials
B/PA ..... Beaumont/Port Arthur (nonattainment area)
CAM ..... Compliance Assurance Monitoring
CD ..... control device
COMS ..... continuous opacity monitoring system
CVS ..... closed-vent system
D/FW ..... Dallas/Fort Worth (nonattainment area)
DR ..... Designated Representative
ElP ..... El Paso (nonattainment area)
EP ..... emission point
EPA ..... U.S. Environmental Protection Agency
EU ..... emission unit
FCAA Amendments ..... Federal Clean Air Act Amendments
FOP ..... federal operating permit
GF ..... grandfathered
gr/100 scf ..... grains per 100 standard cubic feet
HAP ..... hazardous air pollutant
H/G/B ..... Houston/Galveston/Brazoria (nonattainment area)
H_2S ..... hydrogen sulfide
ID No. ..... identification number
lb/hr ..... pound(s) per hour
MMBtu/hr ..... Million British thermal units per hour
MRRT ..... monitoring, recordkeeping, reporting, and testing
NA ..... nonattainment
N/A ..... not applicable
NADB ..... National Allowance Data Base
NO_x ..... nitrogen oxides
NSPS ..... New Source Performance Standard (40 CFR Part 60)
NSR ..... New Source Review
ORIS ..... Office of Regulatory Information Systems
Pb ..... lead
PBR ..... Permit By Rule
PM ..... particulate matter
ppmv ..... parts per million by volume
PSD ..... prevention of significant deterioration
RO ..... Responsible Official
SO_2 ..... sulfur dioxide
TCEQ ..... Texas Commission on Environmental Quality
TSP ..... total suspended particulate
TVP ..... true vapor pressure
U.S.C. ..... United States Code
VOC ..... volatile organic compound

[SEQ CHAPTER \H \R 1]FEDERAL OPERATING PERMIT

A FEDERAL OPERATING PERMIT IS HEREBY ISSUED TO
Nalco Company LLC

AUTHORIZING THE OPERATION OF
Nalco Fresno Facility
Industrial Organic Chemicals

LOCATED AT
Fort Bend County, Texas
Latitude 29° 32' 33" Longitude 95° 26' 56"
Regulated Entity Number: RN101618882

This permit is issued in accordance with and subject to the Texas Clean Air Act (TCAA), Chapter 382 of the Texas Health and Safety Code and Title 30 Texas Administrative Code Chapter 122 (30 TAC Chapter 122), Federal Operating Permits. Under 30 TAC Chapter 122, this permit constitutes the permit holder's authority to operate the site and emission units listed in this permit. Operations of the site and emission units listed in this permit are subject to all additional rules or amended rules and orders of the Commission pursuant to the TCAA.

This permit does not relieve the permit holder from the responsibility of obtaining New Source Review authorization for new, modified, or existing facilities in accordance with 30 TAC Chapter 116, Control of Air Pollution by Permits for New Construction or Modification.

The site and emission units authorized by this permit shall be operated in accordance with 30 TAC Chapter 122, the general terms and conditions, special terms and conditions, and attachments contained herein.

This permit shall expire five years from the date of issuance. The renewal requirements specified in 30 TAC § 122.241 must be satisfied in order to renew the authorization to operate the site and emission units.

Permit No: O3536 Issuance Date: April 9, 2013

[ADVANCE \x 144]For the Commission

Table of Contents

Section **Page**

[TOC \o "1-3" \h \z \t "SOP_Heading1,1,SOP_Heading2,2,SOP_Heading2 + Centered,2,SOP_Heading1 + Centered,1"]

General Terms and Conditions

The permit holder shall comply with all terms and conditions contained in 30 TAC § 122.143 (General Terms and Conditions), 30 TAC § 122.144 (Recordkeeping Terms and Conditions), 30 TAC § 122.145 (Reporting Terms and Conditions), and 30 TAC § 122.146 (Compliance Certification Terms and Conditions).

In accordance with 30 TAC § 122.144(1), records of required monitoring data and support information required by this permit, or any applicable requirement codified in this permit, are required to be maintained for a period of five years from the date of the monitoring report, sample, or application unless a longer data retention period is specified in an applicable requirement. The five year record retention period supersedes any less stringent retention requirement that may be specified in a condition of a permit identified in the New Source Review Authorization attachment.

If the permit holder chooses to demonstrate that this permit is no longer required, a written request to void this permit shall be submitted to the Texas Commission on Environmental Quality (TCEQ) by the Responsible Official in accordance with 30 TAC § 122.161(e). The permit holder shall comply with the permit's requirements, including compliance certification and deviation reporting, until notified by the TCEQ that this permit is voided.

The permit holder shall comply with 30 TAC Chapter 116 by obtaining a New Source Review authorization prior to new construction or modification of emission units located in the area covered by this permit.

All reports required by this permit must include in the submittal a cover letter which identifies the following information: company name, TCEQ regulated entity number, air account number (if assigned), site name, area name (if applicable), and Air Permits Division permit number(s).

[SEQ CHAPTER \h \r 1]Special Terms and Conditions:

Emission Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting

1. Permit holder shall comply with the following requirements:

    A. Emission units (including groups and processes) in the Applicable Requirements Summary attachment shall meet the limitations, standards, equipment specifications, monitoring, recordkeeping, reporting, testing, and other requirements listed in the Applicable Requirements Summary attachment to assure compliance with the permit.

    B. The textual description in the column titled "Textual Description" in the Applicable Requirements Summary attachment is not enforceable and is not deemed as a substitute for the actual regulatory language. The Textual Description is provided for information purposes only.

    C. A citation listed on the Applicable Requirements Summary attachment, which has a notation [G] listed before it, shall include the referenced section and subsection for all commission rules, or paragraphs for all federal and state regulations and all subordinate paragraphs, subparagraphs and clauses, subclauses, and items contained within the referenced citation as applicable requirements.

D. When a grouped citation, notated with a [G] in the Applicable Requirements Summary, contains multiple compliance options, the permit holder must keep records of when each compliance option was used.

E. Emission units subject to 40 CFR Part 63, Subpart ZZZZ as identified in the attached Applicable Requirements Summary table are subject to 30 TAC Chapter 113, Subchapter C, § 113.1090 which incorporates the 40 CFR Part 63 Subpart by reference.

F. Emission units subject to 40 CFR Part 63, Subpart VVVVVV as identified in the attached Applicable Requirements Summary table are subject to 30 TAC Chapter 113, Subchapter C, § 113.1495 which incorporates the 40 CFR Part 63 Subpart by reference.

G. The permit holder shall comply with the following 30 TAC Chapter 101, Subchapter H, Division 3 (Mass Emission Cap and Trade Program) Requirements:

(i) Title 30 TAC § 101.352 (relating to General Provisions)

(ii) Title 30 TAC § 101.353 (relating to Allocation of Allowances)

(iii) Title 30 TAC § 101.354 (relating to Allowance Deductions)

(iv) Title 30 TAC § 101.356 (relating to Allowance Banking and Trading)

(v) Title 30 TAC § 101.358 (relating to Emission Monitoring and Compliance Demonstration)

(vi) Title 30 TAC § 101.359 (relating to Reporting)

(vii) Title 30 TAC § 101.360 (relating to Level of Activity Certification)

(viii) The terms and conditions by which the emission limits are established to meet or exceed the cap are applicable requirements of this permit

2. The permit holder shall comply with the following sections of 30 TAC Chapter 101 (General Air Quality Rules):

A. Title 30 TAC § 101.1 (relating to Definitions), insofar as the terms defined in this section are used to define the terms used in other applicable requirements

B. Title 30 TAC § 101.3 (relating to Circumvention)

C. Title 30 TAC § 101.8 (relating to Sampling), if such action has been requested by the TCEQ

D. Title 30 TAC § 101.9 (relating to Sampling Ports), if such action has been requested by the TCEQ

E. Title 30 TAC § 101.10 (relating to Emissions Inventory Requirements)

F. Title 30 TAC § 101.201 (relating to Emission Event Reporting and Recordkeeping Requirements)

G. Title 30 TAC § 101.211 (relating to Scheduled Maintenance, Start-up, and Shutdown Reporting and Recordkeeping Requirements)

H. Title 30 TAC § 101.221 (relating to Operational Requirements)

I. Title 30 TAC § 101.222 (relating to Demonstrations)

J. Title 30 TAC § 101.223 (relating to Actions to Reduce Excessive Emissions)

3. Permit holder shall comply with the following requirements of 30 TAC Chapter 111:

A. Visible emissions from stationary vents with a flow rate of less than 100,000 actual cubic feet per minute and constructed after January 31, 1972 that are not listed in the Applicable Requirements Summary attachment for 30 TAC Chapter 111, Subchapter A, Division 1 , shall not exceed 20% opacity averaged over a six-minute period. The permit holder shall comply with the following requirements for stationary vents at the site subject to this standard:

(i) Title 30 TAC § 111.111(a)(1)(B) (relating to Requirements for Specified Sources)

(ii) Title 30 TAC § 111.111(a)(1)(E)

(iii) Title 30 TAC § 111.111(a)(1)(F)(i), (ii), (iii), or (iv)

(iv) For emission units with vent emissions subject to 30 TAC § 111.111(a)(1)(B), complying with 30 TAC § 111.111(a)(1)(F)(ii), (iii), or (iv), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146. These periodic monitoring requirements do not apply to vents that are not capable of producing visible emissions such as vents that emit only colorless VOCs; vents from non-fuming liquids; vents that provide passive ventilation, such as plumbing vents; or vent emissions from any other source that does not obstruct the transmission of light. Vents, as specified in the "Applicable Requirements Summary" attachment, that are subject to the emission limitation of 30 TAC § 111.111(a)(1)(B) are not subject to the following periodic monitoring requirements:

(1) An observation of stationary vents from emission units in operation shall be conducted at least once during each calendar quarter unless the emission unit is not operating for the entire quarter.

(2) For stationary vents from a combustion source, if an alternative to the normally fired fuel is fired for a period greater than or equal to 24 consecutive hours, the permit holder shall conduct an observation of the stationary vent for each such period to determine if visible emissions are present. If such period is greater than 3 months, observations shall be conducted once during each quarter. Supplementing the normally fired fuel with natural gas or fuel gas to increase the net heating value to the

minimum required value does not constitute creation of an alternative fuel.

(3) Records of all observations shall be maintained.

(4) Visible emissions observations of emission units operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of emission units operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions observations shall be made during times when the activities described in 30 TAC § 111.111(a)(1)(E) are not taking place. Visible emissions shall be determined with each stationary vent in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each stationary vent during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

(5) Compliance Certification:

(a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(1) and (a)(1)(B).

(b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(1)(F) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

(c) Some vents may be subject to multiple visible emission or monitoring requirements. All credible data must be

considered when certifying compliance with this requirement even if the observation or monitoring was performed to demonstrate compliance with a different requirement.

B. For visible emissions from a building, enclosed facility, or other structure; the permit holder shall comply with the following requirements:

(i) Title 30 TAC § 111.111(a)(7)(A) (relating to Requirements for Specified Sources)

(ii) Title 30 TAC § 111.111(a)(7)(B)(i) or (ii)

(iii) For a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source subject to 30 TAC § 111.111(a)(7)(A), complying with 30 TAC § 111.111(a)(7)(B)(i) or (ii), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146:

(1) An observation of visible emissions from a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source which is required to comply with 30 TAC § 111.111(a)(7)(A) shall be conducted at least once during each calendar quarter unless the air emission source or enclosed facility is not operating for the entire quarter.

(2) Records of all observations shall be maintained.

(3) Visible emissions observations of air emission sources or enclosed facilities operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of air emission sources or enclosed facilities operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions shall be determined with each emissions outlet in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each emissions outlet during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

(4) Compliance Certification:

(a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(7) and (a)(7)(A)

(b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(7)(B) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader

C. For visible emissions from all other sources not specified in 30 TAC § 111.111(a)(1), (4), or (7); the permit holder shall comply with the following requirements:

(i) Title 30 TAC § 111.111(a)(8)(A) (relating to Requirements for Specified Sources)

(ii) Title 30 TAC § 111.111(a)(8)(B)(i) or (ii)

(iii) For a source subject to 30 TAC § 111.111(a)(8)(A), complying with 30 TAC § 111.111(a)(8)(B)(i) or (ii), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146:

(1) An observation of visible emissions from a source which is required to comply with 30 TAC § 111.111(a)(8)(A) shall be conducted at least once during each calendar quarter unless the source is not operating for the entire quarter.

(2) Records of all observations shall be maintained.

(3) Visible emissions observations of sources operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of sources operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions shall be determined with each source in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each

source during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

(4) Compliance Certification:

(a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(8) and (a)(8)(A)

(b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(8)(B) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

D. Certification of opacity readers determining opacities under Method 9 (as outlined in 40 CFR Part 60, Appendix A) to comply with opacity monitoring requirements shall be accomplished by completing the Visible Emissions Evaluators Course, or approved agency equivalent, no more than 180 days before the opacity reading.

E. For emission units with contributions from uncombined water, the permit holder shall comply with the requirements of 30 TAC § 111.111(b).

(i) Title 30 TAC § 111.205 (relating to Exception for Fire Training)

4. For storage vessels maintaining working pressure as specified in 30 TAC Chapter 115, Subchapter B, Division 1: Storage of Volatile Organic Compounds, the permit holder shall comply with the requirements of 30 TAC § 115.112(e)(1).

5. For industrial wastewater specified in 30 TAC Chapter 115, Subchapter B, the permit holder shall comply with the following requirements for wastewater drains, junction boxes, lift stations and weirs:

A. Title 30 TAC § 115.142 (relating to Control Requirements)

B. Title 30 TAC § 115.142(1)(A) - (D) (relating to Control Requirements)

C. Title 30 TAC § 115.142(1)(E) and (F) (relating to Control Requirements)

D. Title 30 TAC § 115.145 (relating to Approved Test Methods)

E. Title 30 TAC § 115.146 (relating to Recordkeeping Requirements)

F. Title 30 TAC § 115.148 (relating to Determination of Wastewater Characteristics)

6. The permit holder shall comply with the following requirements of 30 TAC Chapter 117:

A. For boilers, process heaters, and stationary reciprocating engines subject to Subchapter D, Division 1 at minor sources of NO_x:

(i) Title 30 TAC § 117.2010(a), and (c) - (f) (relating to Emission Specifications), for sources subject to mass emissions cap and trade under 30 TAC Chapter 101, Subchapter H

(ii) Title 30 TAC § 117.2030 (relating to Operating Requirements)

(iii) Title 30 TAC § 117.2035 (relating to Monitoring and Testing Requirements)

(iv) Title 30 TAC § 117.2045 (relating to Recordkeeping and Reporting Requirements)

(v) Title 30 TAC § 117.9200 (relating to Compliance Schedule)

7. The permit holder shall comply with the following requirements for units subject to any subpart of 40 CFR Part 60, unless otherwise stated in the applicable subpart:

A. Title 40 CFR § 60.7 (relating to Notification and Recordkeeping)

B. Title 40 CFR § 60.8 (relating to Performance Tests)

C. Title 40 CFR § 60.11 (relating to Compliance with Standards and Maintenance Requirements)

D. Title 40 CFR § 60.12 (relating to Circumvention)

E. Title 40 CFR § 60.13 (relating to Monitoring Requirements)

F. Title 40 CFR § 60.14 (relating to Modification)

G. Title 40 CFR § 60.15 (relating to Reconstruction)

H. Title 40 CFR § 60.19 (relating to General Notification and Reporting Requirements)

8. The permit holder shall comply with the requirements of 30 TAC Chapter 113, Subchapter C, § 113.100 for units subject to any subpart of 40 CFR Part 63, unless otherwise stated in the applicable subpart.

9. The permit holder shall comply with certified registrations submitted to the TCEQ for purposes of establishing federally enforceable emission limits. A copy of the certified registration shall be maintained with the permit. Records sufficient to demonstrate compliance with the established limits shall be maintained. The certified registration and records demonstrating compliance shall be provided, on request, to representatives of the appropriate TCEQ regional office and any local air pollution control agency having jurisdiction over the site. The permit holder shall submit updated certified registrations when changes at the site require establishment of new emission limits. If changes result in emissions that do not remain below major source thresholds, the permit holder shall submit a revision application to codify the appropriate requirements in the permit.

Additional Monitoring Requirements

10. The permit holder shall comply with the periodic monitoring requirements as specified in the attached "Periodic Monitoring Summary" upon issuance of the permit. Except for, as applicable, monitoring malfunctions, associated repairs, and required quality assurance or control activities (including, as applicable, calibration checks and required zero and span adjustments), the permit holder shall conduct all monitoring in continuous operation (or shall collect data at all required intervals) at all times that the pollutant-specific emissions unit is operating. The permit holder may elect to collect monitoring data on a more frequent basis and average the data, consistent with the averaging time specified in the "Periodic Monitoring Summary," for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis. In no event shall data be collected and used in particular instances to avoid reporting deviations. Deviations shall be reported according to 30 TAC § 122.145 (Reporting Terms and Conditions).

New Source Review Authorization Requirements

11. Permit holder shall comply with the requirements of New Source Review authorizations issued or claimed by the permit holder for the permitted area, including permits, permits by rule, standard permits, flexible permits, special permits, permits for existing facilities including Voluntary Emissions Reduction Permits and Electric Generating Facility Permits issued under 30 TAC Chapter 116, Subchapter I, or special exemptions referenced in the New Source Review Authorization References attachment. These requirements:

    A. Are incorporated by reference into this permit as applicable requirements

    B. Shall be located with this operating permit

    C. Are not eligible for a permit shield

12. The permit holder shall comply with the general requirements of 30 TAC Chapter 106, Subchapter A or the general requirements, if any, in effect at the time of the claim of any PBR.

13. The permit holder shall maintain records to demonstrate compliance with any emission limitation or standard that is specified in a permit by rule (PBR) or Standard Permit

listed in the New Source Review Authorizations attachment. The records shall yield reliable data from the relevant time period that are representative of the emission unit's compliance with the PBR or Standard Permit. These records may include, but are not limited to, production capacity and throughput, hours of operation, safety data sheets (SDS), chemical composition of raw materials, speciation of air contaminant data, engineering calculations, maintenance records, fugitive data, performance tests, capture/control device efficiencies, direct pollutant monitoring (CEMS, COMS, or PEMS), or control device parametric monitoring. These records shall be made readily accessible and available as required by 30 TAC § 122.144. Any monitoring or recordkeeping data indicating noncompliance with the PBR or Standard Permit shall be considered and reported as a deviation according to 30 TAC § 122.145 (Reporting Terms and Conditions).

14. The permit holder shall comply with the following requirements for Air Quality Standard Permits:

    A. Registration requirements listed in 30 TAC § 116.611, unless otherwise provided for in an Air Quality Standard Permit

    B. General Conditions listed in 30 TAC § 116.615, unless otherwise provided for in an Air Quality Standard Permit

    C. Requirements of the non-rule Air Quality Standard Permit for Pollution Control Projects

Compliance Requirements

15. The permit holder shall certify compliance in accordance with 30 TAC § 122.146. The permit holder shall comply with 30 TAC § 122.146 using at a minimum, but not limited to, the continuous or intermittent compliance method data from monitoring, recordkeeping, reporting, or testing required by the permit and any other credible evidence or information. The certification period may not exceed 12 months and the certification must be submitted within 30 days after the end of the period being certified.

16. The permit holder shall adhere to the provisions in the Compliance Schedule attachment of this permit and submit certified progress reports consistent with the schedule established under 30 TAC § 122.132(e)(4)(C) and including the information specified in 30 TAC § 122.142(e)(2). Those emission units listed in the Compliance Schedule attachment shall adhere with the requirements in the Compliance Schedule attachment until operating fully in compliance with the applicable requirements.

17. Permit holder shall comply with the following 30 TAC Chapter 117 requirements:

    A. The permit holder shall comply with the compliance schedules and submit written notification to the TCEQ Executive Director as required in 30 TAC Chapter 117, Subchapter H, Division 1:

        (i) For sources in the Houston-Galveston-Brazoria Nonattainment area, 30 TAC § 117.9020:

            (1) Title 30 TAC § 117.9020(2)(A), (C), and (D)

B. The permit holder shall comply with the requirements of 30 TAC § 117.354 for Final Control Plan Procedures for Attainment Demonstration Emission Specifications and 30 TAC § 117.356 for Revision of Final Control Plan.

18. Use of Emission Credits to comply with applicable requirements:

A. Unless otherwise prohibited, the permit holder may use emission credits to comply with the following applicable requirements listed elsewhere in this permit:

(i) Title 30 TAC Chapter 115

(ii) Title 30 TAC Chapter 117

(iii) Offsets for Title 30 TAC Chapter 116

B. The permit holder shall comply with the following requirements in order to use the emission credits to comply with the applicable requirements:

(i) The permit holder must notify the TCEQ according to 30 TAC § 101.306(c)(2)

(ii) The emission credits to be used must meet all the geographic, timeliness, applicable pollutant type, and availability requirements listed in 30 TAC Chapter 101, Subchapter H, Division 1

(iii) The executive director has approved the use of the credit according to 30 TAC § 101.306(c)(2)

(iv) The permit holder keeps records of the use of credits towards compliance with the applicable requirements in accordance with 30 TAC § 101.302(g) and 30 TAC Chapter 122

(v) Title 30 TAC § 101.305 (relating to Emission Reductions Achieved Outside the United States)

19. Use of Discrete Emission Credits to comply with the applicable requirements:

A. Unless otherwise prohibited, the permit holder may use discrete emission credits to comply with the following applicable requirements listed elsewhere in this permit:

(i) Title 30 TAC Chapter 115

(ii) Title 30 TAC Chapter 117

(iii) If applicable, offsets for Title 30 TAC Chapter 116

(iv) Temporarily exceed state NSR permit allowables

B. The permit holder shall comply with the following requirements in order to use the credit to comply with the applicable requirements:

(i) The permit holder must notify the TCEQ according to 30 TAC § 101.376(d)

(ii) The discrete emission credits to be used must meet all the geographic, timeliness, applicable pollutant type, and availability requirements listed in 30 TAC Chapter 101, Subchapter H, Division 4

(iii) The executive director has approved the use of the discrete emission credits according to 30 TAC § 101.376(d)(1)(A)

(iv) The permit holder keeps records of the use of credits towards compliance with the applicable requirements in accordance with 30 TAC § 101.372(h) and 30 TAC Chapter 122

(v) Title 30 TAC § 101.375 (relating to Emission Reductions Achieved Outside the United States)

Risk Management Plan

20. For processes subject to 40 CFR Part 68 and specified in 40 CFR § 68.10, the permit holder shall comply with the requirements of the Accidental Release Prevention Provisions in 40 CFR Part 68. The permit holder shall submit to the appropriate agency either a compliance schedule for meeting the requirements of 40 CFR Part 68 by the date provided in 40 CFR § 68.10(a), or as part of the compliance certification submitted under this permit, a certification statement that the source is in compliance with all requirements of 40 CFR Part 68, including the registration and submission of a risk management plan.

Protection of Stratospheric Ozone

21. Permit holders at a site subject to Title VI of the FCAA Amendments shall meet the following requirements for protection of stratospheric ozone:

    A. Any on site servicing, maintenance, and repair on refrigeration and nonmotor vehicle air-conditioning appliances using ozone-depleting refrigerants or non-exempt substitutes shall be conducted in accordance with 40 CFR Part 82, Subpart F. Permit holders shall ensure that repairs on or refrigerant removal from refrigeration and nonmotor vehicle air-conditioning appliances using ozone-depleting refrigerants are performed only by properly certified technicians using certified equipment. Records shall be maintained as required by 40 CFR Part 82, Subpart F.

Permit Location

22. The permit holder shall maintain a copy of this permit and records related to requirements listed in this permit on site.

Permit Shield (30 TAC § 122.148)

23. A permit shield is granted for the emission units, groups, or processes specified in the attached "Permit Shield." Compliance with the conditions of the permit shall be deemed compliance with the specified potentially applicable requirements or specified potentially applicable state-only requirements listed in the attachment "Permit Shield." Permit shield provisions shall not be modified by the executive director until

notification is provided to the permit holder. No later than 90 days after notification of a change in a determination made by the executive director, the permit holder shall apply for the appropriate permit revision to reflect the new determination. Provisional terms are not eligible for this permit shield. Any term or condition, under a permit shield, shall not be protected by the permit shield if it is replaced by a provisional term or condition or the basis of the term and condition changes.

Applicable Requirements Summary 35

Note: A "none" entry may be noted for some emission sources in this permit's "Applicable Requirements Summary" under the heading of "Monitoring and Testing Requirements" and/or "Recordkeeping Requirements" and/or "Reporting Requirements." Such a notation indicates that there are no requirements for the indicated emission source as identified under the respective column heading(s) for the stated portion of the regulation when the emission source is operating under the conditions of the specified SOP Index Number. However, other relevant requirements pursuant to 30 TAC Chapter 122 including Recordkeeping Terms and Conditions (30 TAC § 122.144), Reporting Terms and Conditions (30 TAC § 122.145), and Compliance Certification Terms and Conditions (30 TAC § 122.146) continue to apply.

Unit Summary

Unit/Group/ Process ID No.	Unit Type	Group/Inclusive Units	SOP Index No.	Regulation	Requirement Driver
B-1	Emission Points/Stationary Vents/Process Vents	N/A	111-VENT1	30 TAC Chapter 111, Visible Emissions	No changing attributes.
B-1	Boilers/Steam Generators/Steam Generating Units	N/A	60DC-BOILER1	40 CFR Part 60, Subpart Dc	No changing attributes.

Additional Monitoring Requirements

Periodic Monitoring Summary 99

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: B-1	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 111, Visible Emissions	SOP Index No.: 111-VENT1
Pollutant: PM (OPACITY)	Main Standard: § 111.111(a)(1)(B)
Monitoring Information	
Indicator: Visible Emissions	
Minimum Frequency: once per quarter	
Averaging Period: n/a	
Deviation Limit: Visible emissions exceeding 20% opacity.	
Periodic Monitoring Text: Visible emissions observations shall be made and recorded. Note that to properly determine the presence of visible emissions, all sources must be in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 miles, away from the emission source during the observation. The observer shall select a position where the sun is not directly in the observer's eyes. If the observations cannot be conducted due to weather conditions, the date, time, and specific weather conditions shall be recorded. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. If visible emissions are observed, the permit holder shall report a deviation. As an alternative, the permit holder may determine the opacity consistent with Test Method 9, as soon as practicable, but no later than 24 hours after observing visible emissions. If a Test Method 9 is performed, the opacity limit is the corresponding opacity limit associated with the particulate matter standard in the underlying applicable requirement. If there is no corresponding opacity limit in the underlying applicable requirement, the maximum opacity will be established using the most recent performance test. If the result of the Test Method 9 is opacity above the corresponding opacity limit (associated with the particulate matter standard in the underlying applicable requirement or as identified as a result of a previous performance test to establish the maximum opacity limit), the permit holder shall report a deviation.

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: DEGREASE	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Degreasing Processes	SOP Index No.: 115-DEGREASE
Pollutant: VOC	Main Standard: § 115.412(1)
Monitoring Information	
Indicator: Visual Inspection	
Minimum Frequency: Monthly	
Averaging Period: n/a	
Deviation Limit: Any monitoring data that indicates the cold cleaner is not in compliance with the applicable requirements of 115.412(1)(A)-(F) shall be reported as a deviation.	
Periodic Monitoring Text: Inspect equipment and record data monthly to ensure compliance with any applicable requirements in § 115.412(1)(A)-(F). Any monitoring data which indicates that the cold cleaner is not in compliance with the applicable requirements of § 115.412(1)(A)-(F) shall be considered and reported as a deviation.	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: GRPFS-100	
Control Device ID No.: TO-1	Control Device Type: Vapor Combustor
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Loading and Unloading of VOC	SOP Index No.: 115-LOAD4
Pollutant: VOC	Main Standard: § 115.212(a)(1)
Monitoring Information	
Indicator: Combustion Temperature / Exhaust Gas Temperature	
Minimum Frequency: Once per week	
Averaging Period: n/a*	
Deviation Limit: Exhaust gas temperature falls below 1400 degrees F.	
Periodic Monitoring Text: Measure and record the combustion temperature in the combustion chamber or immediately downstream of the combustion chamber. The monitoring instrumentation shall be maintained, calibrated and operated in accordance with manufacturer's specifications or other written procedures. Any monitoring data below the minimum limit shall be considered and reported as a deviation.	

*The permit holder may elect to collect monitoring data on a more frequent basis and calculate the average as specified by the minimum frequency, for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis and shall not be collected and used in particular instances to avoid reporting deviations.

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: GRPFS-200	
Control Device ID No.: S79-2A,B,C	Control Device Type: Carbon Adsorption System (Non-Regenerative)
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Loading and Unloading of VOC	SOP Index No.: 115-LOAD5
Pollutant: VOC	Main Standard: § 115.212(a)(1)
Monitoring Information	
Indicator: VOC Concentration	
Minimum Frequency: Daily	
Averaging Period: N/A	
Deviation Limit: First canister not replaced or event not recorded when breakthrough occurs. Also when first canister concentration exceeds 500 ppm.	
Periodic Monitoring Text: Measure and record the VOC concentration using a portable analyzer to monitor VOC concentration at the outlet of the initial canister but before the inlet to the second or final polishing canister. The monitoring instrumentation shall be maintained and operated in accordance with manufacturer's specification or other written procedures. If the maximum reading after the outlet of the initial canister is above the maximum limit, that canister shall be replaced and the event recorded before the next VOC reading is taken.

Note that to properly determine the presence of visible emissions, all sources must be in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 miles, away from the emission source during the observation. The observer shall select a position where the sun is not directly in the observer's eyes. If the observations cannot be conducted due to weather conditions, the date, time, and specific weather conditions shall be recorded. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. If visible emissions are observed, the permit holder shall report a deviation. As an alternative, the permit holder may determine the opacity consistent with Test Method 9, as soon as practicable, but no later than 24 hours after observing visible emissions. If the result of the Test Method 9 is opacity above the opacity limit in the applicable requirement, the permit holder shall report a deviation.

ID No.: TF13LOAD	
Control Device ID No.: TO-1	Control Device Type: Vapor Combustor
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Loading and Unloading of VOC	SOP Index No.: 115-LOAD4
Pollutant: VOC	Main Standard: § 115.212(a)(1)
Monitoring Information	
Indicator: Combustion Temperature / Exhaust Gas Temperature	
Minimum Frequency: Once per week	
Averaging Period: n/a*	
Deviation Limit: Exhaust gas temperature falls below 1400 degrees F.	
Periodic Monitoring Text: Measure and record the combustion temperature in the combustion chamber or immediately downstream of the combustion chamber. The monitoring instrumentation shall be maintained, calibrated and operated in accordance with manufacturer's specifications or other written procedures. Any monitoring data below the minimum limit shall be considered and reported as a deviation.	

*The permit holder may elect to collect monitoring data on a more frequent basis and calculate the average as specified by the minimum frequency, for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis and shall not be collected and used in particular instances to avoid reporting deviations.

Periodic Monitoring Summary

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: TO-1	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 111, Visible Emissions	SOP Index No.: 111-VENT1
Pollutant: PM (OPACITY)	Main Standard: § 111.111(a)(1)(B)
Monitoring Information	
Indicator: Visible Emissions	
Minimum Frequency: once per quarter	
Averaging Period: n/a	
Deviation Limit: Visible emissions exceeding 20% opacity.	
Periodic Monitoring Text: Visible emissions observations shall be made and recorded. Note that to properly determine the presence of visible emissions, all sources must be in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 miles, away from the emission source during the observation. The observer shall select a position where the sun is not directly in the observer's eyes. If the observations cannot be conducted due to weather conditions, the date, time, and specific weather conditions shall be recorded. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. If visible emissions are observed, the permit holder shall report a deviation. As an alternative, the permit holder may determine the opacity consistent with Test Method 9, as soon as practicable, but no later than 24 hours after observing visible emissions. If a Test Method 9 is performed, the opacity limit is the corresponding opacity limit associated with the particulate matter standard in the underlying applicable requirement. If there is no corresponding opacity limit in the underlying applicable requirement, the maximum opacity will be established using the most recent performance test. If the result of the Test Method 9 is opacity above the corresponding opacity limit (associated with the particulate matter standard in the underlying applicable requirement or as identified as a result of a previous performance test to establish the maximum opacity limit), the permit holder shall report a deviation.	

Permit Shield

Permit Shield 131

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
B-103	N/A	40 CFR Part 63, Subpart VVVVVV	Blender does not use or produce a HAP that is listed in Table 1 of MACT VVVVVV.
B-104	N/A	40 CFR Part 63, Subpart VVVVVV	Blender does not use or produce a HAP that is listed in Table 1 of MACT VVVVVV.
FWP-1	N/A	40 CFR Part 60, Subpart JJJJ	Engine is not a stationary spark ignition ICE.
FWP-2	N/A	40 CFR Part 60, Subpart JJJJ	Engine is not a stationary spark ignition ICE.

T-4146	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7903	N/A	40 CFR Part 60, Subpart Ka	Tank capacity is less than 40,000 gallons.
T-7903	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7904	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 10,000 gallons.
T-7904	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7905	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 10,000 gallons.
T-7905	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7906	N/A	30 TAC Chapter 115, Storage of VOCs	Tank does not store a VOC as defined by 101.1(115).
T-7906	N/A	40 CFR Part 60, Subpart Kb	Tank does not store a volatile organic liquid.
T-7906	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
			of MACT VVVVVV.
T-7907	N/A	30 TAC Chapter 115, Storage of VOCs	Tank does not store a VOC as defined by 101.1(115).
T-7907	N/A	40 CFR Part 60, Subpart Kb	Tank does not store a volatile organic liquid.
T-7907	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7908	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 10,000 gallons.
T-7908	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7909	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 20,000 gallons.
T-7909	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7910	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 20,000 gallons.
T-7910	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7911	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 20,000 gallons.
T-7911	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7913	N/A	30 TAC Chapter 115, Storage of VOCs	Tank does not store a VOC as defined by 101.1(115).
T-7913	N/A	40 CFR Part 60, Subpart Kb	Tank does not store a volatile organic liquid.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
T-7913	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7914	N/A	30 TAC Chapter 115, Storage of VOCs	Tank does not store a VOC as defined by 101.1(115).
T-7914	N/A	40 CFR Part 60, Subpart Kb	Tank does not store a volatile organic liquid.
T-7914	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7920	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 10,000 gallons.
T-7920	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7925	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 20,000 gallons.
T-7925	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7926	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 10,000 gallons.
T-7926	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7927	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 10,000 gallons.
T-7927	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7928	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 10,000 gallons.
T-7928	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
			of MACT VVVVVV.
T-7929	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 20,000 gallons.
T-7929	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7930	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 20,000 gallons.
T-7930	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.

T-7934	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7935	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 20,000 gallons.
T-7935	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7936	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 20,000 gallons.
T-7936	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7938	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 20,000 gallons.
T-7938	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7939	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 10,000 gallons.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
T-7939	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7940	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 20,000 gallons.
T-7940	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7941	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 20,000 gallons.
T-7941	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7942	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 20,000 gallons.
T-7942	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7944	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 10,000 gallons.
T-7944	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7947	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 20,000 gallons.
T-7947	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7948	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 20,000 gallons.
T-7948	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7949	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 20,000 gallons.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
T-7949	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7950	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 20,000 gallons.
T-7950	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7953	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 20,000 gallons.
T-7953	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7954	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 20,000 gallons.
T-7954	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7955	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 20,000 gallons.
T-7955	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7956	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 20,000 gallons.
T-7956	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7957	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 20,000 gallons.
T-7957	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7958	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 20,000 gallons.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
T-7958	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7959	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 20,000 gallons.
T-7959	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7960	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 20,000 gallons.

T-7961	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 20,000 gallons.
T-7961	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7962	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 20,000 gallons.
T-7962	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7963	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 20,000 gallons.
T-7963	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7964	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 20,000 gallons.
T-7964	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7965	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 20,000 gallons.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
T-7965	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7967	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 10,000 gallons.
T-7967	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7968	N/A	30 TAC Chapter 115, Storage of VOCs	Tank does not store a VOC as defined by 101.1(115).
T-7968	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 20,000 gallons.
T-7968	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7969	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 20,000 gallons.
T-7969	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7970	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 20,000 gallons.
T-7970	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7972	N/A	40 CFR Part 60, Subpart Kb	Tank does not store a VOL with TVP >2.2 psia.
T-7972	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7974	N/A	30 TAC Chapter 115, Storage of VOCs	Tank does not store a VOC as defined by 101.1(115).

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
T-7974	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7975	N/A	30 TAC Chapter 115, Storage of VOCs	Tank does not store a VOC as defined by 101.1(115).
T-7975	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 10,000 gallons.
T-7975	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7976	N/A	40 CFR Part 60, Subpart Kb	Tank does not store a VOL with TVP >2.2 psia.
T-7976	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7977	N/A	40 CFR Part 60, Subpart Kb	Tank does not store a VOL with TVP >2.2 psia.
T-7977	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7978	N/A	40 CFR Part 60, Subpart Kb	Tank does not store a VOL with TVP >2.2 psia.
T-7978	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7981	N/A	40 CFR Part 60, Subpart Kb	Tank does not store a VOL with TVP >2.2 psia.
T-7981	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7982	N/A	40 CFR Part 60, Subpart Kb	Tank does not store a VOL with TVP >2.2 psia.
T-7982	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
			of MACT VVVVVV.
T-7983	N/A	40 CFR Part 60, Subpart Kb	Tank does not store a VOL with TVP >2.2 psia.
T-7983	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7984	N/A	40 CFR Part 60, Subpart Kb	Tank does not store a VOL with TVP >2.2 psia.
T-7984	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7985	N/A	40 CFR Part 60, Subpart Kb	Tank does not store a VOL with TVP >2.2 psia.
T-7985	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.
T-7986	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 20,000 gallons.
T-7986	N/A	40 CFR Part 63, Subpart VVVVVV	Tank does not store a HAP that is listed in Table 1 of MACT VVVVVV.

Acronym List 159

Acronym List

The following abbreviations or acronyms may be used in this permit:

ACFM ..... actual cubic feet per minute
AMOC ..... alternate means of control
ARP ..... Acid Rain Program
ASTM ..... American Society of Testing and Materials
B/PA ..... Beaumont/Port Arthur (nonattainment area)
CAM ..... Compliance Assurance Monitoring
CD ..... control device
COMS ..... continuous opacity monitoring system
CVS ..... closed-vent system
D/FW ..... Dallas/Fort Worth (nonattainment area)
DR ..... Designated Representative
ElP ..... El Paso (nonattainment area)
EP ..... emission point
EPA ..... U.S. Environmental Protection Agency
EU ..... emission unit
FCAA Amendments ..... Federal Clean Air Act Amendments
FOP ..... federal operating permit
GF ..... grandfathered
gr/100 scf ..... grains per 100 standard cubic feet
HAP ..... hazardous air pollutant
H/G/B ..... Houston/Galveston/Brazoria (nonattainment area)
H_2S ..... hydrogen sulfide
ID No. ..... identification number
lb/hr ..... pound(s) per hour
MMBtu/hr ..... Million British thermal units per hour
MRRT ..... monitoring, recordkeeping, reporting, and testing
NA ..... nonattainment
N/A ..... not applicable
NADB ..... National Allowance Data Base
NO_x ..... nitrogen oxides
NSPS ..... New Source Performance Standard (40 CFR Part 60)
NSR ..... New Source Review
ORIS ..... Office of Regulatory Information Systems
Pb ..... lead
PBR ..... Permit By Rule
PM ..... particulate matter
ppmv ..... parts per million by volume
PSD ..... prevention of significant deterioration
RO ..... Responsible Official
SO_2 ..... sulfur dioxide
TCEQ ..... Texas Commission on Environmental Quality
TSP ..... total suspended particulate
TVP ..... true vapor pressure
U.S.C. ..... United States Code
VOC ..... volatile organic compound

[SEQ CHAPTER \h \r 1]Statement of Basis of the Federal Operating Permit

Nalco Company LLC

Site Name: Nalco Fresno Facility
Physical Location: 3130 FM 521 Road
Nearest City: Fresno
County: Fort Bend

Permit Number: O3536
Project Type: Minor Revision

Standard Industrial Classification (SIC) Code: 2869
SIC Name: Industrial Organic Chemicals

This Statement of Basis sets forth the legal and factual basis for the draft changes to the permit conditions resulting from the minor revision project in accordance with 30 TAC §122.201(a)(4). The applicant has submitted an application for a minor permit revision per §§ 122.215-217. This document may include the following information:

A description of the facility/area process description;
A description of the revision project;
A basis for applying permit shields;
A list of the federal regulatory applicability determinations;
A table listing the determination of applicable requirements;
A list of the New Source Review Requirements;
The rationale for periodic monitoring methods selected;
The rationale for compliance assurance methods selected;
A compliance status; and
A list of available unit attribute forms.

Prepared on: May 12, 2017

Operating Permit
Basis of Determination

Description of Revisions
This revision renames groups PLT1LOAD, PLT2LOAD, PLT3LOAD and PLT4LOAD to GRPFS-100, GRPFS-200, GRPFS-300 and GRPFS-400 respectively. New holding tanks (Day Tanks) units T-2101, T-2102 and T-4148 were added to the permit with 30 TAC 115, Loading and Unloading VOC, applicabilities.

Permit Area Process Description
Nalco Company (Nalco) Fresno Plant is a batch operation chemical plant that produces specialty chemicals with the use of reactors, blending vessels, storage tanks and support utilities which currently are authorized by NSR Air Permit No. 4005, and various Permits by Rule (PBRs). The Fresno Plant is divided into separate operating areas, consisting of four plants that share common auxiliary equipment and utilities.

Products are formulated in 14 different reactors and 2 blenders, ranging in sizes from 500 to 6,500 gallons. Bulk, drummed and/or solid raw materials are typically charged into the reactors and blenders. Vent gases are directed to either (1) a control system consisting of a caustic scrubber to remove acid gasses at 99% efficiency followed by the Thermal Oxidizer (EPN TO-1) to control Volatile Organic Compound (VOC) emissions at 99.9%, (2) one of two scrubbers (EPNs S1, S2 and 79S-2A,B,C) with a 99% destruction efficiency, or (3) Flare F-2 (EPN F-2). These raw materials will then be reacted by mixing and heating as necessary. The reactor and blender vents may or may not be opened during this step. A nitrogen purge may be applied during or after the reaction step for certain products (i.e. ethylene oxide and propylene oxide) and will vent to Flare F-1 (EPN F-1). The products will then be cooled as necessary and will either be loaded directly into tank trucks, drums/totes/containers, or transferred to holding tanks, bulk storage or transferred to other reactors acting as holding vessels. Emissions resulting from tank truck loading and packaging operations are controlled by the Thermal Oxidizer for Plants 1, 3 and 4 while emissions from Plant 2 will be routed to a scrubber system (EPN 79S-2A, B, C).

Storage tanks at the Fresno Plant are used to store raw materials, intermediates and finished products associated with the reactors and blenders. The tanks receive raw materials from tank trucks and intermediate and finished products from reactors and blenders. A small portion of the storage tanks have their own individual scrubbers to control emissions while a few others may be routed to Flare F-1 or the Thermal Oxidizer. From these bulk storage tanks, raw materials can be transferred into reactors or blenders while finished products can be loaded out into tank trucks or drums/totes/containers. Emission resulting from these loading and packaging operations will be routed to the Thermal Oxidizer or appropriate scrubber system.

There is also a pilot plant located at the Fresno Plant. The pilot plant consists of five reactors, three pressurized storage tanks and associated tempered oil units for heating and cooling. Product is directly loaded from the reactors into drums. The reactors are routed to either scrubbers PPS-1 or PPS-8.

Nalco is operating Fresno Energy which is an electric energy generating facility that is located nearby the Fresno Plant and is under common control. Fresno Energy includes a Caterpillar G3520C engine that is driving an electric generator to produce 1.47 MW of electrical power. This electrical power is supplied to the power grid and is not used by the Nalco facilities at this site. The engine is fueled with landfill gas.

FOPs at Site
The "application area" consists of the emission units and that portion of the site included in the application and this permit. Multiple FOPs may be issued to a site in accordance with 30 TAC § 122.201(e). When there is only one area for the site, then the application information and permit will include all units at the site. Additional FOPs that exist at the site, if any, are listed below.

Additional FOPs: None

Major Source Pollutants

The table below specifies the pollutants for which the site is a major source:

Major Pollutants	VOC

Reading State of Texas's Federal Operating Permit

The Title V Federal Operating Permit (FOP) lists all state and federal air emission regulations and New Source Review (NSR) authorizations (collectively known as "applicable requirements") that apply at a particular site or permit area (in the event a site has multiple FOPs). **The FOP does not authorize new emissions or new construction activities.** The FOP begins with an introductory page which is common to all Title V permits. This page gives the details of the company, states the authority of the issuing agency, requires the company to operate in accordance with this permit and 30 Texas Administrative Code (TAC) Chapter 122, requires adherence with NSR requirements of 30 TAC Chapter 116, and finally indicates the permit number and the issuance date.

This is followed by the table of contents, which is generally composed of the following elements. Not all permits will have all of the elements.

- General Terms and Conditions
- Special Terms and Conditions
  - Emissions Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting
  - Additional Monitoring Requirements
  - New Source Review Authorization Requirements
  - Compliance Requirements
  - Protection of Stratosphere Ozone
  - Permit Location
  - Permit Shield (30 TAC § 122.148)
- Attachments
  - Applicable Requirements Summary
    - Unit Summary
    - Applicable Requirements Summary
  - Additional Monitoring Requirements
  - Permit Shield
  - New Source Review Authorization References
  - Compliance Plan
  - Alternative Requirements
- Appendix A
  - Acronym list

General Terms and Conditions

The General Terms and Conditions are the same and appear in all permits. The first paragraph lists the specific citations for 30 TAC Chapter 122 requirements that apply to all Title V permit holders. The second paragraph describes the requirements for record retention. The third paragraph provides details for voiding the permit, if applicable. The fourth paragraph states that the permit holder shall comply with the requirements of 30 TAC Chapter 116 by obtaining a New Source Review authorization prior to new construction or modification of emission units located in the area covered by this permit. The fifth paragraph provides details on submission of reports required by the permit.

Special Terms and Conditions

Emissions Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting. The TCEQ has designated certain applicable requirements as site-wide requirements. A site-wide requirement is a requirement that applies uniformly to all the units or activities at the site. Units with only site-wide

requirements are addressed on Form OP-REQ1 and are not required to be listed separately on a OP-UA Form or Form OP-SUM. Form OP-SUM must list all units addressed in the application and provide identifying information, applicable OP-UA Forms, and preconstruction authorizations. The various OP-UA Forms provide the characteristics of each unit from which applicable requirements are established. Some exceptions exist as a few units may have both site-wide requirements and unit specific requirements.

Other conditions. The other entries under special terms and conditions are in general terms referring to compliance with the more detailed data listed in the attachments.

Attachments

Applicable Requirements Summary. The first attachment, the Applicable Requirements Summary, has two tables, addressing unit specific requirements. The first table, the Unit Summary, includes a list of units with applicable requirements, the unit type, the applicable regulation, and the requirement driver. The intent of the requirement driver is to inform the reader that a given unit may have several different operating scenarios and the differences between those operating scenarios.

The applicable requirements summary table provides the detailed citations of the rules that apply to the various units. For each unit and operating scenario, there is an added modifier called the "index number," detailed citations specifying monitoring and testing requirements, recordkeeping requirements, and reporting requirements. The data for this table are based on data supplied by the applicant on the OP-SUM and various OP-UA forms.

Additional Monitoring Requirement. The next attachment includes additional monitoring the applicant must perform to ensure compliance with the applicable standard. Compliance assurance monitoring (CAM) is often required to provide a reasonable assurance of compliance with applicable emission limitations/standards for large emission units that use control devices to achieve compliance with applicant requirements. When necessary, periodic monitoring (PM) requirements are specified for certain parameters (i.e. feed rates, flow rates, temperature, fuel type and consumption, etc.) to determine if a term and condition or emission unit is operating within specified limits to control emissions. These additional monitoring approaches may be required for two reasons. First, the applicable rules do not adequately specify monitoring requirements (exception- Maximum Achievable Control Technology Standards (MACTs) generally have sufficient monitoring), and second, monitoring may be required to fill gaps in the monitoring requirements of certain applicable requirements. In situations where the NSR permit is the applicable requirement requiring extra monitoring for a specific emission unit, the preferred solution is to have the monitoring requirements in the NSR permit updated so that all NSR requirements are consolidated in the NSR permit.

Permit Shield. A permit may or may not have a permit shield, depending on whether an applicant has applied for, and justified the granting of, a permit shield. A permit shield is a special condition included in the permit document stating that compliance with the conditions of the permit shall be deemed compliance with the specified potentially applicable requirement(s) or specified applicable state-only requirement(s).

New Source Review Authorization References. All activities which are related to emissions in the state of Texas must have a NSR authorization prior to beginning construction. This section lists all units in the permit and the NSR authorization that allowed the unit to be constructed or modified. Units that do not have unit specific applicable requirements other than the NSR authorization do not need to be listed in this attachment. While NSR permits are not physically a part of the Title V permit, they are legally incorporated into the Title V permit by reference. Those NSR permits whose emissions exceed certain PSD/NA thresholds must also undergo a Federal review of federally regulated pollutants in addition to review for state regulated pollutants.

Compliance Plan. A permit may have a compliance schedule attachment for listing corrective actions plans for any emission unit that is out of compliance with an applicable requirement.

Alternative Requirements. This attachment will list any alternative monitoring plans or alternative means of compliance for applicable requirements that have been approved by the EPA Administrator and/or the TCEQ Executive Director.

Appendix A

Acronym list. This attachment lists the common acronyms used when discussing the FOPs.

Stationary vents subject to 30 TAC Chapter 111, Subchapter A, § 111.111(a)(1)(B) addressed in the Special Terms and Conditions

The site contains stationary vents with a flowrate less than 100,000 actual cubic feet per minute (acfm) and constructed after January 31, 1972 which are limited, over a six-minute average, to 20% opacity as required by 30 TAC § 111.111(a)(1)(B). As a site may have a large number of stationary vents that fall into this category, they are not required to be listed individually in the permit's Applicable Requirement Summary. This is consistent with EPA's White Paper for Streamlined Development of Part 70 Permit Applications, July 10, 1995, that states that requirements that apply identically to emission units at a site can be treated on a generic basis such as source-wide opacity limits.

Periodic monitoring is specified in Special Term and Condition 3.A for stationary vents subject to 30 TAC § 111.111(a)(1)(B) to verify compliance with the 20% opacity limit. These vents are not expected to produce visible emissions during normal operation. The TCEQ evaluated the probability of these sources violating the opacity standards and determined that there is a very low potential that an opacity standard would be exceeded. It was determined that continuous monitoring for these sources is not warranted as there would be very limited environmental benefit in continuously monitoring sources that have a low potential to produce visible emissions. Therefore, the TCEQ set the visible observation monitoring frequency for these sources to once per calendar quarter.

The TCEQ has exempted vents that are not capable of producing visible emissions from periodic monitoring requirements. These vents include sources of colorless VOCs, non-fuming liquids, and other materials that cannot produce emissions that obstruct the transmission of light. Passive ventilation vents, such as plumbing vents, are also included in this category. Since this category of vents are not capable of producing opacity due to the physical or chemical characteristics of the emission source, periodic monitoring is not required as it would not yield any additional data to assure compliance with the 20% opacity standard of 30 TAC § 111.111(a)(1)(B).

In the event that visible emissions are detected, either through the quarterly observation or other credible evidence, such as observations from company personnel, the permit holder shall either report a deviation or perform a Test Method 9 observation to determine the opacity consistent with the 6-minute averaging time specified in 30 TAC § 111.111(a)(1)(B). An additional provision is included to monitor combustion sources more frequently than quarterly if alternate fuels are burned for periods greater than 24 consecutive hours. This will address possible emissions that may arise when switching fuel types.

Stationary Vents subject to 30 TAC Chapter 111 not addressed in the Special Terms and Conditions
All other stationary vents subject to 30 TAC Chapter 111 not covered in the Special Terms and Conditions are listed in the permit's Applicable Requirement Summary. The basis for the applicability determinations for these vents are listed in the Determination of Applicable Requirements table.

Federal Regulatory Applicability Determinations

The following chart summarizes the applicability of the principal air pollution regulatory programs to the permit area:

Regulatory Program	Applicability (Yes/No)
Prevention of Significant Deterioration (PSD)	No
Nonattainment New Source Review (NNSR)	No
Minor NSR	Yes
40 CFR Part 60 - New Source Performance Standards	Yes
40 CFR Part 61 - National Emission Standards for Hazardous Air Pollutants (NESHAPs)	No
40 CFR Part 63 - NESHAPs for Source Categories	Yes
Title IV (Acid Rain) of the Clean Air Act (CAA)	No
Title V (Federal Operating Permits) of the CAA	Yes
Title VI (Stratospheric Ozone Protection) of the CAA	Yes
CSAPR (Cross-State Air Pollution Rule)	No

Basis for Applying Permit Shields

An operating permit applicant has the opportunity to specifically request a permit shield to document that specific applicable requirements do not apply to emission units in the permit. A permit shield is a special condition stating that compliance with the conditions of the permit shall be deemed compliance with the specified potentially applicable requirements or specified potentially applicable state-only requirements. A permit shield has been requested in the application for specific emission units. For the permit shield requests that have been approved, the basis of determination for regulations that the owner/operator need not comply with are located in the "Permit Shield" attachment of the permit.

Insignificant Activities

In general, units not meeting the criteria for inclusion on either Form OP-SUM or Form OP-REQ1 are not required to be addressed in the operating permit application. Examples of these types of units include, but are not limited to, the following:

1. Office activities such as photocopying, blueprint copying, and photographic processes.
2. Sanitary sewage collection and treatment facilities other than those used to incinerate wastewater treatment plant sludge. Stacks or vents for sanitary sewer plumbing traps are also included.
3. Food preparation facilities including, but not limited to, restaurants and cafeterias used for preparing food or beverages primarily for consumption on the premises.
4. Outdoor barbecue pits, campfires, and fireplaces.
5. Laundry dryers, extractors, and tumblers processing bedding, clothing, or other fabric items generated primarily at the premises. This does not include emissions from dry cleaning systems using perchloroethylene or petroleum solvents.
6. Facilities storing only dry, sweet natural gas, including natural gas pressure regulator vents.
7. Any air separation or other industrial gas production, storage, or packaging facility. Industrial gases, for purposes of this list, include only oxygen, nitrogen, helium, neon, argon, krypton, and xenon.
8. Storage and handling of sealed portable containers, cylinders, or sealed drums.
9. Vehicle exhaust from maintenance or repair shops.
10. Storage and use of non-VOC products or equipment for maintaining motor vehicles operated at the site (including but not limited to, antifreeze and fuel additives).

11. Air contaminant detectors and recorders, combustion controllers and shut-off devices, product analyzers, laboratory analyzers, continuous emissions monitors, other analyzers and monitors, and emissions associated with sampling activities. Exception to this category includes sampling activities that are deemed fugitive emissions and under a regulatory leak detection and repair program.
12. Bench scale laboratory equipment and laboratory equipment used exclusively for chemical and physical analysis, including but not limited to, assorted vacuum producing devices and laboratory fume hoods.
13. Steam vents, steam leaks, and steam safety relief valves, provided the steam (or boiler feedwater) has not contacted other materials or fluids containing regulated air pollutants other than boiler water treatment chemicals.
14. Storage of water that has not contacted other materials or fluids containing regulated air pollutants other than boiler water treatment chemicals.
15. Well cellars.
16. Fire or emergency response equipment and training, including but not limited to, use of fire control equipment including equipment testing and training, and open burning of materials or fuels associated with firefighting training.
17. Crucible or pot furnaces with a brim full capacity of less than 450 cubic inches of any molten metal.
18. Equipment used exclusively for the melting or application of wax.
19. All closed tumblers used for the cleaning or deburring of metal products without abrasive blasting, and all open tumblers with a batch capacity of 1,000 lbs. or less.
20. Shell core and shell mold manufacturing machines.
21. Sand or investment molds with a capacity of 100 lbs. or less used for the casting of metals;
22. Equipment used for inspection of metal products.
23. Equipment used exclusively for rolling, forging, pressing, drawing, spinning, or extruding either hot or cold metals by some mechanical means.
24. Instrument systems utilizing air, natural gas, nitrogen, oxygen, carbon dioxide, helium, neon, argon, krypton, and xenon.
25. Battery recharging areas.
26. Brazing, soldering, or welding equipment.

Determination of Applicable Requirements

The tables below include the applicability determinations for the emission units, the index number(s) where applicable, and all relevant unit attribute information used to form the basis of the applicability determination. The unit attribute information is a description of the physical properties of an emission unit which is used to determine the requirements to which the permit holder must comply. For more information about the descriptions of the unit attributes specific Unit Attribute Forms may be viewed at [HYPERLINK "http://www.tceq.texas.gov/permitting/air/nav/air_all_ua_forms.html"].

A list of unit attribute forms is included at the end of this document. Some examples of unit attributes include construction date; product stored in a tank; boiler fuel type; etc.. Generally, multiple attributes are needed to determine the requirements for a given emission unit and index number. The table below lists these attributes in the column entitled “Basis of Determination.” Attributes that demonstrate that an applicable requirement applies will be the factual basis for the specific citations in an applicable requirement that apply to a unit for that index number. The TCEQ Air Permits Division has developed flowcharts for determining applicability of state and federal regulations based on the unit attribute information in a Decision Support System (DSS). These flowcharts can be accessed via the internet at [HYPERLINK "http://www.tceq.texas.gov/permitting/air/nav/air_supportsys.html"]. The Air Permits Division staff may also be contacted for assistance at (512) 239-1250.

The attributes for each unit and corresponding index number provide the basis for determining the specific legal citations in an applicable requirement that apply, including emission limitations or standards, monitoring, recordkeeping, and reporting. The rules were found to apply or not apply by using the unit attributes as answers to decision questions found in the flowcharts of the DSS. Some additional attributes indicate which legal citations of a rule apply. The legal citations that apply to each emission unit may be found in the Applicable Requirements Summary table of the draft permit. There may be some entries or rows of

units and rules not found in the permit, or if the permit contains a permit shield, repeated in the permit shield area. These are sets of attributes that describe negative applicability, or; in other words, the reason why a potentially applicable requirement does not apply.

If applicability determinations have been made which differ from the available flowcharts, an explanation of the decisions involved in the applicability determination is specified in the column "Changes and Exceptions to RRT." If there were no exceptions to the DSS, then this column has been removed.

The draft permit includes all emission limitations or standards, monitoring, recordkeeping and reporting required by each applicable requirement. If an applicable requirement does not require monitoring, recordkeeping, or reporting, the word "None" will appear in the Applicable Requirements Summary table. If additional periodic monitoring is required for an applicable requirement, it will be explained in detail in the portion of this document entitled "Rationale for Compliance Assurance Monitoring (CAM)/ Periodic Monitoring Methods Selected."

When attributes demonstrate that a unit is not subject to an applicable requirement, the applicant may request a permit shield for those items. The portion of this document entitled "Basis for Applying Permit Shields" specifies which units, if any, have a permit shield.

Operational Flexibility
When an emission unit has multiple operating scenarios, it will have a different index number associated with each operating condition. This means that units are permitted to operate under multiple operating conditions. The applicable requirements for each operating condition are determined by a unique set of unit attributes. For example, a tank may store two different products at different points in time. The tank may, therefore, need to comply with two distinct sets of requirements, depending on the product that is stored. Both sets of requirements are included in the permit, so that the permit holder may store either product in the tank.

Determination of Applicable Requirements

Unit ID	Regulation	Index Number	Basis of Determination*	Changes and Exceptions to DSS**
R-106	40 CFR Part 63, Subpart VVVVVV	63VVVVVV-PV1	Unit Type = Emission Unit CMPU subject to this 40 CFR Part 63, Subpart VVVVVV	The citations for this rule were determined from the basis of determination provided (i.e. the unit attributes that the applicant should provide when no form exists) and an analysis of the rule text.
R106LOAD	40 CFR Part 63, Subpart VVVVVV	63VVVVVV-LD1	Unit Type = Emission Unit CMPU subject to this 40 CFR Part 63, Subpart VVVVVV	The citations for this rule were determined from the basis of determination provided (i.e. the unit attributes that the applicant should provide when no form exists) and an analysis of the rule text.
R-106WW	40 CFR Part 63, Subpart VVVVVV	63VVVVVV-WW1	Unit Type = Emission Unit CMPU subject to this 40 CFR Part 63, Subpart VVVVVV	The citations for this rule were determined from the basis of determination provided (i.e. the unit attributes that the applicant should provide when no form exists) and an analysis of the rule text.
FWP-1	40 CFR Part 60, Subpart IIII	60IIII-02	Applicability Date = Stationary CI ICE commenced construction, reconstruction, or modification after July 11, 2005. Kilowatts = Power rating is greater than or equal to 130 KW and less than or equal to 368 KW. Exemptions = The CI ICE is not exempt due to national security, testing at an engine test cell/stand or as a temporary replacement. Service = CI ICE is a fire-pump engine, an emergency engine certified to National Fire Protection Association requirements. Commencing = CI ICE that is commencing new construction. Manufacture Date = Date of manufacture was on or prior to 07/01/2006.	
FWP-1	40 CFR Part 63, Subpart ZZZZ	63ZZZZ-ENG1	HAP Source = Any stationary source of hazardous air pollutants that is not a major source as defined in 40 CFR § 63.2. Brake HP = Stationary RICE with a brake HP greater than or equal to 250 HP and less than 300 HP. Performance Test = No previous performance test used, a performance test is conducted to demonstrate initial compliance Construction/Reconstruction Date = Commenced construction or reconstruction on or after December 19, 2002, but before June 12, 2006. Control Technique = Control technique other than an oxidation catalyst Different Schedule = Schedule specified in Subpart ZZZZ for submission of reports applies.	

Unit ID	Regulation	Index Number	Basis of Determination*	Changes and Exceptions to DSS**
			Nonindustrial Emergency Engine = Stationary RICE is not defined in 40 CFR §63.6675 as a residential emergency RICE, a commercial emergency RICE, or an institutional emergency RICE. Operating Limits = Using the control techniques approved in Subpart ZZZZ Displacement = The stationary CI RICE has a displacement less than 30 liters per cylinder and uses diesel fuel. Monitoring System = Monitoring system other than a CPMS or CEMS Service Type = Emergency use where the RICE operates or is contractually obligated to be available for more than 15 hours per calendar year as specified in 40 CFR §63.6640(f)(2)(ii)-(iii) or that operates for the purpose specified in 40 CFR §63.6640(f)(4)(ii). Stationary RICE Type = Compression ignition engine	
FWP-2	40 CFR Part 60, Subpart IIII	60IIII-01	Applicability Date = Stationary CI ICE commenced construction, reconstruction, or modification after July 11, 2005. Diesel = Diesel fuel is used. Kilowatts = Power rating is greater than or equal to 130 KW and less than or equal to 368 KW. Exemptions = The CI ICE is not exempt due to national security, testing at an engine test cell/stand or as a temporary replacement. Displacement = Displacement is less than 10 liters per cylinder. Service = CI ICE is a fire-pump engine, an emergency engine certified to National Fire Protection Association requirements. Standards = The emergency CI ICE does not meet the standards applicable to non-emergency engines. Commencing = CI ICE that is commencing new construction. Compliance Option = The CI ICE and control device is installed, configured, operated, and maintained according to the manufacturer's emission-related written instructions. Manufacture Date = Date of manufacture is after 07/01/2006. Model Year = CI ICE was manufactured in model year 2010. Options = The CI ICE rated speed is less than 2650 RPMs.	
FWP-2	40 CFR Part 63, Subpart ZZZZ	63ZZZZ-ENG2	HAP Source = Any stationary source of hazardous air pollutants that is not a major source as defined in 40 CFR § 63.2. Brake HP = Stationary RICE with a brake HP greater than or equal to 250 HP and less than 300 HP. Construction/Reconstruction Date = Commenced construction or reconstruction on or after June 12, 2006.	
T-4101	30 TAC Chapter 115, Storage of VOCs	115-TANK1	Today's Date = Today's date is March 1, 2013 or later. Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Product Stored = Other than crude oil, condensate, or VOC	
T-4101	40 CFR Part 60, Subpart K	60K-TANK1	Construction/Modification Date = After March 8, 1974 and on or before May 19, 1978 Storage Capacity = Capacity is 40,000 gallons (151,416 liters) or less	

Unit ID	Regulation	Index Number	Basis of Determination*	Changes and Exceptions to DSS**

	Subpart A			
FUG	30 TAC Chapter 115, Pet. Refinery & Petrochemicals	R5352-ALL	SOP/GOP Index No. = Owner/Operator assumes VOC fugitive control requirements for all components subject to 30 TAC Chapter 115, Subchapter D, Division 3 with no alternate control or control device. Agitators = The fugitive unit contains agitators. Components Utilizing Alternative Work Practice in § 115.358 = No components in the fugitive unit are using the alternative work practice under § 115.358. Compressor Seals = The fugitive unit does not contain compressor seals. Flanges = The fugitive unit contains flanges. Open-ended Valves = The fugitive unit contains open-ended valves. Pressure Relief Valves = The fugitive unit contains pressure relief valves. Process Drains = The fugitive unit has process drains. Pump Seals = The fugitive unit contains pump seals. Rupture Disks = The fugitive unit has pressure relief valves equipped with rupture disks. Title 30 TAC § 115.352 Applicable = Site is a petroleum refinery, synthetic organic chemical, polymer resin or methyl tert-butyl ether manufacturing process or a natural gas/gasoline processing operation as defined in 30 TAC 115.10. Valves (other than pressure relief and open-ended) = The fugitive unit contains valves other than pressure relief valves or open-ended valves or lines. Alternate Control Requirement = The TCEQ Executive Director has not approved an alternate method for demonstrating and documenting continuous compliance with an alternate control requirement or exemption criteria for flanges or no alternate has been requested. Instrumentation Systems = The fugitive unit does not have instrumentation systems, as defined in 40 CFR § 63.161, that meet 40 CFR § 63.169. Less Than 250 Components at Site = Fugitive unit not located at site with less than 250 fugitive components. Sampling Connection Systems = The fugitive unit does not have sampling connection systems, as defined in 40 CFR § 63.161, that meet 40 CFR § 63.169. Weight Percent VOC = Components in the fugitive unit contact process fluids that contain less than 10% VOC by weight and process fluids that contains VOC at 10%, or greater, by weight. Complying wIth § 115.352(1) = Valves are complying with § 115.352(1). Complying With § 115.352(1) = Open-ended valves and lines are complying with § 115.352(1). Complying WIth § 115.352(1) = Agitators are complying with § 115.352(1). Complying with 30 TAC § 115.352(1) = Flanges are complying with the requirements in 30 TAC § 115.352(1). Reciprocating Compressors Or Positive Displacement Pumps = The fugitive unit does not have reciprocating compressors or positive displacement pumps used in natural gas/gasoline processing operations. TVP 0.002 PSIA or Less = The fugitive unit has components or systems that contact a process fluid containing VOC having a true vapor pressure less than or equal to 0.002 psia at 68 degrees Fahrenheit.	

Unit ID	Regulation	Index Number	Basis of Determination*	Changes and Exceptions to DSS**
			TVP of Process Fluid VOC <= 0.044 psia at 68° F = Pressure relief valves contact a process fluid with a TVP of less than or equal to 0.044 psia at 68° F. TVP of Process Fluid VOC <= 0.044 PSIA AT 68° F = Process drains contact a process fluid containing VOC having a true vapor pressures less than or equal to 0.044 psia at 68 degrees Fahrenheit. TVP of Process Fluid VOC <= 0.044 PSIA AT 68° F = Flanges contact a process fluid containing VOC having a true vapor pressures less than or equal to 0.044 psia at 68 degrees Fahrenheit. Complying with 30 TAC § 115.352(1) = Pump seals are complying with the requirements in 30 TAC § 115.352(1). TVP of Process Fluid VOC > 0.044 psia at 68° F = Agitators contact a process fluid with a TVP greater than 0.044 psia at 68° F. TVP of Process Fluid VOC > 0.044 PSIA AT 68° F = Flanges contact a process fluid containing VOC having a TVP greater than 0.044 psia at 68 degrees Fahrenheit.

NSR Versus Title V FOP

The state of Texas has two Air permitting programs, New Source Review (NSR) and Title V Federal Operating Permits. The two programs are substantially different both in intent and permit content.

NSR is a preconstruction permitting program authorized by the Texas Clean Air Act and Title I of the Federal Clean Air Act (FCAA). The processing of these permits is governed by 30 Texas Administrative Code (TAC) Chapter 116.111. The Title V Federal Operating Program is a federal program authorized under Title V of the FCAA that has been delegated to the state of Texas to administer and is governed by 30 TAC Chapter 122. The major differences between the two permitting programs are listed in the table below:

NSR Permit	Federal Operating Permit(FOP)
Issued Prior to new Construction or modification of an existing facility	For initial permit with application shield, can be issued after operation commences; significant revisions require approval prior to operation.
Authorizes air emissions	Codifies existing applicable requirements, does not authorize new emissions
Ensures issued permits are protective of the environment and human health by conducting a health effects review and that requirement for best available control technology (BACT) is implemented.	Applicable requirements listed in permit are used by the inspectors to ensure proper operation of the site as authorized. Ensures that adequate monitoring is in place to allow compliance determination with the FOP.
Up to two Public notices may be required. Opportunity for public comment and contested case hearings for some authorizations.	One public notice required. Opportunity for public comments. No contested case hearings.
Applies to all point source emissions in the state.	Applies to all major sources and some non-major sources identified by the EPA.
Applies to facilities: a portion of site or individual emission sources	One or multiple FOPs cover the entire site (consists of multiple facilities)
Permits include terms and conditions under which the applicant must construct and operate its various equipment and processes on a facility basis.	Permits include terms and conditions that specify the general operational requirements of the site; and also include codification of all applicable requirements for emission units at the site.
Opportunity for EPA review for Federal Prevention of Significant Deterioration (PSD) and Nonattainment (NA) permits for major sources.	Opportunity for EPA review, Affected states review, and a Public petition period for every FOP.
Permits have a table listing maximum emission limits for pollutants	Permit has an applicable requirements table and Periodic Monitoring (PM) / Compliance Assurance Monitoring (CAM) tables which document applicable monitoring requirements.
Permits can be altered or amended upon application by company. Permits must be issued before construction or modification of facilities can begin.	Permits can be revised through several revision processes, which provide for different levels of public notice and opportunity to comment. Changes that would be significant revisions require that a revised permit be issued before those changes can be operated.
NSR permits are issued independent of FOP requirements.	FOP are independent of NSR permits, but contain a list of all NSR permits incorporated by reference

[SEQ CHAPTER \h \r 1]New Source Review Requirements

Below is a list of the New Source Review (NSR) permits for the permitted area. These NSR permits are incorporated by reference into the operating permit and are enforceable under it. These permits can be found in the main TCEQ file room, located on the first floor of Building E, 12100 Park 35 Circle, Austin, Texas. The Public Education Program may be contacted at 1-800-687-4040 or the Air Permits Division (APD) may be contacted at 1-512-239-1250 for help with any question.

Additionally, the site contains emission units that are permitted by rule under the requirements of 30 TAC Chapter 106, Permits by Rule. The following table specifies the permits by rule that apply to the site. All current permits by rule are contained in Chapter 106. Outdated 30 TAC Chapter 106 permits by rule may be viewed at the following Web site:

[HYPERLINK "http://www.tceq.texas.gov/permitting/air/permitbyrule/historical_rules/old106list/index106.html"]

Outdated Standard Exemption lists may be viewed at the following Web site:

[HYPERLINK "http://www.tceq.texas.gov/permitting/air/permitbyrule/historical_rules/oldselist/se_index.html"]

The status of air permits and applications and a link to the Air Permits Remote Document Server is located at the following Web site:

Emission Units and Emission Points

In air permitting terminology, any source capable of generating emissions (for example, an engine or a sandblasting area) is called an Emission Unit. For purposes of Title V, emission units are specifically listed in

the operating permit when they have applicable requirements other than New Source Review (NSR), or when they are listed in the permit shield table.

The actual physical location where the emissions enter the atmosphere (for example, an engine stack or a sand-blasting yard) is called an emission point. For New Source Review preconstruction permitting purposes, every emission unit has an associated emission point. Emission limits are listed in an NSR permit, associated with an emission point. This list of emission points and emission limits per pollutant is commonly referred to as the "Maximum Allowable Emission Rate Table", or "MAERT" for short. Specifically, the MAERT lists the Emission Point Number (EPN) that identifies the emission point, followed immediately by the Source Name, identifying the emission unit that is the source of those emissions on this table.

Thus, by reference, an emission unit in a Title V operating permit is linked by reference number to an NSR authorization, and its related emission point.

Monitoring Sufficiency

Federal and state rules, 40 CFR § 70.6(a)(3)(i)(B) and 30 TAC § 122.142(c) respectively, require that each federal operating permit include additional monitoring for applicable requirements that lack periodic or instrumental monitoring (which may include recordkeeping that serves as monitoring) that yields reliable data from a relevant time period that are representative of the emission unit's compliance with the applicable emission limitation or standard. Furthermore, the federal operating permit must include compliance assurance monitoring (CAM) requirements for emission sources that meet the applicability criteria of 40 CFR Part 64 in accordance with 40 CFR § 70.6(a)(3)(i)(A) and 30 TAC § 122.604(b).

With the exception of any emission units listed in the Periodic Monitoring or CAM Summaries in the FOP, the TCEQ Executive Director has determined that the permit contains sufficient monitoring, testing, recordkeeping, and reporting requirements that assure compliance with the applicable requirements. If applicable, each emission unit that requires additional monitoring in the form of periodic monitoring or CAM is described in further detail under the Rationale for CAM/PM Methods Selected section following this paragraph.

Rationale for Compliance Assurance Monitoring (CAM)/ Periodic Monitoring Methods Selected

Periodic Monitoring:

The Federal Clean Air Act requires that each federal operating permit include monitoring sufficient to assure compliance with the terms and conditions of the permit. Most of the emission limits and standards applicable to emission units at Title V sources include adequate monitoring to show that the units meet the limits and standards. For those requirements that do not include monitoring, or where the monitoring is not sufficient to assure compliance, the federal operating permit must include such monitoring for the emission units affected. The following emission units are subject to periodic monitoring requirements because the emission units are subject to an emission limitation or standard for an air pollutant (or surrogate thereof) in an applicable requirement that does not already require monitoring, or the monitoring for the applicable requirement is not sufficient to assure compliance:

Unit/Group/Process Information	
ID No.: B-1	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 111, Visible Emissions	SOP Index No.: 111-VENT1
Pollutant: PM (OPACITY)	Main Standard: § 111.111(a)(1)(B)
Monitoring Information	
Indicator: Visible Emissions	
Minimum Frequency: once per quarter	
Averaging Period: n/a	
Deviation Limit: Visible emissions exceeding 20% opacity.	
Basis of monitoring: The option to perform opacity readings or visible emissions to demonstrate compliance is consistent with EPA Reference Test Method 9 and 22. Opacity and visible emissions have been used as an indicator of particulate emissions in many federal rules including 40 CFR Part 60, Subpart F and Subpart HH. In addition, use of these indicators is consistent with the EPA's "Compliance Assurance Monitoring (CAM) Technical Guidance Document" (August 1998). Monitoring specifications and procedures for the opacity are consistent with federal requirements and include the EPA's Test Method 9 for determining opacity by visual observations and the requirements of 40 CFR § 60.13 for a continuous opacity monitoring system (COMS). The monitoring specifications and procedures for the visible emissions monitoring are similar to "EPA Reference Method 22" procedures.

Applicable Regulatory Requirement	
Name: 30 TAC Chapter 111, Visible Emissions	SOP Index No.: 111-VENT1
Pollutant: PM (OPACITY)	Main Standard: § 111.111(a)(1)(B)
Monitoring Information	
Indicator: Visible Emissions	
Minimum Frequency: once per quarter	
Averaging Period: n/a	
Deviation Limit: Visible emissions exceeding 20% opacity.	
Basis of monitoring: The option to perform opacity readings or visible emissions to demonstrate compliance is consistent with EPA Reference Test Method 9 and 22. Opacity and visible emissions have been used as an indicator of particulate emissions in many federal rules including 40 CFR Part 60, Subpart F and Subpart HH. In addition, use of these indicators is consistent with the EPA's "Compliance Assurance Monitoring (CAM) Technical Guidance Document" (August 1998). Monitoring specifications and procedures for the opacity are consistent with federal requirements and include the EPA's Test Method 9 for determining opacity by visual observations and the requirements of 40 CFR § 60.13 for a continuous opacity monitoring system (COMS). The monitoring specifications and procedures for the visible emissions monitoring are similar to "EPA Reference Method 22" procedures.	

Unit/Group/Process Information	
ID No.: DEGREASE	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Degreasing Processes	SOP Index No.: 115-DEGREASE
Pollutant: VOC	Main Standard: § 115.412(1)
Monitoring Information	
Indicator: Visual Inspection	
Minimum Frequency: Monthly	
Averaging Period: n/a	
Deviation Limit: Any monitoring data that indicates the cold cleaner is not in compliance with the applicable requirements of 115.412(1)(A)-(F) shall be reported as a deviation.	
Basis of monitoring: The monitoring option to cover cold cleaner or the open-top vapor cleaner was included in the EPA "Periodic Monitoring Technical Reference Document" (April 1999) to monitor VOC sources. In addition to covering the cleaner records of monthly inspections of equipment is an effective way to ensure that the system is operating in accordance with its design.	

Unit/Group/Process Information	
ID No.: FS-100	
Control Device ID No.: TO-1	Control Device Type: Vapor Combustor
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Loading and Unloading of VOC	SOP Index No.: 115-LOAD4
Pollutant: VOC	Main Standard: § 115.212(a)(1)
Monitoring Information	
Indicator: Combustion Temperature / Exhaust Gas Temperature	
Minimum Frequency: Once per week	
Averaging Period: n/a*	
Deviation Limit: Exhaust gas temperature falls below 1400 degrees F.	
Basis of monitoring: It is widely practiced and accepted to use performance tests, manufacturer's recommendations, engineering calculations and/or historical data to establish a minimum temperature for thermal incinerators. This minimum temperature must be maintained in order for the proper destruction efficiency. Operation below the minimum combustion temperature will result in incomplete combustion and potential noncompliance with emission limitations and/or standards. The monitoring of the combustion temperature of a thermal incinerator is commonly required in federal and state rules, including: 40 CFR Part 60, Subparts III, NNN, QQQ, and RRR; 40 CFR Part 61, Subparts BB and FF; 40 CFR Part 63, Subparts G, R, DD, EE, and HH; and 30 TAC Chapter 115.	

*The permit holder may elect to collect monitoring data on a more frequent basis and calculate the average as specified by the minimum frequency, for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis and shall not be collected and used in particular instances to avoid reporting deviations.

Unit/Group/Process Information

Unit/Group/Process Information	
ID No.: FS-200	
Control Device ID No.: S79-2A,B,C	Control Device Type: Carbon Adsorption System (Non-Regenerative)
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Loading and Unloading of VOC	SOP Index No.: 115-LOAD5
Pollutant: VOC	Main Standard: § 115.212(a)(1)
Monitoring Information	
Indicator: VOC Concentration	
Minimum Frequency: Daily	
Averaging Period: N/A	
Deviation Limit: First canister not replaced or event not recorded when breakthrough occurs. Also when first canister concentration exceeds 500 ppm.	
Basis of monitoring: A common way to monitor a non-regenerative carbon adsorption system is by measuring the outlet VOC concentration with a portable analyzer with procedures such as EPA Test Method 25A or a VOC CEMS. An increase in VOC concentration demonstrates when the carbon canister needs to be replaced. This indicator is consistent with the EPA "CAM Technical Guidance Document" (August 1998) and "Periodic Monitoring Technical Reference Guidance Document" (April 1999). Outlet VOC concentration has been used as an indicator of VOC emissions in many federal and state rules, including: 40 CFR Part 60, Subparts III, NNN, and RRR; and 30 TAC Chapter 115.

Unit/Group/Process Information	
ID No.: T-4134	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Storage of VOCs	SOP Index No.: 115-TANK6
Pollutant: VOC	Main Standard: § 115.112(e)(1)
Monitoring Information	
Indicator: Structural Integrity of the Pipe	
Minimum Frequency: Emptied and degassed	
Averaging Period: n/a	
Deviation Limit: The tank is not inspected or if repairs are not completed prior to refilling the storage vessel.	
Basis of monitoring: The periodic monitoring option provided for emission units using a submerged fill pipe is location of the submerged fill pipe and structural integrity of the pipe. The location and the integrity of the pipe ensure that loading operations are controlled to prevent splash fill and reduce generated vapors; therefore, less emissions are released to the atmosphere. This approach was included as an option by the EPA in the "Periodic Monitoring Technical Reference Document" (April 1999) to monitor VOC sources.	

Unit/Group/Process Information	
ID No.: T-4134	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement

Unit/Group/Process Information	
ID No.: TF13LOAD	
Control Device ID No.: TO-1	Control Device Type: Vapor Combustor
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Loading and Unloading of VOC	SOP Index No.: 115-LOAD4
Pollutant: VOC	Main Standard: § 115.212(a)(1)
Monitoring Information	
Indicator: Combustion Temperature / Exhaust Gas Temperature	
Minimum Frequency: Once per week	
Averaging Period: n/a*	
Deviation Limit: Exhaust gas temperature falls below 1400 degrees F.	
Basis of monitoring: It is widely practiced and accepted to use performance tests, manufacturer's recommendations, engineering calculations and/or historical data to establish a minimum temperature for thermal incinerators. This minimum temperature must be maintained in order for the proper destruction efficiency. Operation below the minimum combustion temperature will result in incomplete combustion and potential noncompliance with emission limitations and/or standards. The monitoring of the combustion temperature of a thermal incinerator is commonly required in federal and state rules, including: 40 CFR Part 60, Subparts III, NNN, QQQ, and RRR; 40 CFR Part 61, Subparts BB and FF; 40 CFR Part 63, Subparts G, R, DD, EE, and HH; and 30 TAC Chapter 115.	

*The permit holder may elect to collect monitoring data on a more frequent basis and calculate the average as specified by the minimum frequency, for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis and shall not be collected and used in particular instances to avoid reporting deviations.

Minimum Frequency: Once per week	
Averaging Period: n/a*	
Deviation Limit: Exhaust gas temperature falls below 1400 degrees F.	
Basis of monitoring: It is widely practiced and accepted to use performance tests, manufacturer's recommendations, engineering calculations and/or historical data to establish a minimum temperature for thermal incinerators. This minimum temperature must be maintained in order for the proper destruction efficiency. Operation below the minimum combustion temperature will result in incomplete combustion and potential noncompliance with emission limitations and/or standards. The monitoring of the combustion temperature of a thermal incinerator is commonly required in federal and state rules, including: 40 CFR Part 60, Subparts III, NNN, QQQ, and RRR; 40 CFR Part 61, Subparts BB and FF; 40 CFR Part 63, Subparts G, R, DD, EE, and HH; and 30 TAC Chapter 115.	

*The permit holder may elect to collect monitoring data on a more frequent basis and calculate the average as specified by the minimum frequency, for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis and shall not be collected and used in particular instances to avoid reporting deviations.

Unit/Group/Process Information	
ID No.: TO-1	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 111, Visible Emissions	SOP Index No.: 111-VENT1
Pollutant: PM (OPACITY)	Main Standard: § 111.111(a)(1)(B)
Monitoring Information	
Indicator: Visible Emissions	
Minimum Frequency: once per quarter	
Averaging Period: n/a	
Deviation Limit: Visible emissions exceeding 20% opacity.	
Basis of monitoring: The option to perform opacity readings or visible emissions to demonstrate compliance is consistent with EPA Reference Test Method 9 and 22. Opacity and visible emissions have been used as an indicator of particulate emissions in many federal rules including 40 CFR Part 60, Subpart F and Subpart HH. In addition, use of these indicators is consistent with the EPA's "Compliance Assurance Monitoring (CAM) Technical Guidance Document" (August 1998). Monitoring specifications and procedures for the opacity are consistent with federal requirements and include the EPA's Test Method 9 for determining opacity by visual observations and the requirements of 40 CFR § 60.13 for a continuous opacity monitoring system (COMS). The monitoring specifications and procedures for the visible emissions monitoring are similar to "EPA Reference Method 22" procedures.

[SEQ CHAPTER \H \R 1]FEDERAL OPERATING PERMIT

A FEDERAL OPERATING PERMIT IS HEREBY ISSUED TO
Union Carbide Corporation

AUTHORIZING THE OPERATION OF
UCC Seadrift Operations
Ethylene Oxide / Glycol
Industrial Organic Chemicals

LOCATED AT
Calhoun County, Texas
Latitude 28° 30' 59" Longitude 96° 46' 5"
Regulated Entity Number: RN102181526

This permit is issued in accordance with and subject to the Texas Clean Air Act (TCAA), Chapter 382 of the Texas Health and Safety Code and Title 30 Texas Administrative Code Chapter 122 (30 TAC Chapter 122), Federal Operating Permits. Under 30 TAC Chapter 122, this permit constitutes the permit holder's authority to operate the site and emission units listed in this permit. Operations of the site and emission units listed in this permit are subject to all additional rules or amended rules and orders of the Commission pursuant to the TCAA.

This permit does not relieve the permit holder from the responsibility of obtaining New Source Review authorization for new, modified, or existing facilities in accordance with 30 TAC Chapter 116, Control of Air Pollution by Permits for New Construction or Modification.

The site and emission units authorized by this permit shall be operated in accordance with 30 TAC Chapter 122, the general terms and conditions, special terms and conditions, and attachments contained herein.

This permit shall expire five years from the date of issuance. The renewal requirements specified in 30 TAC § 122.241 must be satisfied in order to renew the authorization to operate the site and emission units.

Permit No: O2030 Issuance Date: _____

_____

[ADVANCE \x 144]For the Commission

Table of Contents

Section **Page**

[TOC \o "1-3" \h \z \t "SOP_Heading1,1,SOP_Heading2,2,SOP_Heading2 + Centered,2,SOP_Heading1 + Centered,1"]

General Terms and Conditions

The permit holder shall comply with all terms and conditions contained in 30 TAC § 122.143 (General Terms and Conditions), 30 TAC § 122.144 (Recordkeeping Terms and Conditions), 30 TAC § 122.145 (Reporting Terms and Conditions), and 30 TAC § 122.146 (Compliance Certification Terms and Conditions).

In accordance with 30 TAC § 122.144(1), records of required monitoring data and support information required by this permit, or any applicable requirement codified in this permit, are required to be maintained for a period of five years from the date of the monitoring report, sample, or application unless a longer data retention period is specified in an applicable requirement. The five year record retention period supersedes any less stringent retention requirement that may be specified in a condition of a permit identified in the New Source Review Authorization attachment.

If the permit holder chooses to demonstrate that this permit is no longer required, a written request to void this permit shall be submitted to the Texas Commission on Environmental Quality (TCEQ) by the Responsible Official in accordance with 30 TAC § 122.161(e). The permit holder shall comply with the permit's requirements, including compliance certification and deviation reporting, until notified by the TCEQ that this permit is voided.

The permit holder shall comply with 30 TAC Chapter 116 by obtaining a New Source Review authorization prior to new construction or modification of emission units located in the area covered by this permit.

All reports required by this permit must include in the submittal a cover letter which identifies the following information: company name, TCEQ regulated entity number, air account number (if assigned), site name, area name (if applicable), and Air Permits Division permit number(s).

[SEQ CHAPTER \h \r 1]Special Terms and Conditions:

Emission Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting

1. Permit holder shall comply with the following requirements:

   A. Emission units (including groups and processes) in the Applicable Requirements Summary attachment shall meet the limitations, standards, equipment specifications, monitoring, recordkeeping, reporting, testing, and other requirements listed in the Applicable Requirements Summary attachment to assure compliance with the permit.

   B. The textual description in the column titled "Textual Description" in the Applicable Requirements Summary attachment is not enforceable and is not deemed as a substitute for the actual regulatory language. The Textual Description is provided for information purposes only.

   C. A citation listed on the Applicable Requirements Summary attachment, which has a notation [G] listed before it, shall include the referenced section and subsection for all commission rules, or paragraphs for all federal and state regulations and all subordinate paragraphs, subparagraphs and clauses, subclauses, and items contained within the referenced citation as applicable requirements.

D. When a grouped citation, notated with a [G] in the Applicable Requirements Summary, contains multiple compliance options, the permit holder must keep records of when each compliance option was used.

E. Emission units subject to 40 CFR Part 63, Subparts F, G, H, and DDDDD as identified in the attached Applicable Requirements Summary table are subject to 30 TAC Chapter 113, Subchapter C, §§ 113.110, 113.120, 113.130, and 113.1130, respectively, which incorporates the 40 CFR Part 63 Subpart by reference.

2. The permit holder shall comply with the following sections of 30 TAC Chapter 101 (General Air Quality Rules):

A. Title 30 TAC § 101.1 (relating to Definitions), insofar as the terms defined in this section are used to define the terms used in other applicable requirements

B. Title 30 TAC § 101.3 (relating to Circumvention)

C. Title 30 TAC § 101.8 (relating to Sampling), if such action has been requested by the TCEQ

D. Title 30 TAC § 101.9 (relating to Sampling Ports), if such action has been requested by the TCEQ

E. Title 30 TAC § 101.10 (relating to Emissions Inventory Requirements)

F. Title 30 TAC § 101.201 (relating to Emission Event Reporting and Recordkeeping Requirements)

G. Title 30 TAC § 101.211 (relating to Scheduled Maintenance, Start-up, and Shutdown Reporting and Recordkeeping Requirements)

H. Title 30 TAC § 101.221 (relating to Operational Requirements)

I. Title 30 TAC § 101.222 (relating to Demonstrations)

J. Title 30 TAC § 101.223 (relating to Actions to Reduce Excessive Emissions)

3. Permit holder shall comply with the following requirements of 30 TAC Chapter 111:

A. Visible emissions from stationary vents with a flow rate of less than 100,000 actual cubic feet per minute and constructed either before or after January 31, 1972 that are not listed in the Applicable Requirements Summary attachment for 30 TAC Chapter 111, Subchapter A, Division 1 , shall not exceed 20% opacity averaged over a six minute period. The permit holder shall comply with the following requirements for stationary vents at the site subject to this standard:

(i) Title 30 TAC § 111.111(a)(1)(B) (relating to Requirements for Specified Sources)

(ii) Title 30 TAC § 111.111(a)(1)(E)

(iii) Title 30 TAC § 111.111(a)(1)(F)(i), (ii), (iii), or (iv)

(iv) For emission units with vent emissions subject to 30 TAC § 111.111(a)(1)(B), complying with 30 TAC § 111.111(a)(1)(F)(ii), (iii), or (iv), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146. These periodic monitoring requirements do not apply to vents that are not capable of producing visible emissions such as vents that emit only colorless VOCs; vents from non-fuming liquids; vents that provide passive ventilation, such as plumbing vents; or vent emissions from any other source that does not obstruct the transmission of light. Vents, as specified in the "Applicable Requirements Summary" attachment, that are subject to the emission limitation of 30 TAC § 111.111(a)(1)(B) are not subject to the following periodic monitoring requirements:

(1) An observation of stationary vents from emission units in operation shall be conducted at least once during each calendar quarter unless the emission unit is not operating for the entire quarter.

(2) For stationary vents from a combustion source, if an alternative to the normally fired fuel is fired for a period greater than or equal to 24 consecutive hours, the permit holder shall conduct an observation of the stationary vent for each such period to determine if visible emissions are present. If such period is greater than 3 months, observations shall be conducted once during each quarter. Supplementing the normally fired fuel with natural gas or fuel gas to increase the net heating value to the minimum required value does not constitute creation of an alternative fuel.

(3) Records of all observations shall be maintained.

(4) Visible emissions observations of emission units operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of emission units operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions observations shall be made during times when the activities described in 30 TAC § 111.111(a)(1)(E) are not taking place. Visible emissions shall be determined with each stationary vent in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each stationary vent during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

(5) Compliance Certification:

(a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(1) and (a)(1)(B).

(b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(1)(F) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

(c) Some vents may be subject to multiple visible emission or monitoring requirements. All credible data must be considered when certifying compliance with this requirement even if the observation or monitoring was performed to demonstrate compliance with a different requirement.

B. Certification of opacity readers determining opacities under Method 9 (as outlined in 40 CFR Part 60, Appendix A) to comply with opacity monitoring requirements shall be accomplished by completing the Visible Emissions Evaluators Course, or approved agency equivalent, no more than 180 days before the opacity reading.

C. For emission units with contributions from uncombined water, the permit holder shall comply with the requirements of 30 TAC § 111.111(b).

D. Emission limits on nonagricultural processes, except for the steam generators specified in 30 TAC § 111.153, shall comply with the following requirements:

(i) Emissions of PM from any source may not exceed the allowable rates as required in 30 TAC § 111.151(a) (relating to Allowable Emissions Limits)

(ii) Sources with an effective stack height (h_e) less than the standard effective stack height (H_e), must reduce the allowable emission level by multiplying it by $[h_e/H_e]^2$ as required in 30 TAC § 111.151(b)

(iii) Effective stack height shall be calculated by the equation specified in 30 TAC § 111.151(c)

4. For storage vessels maintaining working pressure as specified in 30 TAC Chapter 115, Subchapter B, Division 1: "Storage of Volatile Organic Compounds," the permit holder shall comply with the requirements of 30 TAC § 115.112(c)(1).

5. The permit holder shall comply with the following requirements for units subject to any subpart of 40 CFR Part 60, unless otherwise stated in the applicable subpart:

   A. Title 40 CFR § 60.7 (relating to Notification and Recordkeeping)

   B. Title 40 CFR § 60.8 (relating to Performance Tests)

   C. Title 40 CFR § 60.11 (relating to Compliance with Standards and Maintenance Requirements)

   D. Title 40 CFR § 60.12 (relating to Circumvention)

   E. Title 40 CFR § 60.13 (relating to Monitoring Requirements)

   F. Title 40 CFR § 60.14 (relating to Modification)

   G. Title 40 CFR § 60.15 (relating to Reconstruction)

   H. Title 40 CFR § 60.19 (relating to General Notification and Reporting Requirements)

6. The permit holder shall comply with the requirements of 30 TAC Chapter 113, Subchapter C, § 113.100 for units subject to any subpart of 40 CFR Part 63, unless otherwise stated in the applicable subpart.

7. For the chemical manufacturing process specified in 40 CFR Part 63, Subpart F, the permit holder shall comply with 40 CFR § 63.103(a) (relating to General Compliance, Reporting, and Recordkeeping Provisions) (Title 30 TAC Chapter 113, Subchapter C, § 113.110 incorporated by reference).

8. For the chemical manufacturing facilities with a 40 CFR Part 63, Subpart G Group 2 wastewater stream, the permit holder shall comply with (Title 30 TAC Chapter 113, Subchapter C, § 113.120 incorporated by reference):

   A. Title 40 CFR § 63.132(a), (a)(1), and (a)(1)(i) (relating to Process Wastewater Provisions - General)

   B. Title 40 CFR § 63.146(b)(1) (relating to Process Wastewater Provisions - Reporting)

   C. Title 40 CFR § 63.147(b)(8) (relating to Process Wastewater Provisions - Recordkeeping)

9. For Group 1 wastewater streams the permit holder shall comply with the following requirements 40 CFR § 63.138 (relating to Process Wastewater Provisions - Performance Standards for Treatment Processes Managing Group 1 Wastewater Streams and/or Residuals Removed from Group 1 Wastewater Streams) (Title 30 TAC Chapter 113, Subchapter C, § 113.120 incorporated by reference):

A. Title 40 CFR § 63.138(i)(1), (i)(1)(i) and (i)(1)(ii), for demonstration of total source mass flow rate requirements

10. For the chemical manufacturing facilities subject to leak detection requirements in 40 CFR Part 63, Subpart G, the permit holder shall comply with the following requirements (Title 30 TAC Chapter 113, Subchapter C, § 113.120 incorporated by reference):

A. General Leak Detection Requirements:

(i) Title 40 CFR § 63.148(d)(1) - (3), and (e) (relating to Leak Inspection Provisions)

(ii) Title 40 CFR § 63.148(c), (g), (g)(2), (h), and (h)(2) (relating to Leak Inspection Provisions), for monitoring and testing requirements

(iii) Title 40 CFR §§ 63.148(g)(2), (h)(2), (i)(1) - (2), (i)(4)(i) - (viii), (i)(5), and 63.152(a)(1) - (5), for recordkeeping requirements

(iv) Title 40 CFR §§ 63.148(j), 63.151(a)(6)(i) - (iii), (b)(1) - (2), (j)(1) - (3), 63.152(a)(1) - (5), (b), (b)(1)(i) - (ii), and (b)(4), for reporting requirements

B. For closed vent system or vapor collection systems constructed of hard piping:

(i) Title 40 CFR § 63.148(b)(1)(ii) (relating to Leak Inspection Provisions), for monitoring and testing requirements

(ii) Title 40 CFR § 63.148(i)(6) (relating to Leak Inspection Provisions), for recordkeeping requirements

11. For the chemical manufacturing facilities subject to transfer operations requirements in 40 CFR Part 63, Subpart G, the permit holder shall comply with the following requirements (Title 30 TAC Chapter 113, Subchapter C, § 113.120 incorporated by reference):

A. Title 40 CFR § 63.126(e)(1) - (2), and (f) (relating to Transfer Operations Provisions Reference Control Technology)

B. Title 40 CFR § 63.128(f)(1) - (2) (relating to Transfer Operations Provisions - Test Methods and Procedures)

C. Title 40 CFR § 63.130(e) (relating to Transfer Operations Provisions - Periodic Recordkeeping and Reporting)

12. For the transfer of site remediation materials subject to 40 CFR Part 63, Subpart GGGGG off-site to another facility, the permit holder shall comply with the following requirements (Title 30 TAC, Subchapter C, § 113.1160 incorporated by reference):

A. Title 40 CFR § 63.7936(a), for the transfer of site remediation materials

B. Title 40 CFR § 63.7936(b)(1), for transfer to a landfill or land disposal unit

C. Title 40 CFR § 63.7936(b)(2), for transfer to a facility subject to 40 CFR Part 63, Subpart DD

D. Title 40 CFR § 63.7936(b)(3), (b)(3)(i) - (iv), for transfer to a facility managing the site remediation material according to the requirements of 40 CFR Part 63, Subpart GGGGG

13. For containers managing remediation materials subject to 40 CFR Part 63, Subpart GGGGG, the permit holder shall comply with the following requirements (Title 30 TAC Chapter 113, Subchapter C, § 113.1160 incorporated by reference):

A. Title 40 CFR § 63.922(b)(1) - (3), (c), (d), (d)(1) - (5), (e), and (f), (f)(1) - (4) (relating to Standards - Container Level 1 Controls)

B. Title 40 CFR § 63.923(b)(1) - (3), (c), (d), (d)(1) - (5), (e), and (f), (f)(1) - (4) (relating to Standards - Container Level 2 Controls)

C. Title 40 CFR § 63.925(a)(1) - (8), and (b)(1) - (3) (relating to Test Methods and Procedures)

D. Title 40 CFR § 63.926(a)(1) - (3) (relating to Inspection and Monitoring Requirements)

E. Title 40 CFR § 63.7901(b) and (b)(1), for initial demonstration of compliance

F. Title 40 CFR § 63.7901(b)(2), for initial demonstration of compliance

G. Title 40 CFR § 63.7901(c), (c)(1), and (c)(2), for initial demonstration of compliance

H. Title 40 CFR § 63.7901(d), and (d)(1) - (4), for initial demonstration of compliance

I. Title 40 CFR § 63.7903(b) and (b)(1), for continuous demonstration of compliance

J. Title 40 CFR § 63.7903(b)(2), (b)(2)(i), (b)(2)(ii), for continuous demonstration of compliance

K. Title 40 CFR § 63.7903(c)(4), (c)(4)(i), and (c)(4)(ii), for continuous demonstration of compliance

L. Title 40 CFR § 63.7903(d)(5), (d)(5)(i), and (d)(5)(ii), for continuous demonstration of compliance

M. Title 40 CFR § 63.7952(c), for recordkeeping

Additional Monitoring Requirements

14. The permit holder shall comply with the periodic monitoring requirements as specified in the attached "Periodic Monitoring Summary" upon issuance of the permit. Except for, as applicable, monitoring malfunctions, associated repairs, and required quality assurance or control activities (including, as applicable, calibration checks and required zero and span adjustments), the permit holder shall conduct all monitoring in continuous operation (or shall collect data at all required intervals) at all times that the pollutant-specific emissions unit is operating. The permit holder may elect to collect monitoring data on a more frequent basis and average the data, consistent with the averaging time specified in the "Periodic Monitoring Summary," for purposes of

determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis. In no event shall data be collected and used in particular instances to avoid reporting deviations. Deviations shall be reported according to 30 TAC § 122.145 (Reporting Terms and Conditions).

New Source Review Authorization Requirements

15. Permit holder shall comply with the requirements of New Source Review authorizations issued or claimed by the permit holder for the permitted area, including permits, permits by rule, standard permits, flexible permits, special permits, permits for existing facilities including Voluntary Emissions Reduction Permits and Electric Generating Facility Permits issued under 30 TAC Chapter 116, Subchapter I, or special exemptions referenced in the New Source Review Authorization References attachment. These requirements:

    A. Are incorporated by reference into this permit as applicable requirements

    B. Shall be located with this operating permit

    C. Are not eligible for a permit shield

16. The permit holder shall comply with the general requirements of 30 TAC Chapter 106, Subchapter A or the general requirements, if any, in effect at the time of the claim of any PBR.

17. The permit holder shall maintain records to demonstrate compliance with any emission limitation or standard that is specified in a permit by rule (PBR) or Standard Permit listed in the New Source Review Authorizations attachment. The records shall yield reliable data from the relevant time period that are representative of the emission unit's compliance with the PBR or Standard Permit. These records may include, but are not limited to, production capacity and throughput, hours of operation, safety data sheets (SDS), chemical composition of raw materials, speciation of air contaminant data, engineering calculations, maintenance records, fugitive data, performance tests, capture/control device efficiencies, direct pollutant monitoring (CEMS, COMS, or PEMS), or control device parametric monitoring. These records shall be made readily accessible and available as required by 30 TAC § 122.144. Any monitoring or recordkeeping data indicating noncompliance with the PBR or Standard Permit shall be considered and reported as a deviation according to 30 TAC § 122.145 (Reporting Terms and Conditions).

Compliance Requirements

18. The permit holder shall certify compliance in accordance with 30 TAC § 122.146. The permit holder shall comply with 30 TAC § 122.146 using at a minimum, but not limited to, the continuous or intermittent compliance method data from monitoring, recordkeeping, reporting, or testing required by the permit and any other credible evidence or information. The certification period may not exceed 12 months and the certification must be submitted within 30 days after the end of the period being certified.

19. Use of Discrete Emission Credits to comply with the applicable requirements:

A. Unless otherwise prohibited, the permit holder may use discrete emission credits to comply with the following applicable requirements listed elsewhere in this permit:

(i) Title 30 TAC Chapter 115

(ii) Title 30 TAC Chapter 117

(iii) If applicable, offsets for Title 30 TAC Chapter 116

(iv) Temporarily exceed state NSR permit allowables

B. The permit holder shall comply with the following requirements in order to use the credit to comply with the applicable requirements:

(i) The permit holder must notify the TCEQ according to 30 TAC § 101.376(d)

(ii) The discrete emission credits to be used must meet all the geographic, timeliness, applicable pollutant type, and availability requirements listed in 30 TAC Chapter 101, Subchapter H, Division 4

(iii) The executive director has approved the use of the discrete emission credits according to 30 TAC § 101.376(d)(1)(A)

(iv) The permit holder keeps records of the use of credits towards compliance with the applicable requirements in accordance with 30 TAC § 101.372(h) and 30 TAC Chapter 122

(v) Title 30 TAC § 101.375 (relating to Emission Reductions Achieved Outside the United States)

Risk Management Plan

20. For processes subject to 40 CFR Part 68 and specified in 40 CFR § 68.10, the permit holder shall comply with the requirements of the Accidental Release Prevention Provisions in 40 CFR Part 68. The permit holder shall submit to the appropriate agency either a compliance schedule for meeting the requirements of 40 CFR Part 68 by the date provided in 40 CFR § 68.10(a), or as part of the compliance certification submitted under this permit, a certification statement that the source is in compliance with all requirements of 40 CFR Part 68, including the registration and submission of a risk management plan.

Protection of Stratospheric Ozone

21. Permit holders at a site subject to Title VI of the FCAA Amendments shall meet the following requirements for protection of stratospheric ozone:

A. Any on site servicing, maintenance, and repair on refrigeration and nonmotor vehicle air-conditioning appliances using ozone-depleting refrigerants or non-exempt substitutes shall be conducted in accordance with 40 CFR Part 82, Subpart F. Permit holders shall ensure that repairs on or refrigerant removal from refrigeration and nonmotor vehicle air-conditioning appliances using ozone-depleting refrigerants are performed only by properly certified

technicians using certified equipment. Records shall be maintained as required by 40 CFR Part 82, Subpart F.

Permit Location

22. The permit holder shall maintain a copy of this permit and records related to requirements listed in this permit on site.

Applicable Requirements Summary

Unit Summary 13

Applicable Requirements Summary 17

Note: A "none" entry may be noted for some emission sources in this permit's "Applicable Requirements Summary" under the heading of "Monitoring and Testing Requirements" and/or "Recordkeeping Requirements" and/or "Reporting Requirements." Such a notation indicates that there are no requirements for the indicated emission source as identified under the respective column heading(s) for the stated portion of the regulation when the emission source is operating under the conditions of the specified SOP Index Number. However, other relevant requirements pursuant to 30 TAC Chapter 122 including Recordkeeping Terms and Conditions (30 TAC § 122.144), Reporting Terms and Conditions (30 TAC § 122.145), and Compliance Certification Terms and Conditions (30 TAC § 122.146) continue to apply.

Unit Summary

Unit/Group/ Process ID No.	Unit Type	Group/Inclusive Units	SOP Index No.	Regulation	Requirement Driver
100	EMISSION POINTS/ STATIONARY VENTS/ PROCESS VENTS	N/A	R5121	30 TAC Chapter 115, Vent Gas Controls	No changing attributes.
100	DISTILLATION OPERATIONS	N/A	60NNN	40 CFR Part 60, Subpart NNN	No changing attributes.
100	EMISSION POINTS/ STATIONARY VENTS/ PROCESS VENTS	N/A	63G	40 CFR Part 63, Subpart G	No changing attributes.
101	EMISSION POINTS/ STATIONARY VENTS/ PROCESS VENTS	N/A	R5121	30 TAC Chapter 115, Vent Gas Controls	No changing attributes.
101	EMISSION POINTS/ STATIONARY VENTS/ PROCESS VENTS	N/A	63G	40 CFR Part 63, Subpart G	No changing attributes.
1013	FLARES	N/A	R1111	30 TAC Chapter 111, Visible Emissions	No changing attributes.
1013	FLARES	N/A	63A	40 CFR Part 63, Subpart A	Flare Assist Type = Air assisted
1013	FLARES	N/A	63A-1	40 CFR Part 63, Subpart A	Flare Assist Type = Non-assisted, Flare Exit Velocity = Flare exit velocity is greater than or equal to 60 ft/s (18.3 m/sec) but less than 400 ft/s (122 m/sec)., Heating Value of Gas = Heating value is less than or equal to 1000 Btu/scf (37.3 MJ/scm).
1014	FLARES	N/A	R1111	30 TAC Chapter 111, Visible Emissions	No changing attributes.

Unit Summary

Unit/Group/ Process ID No.	Unit Type	Group/Inclusive Units	SOP Index No.	Regulation	Requirement Driver
1014	FLARES	N/A	63A	40 CFR Part 63, Subpart A	No changing attributes.
1042	EMISSION POINTS/ STATIONARY VENTS/ PROCESS VENTS	N/A	R5121	30 TAC Chapter 115, Vent Gas Controls	No changing attributes.
1042	DISTILLATION OPERATIONS	N/A	60NNN	40 CFR Part 60, Subpart NNN	No changing attributes.
1042	EMISSION POINTS/ STATIONARY VENTS/ PROCESS VENTS	N/A	63G	40 CFR Part 63, Subpart G	No changing attributes.
1176	BOILERS/ STEAM GENERATORS/ STEAM GENERATING UNITS	N/A	63DDDDD	40 CFR Part 63, Subpart DDDDD	No changing attributes.
118	EMISSION POINTS/ STATIONARY VENTS/ PROCESS VENTS	N/A	R5121	30 TAC Chapter 115, Vent Gas Controls	No changing attributes.
118	DISTILLATION OPERATIONS	N/A	60NNN	40 CFR Part 60, Subpart NNN	No changing attributes.
118	EMISSION POINTS/ STATIONARY VENTS/ PROCESS VENTS	N/A	63G	40 CFR Part 63, Subpart G	No changing attributes.
97A	EMISSION POINTS/ STATIONARY VENTS/ PROCESS VENTS	N/A	R1111	30 TAC Chapter 111, Visible Emissions	No changing attributes.
97A	EMISSION POINTS/ STATIONARY VENTS/ PROCESS VENTS	N/A	R5121	30 TAC Chapter 115, Vent Gas Controls	No changing attributes.
97A	EMISSION POINTS/ STATIONARY VENTS/ PROCESS VENTS	N/A	63G	40 CFR Part 63, Subpart G	No changing attributes.

Unit Summary

Unit/Group/ Process ID No.	Unit Type	Group/Inclusive Units	SOP Index No.	Regulation	Requirement Driver
99	EMISSION POINTS/ STATIONARY VENTS/ PROCESS VENTS	N/A	R5121	30 TAC Chapter 115, Vent Gas Controls	No changing attributes.
99	DISTILLATION OPERATIONS	N/A	60NNN	40 CFR Part 60, Subpart NNN	No changing attributes.
99	EMISSION POINTS/ STATIONARY VENTS/ PROCESS VENTS	N/A	63G	40 CFR Part 63, Subpart G	No changing attributes.
C-411	STORAGE TANKS/VESSELS	N/A	R5112	30 TAC Chapter 115, Storage of VOCs	No changing attributes.
C-411	STORAGE TANKS/VESSELS	N/A	63G	40 CFR Part 63, Subpart G	No changing attributes.
C-412	STORAGE TANKS/VESSELS	N/A	R5112	30 TAC Chapter 115, Storage of VOCs	No changing attributes.
C-412	STORAGE TANKS/VESSELS	N/A	63G	40 CFR Part 63, Subpart G	No changing attributes.
C-413	STORAGE TANKS/VESSELS	N/A	R5112	30 TAC Chapter 115, Storage of VOCs	No changing attributes.
GRPGLYCLTK	STORAGE TANKS/VESSELS	SDT10, SDT12, SDT13, SDT15, SDT16, SDT17, SDT18, SDT34, SDT35, SDT9	63G	40 CFR Part 63, Subpart G	No changing attributes.
OX2-FUG	FUGITIVE EMISSION UNITS	N/A	63H	40 CFR Part 63, Subpart H	No changing attributes.
OX2-GLFUG	FUGITIVE EMISSION UNITS	N/A	60VV	40 CFR Part 60, Subpart VV	No changing attributes.
OX2-GLFUG	FUGITIVE EMISSION UNITS	N/A	63H	40 CFR Part 63, Subpart H	No changing attributes.
OXRACK3	LOADING/UNLOADING OPERATIONS	N/A	R5-EO	30 TAC Chapter 115, Loading and Unloading of VOC	No changing attributes.

Unit Summary

Unit/Group/ Process ID No.	Unit Type	Group/Inclusive Units	SOP Index No.	Regulation	Requirement Driver
OXRACK3	LOADING/UNLOADING OPERATIONS	N/A	63G-EO	40 CFR Part 63, Subpart G	No changing attributes.
PROEOGL	CHEMICAL MANUFACTURING PROCESS	N/A	63F-1	40 CFR Part 63, Subpart F	No changing attributes.
RB-101	EMISSION POINTS/ STATIONARY VENTS/ PROCESS VENTS	N/A	63G	40 CFR Part 63, Subpart G	No changing attributes.
RB-109	EMISSION POINTS/ STATIONARY VENTS/ PROCESS VENTS	N/A	63G	40 CFR Part 63, Subpart G	No changing attributes.
RB-110	EMISSION POINTS/ STATIONARY VENTS/ PROCESS VENTS	N/A	63G	40 CFR Part 63, Subpart G	No changing attributes.
RB-111	EMISSION POINTS/ STATIONARY VENTS/ PROCESS VENTS	N/A	63G	40 CFR Part 63, Subpart G	No changing attributes.
SD108	FLARES	N/A	R1111	30 TAC Chapter 111, Visible Emissions	No changing attributes.
SD108A	FLARES	N/A	R1111	30 TAC Chapter 111, Visible Emissions	No changing attributes.
SD108A	FLARES	N/A	63A	40 CFR Part 63, Subpart A	No changing attributes.
SD108VNT	EMISSION POINTS/ STATIONARY VENTS/ PROCESS VENTS	N/A	R5121	30 TAC Chapter 115, Vent Gas Controls	No changing attributes.
TETLOAD	LOADING/UNLOADING OPERATIONS	N/A	R5-EO	30 TAC Chapter 115, Loading and Unloading of VOC	No changing attributes.

Additional Monitoring Requirements

Periodic Monitoring Summary 40

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: C-411	
Control Device ID No.: 1013 OR 1014	Control Device Type: Flare
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Storage of VOCs	SOP Index No.: R5112
Pollutant: VOC	Main Standard: § 115.112(c)(1)
Monitoring Information	
Indicator: Pilot Flame	
Minimum Frequency: Once per hour	
Averaging Period: n/a	
Deviation Limit: Absence of Pilot Flame	
Periodic Monitoring Text: Measure and record the presence of the pilot flame or maintain records of alarm events and duration of alarm events. The presence of a flare pilot flame shall be monitored using a thermocouple or any other equivalent device to detect the presence of a flame or using an alarm that uses a thermocouple or other equivalent device to detect the absence of a flame. The monitoring instrumentation shall be maintained, calibrated and operated in accordance with manufacturer's specifications or other written procedures. Any monitoring data which indicates the lack of a pilot flame shall be considered and reported as a deviation.	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: C-412	
Control Device ID No.: 1013 OR 1014	Control Device Type: Flare
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Storage of VOCs	SOP Index No.: R5112
Pollutant: VOC	Main Standard: § 115.112(c)(1)
Monitoring Information	
Indicator: Pilot Flame	
Minimum Frequency: Once per hour	
Averaging Period: n/a	
Deviation Limit: Absence of Pilot Flame	
Periodic Monitoring Text: Measure and record the presence of the pilot flame or maintain records of alarm events and duration of alarm events. The presence of a flare pilot flame shall be monitored using a thermocouple or any other equivalent device to detect the presence of a flame or using an alarm that uses a thermocouple or other equivalent device to detect the absence of a flame. The monitoring instrumentation shall be maintained, calibrated and operated in accordance with manufacturer's specifications or other written procedures. Any monitoring data which indicates the lack of a pilot flame shall be considered and reported as a deviation.	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: C-413	
Control Device ID No.: 1013 OR 1014	Control Device Type: Flare
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Storage of VOCs	SOP Index No.: R5112
Pollutant: VOC	Main Standard: § 115.112(c)(1)
Monitoring Information	
Indicator: Pilot Flame	
Minimum Frequency: Once per hour	
Averaging Period: n/a	
Deviation Limit: Absence of Pilot Flame	
Periodic Monitoring Text: Measure and record the presence of the pilot flame or maintain records of alarm events and duration of alarm events. The presence of a flare pilot flame shall be monitored using a thermocouple or any other equivalent device to detect the presence of a flame or using an alarm that uses a thermocouple or other equivalent device to detect the absence of a flame. The monitoring instrumentation shall be maintained, calibrated and operated in accordance with manufacturer's specifications or other written procedures. Any monitoring data which indicates the lack of a pilot flame shall be considered and reported as a deviation.

New Source Review Authorization References 44

New Source Review Authorization References by Emission Unit 45

New Source Review Authorization References

The New Source Review authorizations listed in the table below are applicable requirements under 30 TAC Chapter 122 and enforceable under this operating permit.

Title 30 TAC Chapter 116 Permits, Special Permits, and Other Authorizations (Other Than Permits By Rule, PSD Permits, or NA Permits) for the Application Area.	
Authorization No.: 22321	Issuance Date: 01/28/2015
Authorization No.: 48653	Issuance Date: 02/19/2013
Permits By Rule (30 TAC Chapter 106) for the Application Area	
Number: 106.261	Version No./Date: 11/01/2003
Number: 106.262	Version No./Date: 11/01/2003
Number: 106.263	Version No./Date: 11/01/2001
Number: 106.264	Version No./Date: 09/04/2000

New Source Review Authorization References by Emissions Unit

The following is a list of New Source Review (NSR) authorizations for emission units listed elsewhere in this operating permit. The NSR authorizations are applicable requirements under 30 TAC Chapter 122 and enforceable under this operating permit.

Unit/Group/Process ID No.	Emission Unit Name/Description	New Source Review Authorization
100	CONCENTRATOR COLUMN	48653
1013	RACK 3 PRIMARY FLARE	22321
1014	RACK 3 BACKUP FLARE	22321
101	CONDENSATE TANK	48653
1042	STRIPPER CALANDRIA VENT	48653
1176	LIQUID COOLANT HEATER	48653, 106.264/09/04/2000
118	DI STILL VENT	48653
97A	GAS TURBINE	48653
99	MONO STILL VENT	48653
C-411	#1 EO SURGE TANK	22321
C-412	#2 EO SURGE TANK	22321
C-413	EO FLUSH TANK	22321
OX2-FUG	EOGL UNIT FUGITIVES	22321, 48653
OX2-GLFUG	EOGL UNIT GLYCOLS FUGITIVES	48653
OXRACK3	LOADING RACK 3	22321
PROEOGL	EOGL PROCESS	48653
RB-101	PROCESS WATER TANK VENT	48653
RB-109	NO. 2 EVAPORATOR	48653
RB-110	NO. 3 EVAPORATOR	48653

New Source Review Authorization References by Emissions Unit

The following is a list of New Source Review (NSR) authorizations for emission units listed elsewhere in this operating permit. The NSR authorizations are applicable requirements under 30 TAC Chapter 122 and enforceable under this operating permit.

Unit/Group/Process ID No.	Emission Unit Name/Description	New Source Review Authorization
RB-111	NO. 4 EVAPORATOR	48653
SD108A	PROCESS FLARE (SMALL TIP)	48653
SD108	STANDBY PROCESS FLARE (LARGE TIP)	48653
SD108VNT	PROCESS FLARE VENT HEADER	48653
SDT10	TANK 2301	48653
SDT12	TANK 2310	48653
SDT13	TANK 2311	48653
SDT15	TANK 2320	48653
SDT16	TANK 2321	48653
SDT17	TANK 2322	48653
SDT18	TANK 2323	48653
SDT34	TANK 515	48653
SDT35	TANK 516	48653
SDT9	TANK 2300	48653, 106.261/11/01/2003, 106.262/11/01/2003
TETLOAD	TETRALIN LOADING	48653

Appendix A

Acronym List 48

Acronym List

The following abbreviations or acronyms may be used in this permit:

ACFM ..... actual cubic feet per minute
AMOC ..... alternate means of control
ARP ..... Acid Rain Program
ASTM ..... American Society of Testing and Materials
B/PA ..... Beaumont/Port Arthur (nonattainment area)
CAM ..... Compliance Assurance Monitoring
CD ..... control device
COMS ..... continuous opacity monitoring system
CVS ..... closed-vent system
D/FW ..... Dallas/Fort Worth (nonattainment area)
DR ..... Designated Representative
ElP ..... El Paso (nonattainment area)
EP ..... emission point
EPA ..... U.S. Environmental Protection Agency
EU ..... emission unit
FCAA Amendments ..... Federal Clean Air Act Amendments
FOP ..... federal operating permit
GF ..... grandfathered
gr/100 scf ..... grains per 100 standard cubic feet
HAP ..... hazardous air pollutant
H/G/B ..... Houston/Galveston/Brazoria (nonattainment area)
H_2S ..... hydrogen sulfide
ID No. ..... identification number
lb/hr ..... pound(s) per hour
MMBtu/hr ..... Million British thermal units per hour
MRRT ..... monitoring, recordkeeping, reporting, and testing
NA ..... nonattainment
N/A ..... not applicable
NADB ..... National Allowance Data Base
NO_x ..... nitrogen oxides
NSPS ..... New Source Performance Standard (40 CFR Part 60)
NSR ..... New Source Review
ORIS ..... Office of Regulatory Information Systems
Pb ..... lead
PBR ..... Permit By Rule
PM ..... particulate matter
ppmv ..... parts per million by volume
PSD ..... prevention of significant deterioration
RO ..... Responsible Official
SO_2 ..... sulfur dioxide
TCEQ ..... Texas Commission on Environmental Quality
TSP ..... total suspended particulate
TVP ..... true vapor pressure
U.S.C. ..... United States Code
VOC ..... volatile organic compound

[SEQ CHAPTER \h \r 1]Statement of Basis of the Federal Operating Permit

Union Carbide Corporation

Site Name: UCC Seadrift Operations
Area Name: Ethylene Oxide / Glycol
Physical Location: 7501 State Hwy 185 N
Nearest City: Seadrift
County: Calhoun

Permit Number: O2030
Project Type: Renewal

Standard Industrial Classification (SIC) Code: 2869
SIC Name: Industrial Organic Chemicals

This Statement of Basis sets forth the legal and factual basis for the draft permit conditions in accordance with 30 TAC §122.201(a)(4). Per 30 TAC §§ 122.241 and 243, the permit holder has submitted an application under § 122.134 for permit renewal. This document may include the following information:

A description of the facility/area process description;
A basis for applying permit shields;
A list of the federal regulatory applicability determinations;
A table listing the determination of applicable requirements;
A list of the New Source Review Requirements;
The rationale for periodic monitoring methods selected;
The rationale for compliance assurance methods selected;
A compliance status; and
A list of available unit attribute forms.

Prepared on: March 10, 2017

Operating Permit
Basis of Determination

Permit Area Process Description
The Ethylene Oxide/ Glycol (EOGL) Plant consists of ethylene oxide operations, glycol reaction and refining operations, a gas turbine air supply system, and loading and unloading facilities with surge tanks. The EOGL Plant is classified as a chemical manufacturing process unit (CMPU) subject to the requirements of the Hazardous Organic NESHAPs (HON: MACTs F, G, H). Some of the storage and loading operations associated with the EOGL Plant are considered part of Distribution Systems which are addressed in a separate Title V application area.

Fugitive emissions within the EOGL Plant include VOC and HAPs. All fugitive sources throughout the EOGL Plant are potentially subject to MACT H (depending on service type). For the purposes of NSPS VV, the EOGL Plant may be considered two separate process units: the ethylene oxide process and the glycols process.

Various wastewater streams originate from the EOGL Plant and they are routed to several different Individual Drain Systems (IDS's) for wastewater. These wastewater streams may include VOC and HAPs, and the receiving IDS's are subject to MACT G requirements for wastewater streams. The MACT G wastewater requirements are all site-wide requirements, so the IDS's are not addressed as Title V emission units within this application area.

Ethylene Oxide
Ethylene, fed by pipeline, process air from the gas turbine, oxygen, water, and small amounts of organic reaction modifiers are reacted in the Fresh Reaction System to produce ethylene oxide (EO) as well as feed stream components. This mixture is transferred to the Fresh Scrubbing System. This system recovers crude EO from the fresh reaction stream, recycles gas back to the fresh reaction stream, and generates a blow-off stream of unreacted raw materials. A wastewater stream from the Fresh Scrubbing System is routed to the wastewater treatment system. Crude EO from the scrubbers is routed to Oxide Recovery/ Refining System (ORRS). The ORRS receives streams containing ethylene oxide from the Fresh Scrubbing System and the Blow-Off Reaction/ Scrubbers. Stripping and distillation operations within this system work collectively to produce product-quality ethylene oxide. Ethylene oxide product is transferred to the following destinations:

- Glycol Operations,
- Surge vessels and loading/ unloading facilities; and
- Downstream User Unit (addressed in separate Title V applications).

The ORRS produces a HAP/ VOC process vent stream from the Stripper Calandria (#1042) which is routed to atmosphere. Steam condensate from the ORRS is routed to the condensate tank (#101), which is vented to the atmosphere and may include VOC and HAPs.

Glycol Reaction and Refining Operations
These include systems for producing, concentrating, and refining ethylene and diethylene glycol (EG and DEG). A portion of the EO from the ORRS is fed to the Glycol Reactors, which when reacted with water produce a crude glycol mixture. This mixture is transferred to the Evaporator System. The Evaporator System removes water from the crude glycol stream in a series of evaporative steps and the glycol is progressively concentrated at each step.

FOPs at Site
The "application area" consists of the emission units and that portion of the site included in the application and this permit. Multiple FOPs may be issued to a site in accordance with 30 TAC § 122.201(e). When there is only one area for the site, then the application information and permit will include all units at the site. Additional FOPs that exist at the site, if any, are listed below.

Additional FOPs: O1613, O2026, O2027, O2028, O2029, O2031, O2032, O2035

Major Source Pollutants

The table below specifies the pollutants for which the site is a major source:

Major Pollutants	VOC, PM, NOX, HAPS, CO

Reading State of Texas's Federal Operating Permit

The Title V Federal Operating Permit (FOP) lists all state and federal air emission regulations and New Source Review (NSR) authorizations (collectively known as "applicable requirements") that apply at a particular site or permit area (in the event a site has multiple FOPs). **The FOP does not authorize new emissions or new construction activities.** The FOP begins with an introductory page which is common to all Title V permits. This page gives the details of the company, states the authority of the issuing agency, requires the company to operate in accordance with this permit and 30 Texas Administrative Code (TAC) Chapter 122, requires adherence with NSR requirements of 30 TAC Chapter 116, and finally indicates the permit number and the issuance date.

This is followed by the table of contents, which is generally composed of the following elements. Not all permits will have all of the elements.

- General Terms and Conditions
- Special Terms and Conditions
  - Emissions Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting
  - Additional Monitoring Requirements
  - New Source Review Authorization Requirements
  - Compliance Requirements
  - Protection of Stratosphere Ozone
  - Permit Location
  - Permit Shield (30 TAC § 122.148)
- Attachments
  - Applicable Requirements Summary
    - Unit Summary
    - Applicable Requirements Summary
  - Additional Monitoring Requirements
  - Permit Shield
  - New Source Review Authorization References
  - Compliance Plan
  - Alternative Requirements
- Appendix A
  - Acronym list

General Terms and Conditions

The General Terms and Conditions are the same and appear in all permits. The first paragraph lists the specific citations for 30 TAC Chapter 122 requirements that apply to all Title V permit holders. The second paragraph describes the requirements for record retention. The third paragraph provides details for voiding the permit, if applicable. The fourth paragraph states that the permit holder shall comply with the requirements of 30 TAC Chapter 116 by obtaining a New Source Review authorization prior to new construction or modification of emission units located in the area covered by this permit. The fifth paragraph provides details on submission of reports required by the permit.

Special Terms and Conditions

Emissions Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting. The TCEQ has designated certain applicable requirements as site-wide requirements. A site-wide requirement is a requirement that applies uniformly to all the units or activities at the site. Units with only site-wide

requirements are addressed on Form OP-REQ1 and are not required to be listed separately on a OP-UA Form or Form OP-SUM. Form OP-SUM must list all units addressed in the application and provide identifying information, applicable OP-UA Forms, and preconstruction authorizations. The various OP-UA Forms provide the characteristics of each unit from which applicable requirements are established. Some exceptions exist as a few units may have both site-wide requirements and unit specific requirements.

Other conditions. The other entries under special terms and conditions are in general terms referring to compliance with the more detailed data listed in the attachments.

Attachments

Applicable Requirements Summary. The first attachment, the Applicable Requirements Summary, has two tables, addressing unit specific requirements. The first table, the Unit Summary, includes a list of units with applicable requirements, the unit type, the applicable regulation, and the requirement driver. The intent of the requirement driver is to inform the reader that a given unit may have several different operating scenarios and the differences between those operating scenarios.

The applicable requirements summary table provides the detailed citations of the rules that apply to the various units. For each unit and operating scenario, there is an added modifier called the "index number," detailed citations specifying monitoring and testing requirements, recordkeeping requirements, and reporting requirements. The data for this table are based on data supplied by the applicant on the OP-SUM and various OP-UA forms.

Additional Monitoring Requirement. The next attachment includes additional monitoring the applicant must perform to ensure compliance with the applicable standard. Compliance assurance monitoring (CAM) is often required to provide a reasonable assurance of compliance with applicable emission limitations/standards for large emission units that use control devices to achieve compliance with applicant requirements. When necessary, periodic monitoring (PM) requirements are specified for certain parameters (i.e. feed rates, flow rates, temperature, fuel type and consumption, etc.) to determine if a term and condition or emission unit is operating within specified limits to control emissions. These additional monitoring approaches may be required for two reasons. First, the applicable rules do not adequately specify monitoring requirements (exception- Maximum Achievable Control Technology Standards (MACTs) generally have sufficient monitoring), and second, monitoring may be required to fill gaps in the monitoring requirements of certain applicable requirements. In situations where the NSR permit is the applicable requirement requiring extra monitoring for a specific emission unit, the preferred solution is to have the monitoring requirements in the NSR permit updated so that all NSR requirements are consolidated in the NSR permit.

Permit Shield. A permit may or may not have a permit shield, depending on whether an applicant has applied for, and justified the granting of, a permit shield. A permit shield is a special condition included in the permit document stating that compliance with the conditions of the permit shall be deemed compliance with the specified potentially applicable requirement(s) or specified applicable state-only requirement(s).

New Source Review Authorization References. All activities which are related to emissions in the state of Texas must have a NSR authorization prior to beginning construction. This section lists all units in the permit and the NSR authorization that allowed the unit to be constructed or modified. Units that do not have unit specific applicable requirements other than the NSR authorization do not need to be listed in this attachment. While NSR permits are not physically a part of the Title V permit, they are legally incorporated into the Title V permit by reference. Those NSR permits whose emissions exceed certain PSD/NA thresholds must also undergo a Federal review of federally regulated pollutants in addition to review for state regulated pollutants.

Compliance Plan. A permit may have a compliance schedule attachment for listing corrective actions plans for any emission unit that is out of compliance with an applicable requirement.

Alternative Requirements. This attachment will list any alternative monitoring plans or alternative means of compliance for applicable requirements that have been approved by the EPA Administrator and/or the TCEQ Executive Director.

Appendix A

Acronym list. This attachment lists the common acronyms used when discussing the FOPs.

Stationary vents subject to 30 TAC Chapter 111, Subchapter A, § 111.111(a)(1)(B) addressed in the Special Terms and Conditions

The site contains stationary vents with a flowrate less than 100,000 actual cubic feet per minute (acfm) and constructed before or after January 31, 1972 which are limited, over a six-minute average, to 20% opacity as required by 30 TAC § 111.111(a)(1)(B). As a site may have a large number of stationary vents that fall into this category, they are not required to be listed individually in the permit's Applicable Requirement Summary. This is consistent with EPA's White Paper for Streamlined Development of Part 70 Permit Applications, July 10, 1995, that states that requirements that apply identically to emission units at a site can be treated on a generic basis such as source-wide opacity limits.

Periodic monitoring is specified in Special Term and Condition 3.A for stationary vents subject to 30 TAC § 111.111(a)(1)(B) to verify compliance with the 20% opacity limit. These vents are not expected to produce visible emissions during normal operation. The TCEQ evaluated the probability of these sources violating the opacity standards and determined that there is a very low potential that an opacity standard would be exceeded. It was determined that continuous monitoring for these sources is not warranted as there would be very limited environmental benefit in continuously monitoring sources that have a low potential to produce visible emissions. Therefore, the TCEQ set the visible observation monitoring frequency for these sources to once per calendar quarter.

The TCEQ has exempted vents that are not capable of producing visible emissions from periodic monitoring requirements. These vents include sources of colorless VOCs, non-fuming liquids, and other materials that cannot produce emissions that obstruct the transmission of light. Passive ventilation vents, such as plumbing vents, are also included in this category. Since this category of vents are not capable of producing opacity due to the physical or chemical characteristics of the emission source, periodic monitoring is not required as it would not yield any additional data to assure compliance with the 20% opacity standard of 30 TAC § 111.111(a)(1)(B).

In the event that visible emissions are detected, either through the quarterly observation or other credible evidence, such as observations from company personnel, the permit holder shall either report a deviation or perform a Test Method 9 observation to determine the opacity consistent with the 6-minute averaging time specified in 30 TAC § 111.111(a)(1)(B). An additional provision is included to monitor combustion sources more frequently than quarterly if alternate fuels are burned for periods greater than 24 consecutive hours. This will address possible emissions that may arise when switching fuel types.

Stationary Vents subject to 30 TAC Chapter 111 not addressed in the Special Terms and Conditions
All other stationary vents subject to 30 TAC Chapter 111 not covered in the Special Terms and Conditions are listed in the permit's Applicable Requirement Summary. The basis for the applicability determinations for these vents are listed in the Determination of Applicable Requirements table.

Federal Regulatory Applicability Determinations

The following chart summarizes the applicability of the principal air pollution regulatory programs to the permit area:

Regulatory Program	Applicability (Yes/No)
Prevention of Significant Deterioration (PSD)	No
Nonattainment New Source Review (NNSR)	No

Minor NSR	Yes
40 CFR Part 60 - New Source Performance Standards	Yes
40 CFR Part 61 - National Emission Standards for Hazardous Air Pollutants (NESHAPs)	No
40 CFR Part 63 - NESHAPs for Source Categories	Yes
Title IV (Acid Rain) of the Clean Air Act (CAA)	No
Title V (Federal Operating Permits) of the CAA	Yes
Title VI (Stratospheric Ozone Protection) of the CAA	Yes
CAIR (Clean Air Interstate Rule)	No

Insignificant Activities

In general, units not meeting the criteria for inclusion on either Form OP-SUM or Form OP-REQ1 are not required to be addressed in the operating permit application. Examples of these types of units include, but are not limited to, the following:

1. Office activities such as photocopying, blueprint copying, and photographic processes.
2. Sanitary sewage collection and treatment facilities other than those used to incinerate wastewater treatment plant sludge. Stacks or vents for sanitary sewer plumbing traps are also included.
3. Food preparation facilities including, but not limited to, restaurants and cafeterias used for preparing food or beverages primarily for consumption on the premises.
4. Outdoor barbecue pits, campfires, and fireplaces.
5. Laundry dryers, extractors, and tumblers processing bedding, clothing, or other fabric items generated primarily at the premises. This does not include emissions from dry cleaning systems using perchloroethylene or petroleum solvents.
6. Facilities storing only dry, sweet natural gas, including natural gas pressure regulator vents.
7. Any air separation or other industrial gas production, storage, or packaging facility. Industrial gases, for purposes of this list, include only oxygen, nitrogen, helium, neon, argon, krypton, and xenon.
8. Storage and handling of sealed portable containers, cylinders, or sealed drums.
9. Vehicle exhaust from maintenance or repair shops.
10. Storage and use of non-VOC products or equipment for maintaining motor vehicles operated at the site (including but not limited to, antifreeze and fuel additives).
11. Air contaminant detectors and recorders, combustion controllers and shut-off devices, product analyzers, laboratory analyzers, continuous emissions monitors, other analyzers and monitors, and emissions associated with sampling activities. Exception to this category includes sampling activities that are deemed fugitive emissions and under a regulatory leak detection and repair program.
12. Bench scale laboratory equipment and laboratory equipment used exclusively for chemical and physical analysis, including but not limited to, assorted vacuum producing devices and laboratory fume hoods.
13. Steam vents, steam leaks, and steam safety relief valves, provided the steam (or boiler feedwater) has not contacted other materials or fluids containing regulated air pollutants other than boiler water treatment chemicals.
14. Storage of water that has not contacted other materials or fluids containing regulated air pollutants other than boiler water treatment chemicals.
15. Well cellars.
16. Fire or emergency response equipment and training, including but not limited to, use of fire control equipment including equipment testing and training, and open burning of materials or fuels associated with firefighting training.
17. Crucible or pot furnaces with a brim full capacity of less than 450 cubic inches of any molten metal.

18. Equipment used exclusively for the melting or application of wax.
19. All closed tumblers used for the cleaning or deburring of metal products without abrasive blasting, and all open tumblers with a batch capacity of 1,000 lbs. or less.
20. Shell core and shell mold manufacturing machines.
21. Sand or investment molds with a capacity of 100 lbs. or less used for the casting of metals;
22. Equipment used for inspection of metal products.
23. Equipment used exclusively for rolling, forging, pressing, drawing, spinning, or extruding either hot or cold metals by some mechanical means.
24. Instrument systems utilizing air, natural gas, nitrogen, oxygen, carbon dioxide, helium, neon, argon, krypton, and xenon.
25. Battery recharging areas.
26. Brazing, soldering, or welding equipment.

Determination of Applicable Requirements

The tables below include the applicability determinations for the emission units, the index number(s) where applicable, and all relevant unit attribute information used to form the basis of the applicability determination. The unit attribute information is a description of the physical properties of an emission unit which is used to determine the requirements to which the permit holder must comply. For more information about the descriptions of the unit attributes specific Unit Attribute Forms may be viewed at [HYPERLINK "http://www.tceq.texas.gov/permitting/air/nav/air_all_ua_forms.html"].

A list of unit attribute forms is included at the end of this document. Some examples of unit attributes include construction date; product stored in a tank; boiler fuel type; etc.. Generally, multiple attributes are needed to determine the requirements for a given emission unit and index number. The table below lists these attributes in the column entitled "Basis of Determination." Attributes that demonstrate that an applicable requirement applies will be the factual basis for the specific citations in an applicable requirement that apply to a unit for that index number. The TCEQ Air Permits Division has developed flowcharts for determining applicability of state and federal regulations based on the unit attribute information in a Decision Support System (DSS). These flowcharts can be accessed via the internet at [HYPERLINK "http://www.tceq.texas.gov/permitting/air/nav/air_supportsys.html"]. The Air Permits Division staff may also be contacted for assistance at (512) 239-1250.

The attributes for each unit and corresponding index number provide the basis for determining the specific legal citations in an applicable requirement that apply, including emission limitations or standards, monitoring, recordkeeping, and reporting. The rules were found to apply or not apply by using the unit attributes as answers to decision questions found in the flowcharts of the DSS. Some additional attributes indicate which legal citations of a rule apply. The legal citations that apply to each emission unit may be found in the Applicable Requirements Summary table of the draft permit. There may be some entries or rows of units and rules not found in the permit, or if the permit contains a permit shield, repeated in the permit shield area. These are sets of attributes that describe negative applicability, or; in other words, the reason why a potentially applicable requirement does not apply.

If applicability determinations have been made which differ from the available flowcharts, an explanation of the decisions involved in the applicability determination is specified in the column "Changes and Exceptions to RRT." If there were no exceptions to the DSS, then this column has been removed.

The draft permit includes all emission limitations or standards, monitoring, recordkeeping and reporting required by each applicable requirement. If an applicable requirement does not require monitoring, recordkeeping, or reporting, the word "None" will appear in the Applicable Requirements Summary table. If additional periodic monitoring is required for an applicable requirement, it will be explained in detail in the portion of this document entitled "Rationale for Compliance Assurance Monitoring (CAM)/ Periodic Monitoring Methods Selected."

When attributes demonstrate that a unit is not subject to an applicable requirement, the applicant may request a permit shield for those items. The portion of this document entitled "Basis for Applying Permit Shields" specifies which units, if any, have a permit shield.

Operational Flexibility
When an emission unit has multiple operating scenarios, it will have a different index number associated with each operating condition. This means that units are permitted to operate under multiple operating conditions. The applicable requirements for each operating condition are determined by a unique set of unit attributes. For example, a tank may store two different products at different points in time. The tank may, therefore, need to comply with two distinct sets of requirements, depending on the product that is stored. Both sets of requirements are included in the permit, so that the permit holder may store either product in the tank.

Unit ID	Regulation	Index Number	Basis of Determination*
C-411	30 TAC Chapter 115, Storage of VOCs	R5112	Today's Date = Today's date is March 1, 2013 or later. Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Tank Description = Tank using a submerged fill pipe and vapor recovery system True Vapor Pressure = True vapor pressure is greater than or equal to 1.5 psia Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is greater than 25,000 gallons Control Device Type = Flare

SDT9	30 TAC Chapter 115, Storage of VOCs	R5112	Today's Date = Today's date is March 1, 2013 or later. Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. True Vapor Pressure = True vapor pressure is less than 1.5 psia Product Stored = VOC other than crude oil or condensate
SDT9	40 CFR Part 63, Subpart G	63G	MACT Subpart F/G Applicability = The unit is a Group 2 vessel. NESHAP Subpart Y Applicability = The unit is not subject to 40 CFR Part 61, Subpart Y. NSPS Subpart Kb Applicability = The unit is not subject to 40 CFR Part 60, Subpart Kb.

Unit ID	Regulation	Index Number	Basis of Determination*
OXRACK3	30 TAC Chapter 115, Loading and Unloading of VOC	R5-EO	Chapter 115 Control Device Type = Vapor control system with a flare. Chapter 115 Facility Type = Facility type other than a gasoline terminal, gasoline bulk plant, motor vehicle fuel dispensing facility or marine terminal. Alternate Control Requirement (ACR) = No alternate control requirements are being utilized. Vapor Tight = Not all liquid and vapor lines are equipped with fittings which make vapor-tight connections that close automatically when disconnected. Product Transferred = Volatile organic compounds other than liquefied petroleum gas, crude oil, condensate and gasoline. Transfer Type = Loading and unloading. True Vapor Pressure = True vapor pressure is greater than or equal to 1.5 psia. Daily Throughput = Loading greater than or equal to 20,000 gallons per day. Control Options = Vapor control system that maintains a control efficiency of at least 90%.
OXRACK3	40 CFR Part 63, Subpart G	63G-EO	Alternate Parameter Monitoring = Approval has not been sought or has not been granted by the EPA Administrator to monitor a parameter other than those specified in 40 CFR § 63.127(a) - (b). Control Device = Flare. Halogenated Emissions = There are no halogenated emission streams from the transfer rack. Transfer Rack Type = Group 1 transfer rack (as defined in 40 CFR § 63.111). Vapor Balancing System = A vapor balancing system is not being used to reduce emissions of organic hazardous air pollutants. Emissions Routing = Emissions of organic hazardous air pollutants are not routed to a fuel gas system nor to a process where the organic hazardous air pollutants meet one or more of the ends specified in 40 CFR § 63.126(b)(4)(i) - (iv). Bypass Lines = The vent system contains by-pass lines that could divert a vent stream flow away from the control device. Closed Vent System = Closed vent system is subject to § 63.172 of Subpart H. Flow Indicator = The by-pass line valve is secured with a carseal or lock-and-key configuration.
TETLOAD	30 TAC Chapter 115, Loading and Unloading of VOC	R5-EO	Chapter 115 Facility Type = Facility type other than a gasoline terminal, gasoline bulk plant, motor vehicle fuel dispensing facility or marine terminal. Alternate Control Requirement (ACR) = No alternate control requirements are being utilized. Product Transferred = Volatile organic compounds other than liquefied petroleum gas, crude oil, condensate and gasoline. Transfer Type = Loading and unloading. True Vapor Pressure = True vapor pressure is less than 1.5 psia.
1176	40 CFR Part 63, Subpart DDDDD	63DDDDD	Construction/Reconstruction Date = Construction or reconstruction began after June 4, 2010.
1013	30 TAC Chapter 111, Visible Emissions	R1111	Acid Gases Only = Flare is not used only as an acid gas flare as defined in 30 TAC § 101.1. Emergency/Upset Conditions Only = Flare is used under conditions other than emergency or upset conditions.
1013	40 CFR Part 60, Subpart A	60A	Subject to 40 CFR § 60.18 = Flare is not subject to 40 CFR § 60.18.
1013	40 CFR Part 63, Subpart A	63A	Required Under 40 CFR Part 63 = Flare is required by a Subpart under 40 CFR Part 63. Heat Content Specification = Adhering to the heat content specifications in 40 CFR § 63.11(b)(6)(ii) and the maximum tip velocity specifications in 40 CFR § 63.11(b)(7) or 40 CFR § 63.11(b)(8).

Unit ID	Regulation	Index Number	Basis of Determination*
			Flare Assist Type = Air assisted
1013	40 CFR Part 63, Subpart A	63A-1	Required Under 40 CFR Part 63 = Flare is required by a Subpart under 40 CFR Part 63. Heat Content Specification = Adhering to the heat content specifications in 40 CFR § 63.11(b)(6)(ii) and the maximum tip velocity specifications in 40 CFR § 63.11(b)(7) or 40 CFR § 63.11(b)(8). Flare Assist Type = Non-assisted Flare Exit Velocity = Flare exit velocity is greater than or equal to 60 ft/s (18.3 m/sec) but less than 400 ft/s (122 m/sec). Heating Value of Gas = Heating value is less than or equal to 1000 Btu/scf (37.3 MJ/scm).
1014	30 TAC Chapter 111, Visible Emissions	R1111	Acid Gases Only = Flare is not used only as an acid gas flare as defined in 30 TAC § 101.1. Emergency/Upset Conditions Only = Flare is used under conditions other than emergency or upset conditions.
1014	40 CFR Part 60, Subpart A	60A	Subject to 40 CFR § 60.18 = Flare is not subject to 40 CFR § 60.18.
1014	40 CFR Part 63, Subpart A	63A	Required Under 40 CFR Part 63 = Flare is required by a Subpart under 40 CFR Part 63. Heat Content Specification = Adhering to the heat content specifications in 40 CFR § 63.11(b)(6)(ii) and the maximum tip velocity specifications in 40 CFR § 63.11(b)(7) or 40 CFR § 63.11(b)(8). Flare Assist Type = Non-assisted Flare Exit Velocity = Flare exit velocity is greater than or equal to 60 ft/s (18.3 m/sec) but less than 400 ft/s (122 m/sec). Heating Value of Gas = Heating value is less than or equal to 1000 Btu/scf (37.3 MJ/scm).
SD108	30 TAC Chapter 111, Visible Emissions	R1111	Acid Gases Only = Flare is not used only as an acid gas flare as defined in 30 TAC § 101.1. Emergency/Upset Conditions Only = Flare is used under conditions other than emergency or upset conditions.
SD108	40 CFR Part 60, Subpart A	60A	Subject to 40 CFR § 60.18 = Flare is not subject to 40 CFR § 60.18.
SD108	40 CFR Part 63, Subpart A	63A	Required Under 40 CFR Part 63 = Flare is not required by a Subpart under 40 CFR Part 63.
SD108A	30 TAC Chapter 111, Visible Emissions	R1111	Acid Gases Only = Flare is not used only as an acid gas flare as defined in 30 TAC § 101.1. Emergency/Upset Conditions Only = Flare is used under conditions other than emergency or upset conditions.
SD108A	40 CFR Part 60, Subpart A	60A	Subject to 40 CFR § 60.18 = Flare is not subject to 40 CFR § 60.18.
SD108A	40 CFR Part 63, Subpart A	63A	Required Under 40 CFR Part 63 = Flare is required by a Subpart under 40 CFR Part 63. Heat Content Specification = Adhering to the heat content specifications in 40 CFR § 63.11(b)(6)(ii) and the maximum tip velocity specifications in 40 CFR § 63.11(b)(7) or 40 CFR § 63.11(b)(8). Flare Assist Type = Non-assisted Flare Exit Velocity = Flare exit velocity is greater than or equal to 60 ft/s (18.3 m/sec) but less than 400 ft/s (122 m/sec). Heating Value of Gas = Heating value is less than or equal to 1000 Btu/scf (37.3 MJ/scm).
97A	40 CFR Part 60, Subpart GG	60GG	Peak Load Heat Input = Heat Input is greater than 100 MMBtu/hr (107.2 GJ/hr) Construction/Modification Date = On or before October 3, 1977.

Unit ID	Regulation	Index Number	Basis of Determination*
97A	40 CFR Part 63, Subpart YYYY	63YYYY	Construction/Reconstruction Date = Turbine was constructed, modified or reconstructed on or before 1/14/2003.
OX2-FUG	40 CFR Part 60, Subpart VV	60VV	Produces Chemicals = The fugitive unit is part of a facility that produces as an intermediate or final product one or more of the chemicals listed in 40 CFR § 60.489. Affected Facility = The fugitive unit is part of a facility that is an affected facility as defined in 40 CFR § 60.480(a)(2). Construction/Modification Date = On or before January 5, 1981. Compliance Option = Choosing to comply with the provisions of 40 CFR Part 60, Subpart VV.
OX2-FUG	40 CFR Part 63, Subpart H	63H	ANY (CLOSED VENT SYSTEMS) = COMPONENT PRESENT ANY (OPEN-ENDED VALVES OR LINES) = COMPONENT PRESENT BYPASS LINES = FUGITIVE UNIT WITH A CLOSED-VENT SYSTEM DOES NOT CONTAIN A BY-PASS LINE THAT COULD DIVERT A VENT STREAM AWAY FROM THE CONTROL DEVICE AND TO THE ATMOSPHERE EQUIPMENT TYPE = FUGITIVE UNIT CONTAINS EQUIPMENT LISTED IN 40 CFR § 63.160(A) WHICH IS OPERATED IN ORGANIC HAZARDOUS AIR POLLUTANT SERVICE GAS/VAPOR OR LIGHT LIQUID SERVICE (AGITATORS) = COMPONENT NOT PRESENT LIGHT LIQUID SERVICE (PUMPS) = COMPONENT PRESENT HEAVY LIQUID SERVICE (AGITATORS) = COMPONENT NOT PRESENT HEAVY LIQUID SERVICE (OPEN-ENDED VALVES OR LINES) = COMPONENT NOT PRESENT HEAVY LIQUID SERVICE (PUMPS) = COMPONENT NOT PRESENT NON RESEARCH AND DEVELOPMENT/BATCH PROCESSES = FUGITIVE UNIT CONTAINS PROCESSES OTHER THAN RESEARCH AND DEVELOPMENT FACILITIES AND BENCH-SCALE BATCH PROCESSES RECOVERY OR RECAPTURE DEVICES (CLOSED VENT SYSTEMS) = COMPONENT NOT PRESENT UNSAFE TO INSPECT = FOR A FUGITIVE UNIT THAT CONTAINS ANY CLOSED-VENT SYSTEM, THERE ARE NO PARTS DESIGNATED AS UNSAFE TO INSPECT ANY (INSTRUMENTATION SYSTEMS) = COMPONENT PRESENT DIFFICULT TO INSPECT = FUGITIVE UNIT CONTAINS ANY CLOSED-VENT SYSTEM WITH PARTS DESIGNATED AS DIFFICULT TO INSPECT GAS/VAPOR OR LIGHT LIQUID SERVICE (VALVES) = COMPONENT PRESENT QIP = UNIT DOES NOT OPT TO COMPLY WITH A QUALITY IMPROVEMENT PROGRAM FOR PUMPS VACUUM SERVICE = NOT ALL OF THE EQUIPMENT IN THE FUGITIVE UNIT IS IN VACUUM SERVICE ANY (COMPRESSORS) = COMPONENT PRESENT EMPLOYEE NUMBER = THE CORPORATION EMPLOYS 100 OR MORE PERSONS ENCLOSED COMBUSTION DEVICES (CLOSED VENT SYSTEMS) = COMPONENT NOT PRESENT HEAVY LIQUID SERVICE (INSTRUMENTATION SYSTEMS = COMPONENT NOT PRESENT HEAVY LIQUID SERVICE (VALVES) = COMPONENT NOT PRESENT LESS THAN 300 OPERATING HOURS = THE FUGITIVE UNIT DOES NOT CONTAIN ANY EQUIPMENT IN ORGANIC HAZARDOUS AIR POLLUTANT (HAP) SERVICE THAT IS INTENDED TO OPERATE LESS THAN 300 HOURS PER CALENDAR YEAR ANY (SURGE CONTROL VESSELS OR BOTTOMS RECEIVERS) = COMPONENT NOT PRESENT GAS VAPOR SERVICE (PRESSURE RELIEF DEVICES) = COMPONENT PRESENT

Continuous Monitoring = Complying with the continuous monitoring requirements of 40 CFR §§ 63.114, 63.117, and 63.118.

Unit ID	Regulation	Index Number	Basis of Determination*
			Halogenated = Vent stream is not halogenated. HAP Concentration = HAP concentration is not needed to determine applicability. By-pass Lines = The vent system does not contain by-pass lines that can divert the vent stream from the control device. Flow Rate = Flow rate is not needed to determine applicability. Electing Control = Not electing to control the process vent to the levels required in 40 CFR § 63.113(a)(1) or (a)(2). NSPS TRE Index Value = TRE index value is greater than 8 as calculated using the appropriate equation from 40 CFR Part 60, Subparts III, NNN or RRR. Performance Test = A performance test was conducted for determining compliance with a regulation promulgated by the EPA using the same methods specified in Subpart G and either no process changes have been made, or the results reliably indicate compliance. MACT TRE Index Value = TRE index value is greater than 4.0 as calculated using the procedures of 40 CFR § 63.115(d).
RB-101	40 CFR Part 63, Subpart G	63G	Alternate Monitoring Parameters = The EPA Administrator has not approved alternate monitoring parameters or alternate monitoring parameters are not used. Control Device = Flare Overlap = Title 40 CFR Part 63, Subpart G only Group 1 = The process vent is a Group 2 process vent. Continuous Monitoring = Complying with the continuous monitoring requirements of 40 CFR §§ 63.114, 63.117, and 63.118. Halogenated = Vent stream is not halogenated. HAP Concentration = HAP concentration is not needed to determine applicability. By-pass Lines = The vent system does not contain by-pass lines that can divert the vent stream from the control device. SD108VNT	30 TAC Chapter 115, Vent Gas Controls	R5121	Alternate Control Requirement = Alternate control is not used. Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Control Device Type = Smokeless flare Vent Type = Vent gas stream emissions of the specified classes of VOCs including aldehydes, alcohols, aromatics, ethers, olefins, peroxides, amines, acids, esters, ketones, sulfides, and branched chain hydrocarbons (C8 and above).
100	40 CFR Part 60, Subpart NNN	60NNN	Subpart NNN Chemicals = The distillation unit produces any chemical listed in 40 CFR § 60.667 as a product, co-product, by-product, or intermediate.

Unit ID	Regulation	Index Number	Basis of Determination*
			Total Resource Effectiveness = TRE index value greater than 8.0 not from a halogenated vent stream. Construction/Modification Date = After December 30, 1983. Subpart NNN Control Device = EPA Administrator approved demonstration of compliance with 40 CFR § 60.662 other than 40 CFR § 60.663(a), (b), (c), or (d). Vent Type = Distillation unit not discharging vent stream into a vapor recovery system. Distillation Unit Type = Does not qualify for any exemption under § 60.660(c)(1)-(3). Total Design Capacity = 1 gigagram per year or greater. Vent Stream Flow Rate = Flow rate greater than or equal to 0.008 scm/min.
1042	40 CFR Part 60, Subpart NNN	60NNN	Subpart NNN Chemicals = The distillation unit produces any chemical listed in 40 CFR § 60.667 as a product, co-product, by-product, or intermediate. Total Resource Effectiveness = TRE index value greater than 8.0 not from a halogenated vent stream. Construction/Modification Date = After December 30, 1983. Subpart NNN Control Device = EPA Administrator approved demonstration of compliance with 40 CFR § 60.662 other than 40 CFR § 60.663(a), (b), (c), or (d). Vent Type = Distillation unit not discharging vent stream into a vapor recovery system. Distillation Unit Type = Does not qualify for any exemption under § 60.660(c)(1)-(3). Total Design Capacity = 1 gigagram per year or greater. Vent Stream Flow Rate = Flow rate greater than or equal to 0.008 scm/min.
118	40 CFR Part 60, Subpart NNN	60NNN	Subpart NNN Chemicals = The distillation unit produces any chemical listed in 40 CFR § 60.667 as a product, co-product, by-product, or intermediate. Total Resource Effectiveness = TRE index value greater than 8.0 not from a halogenated vent stream. Construction/Modification Date = After December 30, 1983. Subpart NNN Control Device = EPA Administrator approved demonstration of compliance with 40 CFR § 60.662 other than 40 CFR § 60.663(a), (b), (c), or (d). Vent Type = Distillation unit not discharging vent stream into a vapor recovery system. Distillation Unit Type = Does not qualify for any exemption under § 60.660(c)(1)-(3). Total Design Capacity = 1 gigagram per year or greater. Vent Stream Flow Rate = Flow rate greater than or equal to 0.008 scm/min.
99	40 CFR Part 60, Subpart NNN	60NNN	Subpart NNN Chemicals = The distillation unit produces any chemical listed in 40 CFR § 60.667 as a product, co-product, by-product, or intermediate. Total Resource Effectiveness = TRE index value greater than 8.0 not from a halogenated vent stream. Construction/Modification Date = After December 30, 1983. Subpart NNN Control Device = EPA Administrator approved demonstration of compliance with 40 CFR § 60.662 other than 40 CFR § 60.663(a), (b), (c), or (d). Vent Type = Distillation unit not discharging vent stream into a vapor recovery system. Distillation Unit Type = Does not qualify for any exemption under § 60.660(c)(1)-(3). Total Design Capacity = 1 gigagram per year or greater. Vent Stream Flow Rate = Flow rate greater than or equal to 0.008 scm/min.

Unit ID	Regulation	Index Number	Basis of Determination*
PROEOGL	40 CFR Part 63, Subpart F	63F-1	Applicable Chemicals = The chemical manufacturing process unit manufactures, as a primary product, one or more of the chemicals listed in 40 CFR § 63.100(b)(1)(i) or 40 CFR § 63.100(b)(1)(ii). Intervening Cooling Fluid = There is no intervening cooling fluid containing less than 5 percent by weight of total HAPs listed in Table 4 of 40 CFR Part 63, Subpart F, between the process and cooling water. Table 2 HAP = The chemical manufacturing process unit uses as a reactant or manufactures, as a product or co-product, one or more of the organic hazardous air pollutants in Table 2. Table 4 HAP Content = The recirculating heat exchange system is not used exclusively to cool process fluids that contain less than 5 percent by weight of total HAPs listed in Table 4 of title 40 CFR Part 63, Subpart F. Alternate Means of Emission Limitation = No alternative means of emission limitation has been approved by the EPA Administrator to achieve a reduction in organic HAP emission or no alternate has been requested. NPDES Permit = The once-through heat exchange system is not subject to NPDES permit with an allowable discharge limit of 1 part per million or less above influent concentration or 10 percent or less above influent concentration. Meets 40 CFR 63.104(a)(4)(i)-(iv) = The once-through heat exchange system is not subject to an NPDES permit that meets 40 CFR § 63.104(a)(4)(i) - (iv). Heat Exchange System = A heat exchange system is utilized. Table 9 HAP Content = The once-through heat exchange system is not used exclusively to cool process fluids that contain less than 5 percent by weight of total HAPs listed in Table 9 of 40 CFR Part 63, Subpart G. Cooling Water Monitored = The cooling water is being monitored for the presence of one or more HAPs or other representative substances whose presence in cooling water indicates a leak. Cooling Water Pressure = The heat exchange system is not operated with the minimum pressure on the cooling water side at least 35 kilopascals greater than the maximum pressure on the process side.

* - The “unit attributes” or operating conditions that determine what requirements apply

NSR Versus Title V FOP

The state of Texas has two Air permitting programs, New Source Review (NSR) and Title V Federal Operating Permits. The two programs are substantially different both in intent and permit content.

NSR is a preconstruction permitting program authorized by the Texas Clean Air Act and Title I of the Federal Clean Air Act (FCAA). The processing of these permits is governed by 30 Texas Administrative Code (TAC) Chapter 116.111. The Title V Federal Operating Program is a federal program authorized under Title V of the FCAA that has been delegated to the state of Texas to administer and is governed by 30 TAC Chapter 122. The major differences between the two permitting programs are listed in the table below:

NSR Permit	Federal Operating Permit(FOP)
Issued Prior to new Construction or modification of an existing facility	For initial permit with application shield, can be issued after operation commences; significant revisions require approval prior to operation.
Authorizes air emissions	Codifies existing applicable requirements, does not authorize new emissions
Ensures issued permits are protective of the environment and human health by conducting a health effects review and that requirement for best available control technology (BACT) is implemented.	Applicable requirements listed in permit are used by the inspectors to ensure proper operation of the site as authorized. Ensures that adequate monitoring is in place to allow compliance determination with the FOP.
Up to two Public notices may be required. Opportunity for public comment and contested case hearings for some authorizations.	One public notice required. Opportunity for public comments. No contested case hearings.
Applies to all point source emissions in the state.	Applies to all major sources and some non-major sources identified by the EPA.
Applies to facilities: a portion of site or individual emission sources	One or multiple FOPs cover the entire site (consists of multiple facilities)
Permits include terms and conditions under which the applicant must construct and operate its various equipment and processes on a facility basis.	Permits include terms and conditions that specify the general operational requirements of the site; and also include codification of all applicable requirements for emission units at the site.
Opportunity for EPA review for Federal Prevention of Significant Deterioration (PSD) and Nonattainment (NA) permits for major sources.	Opportunity for EPA review, Affected states review, and a Public petition period for every FOP.
Permits have a table listing maximum emission limits for pollutants	Permit has an applicable requirements table and Periodic Monitoring (PM) / Compliance Assurance Monitoring (CAM) tables which document applicable monitoring requirements.
Permits can be altered or amended upon application by company. Permits must be issued before construction or modification of facilities can begin.	Permits can be revised through several revision processes, which provide for different levels of public notice and opportunity to comment. Changes that would be significant revisions require that a revised permit be issued before those changes can be operated.
NSR permits are issued independent of FOP requirements.	FOP are independent of NSR permits, but contain a list of all NSR permits incorporated by reference

[SEQ CHAPTER \h \r 1]New Source Review Requirements

Below is a list of the New Source Review (NSR) permits for the permitted area. These NSR permits are incorporated by reference into the operating permit and are enforceable under it. These permits can be found in the main TCEQ file room, located on the first floor of Building E, 12100 Park 35 Circle, Austin, Texas. The Public Education Program may be contacted at 1-800-687-4040 or the Air Permits Division (APD) may be contacted at 1-512-239-1250 for help with any question.

Additionally, the site contains emission units that are permitted by rule under the requirements of 30 TAC Chapter 106, Permits by Rule. The following table specifies the permits by rule that apply to the site. All current permits by rule are contained in Chapter 106. Outdated 30 TAC Chapter 106 permits by rule may be viewed at the following Web site:

[HYPERLINK "http://www.tceq.texas.gov/permitting/air/permitbyrule/historical_rules/old106list/index106.html"]

Outdated Standard Exemption lists may be viewed at the following Web site:

[HYPERLINK "http://www.tceq.texas.gov/permitting/air/permitbyrule/historical_rules/oldselist/se_index.html"]

The status of air permits and applications and a link to the Air Permits Remote Document Server is located at the following Web site:

[HYPERLINK "http://www.tceq.texas.gov/permitting/air/nav/air_status_permits.html"]

Title 30 TAC Chapter 116 Permits, Special Permits, and Other Authorizations (Other Than Permits By Rule, PSD Permits, or NA Permits) for the Application Area.	
Authorization No.: 22321	Issuance Date: 01/28/2015
Authorization No.: 48653	Issuance Date: 02/19/2013
Permits By Rule (30 TAC Chapter 106) for the Application Area	
Number: 106.261	Version No./Date: 11/01/2003
Number: 106.262	Version No./Date: 11/01/2003
Number: 106.263	Version No./Date: 11/01/2001
Number: 106.264	Version No./Date: 09/04/2000

Emission Units and Emission Points

In air permitting terminology, any source capable of generating emissions (for example, an engine or a sandblasting area) is called an Emission Unit. For purposes of Title V, emission units are specifically listed in the operating permit when they have applicable requirements other than New Source Review (NSR), or when they are listed in the permit shield table.

The actual physical location where the emissions enter the atmosphere (for example, an engine stack or a sand-blasting yard) is called an emission point. For New Source Review preconstruction permitting purposes, every emission unit has an associated emission point. Emission limits are listed in an NSR permit, associated with an emission point. This list of emission points and emission limits per pollutant is commonly referred to as the “Maximum Allowable Emission Rate Table”, or “MAERT” for short. Specifically, the MAERT lists the Emission Point Number (EPN) that identifies the emission point, followed immediately by the Source Name, identifying the emission unit that is the source of those emissions on this table.

Thus, by reference, an emission unit in a Title V operating permit is linked by reference number to an NSR authorization, and its related emission point.

Monitoring Sufficiency

Federal and state rules, 40 CFR § 70.6(a)(3)(i)(B) and 30 TAC § 122.142(c) respectively, require that each federal operating permit include additional monitoring for applicable requirements that lack periodic or instrumental monitoring (which may include recordkeeping that serves as monitoring) that yields reliable data from a relevant time period that are representative of the emission unit's compliance with the applicable emission limitation or standard. Furthermore, the federal operating permit must include compliance assurance monitoring (CAM) requirements for emission sources that meet the applicability criteria of 40 CFR Part 64 in accordance with 40 CFR § 70.6(a)(3)(i)(A) and 30 TAC § 122.604(b).

With the exception of any emission units listed in the Periodic Monitoring or CAM Summaries in the FOP, the TCEQ Executive Director has determined that the permit contains sufficient monitoring, testing, recordkeeping, and reporting requirements that assure compliance with the applicable requirements. If applicable, each emission unit that requires additional monitoring in the form of periodic monitoring or CAM is described in further detail under the Rationale for CAM/PM Methods Selected section following this paragraph.

Rationale for Compliance Assurance Monitoring (CAM)/ Periodic Monitoring Methods Selected

Periodic Monitoring:

The Federal Clean Air Act requires that each federal operating permit include monitoring sufficient to assure compliance with the terms and conditions of the permit. Most of the emission limits and standards applicable to emission units at Title V sources include adequate monitoring to show that the units meet the limits and standards. For those requirements that do not include monitoring, or where the monitoring is not sufficient to assure compliance, the federal operating permit must include such monitoring for the emission units affected. The following emission units are subject to periodic monitoring requirements because the emission units are subject to an emission limitation or standard for an air pollutant (or surrogate thereof) in an applicable requirement that does not already require monitoring, or the monitoring for the applicable requirement is not sufficient to assure compliance:

Unit/Group/Process Information	
ID No.: C-411	
Control Device ID No.: 1013 OR 1014	Control Device Type: Flare
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Storage of VOCs	SOP Index No.: R5112
Pollutant: VOC	Main Standard: § 115.112(c)(1)
Monitoring Information	
Indicator: Pilot Flame	
Minimum Frequency: Once per hour	
Averaging Period: n/a	
Deviation Limit: Absence of Pilot Flame	
Basis of monitoring: It is widely practiced and accepted to monitor the flare pilot flame by closed circuit cameras, thermocouples and visual inspection. The presence of the pilot flame demonstrates that VOC emissions are combusted. Monitoring the presence of a pilot flame is required in many federal rules, including: 40 CFR Part 60, Subparts K, III, NNN, QQQ, and RRR; 40 CFR Part 61, Subparts BB and FF; and 40 CFR Part 63, Subparts G, R, W, DD, and HH.	

Unit/Group/Process Information	
ID No.: C-412	
Control Device ID No.: 1013 OR 1014	Control Device Type: Flare

The presence of the pilot flame demonstrates that VOC emissions are combusted. Monitoring the presence of a pilot flame is required in many federal rules, including: 40 CFR Part 60, Subparts K, III, NNN, QQQ, and RRR; 40 CFR Part 61, Subparts BB and FF; and 40 CFR Part 63, Subparts G, R, W, DD, and HH.	

Compliance Review

1. In accordance with 30 TAC Chapter 60, the compliance history was reviewed on **February 14, 2017.**
   Site rating: **0.00 / High** Company rating: **0.56 / Satisfactory**
   (High < 0.10; Satisfactory ≥ 0.10 and ≤ 55; Unsatisfactory > 55)
2. Has the permit changed on the basis of the compliance history or site/company rating? .....No

Site/Permit Area Compliance Status Review

1. Were there any out-of-compliance units listed on Form OP-ACPS?.....No
2. Is a compliance plan and schedule included in the permit? .....No

[SEQ CHAPTER \h \r 1]Statement of Basis of the Federal Operating Permit

Eastman Chemical Company

Site Name: Eastman Chemical Company Texas Operations
Area Name: C5 - Ethylene Glycol
Physical Location: 300 Kodak Blvd
Nearest City: Longview
County: Harrison

Permit Number: O1974
Project Type: Minor Revision

Standard Industrial Classification (SIC) Code: 2869
SIC Name: Industrial Organic Chemicals

This Statement of Basis sets forth the legal and factual basis for the draft changes to the permit conditions resulting from the minor revision project in accordance with 30 TAC §122.201(a)(4). The applicant has submitted an application for a minor permit revision per §§ 122.215-217. This document may include the following information:

A description of the facility/area process description;
A description of the revision project;
A basis for applying permit shields;
A list of the federal regulatory applicability determinations;
A table listing the determination of applicable requirements;
A list of the New Source Review Requirements;
The rationale for periodic monitoring methods selected;
The rationale for compliance assurance methods selected;
A compliance status; and
A list of available unit attribute forms.

Prepared on: December 6, 2016

Operating Permit
Basis of Determination

Description of Revisions
40 CFR 63, Subpart G applicable requirements were added to EP105T50. This unit had a change in service and is now subject to this regulation. With the exception of this regulation, the existing permit shields for this unit remain. The previously granted permit shield for 40 CFR Part 63, Subpart G has been deleted.

EP104FL1 and EP141FL1 unit name/descriptions have been updated. EP104FL1 was updated to "EO Sewer Tank Pilot Burner" from "EO/EG Plant No.2 Flare". EP141FL1 was updated to "Relief Header Pilot Burner" from "EO-2 Emergency Flare". The applicable requirements remain the same for these two units.

The "New Source Authorization References" table has been updated to reflect the most recent issuance date of NSR Permit 1329, which is 11/16/2016. Previously it was 05/21/2007.

Permit Area Process Description
This application area, Area C5, Ethylene Glycol, consists of two ethylene oxide/ethylene glycol plants and two solvents plants.

The two ethylene oxide/ethylene glycol plants produce ethylene oxide and ethylene glycols from ethylene and oxygen in a continuous process. The process steps include reaction, separation, product storage and product transfer. Emission units are reactors, process tanks, distillation units, process cooling towers and storage tanks; and emission control devices are flares. There are fugitive equipment leaks, heat exchanger leaks and wastewater. The types of emissions are volatile organic compounds (VOCs) and hazardous air pollutants (HAPs).

The solvents plants manufacture ethylene glycol ethers from ethylene oxide and alcohols or other glycols ethers. The manufacturing steps include materials storage, reaction, separation, product storage and product transfer. Emission units are reactors, process tanks, distillation units and storage tanks. There are fugitive equipment leaks, heat exchanger leaks and wastewater. The types of emissions are volatile organic compounds (VOCs) and hazardous air pollutants (HAPs).

FOPs at Site
The "application area" consists of the emission units and that portion of the site included in the application and this permit. Multiple FOPs may be issued to a site in accordance with 30 TAC § 122.201(e). When there is only one area for the site, then the application information and permit will include all units at the site. Additional FOPs that exist at the site, if any, are listed below.

Additional FOPs: O1436, O1968, O1970, O1971, O1972, O1973, O1975, O1976, O1977, O1978, O1979, O1981, O1982

Major Source Pollutants
The table below specifies the pollutants for which the site is a major source:

Major Pollutants	VOC, SO2, PM, NOX, HAPS, CO

Reading State of Texas's Federal Operating Permit

The Title V Federal Operating Permit (FOP) lists all state and federal air emission regulations and New Source Review (NSR) authorizations (collectively known as "applicable requirements") that apply at a particular site or permit area (in the event a site has multiple FOPs). **The FOP does not authorize new emissions or new construction activities.** The FOP begins with an introductory page which is common to all Title V permits. This page gives the details of the company, states the authority of the issuing agency, requires the company to operate in accordance with this permit and 30 Texas Administrative Code (TAC) Chapter 122, requires

adherence with NSR requirements of 30 TAC Chapter 116, and finally indicates the permit number and the issuance date.

This is followed by the table of contents, which is generally composed of the following elements. Not all permits will have all of the elements.

- General Terms and Conditions
- Special Terms and Conditions
  - Emissions Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting
  - Additional Monitoring Requirements
  - New Source Review Authorization Requirements
  - Compliance Requirements
  - Protection of Stratosphere Ozone
  - Permit Location
  - Permit Shield (30 TAC § 122.148)
- Attachments
  - Applicable Requirements Summary
    - Unit Summary
    - Applicable Requirements Summary
  - Additional Monitoring Requirements
  - Permit Shield
  - New Source Review Authorization References
  - Compliance Plan
  - Alternative Requirements
- Appendix A
  - Acronym list

General Terms and Conditions

The General Terms and Conditions are the same and appear in all permits. The first paragraph lists the specific citations for 30 TAC Chapter 122 requirements that apply to all Title V permit holders. The second paragraph describes the requirements for record retention. The third paragraph provides details for voiding the permit, if applicable. The fourth paragraph states that the permit holder shall comply with the requirements of 30 TAC Chapter 116 by obtaining a New Source Review authorization prior to new construction or modification of emission units located in the area covered by this permit. The fifth paragraph provides details on submission of reports required by the permit.

Special Terms and Conditions

Emissions Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting. The TCEQ has designated certain applicable requirements as site-wide requirements. A site-wide requirement is a requirement that applies uniformly to all the units or activities at the site. Units with only site-wide requirements are addressed on Form OP-REQ1 and are not required to be listed separately on a OP-UA Form or Form OP-SUM. Form OP-SUM must list all units addressed in the application and provide identifying information, applicable OP-UA Forms, and preconstruction authorizations. The various OP-UA Forms provide the characteristics of each unit from which applicable requirements are established. Some exceptions exist as a few units may have both site-wide requirements and unit specific requirements.

Other conditions. The other entries under special terms and conditions are in general terms referring to compliance with the more detailed data listed in the attachments.

Attachments

Applicable Requirements Summary. The first attachment, the Applicable Requirements Summary, has two tables, addressing unit specific requirements. The first table, the Unit Summary, includes a list of units with

applicable requirements, the unit type, the applicable regulation, and the requirement driver. The intent of the requirement driver is to inform the reader that a given unit may have several different operating scenarios and the differences between those operating scenarios.

The applicable requirements summary table provides the detailed citations of the rules that apply to the various units. For each unit and operating scenario, there is an added modifier called the "index number," detailed citations specifying monitoring and testing requirements, recordkeeping requirements, and reporting requirements. The data for this table are based on data supplied by the applicant on the OP-SUM and various OP-UA forms.

Additional Monitoring Requirement. The next attachment includes additional monitoring the applicant must perform to ensure compliance with the applicable standard. Compliance assurance monitoring (CAM) is often required to provide a reasonable assurance of compliance with applicable emission limitations/standards for large emission units that use control devices to achieve compliance with applicant requirements. When necessary, periodic monitoring (PM) requirements are specified for certain parameters (i.e. feed rates, flow rates, temperature, fuel type and consumption, etc.) to determine if a term and condition or emission unit is operating within specified limits to control emissions. These additional monitoring approaches may be required for two reasons. First, the applicable rules do not adequately specify monitoring requirements (exception- Maximum Achievable Control Technology Standards (MACTs) generally have sufficient monitoring), and second, monitoring may be required to fill gaps in the monitoring requirements of certain applicable requirements. In situations where the NSR permit is the applicable requirement requiring extra monitoring for a specific emission unit, the preferred solution is to have the monitoring requirements in the NSR permit updated so that all NSR requirements are consolidated in the NSR permit.

Permit Shield. A permit may or may not have a permit shield, depending on whether an applicant has applied for, and justified the granting of, a permit shield. A permit shield is a special condition included in the permit document stating that compliance with the conditions of the permit shall be deemed compliance with the specified potentially applicable requirement(s) or specified applicable state-only requirement(s).

New Source Review Authorization References. All activities which are related to emissions in the state of Texas must have a NSR authorization prior to beginning construction. This section lists all units in the permit and the NSR authorization that allowed the unit to be constructed or modified. Units that do not have unit specific applicable requirements other than the NSR authorization do not need to be listed in this attachment. While NSR permits are not physically a part of the Title V permit, they are legally incorporated into the Title V permit by reference. Those NSR permits whose emissions exceed certain PSD/NA thresholds must also undergo a Federal review of federally regulated pollutants in addition to review for state regulated pollutants.

Compliance Plan. A permit may have a compliance schedule attachment for listing corrective actions plans for any emission unit that is out of compliance with an applicable requirement.

Alternative Requirements. This attachment will list any alternative monitoring plans or alternative means of compliance for applicable requirements that have been approved by the EPA Administrator and/or the TCEQ Executive Director.

Appendix A

Acronym list. This attachment lists the common acronyms used when discussing the FOPs.

Stationary vents subject to 30 TAC Chapter 111, Subchapter A, § 111.111(a)(1)(B) addressed in the Special Terms and Conditions

The site contains stationary vents with a flowrate less than 100,000 actual cubic feet per minute (acfm) and constructed after January 31, 1972 which are limited, over a six-minute average, to 20% opacity as required by 30 TAC § 111.111(a)(1)(B). As a site may have a large number of stationary vents that fall into this category, they are not required to be listed individually in the permit's Applicable Requirement Summary. This is consistent with EPA's White Paper for Streamlined Development of Part 70 Permit Applications, July 10, 1995,

that states that requirements that apply identically to emission units at a site can be treated on a generic basis such as source-wide opacity limits.

Periodic monitoring is specified in Special Term and Condition 3 for stationary vents subject to 30 TAC § 111.111(a)(1)(B) to verify compliance with the 20% opacity limit. These vents are not expected to produce visible emissions during normal operation. The TCEQ evaluated the probability of these sources violating the opacity standards and determined that there is a very low potential that an opacity standard would be exceeded. It was determined that continuous monitoring for these sources is not warranted as there would be very limited environmental benefit in continuously monitoring sources that have a low potential to produce visible emissions. Therefore, the TCEQ set the visible observation monitoring frequency for these sources to once per calendar quarter.

The TCEQ has exempted vents that are not capable of producing visible emissions from periodic monitoring requirements. These vents include sources of colorless VOCs, non-fuming liquids, and other materials that cannot produce emissions that obstruct the transmission of light. Passive ventilation vents, such as plumbing vents, are also included in this category. Since this category of vents are not capable of producing opacity due to the physical or chemical characteristics of the emission source, periodic monitoring is not required as it would not yield any additional data to assure compliance with the 20% opacity standard of 30 TAC § 111.111(a)(1)(B).

In the event that visible emissions are detected, either through the quarterly observation or other credible evidence, such as observations from company personnel, the permit holder shall either report a deviation or perform a Test Method 9 observation to determine the opacity consistent with the 6-minute averaging time specified in 30 TAC § 111.111(a)(1)(B). An additional provision is included to monitor combustion sources more frequently than quarterly if alternate fuels are burned for periods greater than 24 consecutive hours. This will address possible emissions that may arise when switching fuel types.

Stationary Vents subject to 30 TAC Chapter 111 not addressed in the Special Terms and Conditions
All other stationary vents subject to 30 TAC Chapter 111 not covered in the Special Terms and Conditions are listed in the permit's Applicable Requirement Summary. The basis for the applicability determinations for these vents are listed in the Determination of Applicable Requirements table.

Federal Regulatory Applicability Determinations

The following chart summarizes the applicability of the principal air pollution regulatory programs to the permit area:

Regulatory Program	Applicability (Yes/No)
Prevention of Significant Deterioration (PSD)	No
Nonattainment New Source Review (NNSR)	No
Minor NSR	Yes
40 CFR Part 60 - New Source Performance Standards	Yes
40 CFR Part 61 - National Emission Standards for Hazardous Air Pollutants (NESHAPs)	No
40 CFR Part 63 - NESHAPs for Source Categories	Yes
Title IV (Acid Rain) of the Clean Air Act (CAA)	No
Title V (Federal Operating Permits) of the CAA	Yes
Title VI (Stratospheric Ozone Protection) of the CAA	No

CAIR (Clean Air Interstate Rule)	No

Basis for Applying Permit Shields

An operating permit applicant has the opportunity to specifically request a permit shield to document that specific applicable requirements do not apply to emission units in the permit. A permit shield is a special condition stating that compliance with the conditions of the permit shall be deemed compliance with the specified potentially applicable requirements or specified potentially applicable state-only requirements. A permit shield has been requested in the application for specific emission units. For the permit shield requests that have been approved, the basis of determination for regulations that the owner/operator need not comply with are located in the "Permit Shield" attachment of the permit.

Insignificant Activities

In general, units not meeting the criteria for inclusion on either Form OP-SUM or Form OP-REQ1 are not required to be addressed in the operating permit application. Examples of these types of units include, but are not limited to, the following:

1. Office activities such as photocopying, blueprint copying, and photographic processes.
2. Sanitary sewage collection and treatment facilities other than those used to incinerate wastewater treatment plant sludge. Stacks or vents for sanitary sewer plumbing traps are also included.
3. Food preparation facilities including, but not limited to, restaurants and cafeterias used for preparing food or beverages primarily for consumption on the premises.
4. Outdoor barbecue pits, campfires, and fireplaces.
5. Laundry dryers, extractors, and tumblers processing bedding, clothing, or other fabric items generated primarily at the premises. This does not include emissions from dry cleaning systems using perchloroethylene or petroleum solvents.
6. Facilities storing only dry, sweet natural gas, including natural gas pressure regulator vents.
7. Any air separation or other industrial gas production, storage, or packaging facility. Industrial gases, for purposes of this list, include only oxygen, nitrogen, helium, neon, argon, krypton, and xenon.
8. Storage and handling of sealed portable containers, cylinders, or sealed drums.
9. Vehicle exhaust from maintenance or repair shops.
10. Storage and use of non-VOC products or equipment for maintaining motor vehicles operated at the site (including but not limited to, antifreeze and fuel additives).
11. Air contaminant detectors and recorders, combustion controllers and shut-off devices, product analyzers, laboratory analyzers, continuous emissions monitors, other analyzers and monitors, and emissions associated with sampling activities. Exception to this category includes sampling activities that are deemed fugitive emissions and under a regulatory leak detection and repair program.
12. Bench scale laboratory equipment and laboratory equipment used exclusively for chemical and physical analysis, including but not limited to, assorted vacuum producing devices and laboratory fume hoods.
13. Steam vents, steam leaks, and steam safety relief valves, provided the steam (or boiler feedwater) has not contacted other materials or fluids containing regulated air pollutants other than boiler water treatment chemicals.
14. Storage of water that has not contacted other materials or fluids containing regulated air pollutants other than boiler water treatment chemicals.
15. Well cellars.
16. Fire or emergency response equipment and training, including but not limited to, use of fire control equipment including equipment testing and training, and open burning of materials or fuels associated with firefighting training.
17. Crucible or pot furnaces with a brim full capacity of less than 450 cubic inches of any molten metal.
18. Equipment used exclusively for the melting or application of wax.
19. All closed tumblers used for the cleaning or deburring of metal products without abrasive blasting, and all open tumblers with a batch capacity of 1,000 lbs. or less.

20. Shell core and shell mold manufacturing machines.
21. Sand or investment molds with a capacity of 100 lbs. or less used for the casting of metals;
22. Equipment used for inspection of metal products.
23. Equipment used exclusively for rolling, forging, pressing, drawing, spinning, or extruding either hot or cold metals by some mechanical means.
24. Instrument systems utilizing air, natural gas, nitrogen, oxygen, carbon dioxide, helium, neon, argon, krypton, and xenon.
25. Battery recharging areas.
26. Brazing, soldering, or welding equipment.

Determination of Applicable Requirements

The tables below include the applicability determinations for the emission units, the index number(s) where applicable, and all relevant unit attribute information used to form the basis of the applicability determination. The unit attribute information is a description of the physical properties of an emission unit which is used to determine the requirements to which the permit holder must comply. For more information about the descriptions of the unit attributes specific Unit Attribute Forms may be viewed at [HYPERLINK "http://www.tceq.texas.gov/permitting/air/nav/air_all_ua_forms.html"].

A list of unit attribute forms is included at the end of this document. Some examples of unit attributes include construction date; product stored in a tank; boiler fuel type; etc.. Generally, multiple attributes are needed to determine the requirements for a given emission unit and index number. The table below lists these attributes in the column entitled "Basis of Determination." Attributes that demonstrate that an applicable requirement applies will be the factual basis for the specific citations in an applicable requirement that apply to a unit for that index number. The TCEQ Air Permits Division has developed flowcharts for determining applicability of state and federal regulations based on the unit attribute information in a Decision Support System (DSS). These flowcharts can be accessed via the internet at [HYPERLINK "http://www.tceq.texas.gov/permitting/air/nav/air_supportsys.html"]. The Air Permits Division staff may also be contacted for assistance at (512) 239-1250.

The attributes for each unit and corresponding index number provide the basis for determining the specific legal citations in an applicable requirement that apply, including emission limitations or standards, monitoring, recordkeeping, and reporting. The rules were found to apply or not apply by using the unit attributes as answers to decision questions found in the flowcharts of the DSS. Some additional attributes indicate which legal citations of a rule apply. The legal citations that apply to each emission unit may be found in the Applicable Requirements Summary table of the draft permit. There may be some entries or rows of units and rules not found in the permit, or if the permit contains a permit shield, repeated in the permit shield area. These are sets of attributes that describe negative applicability, or; in other words, the reason why a potentially applicable requirement does not apply.

If applicability determinations have been made which differ from the available flowcharts, an explanation of the decisions involved in the applicability determination is specified in the column "Changes and Exceptions to RRT." If there were no exceptions to the DSS, then this column has been removed.

The draft permit includes all emission limitations or standards, monitoring, recordkeeping and reporting required by each applicable requirement. If an applicable requirement does not require monitoring, recordkeeping, or reporting, the word "None" will appear in the Applicable Requirements Summary table. If additional periodic monitoring is required for an applicable requirement, it will be explained in detail in the portion of this document entitled "Rationale for Compliance Assurance Monitoring (CAM)/ Periodic Monitoring Methods Selected."

When attributes demonstrate that a unit is not subject to an applicable requirement, the applicant may request a permit shield for those items. The portion of this document entitled "Basis for Applying Permit Shields" specifies which units, if any, have a permit shield.

Operational Flexibility

When an emission unit has multiple operating scenarios, it will have a different index number associated with each operating condition. This means that units are permitted to operate under multiple operating conditions. The applicable requirements for each operating condition are determined by a unique set of unit attributes. For example, a tank may store two different products at different points in time. The tank may, therefore, need to comply with two distinct sets of requirements, depending on the product that is stored. Both sets of requirements are included in the permit, so that the permit holder may store either product in the tank.

* - The "unit attributes" or operating conditions that determine what requirements apply

NSR Versus Title V FOP

The state of Texas has two Air permitting programs, New Source Review (NSR) and Title V Federal Operating Permits. The two programs are substantially different both in intent and permit content.

NSR is a preconstruction permitting program authorized by the Texas Clean Air Act and Title I of the Federal Clean Air Act (FCAA). The processing of these permits is governed by 30 Texas Administrative Code (TAC) Chapter 116.111. The Title V Federal Operating Program is a federal program authorized under Title V of the FCAA that has been delegated to the state of Texas to administer and is governed by 30 TAC Chapter 122. The major differences between the two permitting programs are listed in the table below:

NSR Permit	Federal Operating Permit(FOP)
Issued Prior to new Construction or modification of an existing facility	For initial permit with application shield, can be issued after operation commences; significant revisions require approval prior to operation.
Authorizes air emissions	Codifies existing applicable requirements, does not authorize new emissions
Ensures issued permits are protective of the environment and human health by conducting a health effects review and that requirement for best available control technology (BACT) is implemented.	Applicable requirements listed in permit are used by the inspectors to ensure proper operation of the site as authorized. Ensures that adequate monitoring is in place to allow compliance determination with the FOP.
Up to two Public notices may be required. Opportunity for public comment and contested case hearings for some authorizations.	One public notice required. Opportunity for public comments. No contested case hearings.
Applies to all point source emissions in the state.	Applies to all major sources and some non-major sources identified by the EPA.
Applies to facilities: a portion of site or individual emission sources	One or multiple FOPs cover the entire site (consists of multiple facilities)
Permits include terms and conditions under which the applicant must construct and operate its various equipment and processes on a facility basis.	Permits include terms and conditions that specify the general operational requirements of the site; and also include codification of all applicable requirements for emission units at the site.
Opportunity for EPA review for Federal Prevention of Significant Deterioration (PSD) and Nonattainment (NA) permits for major sources.	Opportunity for EPA review, Affected states review, and a Public petition period for every FOP.
Permits have a table listing maximum emission limits for pollutants	Permit has an applicable requirements table and Periodic Monitoring (PM) / Compliance Assurance Monitoring (CAM) tables which document applicable monitoring requirements.
Permits can be altered or amended upon application by company. Permits must be issued before construction or modification of facilities can begin.	Permits can be revised through several revision processes, which provide for different levels of public notice and opportunity to comment. Changes that would be significant revisions require that a revised permit be issued before those changes can be operated.
NSR permits are issued independent of FOP requirements.	FOP are independent of NSR permits, but contain a list of all NSR permits incorporated by reference

[SEQ CHAPTER \h \r 1]New Source Review Requirements

Below is a list of the New Source Review (NSR) permits for the permitted area. These NSR permits are incorporated by reference into the operating permit and are enforceable under it. These permits can be found in the main TCEQ file room, located on the first floor of Building E, 12100 Park 35 Circle, Austin, Texas. The Public Education Program may be contacted at 1-800-687-4040 or the Air Permits Division (APD) may be contacted at 1-512-239-1250 for help with any question.

Additionally, the site contains emission units that are permitted by rule under the requirements of 30 TAC Chapter 106, Permits by Rule. The following table specifies the permits by rule that apply to the site. All current permits by rule are contained in Chapter 106. Outdated 30 TAC Chapter 106 permits by rule may be viewed at the following Web site:

[HYPERLINK "http://www.tceq.texas.gov/permitting/air/permitbyrule/historical_rules/old106list/index106.html"]

Outdated Standard Exemption lists may be viewed at the following Web site:

[HYPERLINK "http://www.tceq.texas.gov/permitting/air/permitbyrule/historical_rules/oldselist/se_index.html"]

The status of air permits and applications and a link to the Air Permits Remote Document Server is located at the following Web site:

Emission Units and Emission Points

In air permitting terminology, any source capable of generating emissions (for example, an engine or a sandblasting area) is called an Emission Unit. For purposes of Title V, emission units are specifically listed in the operating permit when they have applicable requirements other than New Source Review (NSR), or when they are listed in the permit shield table.

The actual physical location where the emissions enter the atmosphere (for example, an engine stack or a sand-blasting yard) is called an emission point. For New Source Review preconstruction permitting purposes, every emission unit has an associated emission point. Emission limits are listed in an NSR permit, associated with an emission point. This list of emission points and emission limits per pollutant is commonly referred to as the "Maximum Allowable Emission Rate Table", or "MAERT" for short. Specifically, the MAERT lists the Emission Point Number (EPN) that identifies the emission point, followed immediately by the Source Name, identifying the emission unit that is the source of those emissions on this table.

Thus, by reference, an emission unit in a Title V operating permit is linked by reference number to an NSR authorization, and its related emission point.

Monitoring Sufficiency

Federal and state rules, 40 CFR § 70.6(a)(3)(i)(B) and 30 TAC § 122.142(c) respectively, require that each federal operating permit include additional monitoring for applicable requirements that lack periodic or instrumental monitoring (which may include recordkeeping that serves as monitoring) that yields reliable data from a relevant time period that are representative of the emission unit's compliance with the applicable emission limitation or standard. Furthermore, the federal operating permit must include compliance assurance monitoring (CAM) requirements for emission sources that meet the applicability criteria of 40 CFR Part 64 in accordance with 40 CFR § 70.6(a)(3)(i)(A) and 30 TAC § 122.604(b).

With the exception of any emission units listed in the Periodic Monitoring or CAM Summaries in the FOP, the TCEQ Executive Director has determined that the permit contains sufficient monitoring, testing, recordkeeping, and reporting requirements that assure compliance with the applicable requirements. If applicable, each emission unit that requires additional monitoring in the form of periodic monitoring or CAM is described in further detail under the Rationale for CAM/PM Methods Selected section following this paragraph.

Rationale for Compliance Assurance Monitoring (CAM)/ Periodic Monitoring Methods Selected

Periodic Monitoring:

The Federal Clean Air Act requires that each federal operating permit include monitoring sufficient to assure compliance with the terms and conditions of the permit. Most of the emission limits and standards applicable to emission units at Title V sources include adequate monitoring to show that the units meet the limits and standards. For those requirements that do not include monitoring, or where the monitoring is not sufficient to assure compliance, the federal operating permit must include such monitoring for the emission units affected. The following emission units are subject to periodic monitoring requirements because the emission units are subject to an emission limitation or standard for an air pollutant (or surrogate thereof) in an applicable requirement that does not already require monitoring, or the monitoring for the applicable requirement is not sufficient to assure compliance:

Unit/Group/Process Information	
ID No.: EP036U1	
Control Device ID No.: N/A	Control Device Type: N/A

Applicable Regulatory Requirement	
Name: 30 TAC Chapter 111, Visible Emissions	SOP Index No.: R1111-0003
Pollutant: OPACITY	Main Standard: § 111.111(a)(1)(A)
Monitoring Information	
Indicator: Visible Emissions	
Minimum Frequency: once per calendar quarter	
Averaging Period: n/a	
Deviation Limit: There shall be no visible emissions. If visible emissions are observed, the permit holder shall either report a deviation or perform Test Method 9 within 24 hours and opacity shall not exceed 30%.	
Basis of monitoring: The option to perform opacity readings or visible emissions to demonstrate compliance is consistent with EPA Reference Test Method 9 and 22. Monitoring specifications and procedures for the opacity are consistent with federal requirements and include the EPA's Test Method 9 for determining opacity by visual observations. The monitoring specifications and procedures for the visible emissions monitoring are similar to "EPA Reference Method 22" procedures.	

Unit/Group/Process Information	
ID No.: EP037U501	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 111, Visible Emissions	SOP Index No.: R1111-0004
Pollutant: OPACITY	Main Standard: § 111.111(a)(1)(B)
Monitoring Information	
Indicator: Visible Emissions	
Minimum Frequency: once per calendar quarter	
Averaging Period: n/a	
Deviation Limit: There shall be no visible emissions. If visible emissions are observed, the permit holder shall either report a deviation or perform Test Method 9 within 24 hours and opacity shall not exceed 20%.	
Basis of monitoring: The option to perform opacity readings or visible emissions to demonstrate compliance is consistent with EPA Reference Test Method 9 and 22. Monitoring specifications and procedures for the opacity are consistent with federal requirements and include the EPA's Test Method 9 for determining opacity by visual observations. The monitoring specifications and procedures for the visible emissions monitoring are similar to "EPA Reference Method 22" procedures.

[SEQ CHAPTER \H \R 1]FEDERAL OPERATING PERMIT

A FEDERAL OPERATING PERMIT IS HEREBY ISSUED TO
Eastman Chemical Company

AUTHORIZING THE OPERATION OF
Eastman Chemical Company Texas Operations
C5 - Ethylene Glycol
Industrial Organic Chemicals

LOCATED AT
Harrison County, Texas
Latitude 32° 26' 15" Longitude 94° 41' 37"
Regulated Entity Number: RN100219815

This permit is issued in accordance with and subject to the Texas Clean Air Act (TCAA), Chapter 382 of the Texas Health and Safety Code and Title 30 Texas Administrative Code Chapter 122 (30 TAC Chapter 122), Federal Operating Permits. Under 30 TAC Chapter 122, this permit constitutes the permit holder's authority to operate the site and emission units listed in this permit. Operations of the site and emission units listed in this permit are subject to all additional rules or amended rules and orders of the Commission pursuant to the TCAA.

This permit does not relieve the permit holder from the responsibility of obtaining New Source Review authorization for new, modified, or existing facilities in accordance with 30 TAC Chapter 116, Control of Air Pollution by Permits for New Construction or Modification.

The site and emission units authorized by this permit shall be operated in accordance with 30 TAC Chapter 122, the general terms and conditions, special terms and conditions, and attachments contained herein.

This permit shall expire five years from the date of issuance. The renewal requirements specified in 30 TAC § 122.241 must be satisfied in order to renew the authorization to operate the site and emission units.

Permit No: O1974 Issuance Date: November 12, 2014

[ADVANCE \x 144]For the Commission

Table of Contents

Section **Page**

[TOC \o "1-3" \h \z \t "SOP_Heading1,1,SOP_Heading2,2,SOP_Heading2 + Centered,2,SOP_Heading1 + Centered,1"]

General Terms and Conditions

The permit holder shall comply with all terms and conditions contained in 30 TAC § 122.143 (General Terms and Conditions), 30 TAC § 122.144 (Recordkeeping Terms and Conditions), 30 TAC § 122.145 (Reporting Terms and Conditions), and 30 TAC § 122.146 (Compliance Certification Terms and Conditions).

In accordance with 30 TAC § 122.144(1), records of required monitoring data and support information required by this permit, or any applicable requirement codified in this permit, are required to be maintained for a period of five years from the date of the monitoring report, sample, or application unless a longer data retention period is specified in an applicable requirement. The five year record retention period supersedes any less stringent retention requirement that may be specified in a condition of a permit identified in the New Source Review Authorization attachment.

If the permit holder chooses to demonstrate that this permit is no longer required, a written request to void this permit shall be submitted to the Texas Commission on Environmental Quality (TCEQ) by the Responsible Official in accordance with 30 TAC § 122.161(e). The permit holder shall comply with the permit's requirements, including compliance certification and deviation reporting, until notified by the TCEQ that this permit is voided.

The permit holder shall comply with 30 TAC Chapter 116 by obtaining a New Source Review authorization prior to new construction or modification of emission units located in the area covered by this permit.

All reports required by this permit must include in the submittal a cover letter which identifies the following information: company name, TCEQ regulated entity number, air account number (if assigned), site name, area name (if applicable), and Air Permits Division permit number(s).

[SEQ CHAPTER \h \r 1]Special Terms and Conditions:

Emission Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting

1. Permit holder shall comply with the following requirements:

    A. Emission units (including groups and processes) in the Applicable Requirements Summary attachment shall meet the limitations, standards, equipment specifications, monitoring, recordkeeping, reporting, testing, and other requirements listed in the Applicable Requirements Summary attachment to assure compliance with the permit.

    B. The textual description in the column titled "Textual Description" in the Applicable Requirements Summary attachment is not enforceable and is not deemed as a substitute for the actual regulatory language. The Textual Description is provided for information purposes only.

    C. A citation listed on the Applicable Requirements Summary attachment, which has a notation [G] listed before it, shall include the referenced section and subsection for all commission rules, or paragraphs for all federal and state regulations and all subordinate paragraphs, subparagraphs and clauses, subclauses, and items contained within the referenced citation as applicable requirements.

D. When a grouped citation, notated with a [G] in the Applicable Requirements Summary, contains multiple compliance options, the permit holder must keep records of when each compliance option was used.

E. Emission units subject to 40 CFR Part 63, Subpart F, G, H and FFFF as identified in the attached Applicable Requirements Summary table are subject to 30 TAC Chapter 113, Subchapter C, §§ 113.110, 113.120, 113.130 and 113.890 respectively which incorporates the 40 CFR Part 63 Subpart by reference.

2. The permit holder shall comply with the following sections of 30 TAC Chapter 101 (General Air Quality Rules):

A. Title 30 TAC § 101.1 (relating to Definitions), insofar as the terms defined in this section are used to define the terms used in other applicable requirements

B. Title 30 TAC § 101.3 (relating to Circumvention)

C. Title 30 TAC § 101.8 (relating to Sampling), if such action has been requested by the TCEQ

D. Title 30 TAC § 101.9 (relating to Sampling Ports), if such action has been requested by the TCEQ

E. Title 30 TAC § 101.10 (relating to Emissions Inventory Requirements)

F. Title 30 TAC § 101.201 (relating to Emission Event Reporting and Recordkeeping Requirements)

G. Title 30 TAC § 101.211 (relating to Scheduled Maintenance, Start-up, and Shutdown Reporting and Recordkeeping Requirements)

H. Title 30 TAC § 101.221 (relating to Operational Requirements)

I. Title 30 TAC § 101.222 (relating to Demonstrations)

J. Title 30 TAC § 101.223 (relating to Actions to Reduce Excessive Emissions)

3. Permit holder shall comply with the following requirements of 30 TAC Chapter 111:

A. Visible emissions from stationary vents with a flow rate of less than 100,000 actual cubic feet per minute and constructed after January 31, 1972 that are not listed in the Applicable Requirements Summary attachment for 30 TAC Chapter 111, Subchapter A, Division 1 , shall not exceed 20% opacity averaged over a six-minute period. The permit holder shall comply with the following requirements for stationary vents at the site subject to this standard:

(i) Title 30 TAC § 111.111(a)(1)(B) (relating to Requirements for Specified Sources)

(ii) Title 30 TAC § 111.111(a)(1)(E)

(iii) Title 30 TAC § 111.111(a)(1)(F)(i), (ii), (iii), or (iv)

(iv) For emission units with vent emissions subject to 30 TAC § 111.111(a)(1)(B), complying with 30 TAC § 111.111(a)(1)(F)(ii), (iii), or (iv), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146. These periodic monitoring requirements do not apply to vents that are not capable of producing visible emissions such as vents that emit only colorless VOCs; vents from non-fuming liquids; vents that provide passive ventilation, such as plumbing vents; or vent emissions from any other source that does not obstruct the transmission of light. Vents, as specified in the "Applicable Requirements Summary" attachment, that are subject to the emission limitation of 30 TAC § 111.111(a)(1)(B) are not subject to the following periodic monitoring requirements:

(1) An observation of stationary vents from emission units in operation shall be conducted at least once during each calendar quarter unless the emission unit is not operating for the entire quarter.

(2) For stationary vents from a combustion source, if an alternative to the normally fired fuel is fired for a period greater than or equal to 24 consecutive hours, the permit holder shall conduct an observation of the stationary vent for each such period to determine if visible emissions are present. If such period is greater than 3 months, observations shall be conducted once during each quarter. Supplementing the normally fired fuel with natural gas or fuel gas to increase the net heating value to the minimum required value does not constitute creation of an alternative fuel.

(3) Records of all observations shall be maintained.

(4) Visible emissions observations of emission units operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of emission units operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions observations shall be made during times when the activities described in 30 TAC § 111.111(a)(1)(E) are not taking place. Visible emissions shall be determined with each stationary vent in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each stationary vent during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

(5) Compliance Certification:

(a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(1) and (a)(1)(B).

(b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(1)(F) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

(c) Some vents may be subject to multiple visible emission or monitoring requirements. All credible data must be considered when certifying compliance with this requirement even if the observation or monitoring was performed to demonstrate compliance with a different requirement.

B. Certification of opacity readers determining opacities under Method 9 (as outlined in 40 CFR Part 60, Appendix A) to comply with opacity monitoring requirements shall be accomplished by completing the Visible Emissions Evaluators Course, or approved agency equivalent, no more than 180 days before the opacity reading.

C. For emission units with contributions from uncombined water, the permit holder shall comply with the requirements of 30 TAC § 111.111(b).

D. Emission limits on nonagricultural processes, except for the steam generators specified in 30 TAC § 111.153, shall comply with the following requirements:

(i) Emissions of PM from any source may not exceed the allowable rates as required in 30 TAC § 111.151(a) (relating to Allowable Emissions Limits)

(ii) Sources with an effective stack height (h_e) less than the standard effective stack height (H_e), must reduce the allowable emission level by multiplying it by $[h_e/H_e]^2$ as required in 30 TAC § 111.151(b)

(iii) Effective stack height shall be calculated by the equation specified in 30 TAC § 111.151(c)

4. The permit holder shall comply with the following requirements for units subject to any subpart of 40 CFR Part 60, unless otherwise stated in the applicable subpart:

   A. Title 40 CFR § 60.7 (relating to Notification and Recordkeeping)

   B. Title 40 CFR § 60.8 (relating to Performance Tests)

   C. Title 40 CFR § 60.11 (relating to Compliance with Standards and Maintenance Requirements)

   D. Title 40 CFR § 60.12 (relating to Circumvention)

   E. Title 40 CFR § 60.13 (relating to Monitoring Requirements)

   F. Title 40 CFR § 60.14 (relating to Modification)

   G. Title 40 CFR § 60.15 (relating to Reconstruction)

   H. Title 40 CFR § 60.19 (relating to General Notification and Reporting Requirements)

5. The permit holder shall comply with the requirements of 30 TAC Chapter 113, Subchapter C, § 113.100 for units subject to any subpart of 40 CFR Part 63, unless otherwise stated in the applicable subpart.

6. For the chemical manufacturing process specified in 40 CFR Part 63, Subpart F, the permit holder shall comply with 40 CFR § 63.103(a) (relating to General Compliance, Reporting, and Recordkeeping Provisions) (Title 30 TAC Chapter 113, Subchapter C, § 113.110 incorporated by reference).

7. For the chemical manufacturing facilities with a 40 CFR Part 63, Subpart G Group 2 wastewater stream, the permit holder shall comply with (Title 30 TAC Chapter 113, Subchapter C, § 113.120 incorporated by reference):

   A. Title 40 CFR § 63.132(a), (a)(1), and (a)(1)(i) (relating to Process Wastewater Provisions - General)

   B. Title 40 CFR § 63.146(b)(1) (relating to Process Wastewater Provisions - Reporting)

   C. Title 40 CFR § 63.147(b)(8) (relating to Process Wastewater Provisions - Recordkeeping)

8. For the chemical manufacturing facilities subject to leak detection requirements in 40 CFR Part 63, Subpart G, the permit holder shall comply with the following requirements (Title 30 TAC Chapter 113, Subchapter C, § 113.120 incorporated by reference):

   A. General Leak Detection Requirements:

      (i) Title 40 CFR § 63.148(d)(1) - (3), and (e) (relating to Leak Inspection Provisions)

(ii) Title 40 CFR § 63.148(c), (g), (g)(2), (h), and (h)(2) (relating to Leak Inspection Provisions), for monitoring and testing requirements

(iii) Title 40 CFR §§ 63.148(g)(2), (h)(2), (i)(1) - (2), (i)(4)(i) - (viii), (i)(5), and 63.152(a)(1) - (5), for recordkeeping requirements

(iv) Title 40 CFR §§ 63.148(j), 63.151(a)(6)(i) - (iii), (b)(1) - (2), (j)(1) - (3), 63.152(a)(1) - (5), (b), (b)(1)(i) - (ii), and (b)(4), for reporting requirements

9. For miscellaneous chemical process facilities subject to maintenance wastewater requirements as specified in 40 CFR § 63.2485, Table 7, the permit holder shall comply with the requirements of 40 CFR § 63.105 (relating to Maintenance Wastewater Requirements) (Title 30 TAC Chapter 113, Subchapter C, § 113.890 incorporated by reference).

10. For site remediation projects subject to 40 CFR Part 63, Subpart GGGGG that are completed within 30 consecutive calendar days the permit holder shall comply with 40 CFR § 63.7884(b), (b)(1) - (3) (Title 30 TAC, Subchapter C, § 113.1160 incorporated by reference).

11. The permit holder shall comply with certified registrations submitted to the TCEQ for purposes of establishing federally enforceable emission limits. A copy of the certified registration shall be maintained with the permit. Records sufficient to demonstrate compliance with the established limits shall be maintained. The certified registration and records demonstrating compliance shall be provided, on request, to representatives of the appropriate TCEQ regional office and any local air pollution control agency having jurisdiction over the site. The permit holder shall submit updated certified registrations when changes at the site require establishment of new emission limits. If changes result in emissions that do not remain below major source thresholds, the permit holder shall submit a revision application to codify the appropriate requirements in the permit.

Additional Monitoring Requirements

12. The permit holder shall comply with the periodic monitoring requirements as specified in the attached "Periodic Monitoring Summary" upon issuance of the permit. Except for, as applicable, monitoring malfunctions, associated repairs, and required quality assurance or control activities (including, as applicable, calibration checks and required zero and span adjustments), the permit holder shall conduct all monitoring in continuous operation (or shall collect data at all required intervals) at all times that the pollutant-specific emissions unit is operating. The permit holder may elect to collect monitoring data on a more frequent basis and average the data, consistent with the averaging time specified in the "Periodic Monitoring Summary," for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis. In no event shall data be collected and used in particular instances to avoid reporting deviations. Deviations shall be reported according to 30 TAC § 122.145 (Reporting Terms and Conditions).

New Source Review Authorization Requirements

13. Permit holder shall comply with the requirements of New Source Review authorizations issued or claimed by the permit holder for the permitted area, including permits, permits by rule, standard permits, flexible permits, special permits, permits for existing facilities including Voluntary Emissions Reduction Permits and Electric Generating

Facility Permits issued under 30 TAC Chapter 116, Subchapter I, or special exemptions referenced in the New Source Review Authorization References attachment. These requirements:

A. Are incorporated by reference into this permit as applicable requirements

B. Shall be located with this operating permit

C. Are not eligible for a permit shield

14. The permit holder shall comply with the general requirements of 30 TAC Chapter 106, Subchapter A or the general requirements, if any, in effect at the time of the claim of any PBR.

15. The permit holder shall maintain records to demonstrate compliance with any emission limitation or standard that is specified in a permit by rule (PBR) or Standard Permit listed in the New Source Review Authorizations attachment. The records shall yield reliable data from the relevant time period that are representative of the emission unit's compliance with the PBR or Standard Permit. These records may include, but are not limited to, production capacity and throughput, hours of operation, material safety data sheets (MSDS), chemical composition of raw materials, speciation of air contaminant data, engineering calculations, maintenance records, fugitive data, performance tests, capture/control device efficiencies, direct pollutant monitoring (CEMS, COMS, or PEMS), or control device parametric monitoring. These records shall be made readily accessible and available as required by 30 TAC § 122.144.

A. If applicable, monitoring of control device performance or general work practice standards shall be made in accordance with the TCEQ Periodic Monitoring Guidance document.

B. Any monitoring or recordkeeping data indicating noncompliance with the PBR or Standard Permit shall be considered and reported as a deviation according to 30 TAC § 122.145 (Reporting Terms and Conditions).

Compliance Requirements

16. The permit holder shall certify compliance in accordance with 30 TAC § 122.146. The permit holder shall comply with 30 TAC § 122.146 using at a minimum, but not limited to, the continuous or intermittent compliance method data from monitoring, recordkeeping, reporting, or testing required by the permit and any other credible evidence or information. The certification period may not exceed 12 months and the certification must be submitted within 30 days after the end of the period being certified.

17. Use of Discrete Emission Credits to comply with the applicable requirements:

A. Unless otherwise prohibited, the permit holder may use discrete emission credits to comply with the following applicable requirements listed elsewhere in this permit:

(i) Title 30 TAC Chapter 115

(ii) Title 30 TAC Chapter 117

(iii) If applicable, offsets for Title 30 TAC Chapter 116

(iv) Temporarily exceed state NSR permit allowables

B. The permit holder shall comply with the following requirements in order to use the credit to comply with the applicable requirements:

(i) The permit holder must notify the TCEQ according to 30 TAC § 101.376(d)

(ii) The discrete emission credits to be used must meet all the geographic, timeliness, applicable pollutant type, and availability requirements listed in 30 TAC Chapter 101, Subchapter H, Division 4

(iii) The executive director has approved the use of the discrete emission credits according to 30 TAC § 101.376(d)(1)(A)

(iv) The permit holder keeps records of the use of credits towards compliance with the applicable requirements in accordance with 30 TAC § 101.372(h) and 30 TAC Chapter 122

Risk Management Plan

18. For processes subject to 40 CFR Part 68 and specified in 40 CFR § 68.10, the permit holder shall comply with the requirements of the Accidental Release Prevention Provisions in 40 CFR Part 68. The permit holder shall submit to the appropriate agency either a compliance schedule for meeting the requirements of 40 CFR Part 68 by the date provided in 40 CFR § 68.10(a), or as part of the compliance certification submitted under this permit, a certification statement that the source is in compliance with all requirements of 40 CFR Part 68, including the registration and submission of a risk management plan.

Permit Location

19. The permit holder shall maintain a copy of this permit and records related to requirements listed in this permit on site.

Permit Shield (30 TAC § 122.148)

20. A permit shield is granted for the emission units, groups, or processes specified in the attached "Permit Shield." Compliance with the conditions of the permit shall be deemed compliance with the specified potentially applicable requirements or specified potentially applicable state-only requirements listed in the attachment "Permit Shield." Permit shield provisions shall not be modified by the executive director until notification is provided to the permit holder. No later than 90 days after notification of a change in a determination made by the executive director, the permit holder shall apply for the appropriate permit revision to reflect the new determination. Provisional terms are not eligible for this permit shield. Any term or condition, under a permit shield, shall not be protected by the permit shield if it is replaced by a provisional term or condition or the basis of the term and condition changes.

Unit Summary 11

Applicable Requirements Summary 15

Note: A "none" entry may be noted for some emission sources in this permit's "Applicable Requirements Summary" under the heading of "Monitoring and Testing Requirements" and/or "Recordkeeping Requirements" and/or "Reporting Requirements." Such a notation indicates that there are no requirements for the indicated emission source as identified under the respective column heading(s) for the stated portion of the regulation when the emission source is operating under the conditions of the specified SOP Index Number. However, other relevant requirements pursuant to 30 TAC Chapter 122 including Recordkeeping Terms and Conditions (30 TAC § 122.144), Reporting Terms and Conditions (30 TAC § 122.145), and Compliance Certification Terms and Conditions (30 TAC § 122.146) continue to apply.

Unit Summary

Unit/Group/ Process ID No.	Unit Type	Group/Inclusive Units	SOP Index No.	Regulation	Requirement Driver
EP036FG1	FUGITIVE EMISSION UNITS	N/A	63H-0001	40 CFR Part 63, Subpart H	No changing attributes.
EP036U1	EMISSION POINTS/STATIONARY VENTS/PROCESS VENTS	N/A	R1111-0003	30 TAC Chapter 111, Visible Emissions	No changing attributes.
EP037D513	DISTILLATION OPERATIONS	N/A	60NNN-0001	40 CFR Part 60, Subpart NNN	No changing attributes.
EP037D514	DISTILLATION OPERATIONS	N/A	60NNN-0001	40 CFR Part 60, Subpart NNN	No changing attributes.
EP037D516	DISTILLATION OPERATIONS	N/A	60NNN-0001	40 CFR Part 60, Subpart NNN	No changing attributes.
EP037FG1	FUGITIVE EMISSION UNITS	N/A	63H-0002	40 CFR Part 63, Subpart H	No changing attributes.
EP037T543A	STORAGE TANKS/VESSELS	N/A	63G-0007	40 CFR Part 63, Subpart G	No changing attributes.
EP037T543B	STORAGE TANKS/VESSELS	N/A	63G-0008	40 CFR Part 63, Subpart G	No changing attributes.
EP037U501	EMISSION POINTS/STATIONARY VENTS/PROCESS VENTS	N/A	R1111-0004	30 TAC Chapter 111, Visible Emissions	No changing attributes.
EP038D101R	EMISSION POINTS/STATIONARY VENTS/PROCESS VENTS	N/A	63G-0001	40 CFR Part 63, Subpart G	No changing attributes.
EP038D102R	DISTILLATION OPERATIONS	N/A	60NNN-0001	40 CFR Part 60, Subpart NNN	No changing attributes.
EP038D601	EMISSION POINTS/STATIONARY	N/A	63G-0002	40 CFR Part 63, Subpart G	No changing attributes.

Unit Summary

Unit/Group/ Process ID No.	Unit Type	Group/Inclusive Units	SOP Index No.	Regulation	Requirement Driver
	VENTS/PROCESS VENTS				
EP038FG1	FUGITIVE EMISSION UNITS	N/A	63H-0003	40 CFR Part 63, Subpart H	No changing attributes.
EP038FG2	FUGITIVE EMISSION UNITS	N/A	63H-0004	40 CFR Part 63, Subpart H	No changing attributes.
EP038T106	STORAGE TANKS/VESSELS	N/A	63G-0012	40 CFR Part 63, Subpart G	No changing attributes.
EP038T106A	STORAGE TANKS/VESSELS	N/A	63G-0013	40 CFR Part 63, Subpart G	No changing attributes.
EP038T131	STORAGE TANKS/VESSELS	N/A	63G-0014	40 CFR Part 63, Subpart G	No changing attributes.
EP039T113	STORAGE TANKS/VESSELS	N/A	63G-0022	40 CFR Part 63, Subpart G	No changing attributes.
EP039T606A	STORAGE TANKS/VESSELS	N/A	63G-0023	40 CFR Part 63, Subpart G	No changing attributes.
EP039T606B	STORAGE TANKS/VESSELS	N/A	63G-0024	40 CFR Part 63, Subpart G	No changing attributes.
EP104FL1	FLARES	N/A	R1111-0001	30 TAC Chapter 111, Visible Emissions	No changing attributes.
EP104T51	STORAGE TANKS/VESSELS	N/A	63G-0028	40 CFR Part 63, Subpart G	No changing attributes.
EP104T52	STORAGE TANKS/VESSELS	N/A	63G-0029	40 CFR Part 63, Subpart G	No changing attributes.
EP105T50	STORAGE TANKS/VESSELS	N/A	68G-0028	40 CFR Part 63, Subpart G	No changing attributes.

Unit Summary

Unit/Group/ Process ID No.	Unit Type	Group/Inclusive Units	SOP Index No.	Regulation	Requirement Driver
EP141FL1	FLARES	N/A	R1111-0002	30 TAC Chapter 111, Visible Emissions	No changing attributes.
PROEOEG1	CHEMICAL MANUFACTURING PROCESS	N/A	63F-0001	40 CFR Part 63, Subpart F	No changing attributes.
PROEOEG2	CHEMICAL MANUFACTURING PROCESS	N/A	63F-0002	40 CFR Part 63, Subpart F	No changing attributes.
PROES1	CHEMICAL MANUFACTURING PROCESS	N/A	63F-0003	40 CFR Part 63, Subpart F	No changing attributes.
PROES1	CHEMICAL MANUFACTURING PROCESS	N/A	63FFFF-0002	40 CFR Part 63, Subpart FFFF	No changing attributes.
PROES2	CHEMICAL MANUFACTURING PROCESS	N/A	63F-0004	40 CFR Part 63, Subpart F	No changing attributes.
SD020T116	STORAGE TANKS/VESSELS	N/A	63G-0047	40 CFR Part 63, Subpart G	No changing attributes.
SD021T137	STORAGE TANKS/VESSELS	N/A	63G-0036	40 CFR Part 63, Subpart G	No changing attributes.
SD093T2	STORAGE TANKS/VESSELS	N/A	63G-0037	40 CFR Part 63, Subpart G	No changing attributes.
SD098T3	STORAGE TANKS/VESSELS	N/A	63G-0038	40 CFR Part 63, Subpart G	No changing attributes.
SD098T4	STORAGE TANKS/VESSELS	N/A	63G-0039	40 CFR Part 63, Subpart G	No changing attributes.

Unit Summary

Unit/Group/ Process ID No.	Unit Type	Group/Inclusive Units	SOP Index No.	Regulation	Requirement Driver
SD098T5	STORAGE TANKS/VESSELS	N/A	63G-0040	40 CFR Part 63, Subpart G	No changing attributes.
SD098T6	STORAGE TANKS/VESSELS	N/A	63G-0041	40 CFR Part 63, Subpart G	No changing attributes.
SD098T7	STORAGE TANKS/VESSELS	N/A	63G-0042	40 CFR Part 63, Subpart G	No changing attributes.
SD098T8	STORAGE TANKS/VESSELS	N/A	63G-0043	40 CFR Part 63, Subpart G	No changing attributes.
SD099T14	STORAGE TANKS/VESSELS	N/A	63G-0044	40 CFR Part 63, Subpart G	No changing attributes.
SD099T15	STORAGE TANKS/VESSELS	N/A	63G-0045	40 CFR Part 63, Subpart G	No changing attributes.
SD101T21	STORAGE TANKS/VESSELS	N/A	63G-0046	40 CFR Part 63, Subpart G	No changing attributes.

Additional Monitoring Requirements

Periodic Monitoring Summary 36

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: EP036U1	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 111, Visible Emissions	SOP Index No.: R1111-0003
Pollutant: OPACITY	Main Standard: § 111.111(a)(1)(A)
Monitoring Information	
Indicator: Visible Emissions	
Minimum Frequency: once per calendar quarter	
Averaging Period: n/a	
Deviation Limit: There shall be no visible emissions. If visible emissions are observed, the permit holder shall either report a deviation or perform Test Method 9 within 24 hours and opacity shall not exceed 30%.	
Periodic Monitoring Text: Visible emissions observations shall be made and recorded. Note that to properly determine the presence of visible emissions, all sources must be in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 miles, away from the emission source during the observation. The observer shall select a position where the sun is not directly in the observer's eyes. If the observations cannot be conducted due to weather conditions, the date, time, and specific weather conditions shall be recorded. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. If visible emissions are observed, the permit holder shall report a deviation. As an alternative, the permit holder may determine the opacity consistent with Test Method 9, as soon as practicable, but no later than 24 hours after observing visible emissions. If the result of the Test Method 9 is opacity above the opacity limit in the applicable requirement, the permit holder shall report a deviation.

As an alternative, the permit holder may determine the opacity consistent with Test Method 9, as soon as practicable, but no later than 24 hours after observing visible emissions. If the result of the Test Method 9 is opacity above the opacity limit in the applicable requirement, the permit holder shall report a deviation.	

Permit Shield

Permit Shield 39

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
EP036D10	N/A	40 CFR Part 60, Subpart NNN	Unit not constructed, modified, or reconstructed after 12/30/83.
EP036D10	N/A	40 CFR Part 63, Subpart G	Unit does not have a process vent; stream discharges to a fuel gas system.
EP036D11	N/A	40 CFR Part 60, Subpart NNN	Unit not constructed, modified, or reconstructed after 12/30/83.
EP036D11	N/A	40 CFR Part 63, Subpart G	Distillation system does not have a process vent; gas stream does not remain in the gas phase per §63.107(f).
EP036D13	N/A	40 CFR Part 60, Subpart NNN	Unit not constructed, modified, or reconstructed after 12/30/83.
EP036D13	N/A	40 CFR Part 63, Subpart G	Distillation system does not have a process vent; gas stream does not remain in the gas phase per §63.107(f).
EP036D16	N/A	40 CFR Part 60, Subpart NNN	Unit not constructed, modified, or reconstructed after 12/30/83.
EP036D16	N/A	40 CFR Part 63, Subpart G	Distillation system does not have a process vent; gas stream does not remain in the gas phase per §63.107(f).
EP036D19	N/A	40 CFR Part 60, Subpart NNN	Unit not constructed, modified, or reconstructed after 12/30/83.
EP036D19	N/A	40 CFR Part 63, Subpart G	Distillation system does not have a process vent; gas stream does not remain in the gas phase per §63.107(f).

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
EP036D20	N/A	40 CFR Part 60, Subpart NNN	Unit not constructed, modified, or reconstructed after 12/30/83.
EP036D20	N/A	40 CFR Part 63, Subpart G	Distillation system does not have a process vent; gas stream does not remain in the gas phase per §63.107(f).
EP036D3	N/A	40 CFR Part 60, Subpart NNN	Unit not constructed, modified, or reconstructed after 12/30/83.
EP036D3	N/A	40 CFR Part 63, Subpart G	Unit does not have a process vent; gas stream does not originate from a distillation unit (as defined in §63.101).
EP036D4	N/A	40 CFR Part 60, Subpart NNN	Unit not constructed, modified, or reconstructed after 12/30/83.
EP036D4	N/A	40 CFR Part 63, Subpart G	Unit does not have a process vent; stream contains less than 0.005 wt. % HAP.
EP036D5	N/A	40 CFR Part 60, Subpart NNN	Unit not constructed, modified, or reconstructed after 12/30/83.
EP036D5	N/A	40 CFR Part 63, Subpart G	Unit does not have a process vent; stream discharges to a fuel gas system.
EP036D6	N/A	40 CFR Part 60, Subpart NNN	Unit not constructed, modified, or reconstructed after 12/30/83.
EP036D6	N/A	40 CFR Part 63, Subpart G	Unit does not have a process vent; gas stream does not originate from a distillation unit (as defined in §63.101).

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
EP036D7	N/A	40 CFR Part 60, Subpart NNN	Unit not constructed, modified, or reconstructed after 12/30/83.
EP036D7	N/A	40 CFR Part 63, Subpart G	Unit does not have a process vent; stream discharges to a fuel gas system.
EP036D8R	N/A	40 CFR Part 60, Subpart NNN	Unit does not meet the definition of distillation unit per §60.661.
EP036D8R	N/A	40 CFR Part 63, Subpart G	Unit does not have a process vent; gas stream does not originate from a distillation unit (as defined in §63.101).
EP036D9	N/A	40 CFR Part 60, Subpart NNN	Unit not constructed, modified, or reconstructed after 12/30/83.
EP036D9	N/A	40 CFR Part 63, Subpart G	Unit does not have a process vent; stream discharges to a fuel gas system.
EP036FG1	N/A	40 CFR Part 60, Subpart VV	Facility not constructed, modified, or reconstructed after 01/05/81.
EP036FG1	N/A	40 CFR Part 61, Subpart J	Facility does not have sources in benzene service.
EP036FG1	N/A	40 CFR Part 61, Subpart V	Facility does not have sources in VHAP service.
EP036MWW1	N/A	40 CFR Part 63, Subpart FFFF	Maintenance wastewater stream is an affected source subject to 40 CFR Part 63, Subpart G and is not a batch process vent.
EP036R1	N/A	40 CFR Part 60, Subpart III	Unit not constructed, modified, or

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
			reconstructed after 10/21/83.
EP036R1	N/A	40 CFR Part 60, Subpart RRR	Unit not constructed, modified, or reconstructed after 6/29/90.
EP036R1	N/A	40 CFR Part 63, Subpart G	Unit does not have a process vent; stream discharges to a fuel gas system.
EP036R2	N/A	40 CFR Part 60, Subpart III	Unit not constructed, modified, or reconstructed after 10/21/83.
EP036R2	N/A	40 CFR Part 60, Subpart RRR	Unit not constructed, modified, or reconstructed after 6/29/90.
EP036R2	N/A	40 CFR Part 63, Subpart G	Distillation system does not have a process vent; gas stream does not remain in the gas phase per §63.107(f).
EP036R3	N/A	40 CFR Part 60, Subpart III	Unit not constructed, modified, or reconstructed after 10/21/83.
EP036R3	N/A	40 CFR Part 60, Subpart RRR	Unit not constructed, modified, or reconstructed after 6/29/90.
EP036R3	N/A	40 CFR Part 63, Subpart G	Unit does not have a process vent; stream discharges to a fuel gas system.
EP036T4	N/A	40 CFR Part 60, Subpart K	Unit capacity is less than 151,412 liters (40,000 gallons).
EP036T4	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
EP036T4	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
EP036T4	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
EP036T4	N/A	40 CFR Part 63, Subpart G	Unit is part of an affected CMPU but does not meet the definition of a storage vessel per 63.101 since the unit does not contain organic HAP.
EP036T4	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
EP036T43A	N/A	40 CFR Part 60, Subpart K	Unit does not store a petroleum liquid.
EP036T43A	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
EP036T43A	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
EP036T43A	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
EP036T43A	N/A	40 CFR Part 63, Subpart G	Unit is part of an affected CMPU but does not meet the definition of a storage vessel per §63.101 since the unit capacity is less than 38 cubic meters.
EP036T43A	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
EP036T43B	N/A	40 CFR Part 60, Subpart K	Unit does not store a petroleum liquid.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
EP036T43B	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.

			category in Table 1 to §63.1100(a).
EP038T106	N/A	40 CFR Part 60, Subpart K	Unit capacity is less than 151,412 liters (40,000 gallons).
EP038T106	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
EP038T106	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
EP038T106	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
EP038T106	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
EP038T106A	N/A	40 CFR Part 60, Subpart K	Unit capacity is less than 151,412 liters (40,000 gallons).
EP038T106A	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
EP038T106A	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
EP038T106A	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
EP038T106A	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
EP038T131	N/A	40 CFR Part 60, Subpart Kb	Unit storage capacity is less than 75 cubic meters.
EP038T131	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
			containing waste stream.
EP038T131	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
EP038T131	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
EP038T131	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
EP038T132A	N/A	40 CFR Part 60, Subpart K	Unit capacity is less than 151,412 liters (40,000 gallons).
EP038T132A	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
EP038T132A	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
EP038T132A	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
EP038T132A	N/A	40 CFR Part 63, Subpart G	Unit is part of an affected CMPU but does not meet the definition of a storage vessel per §63.101 since the unit capacity is less than 38 cubic meters.
EP038T132A	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
EP038T132B	N/A	40 CFR Part 60, Subpart K	Unit capacity is less than 151,412 liters (40,000 gallons).
EP038T132B	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
			containing waste stream.
EP038T132B	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
EP038T132B	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
EP038T132B	N/A	40 CFR Part 63, Subpart G	Unit is part of an affected CMPU but does not meet the definition of a storage vessel per §63.101 since the unit capacity is less than 38 cubic meters.
EP038T132B	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
EP038T605	N/A	40 CFR Part 60, Subpart Ka	Unit capacity is less than 151,412 liters (40,000 gallons).
EP038T605	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
EP038T605	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
EP038T605	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
EP038T605	N/A	40 CFR Part 63, Subpart G	Unit is part of an affected CMPU but does not meet the definition of a storage vessel per §63.101 since the unit capacity is less than 38 cubic meters.
EP038T605	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
EP038WW1	N/A	40 CFR Part 63, Subpart FFFF	Group 2 wastewater stream is an affected source subject to 40 CFR Part 63, Subpart G and is not a batch process vent.
EP038WW2	N/A	40 CFR Part 63, Subpart FFFF	Group 2 wastewater stream is an affected source subject to 40 CFR Part 63, Subpart G and is not a batch process vent.
EP039T109	N/A	40 CFR Part 60, Subpart Ka	Unit capacity is less than 151,412 liters (40,000 gallons).
EP039T109	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
EP039T109	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
EP039T109	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
EP039T109	N/A	40 CFR Part 63, Subpart G	Unit is part of an affected CMPU but does not meet the definition of a storage vessel per §63.101 since the unit capacity is less than 38 cubic meters.
EP039T109	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
EP039T110	N/A	40 CFR Part 60, Subpart K	Unit capacity is less than 151,412 liters (40,000 gallons).
EP039T110	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
EP039T110	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
EP039T110	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
EP039T110	N/A	40 CFR Part 63, Subpart G	Unit is part of an affected CMPU but does not meet the definition of a storage vessel per §63.101 since the unit capacity is less than 38 cubic meters.
EP039T110	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
EP039T111	N/A	40 CFR Part 60, Subpart K	Unit capacity is less than 151,412 liters (40,000 gallons).
EP039T111	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
EP039T111	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
EP039T111	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
EP039T111	N/A	40 CFR Part 63, Subpart G	Unit is part of an affected CMPU but does not meet the definition of a storage vessel per §63.101 since the unit capacity is less than 38 cubic meters.
EP039T111	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
EP039T112	N/A	40 CFR Part 60, Subpart K	Unit capacity is less than 151,412 liters

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
			(40,000 gallons).
EP039T112	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
EP039T112	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
EP039T112	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
EP039T112	N/A	40 CFR Part 63, Subpart G	Unit is part of an affected CMPU but does not meet the definition of a storage vessel per §63.101 since the unit capacity is less than 38 cubic meters.
EP039T112	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
EP039T113	N/A	40 CFR Part 60, Subpart K	Unit capacity is less than 151,412 liters (40,000 gallons).
EP039T113	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
EP039T113	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
EP039T113	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
EP039T113	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
EP039T606A	N/A	40 CFR Part 60, Subpart Ka	Unit does not store a petroleum liquid.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
EP039T606A	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
EP039T606A	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
EP039T606A	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
EP039T606A	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
EP039T606B	N/A	40 CFR Part 60, Subpart Ka	Unit does not store a petroleum liquid.
EP039T606B	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
EP039T606B	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
EP039T606B	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
EP039T606B	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
EP039T613	N/A	40 CFR Part 60, Subpart Ka	Unit does not store a petroleum liquid.
EP039T613	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
EP039T613	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
EP039T613	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
EP039T613	N/A	40 CFR Part 63, Subpart G	Unit is part of an affected CMPU but does not meet the definition of a storage vessel per §63.101 since the unit does not contain organic HAP.
EP039T613	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
EP039T614	N/A	40 CFR Part 60, Subpart Ka	Unit capacity is less than 151,412 liters (40,000 gallons).
EP039T614	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
EP039T614	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
EP039T614	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
EP039T614	N/A	40 CFR Part 63, Subpart G	Unit is part of an affected CMPU but does not meet the definition of a storage vessel per §63.101 since the unit does not contain organic HAP.
EP039T614	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
EP104FL1	N/A	40 CFR Part 60, Subpart A	Unit not used to comply with part 60 or 61 standards.
EP104FL1	N/A	40 CFR Part 63, Subpart A	Unit not required by relevant part 63 standard.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
EP104T161	N/A	40 CFR Part 60, Subpart Kb	Storage vessel capacity is between 75 cubic meters and 151 cubic meters and stores a liquid with a maximum true vapor pressure < 15 kPa.
EP104T161	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
EP104T161	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
EP104T161	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
EP104T161	N/A	40 CFR Part 63, Subpart G	Unit only manages wastewater from HON excluded activities.
EP104T161	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
EP104T51	N/A	40 CFR Part 60, Subpart K	Unit does not store a petroleum liquid.
EP104T51	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
EP104T51	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
EP104T51	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
EP104T51	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
EP104T52	N/A	40 CFR Part 60, Subpart K	Unit does not store a petroleum liquid.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
EP104T52	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
EP104T52	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
EP104T52	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
EP104T52	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
EP104T56	N/A	40 CFR Part 60, Subpart K	Unit does not store a petroleum liquid.
EP104T56	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
EP104T56	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
EP104T56	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
EP104T56	N/A	40 CFR Part 63, Subpart G	Unit is part of an affected CMPU but does not meet the definition of a storage vessel per 63.101 since the unit does not contain organic HAP.
EP104T56	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to 63.1100(a).
EP104T57	N/A	40 CFR Part 60, Subpart K	Unit capacity is less than 151,412 liters (40,000 gallons).
EP104T57	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
			containing waste stream.
EP104T57	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
EP104T57	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
EP104T57	N/A	40 CFR Part 63, Subpart G	Unit is part of an affected CMPU but does not meet the definition of a storage vessel per §63.101 since the unit does not contain organic HAP.
EP104T57	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
EP105T11A	N/A	40 CFR Part 60, Subpart K	Unit capacity is less than 151,412 liters (40,000 gallons).
EP105T11A	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
EP105T11A	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
EP105T11A	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
EP105T11A	N/A	40 CFR Part 63, Subpart G	Unit is part of an affected CMPU but does not meet the definition of a storage vessel per §63.101 since the unit is a surge control vessel.
EP105T11A	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
EP105T11B	N/A	40 CFR Part 60, Subpart K	Unit capacity is less than 151,412 liters (40,000 gallons).
EP105T11B	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
EP105T11B	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
EP105T11B	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
EP105T11B	N/A	40 CFR Part 63, Subpart G	Unit is part of an affected CMPU but does not meet the definition of a storage vessel per §63.101 since the unit is a surge control vessel.
EP105T11B	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
EP105T40	N/A	40 CFR Part 60, Subpart K	Unit capacity is less than 151,412 liters (40,000 gallons).
EP105T40	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.

SD020T116	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
SD020T116	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
SD020T116	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
SD021T137	N/A	40 CFR Part 60, Subpart K	Unit does not store a petroleum liquid.
SD021T137	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
SD021T137	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
SD021T137	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
SD021T137	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
SD093T2	N/A	40 CFR Part 60, Subpart K	Unit does not store a petroleum liquid.
SD093T2	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
SD093T2	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
SD093T2	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
SD093T2	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
SD098T3	N/A	40 CFR Part 60, Subpart K	Unit does not store a petroleum liquid.
SD098T3	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
SD098T3	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
SD098T3	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
SD098T3	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
SD098T4	N/A	40 CFR Part 60, Subpart K	Unit does not store a petroleum liquid.
SD098T4	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
SD098T4	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
SD098T4	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
SD098T4	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
SD098T5	N/A	40 CFR Part 60, Subpart K	Unit does not store a petroleum liquid.
SD098T5	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
SD098T5	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
SD098T5	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
SD098T5	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
SD098T6	N/A	40 CFR Part 60, Subpart K	Unit does not store a petroleum liquid.
SD098T6	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
SD098T6	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
SD098T6	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
SD098T6	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
SD098T7	N/A	40 CFR Part 60, Subpart K	Unit does not store a petroleum liquid.
SD098T7	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
SD098T7	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
SD098T7	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
SD098T7	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
SD098T8	N/A	40 CFR Part 60, Subpart K	Unit does not store a petroleum liquid.
SD098T8	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
SD098T8	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
SD098T8	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
SD098T8	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
SD099T14	N/A	40 CFR Part 60, Subpart Ka	Unit does not store a petroleum liquid.
SD099T14	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
SD099T14	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
SD099T14	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
SD099T14	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
SD099T15	N/A	40 CFR Part 60, Subpart Ka	Unit does not store a petroleum liquid.
SD099T15	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene containing waste stream.
SD099T15	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
SD099T15	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
SD099T15	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).
SD101T21	N/A	40 CFR Part 60, Subpart K	Unit does not store a petroleum liquid.
SD101T21	N/A	40 CFR Part 61, Subpart FF	Unit not used to manage a benzene

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
			containing waste stream.
SD101T21	N/A	40 CFR Part 61, Subpart Y	Unit does not store refined or industrial grade benzene.
SD101T21	N/A	40 CFR Part 63, Subpart FFFF	Unit is not part of an affected MCPU.
SD101T21	N/A	40 CFR Part 63, Subpart YY	Unit is not listed as a part of a source category in Table 1 to §63.1100(a).

The following is a list of New Source Review (NSR) authorizations for emission units listed elsewhere in this operating permit. The NSR authorizations are applicable requirements under 30 TAC Chapter 122 and enforceable under this operating permit.

Unit/Group/Process ID No.	Emission Unit Name/Description	New Source Review Authorization
SD101T21	ES-2 EEH STORAGE TANK	106.472/09/04/2000

Appendix A

Acronym List 88

Acronym List

The following abbreviations or acronyms may be used in this permit:

ACFM ..... actual cubic feet per minute
AMOC ..... alternate means of control
ARP ..... Acid Rain Program
ASTM ..... American Society of Testing and Materials
B/PA ..... Beaumont/Port Arthur (nonattainment area)
CAM ..... Compliance Assurance Monitoring
CD ..... control device
COMS ..... continuous opacity monitoring system
CVS ..... closed-vent system
D/FW ..... Dallas/Fort Worth (nonattainment area)
DR ..... Designated Representative
ElP ..... El Paso (nonattainment area)
EP ..... emission point
EPA ..... U.S. Environmental Protection Agency
EU ..... emission unit
FCAA Amendments ..... Federal Clean Air Act Amendments
FOP ..... federal operating permit
GF ..... grandfathered
gr/100 scf ..... grains per 100 standard cubic feet
HAP ..... hazardous air pollutant
H/G/B ..... Houston/Galveston/Brazoria (nonattainment area)
H_2S ..... hydrogen sulfide
ID No. ..... identification number
lb/hr ..... pound(s) per hour
MMBtu/hr ..... Million British thermal units per hour
MRRT ..... monitoring, recordkeeping, reporting, and testing
NA ..... nonattainment
N/A ..... not applicable
NADB ..... National Allowance Data Base
NO_x ..... nitrogen oxides
NSPS ..... New Source Performance Standard (40 CFR Part 60)
NSR ..... New Source Review
ORIS ..... Office of Regulatory Information Systems
Pb ..... lead
PBR ..... Permit By Rule
PM ..... particulate matter
ppmv ..... parts per million by volume
PSD ..... prevention of significant deterioration
RO ..... Responsible Official
SO_2 ..... sulfur dioxide
TCEQ ..... Texas Commission on Environmental Quality
TSP ..... total suspended particulate
TVP ..... true vapor pressure
U.S.C. ..... United States Code
VOC ..... volatile organic compound

[SEQ CHAPTER \h \r 1]Statement of Basis of the Federal Operating Permit

Huntsman Petrochemical LLC

Site Name: Huntsman Port Neches
Area Name: F and G Units
Physical Location: 2701 Spur 136
Nearest City: Port Neches
County: Jefferson

Permit Number: O1320
Project Type: Minor Revision

Standard Industrial Classification (SIC) Code: 2869
SIC Name: Industrial Organic Chemicals

This Statement of Basis sets forth the legal and factual basis for the draft changes to the permit conditions resulting from the minor revision project in accordance with 30 TAC §122.201(a)(4). The applicant has submitted an application for a minor permit revision per §§ 122.215-217. This document may include the following information:

A description of the facility/area process description;
A description of the revision project;
A basis for applying permit shields;
A list of the federal regulatory applicability determinations;
A table listing the determination of applicable requirements;
A list of the New Source Review Requirements;
The rationale for periodic monitoring methods selected;
The rationale for compliance assurance methods selected;
A compliance status; and
A list of available unit attribute forms.

Prepared on: April 21, 2017

Operating Permit
Basis of Determination

Description of Revisions
A federal operating permit (FOP) minor revision application for Huntsman Petrochemical, LLC, F and G units was received by the TCEQ on 8/24/2016. As a result of the minor revision, the changes made to the FOP include the addition of boilers/steam generating units, storage tanks, fugitive unit, stationary/process vents, distillation units and chemical manufacturing process units. These units are subject to MACT DDDDD, 30 TAC Chapter 115, Storage of VOCs, NSPS Dc, 30 TAC Chapter 117, Subchapter B, 30 TAC Chapter 115, Subchapter D, MACT H, NSPS VVa, 30 TAC Chapter 111, Visible Emissions, 30 TAC Chapter 115, Vent Gas Controls, MACT G, NSPS NNN & MACT F, and the requirements are identified in the FOP. Some of the units are subject to additional monitoring under 30 TAC Chapter 115, Vent Gas Control and the requirements are identified in the FOP. NSR Permit No. 106169 was incorporated into the FOP, the special terms and conditions were revised, and NSR Permit Nos. 647B & 5807A were removed.

Permit Area Process Description
[SEQ CHAPTER \h \r 1]Ethylene oxide is produced by reacting ethylene and oxygen over a silver impregnated catalyst (catalytic partial oxidation of ethylene). The ethylene oxide is then reacted with water to produce mono-, di- and tri-ethylene glycols.

FOPs at Site
The "application area" consists of the emission units and that portion of the site included in the application and this permit. Multiple FOPs may be issued to a site in accordance with 30 TAC § 122.201(e). When there is only one area for the site, then the application information and permit will include all units at the site. Additional FOPs that exist at the site, if any, are listed below.

Additional FOPs: O2286, O2287, O2288, O3056

Major Source Pollutants
The table below specifies the pollutants for which the site is a major source:

Major Pollutants	VOC, SO_2, NO_x, HAPs, CO, GHG

Reading State of Texas's Federal Operating Permit

The Title V Federal Operating Permit (FOP) lists all state and federal air emission regulations and New Source Review (NSR) authorizations (collectively known as "applicable requirements") that apply at a particular site or permit area (in the event a site has multiple FOPs). **The FOP does not authorize new emissions or new construction activities.** The FOP begins with an introductory page which is common to all Title V permits. This page gives the details of the company, states the authority of the issuing agency, requires the company to operate in accordance with this permit and 30 Texas Administrative Code (TAC) Chapter 122, requires adherence with NSR requirements of 30 TAC Chapter 116, and finally indicates the permit number and the issuance date.

This is followed by the table of contents, which is generally composed of the following elements. Not all permits will have all of the elements.

- General Terms and Conditions
- Special Terms and Conditions
  - Emissions Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting
  - Additional Monitoring Requirements
  - New Source Review Authorization Requirements
  - Compliance Requirements

    - Protection of Stratosphere Ozone
    - Permit Location
    - Permit Shield (30 TAC § 122.148)
- Attachments
    - Applicable Requirements Summary
        - Unit Summary
        - Applicable Requirements Summary
    - Additional Monitoring Requirements
    - Permit Shield
    - New Source Review Authorization References
    - Compliance Plan
    - Alternative Requirements
- Appendix A
    - Acronym list

General Terms and Conditions

The General Terms and Conditions are the same and appear in all permits. The first paragraph lists the specific citations for 30 TAC Chapter 122 requirements that apply to all Title V permit holders. The second paragraph describes the requirements for record retention. The third paragraph provides details for voiding the permit, if applicable. The fourth paragraph states that the permit holder shall comply with the requirements of 30 TAC Chapter 116 by obtaining a New Source Review authorization prior to new construction or modification of emission units located in the area covered by this permit. The fifth paragraph provides details on submission of reports required by the permit.

Special Terms and Conditions

Emissions Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting. The TCEQ has designated certain applicable requirements as site-wide requirements. A site-wide requirement is a requirement that applies uniformly to all the units or activities at the site. Units with only site-wide requirements are addressed on Form OP-REQ1 and are not required to be listed separately on a OP-UA Form or Form OP-SUM. Form OP-SUM must list all units addressed in the application and provide identifying information, applicable OP-UA Forms, and preconstruction authorizations. The various OP-UA Forms provide the characteristics of each unit from which applicable requirements are established. Some exceptions exist as a few units may have both site-wide requirements and unit specific requirements.

Other conditions. The other entries under special terms and conditions are in general terms referring to compliance with the more detailed data listed in the attachments.

Attachments

Applicable Requirements Summary. The first attachment, the Applicable Requirements Summary, has two tables, addressing unit specific requirements. The first table, the Unit Summary, includes a list of units with applicable requirements, the unit type, the applicable regulation, and the requirement driver. The intent of the requirement driver is to inform the reader that a given unit may have several different operating scenarios and the differences between those operating scenarios.

The applicable requirements summary table provides the detailed citations of the rules that apply to the various units. For each unit and operating scenario, there is an added modifier called the "index number," detailed citations specifying monitoring and testing requirements, recordkeeping requirements, and reporting requirements. The data for this table are based on data supplied by the applicant on the OP-SUM and various OP-UA forms.

Additional Monitoring Requirement. The next attachment includes additional monitoring the applicant must perform to ensure compliance with the applicable standard. Compliance assurance monitoring (CAM) is often required to provide a reasonable assurance of compliance with applicable emission limitations/standards for

large emission units that use control devices to achieve compliance with applicant requirements. When necessary, periodic monitoring (PM) requirements are specified for certain parameters (i.e. feed rates, flow rates, temperature, fuel type and consumption, etc.) to determine if a term and condition or emission unit is operating within specified limits to control emissions. These additional monitoring approaches may be required for two reasons. First, the applicable rules do not adequately specify monitoring requirements (exception- Maximum Achievable Control Technology Standards (MACTs) generally have sufficient monitoring), and second, monitoring may be required to fill gaps in the monitoring requirements of certain applicable requirements. In situations where the NSR permit is the applicable requirement requiring extra monitoring for a specific emission unit, the preferred solution is to have the monitoring requirements in the NSR permit updated so that all NSR requirements are consolidated in the NSR permit.

Permit Shield. A permit may or may not have a permit shield, depending on whether an applicant has applied for, and justified the granting of, a permit shield. A permit shield is a special condition included in the permit document stating that compliance with the conditions of the permit shall be deemed compliance with the specified potentially applicable requirement(s) or specified applicable state-only requirement(s).

New Source Review Authorization References. All activities which are related to emissions in the state of Texas must have a NSR authorization prior to beginning construction. This section lists all units in the permit and the NSR authorization that allowed the unit to be constructed or modified. Units that do not have unit specific applicable requirements other than the NSR authorization do not need to be listed in this attachment. While NSR permits are not physically a part of the Title V permit, they are legally incorporated into the Title V permit by reference. Those NSR permits whose emissions exceed certain PSD/NA thresholds must also undergo a Federal review of federally regulated pollutants in addition to review for state regulated pollutants.

Compliance Plan. A permit may have a compliance schedule attachment for listing corrective actions plans for any emission unit that is out of compliance with an applicable requirement.

Alternative Requirements. This attachment will list any alternative monitoring plans or alternative means of compliance for applicable requirements that have been approved by the EPA Administrator and/or the TCEQ Executive Director.

Appendix A

Acronym list. This attachment lists the common acronyms used when discussing the FOPs.

Stationary vents subject to 30 TAC Chapter 111, Subchapter A, § 111.111(a)(1)(B) addressed in the Special Terms and Conditions

The site contains stationary vents with a flowrate less than 100,000 actual cubic feet per minute (acfm) and constructed after January 31, 1972 which are limited, over a six-minute average, to 20% opacity as required by 30 TAC § 111.111(a)(1)(B). As a site may have a large number of stationary vents that fall into this category, they are not required to be listed individually in the permit's Applicable Requirement Summary. This is consistent with EPA's White Paper for Streamlined Development of Part 70 Permit Applications, July 10, 1995, that states that requirements that apply identically to emission units at a site can be treated on a generic basis such as source-wide opacity limits.

Periodic monitoring is specified in Special Term and Condition 3.A. for stationary vents subject to 30 TAC § 111.111(a)(1)(B) to verify compliance with the 20% opacity limit. These vents are not expected to produce visible emissions during normal operation. The TCEQ evaluated the probability of these sources violating the opacity standards and determined that there is a very low potential that an opacity standard would be exceeded. It was determined that continuous monitoring for these sources is not warranted as there would be very limited environmental benefit in continuously monitoring sources that have a low potential to produce visible emissions. Therefore, the TCEQ set the visible observation monitoring frequency for these sources to once per calendar quarter.

The TCEQ has exempted vents that are not capable of producing visible emissions from periodic monitoring requirements. These vents include sources of colorless VOCs, non-fuming liquids, and other materials that cannot produce emissions that obstruct the transmission of light. Passive ventilation vents, such as plumbing vents, are also included in this category. Since this category of vents are not capable of producing opacity due to the physical or chemical characteristics of the emission source, periodic monitoring is not required as it would not yield any additional data to assure compliance with the 20% opacity standard of 30 TAC § 111.111(a)(1)(B).

In the event that visible emissions are detected, either through the quarterly observation or other credible evidence, such as observations from company personnel, the permit holder shall either report a deviation or perform a Test Method 9 observation to determine the opacity consistent with the 6-minute averaging time specified in 30 TAC § 111.111(a)(1)(B). An additional provision is included to monitor combustion sources more frequently than quarterly if alternate fuels are burned for periods greater than 24 consecutive hours. This will address possible emissions that may arise when switching fuel types.

Stationary Vents subject to 30 TAC Chapter 111 not addressed in the Special Terms and Conditions
All other stationary vents subject to 30 TAC Chapter 111 not covered in the Special Terms and Conditions are listed in the permit's Applicable Requirement Summary. The basis for the applicability determinations for these vents are listed in the Determination of Applicable Requirements table.

Federal Regulatory Applicability Determinations

The following chart summarizes the applicability of the principal air pollution regulatory programs to the permit area:

Regulatory Program	Applicability (Yes/No)
Prevention of Significant Deterioration (PSD)	No
Nonattainment New Source Review (NNSR)	No
Minor NSR	Yes
40 CFR Part 60 - New Source Performance Standards	Yes
40 CFR Part 61 - National Emission Standards for Hazardous Air Pollutants (NESHAPs)	Yes
40 CFR Part 63 - NESHAPs for Source Categories	Yes
Title IV (Acid Rain) of the Clean Air Act (CAA)	No
Title V (Federal Operating Permits) of the CAA	Yes
Title VI (Stratospheric Ozone Protection) of the CAA	Yes
CSAPR (Cross-State Air Pollution Rule)	No

Basis for Applying Permit Shields

An operating permit applicant has the opportunity to specifically request a permit shield to document that specific applicable requirements do not apply to emission units in the permit. A permit shield is a special condition stating that compliance with the conditions of the permit shall be deemed compliance with the specified potentially applicable requirements or specified potentially applicable state-only requirements. A permit shield has been requested in the application for specific emission units. For the permit shield requests

that have been approved, the basis of determination for regulations that the owner/operator need not comply with are located in the "Permit Shield" attachment of the permit.

Insignificant Activities

In general, units not meeting the criteria for inclusion on either Form OP-SUM or Form OP-REQ1 are not required to be addressed in the operating permit application. Examples of these types of units include, but are not limited to, the following:

1. Office activities such as photocopying, blueprint copying, and photographic processes.
2. Sanitary sewage collection and treatment facilities other than those used to incinerate wastewater treatment plant sludge. Stacks or vents for sanitary sewer plumbing traps are also included.
3. Food preparation facilities including, but not limited to, restaurants and cafeterias used for preparing food or beverages primarily for consumption on the premises.
4. Outdoor barbecue pits, campfires, and fireplaces.
5. Laundry dryers, extractors, and tumblers processing bedding, clothing, or other fabric items generated primarily at the premises. This does not include emissions from dry cleaning systems using perchloroethylene or petroleum solvents.
6. Facilities storing only dry, sweet natural gas, including natural gas pressure regulator vents.
7. Any air separation or other industrial gas production, storage, or packaging facility. Industrial gases, for purposes of this list, include only oxygen, nitrogen, helium, neon, argon, krypton, and xenon.
8. Storage and handling of sealed portable containers, cylinders, or sealed drums.
9. Vehicle exhaust from maintenance or repair shops.
10. Storage and use of non-VOC products or equipment for maintaining motor vehicles operated at the site (including but not limited to, antifreeze and fuel additives).
11. Air contaminant detectors and recorders, combustion controllers and shut-off devices, product analyzers, laboratory analyzers, continuous emissions monitors, other analyzers and monitors, and emissions associated with sampling activities. Exception to this category includes sampling activities that are deemed fugitive emissions and under a regulatory leak detection and repair program.
12. Bench scale laboratory equipment and laboratory equipment used exclusively for chemical and physical analysis, including but not limited to, assorted vacuum producing devices and laboratory fume hoods.
13. Steam vents, steam leaks, and steam safety relief valves, provided the steam (or boiler feedwater) has not contacted other materials or fluids containing regulated air pollutants other than boiler water treatment chemicals.
14. Storage of water that has not contacted other materials or fluids containing regulated air pollutants other than boiler water treatment chemicals.
15. Well cellars.
16. Fire or emergency response equipment and training, including but not limited to, use of fire control equipment including equipment testing and training, and open burning of materials or fuels associated with firefighting training.
17. Crucible or pot furnaces with a brim full capacity of less than 450 cubic inches of any molten metal.
18. Equipment used exclusively for the melting or application of wax.
19. All closed tumblers used for the cleaning or deburring of metal products without abrasive blasting, and all open tumblers with a batch capacity of 1,000 lbs. or less.
20. Shell core and shell mold manufacturing machines.
21. Sand or investment molds with a capacity of 100 lbs. or less used for the casting of metals;
22. Equipment used for inspection of metal products.
23. Equipment used exclusively for rolling, forging, pressing, drawing, spinning, or extruding either hot or cold metals by some mechanical means.
24. Instrument systems utilizing air, natural gas, nitrogen, oxygen, carbon dioxide, helium, neon, argon, krypton, and xenon.
25. Battery recharging areas.
26. Brazing, soldering, or welding equipment.

Determination of Applicable Requirements

The tables below include the applicability determinations for the emission units, the index number(s) where applicable, and all relevant unit attribute information used to form the basis of the applicability determination. The unit attribute information is a description of the physical properties of an emission unit which is used to determine the requirements to which the permit holder must comply. For more information about the descriptions of the unit attributes specific Unit Attribute Forms may be viewed at [HYPERLINK "http://www.tceq.texas.gov/permitting/air/nav/air_all_ua_forms.html"].

A list of unit attribute forms is included at the end of this document. Some examples of unit attributes include construction date; product stored in a tank; boiler fuel type; etc.. Generally, multiple attributes are needed to determine the requirements for a given emission unit and index number. The table below lists these attributes in the column entitled "Basis of Determination." Attributes that demonstrate that an applicable requirement applies will be the factual basis for the specific citations in an applicable requirement that apply to a unit for that index number. The TCEQ Air Permits Division has developed flowcharts for determining applicability of state and federal regulations based on the unit attribute information in a Decision Support System (DSS). These flowcharts can be accessed via the internet at [HYPERLINK "http://www.tceq.texas.gov/permitting/air/nav/air_supportsys.html"]. The Air Permits Division staff may also be contacted for assistance at (512) 239-1250.

The attributes for each unit and corresponding index number provide the basis for determining the specific legal citations in an applicable requirement that apply, including emission limitations or standards, monitoring, recordkeeping, and reporting. The rules were found to apply or not apply by using the unit attributes as answers to decision questions found in the flowcharts of the DSS. Some additional attributes indicate which legal citations of a rule apply. The legal citations that apply to each emission unit may be found in the Applicable Requirements Summary table of the draft permit. There may be some entries or rows of units and rules not found in the permit, or if the permit contains a permit shield, repeated in the permit shield area. These are sets of attributes that describe negative applicability, or; in other words, the reason why a potentially applicable requirement does not apply.

If applicability determinations have been made which differ from the available flowcharts, an explanation of the decisions involved in the applicability determination is specified in the column "Changes and Exceptions to RRT." If there were no exceptions to the DSS, then this column has been removed.

The draft permit includes all emission limitations or standards, monitoring, recordkeeping and reporting required by each applicable requirement. If an applicable requirement does not require monitoring, recordkeeping, or reporting, the word "None" will appear in the Applicable Requirements Summary table. If additional periodic monitoring is required for an applicable requirement, it will be explained in detail in the portion of this document entitled "Rationale for Compliance Assurance Monitoring (CAM)/ Periodic Monitoring Methods Selected."

When attributes demonstrate that a unit is not subject to an applicable requirement, the applicant may request a permit shield for those items. The portion of this document entitled "Basis for Applying Permit Shields" specifies which units, if any, have a permit shield.

Operational Flexibility
When an emission unit has multiple operating scenarios, it will have a different index number associated with each operating condition. This means that units are permitted to operate under multiple operating conditions. The applicable requirements for each operating condition are determined by a unique set of unit attributes. For example, a tank may store two different products at different points in time. The tank may, therefore, need to comply with two distinct sets of requirements, depending on the product that is stored. Both sets of requirements are included in the permit, so that the permit holder may store either product in the tank.

Determination of Applicable Requirements

Unit ID	Regulation	Index Number	Basis of Determination*
F4TF41	30 TAC Chapter 115, Storage of VOCs	R5112-00a	Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Tank Description = Tank does not require emission controls True Vapor Pressure = True vapor pressure is less than 1.0 psia Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is greater than 1,000 gallons but less than or equal to 25,000 gallons
F6TF61	30 TAC Chapter 115, Storage of VOCs	R5112-00a	Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Tank Description = Tank does not require emission controls True Vapor Pressure = True vapor pressure is less than 1.0 psia Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is greater than 1,000 gallons but less than or equal to 25,000 gallons
F6TF6101	30 TAC Chapter 115, Storage of VOCs	R5112-00g	Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Tank Description = Tank does not require emission controls True Vapor Pressure = True vapor pressure is less than 1.0 psia Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is greater than 25,000 gallons but less than or equal to 40,000 gallons
F-F6-147	30 TAC Chapter 115, Storage of VOCs	R5112-009	Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Tank Description = Tank using a vapor recovery system (VRS) True Vapor Pressure = True vapor pressure is greater than or equal to 1.5 psia Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is greater than 1,000 gallons but less than or equal to 25,000 gallons Control Device Type = Direct-flame incinerator
F-F6-147	40 CFR Part 63, Subpart G	63GT-037	MACT Subpart F/G Applicability = The unit is a Group 1 vessel (as defined in Table 5 for existing sources or Table 6 for new sources of 40 CFR 63, Subpart G). Closed Vent System = Closed vent system is routing emissions to a process or fuel gas system, or is subject to § 63.148 of Subpart G NESHAP Subpart Y Applicability = The unit is not subject to 40 CFR Part 61, Subpart Y. Hard Piping = The closed vent system is constructed of hard piping. Bypass Lines = Closed vent system has by-pass lines that are sealed with a carseal or lock and key mechanism Maximum TVP = Maximum true vapor pressure of the total organic HAP in the liquid is greater than or equal to 11.11 psi (76.6 kPa) Control Device Type = Enclosed combustion device with a minimum residence time of 0.5 seconds and a minimum temperature of 760° C.

Unit ID	Regulation	Index Number	Basis of Determination*
			Emission Control Type = Closed vent system (CVS) and control device (fixed roof) Control Device Design = The control device was not installed on or before December 31, 1992 or was not designed to reduce inlet emissions of total organic hazardous air pollutants by greater than or equal to 90% and less than 95%. Design Evaluation Submitted = A design evaluation of the emission control system was submitted to demonstrate compliance with 40 CFR § 63.119(e).
F-F6-148	30 TAC Chapter 115, Storage of VOCs	R5112-009	Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Tank Description = Tank using a vapor recovery system (VRS) True Vapor Pressure = True vapor pressure is greater than or equal to 1.5 psia Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is greater than 1,000 gallons but less than or equal to 25,000 gallons Control Device Type = Direct-flame incinerator

			NESHAP Subpart Y Applicability = The unit is not subject to 40 CFR Part 61, Subpart Y. Hard Piping = The closed vent system is constructed of hard piping. Bypass Lines = Closed vent system has by-pass lines that are sealed with a carseal or lock and key mechanism Maximum TVP = Maximum true vapor pressure of the total organic HAP in the liquid is greater than or equal to 11.11 psi (76.6 kPa) Control Device Type = Enclosed combustion device with a minimum residence time of 0.5 seconds and a minimum temperature of 760° C. Emission Control Type = Closed vent system (CVS) and control device (fixed roof) Control Device Design = The control device was not installed on or before December 31, 1992 or was not designed to reduce inlet emissions of total organic hazardous air pollutants by greater than or equal to 90% and less than 95%. Design Evaluation Submitted = A design evaluation of the emission control system was submitted to demonstrate compliance with 40 CFR § 63.119(e).
F-F6-150	30 TAC Chapter 115, Storage of VOCs	R5112-009	Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Tank Description = Tank using a vapor recovery system (VRS) True Vapor Pressure = True vapor pressure is greater than or equal to 1.5 psia Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is greater than 1,000 gallons but less than or equal to 25,000 gallons Control Device Type = Direct-flame incinerator
F-F6-150	40 CFR Part 63, Subpart G	63GT-037	MACT Subpart F/G Applicability = The unit is a Group 1 vessel (as defined in Table 5 for existing sources or Table 6 for new sources of 40 CFR 63, Subpart G). Closed Vent System = Closed vent system is routing emissions to a process or fuel gas system, or is subject to § 63.148 of Subpart G NESHAP Subpart Y Applicability = The unit is not subject to 40 CFR Part 61, Subpart Y. Hard Piping = The closed vent system is constructed of hard piping. Bypass Lines = Closed vent system has by-pass lines that are sealed with a carseal or lock and key mechanism Maximum TVP = Maximum true vapor pressure of the total organic HAP in the liquid is greater than or equal to 11.11 psi (76.6 kPa) Control Device Type = Enclosed combustion device with a minimum residence time of 0.5 seconds and a minimum temperature of 760° C. RSELDS	40 CFR Part 63, Subpart Y	63Y-005	Subpart Y Facility Type = Existing onshore loading terminal (located onshore or less than 0.5 miles from shore). Ballasting Operations = Operations other than or in addition to ballasting operations are performed at the facility. Vapor Pressure = Vapor pressure is greater than or equal to 10.3 kilopascals (1.5 psia) at standard conditions, 20° C and 760 mm Hg. Subpart BB Applicability = Marine vessel loading operations are not subject to and complying with 40 CFR Part 61, Subpart BB. Material Loaded = Material other than crude oil or gasoline. HAP Impurities Only = Marine vessel loading operations at loading berths transfer liquids containing organic hazardous air pollutants other than as impurities. Source Emissions = Source with emissions less than 10 and 25 tons.
RSELRBMTC	30 TAC Chapter 115, Loading and Unloading of VOC	R5211-018	Chapter 115 Facility Type = Facility type other than a gasoline terminal, gasoline bulk plant, motor vehicle fuel dispensing facility or marine terminal. Alternate Control Requirement (ACR) = No alternate control requirements are being utilized. Product Transferred = Volatile organic compounds other than liquefied petroleum gas and gasoline. Transfer Type = Only loading. True Vapor Pressure = True vapor pressure less than 0.5 psia.
RSELRBMTC	40 CFR Part 63, Subpart G	63GL-0g2a	Transfer Rack Type = Group 2 transfer rack (as defined in 40 CFR § 63.111). Subject to Subpart BB = The transfer rack is not subject to 40 CFR Part 61, Subpart BB.
RSELRBMTD	30 TAC Chapter 115, Loading and Unloading of VOC	R5211-018	Chapter 115 Facility Type = Facility type other than a gasoline terminal, gasoline bulk plant, motor vehicle fuel dispensing facility or marine terminal. Alternate Control Requirement (ACR) = No alternate control requirements are being utilized. Product Transferred = Volatile organic compounds other than liquefied petroleum gas and gasoline. Transfer Type = Only loading. True Vapor Pressure = True vapor pressure less than 0.5 psia.
RSELRBMTD	40 CFR Part 63, Subpart G	63GL-0g2a	Transfer Rack Type = Group 2 transfer rack (as defined in 40 CFR § 63.111). Subject to Subpart BB = The transfer rack is not subject to 40 CFR Part 61, Subpart BB.
RSELRBMTW	30 TAC Chapter 115, Loading and Unloading of VOC	R5211-018	Chapter 115 Facility Type = Facility type other than a gasoline terminal, gasoline bulk plant, motor vehicle fuel dispensing facility or marine terminal. Alternate Control Requirement (ACR) = No alternate control requirements are being utilized. Product Transferred = Volatile organic compounds other than liquefied petroleum gas and gasoline. Transfer Type = Only loading. True Vapor Pressure = True vapor pressure less than 0.5 psia.

Unit ID	Regulation	Index Number	Basis of Determination*
RSELRBMTW	40 CFR Part 63, Subpart G	63GL-0g2a	Transfer Rack Type = Group 2 transfer rack (as defined in 40 CFR § 63.111). Subject to Subpart BB = The transfer rack is not subject to 40 CFR Part 61, Subpart BB.
RSELRPRDC	30 TAC Chapter 115, Loading and Unloading of VOC	R5211-00k	Chapter 115 Control Device Type = No control device. Chapter 115 Facility Type = Facility type other than a gasoline terminal, gasoline bulk plant, motor vehicle fuel dispensing facility or marine terminal. Alternate Control Requirement (ACR) = No alternate control requirements are being utilized. Vapor Tight = All liquid and vapor lines are equipped with fittings which make vapor-tight connections that close automatically when disconnected. Product Transferred = Volatile organic compounds other than liquefied petroleum gas and gasoline. Transfer Type = Only loading. True Vapor Pressure = True vapor pressure greater than or equal to 0.5 psia. Daily Throughput = Loading greater than or equal to 20,000 gallons per day. Control Options = Pressurized loading system.
RSELRPRDC	30 TAC Chapter 115, Loading and Unloading of VOC	R5211-018	Chapter 115 Facility Type = Facility type other than a gasoline terminal, gasoline bulk plant, motor vehicle fuel dispensing facility or marine terminal. Alternate Control Requirement (ACR) = No alternate control requirements are being utilized. Product Transferred = Volatile organic compounds other than liquefied petroleum gas and gasoline. Transfer Type = Only loading. True Vapor Pressure = True vapor pressure less than 0.5 psia.
RSELRPRDC	40 CFR Part 63, Subpart G	63GL-0g2a	Transfer Rack Type = Group 2 transfer rack (as defined in 40 CFR § 63.111). Subject to Subpart BB = The transfer rack is not subject to 40 CFR Part 61, Subpart BB.
RSELRTRKW	30 TAC Chapter 115, Loading and Unloading of VOC	R5211-00c	Chapter 115 Control Device Type = No control device. Chapter 115 Facility Type = Facility type other than a gasoline terminal, gasoline bulk plant, motor vehicle fuel dispensing facility or marine terminal. Alternate Control Requirement (ACR) = No alternate control requirements are being utilized. Vapor Tight = Not all liquid and vapor lines are equipped with fittings which make vapor-tight connections that close automatically when disconnected. Product Transferred = Volatile organic compounds other than liquefied petroleum gas and gasoline. Transfer Type = Only loading. True Vapor Pressure = True vapor pressure greater than or equal to 0.5 psia. Daily Throughput = Loading greater than or equal to 20,000 gallons per day. Control Options = Vapor balance system.
RSELRTRKW	30 TAC Chapter 115, Loading and Unloading of VOC	R5211-018	Chapter 115 Facility Type = Facility type other than a gasoline terminal, gasoline bulk plant, motor vehicle fuel dispensing facility or marine terminal. Alternate Control Requirement (ACR) = No alternate control requirements are being utilized. Product Transferred = Volatile organic compounds other than liquefied petroleum gas and gasoline. Transfer Type = Only loading.

Unit ID	Regulation	Index Number	Basis of Determination*
			True Vapor Pressure = True vapor pressure less than 0.5 psia.
RSELRTRKW	40 CFR Part 63, Subpart G	63GL-0g2a	Transfer Rack Type = Group 2 transfer rack (as defined in 40 CFR § 63.111). Subject to Subpart BB = The transfer rack is not subject to 40 CFR Part 61, Subpart BB.
F8-BOIL	30 TAC Chapter 117, Subchapter B	R7201-F8	Unit Type = Other industrial, commercial, or institutional boiler. Maximum Rated Capacity = MRC is greater than or equal to 40 MMBtu/hr but less than 100 MMBtu/hr. RACT Date Placed in Service = On or after the final compliance date specified in 30 TAC § 117.9000. Functionally Identical Replacement = Unit is not a functionally identical replacement.
F8-BOIL	40 CFR Part 60, Subpart Dc	60DC-1	Construction/Modification Date = After February 28, 2005. PM Monitoring Type = No particulate monitoring. Maximum Design Heat Input Capacity = Maximum design heat input capacity is greater than or equal to 10 MMBtu/hr (2.9 MW) but less than or equal to 100 MMBtu (29 MW). SO2 Inlet Monitoring Type = No SO_2 monitoring. Other Subparts = The facility is not covered under 40 CFR Part 60, Subparts AAAA or KKKK, or under an approved State or Federal section 111(d)/129 plan implementing 40 CFR Part 60, Subpart BBBB. SO2 Outlet Monitoring Type = No SO_2 monitoring. Heat Input Capacity = Heat input capacity is greater than or equal to 30 MMBtu/hr (8.7 MW) but less than or equal to 75 MMBtu/hr (22 MW). Technology Type = None. D-Series Fuel Type = Natural gas. ACF Option - SO2 = Other ACF or no ACF. ACF Option - PM = Other ACF or no ACF. 30% Coal Duct Burner = The facility does not combust coal in a duct burner as part of a combined cycle system; or more than 30% of the heat is from combustion of coal and less than 70% is from exhaust gases entering the duct burner.
F8-BOIL	40 CFR Part 63, Subpart DDDDD	63DDDDD-1	Construction/Reconstruction Date = Construction or reconstruction began after June 4, 2010. HEAT INPUT CAPACITY = RATED HEAT INPUT CAPACITY OF GREATER THAN 10 MMBTU/HR BUT LESS THAN 100 MMBTU/HR
F4FUG	30 TAC Chapter 115, Pet. Refinery & Petrochemicals	R5352-ALL	SOP/GOP Index No. = Owner/Operator assumes VOC fugitive control requirements for all components subject to 30 TAC Chapter 115, Subchapter D, Division 3 with no alternate control or control device.
F4FUG	40 CFR Part 63, Subpart H	63H-ALL	SOP Index No. = Owner/Operator assumes fugitive control requirements for all components in VOC or VHAP service subject to 40 CFR Part 63, Subpart H with no alternated control or control device.
F6FUG	30 TAC Chapter 115, Pet. Refinery & Petrochemicals	R5352-ALL	SOP/GOP Index No. = Owner/Operator assumes VOC fugitive control requirements for all components subject to 30 TAC Chapter 115, Subchapter D, Division 3 with no alternate control or control device.
F6FUG	40 CFR Part 63, Subpart H	63H-ALL	SOP Index No. = Owner/Operator assumes fugitive control requirements for all components in VOC or VHAP service subject to 40 CFR Part 63, Subpart H with no alternated control or control device.

Unit ID	Regulation	Index Number	Basis of Determination*
F8-FUG	30 TAC Chapter 115, Pet. Refinery & Petrochemicals	R5352-ALL	SOP/GOP Index No. = Owner/Operator assumes VOC fugitive control requirements for all components subject to 30 TAC Chapter 115, Subchapter D, Division 3 with no alternate control or control device.
F8-FUG	40 CFR Part 60, Subpart VVa	VVA-1	Produces Chemicals = The facility produces, as an intermediate or final product, one or more of the chemicals listed in 40 CFR § 60.489a. Affected Facility = The facility is an affected facility as defined in 40 CFR § 60.480a(a)(2). Construction/Modification Date = After November 7, 2006. Compliance Option = Choosing to comply with the provisions of 40 CFR Part 63, Subpart H.
F8-FUG	40 CFR Part 63, Subpart H	63H-ALL	SOP Index No. = Owner/Operator assumes fugitive control requirements for all components in VOC or VHAP service subject to 40 CFR Part 63, Subpart H with no alternated control or control device.
G1FUG	30 TAC Chapter 115, Pet. Refinery & Petrochemicals	R5352-ALL	SOP/GOP Index No. = Owner/Operator assumes VOC fugitive control requirements for all components subject to 30 TAC Chapter 115, Subchapter D, Division 3 with no alternate control or control device.

F4FF4135	30 TAC Chapter 115, Vent Gas Controls	R5121-10	Alternate Control Requirement = Alternate control is not used. Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Total Design Capacity = Total design capacity is greater than or equal to 1,100 tons per year for all chemicals produced within that unit. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Flow Rate or VOC Concentration = Flow rate is greater than or equal to 0.011 scm/min or the VOC concentration is greater than or equal to 500 ppmv. 40 CFR 60 Subpart NNN Requirements = The distillation unit vent gas stream satisfies one of the following requirements of 40 CFR Part 60, Subpart NNN: TRE index value is greater than 8.0; or TRE index value is greater than 1.0 without the use of VOC emission control devices. Vent Type = Vent gas stream originates from a synthetic organic chemical manufacturing industry reactor process or distillation operation, as defined in 30 TAC § 115.10. 40 CFR 60 Subpart RRR Requirements = The reactor process vent gas stream satisfies neither of the following requirements of 40 CFR Part 60, Subpart RRR: TRE index value is greater than 8.0; or TRE index value is greater than 1.0 without the use of VOC emission control devices.
F4FF4135	40 CFR Part 63, Subpart G	63GV-100	Control Device = No recovery device. Overlap = Title 40 CFR Part 60, Subpart NNN Group 1 = The process vent is a Group 2 process vent. Regulation = Owner or operator is electing to comply with the associated monitoring, testing, recordkeeping, and reporting requirements of 40 CFR Part 60, Subpart III, supporting the control requirements of 40 CFR § 60.662. HAP Concentration = HAP concentration is not needed to determine applicability. Flow Rate = Flow rate is not needed to determine applicability.

Unit ID	Regulation	Index Number	Basis of Determination*
			Electing Control = Not electing to control the process vent to the levels required in 40 CFR § 63.113(a)(1) or (a)(2). NSPS TRE Index Value = TRE index value is greater than 8 as calculated using the appropriate equation from 40 CFR Part 60, Subparts III, NNN or RRR. MACT TRE Index Value = TRE index value is greater than 4.0 as calculated using the procedures of 40 CFR § 63.115(d).
F6FF6104	30 TAC Chapter 115, Vent Gas Controls	R5121-10	Alternate Control Requirement = Alternate control is not used. Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Total Design Capacity = Total design capacity is greater than or equal to 1,100 tons per year for all chemicals produced within that unit. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Flow Rate or VOC Concentration = Flow rate is greater than or equal to 0.011 scm/min or the VOC concentration is greater than or equal to 500 ppmv. 40 CFR 60 Subpart NNN Requirements = The distillation unit vent gas stream satisfies one of the following requirements of 40 CFR Part 60, Subpart NNN: TRE index value is greater than 8.0; or TRE index value is greater than 1.0 without the use of VOC emission control devices. Vent Type = Vent gas stream originates from a synthetic organic chemical manufacturing industry reactor process or distillation operation, as defined in 30 TAC § 115.10. 40 CFR 60 Subpart RRR Requirements = The reactor process vent gas stream satisfies one of the following requirements of 40 CFR Part 60, Subpart RRR: TRE index value is greater than 8.0; or TRE index value is greater than 1.0 without the use of VOC emission control devices.
F6FF6104	40 CFR Part 63, Subpart G	63GV-100	Control Device = No recovery device. Overlap = Title 40 CFR Part 60, Subpart NNN Group 1 = The process vent is a Group 2 process vent. Regulation = Owner or operator is electing to comply with the associated monitoring, testing, recordkeeping, and reporting requirements of 40 CFR Part 60, Subpart III, supporting the control requirements of 40 CFR § 60.662. HAP Concentration = HAP concentration is not needed to determine applicability. Flow Rate = Flow rate is not needed to determine applicability. Electing Control = Not electing to control the process vent to the levels required in 40 CFR § 63.113(a)(1) or (a)(2). NSPS TRE Index Value = TRE index value is greater than 8 as calculated using the appropriate equation from 40 CFR Part 60, Subparts III, NNN or RRR. MACT TRE Index Value = TRE index value is greater than 4.0 as calculated using the procedures of 40 CFR § 63.115(d).
F8-RGN	30 TAC Chapter 111, Visible Emissions	R1111-F8-9	Alternate Opacity Limitation = Not complying with an alternate opacity limit under 30 TAC § 111.113. Vent Source = The source of the vent is not a steam generator fired by solid fossil fuel, oil or a mixture of oil and gas and is not a catalyst regenerator for a fluid bed catalytic cracking unit. Opacity Monitoring System = Optical instrument capable of measuring the opacity of emissions is not installed in the vent or optical instrumentation does not meet the requirements of § 111.111(a)(1)(D), or the vent stream does not qualify for the exemption in § 111.111(a)(3). Construction Date = After January 31, 1972 Effluent Flow Rate = Effluent flow rate is at least 100,000 actual cubic feet per minute.

Unit ID	Regulation	Index Number	Basis of Determination*
F8-RGN	30 TAC Chapter 115, Vent Gas Controls	R5121-F8-9	Alternate Control Requirement = Alternate control is not used. Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Total Design Capacity = Total design capacity is greater than or equal to 1,100 tons per year for all chemicals produced within that unit. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Flow Rate or VOC Concentration = Flow rate is greater than or equal to 0.011 scm/min or the VOC concentration is greater than or equal to 500 ppmv. 40 CFR 60 Subpart NNN Requirements = The distillation unit vent gas stream satisfies one of the following requirements of 40 CFR Part 60, Subpart NNN: TRE index value is greater than 8.0; or TRE index value is greater than 1.0 without the use of VOC emission control devices. Vent Type = Vent gas stream originates from a synthetic organic chemical manufacturing industry reactor process or distillation operation, as defined in 30 TAC § 115.10. 40 CFR 60 Subpart RRR Requirements = The reactor process vent gas stream satisfies neither of the following requirements of 40 CFR Part 60, Subpart RRR: TRE index value is greater than 8.0; or TRE index value is greater than 1.0 without the use of VOC emission control devices.
F8-RGN	40 CFR Part 63, Subpart G	63G-F8-9	Alternate Monitoring Parameters = The EPA Administrator has not approved alternate monitoring parameters or alternate monitoring parameters are not used. Control Device = No recovery device. Overlap = Title 40 CFR Part 60, Subpart NNN Group 1 = The process vent is a Group 2 process vent. Halogenated = Vent stream is not halogenated. Regulation = Owner or operator is electing to comply with the associated monitoring, testing, recordkeeping, and reporting requirements of 40 CFR Part 60, Subpart III, supporting the control requirements of 40 CFR § 60.662. HAP Concentration = HAP concentration is greater than or equal to 50 ppm. Flow Rate = Flow rate is greater than or equal to 0.005 scm/min or the owner or operator is not electing to demonstrate this flow rate. Electing Control = Not electing to control the process vent to the levels required in 40 CFR § 63.113(a)(1) or (a)(2). NSPS TRE Index Value = TRE index value is greater than 1 and less than 4 as calculated using the appropriate equation from 40 CFR Part 60, Subparts III, NNN or RRR. Performance Test = No previous performance test was conducted. MACT TRE Index Value = TRE index value is greater than 1.0 and less than or equal to 4.0 as calculated using the procedures of 40 CFR § 63.115(d).
FC4300	30 TAC Chapter 115, Vent Gas Controls	R5121-2	Alternate Control Requirement = Alternate control is not used. 	Subpart G		alternate monitoring parameters are not used. Control Device = Thermal incinerator. Overlap = Title 40 CFR Part 60, Subpart NNN Group 1 = The process vent meets the definition of a Group 1 process vent. Continuous Monitoring = Complying with the continuous monitoring requirements of 40 CFR §§ 63.114, 63.117, and 63.118. Halogenated = Vent stream is not halogenated. By-pass Lines = The vent system contains by-pass lines that can divert the vent stream from the control device. Flow Indicator = A flow indicator is installed and operated at the entrance of the by-pass line. Performance Test = A performance test was conducted for determining compliance with a regulation promulgated by the EPA using the same methods specified in Subpart G and either no process changes have been made, or the results reliably indicate compliance.
F-F4-56	30 TAC Chapter 115, Vent Gas Controls	R5121-2	Alternate Control Requirement = Alternate control is not used. Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Total Design Capacity = Total design capacity is greater than or equal to 1,100 tons per year for all chemicals produced within that unit. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Flow Rate or VOC Concentration = Flow rate is greater than or equal to 0.011 scm/min or the VOC concentration is greater than or equal to 500 ppmv. 40 CFR 60 Subpart NNN Requirements = The distillation unit vent gas stream satisfies neither of the following requirements of 40 CFR Part 60, Subpart NNN: TRE index value is greater than 8.0; or TRE index value is greater than 1.0 without the use of VOC emission control devices. Control Device Type = Direct flame incinerator in which the vent gas stream is burned at a temperature or at least 1300° F (704 C). Vent Type = Vent gas stream originates from a synthetic organic chemical manufacturing industry reactor process or distillation operation, as defined in 30 TAC § 115.10. 40 CFR 60 Subpart RRR Requirements = The reactor process vent gas stream satisfies neither of the following requirements of 40 CFR Part 60, Subpart RRR: TRE index value is greater than 8.0; or TRE index value is greater than 1.0 without the use of VOC emission control devices.
F-F4-56	40 CFR Part 63, Subpart G	63GV-082N	Alternate Monitoring Parameters = The EPA Administrator has not approved alternate monitoring parameters or alternate monitoring parameters are not used. Control Device = Thermal incinerator. Overlap = Title 40 CFR Part 60, Subpart NNN Group 1 = The process vent meets the definition of a Group 1 process vent. Continuous Monitoring = Complying with the continuous monitoring requirements of 40 CFR §§ 63.114, 63.117, and 63.118. Halogenated = Vent stream is not halogenated. By-pass Lines = The vent system contains by-pass lines that can divert the vent stream from the control device.

Control Device Type = Direct flame incinerator in which the vent gas stream is burned at a temperature or at least 1300° F (704 C). Vent Type = Vent gas stream originates from a synthetic organic chemical manufacturing industry reactor process or distillation operation, as defined in 30 TAC § 115.10. 40 CFR 60 Subpart RRR Requirements = The reactor process vent gas stream satisfies neither of the following requirements of 40 CFR Part 60, Subpart RRR: TRE index value is greater than 8.0; or TRE index value is greater than 1.0 without the use of VOC emission control devices.
F-F6-33	40 CFR Part 63, Subpart G	63GV-082N	Alternate Monitoring Parameters = The EPA Administrator has not approved alternate monitoring parameters or alternate monitoring parameters are not used. Control Device = Thermal incinerator. Overlap = Title 40 CFR Part 60, Subpart NNN Group 1 = The process vent meets the definition of a Group 1 process vent. Continuous Monitoring = Complying with the continuous monitoring requirements of 40 CFR §§ 63.114, 63.117, and 63.118. Halogenated = Vent stream is not halogenated. By-pass Lines = The vent system contains by-pass lines that can divert the vent stream from the control device. Flow Indicator = A flow indicator is installed and operated at the entrance of the by-pass line. Performance Test = A performance test was conducted for determining compliance with a regulation promulgated by the EPA using the same methods specified in Subpart G and either no process changes have been made, or the results reliably indicate compliance.
F-F6-44	30 TAC Chapter 115, Vent Gas Controls	R5121-2	Alternate Control Requirement = Alternate control is not used. Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Total Design Capacity = Total design capacity is greater than or equal to 1,100 tons per year for all chemicals produced within that unit. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Flow Rate or VOC Concentration = Flow rate is greater than or equal to 0.011 scm/min or the VOC concentration is greater than or equal to 500 ppmv. 40 CFR 60 Subpart NNN Requirements = The distillation unit vent gas stream satisfies neither of the following requirements of 40 CFR Part 60, Subpart NNN: TRE index value is greater than 8.0; or TRE index value is greater than 1.0 without the use of VOC emission control devices.

VOC Concentration = VOC concentration is greater than or equal to 612 ppmv.
F-G3-18	40 CFR Part 63, Subpart G	63GV-100	Alternate Monitoring Parameters = The EPA Administrator has not approved alternate monitoring parameters or alternate monitoring parameters are not used. Control Device = Thermal incinerator. Overlap = Title 40 CFR Part 63, Subpart G only Group 1 = The process vent is a Group 2 process vent. Continuous Monitoring = Complying with the continuous monitoring requirements of 40 CFR §§ 63.114, 63.117, and 63.118. Halogenated = Vent stream is not halogenated. HAP Concentration = HAP concentration is not needed to determine applicability. By-pass Lines = The vent system does not contain by-pass lines that can divert the vent stream from the control device. Flow Rate = Flow rate is not needed to determine applicability. NSPS TRE Index Value = TRE index value is greater than 8 as calculated using the appropriate equation from 40 CFR Part 60, Subparts III, NNN or RRR. Performance Test = A performance test was conducted for determining compliance with a regulation promulgated by the EPA using the same methods specified in Subpart G and either no process changes have been made, or the results reliably indicate compliance. MACT TRE Index Value = TRE index value is greater than 4.0 as calculated using the procedures of 40 CFR § 63.115(d). Plant Type = Vinyl chloride plant.
F-G4-3	30 TAC Chapter 115, Vent Gas Controls	R5121-10	Alternate Control Requirement = Alternate control is not used. Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source.

Unit ID	Regulation	Index Number	Basis of Determination*
			Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. 40 CFR 60 Subpart NNN Requirements = The distillation unit vent gas stream satisfies one of the following requirements of 40 CFR Part 60, Subpart NNN: TRE index value is greater than 8.0; or TRE index value is greater than 1.0 without the use of VOC emission control devices. Vent Type = Vent gas stream originates from a synthetic organic chemical manufacturing industry reactor process or distillation operation, as defined in 30 TAC § 115.10. 40 CFR 60 Subpart RRR Requirements = The reactor process vent gas stream satisfies neither of the following requirements of 40 CFR Part 60, Subpart RRR: TRE index value is greater than 8.0; or TRE index value is greater than 1.0 without the use of VOC emission control devices. VOC Concentration = VOC concentration is less than 612 ppmv.
F-G4-5	30 TAC Chapter 115, Vent Gas Controls	R5121-10	Alternate Control Requirement = Alternate control is not used. Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Total Design Capacity = Total design capacity is greater than or equal to 1,100 tons per year for all chemicals produced within that unit. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Flow Rate or VOC Concentration = Flow rate is less than 0.011 scm/min or the VOC concentration is less than 500 ppmv. 40 CFR 60 Subpart NNN Requirements = The distillation unit vent gas stream satisfies neither of the following requirements of 40 CFR Part 60, Subpart NNN: TRE index value is greater than 8.0; or TRE index value is greater than 1.0 without the use of VOC emission control devices. Vent Type = Vent gas stream originates from a synthetic organic chemical manufacturing industry reactor process or distillation operation, as defined in 30 TAC § 115.10. 40 CFR 60 Subpart RRR Requirements = The reactor process vent gas stream satisfies neither of the following requirements of 40 CFR Part 60, Subpart RRR: TRE index value is greater than 8.0; or TRE index value is greater than 1.0 without the use of VOC emission control devices.
F-G6-11	30 TAC Chapter 115, Vent Gas Controls	R5121-2	Alternate Control Requirement = Alternate control is not used. Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Total Design Capacity = Total design capacity is greater than or equal to 1,100 tons per year for all chemicals produced within that unit. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Flow Rate or VOC Concentration = Flow rate is greater than or equal to 0.011 scm/min or the VOC concentration is greater than or equal to 500 ppmv. 40 CFR 60 Subpart NNN Requirements = The distillation unit vent gas stream satisfies neither of the following requirements of 40 CFR Part 60, Subpart NNN: TRE index value is greater than 8.0; or TRE index value is greater than 1.0 without the use of VOC emission control devices. Control Device Type = Direct flame incinerator in which the vent gas stream is burned at a temperature or at least

Unit ID	Regulation	Index Number	Basis of Determination*
			1300° F (704 C). Vent Type = Vent gas stream originates from a synthetic organic chemical manufacturing industry reactor process or distillation operation, as defined in 30 TAC § 115.10. 40 CFR 60 Subpart RRR Requirements = The reactor process vent gas stream satisfies neither of the following requirements of 40 CFR Part 60, Subpart RRR: TRE index value is greater than 8.0; or TRE index value is greater than 1.0 without the use of VOC emission control devices.
F-G6-11	40 CFR Part 63, Subpart G	63GV-082N	Alternate Monitoring Parameters = The EPA Administrator has not approved alternate monitoring parameters or alternate monitoring parameters are not used. Control Device = Thermal incinerator. Overlap = Title 40 CFR Part 60, Subpart NNN Group 1 = The process vent meets the definition of a Group 1 process vent. Continuous Monitoring = Complying with the continuous monitoring requirements of 40 CFR §§ 63.114, 63.117, and 63.118. Halogenated = Vent stream is not halogenated. By-pass Lines = The vent system contains by-pass lines that can divert the vent stream from the control device. Flow Indicator = A flow indicator is installed and operated at the entrance of the by-pass line. Performance Test = A performance test was conducted for determining compliance with a regulation promulgated by the EPA using the same methods specified in Subpart G and either no process changes have been made, or the results reliably indicate compliance.
GRPFGVE3	30 TAC Chapter 115, Vent Gas Controls	R5121-2	Alternate Control Requirement = Alternate control is not used. Total Design Capacity = Total design capacity is greater than or equal to 1,100 tons per year for all chemicals produced within that unit. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Flow Rate or VOC Concentration = Flow rate is greater than or equal to 0.011 scm/min or the VOC concentration is greater than or equal to 500 ppmv. 40 CFR 60 Subpart NNN Requirements = The distillation unit vent gas stream satisfies neither of the following requirements of 40 CFR Part 60, Subpart NNN: TRE index value is greater than 8.0; or TRE index value is greater than 1.0 without the use of VOC emission control devices. Control Device Type = Vapor recovery system, as defined in 30 TAC § 115.10, other than an afterburner, blast furnace combustion device, boiler, catalytic or direct flame incinerator, carbon adsorption system, chiller, flare or vapor combustor. Vent Type = Vent gas stream originates from a synthetic organic chemical manufacturing industry reactor process or distillation operation, as defined in 30 TAC § 115.10. 40 CFR 60 Subpart RRR Requirements = The reactor process vent gas stream satisfies neither of the following requirements of 40 CFR Part 60, Subpart RRR: TRE index value is greater than 8.0; or TRE index value is greater than 1.0 without the use of VOC emission control devices.
V-F-F8-6A	30 TAC Chapter 115, Vent Gas Controls	R5121-F8	Alternate Control Requirement = Alternate control is not used. Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Total Design Capacity = Total design capacity is greater than or equal to 1,100 tons per year for all chemicals produced within that unit. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Flow Rate or VOC Concentration = Flow rate is greater than or equal to 0.011 scm/min or the VOC concentration is

Unit ID	Regulation	Index Number	Basis of Determination*
			greater than or equal to 500 ppmv. 40 CFR 60 Subpart NNN Requirements = The distillation unit vent gas stream satisfies neither of the following requirements of 40 CFR Part 60, Subpart NNN: TRE index value is greater than 8.0; or TRE index value is greater than 1.0 without the use of VOC emission control devices. Control Device Type = Vapor recovery system, as defined in 30 TAC § 115.10, other than an afterburner, blast furnace combustion device, boiler, catalytic or direct flame incinerator, carbon adsorption system, chiller, flare or vapor combustor. Vent Type = Vent gas stream originates from a synthetic organic chemical manufacturing industry reactor process or distillation operation, as defined in 30 TAC § 115.10. 40 CFR 60 Subpart RRR Requirements = The reactor process vent gas stream satisfies neither of the following requirements of 40 CFR Part 60, Subpart RRR: TRE index value is greater than 8.0; or TRE index value is greater than 1.0 without the use of VOC emission control devices.
V-F-F8-6A	40 CFR Part 63, Subpart G	63G-F8-N	Alternate Monitoring Parameters = The EPA Administrator has not approved alternate monitoring parameters or alternate monitoring parameters are not used. Control Device = Boiler or process heater with a design heat input capacity of less than or equal to 44 MW. Overlap = Title 40 CFR Part 60, Subpart NNN Group 1 = The process vent is a Group 2 process vent. Continuous Monitoring = Complying with the continuous monitoring requirements of 40 CFR §§ 63.114, 63.117, and 63.118. Halogenated = Vent stream is not halogenated. Regulation = Owner or operator is electing to comply with the associated monitoring, testing, recordkeeping, and reporting requirements of 40 CFR Part 60, Subpart III, supporting the control requirements of 40 CFR § 60.662. HAP Concentration = HAP concentration is not needed to determine applicability. By-pass Lines = The vent system does not contain by-pass lines that can divert the vent stream from the control device. Flow Rate = Flow rate is not needed to determine applicability. Electing Control = Electing to control the process vent to the levels required in 40 CFR § 63.113(a)(2) without calculating the TRE index value Performance Test = No previous performance test was conducted.
V-F-F8-6B	30 TAC Chapter 115, Vent Gas Controls	R5121-F8	Alternate Control Requirement = Alternate control is not used. Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Total Design Capacity = Total design capacity is greater than or equal to 1,100 tons per year for all chemicals produced within that unit. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Flow Rate or VOC Concentration = Flow rate is greater than or equal to 0.011 scm/min or the VOC concentration is greater than or equal to 500 ppmv. 40 CFR 60 Subpart NNN Requirements = The distillation unit vent gas stream satisfies neither of the following requirements of 40 CFR Part 60, Subpart NNN: TRE index value is greater than 8.0; or TRE index value is greater than 1.0 without the use of VOC emission control devices. Control Device Type = Vapor recovery system, as defined in 30 TAC § 115.10, other than an afterburner, blast furnace

V-R-F8-1	40 CFR Part 63, Subpart G	63G-F8-R	Alternate Monitoring Parameters = The EPA Administrator has not approved alternate monitoring parameters or alternate monitoring parameters are not used. Control Device = Boiler or process heater with a design heat input capacity of less than or equal to 44 MW. Overlap = Title 40 CFR Part 60, Subpart RRR Group 1 = The process vent is a Group 2 process vent. Continuous Monitoring = Complying with the continuous monitoring requirements of 40 CFR §§ 63.114, 63.117, and 63.118. Halogenated = Vent stream is not halogenated. Regulation = Owner or operator is electing to comply with the associated monitoring, testing, recordkeeping, and reporting requirements of 40 CFR Part 60, Subpart III, supporting the control requirements of 40 CFR § 60.702. HAP Concentration = HAP concentration is not needed to determine applicability. By-pass Lines = The vent system does not contain by-pass lines that can divert the vent stream from the control device. Flow Rate = Flow rate is not needed to determine applicability. Electing Control = Electing to control the process vent to the levels required in 40 CFR § 63.113(a)(2) without calculating the TRE index value Performance Test = No previous performance test was conducted.
V-R-F8-2	30 TAC Chapter 115, Vent Gas	R5121-2	Alternate Control Requirement = Alternate control is not used. Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC

Unit ID	Regulation	Index Number	Basis of Determination*
	Controls		Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Total Design Capacity = Total design capacity is greater than or equal to 1,100 tons per year for all chemicals produced within that unit. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Flow Rate or VOC Concentration = Flow rate is greater than or equal to 0.011 scm/min or the VOC concentration is greater than or equal to 500 ppmv. 40 CFR 60 Subpart NNN Requirements = The distillation unit vent gas stream satisfies neither of the following requirements of 40 CFR Part 60, Subpart NNN: TRE index value is greater than 8.0; or TRE index value is greater than 1.0 without the use of VOC emission control devices. Control Device Type = Direct flame incinerator in which the vent gas stream is burned at a temperature or at least 1300° F (704 C). Vent Type = Vent gas stream originates from a synthetic organic chemical manufacturing industry reactor process or distillation operation, as defined in 30 TAC § 115.10. 40 CFR 60 Subpart RRR Requirements = The reactor process vent gas stream satisfies neither of the following requirements of 40 CFR Part 60, Subpart RRR: TRE index value is greater than 8.0; or TRE index value is greater than 1.0 without the use of VOC emission control devices.
V-R-F8-2	40 CFR Part 63, Subpart G	63GV-082R	Alternate Monitoring Parameters = The EPA Administrator has not approved alternate monitoring parameters or alternate monitoring parameters are not used. Control Device = Thermal incinerator. Overlap = Title 40 CFR Part 60, Subpart RRR Group 1 = The process vent meets the definition of a Group 1 process vent. Continuous Monitoring = Complying with the continuous monitoring requirements of 40 CFR §§ 63.114, 63.117, and 63.118. Halogenated = Vent stream is not halogenated. By-pass Lines = The vent system contains by-pass lines that can divert the vent stream from the control device. Flow Indicator = A flow indicator is installed and operated at the entrance of the by-pass line. Performance Test = A performance test was conducted for determining compliance with a regulation promulgated by the EPA using the same methods specified in Subpart G and either no process changes have been made, or the results reliably indicate compliance.
F4FF4135	40 CFR Part 60, Subpart NNN	60NNN-008a	Subpart NNN Chemicals = The distillation unit produces any chemical listed in 40 CFR § 60.667 as a product, co-product, by-product, or intermediate. Total Resource Effectiveness = TRE index value greater than 8.0 not from a halogenated vent stream. Construction/Modification Date = After December 30, 1983. Vent Type = Distillation unit not discharging vent stream into a vapor recovery system. Distillation Unit Type = Does not qualify for any exemption under § 60.660(c)(1)-(3).
F6FF6104	40 CFR Part 60, Subpart NNN	60NNN-008a	Subpart NNN Chemicals = The distillation unit produces any chemical listed in 40 CFR § 60.667 as a product, co-product, by-product, or intermediate. Total Resource Effectiveness = TRE index value greater than 8.0 not from a halogenated vent stream. Construction/Modification Date = After December 30, 1983.

Unit ID	Regulation	Index Number	Basis of Determination*
			Vent Type = Distillation unit not discharging vent stream into a vapor recovery system. Distillation Unit Type = Does not qualify for any exemption under § 60.660(c)(1)-(3).
F-F8-9	40 CFR Part 60, Subpart NNN	60NNN-F8-9	Subpart NNN Chemicals = The distillation unit produces any chemical listed in 40 CFR § 60.667 as a product, co-product, by-product, or intermediate. Total Resource Effectiveness = TRE index value less than 8.0 not from a halogenated vent stream. Construction/Modification Date = After December 30, 1983. TOC Reduction = Compliance is achieved through use of a flare or recovery device. Subpart NNN Control Device = Boiler or process heater design heat input capacity less than 44 MW (150 MMBtu/hr). Vent Type = Distillation unit not discharging vent stream into a vapor recovery system. Distillation Unit Type = Does not qualify for any exemption under § 60.660(c)(1)-(3). Total Design Capacity = 1 gigagram per year or greater. Vent Stream Flow Rate = Flow rate greater than or equal to 0.008 scm/min.
F-G4-3	40 CFR Part 60, Subpart NNN	60NNN-033a	Subpart NNN Chemicals = The distillation unit produces any chemical listed in 40 CFR § 60.667 as a product, co-product, by-product, or intermediate. Total Resource Effectiveness = TRE index value greater than 8.0 not from a halogenated vent stream. Construction/Modification Date = After December 30, 1983. Vent Type = A single distillation unit discharging vent stream into a vapor recovery system. Distillation Unit Type = Does not qualify for any exemption under § 60.660(c)(1)-(3).
GRPFGPRO1	40 CFR Part 63, Subpart F	63F-009	Applicable Chemicals = The chemical manufacturing process unit manufactures, as a primary product, one or more of the chemicals listed in 40 CFR § 63.100(b)(1)(i) or 40 CFR § 63.100(b)(1)(ii). Intervening Cooling Fluid = There is no intervening cooling fluid containing less than 5 percent by weight of total HAPs listed in Table 4 of 40 CFR Part 63, Subpart F, between the process and cooling water. Table 2 HAP = The chemical manufacturing process unit uses as a reactant or manufactures, as a product or co-product, one or more of the organic hazardous air pollutants in Table 2. Table 4 HAP Content = The recirculating heat exchange system is not used exclusively to cool process fluids that contain less than 5 percent by weight of total HAPs listed in Table 4 of title 40 CFR Part 63, Subpart F. Alternate Means of Emission Limitation = No alternative means of emission limitation has been approved by the EPA Administrator to achieve a reduction in organic HAP emission or no alternate has been requested. NPDES Permit = The once-through heat exchange system is not subject to NPDES permit with an allowable discharge limit of 1 part per million or less above influent concentration or 10 percent or less above influent concentration. Meets 40 CFR 63.104(a)(4)(i)-(iv) = The once-through heat exchange system is not subject to an NPDES permit that meets 40 CFR § 63.104(a)(4)(i) - (iv). Heat Exchange System = A heat exchange system is utilized. Table 9 HAP Content = The once-through heat exchange system is not used exclusively to cool process fluids that contain less than 5 percent by weight of total HAPs listed in Table 9 of 40 CFR Part 63, Subpart G. Cooling Water Monitored = The cooling water is being monitored for the presence of one or more HAPs or other representative substances whose presence in cooling water indicates a leak. Cooling Water Pressure = The heat exchange system is not operated with the minimum pressure on the cooling water side at least 35 kilopascals greater than the maximum pressure on the process side.

Unit ID	Regulation	Index Number	Basis of Determination*
PROF8HON	40 CFR Part 63, Subpart F	63F-009	Applicable Chemicals = The chemical manufacturing process unit manufactures, as a primary product, one or more of the chemicals listed in 40 CFR § 63.100(b)(1)(i) or 40 CFR § 63.100(b)(1)(ii). Intervening Cooling Fluid = There is no intervening cooling fluid containing less than 5 percent by weight of total HAPs listed in Table 4 of 40 CFR Part 63, Subpart F, between the process and cooling water. Table 2 HAP = The chemical manufacturing process unit uses as a reactant or manufactures, as a product or co-product, one or more of the organic hazardous air pollutants in Table 2. Table 4 HAP Content = The recirculating heat exchange system is not used exclusively to cool process fluids that contain less than 5 percent by weight of total HAPs listed in Table 4 of title 40 CFR Part 63, Subpart F. Alternate Means of Emission Limitation = No alternative means of emission limitation has been approved by the EPA Administrator to achieve a reduction in organic HAP emission or no alternate has been requested. NPDES Permit = The once-through heat exchange system is not subject to NPDES permit with an allowable discharge limit of 1 part per million or less above influent concentration or 10 percent or less above influent concentration. Meets 40 CFR 63.104(a)(4)(i)-(iv) = The once-through heat exchange system is not subject to an NPDES permit that meets 40 CFR § 63.104(a)(4)(i) - (iv). Heat Exchange System = A heat exchange system is utilized. Table 9 HAP Content = The once-through heat exchange system is not used exclusively to cool process fluids that contain less than 5 percent by weight of total HAPs listed in Table 9 of 40 CFR Part 63, Subpart G. Cooling Water Monitored = The cooling water is being monitored for the presence of one or more HAPs or other representative substances whose presence in cooling water indicates a leak. Cooling Water Pressure = The heat exchange system is not operated with the minimum pressure on the cooling water side at least 35 kilopascals greater than the maximum pressure on the process side.

* - The “unit attributes” or operating conditions that determine what requirements apply

NSR Versus Title V FOP

The state of Texas has two Air permitting programs, New Source Review (NSR) and Title V Federal Operating Permits. The two programs are substantially different both in intent and permit content.

NSR is a preconstruction permitting program authorized by the Texas Clean Air Act and Title I of the Federal Clean Air Act (FCAA). The processing of these permits is governed by 30 Texas Administrative Code (TAC) Chapter 116.111. The Title V Federal Operating Program is a federal program authorized under Title V of the FCAA that has been delegated to the state of Texas to administer and is governed by 30 TAC Chapter 122. The major differences between the two permitting programs are listed in the table below:

NSR Permit	Federal Operating Permit(FOP)
Issued Prior to new Construction or modification of an existing facility	For initial permit with application shield, can be issued after operation commences; significant revisions require approval prior to operation.
Authorizes air emissions	Codifies existing applicable requirements, does not authorize new emissions
Ensures issued permits are protective of the environment and human health by conducting a health effects review and that requirement for best available control technology (BACT) is implemented.	Applicable requirements listed in permit are used by the inspectors to ensure proper operation of the site as authorized. Ensures that adequate monitoring is in place to allow compliance determination with the FOP.
Up to two Public notices may be required. Opportunity for public comment and contested case hearings for some authorizations.	One public notice required. Opportunity for public comments. No contested case hearings.
Applies to all point source emissions in the state.	Applies to all major sources and some non-major sources identified by the EPA.
Applies to facilities: a portion of site or individual emission sources	One or multiple FOPs cover the entire site (consists of multiple facilities)
Permits include terms and conditions under which the applicant must construct and operate its various equipment and processes on a facility basis.	Permits include terms and conditions that specify the general operational requirements of the site; and also include codification of all applicable requirements for emission units at the site.
Opportunity for EPA review for Federal Prevention of Significant Deterioration (PSD) and Nonattainment (NA) permits for major sources.	Opportunity for EPA review, Affected states review, and a Public petition period for every FOP.
Permits have a table listing maximum emission limits for pollutants	Permit has an applicable requirements table and Periodic Monitoring (PM) / Compliance Assurance Monitoring (CAM) tables which document applicable monitoring requirements.
Permits can be altered or amended upon application by company. Permits must be issued before construction or modification of facilities can begin.	Permits can be revised through several revision processes, which provide for different levels of public notice and opportunity to comment. Changes that would be significant revisions require that a revised permit be issued before those changes can be operated.
NSR permits are issued independent of FOP requirements.	FOP are independent of NSR permits, but contain a list of all NSR permits incorporated by reference

[SEQ CHAPTER \h \r 1]New Source Review Requirements

Below is a list of the New Source Review (NSR) permits for the permitted area. These NSR permits are incorporated by reference into the operating permit and are enforceable under it. These permits can be found in the main TCEQ file room, located on the first floor of Building E, 12100 Park 35 Circle, Austin, Texas. The Public Education Program may be contacted at 1-800-687-4040 or the Air Permits Division (APD) may be contacted at 1-512-239-1250 for help with any question.

Additionally, the site contains emission units that are permitted by rule under the requirements of 30 TAC Chapter 106, Permits by Rule. The following table specifies the permits by rule that apply to the site. All current permits by rule are contained in Chapter 106. Outdated 30 TAC Chapter 106 permits by rule may be viewed at the following Web site:

[HYPERLINK "http://www.tceq.texas.gov/permitting/air/permitbyrule/historical_rules/old106list/index106.html"]

Outdated Standard Exemption lists may be viewed at the following Web site:

[HYPERLINK "http://www.tceq.texas.gov/permitting/air/permitbyrule/historical_rules/oldselist/se_index.html"]

The status of air permits and applications and a link to the Air Permits Remote Document Server is located at the following Web site:

[HYPERLINK "http://www.tceq.texas.gov/permitting/air/nav/air_status_permits.html"]

Emission Units and Emission Points

In air permitting terminology, any source capable of generating emissions (for example, an engine or a sandblasting area) is called an Emission Unit. For purposes of Title V, emission units are specifically listed in the operating permit when they have applicable requirements other than New Source Review (NSR), or when they are listed in the permit shield table.

The actual physical location where the emissions enter the atmosphere (for example, an engine stack or a sand-blasting yard) is called an emission point. For New Source Review preconstruction permitting purposes, every emission unit has an associated emission point. Emission limits are listed in an NSR permit, associated with an emission point. This list of emission points and emission limits per pollutant is commonly referred to as the "Maximum Allowable Emission Rate Table", or "MAERT" for short. Specifically, the MAERT lists the Emission Point Number (EPN) that identifies the emission point, followed immediately by the Source Name, identifying the emission unit that is the source of those emissions on this table.

Thus, by reference, an emission unit in a Title V operating permit is linked by reference number to an NSR authorization, and its related emission point.

Monitoring Sufficiency

Federal and state rules, 40 CFR § 70.6(a)(3)(i)(B) and 30 TAC § 122.142(c) respectively, require that each federal operating permit include additional monitoring for applicable requirements that lack periodic or instrumental monitoring (which may include recordkeeping that serves as monitoring) that yields reliable data from a relevant time period that are representative of the emission unit's compliance with the applicable emission limitation or standard. Furthermore, the federal operating permit must include compliance assurance monitoring (CAM) requirements for emission sources that meet the applicability criteria of 40 CFR Part 64 in accordance with 40 CFR § 70.6(a)(3)(i)(A) and 30 TAC § 122.604(b).

With the exception of any emission units listed in the Periodic Monitoring or CAM Summaries in the FOP, the TCEQ Executive Director has determined that the permit contains sufficient monitoring, testing, recordkeeping, and reporting requirements that assure compliance with the applicable requirements. If applicable, each emission unit that requires additional monitoring in the form of periodic monitoring or CAM is described in further detail under the Rationale for CAM/PM Methods Selected section following this paragraph.

Rationale for Compliance Assurance Monitoring (CAM)/ Periodic Monitoring Methods Selected

Compliance Assurance Monitoring (CAM):

Compliance Assurance Monitoring (CAM) is a federal monitoring program established under Title 40 Code of Federal Regulations Part 64 (40 CFR Part 64).

Emission units are subject to CAM requirements if they meet the following criteria:

1. the emission unit is subject to an emission limitation or standard for an air pollutant (or surrogate thereof) in an applicable requirement;

2. the emission unit uses a control device to achieve compliance with the emission limitation or standard specified in the applicable requirement; and

3. the emission unit has the pre-control device potential to emit greater than or equal to the amount in tons per year for a site to be classified as a major source.

The following table(s) identify the emission unit(s) that are subject to CAM:

Unit/Group/Process Information	
ID No.: GRPFGVE3	
Control Device ID No.: F4HF41	Control Device Type: Thermal Incinerator (Direct Flame Incinerator/Regenerative Thermal Oxidizer)
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Vent Gas Controls	SOP Index No.: R5121-2
Pollutant: VOC	Main Standard: § 115.121(a)(2)
Monitoring Information	
Indicator: Combustion Temperature / Exhaust Gas Temperature	
Minimum Frequency: once per day	
Averaging Period: n/a*	
Deviation Limit: It is a deviation if the firebox temperature is less than 1704 degree Fahrenheit while waste gas is vented to the incinerator.	
Basis of CAM: It is widely practiced and accepted to use performance tests, manufacturer's recommendations, engineering calculations and/or historical data to establish a minimum temperature for thermal incinerators. This minimum temperature must be maintained in order for the proper destruction efficiency. Operation below the minimum combustion temperature will result in incomplete combustion and potential noncompliance with emission limitations and/or standards. The monitoring of the combustion temperature of a thermal incinerator is commonly required in federal and state rules, including: 40 CFR Part 60, Subparts III, NNN, QQQ, and RRR; 40 CFR Part 61, Subparts BB and FF; 40 CFR Part 63, Subparts G, R, DD, EE, and HH; and 30 TAC Chapter 115.	

*The permit holder may elect to collect monitoring data on a more frequent basis and calculate the average as specified by the minimum frequency, for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis and shall not be collected and used in particular instances to avoid reporting deviations.

Unit/Group/Process Information	
ID No.: GRPFGVE4	
Control Device ID No.: F4HF41	Control Device Type: Thermal Incinerator (Direct Flame Incinerator/Regenerative Thermal Oxidizer)
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Vent Gas Controls	SOP Index No.: R5121-2
Pollutant: VOC	Main Standard: § 115.121(a)(2)

*The permit holder may elect to collect monitoring data on a more frequent basis and calculate the average as specified by the minimum frequency, for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis and shall not be collected and used in particular instances to avoid reporting deviations.

Periodic Monitoring:

The Federal Clean Air Act requires that each federal operating permit include monitoring sufficient to assure compliance with the terms and conditions of the permit. Most of the emission limits and standards applicable to emission units at Title V sources include adequate monitoring to show that the units meet the limits and standards. For those requirements that do not include monitoring, or where the monitoring is not sufficient to assure compliance, the federal operating permit must include such monitoring for the emission units affected. The following emission units are subject to periodic monitoring requirements because the emission units are subject to an emission limitation or standard for an air pollutant (or surrogate thereof) in an applicable requirement that does not already require monitoring, or the monitoring for the applicable requirement is not sufficient to assure compliance:

Unit/Group/Process Information	
ID No.: F8-RGN	
Control Device ID No.: F8-BOIL	Control Device Type: Steam Generating Unit (Boiler)/Process Heater (Design heat input is less than 44MW)
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 111, Visible Emissions	SOP Index No.: R1111-F8-9
Pollutant: PM (OPACITY)	Main Standard: § 111.111(a)(1)(C)
Monitoring Information	
Indicator: Visible Emissions	
Minimum Frequency: Once per week	
Averaging Period: n/a	
Deviation Limit: It is a deviation if visible emissions are observed.	
Basis of monitoring: The option to perform opacity readings or visible emissions to demonstrate compliance is consistent with EPA Reference Test Method 9 and 22. Monitoring specifications and procedures for the opacity are consistent with federal requirements and include the EPA's Test Method 9 for determining opacity by visual observations . The monitoring specifications and procedures for the visible emissions monitoring are similar to "EPA Reference Method 22" procedures.	

Unit/Group/Process Information	
ID No.: V-F8-BOIL	
Control Device ID No.: F8-BOIL	Control Device Type: Steam Generating Unit (Boiler)/Process Heater (Design heat input is less than 44MW)
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Vent Gas Controls	SOP Index No.: R5121-F8
Pollutant: VOC	Main Standard: § 115.122(a)(2)
Monitoring Information	
Indicator: Combustion Temperature / Exhaust Gas Temperature	
Minimum Frequency: Once per week	
Averaging Period: n/a*	
Deviation Limit: It is a deviation if the combustion temperature is less than 410 degrees Fahrenheit.	
Basis of monitoring: It is widely practiced and accepted to use performance tests, manufacturer's recommendations, engineering calculations and/or historical data to establish a minimum temperature for boilers/process heaters. This minimum temperature must be maintained in order for the proper destruction efficiency. Operation below the minimum combustion temperature will result in incomplete combustion and potential noncompliance with emission limitations and/or standards. The monitoring of combustion temperature of a boiler/process heater is commonly required in federal and state rules, including: 40 CFR Part 60, Subparts III, NNN, and RRR; 40 CFR Part 61, Subparts BB and FF; 40 CFR Part 63, Subparts G, DD, and HH; and 30 TAC Chapter 115.	

*The permit holder may elect to collect monitoring data on a more frequent basis and calculate the average as specified by the minimum frequency, for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis and shall not be collected and used in particular instances to avoid reporting deviations.

Unit/Group/Process Information	
ID No.: V-F-F8-13	
Control Device ID No.: F8-BOIL	Control Device Type: Steam Generating Unit (Boiler)/Process Heater (Design heat input is less than 44MW)
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Vent Gas Controls	SOP Index No.: R5121-F8
Pollutant: VOC	Main Standard: § 115.122(a)(2)
Monitoring Information	
Indicator: Combustion Temperature / Exhaust Gas Temperature	
Minimum Frequency: Once per week	
Averaging Period: n/a*	
Deviation Limit: It is a deviation if the combustion temperature is less than 410 degrees Fahrenheit.	
Basis of monitoring: It is widely practiced and accepted to use performance tests, manufacturer's recommendations, engineering calculations and/or historical data to establish a minimum temperature for boilers/process heaters. This minimum temperature must be maintained in order for the proper destruction efficiency. Operation below the minimum combustion temperature will result in incomplete combustion and potential noncompliance with emission limitations and/or standards. The monitoring of combustion temperature of a boiler/process heater is commonly required in federal and state rules, including: 40 CFR Part 60, Subparts III, NNN, and RRR; 40 CFR Part 61, Subparts BB and FF; 40 CFR Part 63, Subparts G, DD, and HH; and 30 TAC Chapter 115.	

*The permit holder may elect to collect monitoring data on a more frequent basis and calculate the average as specified by the minimum frequency, for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis and shall not be collected and used in particular instances to avoid reporting deviations.

Unit/Group/Process Information	
ID No.: V-F-F8-13-1	
Control Device ID No.: F8-BOIL	Control Device Type: Steam Generating Unit (Boiler)/Process Heater (Design heat input is less than 44MW)
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Vent Gas Controls	SOP Index No.: R5121-F8-EMERG
Pollutant: VOC	Main Standard: § 115.122(a)(2)
Monitoring Information	
Indicator: Valve's position open or closed.	
Minimum Frequency: Continuous	
Averaging Period: N/A	
Deviation Limit: It is a deviation if the valve positioner instrument detects the valve in the open position.	
Basis of monitoring: A Data Collection System (DCS) system with an alarm is used by Huntsman to monitor flow through the emergency vent. The DCS keeps continuous records of the valve that controls flow through the emergency vent using monitoring data from a valve positioner instrument. The valve on the emergency vent is closed during normal operations, however it may open during an upset condition. When the valve is in the closed position, no emissions are being routed to the atmosphere which assures compliance with 30 TAC §115.121(a)(1) which requires no VOCs to be emitted from a process vent unless the emissions are properly controlled in accordance with 30 TAC §115.122(a)(2). Any data that shows the valve in the open position shall be reported as a deviation since emissions are being routed through the vent uncontrolled.	

Unit/Group/Process Information

[SEQ CHAPTER \H \R 1]FEDERAL OPERATING PERMIT

A FEDERAL OPERATING PERMIT IS HEREBY ISSUED TO
Huntsman Petrochemical LLC

AUTHORIZING THE OPERATION OF
Huntsman Port Neches
F and G Units
Industrial Organic Chemicals

LOCATED AT
Jefferson County, Texas
Latitude 29° 58' 5" Longitude 93° 55' 35"
Regulated Entity Number: RN100219252

This permit is issued in accordance with and subject to the Texas Clean Air Act (TCAA), Chapter 382 of the Texas Health and Safety Code and Title 30 Texas Administrative Code Chapter 122 (30 TAC Chapter 122), Federal Operating Permits. Under 30 TAC Chapter 122, this permit constitutes the permit holder's authority to operate the site and emission units listed in this permit. Operations of the site and emission units listed in this permit are subject to all additional rules or amended rules and orders of the Commission pursuant to the TCAA.

This permit does not relieve the permit holder from the responsibility of obtaining New Source Review authorization for new, modified, or existing facilities in accordance with 30 TAC Chapter 116, Control of Air Pollution by Permits for New Construction or Modification.

The site and emission units authorized by this permit shall be operated in accordance with 30 TAC Chapter 122, the general terms and conditions, special terms and conditions, and attachments contained herein.

This permit shall expire five years from the date of issuance. The renewal requirements specified in 30 TAC § 122.241 must be satisfied in order to renew the authorization to operate the site and emission units.

Permit No: O1320 Issuance Date: October 21, 2014

[ADVANCE \x 144]For the Commission

[TOC \o "1-3" \h \z \t "SOP_Heading1,1,SOP_Heading2,2,SOP_Heading2 + Centered,2,SOP_Heading1 + Centered,1"]

General Terms and Conditions

The permit holder shall comply with all terms and conditions contained in 30 TAC § 122.143 (General Terms and Conditions), 30 TAC § 122.144 (Recordkeeping Terms and Conditions), 30 TAC § 122.145 (Reporting Terms and Conditions), and 30 TAC § 122.146 (Compliance Certification Terms and Conditions).

In accordance with 30 TAC § 122.144(1), records of required monitoring data and support information required by this permit, or any applicable requirement codified in this permit, are required to be maintained for a period of five years from the date of the monitoring report, sample, or application unless a longer data retention period is specified in an applicable requirement. The five year record retention period supersedes any less stringent retention requirement that may be specified in a condition of a permit identified in the New Source Review Authorization attachment.

If the permit holder chooses to demonstrate that this permit is no longer required, a written request to void this permit shall be submitted to the Texas Commission on Environmental Quality (TCEQ) by the Responsible Official in accordance with 30 TAC § 122.161(e). The permit holder shall comply with the permit's requirements, including compliance certification and deviation reporting, until notified by the TCEQ that this permit is voided.

The permit holder shall comply with 30 TAC Chapter 116 by obtaining a New Source Review authorization prior to new construction or modification of emission units located in the area covered by this permit.

All reports required by this permit must include in the submittal a cover letter which identifies the following information: company name, TCEQ regulated entity number, air account number (if assigned), site name, area name (if applicable), and Air Permits Division permit number(s).

[SEQ CHAPTER \h \r 1]Special Terms and Conditions:

Emission Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting

1. Permit holder shall comply with the following requirements:

    A. Emission units (including groups and processes) in the Applicable Requirements Summary attachment shall meet the limitations, standards, equipment specifications, monitoring, recordkeeping, reporting, testing, and other requirements listed in the Applicable Requirements Summary attachment to assure compliance with the permit.

    B. The textual description in the column titled "Textual Description" in the Applicable Requirements Summary attachment is not enforceable and is not deemed as a substitute for the actual regulatory language. The Textual Description is provided for information purposes only.

    C. A citation listed on the Applicable Requirements Summary attachment, which has a notation [G] listed before it, shall include the referenced section and subsection for all commission rules, or paragraphs for all federal and state regulations and all subordinate paragraphs, subparagraphs and clauses, subclauses, and items contained within the referenced citation as applicable requirements.

D. When a grouped citation, notated with a [G] in the Applicable Requirements Summary, contains multiple compliance options, the permit holder must keep records of when each compliance option was used.

E. Emission units subject to 40 CFR Part 63, Subparts F, G, H, Y and DDDDD as identified in the attached Applicable Requirements Summary table are subject to 30 TAC Chapter 113, Subchapter C, § § 113.110, 113.120, 113.130, 113.300 and 113.1130 respectively which incorporate the 40 CFR Part 63 Subparts by reference.

2. The permit holder shall comply with the following sections of 30 TAC Chapter 101 (General Air Quality Rules):

A. Title 30 TAC § 101.1 (relating to Definitions), insofar as the terms defined in this section are used to define the terms used in other applicable requirements

B. Title 30 TAC § 101.3 (relating to Circumvention)

C. Title 30 TAC § 101.8 (relating to Sampling), if such action has been requested by the TCEQ

D. Title 30 TAC § 101.9 (relating to Sampling Ports), if such action has been requested by the TCEQ

E. Title 30 TAC § 101.10 (relating to Emissions Inventory Requirements)

F. Title 30 TAC § 101.201 (relating to Emission Event Reporting and Recordkeeping Requirements)

G. Title 30 TAC § 101.211 (relating to Scheduled Maintenance, Start-up, and Shutdown Reporting and Recordkeeping Requirements)

H. Title 30 TAC § 101.221 (relating to Operational Requirements)

I. Title 30 TAC § 101.222 (relating to Demonstrations)

J. Title 30 TAC § 101.223 (relating to Actions to Reduce Excessive Emissions)

3. Permit holder shall comply with the following requirements of 30 TAC Chapter 111:

A. Visible emissions from stationary vents with a flow rate of less than 100,000 actual cubic feet per minute and constructed after January 31, 1972 that are not listed in the Applicable Requirements Summary attachment for 30 TAC Chapter 111, Subchapter A, Division 1 , shall not exceed 20% opacity averaged over a six-minute period. The permit holder shall comply with the following requirements for stationary vents at the site subject to this standard:

(i) Title 30 TAC § 111.111(a)(1)(B) (relating to Requirements for Specified Sources)

(ii) Title 30 TAC § 111.111(a)(1)(E)

(iii) Title 30 TAC § 111.111(a)(1)(F)(i), (ii), (iii), or (iv)

(iv) For emission units with vent emissions subject to 30 TAC § 111.111(a)(1)(B), complying with 30 TAC § 111.111(a)(1)(F)(ii), (iii), or (iv), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146. These periodic monitoring requirements do not apply to vents that are not capable of producing visible emissions such as vents that emit only colorless VOCs; vents from non-fuming liquids; vents that provide passive ventilation, such as plumbing vents; or vent emissions from any other source that does not obstruct the transmission of light. Vents, as specified in the "Applicable Requirements Summary" attachment, that are subject to the emission limitation of 30 TAC § 111.111(a)(1)(B) are not subject to the following periodic monitoring requirements:

(1) An observation of stationary vents from emission units in operation shall be conducted at least once during each calendar quarter unless the emission unit is not operating for the entire quarter.

(2) For stationary vents from a combustion source, if an alternative to the normally fired fuel is fired for a period greater than or equal to 24 consecutive hours, the permit holder shall conduct an observation of the stationary vent for each such period to determine if visible emissions are present. If such period is greater than 3 months, observations shall be conducted once during each quarter. Supplementing the normally fired fuel with natural gas or fuel gas to increase the net heating value to the minimum required value does not constitute creation of an alternative fuel.

(3) Records of all observations shall be maintained.

(4) Visible emissions observations of emission units operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of emission units operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions observations shall be made during times when the activities described in 30 TAC § 111.111(a)(1)(E) are not taking place. Visible emissions shall be determined with each stationary vent in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each stationary vent during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

(5) Compliance Certification:

(a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(1) and (a)(1)(B).

(b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(1)(F) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

(c) Some vents may be subject to multiple visible emission or monitoring requirements. All credible data must be considered when certifying compliance with this requirement even if the observation or monitoring was performed to demonstrate compliance with a different requirement.

B. For visible emissions from a building, enclosed facility, or other structure; the permit holder shall comply with the following requirements:

(i) Title 30 TAC § 111.111(a)(7)(A) (relating to Requirements for Specified Sources)

(ii) Title 30 TAC § 111.111(a)(7)(B)(i) or (ii)

(iii) For a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source subject to 30 TAC § 111.111(a)(7)(A), complying with 30 TAC § 111.111(a)(7)(B)(i) or (ii), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146:

(1) An observation of visible emissions from a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source which is required to comply with 30 TAC § 111.111(a)(7)(A) shall be conducted at least once during each calendar quarter unless the

air emission source or enclosed facility is not operating for the entire quarter.

(2) Records of all observations shall be maintained.

(3) Visible emissions observations of air emission sources or enclosed facilities operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of air emission sources or enclosed facilities operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions shall be determined with each emissions outlet in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each emissions outlet during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

(4) Compliance Certification:

(a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(7) and (a)(7)(A)

(b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(7)(B) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

C. For visible emissions from all other sources not specified in 30 TAC § 111.111(a)(1), (4), or (7); the permit holder shall comply with the following requirements:

(i) Title 30 TAC § 111.111(a)(8)(A) (relating to Requirements for Specified Sources)

(ii) Title 30 TAC § 111.111(a)(8)(B)(i) or (ii)

(iii) For a source subject to 30 TAC § 111.111(a)(8)(A), complying with 30 TAC § 111.111(a)(8)(B)(i) or (ii), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146:

(1) An observation of visible emissions from a source which is required to comply with 30 TAC § 111.111(a)(8)(A) shall be conducted at least once during each calendar quarter unless the source is not operating for the entire quarter.

(2) Records of all observations shall be maintained.

(3) Visible emissions observations of sources operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of sources operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions shall be determined with each source in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each source during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

(4) Compliance Certification:

(a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(8) and (a)(8)(A)

(b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(8)(B) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the

source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

D. Certification of opacity readers determining opacities under Method 9 (as outlined in 40 CFR Part 60, Appendix A) to comply with opacity monitoring requirements shall be accomplished by completing the Visible Emissions Evaluators Course, or approved agency equivalent, no more than 180 days before the opacity reading.

E. For emission units with contributions from uncombined water, the permit holder shall comply with the requirements of 30 TAC § 111.111(b).

F. Emission limits on nonagricultural processes, except for the steam generators specified in 30 TAC § 111.153, shall comply with the following requirements:

(i) Emissions of PM from any source may not exceed the allowable rates as required in 30 TAC § 111.151(a) (relating to Allowable Emissions Limits)

(ii) Sources with an effective stack height (h_e) less than the standard effective stack height (H_e), must reduce the allowable emission level by multiplying it by $[h_e/H_e]^2$ as required in 30 TAC § 111.151(b)

(iii) Effective stack height shall be calculated by the equation specified in 30 TAC § 111.151(c)

4. The permit holder shall comply with the following requirements of 30 TAC Chapter 115, Subchapter F, Division 3, Degassing of Storage Tanks, Transport Vessels and Marine Vessels:

A. For degassing of stationary VOC storage tanks, the permit holder shall comply with the following requirements:

(i) Title 30 TAC § 115.541(a) - (c) (relating to Emission Specifications)

(ii) Title 30 TAC § 115.541(f) (relating to Emission Specifications), for floating roof storage tanks

(iii) Title 30 TAC § 115.542(a) and (a)(1), (a)(2), (a)(3) or (a)(4) (relating to Control Requirements). Where the requirements of 30 TAC Chapter 115, Subchapter F contain multiple compliance options, the permit holder shall keep records of when each compliance option was used.

(iv) Title 30 TAC § 115.542(b) - (d), (relating to Control Requirements)

(v) Title 30 TAC § 115.543 (relating to Alternate Control Requirements)

(vi) Title 30 TAC § 115.544(a)(1) and (a)(2) (relating to Inspection, Monitoring, and Testing Requirements), for inspections

(vii) Title 30 TAC § 115.544(b) (relating to Inspection, Monitoring, and Testing Requirements), for monitoring

(viii) Title 30 TAC § 115.544(b)(1) and (b)(2) (relating to Inspection, Monitoring, and Testing Requirements), for monitoring of control devices

(ix) Title 30 TAC § 115.544(b)(2)(A) - (J) (relating to Inspection, Monitoring, and Testing Requirements), for monitoring (as appropriate to the control device)

(x) Title 30 TAC § 115.544(b)(3), (b)(4) and (b)(6) (relating to Inspection, Monitoring, and Testing Requirements), for VOC concentration or lower explosive limit threshold monitoring

(xi) Title 30 TAC § 115.544(c), and (c)(1) - (c)(3) (relating to Inspection, Monitoring, and Testing Requirements), for testing of control devices used to comply with 30 TAC § 115.542(a)(1)

(xii) Title 30 TAC § 115.545(1) - (7), (9) - (11) and (13) (relating to Approved Test Methods)

(xiii) Title 30 TAC § 115.546(a), (a)(1) and (a)(3) (relating to Recordkeeping and Notification Requirements), for recordkeeping

(xiv) Title 30 TAC § 115.546(a)(2) and (a)(2)(A) - (J) (relating to Recordkeeping and Notification Requirements), for recordkeeping (as appropriate to the control device)

(xv) Title 30 TAC § 115.546(a)(4) (relating to Recordkeeping and Notification Requirements), for recordkeeping of testing of control devices used to comply with 30 TAC § 115.542(a)(1)

(xvi) Title 30 TAC § 115.547(4) (relating to Exemptions)

B. For the degassing of all transport vessels with a nominal capacity of 8,000 gallons or more, the permit holder shall comply with the following requirements:

(i) Title 30 TAC § 115.541(a) - (c) and (d) (relating to Emission Specifications)

(ii) Title 30 TAC § 115.542(a) and (a)(1), (a)(2), (a)(3) or (a)(4) (relating to Control Requirements). Where the requirements of 30 TAC Chapter 115, Subchapter F contain multiple compliance options, the permit holder shall keep records of when each compliance option was used.

(iii) Title 30 TAC § 115.542(b), (c) and (e) (relating to Control Requirements)

(iv) Title 30 TAC § 115.543 (relating to Alternate Control Requirements)

(v) Title 30 TAC § 115.544(a)(1) and (a)(2) (relating to Inspection, Monitoring, and Testing Requirements), for inspections

(vi) Title 30 TAC § 115.544(b) (relating to Inspection, Monitoring, and Testing Requirements), for monitoring

(vii) Title 30 TAC § 115.544(b)(1) and (b)(2) (relating to Inspection, Monitoring, and Testing Requirements), for monitoring of control devices

(viii) Title 30 TAC § 115.544(b)(2)(A) - (J) (relating to Inspection, Monitoring, and Testing Requirements), for monitoring (as appropriate to the control device)

(ix) Title 30 TAC § 115.544(b)(3), (b)(4) and (b)(6) (relating to Inspection, Monitoring, and Testing Requirements), for VOC concentration or lower explosive limit threshold monitoring

(x) Title 30 TAC § 115.544(c), and (c)(1) - (c)(3) (relating to Inspection, Monitoring, and Testing Requirements), for testing of control devices used to comply with 30 TAC § 115.542(a)(1)

(xi) Title 30 TAC § 115.545(1) - (11) and (13) (relating to Approved Test Methods)

(xii) Title 30 TAC § 115.546(a), (a)(1) and (a)(3) (relating to Recordkeeping and Notification Requirements), for recordkeeping

(xiii) Title 30 TAC § 115.546(a)(2) and (a)(2)(A) - (J) (relating to Recordkeeping and Notification Requirements), for recordkeeping (as appropriate to the control device)

(xiv) Title 30 TAC § 115.546(a)(4) (relating to Recordkeeping and Notification Requirements), for recordkeeping of testing of control devices used to comply with 30 TAC § 115.542(a)(1)

C. For the degassing of VOC marine vessels with a nominal capacity of 420,000 gallons or more, the permit holder shall comply with the following requirements:

(i) Title 30 TAC § 115.541(a) - (c) and (e) (relating to Emission Specifications)

(ii) Title 30 TAC § 115.542(a) and (a)(1), (a)(2), (a)(3) or (4), (relating to Control Requirements). Where the requirements of 30 TAC Chapter 115, Subchapter F contain multiple compliance options, the permit holder shall keep records of when each compliance option was used

(iii) Title 30 TAC § 115.542(b) , (c) and (f) (relating to Control Requirements)

(iv) Title 30 TAC § 115.543 (relating to Alternate Control Requirements)

(v) Title 30 TAC § 115.544(a)(1) and (a)(2) (relating to Inspection, Monitoring, and Testing Requirements), for inspections

(vi) Title 30 TAC § 115.544(b) (relating to Inspection, Monitoring, and Testing Requirements), for monitoring

(vii) Title 30 TAC § 115.544(b)(1) and (b)(2) (relating to Inspection, Monitoring, and Testing Requirements), for monitoring of control devices

(viii) Title 30 TAC § 115.544(b)(2)(A) - (J) (relating to Inspection, Monitoring, and Testing Requirements), for monitoring (as appropriate to the control device)

(ix) Title 30 TAC § 115.544(b)(3), (b)(4) and (b)(6) (relating to Inspection, Monitoring, and Testing Requirements), for VOC concentration or lower explosive limit threshold monitoring

(x) Title 30 TAC § 115.544(c), and (c)(1) - (c)(3) (relating to Inspection, Monitoring, and Testing Requirements), for testing of control devices used to comply with 30 TAC § 115.542(a)(1)

(xi) Title 30 TAC § 115.545(1) - (7), and (9) - (13) (relating to Approved Test Methods)

(xii) Title 30 TAC § 115.546(a), (a)(1) and (a)(3) (relating to Recordkeeping and Notification Requirements), for recordkeeping

(xiii) Title 30 TAC § 115.546(a)(2) and (a)(2)(A) - (J) (relating to Recordkeeping and Notification Requirements), for recordkeeping (as appropriate to the control device)

(xiv) Title 30 TAC § 115.546(a)(4) (relating to Recordkeeping and Notification Requirements), for recordkeeping of testing of control devices used to comply with 30 TAC § 115.542(a)(1)

(xv) Title 30 TAC § 115.546(b) (relating to Recordkeeping and Notification Requirements), for notification

D. For the degassing of VOC marine vessels that have sustained damage which prevents a cargo tank's opening from being properly secured, the onboard vapor recovery system to be inoperative, or the pressure/vacuum relief valves from operating within certified limits as specified by a classification society or flag state, the permit holder shall comply with the following requirements:

(i) Title 30 TAC § 115.544(a), (a)(1) and (a)(2) (relating to Inspection, Monitoring and Inspection Requirements)

(ii) Title 30 TAC § 115.547(5) (relating to Exemptions)

5. The permit holder shall comply with the following requirements for units subject to any subpart of 40 CFR Part 60, unless otherwise stated in the applicable subpart:

A. Title 40 CFR § 60.7 (relating to Notification and Recordkeeping)

B. Title 40 CFR § 60.8 (relating to Performance Tests)

C. Title 40 CFR § 60.11 (relating to Compliance with Standards and Maintenance Requirements)

D. Title 40 CFR § 60.12 (relating to Circumvention)

E. Title 40 CFR § 60.13 (relating to Monitoring Requirements)

F. Title 40 CFR § 60.14 (relating to Modification)

G. Title 40 CFR § 60.15 (relating to Reconstruction)

H. Title 40 CFR § 60.19 (relating to General Notification and Reporting Requirements)

6. The permit holder shall comply with the following requirements for units subject to any subpart of 40 CFR Part 61, unless otherwise stated in the applicable subpart:

A. Title 40 CFR § 61.05 (relating to Prohibited Activities)

B. Title 40 CFR § 61.07 (relating to Application for Approval of Construction or Modification)

C. Title 40 CFR § 61.09 (relating to Notification of Start-up)

D. Title 40 CFR § 61.10 (relating to Source Reporting and Request Waiver)

E. Title 40 CFR § 61.12 (relating to Compliance with Standards and Maintenance Requirements)

F. Title 40 CFR § 61.13 (relating to Emissions Tests and Waiver of Emission Tests)

G. Title 40 CFR § 61.14 (relating to Monitoring Requirements)

H. Title 40 CFR § 61.15 (relating to Modification)

I. Title 40 CFR § 61.19 (relating to Circumvention)

7. For facilities where total annual benzene quantity from waste is less than 1 megagram per year and subject to emission standards in 40 CFR Part 61, Subpart FF, the permit holder shall comply with the following requirements:

A. Title 40 CFR § 61.355(a)(1)(iii), (a)(2), (a)(5)(i) - (ii), (a)(6), (b), and (c)(1) - (3) (relating to Test Methods, Procedures, and Compliance Provisions), for calculation procedures

B. Title 40 CFR § 61.356(a) (relating to Recordkeeping Requirements)

C. Title 40 CFR § 61.356(b), and (b)(1) (relating to Recordkeeping Requirements)

D. Title 40 CFR § 61.357(a), and (b) (relating to Reporting Requirements)

8. The permit holder shall comply with the requirements of 30 TAC Chapter 113, Subchapter C, § 113.100 for units subject to any subpart of 40 CFR Part 63, unless otherwise stated in the applicable subpart.

9. For the chemical manufacturing process specified in 40 CFR Part 63, Subpart F, the permit holder shall comply with 40 CFR § 63.103(a) (relating to General Compliance, Reporting, and Recordkeeping Provisions) (Title 30 TAC Chapter 113, Subchapter C, § 113.110 incorporated by reference).

10. For the chemical manufacturing facilities with a 40 CFR Part 63, Subpart G Group 2 wastewater stream, the permit holder shall comply with (Title 30 TAC Chapter 113, Subchapter C, § 113.120 incorporated by reference):

    A. Title 40 CFR § 63.132(a), (a)(1), and (a)(1)(i) (relating to Process Wastewater Provisions - General)

    B. Title 40 CFR § 63.146(b)(1) (relating to Process Wastewater Provisions - Reporting)

    C. Title 40 CFR § 63.147(b)(8) (relating to Process Wastewater Provisions - Recordkeeping)

11. For the chemical manufacturing facilities subject to leak detection requirements in 40 CFR Part 63, Subpart G, the permit holder shall comply with the following requirements (Title 30 TAC Chapter 113, Subchapter C, § 113.120 incorporated by reference):

    A. General Leak Detection Requirements:

        (i) Title 40 CFR § 63.148(d)(1) - (3), and (e) (relating to Leak Inspection Provisions)

        (ii) Title 40 CFR § 63.148(c), (g), (g)(2), (h), and (h)(2) (relating to Leak Inspection Provisions), for monitoring and testing requirements

        (iii) Title 40 CFR §§ 63.148(g)(2), (h)(2), (i)(1) - (2), (i)(4)(i) - (viii), (i)(5), and 63.152(a)(1) - (5), for recordkeeping requirements

        (iv) Title 40 CFR §§ 63.148(j), 63.151(a)(6)(i) - (iii), (b)(1) - (2), (j)(1) - (3), 63.152(a)(1) - (5), (b), (b)(1)(i) - (ii), and (b)(4), for reporting requirements

    B. For closed vent system or vapor collection systems constructed of hard piping:

        (i) Title 40 CFR § 63.148(b)(1)(ii) (relating to Leak Inspection Provisions), for monitoring and testing requirements

        (ii) Title 40 CFR § 63.148(i)(6) (relating to Leak Inspection Provisions), for recordkeeping requirements

12. For the operations pertaining to the loading and unloading of marine tank vessels specified in 40 CFR Part 63, Subpart Y, the permit holder shall comply with the following requirements (Title 30 TAC Chapter 113, Subchapter C, § 113.300 incorporated by reference):

    A. Title 40 CFR § 63.560(c) (relating to Designation of Affected Source), for applicability of the General Provisions of Subpart A

    B. Title 40 CFR § 63.563(a)(4) (relating to Compliance and Performance Testing), for vapor tightness requirements of the marine vessels

    C. Title 40 CFR § 63.564(a)(1) and (d) (relating to Monitoring Requirements)

D. Title 40 CFR § 63.565(a) (relating to Test Methods and Procedures), for performance testing requirements

E. Title 40 CFR § 63.565(c) (relating to Test Methods and Procedures), for vapor tightness requirements of the marine vessels

F. Title 40 CFR § 63.566 (relating to Construction and Reconstruction)

G. Title 40 CFR § 63.567(a) - (b) and (h) - (i) (relating to Reporting and Recordkeeping Requirements)

Additional Monitoring Requirements

13. Unless otherwise specified, the permit holder shall comply with the compliance assurance monitoring requirements as specified in the attached "CAM Summary" upon issuance of the permit. In addition, the permit holder shall comply with the following:

A. The permit holder shall comply with the terms and conditions contained in 30 TAC § 122.147 (General Terms and Conditions for Compliance Assurance Monitoring).

B. The permit holder shall report, consistent with the averaging time identified in the "CAM Summary," deviations as defined by the deviation limit in the "CAM Summary." Any monitoring data below a minimum limit or above a maximum limit, that is collected in accordance with the requirements specified in 40 CFR § 64.7(c), shall be reported as a deviation. Deviations shall be reported according to 30 TAC § 122.145 (Reporting Terms and Conditions).

C. The permit holder may elect to collect monitoring data on a more frequent basis and average the data, consistent with the averaging time specified in the "CAM Summary," for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis. In no event shall data be collected and used in particular instances in order to avoid reporting deviations. All monitoring data shall be collected in accordance with the requirements specified in 40 CFR § 64.7(c).

D. The permit holder shall operate the monitoring, identified in the attached "CAM Summary," in accordance with the provisions of 40 CFR § 64.7.

E. The permit holder shall comply with either of the following requirements for any capture system associated with the VOC control device subject to CAM. If the results of the following inspections indicate that the capture system is not working properly, the permit holder shall promptly take necessary corrective actions:

(i) Once a year the permit holder shall inspect the capture system in compliance of CAM for leaks in accordance with 40 CFR Part 60, Appendix A, Test Method 21. Leaks shall be indicated by an instrument reading greater than or equal to 500 ppm above background or as defined by the underlying applicable requirement; or

(ii) Once a month, the permit holder shall conduct a visual, audible, and/or olfactory inspection of the capture system in compliance of CAM to detect leaking components.

F. The permit holder shall comply with the requirements of 40 CFR § 70.6(a)(3)(ii)(A) and 30 TAC § 122.144(1)(A)-(F) for documentation of all required inspections.

14. The permit holder shall comply with the periodic monitoring requirements as specified in the attached "Periodic Monitoring Summary" upon issuance of the permit. Except for, as applicable, monitoring malfunctions, associated repairs, and required quality assurance or control activities (including, as applicable, calibration checks and required zero and span adjustments), the permit holder shall conduct all monitoring in continuous operation (or shall collect data at all required intervals) at all times that the pollutant-specific emissions unit is operating. The permit holder may elect to collect monitoring data on a more frequent basis and average the data, consistent with the averaging time specified in the "Periodic Monitoring Summary," for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis. In no event shall data be collected and used in particular instances to avoid reporting deviations. Deviations shall be reported according to 30 TAC § 122.145 (Reporting Terms and Conditions).

New Source Review Authorization Requirements

15. Permit holder shall comply with the requirements of New Source Review authorizations issued or claimed by the permit holder for the permitted area, including permits, permits by rule, standard permits, flexible permits, special permits, permits for existing facilities including Voluntary Emissions Reduction Permits and Electric Generating Facility Permits issued under 30 TAC Chapter 116, Subchapter I, or special exemptions referenced in the New Source Review Authorization References attachment. These requirements:

    A. Are incorporated by reference into this permit as applicable requirements

    B. Shall be located with this operating permit

    C. Are not eligible for a permit shield

16. The permit holder shall comply with the general requirements of 30 TAC Chapter 106, Subchapter A or the general requirements, if any, in effect at the time of the claim of any PBR.

17. The permit holder shall maintain records to demonstrate compliance with any emission limitation or standard that is specified in a permit by rule (PBR) or Standard Permit listed in the New Source Review Authorizations attachment. The records shall yield reliable data from the relevant time period that are representative of the emission unit's compliance with the PBR or Standard Permit. These records may include, but are not limited to, production capacity and throughput, hours of operation, safety data sheets (SDS), chemical composition of raw materials, speciation of air contaminant data, engineering calculations, maintenance records, fugitive data, performance tests, capture/control device efficiencies, direct pollutant monitoring (CEMS, COMS, or PEMS), or control device parametric monitoring. These records shall be made readily accessible and available as required by 30 TAC § 122.144. Any monitoring or recordkeeping data indicating noncompliance with the PBR or Standard Permit shall be considered and reported as a deviation according to 30 TAC § 122.145 (Reporting Terms and Conditions).

Compliance Requirements

18. The permit holder shall certify compliance in accordance with 30 TAC § 122.146. The permit holder shall comply with 30 TAC § 122.146 using at a minimum, but not limited to, the continuous or intermittent compliance method data from monitoring, recordkeeping, reporting, or testing required by the permit and any other credible evidence or information. The certification period may not exceed 12 months and the certification must be submitted within 30 days after the end of the period being certified.

19. Use of Emission Credits to comply with applicable requirements:

    A. Unless otherwise prohibited, the permit holder may use emission credits to comply with the following applicable requirements listed elsewhere in this permit:

        (i) Title 30 TAC Chapter 115

        (ii) Title 30 TAC Chapter 117

        (iii) Offsets for Title 30 TAC Chapter 116

    B. The permit holder shall comply with the following requirements in order to use the emission credits to comply with the applicable requirements:

        (i) The permit holder must notify the TCEQ according to 30 TAC § 101.306(c)-(d)

        (ii) The emission credits to be used must meet all the geographic, timeliness, applicable pollutant type, and availability requirements listed in 30 TAC Chapter 101, Subchapter H, Division 1

        (iii) The executive director has approved the use of the credit according to 30 TAC § 101.306(c)-(d)

        (iv) The permit holder keeps records of the use of credits towards compliance with the applicable requirements in accordance with 30 TAC § 101.302(g) and 30 TAC Chapter 122

        (v) Title 30 TAC § 101.305 (relating to Emission Reductions Achieved Outside the United States)

20. Use of Discrete Emission Credits to comply with the applicable requirements:

    A. Unless otherwise prohibited, the permit holder may use discrete emission credits to comply with the following applicable requirements listed elsewhere in this permit:

        (i) Title 30 TAC Chapter 115

        (ii) Title 30 TAC Chapter 117

        (iii) If applicable, offsets for Title 30 TAC Chapter 116

(iv) Temporarily exceed state NSR permit allowables

B. The permit holder shall comply with the following requirements in order to use the credit to comply with the applicable requirements:

(i) The permit holder must notify the TCEQ according to 30 TAC § 101.376(d)

(ii) The discrete emission credits to be used must meet all the geographic, timeliness, applicable pollutant type, and availability requirements listed in 30 TAC Chapter 101, Subchapter H, Division 4

(iii) The executive director has approved the use of the discrete emission credits according to 30 TAC § 101.376(d)(1)(A)

(iv) The permit holder keeps records of the use of credits towards compliance with the applicable requirements in accordance with 30 TAC § 101.372(h) and 30 TAC Chapter 122

(v) Title 30 TAC § 101.375 (relating to Emission Reductions Achieved Outside the United States)

Risk Management Plan

21. For processes subject to 40 CFR Part 68 and specified in 40 CFR § 68.10, the permit holder shall comply with the requirements of the Accidental Release Prevention Provisions in 40 CFR Part 68. The permit holder shall submit to the appropriate agency either a compliance schedule for meeting the requirements of 40 CFR Part 68 by the date provided in 40 CFR § 68.10(a), or as part of the compliance certification submitted under this permit, a certification statement that the source is in compliance with all requirements of 40 CFR Part 68, including the registration and submission of a risk management plan.

Protection of Stratospheric Ozone

22. Permit holders at a site subject to Title VI of the FCAA Amendments shall meet the following requirements for protection of stratospheric ozone:

A. Any on site servicing, maintenance, and repair on refrigeration and nonmotor vehicle air-conditioning appliances using ozone-depleting refrigerants or non-exempt substitutes shall be conducted in accordance with 40 CFR Part 82, Subpart F. Permit holders shall ensure that repairs on or refrigerant removal from refrigeration and nonmotor vehicle air-conditioning appliances using ozone-depleting refrigerants are performed only by properly certified technicians using certified equipment. Records shall be maintained as required by 40 CFR Part 82, Subpart F.

B. The permit holder shall comply with 40 CFR Part 82, Subpart H related to Halon Emissions Reduction requirements as specified in 40 CFR § 82.250 - § 82.270 and the applicable Part 82 Appendices.

Permit Location

23. The permit holder shall maintain a copy of this permit and records related to requirements listed in this permit on site.

Permit Shield (30 TAC § 122.148)

24. A permit shield is granted for the emission units, groups, or processes specified in the attached "Permit Shield." Compliance with the conditions of the permit shall be deemed compliance with the specified potentially applicable requirements or specified potentially applicable state-only requirements listed in the attachment "Permit Shield." Permit shield provisions shall not be modified by the executive director until notification is provided to the permit holder. No later than 90 days after notification of a change in a determination made by the executive director, the permit holder shall apply for the appropriate permit revision to reflect the new determination. Provisional terms are not eligible for this permit shield. Any term or condition, under a permit shield, shall not be protected by the permit shield if it is replaced by a provisional term or condition or the basis of the term and condition changes.

Applicable Requirements Summary 33

Note: A "none" entry may be noted for some emission sources in this permit's "Applicable Requirements Summary" under the heading of "Monitoring and Testing Requirements" and/or "Recordkeeping Requirements" and/or "Reporting Requirements." Such a notation indicates that there are no requirements for the indicated emission source as identified under the respective column heading(s) for the stated portion of the regulation when the emission source is operating under the conditions of the specified SOP Index Number. However, other relevant requirements pursuant to 30 TAC Chapter 122 including Recordkeeping Terms and Conditions (§ 122.144), Reporting Terms and Conditions (§ 122.145), and Compliance Certification Terms and Conditions (§ 122.146) continue to apply.

Periodic Monitoring Summary 101

CAM Summary

Unit/Group/Process Information	
ID No.: GRPFGVE3	
Control Device ID No.: F4HF41	Control Device Type: Thermal Incinerator (Direct Flame Incinerator/Regenerative Thermal Oxidizer)
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Vent Gas Controls	SOP Index No.: R5121-2
Pollutant: VOC	Main Standard: § 115.121(a)(2)
Monitoring Information	
Indicator: Combustion Temperature / Exhaust Gas Temperature	
Minimum Frequency: once per day	
Averaging Period: n/a*	
Deviation Limit: It is a deviation if the firebox temperature is less than 1704 degree Fahrenheit while waste gas is vented to the incinerator.	
CAM Text: The monitoring device should be installed in the combustion chamber or immediately downstream of the combustion chamber. Each monitoring device shall be calibrated at a frequency in accordance with the manufacturer's specifications, other written procedures that provide an adequate assurance that the device is calibrated accurately, or at least annually, whichever is more frequent, and shall be accurate to within one of the following: ± 0.75% of the temperature being measured expressed in degrees Celsius; or ± 2.5 degrees Celsius.	

*The permit holder may elect to collect monitoring data on a more frequent basis and calculate the average as specified by the minimum frequency, for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis and shall not be collected and used in particular instances to avoid reporting deviations.

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: F8-RGN	
Control Device ID No.: F8-BOIL	Control Device Type: Steam Generating Unit (Boiler)/Process Heater (Design heat input is less than 44MW)
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 111, Visible Emissions	SOP Index No.: R1111-F8-9
Pollutant: PM (OPACITY)	Main Standard: § 111.111(a)(1)(C)
Monitoring Information	
Indicator: Visible Emissions	
Minimum Frequency: Once per week	
Averaging Period: n/a	
Deviation Limit: It is a deviation if visible emissions are observed.	
Periodic Monitoring Text: Visible emissions observations shall be made and recorded. Note that to properly determine the presence of visible emissions, all sources must be in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 miles, away from the emission source during the observation. The observer shall select a position where the sun is not directly in the observer's eyes. If the observations cannot be conducted due to weather conditions, the date, time, and specific weather conditions shall be recorded. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. If visible emissions are observed, the permit holder shall report a deviation. As an alternative, the permit holder may determine the opacity consistent with Test Method 9, as soon as practicable, but no later than 24 hours after observing visible emissions. If the result of the Test Method 9 is an opacity above the corresponding opacity limit, the permit holder shall report a deviation.	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: V-F8-BOIL	
Control Device ID No.: F8-BOIL	Control Device Type: Steam Generating Unit (Boiler)/Process Heater (Design heat input is less than 44MW)
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Vent Gas Controls	SOP Index No.: R5121-F8
Pollutant: VOC	Main Standard: § 115.122(a)(2)
Monitoring Information	
Indicator: Combustion Temperature / Exhaust Gas Temperature	
Minimum Frequency: Once per week	
Averaging Period: n/a*	
Deviation Limit: It is a deviation if the combustion temperature is less than 410 degrees Fahrenheit.	
Periodic Monitoring Text: Measure and record the combustion temperature in the combustion chamber or immediately downstream of the combustion chamber into which the volatile organic compound is introduced. Any monitoring data below the minimum limit shall be considered and reported as a deviation.	

*The permit holder may elect to collect monitoring data on a more frequent basis and calculate the average as specified by the minimum frequency, for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis and shall not be collected and used in particular instances to avoid reporting deviations.

Unit/Group/Process Information	
ID No.: V-F-F8-6A	
Control Device ID No.: F8-BOIL	Control Device Type: Steam Generating Unit (Boiler)/Process Heater (Design heat input is less than 44MW)
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Vent Gas Controls	SOP Index No.: R5121-F8
Pollutant: VOC	Main Standard: § 115.122(a)(2)
Monitoring Information	
Indicator: Combustion Temperature / Exhaust Gas Temperature	
Minimum Frequency: Once per week	
Averaging Period: n/a*	
Deviation Limit: It is a deviation if the combustion temperature is less than 410 degrees Fahrenheit.	
Periodic Monitoring Text: Measure and record the combustion temperature in the combustion chamber or immediately downstream of the combustion chamber into which the volatile organic compound is introduced. Any monitoring data below the minimum limit shall be considered and reported as a deviation.	

*The permit holder may elect to collect monitoring data on a more frequent basis and calculate the average as specified by the minimum frequency, for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis and shall not be collected and used in particular instances to avoid reporting deviations.

Acronym List 135

Acronym List

The following abbreviations or acronyms may be used in this permit:

ACFM ..... actual cubic feet per minute
AMOC ..... alternate means of control
ARP ..... Acid Rain Program
ASTM ..... American Society of Testing and Materials
B/PA ..... Beaumont/Port Arthur (nonattainment area)
CAM ..... Compliance Assurance Monitoring
CD ..... control device
COMS ..... continuous opacity monitoring system
CVS ..... closed-vent system
D/FW ..... Dallas/Fort Worth (nonattainment area)
DR ..... Designated Representative
ElP ..... El Paso (nonattainment area)
EP ..... emission point
EPA ..... U.S. Environmental Protection Agency
EU ..... emission unit
FCAA Amendments ..... Federal Clean Air Act Amendments
FOP ..... federal operating permit
GF ..... grandfathered
gr/100 scf ..... grains per 100 standard cubic feet
HAP ..... hazardous air pollutant
H/G/B ..... Houston/Galveston/Brazoria (nonattainment area)
H_2S ..... hydrogen sulfide
ID No. ..... identification number
lb/hr ..... pound(s) per hour
MMBtu/hr ..... Million British thermal units per hour
MRRT ..... monitoring, recordkeeping, reporting, and testing
NA ..... nonattainment
N/A ..... not applicable
NADB ..... National Allowance Data Base
NO_x ..... nitrogen oxides
NSPS ..... New Source Performance Standard (40 CFR Part 60)
NSR ..... New Source Review
ORIS ..... Office of Regulatory Information Systems
Pb ..... lead
PBR ..... Permit By Rule
PM ..... particulate matter
ppmv ..... parts per million by volume
PSD ..... prevention of significant deterioration
RO ..... Responsible Official
SO_2 ..... sulfur dioxide
TCEQ ..... Texas Commission on Environmental Quality
TSP ..... total suspended particulate
TVP ..... true vapor pressure
U.S.C. ..... United States Code
VOC ..... volatile organic compound

[SEQ CHAPTER \H \R 1]FEDERAL OPERATING PERMIT

A FEDERAL OPERATING PERMIT IS HEREBY ISSUED TO
Linde Gas North America LLC

AUTHORIZING THE OPERATION OF
Carbon Monoxide Unit
Industrial Gases

LOCATED AT
Harris County, Texas
Latitude 29° 37' 17" Longitude 95° 3' 50"
Regulated Entity Number: RN103080487

This permit is issued in accordance with and subject to the Texas Clean Air Act (TCAA), Chapter 382 of the Texas Health and Safety Code and Title 30 Texas Administrative Code Chapter 122 (30 TAC Chapter 122), Federal Operating Permits. Under 30 TAC Chapter 122, this permit constitutes the permit holder's authority to operate the site and emission units listed in this permit. Operations of the site and emission units listed in this permit are subject to all additional rules or amended rules and orders of the Commission pursuant to the TCAA.

This permit does not relieve the permit holder from the responsibility of obtaining New Source Review authorization for new, modified, or existing facilities in accordance with 30 TAC Chapter 116, Control of Air Pollution by Permits for New Construction or Modification.

The site and emission units authorized by this permit shall be operated in accordance with 30 TAC Chapter 122, the general terms and conditions, special terms and conditions, and attachments contained herein.

This permit shall expire five years from the date of issuance. The renewal requirements specified in 30 TAC § 122.241 must be satisfied in order to renew the authorization to operate the site and emission units.

Permit No: O1329 Issuance Date: _____

Table of Contents

Section **Page**

[TOC \o "1-3" \h \z \t "SOP_Heading1,1,SOP_Heading2,2,SOP_Heading2 + Centered,2,SOP_Heading1 + Centered,1"]

General Terms and Conditions

The permit holder shall comply with all terms and conditions contained in 30 TAC § 122.143 (General Terms and Conditions), 30 TAC § 122.144 (Recordkeeping Terms and Conditions), 30 TAC § 122.145 (Reporting Terms and Conditions), and 30 TAC § 122.146 (Compliance Certification Terms and Conditions).

In accordance with 30 TAC § 122.144(1), records of required monitoring data and support information required by this permit, or any applicable requirement codified in this permit, are required to be maintained for a period of five years from the date of the monitoring report, sample, or application unless a longer data retention period is specified in an applicable requirement. The five year record retention period supersedes any less stringent retention requirement that may be specified in a condition of a permit identified in the New Source Review Authorization attachment.

If the permit holder chooses to demonstrate that this permit is no longer required, a written request to void this permit shall be submitted to the Texas Commission on Environmental Quality (TCEQ) by the Responsible Official in accordance with 30 TAC § 122.161(e). The permit holder shall comply with the permit's requirements, including compliance certification and deviation reporting, until notified by the TCEQ that this permit is voided.

The permit holder shall comply with 30 TAC Chapter 116 by obtaining a New Source Review authorization prior to new construction or modification of emission units located in the area covered by this permit.

All reports required by this permit must include in the submittal a cover letter which identifies the following information: company name, TCEQ regulated entity number, air account number (if assigned), site name, area name (if applicable), and Air Permits Division permit number(s).

[SEQ CHAPTER \h \r 1]Special Terms and Conditions:

Emission Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting

1. Permit holder shall comply with the following requirements:

    A. Emission units (including groups and processes) in the Applicable Requirements Summary attachment shall meet the limitations, standards, equipment specifications, monitoring, recordkeeping, reporting, testing, and other requirements listed in the Applicable Requirements Summary attachment to assure compliance with the permit.

    B. The textual description in the column titled "Textual Description" in the Applicable Requirements Summary attachment is not enforceable and is not deemed as a substitute for the actual regulatory language. The Textual Description is provided for information purposes only.

    C. A citation listed on the Applicable Requirements Summary attachment, which has a notation [G] listed before it, shall include the referenced section and subsection for all commission rules, or paragraphs for all federal and state regulations and all subordinate paragraphs, subparagraphs and clauses, subclauses, and items contained within the referenced citation as applicable requirements.

D. When a grouped citation, notated with a [G] in the Applicable Requirements Summary, contains multiple compliance options, the permit holder must keep records of when each compliance option was used.

E. Emission units subject to 40 CFR Part 63, Subparts EEE, EEEE, and ZZZZ as identified in the attached Applicable Requirements Summary table are subject to 30 TAC Chapter 113, Subchapter C, §§ 113.620, 113.880, and 113.1090, respectively, which incorporates the 40 CFR Part 63 Subpart by reference.

F. A VOC vent stream from MSSPROPVENT (included in the applicable requirements summary) is routed to a control device (ID: 57MN1147ST flare unit) located at an adjacent site for VOC destruction. The adjacent site, which is owned and operated by Arkema Inc., is operating under a Federal Operating Permit O1988.

G. For the purpose of generating emission reduction credits through 30 TAC Chapter 101, Subchapter H, Division 1 (Emission Credit Banking and Trading), the permit holder shall comply with the following requirements:

(i) Title 30 TAC § 101.302 (relating to General Provisions)

(ii) Title 30 TAC § 101.303 (relating to Emission Reduction Credit Generation Certification)

(iii) Title 30 TAC § 101.304 (relating to Mobile Emission Reduction Credit Generation and Certification)

(iv) Title 30 TAC § 101.309 (relating to Emission Credit Banking and Trading)

(v) The terms and conditions by which the emission limits are established to generate the reduction credit are applicable requirements of this permit

H. The permit holder shall comply with the following 30 TAC Chapter 101, Subchapter H, Division 3 (Mass Emission Cap and Trade Program) Requirements:

(i) Title 30 TAC § 101.352 (relating to General Provisions)

(ii) Title 30 TAC § 101.353 (relating to Allocation of Allowances)

(iii) Title 30 TAC § 101.354 (relating to Allowance Deductions)

(iv) Title 30 TAC § 101.356 (relating to Allowance Banking and Trading)

(v) Title 30 TAC § 101.358 (relating to Emission Monitoring and Compliance Demonstration)

(vi) Title 30 TAC § 101.359 (relating to Reporting)

(vii) Title 30 TAC § 101.360 (relating to Level of Activity Certification)

(viii) The terms and conditions by which the emission limits are established to meet or exceed the cap are applicable requirements of this permit

2. The permit holder shall comply with the following sections of 30 TAC Chapter 101 (General Air Quality Rules):

A. Title 30 TAC § 101.1 (relating to Definitions), insofar as the terms defined in this section are used to define the terms used in other applicable requirements

B. Title 30 TAC § 101.3 (relating to Circumvention)

C. Title 30 TAC § 101.8 (relating to Sampling), if such action has been requested by the TCEQ

D. Title 30 TAC § 101.9 (relating to Sampling Ports), if such action has been requested by the TCEQ

E. Title 30 TAC § 101.10 (relating to Emissions Inventory Requirements)

F. Title 30 TAC § 101.201 (relating to Emission Event Reporting and Recordkeeping Requirements)

G. Title 30 TAC § 101.211 (relating to Scheduled Maintenance, Start-up, and Shutdown Reporting and Recordkeeping Requirements)

H. Title 30 TAC § 101.221 (relating to Operational Requirements)

I. Title 30 TAC § 101.222 (relating to Demonstrations)

J. Title 30 TAC § 101.223 (relating to Actions to Reduce Excessive Emissions)

3. Permit holder shall comply with the following requirements of 30 TAC Chapter 111:

A. Visible emissions from stationary vents with a flow rate of less than 100,000 actual cubic feet per minute and constructed after January 31, 1972 that are not listed in the Applicable Requirements Summary attachment for 30 TAC Chapter 111, Subchapter A, Division 1 , shall not exceed 20% opacity averaged over a six-minute period. The permit holder shall comply with the following requirements for stationary vents at the site subject to this standard:

(i) Title 30 TAC § 111.111(a)(1)(B) (relating to Requirements for Specified Sources)

(ii) Title 30 TAC § 111.111(a)(1)(E)

(iii) Title 30 TAC § 111.111(a)(1)(F)(i), (ii), (iii), or (iv)

(iv) For emission units with vent emissions subject to 30 TAC § 111.111(a)(1)(B), complying with 30 TAC § 111.111(a)(1)(F)(ii), (iii), or (iv), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146. These periodic monitoring requirements do not apply to vents that are not capable of producing visible emissions such as vents that emit only colorless VOCs; vents from non-fuming liquids; vents that provide passive ventilation, such as plumbing vents; or vent emissions from any other source that does not obstruct the transmission of light. Vents, as specified in the "Applicable Requirements Summary" attachment, that are

subject to the emission limitation of 30 TAC § 111.111(a)(1)(B) are not subject to the following periodic monitoring requirements:

(1) An observation of stationary vents from emission units in operation shall be conducted at least once during each calendar quarter unless the emission unit is not operating for the entire quarter.

(2) For stationary vents from a combustion source, if an alternative to the normally fired fuel is fired for a period greater than or equal to 24 consecutive hours, the permit holder shall conduct an observation of the stationary vent for each such period to determine if visible emissions are present. If such period is greater than 3 months, observations shall be conducted once during each quarter. Supplementing the normally fired fuel with natural gas or fuel gas to increase the net heating value to the minimum required value does not constitute creation of an alternative fuel.

(3) Records of all observations shall be maintained.

(4) Visible emissions observations of emission units operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of emission units operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions observations shall be made during times when the activities described in 30 TAC § 111.111(a)(1)(E) are not taking place. Visible emissions shall be determined with each stationary vent in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each stationary vent during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

(5) Compliance Certification:

(a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(1) and (a)(1)(B).

(b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the

appropriate opacity test specified in 30 TAC § 111.111(a)(1)(F) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

(c) Some vents may be subject to multiple visible emission or monitoring requirements. All credible data must be considered when certifying compliance with this requirement even if the observation or monitoring was performed to demonstrate compliance with a different requirement.

B. Certification of opacity readers determining opacities under Method 9 (as outlined in 40 CFR Part 60, Appendix A) to comply with opacity monitoring requirements shall be accomplished by completing the Visible Emissions Evaluators Course, or approved agency equivalent, no more than 180 days before the opacity reading.

C. For emission units with contributions from uncombined water, the permit holder shall comply with the requirements of 30 TAC § 111.111(b).

D. Emission limits on nonagricultural processes, except for the steam generators specified in 30 TAC § 111.153, shall comply with the following requirements:

(i) Emissions of PM from any source may not exceed the allowable rates as required in 30 TAC § 111.151(a) (relating to Allowable Emissions Limits)

(ii) Sources with an effective stack height (h_e) less than the standard effective stack height (H_e), must reduce the allowable emission level by multiplying it by $[h_e/H_e]^2$ as required in 30 TAC § 111.151(b)

(iii) Effective stack height shall be calculated by the equation specified in 30 TAC § 111.151(c)

E. Outdoor burning, as stated in 30 TAC § 111.201, shall not be authorized unless the following requirements are satisfied:

(i) Title 30 TAC § 111.205 (relating to Exception for Fire Training)

(ii) Title 30 TAC § 111.221 (relating to Responsibility for Consequences of Outdoor Burning)

4. For storage vessels maintaining working pressure as specified in 30 TAC Chapter 115, Subchapter B, Division 1: Storage of Volatile Organic Compounds, the permit holder shall comply with the requirements of 30 TAC § 115.112(e)(1).

5. The permit holder shall comply with the requirements of 30 TAC § 115.722(b) (relating to Site-wide Cap and Control Requirements) and the requirements of 30 TAC § 115.726(g) (relating to Recordkeeping and Reporting Requirements).

6. The permit holder shall comply with the following requirements of 30 TAC Chapter 115, Subchapter H, Division 1 for pressure relief devices not controlled by a flare:

   A. Title 30 TAC § 115.725(c)

   B. Title 30 TAC § 115.725(c)(1), (c)(1)(A) - (C)

   C. Title 30 TAC § 115.725(c)(2)

   D. Title 30 TAC § 115.725(c)(3), (c)(3)(A) - (E)

   E. Title 30 TAC § 115.725(c)(4)

   F. Title 30 TAC § 115.725(l)

   G. Title 30 TAC § 115.726(c), (c)(1) - (4)

7. The permit holder shall comply with the requirements of 30 TAC § 115.726(e)(3)(A) for vent streams having no potential to emit HRVOC.

8. The permit holder shall comply with the requirements of 30 TAC § 115.726(e)(3)(A) for vent streams from sources exempt under 30 TAC § 115.727(c)(3).

9. The permit holder shall comply with the requirements of 30 TAC § 115.761(b) (relating to Site-wide Cap) and the requirements of 30 TAC § 115.766(g) (relating to Recordkeeping and Reporting Requirements).

10. The permit holder shall comply with the requirements of 30 TAC Chapter 113, Subchapter C, § 113.100 for units subject to any subpart of 40 CFR Part 63, unless otherwise stated in the applicable subpart.

Additional Monitoring Requirements

11. The permit holder shall comply with the periodic monitoring requirements as specified in the attached "Periodic Monitoring Summary" upon issuance of the permit. Except for, as applicable, monitoring malfunctions, associated repairs, and required quality assurance or control activities (including, as applicable, calibration checks and required zero and span adjustments), the permit holder shall conduct all monitoring in continuous operation (or shall collect data at all required intervals) at all times that the pollutant-specific emissions unit is operating. The permit holder may elect to collect monitoring data on a more frequent basis and average the data, consistent with the averaging time specified in the "Periodic Monitoring Summary," for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis. In no event shall data be collected and used in particular instances to avoid reporting deviations. Deviations shall be reported according to 30 TAC § 122.145 (Reporting Terms and Conditions).

New Source Review Authorization Requirements

12. Permit holder shall comply with the requirements of New Source Review authorizations issued or claimed by the permit holder for the permitted area, including permits, permits by rule, standard permits, flexible permits, special permits, permits for existing facilities including Voluntary Emissions Reduction Permits and Electric Generating Facility Permits issued under 30 TAC Chapter 116, Subchapter I, or special exemptions referenced in the New Source Review Authorization References attachment. These requirements:

    A. Are incorporated by reference into this permit as applicable requirements

    B. Shall be located with this operating permit

    C. Are not eligible for a permit shield

13. The permit holder shall comply with the general requirements of 30 TAC Chapter 106, Subchapter A or the general requirements, if any, in effect at the time of the claim of any PBR.

14. The permit holder shall maintain records to demonstrate compliance with any emission limitation or standard that is specified in a permit by rule (PBR) or Standard Permit listed in the New Source Review Authorizations attachment. The records shall yield reliable data from the relevant time period that are representative of the emission unit's compliance with the PBR or Standard Permit. These records may include, but are not limited to, production capacity and throughput, hours of operation, safety data sheets (SDS), chemical composition of raw materials, speciation of air contaminant data, engineering calculations, maintenance records, fugitive data, performance tests, capture/control device efficiencies, direct pollutant monitoring (CEMS, COMS, or PEMS), or control device parametric monitoring. These records shall be made readily accessible and available as required by 30 TAC § 122.144. Any monitoring or recordkeeping data indicating noncompliance with the PBR or Standard Permit shall be considered and reported as a deviation according to 30 TAC § 122.145 (Reporting Terms and Conditions).

Compliance Requirements

15. The permit holder shall certify compliance in accordance with 30 TAC § 122.146. The permit holder shall comply with 30 TAC § 122.146 using at a minimum, but not limited to, the continuous or intermittent compliance method data from monitoring, recordkeeping, reporting, or testing required by the permit and any other credible evidence or information. The certification period may not exceed 12 months and the certification must be submitted within 30 days after the end of the period being certified.

16. Permit holder shall comply with the following 30 TAC Chapter 117 requirements:

    A. The permit holder shall comply with the compliance schedules and submit written notification to the TCEQ Executive Director as required in 30 TAC Chapter 117, Subchapter H, Division 1:

        (i) For sources in the Houston-Galveston-Brazoria Nonattainment area, 30 TAC § 117.9020:

(1) Title 30 TAC § 117.9020(2)(A), (C), and (D)

B. The permit holder shall comply with the Initial Control Plan unit listing requirement in 30 TAC § 117.350(c) and (c)(1).

C. The permit holder shall comply with the requirements of 30 TAC § 117.354 for Final Control Plan Procedures for Attainment Demonstration Emission Specifications and 30 TAC § 117.356 for Revision of Final Control Plan.

17. Use of Emission Credits to comply with applicable requirements:

A. Unless otherwise prohibited, the permit holder may use emission credits to comply with the following applicable requirements listed elsewhere in this permit:

(i) Title 30 TAC Chapter 115

(ii) Title 30 TAC Chapter 117

(iii) Offsets for Title 30 TAC Chapter 116

B. The permit holder shall comply with the following requirements in order to use the emission credits to comply with the applicable requirements:

(i) The permit holder must notify the TCEQ according to 30 TAC § 101.306(c)(2)

(ii) The emission credits to be used must meet all the geographic, timeliness, applicable pollutant type, and availability requirements listed in 30 TAC Chapter 101, Subchapter H, Division 1

(iii) The executive director has approved the use of the credit according to 30 TAC § 101.306(c)(2)

(iv) The permit holder keeps records of the use of credits towards compliance with the applicable requirements in accordance with 30 TAC § 101.302(g) and 30 TAC Chapter 122

(v) Title 30 TAC § 101.305 (relating to Emission Reductions Achieved Outside the United States)

18. Use of Discrete Emission Credits to comply with the applicable requirements:

A. Unless otherwise prohibited, the permit holder may use discrete emission credits to comply with the following applicable requirements listed elsewhere in this permit:

(i) Title 30 TAC Chapter 115

(ii) Title 30 TAC Chapter 117

(iii) If applicable, offsets for Title 30 TAC Chapter 116

(iv) Temporarily exceed state NSR permit allowables

B. The permit holder shall comply with the following requirements in order to use the credit to comply with the applicable requirements:

(i) The permit holder must notify the TCEQ according to 30 TAC § 101.376(d)

(ii) The discrete emission credits to be used must meet all the geographic, timeliness, applicable pollutant type, and availability requirements listed in 30 TAC Chapter 101, Subchapter H, Division 4

(iii) The executive director has approved the use of the discrete emission credits according to 30 TAC § 101.376(d)(1)(A)

(iv) The permit holder keeps records of the use of credits towards compliance with the applicable requirements in accordance with 30 TAC § 101.372(h) and 30 TAC Chapter 122

(v) Title 30 TAC § 101.375 (relating to Emission Reductions Achieved Outside the United States)

Permit Location

19. The permit holder shall maintain a copy of this permit and records related to requirements listed in this permit on site.

Permit Shield (30 TAC § 122.148)

20. A permit shield is granted for the emission units, groups, or processes specified in the attached "Permit Shield." Compliance with the conditions of the permit shall be deemed compliance with the specified potentially applicable requirements or specified potentially applicable state-only requirements listed in the attachment "Permit Shield." Permit shield provisions shall not be modified by the executive director until notification is provided to the permit holder. No later than 90 days after notification of a change in a determination made by the executive director, the permit holder shall apply for the appropriate permit revision to reflect the new determination. Provisional terms are not eligible for this permit shield. Any term or condition, under a permit shield, shall not be protected by the permit shield if it is replaced by a provisional term or condition or the basis of the term and condition changes.

Unit Summary 12

Applicable Requirements Summary 15

Note: A "none" entry may be noted for some emission sources in this permit's "Applicable Requirements Summary" under the heading of "Monitoring and Testing Requirements" and/or "Recordkeeping Requirements" and/or "Reporting Requirements." Such a notation indicates that there are no requirements for the indicated emission source as identified under the respective column heading(s) for the stated portion of the regulation when the emission source is operating under the conditions of the specified SOP Index Number. However, other relevant requirements pursuant to 30 TAC Chapter 122 including Recordkeeping Terms and Conditions (30 TAC § 122.144), Reporting Terms and Conditions (30 TAC § 122.145), and Compliance Certification Terms and Conditions (30 TAC § 122.146) continue to apply.

Unit Summary

Unit/Group/ Process ID No.	Unit Type	Group/Inclusive Units	SOP Index No.	Regulation	Requirement Driver
51ANAL	EMISSION POINTS/ STATIONARY VENTS/ PROCESS VENTS	N/A	R5727	30 TAC Chapter 115, HRVOC Vent Gas	No changing attributes.
51ANAL	EMISSION POINTS/ STATIONARY VENTS/ PROCESS VENTS	N/A	R5127	30 TAC Chapter 115, Vent Gas Controls	No changing attributes.
51COHEAD	EMISSION POINTS/ STATIONARY VENTS/ PROCESS VENTS	N/A	R5127-1	30 TAC Chapter 115, Vent Gas Controls	Combined 24-Hour VOC Weight = Combined VOC weight is less than or equal to 100 pounds (45.4 kg)., Alternate Control Requirement = Alternate control is not used., Control Device Type = Smokeless flare
51COHEAD	EMISSION POINTS/ STATIONARY VENTS/ PROCESS VENTS	N/A	R5127-2	30 TAC Chapter 115, Vent Gas Controls	Combined 24-Hour VOC Weight = Combined VOC weight is greater than 100 pounds (45.4 kg)., VOC Concentration = VOC concentration is less than 612 ppmv.
51MH5A	PROCESS HEATERS/ FURNACES	N/A	R2009-01	30 TAC Chapter 112, Sulfur Compounds	No changing attributes.
51MH5A	PROCESS HEATERS/ FURNACES	N/A	R7310-01	30 TAC Chapter 117, Subchapter B	No changing attributes.
51MH5A	BOILERS/ STEAM GENERATORS/ STEAM GENERATING UNITS	N/A	63EEE	40 CFR Part 63, Subpart EEE	No changing attributes.
51SK01	SOLVENT DEGREASING MACHINES	N/A	R5412-01	30 TAC Chapter 115, Degreasing Processes	No changing attributes.

Unit Summary

Unit/Group/ Process ID No.	Unit Type	Group/Inclusive Units	SOP Index No.	Regulation	Requirement Driver
51SUMP59	STORAGE TANKS/ VESSELS	N/A	R5111	30 TAC Chapter 115, Storage of VOCs	No changing attributes.
51V1206	STORAGE TANKS/ VESSELS	N/A	R5111	30 TAC Chapter 115, Storage of VOCs	No changing attributes.
51V655	STORAGE TANKS/ VESSELS	N/A	R5112-001	30 TAC Chapter 115, Storage of VOCs	Control Device Type = Other vapor destruction unit
51V655	STORAGE TANKS/ VESSELS	N/A	R5112-002	30 TAC Chapter 115, Storage of VOCs	Control Device Type = Flare
51V671	STORAGE TANKS/ VESSELS	N/A	R5111	30 TAC Chapter 115, Storage of VOCs	No changing attributes.
51V704	STORAGE TANKS/ VESSELS	N/A	R5112-1	30 TAC Chapter 115, Storage of VOCs	No changing attributes.
51V704	STORAGE TANKS/ VESSELS	N/A	63EEEE	40 CFR Part 63, Subpart EEEE	No changing attributes.
51V778	STORAGE TANKS/ VESSELS	N/A	R5111	30 TAC Chapter 115, Storage of VOCs	No changing attributes.
GER-0011	EMISSION POINTS/ STATIONARY VENTS/ PROCESS VENTS	N/A	R1111	30 TAC Chapter 111, Visible Emissions	No changing attributes.
GER-0011	SRIC ENGINES	N/A	R7303	30 TAC Chapter 117, Subchapter B	No changing attributes.
GER-0011	SRIC ENGINES	N/A	63ZZZZ	40 CFR Part 63, Subpart ZZZZ	No changing attributes.
MSSMEOHTRK	LOADING/UNLOADING OPERATIONS	N/A	R5217	30 TAC Chapter 115, Loading and Unloading of VOC	No changing attributes.
MSSPROPVENT	EMISSION POINTS/ STATIONARY VENTS/ PROCESS VENTS	N/A	R5720	30 TAC Chapter 115, HRVOC Vent Gas	No changing attributes.

Additional Monitoring Requirements

Periodic Monitoring Summary 36

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: 51MH5A	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 112, Sulfur Compounds	SOP Index No.: R2009-01
Pollutant: SO_2	Main Standard: § 112.9(c)
Monitoring Information	
Indicator: Sulfur Content	
Minimum Frequency: Quarterly	
Averaging Period: N/A	
Deviation Limit: The maximum sulfur concentrations are: --the natural gas to main burner and atomizer is 165 ppmw or 19.43 ppmv; --the liquid waste methanol stream is 115 ppmw; --the vent gas composition (slip analyzers V-655, V-620) is 20 ppmv.	
Periodic Monitoring Text: The maximum sulfur concentration will be 26.96 ppmv, if all three fuels contain the maximum possible sulfur content before dilution with combustion air. Natural gas sulfur content will be determined quarterly through either Vendor Certificate of Analysis, 3rd party lab analysis, or Draeger Tube sampling. Waste methanol sulfur content will be analyzed quarterly through a 3rd party lab analysis, or by inhouse lab analysis. Vent gas sulfur content will be determined quarterly through either 3rd party lab analysis, or Draeger Tube sampling.	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: 51SK01	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Degreasing Processes	SOP Index No.: R5412-01
Pollutant: VOC	Main Standard: § 115.412(1)
Monitoring Information	
Indicator: Visual Inspection	
Minimum Frequency: Monthly	
Averaging Period: n/a	
Deviation Limit: Any monitoring data which indicates that the cold cleaner is not in compliance with the applicable requirements of § 115.412(1)(A)-(F) shall be considered and reported as a deviation.	
Periodic Monitoring Text: Inspect equipment and record data monthly to ensure compliance with any applicable requirements in § 115.412(1)(A)-(F). Any monitoring data which indicates that the cold cleaner is not in compliance with the applicable requirements of § 115.412(1)(A)-(F) shall be considered and reported as a deviation.	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: GER-0011	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 111, Visible Emissions	SOP Index No.: R1111
Pollutant: PM (OPACITY)	Main Standard: § 111.111(a)(1)(B)
Monitoring Information	
Indicator: Visible Emissions	
Minimum Frequency: once per quarter	
Averaging Period: n/a	
Deviation Limit: 20% Opacity	
Periodic Monitoring Text: Visible emissions observations shall be made and recorded. Note that to properly determine the presence of visible emissions, all sources must be in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 miles, away from the emission source during the observation. The observer shall select a position where the sun is not directly in the observer's eyes. If the observations cannot be conducted due to weather conditions, the date, time, and specific weather conditions shall be recorded. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. If visible emissions are observed, the permit holder shall report a deviation. As an alternative, the permit holder may determine the opacity consistent with Test Method 9, as soon as practicable, but no later than 24 hours after observing visible emissions. If a Test Method 9 is performed, the opacity limit is the corresponding opacity limit associated with the particulate matter standard in the underlying applicable requirement. If there is no corresponding opacity limit in the underlying applicable requirement, the maximum opacity will be established using the most recent performance test. If the result of the Test Method 9 is opacity above the corresponding opacity limit (associated with the particulate matter standard in the underlying applicable requirement or as identified as a result of a previous performance test to establish the maximum opacity limit), the permit holder shall report a deviation.	

Permit Shield

Permit Shield 40

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
51COFUG	N/A	30 TAC Chapter 115, HRVOC Fugitive Emissions	Not a process unit or process within a petroleum refinery; synthetic organic chemical, polymer, resin, or methyl tert-butyl ether manufacturing process; or natural gas/gasoline processing operation.
51COFUG	N/A	30 TAC Chapter 115, Pet. Refinery & Petrochemicals	Not a process unit or process within a petroleum refinery; synthetic organic chemical, polymer, resin, or methyl tert-butyl ether manufacturing process; or natural gas/gasoline processing operation.
51MJ151	N/A	30 TAC Chapter 117, Subchapter B	Emissions from the eductor result from the combustion of natural gas and is used only to preheat the shell of the reactor vessel. The eductor does not fall into any of the categories of combustion units in 117.300.
51MJ152	N/A	30 TAC Chapter 117, Subchapter B	Emissions from the eductor result from the combustion of natural gas and is used only to preheat the shell of the reactor vessel. The eductor does not fall into any of the categories of combustion units in 117.300.
51MJ153	N/A	30 TAC Chapter 117, Subchapter B	Emissions from the eductor result from the combustion of natural gas and is used only to preheat the shell of the reactor vessel. The eductor does not fall into any of the categories of combustion units in 117.300.
51SUMP59	N/A	40 CFR Part 60, Subpart K	The storage capacity has a design capacity less than 40,000 gallons.
51SUMP59	N/A	40 CFR Part 60, Subpart Ka	The storage capacity has a design capacity less than 40,000 gallons.
51SUMP59	N/A	40 CFR Part 60, Subpart Kb	The storage capacity has a design capacity less than 75

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Acronym List **50**

Acronym List

The following abbreviations or acronyms may be used in this permit:

ACFM ..... actual cubic feet per minute
AMOC ..... alternate means of control
ARP ..... Acid Rain Program
ASTM ..... American Society of Testing and Materials
B/PA ..... Beaumont/Port Arthur (nonattainment area)
CAM ..... Compliance Assurance Monitoring
CD ..... control device
COMS ..... continuous opacity monitoring system
CVS ..... closed-vent system
D/FW ..... Dallas/Fort Worth (nonattainment area)
DR ..... Designated Representative
ElP ..... El Paso (nonattainment area)
EP ..... emission point
EPA ..... U.S. Environmental Protection Agency
EU ..... emission unit
FCAA Amendments ..... Federal Clean Air Act Amendments
FOP ..... federal operating permit
GF ..... grandfathered
gr/100 scf ..... grains per 100 standard cubic feet
HAP ..... hazardous air pollutant
H/G/B ..... Houston/Galveston/Brazoria (nonattainment area)
H_2S ..... hydrogen sulfide
ID No. ..... identification number
lb/hr ..... pound(s) per hour
MMBtu/hr ..... Million British thermal units per hour
MRRT ..... monitoring, recordkeeping, reporting, and testing
NA ..... nonattainment
N/A ..... not applicable
NADB ..... National Allowance Data Base
NO_x ..... nitrogen oxides
NSPS ..... New Source Performance Standard (40 CFR Part 60)
NSR ..... New Source Review
ORIS ..... Office of Regulatory Information Systems
Pb ..... lead
PBR ..... Permit By Rule
PM ..... particulate matter
ppmv ..... parts per million by volume
PSD ..... prevention of significant deterioration
RO ..... Responsible Official
SO_2 ..... sulfur dioxide
TCEQ ..... Texas Commission on Environmental Quality
TSP ..... total suspended particulate
TVP ..... true vapor pressure
U.S.C. ..... United States Code
VOC ..... volatile organic compound

[SEQ CHAPTER \h \r 1]Statement of Basis of the Federal Operating Permit

Linde Gas North America LLC

Site Name: Carbon Monoxide Unit
Physical Location: 9502 Bayport Blvd
Nearest City: Pasadena
County: Harris

Permit Number: O1329
Project Type: Renewal

Standard Industrial Classification (SIC) Code: 2813
SIC Name: Industrial Gases

This Statement of Basis sets forth the legal and factual basis for the draft permit conditions in accordance with 30 TAC §122.201(a)(4). Per 30 TAC §§ 122.241 and 243, the permit holder has submitted an application under § 122.134 for permit renewal. This document may include the following information:

A description of the facility/area process description;
A basis for applying permit shields;
A list of the federal regulatory applicability determinations;
A table listing the determination of applicable requirements;
A list of the New Source Review Requirements;
The rationale for periodic monitoring methods selected;
The rationale for compliance assurance methods selected;
A compliance status; and
A list of available unit attribute forms.

Prepared on: October 5, 2016

Operating Permit
Basis of Determination

Permit Area Process Description
Synthesis gas, mainly carbon monoxide and hydrogen, is produced by the partial oxidation of natural gas. By-product carbon dioxide from the Ethylene Oxide and Vinyl Acetate Units is also used as a feed. Currently, three parallel reactor/waste heat exchanger trains produce the synthesis gas that feeds the downstream purification equipment.

High purity carbon monoxide product is produced from the synthesis gas using a Rectisol plant for the bulk removal of carbon dioxide, a molecular sieve station for the removal of trace amounts of carbon dioxide, and a Cold Box to separate the carbon monoxide product from the hydrogen. Most of the carbon dioxide that is removed in the Rectisol is recycled to the reactors by the CO_2 recycle compressor.

FOPs at Site
The "application area" consists of the emission units and that portion of the site included in the application and this permit. Multiple FOPs may be issued to a site in accordance with 30 TAC § 122.201(e). When there is only one area for the site, then the application information and permit will include all units at the site. Additional FOPs that exist at the site, if any, are listed below.

Additional FOPs: None

Major Source Pollutants
The table below specifies the pollutants for which the site is a major source:

Major Pollutants	VOC, NOX, HAPS, CO

Reading State of Texas's Federal Operating Permit

The Title V Federal Operating Permit (FOP) lists all state and federal air emission regulations and New Source Review (NSR) authorizations (collectively known as "applicable requirements") that apply at a particular site or permit area (in the event a site has multiple FOPs). **The FOP does not authorize new emissions or new construction activities.** The FOP begins with an introductory page which is common to all Title V permits. This page gives the details of the company, states the authority of the issuing agency, requires the company to operate in accordance with this permit and 30 Texas Administrative Code (TAC) Chapter 122, requires adherence with NSR requirements of 30 TAC Chapter 116, and finally indicates the permit number and the issuance date.

This is followed by the table of contents, which is generally composed of the following elements. Not all permits will have all of the elements.

- General Terms and Conditions
- Special Terms and Conditions
  - Emissions Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting
  - Additional Monitoring Requirements
  - New Source Review Authorization Requirements
  - Compliance Requirements
  - Protection of Stratosphere Ozone
  - Permit Location
  - Permit Shield (30 TAC § 122.148)
- Attachments
  - Applicable Requirements Summary
    - Unit Summary

        - Applicable Requirements Summary
    - Additional Monitoring Requirements
    - Permit Shield
    - New Source Review Authorization References
    - Compliance Plan
    - Alternative Requirements
- Appendix A
    - Acronym list

General Terms and Conditions

The General Terms and Conditions are the same and appear in all permits. The first paragraph lists the specific citations for 30 TAC Chapter 122 requirements that apply to all Title V permit holders. The second paragraph describes the requirements for record retention. The third paragraph provides details for voiding the permit, if applicable. The fourth paragraph states that the permit holder shall comply with the requirements of 30 TAC Chapter 116 by obtaining a New Source Review authorization prior to new construction or modification of emission units located in the area covered by this permit. The fifth paragraph provides details on submission of reports required by the permit.

Special Terms and Conditions

Emissions Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting. The TCEQ has designated certain applicable requirements as site-wide requirements. A site-wide requirement is a requirement that applies uniformly to all the units or activities at the site. Units with only site-wide requirements are addressed on Form OP-REQ1 and are not required to be listed separately on a OP-UA Form or Form OP-SUM. Form OP-SUM must list all units addressed in the application and provide identifying information, applicable OP-UA Forms, and preconstruction authorizations. The various OP-UA Forms provide the characteristics of each unit from which applicable requirements are established. Some exceptions exist as a few units may have both site-wide requirements and unit specific requirements.

Other conditions. The other entries under special terms and conditions are in general terms referring to compliance with the more detailed data listed in the attachments.

Attachments

Applicable Requirements Summary. The first attachment, the Applicable Requirements Summary, has two tables, addressing unit specific requirements. The first table, the Unit Summary, includes a list of units with applicable requirements, the unit type, the applicable regulation, and the requirement driver. The intent of the requirement driver is to inform the reader that a given unit may have several different operating scenarios and the differences between those operating scenarios.

The applicable requirements summary table provides the detailed citations of the rules that apply to the various units. For each unit and operating scenario, there is an added modifier called the "index number," detailed citations specifying monitoring and testing requirements, recordkeeping requirements, and reporting requirements. The data for this table are based on data supplied by the applicant on the OP-SUM and various OP-UA forms.

Additional Monitoring Requirement. The next attachment includes additional monitoring the applicant must perform to ensure compliance with the applicable standard. Compliance assurance monitoring (CAM) is often required to provide a reasonable assurance of compliance with applicable emission limitations/standards for large emission units that use control devices to achieve compliance with applicant requirements. When necessary, periodic monitoring (PM) requirements are specified for certain parameters (i.e. feed rates, flow rates, temperature, fuel type and consumption, etc.) to determine if a term and condition or emission unit is operating within specified limits to control emissions. These additional monitoring approaches may be required for two reasons. First, the applicable rules do not adequately specify monitoring requirements (exception- Maximum Achievable Control Technology Standards (MACTs) generally have sufficient

monitoring), and second, monitoring may be required to fill gaps in the monitoring requirements of certain applicable requirements. In situations where the NSR permit is the applicable requirement requiring extra monitoring for a specific emission unit, the preferred solution is to have the monitoring requirements in the NSR permit updated so that all NSR requirements are consolidated in the NSR permit.

Permit Shield. A permit may or may not have a permit shield, depending on whether an applicant has applied for, and justified the granting of, a permit shield. A permit shield is a special condition included in the permit document stating that compliance with the conditions of the permit shall be deemed compliance with the specified potentially applicable requirement(s) or specified applicable state-only requirement(s).

New Source Review Authorization References. All activities which are related to emissions in the state of Texas must have a NSR authorization prior to beginning construction. This section lists all units in the permit and the NSR authorization that allowed the unit to be constructed or modified. Units that do not have unit specific applicable requirements other than the NSR authorization do not need to be listed in this attachment. While NSR permits are not physically a part of the Title V permit, they are legally incorporated into the Title V permit by reference. Those NSR permits whose emissions exceed certain PSD/NA thresholds must also undergo a Federal review of federally regulated pollutants in addition to review for state regulated pollutants.

Compliance Plan. A permit may have a compliance schedule attachment for listing corrective actions plans for any emission unit that is out of compliance with an applicable requirement.

Alternative Requirements. This attachment will list any alternative monitoring plans or alternative means of compliance for applicable requirements that have been approved by the EPA Administrator and/or the TCEQ Executive Director.

Appendix A

Acronym list. This attachment lists the common acronyms used when discussing the FOPs.

Stationary vents subject to 30 TAC Chapter 111, Subchapter A, § 111.111(a)(1)(B) addressed in the Special Terms and Conditions

The site contains stationary vents with a flowrate less than 100,000 actual cubic feet per minute (acfm) and constructed after January 31, 1972 which are limited, over a six-minute average, to 20% opacity as required by 30 TAC § 111.111(a)(1)(B). As a site may have a large number of stationary vents that fall into this category, they are not required to be listed individually in the permit's Applicable Requirement Summary. This is consistent with EPA's White Paper for Streamlined Development of Part 70 Permit Applications, July 10, 1995, that states that requirements that apply identically to emission units at a site can be treated on a generic basis such as source-wide opacity limits.

Periodic monitoring is specified in Special Term and Condition 3.A for stationary vents subject to 30 TAC § 111.111(a)(1)(B) to verify compliance with the 20% opacity limit. These vents are not expected to produce visible emissions during normal operation. The TCEQ evaluated the probability of these sources violating the opacity standards and determined that there is a very low potential that an opacity standard would be exceeded. It was determined that continuous monitoring for these sources is not warranted as there would be very limited environmental benefit in continuously monitoring sources that have a low potential to produce visible emissions. Therefore, the TCEQ set the visible observation monitoring frequency for these sources to once per calendar quarter.

The TCEQ has exempted vents that are not capable of producing visible emissions from periodic monitoring requirements. These vents include sources of colorless VOCs, non-fuming liquids, and other materials that cannot produce emissions that obstruct the transmission of light. Passive ventilation vents, such as plumbing vents, are also included in this category. Since this category of vents are not capable of producing opacity due to the physical or chemical characteristics of the emission source, periodic monitoring is not required as it would not yield any additional data to assure compliance with the 20% opacity standard of 30 TAC § 111.111(a)(1)(B).

In the event that visible emissions are detected, either through the quarterly observation or other credible evidence, such as observations from company personnel, the permit holder shall either report a deviation or perform a Test Method 9 observation to determine the opacity consistent with the 6-minute averaging time specified in 30 TAC § 111.111(a)(1)(B). An additional provision is included to monitor combustion sources more frequently than quarterly if alternate fuels are burned for periods greater than 24 consecutive hours. This will address possible emissions that may arise when switching fuel types.

Stationary Vents subject to 30 TAC Chapter 111 not addressed in the Special Terms and Conditions
All other stationary vents subject to 30 TAC Chapter 111 not covered in the Special Terms and Conditions are listed in the permit's Applicable Requirement Summary. The basis for the applicability determinations for these vents are listed in the Determination of Applicable Requirements table.

Federal Regulatory Applicability Determinations

The following chart summarizes the applicability of the principal air pollution regulatory programs to the permit area:

Regulatory Program	Applicability (Yes/No)
Prevention of Significant Deterioration (PSD)	No
Nonattainment New Source Review (NNSR)	No
Minor NSR	Yes
40 CFR Part 60 - New Source Performance Standards	No
40 CFR Part 61 - National Emission Standards for Hazardous Air Pollutants (NESHAPs)	No
40 CFR Part 63 - NESHAPs for Source Categories	Yes
Title IV (Acid Rain) of the Clean Air Act (CAA)	No
Title V (Federal Operating Permits) of the CAA	Yes
Title VI (Stratospheric Ozone Protection) of the CAA	No
CAIR (Clean Air Interstate Rule)	No

Basis for Applying Permit Shields

An operating permit applicant has the opportunity to specifically request a permit shield to document that specific applicable requirements do not apply to emission units in the permit. A permit shield is a special condition stating that compliance with the conditions of the permit shall be deemed compliance with the specified potentially applicable requirements or specified potentially applicable state-only requirements. A permit shield has been requested in the application for specific emission units. For the permit shield requests that have been approved, the basis of determination for regulations that the owner/operator need not comply with are located in the "Permit Shield" attachment of the permit.

Insignificant Activities

In general, units not meeting the criteria for inclusion on either Form OP-SUM or Form OP-REQ1 are not required to be addressed in the operating permit application. Examples of these types of units include, but are not limited to, the following:

1. Office activities such as photocopying, blueprint copying, and photographic processes.
2. Sanitary sewage collection and treatment facilities other than those used to incinerate wastewater treatment plant sludge. Stacks or vents for sanitary sewer plumbing traps are also included.
3. Food preparation facilities including, but not limited to, restaurants and cafeterias used for preparing food or beverages primarily for consumption on the premises.
4. Outdoor barbecue pits, campfires, and fireplaces.
5. Laundry dryers, extractors, and tumblers processing bedding, clothing, or other fabric items generated primarily at the premises. This does not include emissions from dry cleaning systems using perchloroethylene or petroleum solvents.
6. Facilities storing only dry, sweet natural gas, including natural gas pressure regulator vents.
7. Any air separation or other industrial gas production, storage, or packaging facility. Industrial gases, for purposes of this list, include only oxygen, nitrogen, helium, neon, argon, krypton, and xenon.
8. Storage and handling of sealed portable containers, cylinders, or sealed drums.
9. Vehicle exhaust from maintenance or repair shops.
10. Storage and use of non-VOC products or equipment for maintaining motor vehicles operated at the site (including but not limited to, antifreeze and fuel additives).
11. Air contaminant detectors and recorders, combustion controllers and shut-off devices, product analyzers, laboratory analyzers, continuous emissions monitors, other analyzers and monitors, and emissions associated with sampling activities. Exception to this category includes sampling activities that are deemed fugitive emissions and under a regulatory leak detection and repair program.
12. Bench scale laboratory equipment and laboratory equipment used exclusively for chemical and physical analysis, including but not limited to, assorted vacuum producing devices and laboratory fume hoods.
13. Steam vents, steam leaks, and steam safety relief valves, provided the steam (or boiler feedwater) has not contacted other materials or fluids containing regulated air pollutants other than boiler water treatment chemicals.
14. Storage of water that has not contacted other materials or fluids containing regulated air pollutants other than boiler water treatment chemicals.
15. Well cellars.
16. Fire or emergency response equipment and training, including but not limited to, use of fire control equipment including equipment testing and training, and open burning of materials or fuels associated with firefighting training.
17. Crucible or pot furnaces with a brim full capacity of less than 450 cubic inches of any molten metal.
18. Equipment used exclusively for the melting or application of wax.
19. All closed tumblers used for the cleaning or deburring of metal products without abrasive blasting, and all open tumblers with a batch capacity of 1,000 lbs. or less.
20. Shell core and shell mold manufacturing machines.
21. Sand or investment molds with a capacity of 100 lbs. or less used for the casting of metals;
22. Equipment used for inspection of metal products.
23. Equipment used exclusively for rolling, forging, pressing, drawing, spinning, or extruding either hot or cold metals by some mechanical means.
24. Instrument systems utilizing air, natural gas, nitrogen, oxygen, carbon dioxide, helium, neon, argon, krypton, and xenon.
25. Battery recharging areas.
26. Brazing, soldering, or welding equipment.

Determination of Applicable Requirements

The tables below include the applicability determinations for the emission units, the index number(s) where applicable, and all relevant unit attribute information used to form the basis of the applicability determination. The unit attribute information is a description of the physical properties of an emission unit which is used to determine the requirements to which the permit holder must comply. For more information about the descriptions of the unit attributes specific Unit Attribute Forms may be viewed at [HYPERLINK "http://www.tceq.texas.gov/permitting/air/nav/air_all_ua_forms.html"].

A list of unit attribute forms is included at the end of this document. Some examples of unit attributes include construction date; product stored in a tank; boiler fuel type; etc.. Generally, multiple attributes are needed to determine the requirements for a given emission unit and index number. The table below lists these attributes in the column entitled "Basis of Determination." Attributes that demonstrate that an applicable requirement applies will be the factual basis for the specific citations in an applicable requirement that apply to a unit for that index number. The TCEQ Air Permits Division has developed flowcharts for determining applicability of state and federal regulations based on the unit attribute information in a Decision Support System (DSS). These flowcharts can be accessed via the internet at [HYPERLINK "http://www.tceq.texas.gov/permitting/air/nav/air_supportsys.html"]. The Air Permits Division staff may also be contacted for assistance at (512) 239-1250.

The attributes for each unit and corresponding index number provide the basis for determining the specific legal citations in an applicable requirement that apply, including emission limitations or standards, monitoring, recordkeeping, and reporting. The rules were found to apply or not apply by using the unit attributes as answers to decision questions found in the flowcharts of the DSS. Some additional attributes indicate which legal citations of a rule apply. The legal citations that apply to each emission unit may be found in the Applicable Requirements Summary table of the draft permit. There may be some entries or rows of units and rules not found in the permit, or if the permit contains a permit shield, repeated in the permit shield area. These are sets of attributes that describe negative applicability, or; in other words, the reason why a potentially applicable requirement does not apply.

If applicability determinations have been made which differ from the available flowcharts, an explanation of the decisions involved in the applicability determination is specified in the column "Changes and Exceptions to RRT." If there were no exceptions to the DSS, then this column has been removed.

The draft permit includes all emission limitations or standards, monitoring, recordkeeping and reporting required by each applicable requirement. If an applicable requirement does not require monitoring, recordkeeping, or reporting, the word "None" will appear in the Applicable Requirements Summary table. If additional periodic monitoring is required for an applicable requirement, it will be explained in detail in the portion of this document entitled "Rationale for Compliance Assurance Monitoring (CAM)/ Periodic Monitoring Methods Selected."

When attributes demonstrate that a unit is not subject to an applicable requirement, the applicant may request a permit shield for those items. The portion of this document entitled "Basis for Applying Permit Shields" specifies which units, if any, have a permit shield.

Operational Flexibility

When an emission unit has multiple operating scenarios, it will have a different index number associated with each operating condition. This means that units are permitted to operate under multiple operating conditions. The applicable requirements for each operating condition are determined by a unique set of unit attributes. For example, a tank may store two different products at different points in time. The tank may, therefore, need to comply with two distinct sets of requirements, depending on the product that is stored. Both sets of requirements are included in the permit, so that the permit holder may store either product in the tank.

Determination of Applicable Requirements

Unit ID	Regulation	Index Number	Basis of Determination*
GER-0011	30 TAC Chapter 117, Subchapter B	R7303	Type of Service = New, modified, reconstructed or relocated diesel fuel-fired engine, placed into service on or after October 1, 2001, located in the Houston/Galveston/Brazoria ozone nonattainment area, operated less than 100 hours/year, on a rolling 12-month average
GER-0011	40 CFR Part 63, Subpart ZZZZ	63ZZZZ	HAP Source = Any stationary source or group of stationary sources of hazardous air pollutants meeting the definition of a major source as described in 40 CFR § 63.2. Brake HP = Stationary RICE with a brake HP greater than or equal to 100 HP and less than 250 HP. Construction/Reconstruction Date = Commenced construction or reconstruction before December 19, 2002. Service Type = Emergency use where the RICE does not operate or is not contractually obligated to be available for more than 15 hours per calendar year as specified in 40 CFR §63.6640(f)(2)(ii)-(iii) or does not operate as specified in 40 CFR §63.6640(f)(4)(ii). Stationary RICE Type = Compression ignition engine
51SUMP59	30 TAC Chapter 115, Storage of VOCs	R5111	Today's Date = Today's date is March 1, 2013 or later. Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Tank Description = Tank does not require emission controls True Vapor Pressure = True vapor pressure is less than 1.0 psia Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is greater than 1,000 gallons but less than or equal to 25,000 gallons
51V1206	30 TAC Chapter 115, Storage of VOCs	R5111	Today's Date = Today's date is March 1, 2013 or later. Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Tank Description = Tank does not require emission controls True Vapor Pressure = True vapor pressure is less than 1.0 psia Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is greater than 1,000 gallons but less than or equal to 25,000 gallons
51V655	30 TAC Chapter 115, Storage of VOCs	R5112-001	Today's Date = Today's date is March 1, 2013 or later. Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Tank Description = Tank using a vapor recovery system (VRS) True Vapor Pressure = True vapor pressure is greater than or equal to 1.5 psia Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is greater than 25,000 gallons but less than or equal to 40,000 gallons Control Device Type = Other vapor destruction unit Throughput = The liquid throughput is greater than 1,500 barrels.
51V655	30 TAC Chapter 115, Storage of	R5112-002	Today's Date = Today's date is March 1, 2013 or later.

Unit ID	Regulation	Index Number	Basis of Determination*
	VOCs		Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Tank Description = Tank using a vapor recovery system (VRS) True Vapor Pressure = True vapor pressure is greater than or equal to 1.5 psia Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is greater than 25,000 gallons but less than or equal to 40,000 gallons Control Device Type = Flare Throughput = The liquid throughput is greater than 1,500 barrels.
51V671	30 TAC Chapter 115, Storage of VOCs	R5111	Today's Date = Today's date is March 1, 2013 or later. Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Tank Description = Tank does not require emission controls True Vapor Pressure = True vapor pressure is less than 1.0 psia Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is greater than 1,000 gallons but less than or equal to 25,000 gallons
51V704	30 TAC Chapter 115, Storage of VOCs	R5112-1	Today's Date = Today's date is March 1, 2013 or later. Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Tank Description = Tank using a vapor recovery system (VRS) True Vapor Pressure = True vapor pressure is greater than or equal to 1.5 psia Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is greater than 1,000 gallons but less than or equal to 25,000 gallons Control Device Type = Flare Throughput = The liquid throughput is greater than 1,500 barrels.
51V704	40 CFR Part 63, Subpart EEEE	63EEEE	Product Stored = Organic HAP containing liquid other than crude oil.
51V778	30 TAC Chapter 115, Storage of VOCs	R5111	Today's Date = Today's date is March 1, 2013 or later. Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Tank Description = Tank does not require emission controls True Vapor Pressure = True vapor pressure is less than 1.0 psia Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is greater than 1,000 gallons but less than or equal to 25,000 gallons
MSSMEOHTRK	30 TAC Chapter 115, Loading and Unloading of VOC	R5217	Chapter 115 Facility Type = Facility type other than a gasoline terminal, gasoline bulk plant, motor vehicle fuel dispensing facility or marine terminal. Alternate Control Requirement (ACR) = No alternate control requirements are being utilized. Product Transferred = Volatile organic compounds other than liquefied petroleum gas and gasoline. Transfer Type = Loading and unloading.

Unit ID	Regulation	Index Number	Basis of Determination*
			True Vapor Pressure = True vapor pressure greater than or equal to 0.5 psia. Daily Throughput = Loading less than 20,000 gallons per day. Control Options = Vapor control system that maintains a control efficiency of at least 90%.
MSSV655TRK	30 TAC Chapter 115, Loading and Unloading of VOC	R5217	Chapter 115 Control Device Type = Vapor control system with a flare. Chapter 115 Facility Type = Facility type other than a gasoline terminal, gasoline bulk plant, motor vehicle fuel dispensing facility or marine terminal. Alternate Control Requirement (ACR) = No alternate control requirements are being utilized. Vapor Tight = All liquid and vapor lines are equipped with fittings which make vapor-tight connections that close automatically when disconnected. Product Transferred = Volatile organic compounds other than liquefied petroleum gas and gasoline. Transfer Type = Loading and unloading. True Vapor Pressure = True vapor pressure greater than or equal to 0.5 psia. Daily Throughput = Loading less than 20,000 gallons per day. Control Options = Vapor control system that maintains a control efficiency of at least 90%.
51MH5A	30 TAC Chapter 111, Incineration	R111	Hazardous Waste = The unit does not combust hazardous waste as a fuel for energy recover or does not meet the criteria for regulation.
51MH5A	30 TAC Chapter 112, Sulfur Compounds	R2009-01	Effective Stack Height = The effective stack height is equal to or greater than the standard effective stack height.
51MH5A	30 TAC Chapter 117, Subchapter B	R7310-01	Diluent CEMS = The process heater does not use a carbon dioxide CEMS to monitor diluent. Fuel Flow Monitoring = Fuel flow is monitored with a totalizing fuel flow meter per 30 TAC §§ 117.140(a), 117.340(a) or 117.440(a). Unit Type = Designated as a Boiler or Industrial Furnace regulated as an existing facility by the EPA in 40 CFR Part 266, Subpart H (as was in effect on June 9, 1993). Maximum Rated Capacity = Maximum rated capacity is at least 40 MMBtu/hr, but less than 100 MMBtu/hr. NOx Emission Limit Basis = Emission limit in lb/hr (or ppm by volume at 15% oxygen, dry basis) on a block one-hour average NOx Reduction = No NO_x control method Fuel Type #1 = Natural gas Fuel Type #2 = Liquid NOx Monitoring System = Maximum emission rate testing [in accordance with 30 TAC § 117.8000] Annual Heat Input = Annual heat input is greater than $2.8(10^{11})$ Btu/yr, based on a rolling 12-month average. NOx Emission Limitation = Title 30 TAC §§ 117.310(d)(3) and 117.310(a)(8)
51MH5A	40 CFR Part 63, Subpart EEE	63EEE	ALT Metals = Complying with the particulate matter standards. Type Fuel = Boiler burns liquid fuel. Existing Source = The boiler is an existing source (construction or reconstruction commenced on or before April 20, 2004). Met Feedrate = Feedrate levels are established as 12-hour rolling average limit for semivolatile and low

Unit ID	Regulation	Index Number	Basis of Determination*
			volatile metals. Area Source = The boiler is a major source as defined under §63.2. CO/THC Stadard = Complying with the CO standard in § 63.1216(a)(5)(i) or (b)(5)(i); or § 63.1217(a)(5)(i) or (b)(5)(i). Baghouse = The boiler is not equipped with a baghouse. Elective Standards = The area source is not electing to comply with § 63.1216 or § 63.1217 per § 266.100(b)(3) and is complying with the Part 266 requirements for particulate matter, hydrogen chloride and chlorine gas, and metals emissions other than mercury. Dioxin/Furan Standard = Complying with the CO standard in § 63.1217(a)(1)(ii) or (b)(1)(ii). Dioxin-Listed = The boiler does not burn the dioxin-listed hazardous wastes F020, F021, F022, F023, F026, or F027. Heating Value = The hazardous waste as-fired heating value is less than 10,000 Btu/lb. DRE Previous Test = Previous testing was used to document conformance with the DRE standard. Hg Feedrate = Feedrate levels are established as 12-hour rolling average limit for Hg. Feed Zone = The source feeds waste at the normal flame zone.
51MN157	40 CFR Part 60, Subpart A	60A-0018-01	Subject to 40 CFR § 60.18 = Flare is not subject to 40 CFR § 60.18. Adhering to Heat Content Specifications = Adhering to the heat content specifications in 40 CFR § 60.18(c)(3)(ii) and the maximum tip velocity specifications in 40 CFR § 60.18(c)(4). Flare Assist Type = Non-assisted Flare Exit Velocity = Flare exit velocity is greater than or equal to 60 ft/s (18.3 m/sec) but less than 400 ft/s (122 m/sec). Heating Value of Gas = Heating value is less than or equal to 1000 Btu/scf (37.3 MJ/scm).
51MN157	40 CFR Part 60, Subpart A	60A-0018-02	Subject to 40 CFR § 60.18 = Flare is not subject to 40 CFR § 60.18. Adhering to Heat Content Specifications = Adhering to the requirements in 40 CFR § 60.18(c)(3)(i).
51MN157	40 CFR Part 63, Subpart A	RA-001-01	Required Under 40 CFR Part 63 = Flare is not required by a Subpart under 40 CFR Part 63.
51ANAL	30 TAC Chapter 115, HRVOC Vent Gas	R5727	HRVOC Concentration = The vent gas stream has a HRVOC concentration less than 100 ppmv at all times. Max Flow Rate = The vent gas stream has a maximum potential flow rate greater than 100 dry standard cubic feet per hour (ft3/hr). Exempt Date = The vent gas stream is not exempt.
51ANAL	30 TAC Chapter 115, Vent Gas Controls	R5127	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Combined 24-Hour VOC Weight = Combined VOC weight is less than or equal to 100 pounds (45.4 kg). VOC Concentration = VOC concentration is less than 612 ppmv.

Unit ID	Regulation	Index Number	Basis of Determination*
			VOC Concentration/Emission Rate @ Max Operating Conditions = The VOC concentration or emission rate is less than the applicable exemption limit at maximum actual operating conditions and the alternate recordkeeping requirements of 30 TAC § 115.126(4) are being selected.
51COHEAD	30 TAC Chapter 115, Vent Gas Controls	R5127-1	Alternate Control Requirement = Alternate control is not used. Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Control Device Type = Smokeless flare Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Combined 24-Hour VOC Weight = Combined VOC weight is less than or equal to 100 pounds (45.4 kg). VOC Concentration/Emission Rate @ Max Operating Conditions = The VOC concentration or emission rate is less than the applicable exemption limit at maximum actual operating conditions and the alternate recordkeeping requirements of 30 TAC § 115.126(4) are being selected.
51COHEAD	30 TAC Chapter 115, Vent Gas Controls	R5127-2	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Combined 24-Hour VOC Weight = Combined VOC weight is greater than 100 pounds (45.4 kg). VOC Concentration = VOC concentration is less than 612 ppmv. VOC Concentration/Emission Rate @ Max Operating Conditions = The VOC concentration or emission rate is less than the applicable exemption limit at maximum actual operating conditions and the alternate recordkeeping requirements of 30 TAC § 115.126(4) are being selected.
GER-0011	30 TAC Chapter 111, Visible Emissions	R1111	Alternate Opacity Limitation = Not complying with an alternate opacity limit under 30 TAC § 111.113. Vent Source = The source of the vent is not a steam generator fired by solid fossil fuel, oil or a mixture of oil and gas and is not a catalyst regenerator for a fluid bed catalytic cracking unit. Opacity Monitoring System = Optical instrument capable of measuring the opacity of emissions is not installed in the vent or optical instrumentation does not meet the requirements of § 111.111(a)(1)(D), or the vent stream does not qualify for the exemption in § 111.111(a)(3). Construction Date = After January 31, 1972 Effluent Flow Rate = Effluent flow rate is less than 100,000 actual cubic feet per minute.
MSSPROPVENT	30 TAC Chapter 115, HRVOC Vent Gas	R5720	Alternative Monitoring = Not using alternative monitoring and testing methods. HRVOC Concentration = The vent gas stream has a HRVOC concentration of at least 100 ppmv at some times. Max Flow Rate = The vent gas stream has a maximum potential flow rate greater than 100 dry standard cubic feet per hour (ft3/hr).

Unit ID	Regulation	Index Number	Basis of Determination*
			Minor Modification = Not using any minor modification to the monitoring and testing methods of the rule. Vent Gas Stream Control = Vent gas stream is controlled by a flare. Process Knowledge = Process knowledge and engineering calculations are used to determine HRVOC emissions during emission events and scheduled startup, shutdown, and maintenance activities. Waived Testing = The executive director has not waived testing for identical vents. Testing Requirements = Process knowledge to determine maximum potential HRVOC hourly emissions for analyzer vents, stream system vents, vent gas streams with no HRVOC except during emission event or degassing safety device in lieu of testing.
MSSPROPVENT	30 TAC Chapter 115, Vent Gas Controls	R5121	Alternate Control Requirement = Alternate control is not used. Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Control Device Type = Smokeless flare Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule.
51SK01	30 TAC Chapter 115, Degreasing Processes	R5412-01	Solvent Degreasing Machine Type = Cold solvent cleaning machine. Alternate Control Requirement = The TCEQ Executive Director has not approved an alternative control requirement as allowed under 30 TAC § 115.413 or not alternative has been requested. Solvent Sprayed = A solvent is sprayed. Solvent Vapor Pressure = Solvent vapor pressure is less than or equal to 0.6 psia as measured at 100 degrees Fahrenheit. Solvent Heated = The solvent is heated to a temperature greater than 120° F. Parts Larger than Drainage = No cleaned parts for which the machine is authorized to clean are larger than the internal drainage facility of the machine. Drainage Area = Area is greater than or equal to 16 square inches. Disposal in Enclosed Containers = Waste solvent is properly disposed of in enclosed containers.

* - The "unit attributes" or operating conditions that determine what requirements apply

NSR Versus Title V FOP

The state of Texas has two Air permitting programs, New Source Review (NSR) and Title V Federal Operating Permits. The two programs are substantially different both in intent and permit content.

NSR is a preconstruction permitting program authorized by the Texas Clean Air Act and Title I of the Federal Clean Air Act (FCAA). The processing of these permits is governed by 30 Texas Administrative Code (TAC) Chapter 116.111. The Title V Federal Operating Program is a federal program authorized under Title V of the FCAA that has been delegated to the state of Texas to administer and is governed by 30 TAC Chapter 122. The major differences between the two permitting programs are listed in the table below:

NSR Permit	Federal Operating Permit(FOP)
Issued Prior to new Construction or modification of an existing facility	For initial permit with application shield, can be issued after operation commences; significant revisions require approval prior to operation.
Authorizes air emissions	Codifies existing applicable requirements, does not authorize new emissions
Ensures issued permits are protective of the environment and human health by conducting a health effects review and that requirement for best available control technology (BACT) is implemented.	Applicable requirements listed in permit are used by the inspectors to ensure proper operation of the site as authorized. Ensures that adequate monitoring is in place to allow compliance determination with the FOP.
Up to two Public notices may be required. Opportunity for public comment and contested case hearings for some authorizations.	One public notice required. Opportunity for public comments. No contested case hearings.
Applies to all point source emissions in the state.	Applies to all major sources and some non-major sources identified by the EPA.
Applies to facilities: a portion of site or individual emission sources	One or multiple FOPs cover the entire site (consists of multiple facilities)
Permits include terms and conditions under which the applicant must construct and operate its various equipment and processes on a facility basis.	Permits include terms and conditions that specify the general operational requirements of the site; and also include codification of all applicable requirements for emission units at the site.
Opportunity for EPA review for Federal Prevention of Significant Deterioration (PSD) and Nonattainment (NA) permits for major sources.	Opportunity for EPA review, Affected states review, and a Public petition period for every FOP.
Permits have a table listing maximum emission limits for pollutants	Permit has an applicable requirements table and Periodic Monitoring (PM) / Compliance Assurance Monitoring (CAM) tables which document applicable monitoring requirements.
Permits can be altered or amended upon application by company. Permits must be issued before construction or modification of facilities can begin.	Permits can be revised through several revision processes, which provide for different levels of public notice and opportunity to comment. Changes that would be significant revisions require that a revised permit be issued before those changes can be operated.
NSR permits are issued independent of FOP requirements.	FOP are independent of NSR permits, but contain a list of all NSR permits incorporated by reference

[SEQ CHAPTER \h \r 1]New Source Review Requirements

Below is a list of the New Source Review (NSR) permits for the permitted area. These NSR permits are incorporated by reference into the operating permit and are enforceable under it. These permits can be found in the main TCEQ file room, located on the first floor of Building E, 12100 Park 35 Circle, Austin, Texas. The Public Education Program may be contacted at 1-800-687-4040 or the Air Permits Division (APD) may be contacted at 1-512-239-1250 for help with any question.

Additionally, the site contains emission units that are permitted by rule under the requirements of 30 TAC Chapter 106, Permits by Rule. The following table specifies the permits by rule that apply to the site. All current permits by rule are contained in Chapter 106. Outdated 30 TAC Chapter 106 permits by rule may be viewed at the following Web site:

[HYPERLINK "http://www.tceq.texas.gov/permitting/air/permitbyrule/historical_rules/old106list/index106.html"]

Outdated Standard Exemption lists may be viewed at the following Web site:

[HYPERLINK "http://www.tceq.texas.gov/permitting/air/permitbyrule/historical_rules/oldselist/se_index.html"]

The status of air permits and applications and a link to the Air Permits Remote Document Server is located at the following Web site:

[HYPERLINK "http://www.tceq.texas.gov/permitting/air/nav/air_status_permits.html"]

Emission Units and Emission Points

In air permitting terminology, any source capable of generating emissions (for example, an engine or a sandblasting area) is called an Emission Unit. For purposes of Title V, emission units are specifically listed in the operating permit when they have applicable requirements other than New Source Review (NSR), or when they are listed in the permit shield table.

The actual physical location where the emissions enter the atmosphere (for example, an engine stack or a sand-blasting yard) is called an emission point. For New Source Review preconstruction permitting purposes,

every emission unit has an associated emission point. Emission limits are listed in an NSR permit, associated with an emission point. This list of emission points and emission limits per pollutant is commonly referred to as the "Maximum Allowable Emission Rate Table", or "MAERT" for short. Specifically, the MAERT lists the Emission Point Number (EPN) that identifies the emission point, followed immediately by the Source Name, identifying the emission unit that is the source of those emissions on this table.

Thus, by reference, an emission unit in a Title V operating permit is linked by reference number to an NSR authorization, and its related emission point.

Monitoring Sufficiency

Federal and state rules, 40 CFR § 70.6(a)(3)(i)(B) and 30 TAC § 122.142(c) respectively, require that each federal operating permit include additional monitoring for applicable requirements that lack periodic or instrumental monitoring (which may include recordkeeping that serves as monitoring) that yields reliable data from a relevant time period that are representative of the emission unit's compliance with the applicable emission limitation or standard. Furthermore, the federal operating permit must include compliance assurance monitoring (CAM) requirements for emission sources that meet the applicability criteria of 40 CFR Part 64 in accordance with 40 CFR § 70.6(a)(3)(i)(A) and 30 TAC § 122.604(b).

With the exception of any emission units listed in the Periodic Monitoring or CAM Summaries in the FOP, the TCEQ Executive Director has determined that the permit contains sufficient monitoring, testing, recordkeeping, and reporting requirements that assure compliance with the applicable requirements. If applicable, each emission unit that requires additional monitoring in the form of periodic monitoring or CAM is described in further detail under the Rationale for CAM/PM Methods Selected section following this paragraph.

Rationale for Compliance Assurance Monitoring (CAM)/ Periodic Monitoring Methods Selected

Periodic Monitoring:

The Federal Clean Air Act requires that each federal operating permit include monitoring sufficient to assure compliance with the terms and conditions of the permit. Most of the emission limits and standards applicable to emission units at Title V sources include adequate monitoring to show that the units meet the limits and standards. For those requirements that do not include monitoring, or where the monitoring is not sufficient to assure compliance, the federal operating permit must include such monitoring for the emission units affected. The following emission units are subject to periodic monitoring requirements because the emission units are subject to an emission limitation or standard for an air pollutant (or surrogate thereof) in an applicable requirement that does not already require monitoring, or the monitoring for the applicable requirement is not sufficient to assure compliance:

Unit/Group/Process Information	
ID No.: 51MH5A	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 112, Sulfur Compounds	SOP Index No.: R2009-01
Pollutant: SO_2	Main Standard: § 112.9(c)
Monitoring Information	
Indicator: Sulfur Content	
Minimum Frequency: Quarterly	
Averaging Period: N/A	

Deviation Limit: The maximum sulfur concentrations are: --the natural gas to main burner and atomizer is 165 ppmw or 19.43 ppmv --the liquid waste methanol stream is 115 ppmw --the vent gas composition (slip analyzers V-655, V-620) is 20 ppmv.
Basis of monitoring: The heater uses natural gas a primary burner fuel, with waste streams and process vent gas supplementing the fuel. Natural gas is used to start-up and maintain temperature in the heater. All these fuels and air are combined in the combustion chamber. A common way to determine SO2 emissions is by determining the amount (percentage) of sulfur in fuel combusted by an emission unit. This quantity along with stack flow rate and quantity of fuel combusted may be used to calculate the amount of SO2 emitted to the atmosphere.

Unit/Group/Process Information	
ID No.: 51SK01	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Degreasing Processes	SOP Index No.: R5412-01
Pollutant: VOC	Main Standard: § 115.412(1)
Monitoring Information	
Indicator: Visual Inspection	
Minimum Frequency: Monthly	
Averaging Period: n/a	
Deviation Limit: Any monitoring data which indicates that the cold cleaner is not in compliance with the applicable requirements of § 115.412(1)(A)-(F) shall be considered and reported as a deviation.	
Basis of monitoring: The monitoring option to cover cold cleaner or the open-top vapor cleaner was included in the EPA "Periodic Monitoring Technical Reference Document" (April 1999) to monitor VOC sources. In addition to covering the cleaner records of monthly inspections of equipment is an effective way to ensure that the system is operating in accordance with its design.	

Unit/Group/Process Information	
ID No.: GER-0011	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 111, Visible Emissions	SOP Index No.: R1111
Pollutant: PM (OPACITY)	Main Standard: § 111.111(a)(1)(B)
Monitoring Information	
Indicator: Visible Emissions	
Minimum Frequency: once per quarter	
Averaging Period: n/a	
Deviation Limit: 20% Opacity	
Basis of monitoring: The option to perform opacity readings or visible emissions to demonstrate compliance is consistent with EPA Reference Test Method 9 and 22. Opacity and visible emissions have been used as an indicator of particulate emissions in many federal rules including 40 CFR Part 60, Subpart F and Subpart HH. In addition, use of these indicators is consistent with the EPA's "Compliance Assurance Monitoring (CAM) Technical Guidance Document" (August 1998). Monitoring specifications and procedures for the opacity are consistent with federal requirements and include the EPA's Test Method 9 for determining opacity by visual observations and the requirements of 40 CFR § 60.13 for a continuous opacity monitoring system (COMS). The monitoring specifications and procedures for the visible emissions monitoring are similar to "EPA Reference Method 22" procedures.	

Compliance Review

1. In accordance with 30 TAC Chapter 60, the compliance history was reviewed on **July 12, 2016.**
   Site rating: **3.75 / Satisfactory** Company rating: **4.99 / Satisfactory**
   (High < 0.10; Satisfactory ≥ 0.10 and ≤ 55; Unsatisfactory > 55)
2. Has the permit changed on the basis of the compliance history or site/company rating? .....No

Site/Permit Area Compliance Status Review

1. Were there any out-of-compliance units listed on Form OP-ACPS?.....No
2. Is a compliance plan and schedule included in the permit? .....No

Location: RTP-OAQPS-C335I/RTP-OAQPS-BLDG-C; RTP-OAQPS Ex. 6 Personal Privacy (PP) HEID/Phone-Line/RTP-OAQPS-BLDG-C

Start: 7/26/2018 1:30:00 PM
End: 7/26/2018 2:30:00 PM
Show Time As: Tentative

Required Attendees: Caparoso, Jennifer; Witt, Jon; Strum, Madeleine; Palma, Ted (Palma.Ted@epa.gov); Shappley, Ned

I don't think we'll need the whole time, but I reserved an hour just in case.

Attached is a list of facilities as a checklist – the same as in the larger Excel file. (All the additional info relevant to our discussion is still in the large sheet.)

I will fill you in on the conversation today and then we will walk through the list and talk about them. Our goal is that by the end of the meeting we will have a list to pass forward.

Thanks for meeting on such short notice. This is a quick-turnaround.

Subject: RE: 3pm meeting tomorrow
Attachments: EtO Pager 073117.docx

Hi Mark,

Here is the latest draft of the pager. Erika is reviewing it so it might change a bit.

The purpose of the mtg is to bring Mike up to speed on EtO: The IRIS update, RTR issues, what we are seeing so far in the draft 2014 NATA, what the regions are doing and suggestions for follow-up. It is also to talk to SPPD about them doing some work on further emissions characterization.

We can certainly invite you to mtgs where the inventory is relevant, and that would include this meeting.

Please let me know if looking at the pager provides you with enough information to see whether you want to attend. Alternatively you and I could chat later in the week.

Thanks
Kelly

Subject: 3pm meeting tomorrow

Kelly and Darcie,

I hope all is well with you and your group's efforts.

Can you please explain a little more about the 3pm NATA meeting tomorrow? Chet asked me at AQAD staff meeting this morning, but I didn't know anything about it. Madeleine had told me the effort was ongoing with SPPD to further QA the EtO data, but I didn't realize that the meeting tomorrow was about that. Madeleine sent me the link in Sharepoint to the pager, but I don't have permission to read it, and I also don't know to what degree the pager would be used during the meeting.

Both Chet and I have a conflict for the meeting tomorrow (Chet forwarded to me). However, depending on the topic, I may be able to forgo my conflict in favor of this meeting.

Also, in the future, would it be possible just to include me on all invites related to NATA and inventories for GL or DD-level meetings? That would really help me keep on top of these needs to help guide EIAG for improvements in the future.

Thanks much!

Marc

Subject: RE: EtO facilities in elevated risk tracts

Here's another list, done the same way as before, but now also grabbing facilities in or adjacent to the 100 in a million (total risk) tracts. This list includes the MSA ones you noted below.
I'm sure the facilities you noted that are in the attached list but not on the MSA list are just those with low emissions that don't really drive anything, but still get included because they are in the tracts and they have nonzero emissions…

Subject: EtO facilities in elevated risk tracts

Here are the facilities that have EtO emissions in the 106 tracts nationwide with total risk >= 100 in a million. The list does not include facilities that may be just outside a high risk tract and potentially drive the risk of that tract. I have joined all the tract risk data to the list of facilities for the tract it is in.
This was all done by the map app, but don't try this at home.

Hi
Thanks for working on this you guys.

Ex. 5 Deliberative Process (DP)

Subject: Re: Smith, Darcie has shared 'EtO Pager 072817'

Hi, Darcie -

I am unable to make changes to the document remotely, and I also cannot see the changes that Kelly and you made from the version I edited last night. Would you please email me the version showing the changes so that I can send you edits this afternoon?

Did you both prefer to say that "EtO is a mutagen"?

Thanks.

Amy

Hi - Here's the new version of the EtO pager.

Kelly - I've accepted all your edits and answered your comments where I could.

Amy - Kelly had some comments on the IRIS section.

Please make your edits here and we can all work off the same version.

Thanks,
Darcie

Thanks Erika –

I've accepted your edits, except in a few places. Regarding the NIOSH study, it is actually only one study, that has multiple publications from it, so we left it singular. Also, the hospital sterilizer rule was an area source std, so I don't think it actually has a risk review like the major source MACT rules. If it does, it is not currently on any of the court order/consent decree lists. That would be a good question to ask/answer. The MACT for commercial sterilizers, however, has been through RTR.

Darcie

This looks good. I had a few small tweaks and one addition at the end—I think Mike and Steve are focused on how we're going to move forward to address this issue, working with the regions on communications etc.

Thanks for the chance to review in advance.

Subject: EtO pager for your review

Erika,

Attached is the pager on EtO for Mike and SPPD. The mtg is 3pm tomorrow. Thanks in advance for your review.

There are several aspects of the EtO issue we would like to communicate, so we organized the pager by putting a set of summary bullets at the top, then expanding on each topic in the body of the pager.

Thanks,

Kelly

Subject: Chem Sector Facility List

Hi Darcie,

Please see the attached, much anticipated Chemical Sector Facility List.
Tegan has built this list from several datasets and has attempted to locate as many EIS IDs as possible.
There are 5811 facilities on this list, 3140 have EIS numbers.
Column A, labeled "ID", is a unique number assigned to each facility for index purposes and does not relate to any other numbering system.
Besides EIS IDs , FRS ID and NEI ID are facility identifiers in the sheet. An FRS ID cell may contain more than one FRS ID.
In addition to facility name and locational information, NAICS codes are also listed.

As discussed, we are looking for NATA risk information for these facilities.
Most urgently, we are hoping to get a summary report of facility wide risk for each facility with the top 3 HAP that contribute toward that risk.
Please don't worry about the facilities without EIS numbers, unless there is a quick and easy way to match based on other facility identifiers.
Also, we are hoping to get more detailed information, which would include each pollutant's contribution toward risk at each facility and the risk contribution from each emission source at each facility.

If you have any questions, please feel free to contact Tegan or me.

Thanks,
Art

Subject: RE: EtO - 21 priority facilities

They're on the one with Peter, so that's good.

Oddly enough, there are a lot of people not on the mtg with Mike that should be and were on the initial list I created. I've sent the missing names forward and added Jennifer's name (Brenda's was already there), but that meeting is out of my hands. (I would say that you all should just come in with Penny, but that's up to you.)

Subject: RE: EtO - 21 priority facilities

Hi Darcie,

Can we add Brenda and Jennifer to all future EtO meetings, including the briefing?

Thanks!
Tegan

Subject: RE: EtO - 21 priority facilities

Hi Tegan –

For some reason I couldn't ever connect to the file, so it took me a while. Sorry for the delay!

Yes, it looks like you've got all the facilities that are priority for ethylene oxide, at the tract level. There could be some that pop up at the block level (e.g., Houston Plan in Fort Bend Texas), but the first priority is the ones you've listed in your table below.

Thanks! (and please let me know if there's anything else I can do to help)
Darcie

Subject: EtO - 21 priority facilities

Hi Darcie,

I hope you're doing well. Just to make sure we're all on the same page, can you confirm that the 21 high priority facilities you've identified are the same as the ones that I have? See below:

EIS_ID	Sitename	FACILITY Risk (MIR)	LOCATION_ADDRESS	LOCATION_CITY	state

Subject: Materials for Tomorrow's EtO mtg w Mike

Hi Pete,

Here are the documents for tomorrow's EtO mtg with Mike.

There are three items:

- A high level pager that we will walk through during the meeting
- A detailed status dated Nov 2017 – it would be great if he could read this before the mtg tomorrow
- The previous pager we sent him this past August – just so he has it handy

Thanks,
Kelly

Ethylene Oxide Update for Mike Koerber
November 2, 2017

Purpose:

- To provide an update on the work that has been done to investigate the potential for EtO exposures to cause health risks.
- To discuss next steps.

Issues:

- EtO emissions from approximately 60-70 facilities may present a public health concern.
    - In December 2016, ORD released the IRIS assessment for the carcinogen ethylene Oxide (EtO). EtO is now known to be approximately 60 times more potent than previously understood. It is a known human carcinogen.

- Some of the facilities are included in source categories for which RTR reviews are ongoing, (e.g., Miscellaneous Organic Chemical Production and Processes (MON).
    - The initial review for the MON source category, shows the potential for some of the EtO risk to be attributable to MON processes.
- The facilities also include source categories for which the RTRs have already been completed (e.g., HON, polyether polyols, commercial sterilizers).
    - Some are due for technology reviews.
- Other source categories such as Ethylene Production and Organic Liquids Distribution (OLD) could show risks well above 100-in-1 million from EtO being emitted from other on-site source categories (e.g., HON and/or Polyether Polyols Production)
    - These risks could show up as part of the facility-wide risk assessment.

- The Regions continue to be active in their efforts to brief their management, conduct outreach to states, and assess the potential public health impacts.

Status:

Please see detailed pager dated November 2017. We have also attached the previous pager, dated August 2017.

Current and Next Steps:

- Working to QA/QC the emissions data for the facilities that NATA identified. Likely path forward is to work through the ACC to confirm / change emissions.
- Gathering data on un- or under-controlled emissions sources for the above source categories, and possible options for emissions reductions.
- Researching options for alternative source and ambient monitoring.
- Investigating the potential for working on an approach to address potential risks from EtO with inter- or intra-Agency groups for whom EtO may also be a potential issue.
    - Other EPA offices, CDC, OSHA
- Brief Steve Page – Nov 2017
- Brief OAR Mgmt – Dec 2017

Timeline:

- Summer 2018 – release of 2014 NATA, includes nationwide census tract level risk results
    - EtO expected to drive cancer risks

- Aug 2018 – Ethylene Production Source Category RTR Proposal
- Oct 2018 – Organic Liquids Distribution Source Category RTR Proposal
- Dec 2018 – Miscellaneous Organic Chemical Production and Processes (MON) Source Category RTR Proposal

Attachment

Ethylene Oxide (EtO)
Detailed Status to Accompany Update for Mike Koerber

November 2017

EtO Facility Review:

- 42 "priority list" facilities in version 1 (v1) of the 2014 NATA, where cancer risks at the census tract level are greater than 100-in-1 million and are driven by emissions of EtO from stationary sources. We have begun QA of these sources.
- 34 additional facilities that are likely to have risks well above 100-in-1 million at the census block level even if they don't show up at the tract-level in NATA. These are not publically released in NATA. We will soon begin to QA these sources.

- For the 42 "priority list" facilities where cancer risks are driven by EtO, all have been reviewed or verified by state agency data submitters or by the TRI program.
    - 33 of these 42 we predict will continue to be a priority in version 2 (v2) because no changes were received during the NATA review.
        - 3 of these 33 used EtO in 2014, however discontinued its use post-2014.
        - The NATA review is complete and all comments received have been incorporated into version 2 of the 2014 NEI.
        - Point source modeling for NATA will begin in November; tract-level risks won't be known until mid-2018.
    - 9 of the 42 submitted changes to emissions or stack parameters and are predicted to not contribute to elevated risk at the census track level (although they still could be well above 100-in-1 million at the block level).

EPA-R6-2021-005139 6.7.2022 Prod ED_005994A_00000069-00001

Summary Table of Source Categories and Number of Facilities Emitting EtO

Number of Facilities and Characterization				Note
Status in v1 2014 NATA	Predicted Status in v2 2014 NATA	Type of facility	Source category	
42 NATA >100-in-1 million @ tract in v1	**33** (or 30)[a] Likely to have *tract* risk above 100-in-1 million in v2	**21** Chemical facilities	**12** Ethylene, MON, OLD (may also be subject to other rules such as HON or Polyether Polyols Production)	Ethylene – 6 facilities – no EtO risk attributable to source category MON – 11 facilities – some of EtO risk may be attributable to source category OLD – 4 facilities – no EtO risk attributable to source category
			2 HON and/or Polyether Polyols Production	
			6 Minor sources	
			1 Closing	
		12 Sterilization facilities		
	9 Likely not to have tract risk above 100-in-1 million in v2, although still could at the *block*			Not yet examined
34 NATA>100-in-1 million @ block in v1				Not yet examined

[a] Could be 30 facilities if we allow for those that discontinued use of EtO after 2014.

- Updates to Sterilizer Facilities (12 of 33):
    - Release parameter discrepancies found with all facilities in Georgia.
    - Minor discrepancies found for a facility in New Mexico.
    - Minimal emissions changes found for a facility in Louisiana, however after 2014.
    - The removal of EtO sterilizers from two hospitals in Chicago was confirmed with a state contact.
- Updates to Chemical Manufacturing Facilities (21 of 33):
    - We are focusing on whether any of the 42 priority facilities have EtO emissions associated with categories for which we have upcoming RTR deadlines.
    - We have identified 21 of the 42 high priority EtO facilities that are chemical facilities that either manufacture EtO, react it to make ethylene glycol, polyether polyols or surfactants, or store and distribute it.
        - Of these 21, we have obtained documentation for 20 facilities and confirmed the other facility ceased use of ethylene oxide and is closing this year.
        - We are using Title V permits, other available information, in-house expertise on these chemical processes, and discussions we have underway with American Chemistry Council in the context of the RTR work to determine whether any of these EtO emissions are attributable to Ethylene Production, MON and/or OLD source categories.
        - We have identified 12 facilities that have operations on-site that are subject to the Ethylene Production and/or MON and/or OLD source categories. At this point, we confirmed that no EtO emissions are associated with the Ethylene Production source category and determined that no EtO emissions are from the OLD source category; however, EtO is likely to contribute to facility-wide risks. The initial review for the MON source category, shows the potential for some of the EtO risk to be attributable to MON processes.
    - We also know that many of these EtO emissions are from processes subject to the Hazardous Organic NESHAP (HON) or Polyether Polyols Production, for which we completed the RTR reviews in 2006 and 2014, respectively.

Regions:

- Regions continue to brief their management about potential risks from ethylene oxide emissions.
- Additional activities include talking to states (e.g., R2, R6) and conducting modeling (e.g., R2, R5).
- Expected presentations on ethylene oxide at R5 annual meeting with state risk assessors (Nov 1-2) and at R1/R2 NESCAUM meeting (Nov 14-15).
- R6 drafting talking points so Regions can be consistent when talking to their states, which is important if a company has facilities in more than one region. When ready, OAQPS will review.

Ambient Monitoring:

- Current method for ambient sampling and analysis is TO-15 using canisters. However, the current detection limit is equivalent to a cancer risk level of approximately 1,000-in-1 million (see table below). We are researching alternatives.
    - The national contract lab, ERG, is looking at how low detection limits can go. To do this, they need a new gaseous standard, which has been ordered.
    - A lab in Rhode Island has collected and analyzed samples for EtO with MDLs in the 100-1,000-in-1 million risk range. They measured (above MDL) down to 0.07 $\mu g/m^3$ (and had self-reported MDL of 0.018 $\mu g/m^3$) which is ~~between~~ approximately 100~~–and 1,000~~-in-1 million. We are verifying this with ERG.

Source Monitoring:

- Stationary source measurement methods evaluated by EPA in 1988 for EtO sterilizer emissions limits include direct analysis by gas chromatography with flame ionization detection. In the same study, EPA evaluated extractive canister sampling and analysis of EtO sterilizers.
- NIOSH published 2 methods (NIOSH 1614 and NIOSH 3702) to measure EtO in workplace air.
- A summary table of methods used to measure EtO is provided below.
- Ambient methods require additional evaluation to confirm that they are applicable for the ambient concentrations relevant to risk levels we're seeing from the modeling.

Ethylene Oxide Air Concentrations and Risk Levels

Cancer risk level	($\mu g/m^3$)	MW	PPB	PPT
1-in-1 million	0.0002	44.05	0.00011	0.11
10-in-1 million	0.002	44.05	0.00111	1.11
100-in-1 million	0.02	44.05	0.01110	11.10
1,000-in-1 million	0.2	44.05	0.11101	111.01

Ethylene Oxide Measurement Methods and Sensitivities (MDL)

Method Type	Test Method #	Method Detection Limit (MDL)	Type	Comments
Canister	TO-15	1) 0.01 ppb (based on Rhode Island entity-entered MDL) 2) ERG – still waiting. Expect same as above	Ambient	1) Was used by Rhode Island (reported in Air Toxics Archive)
Canister	Direct Inject GC/FID and GC/MS	Stability Study only	Source (i.e., stack)	No preconcentration. 72 Hour Stability without pretreatment showed 2.5 ppm negative bias
GC/FID online (semi continuous)	Radian Report 1988	MDL 30 ppb	Source	MDL per Knoll, J. of Chromatographic Science, 23, (1985) 422-425 direct GC/FID no preconcentration.
GC/PID online (semi continuous)	CARB 431	MDL ~ 67 ppb	Source	Tedlar Bag Collection PQL~ lowest calibration point Practical Quantitation Limit (PQL) = 200 ppb
Sorbent Tube (carbon coated with HBr)	NIOSH 1614	MDL 0.013 ppb	Workplace exposure	PQL = 50 ppb The range NIOSH worked in is 0.05 to 4.6 ppm (0.08 to 8.3 mg/m3) for a 24-L air sample. The method is applicable to short-term (10-min) samples.
Bag or Ambient Air	NIOSH 3702	Expect same as GC/FID or GC/PID	Workplace exposure	PQL = 1 ppb The working range is 0.001 to 1000 ppm in relatively non-complex atmospheres (e.g., sterilization facilities).

Subject: RE: List of point sources impacting 2014 NATA v1 tract risks

Hi Margaret
Thanks for the changes – no I don't need them in a change sheet. However I have some follow up questions/issues.

1) Regarding Pelron, there are 4 separate release points – are they all at this lat/lon? Note I show in the figure the census block receptor locations with respect to the source. (you need to look at both slides to see the top 3 receptors). Before I make the change, I wanted to make sure this change reflects the storage tanks release point which is the one for the one emitting ethylene oxide (first one in the below table). Could these storage tanks be farther south than what you provided or is the yellow oval I put on the figure the most accurate location)?

	EIS Release Point ID	Agency Release Point ID	Program System Code	Release Point Description	Status	Release Point Type	Stack Height (FT)	Stack Diameter (FT)
	37261412	0002	ILEPA	6 Storage tanks	Operating	Vertical	8	0.33
	37261312	0006	ILEPA	6200 Gallon blend tank	Operating	Vertical	15	0.3
	37261212	0001	ILEPA	7 Reactors	Operating	Vertical	6	0.2
	37261112	0005	ILEPA	CL Brooks boiler	Operating	Vertical	24	1.3

2) For custom Hard Chrome—You indicated that this facilty closed in 2015/6. this is the 2014 NATA so we would need changes to 2014 emissions. Do you have any changes to 2014? In the past we included information on post-2014 emissions in our "Errata-updates" list but we don't change the 2014 emissions unless they are incorrect. I see that this facility (and 3 others) have a large impact on tract 17031819100 (per the below table). Do you have any changes for the hospitals which also contribute to that tract? Many hospitals no longer use ethylene oxide (I have determined this based on the comments I've gotten back from other states) and if they do, in lower quantities than were reported to the NEI for 2014.

Hello EPA NATA Regional Leads:

We've put together a list of facilities that we need you to review or coordinate with states to review to make sure the emissions are correct. These are facilities that contribute to tract risks for tracts > 100 in a million risk based on the modeling of the 2014 NEI v1 emissions.

The file (excel) is on SharePoint: https://usepa.sharepoint.com/sites/oar_Work/NATAREVIEW/DocumenationInstructions/Priorty%20Facility%20List%20-based%20on%20tract%20risk.xlsx?d=waf2688ed4912470eba2be30fe30f7f65 You can download by saving it to your hard-drive and it will be easier to filter that way.

Please review the facilities that do not have a "Y" in column I ("State Reviewed Data") or do not have a NOTE that indicates that they were put on the TRI list – the ones with the TRI note are being looked at by Velu Senthil of the TRI Program (and he will coordinate with TRI Regional Office leads). In addition to emissions, please also look at the geographic coordinates and release parameters which are in the VIEW3 files on SharePoint (or you can use the NATA Map App).

Our target is to have the entire list reviewed by the **end of June**. **These data are for sharing only with state/local/tribal (S/L/T) agency and S/L/T should not share them outside their agency.**

Thanks

Madeleine

It's a 2014 snap shot so we must include the emissions if they occurred in 2014. We can add to an errata sheet as an afterthought.

Hello
Hope your meeting went well. Per the email below, I have a Meeting topic=== if we know that AFTER 2014 emissions were eliminated from a facility causing a tract to be > 100 in 2014 how to handle in NATA?

In 2011 we put it in the errata and updates sheet but these aren't facilities that caused tract risks > 100.

Margaret,
Thanks so much for all your follow up and your helpful emails! For the 2014 NATA I think I need 2014 emissions. I could assume Saint Anthony didn't use these in 2014 and zero them out but 3-4 years ago doesn't fully support that. For

both of these facilities, it is great to know they are not there now and we should definitely make note of this (at a minimum) – so I'm not sure it is worth checking back with the facilities on their 2014.

I'll get back to you – we didn't really have this situation (tract risk > 100 in 2014 but source no longer there) and I'd like to talk to the team how they want to handle this. In the mean time I will annotate the excel sheet on the SharePoint.

Unfortunately, I missed both of the call backs from Saint Anthony and Swedish Covenant Hospital but they left the following in a message:

Saint Anthony said that they no longer have EtO Sterilizers and she didn't know the exact date as it was before she was with them. She estimates that it was 3-4 years ago.

Swedish Covenant said that they also no longer have EtO Sterilizers and she said that it was removed in February 2015.

Let me know if you have any additional questions and I can call them back.

-Margaret

Hi Madeleine,

Suzanne and I have looked into your questions a bit more yesterday and today.

Pelron is also know by the parent company name: Elé Corporation. I was able to verify the emissions with the consultant Pelron uses to submit their emissions to TRI - United States Compliance Corporation.

The lat long was confirmed to be incorrect and they will correct that in the TRI system to reflect the change. According to the consultant, all the process units are located towards the middle and back of the property. The consultant didn't have specifics but was ok if you centralize the lat long to the middle of the property. The emissions are correct as reported and the consultant said the facility uses a lot of EtO. In calculating the emissions, they use the emission factor of 1.5 from AP42 chapter 6.4 table 6.4.1. There is a scrubber on the system which they claim 99% control. They didn't have release parameters readily available to share so I am unable to update those for you. If you have additional questions, let me know and I will call the consultant back again.

As for St. Anthony's Hospital and Swedish Covenant Hospital, Suzanne was unable to find a permit in Illinois and they aren't listed in TRI so we struggled with who to call to question their emissions. IEPA had previously verified and stated the following:

> Yes, all the ETO sources were reviewed. Probably just missed stating that for those two in the spreadsheet. No changes were made since that is what they reported on their annual emission report.

Today I called both hospitals and their operators directed me to their sterilization departments. I left messages for both managers and will let you know what they say once I hear back from them.

I will review Pelron more closely and get back to you but the lat longs provided in your list attached to this email were to the facility next door. As for Custom Hard Chrome, I know that this is for 2014 but even though Illinois reviewed the data, I wanted to let you know that this source was closed now. You can include this in the errata update. I will see what I can find out about the hospitals in same track.

Hi Margaret
If you go to SharePoint – Priority Facility List-- you will see that Region5 sources have been reviewed. If there are any comments I missed can you either let me know or add them in SharePoint? I think having the comments is very helpful so if you have done any additional outreach on the ones where the emissions will not change, please include that information in the comments.

Thanks!

Unfortunately, I missed both of the call backs from Saint Anthony and Swedish Covenant Hospital but they left the following in a message:

Saint Anthony said that they no longer have EtO Sterilizers and she didn't know the exact date as it was before she was with them. She estimates that it was 3-4 years ago.

Swedish Covenant said that they also no longer have EtO Sterilizers and she said that it was removed in February 2015.

Let me know if you have any additional questions and I can call them back.

-Margaret

Hi Madeleine,

Suzanne and I have looked into your questions a bit more yesterday and today.

Pelron is also know by the parent company name: Elé Corporation. I was able to verify the emissions with the consultant Pelron uses to submit their emissions to TRI - United States Compliance Corporation.

The lat long was confirmed to be incorrect and they will correct that in the TRI system to reflect the change. According to the consultant, all the process units are located towards the middle and back of the property. The consultant didn't have specifics but was ok if you centralize the lat long to the middle of the property. The emissions are correct as reported and the consultant said the facility uses a lot of EtO. In calculating the emissions, they use the emission factor of 1.5 from AP42 chapter 6.4 table 6.4.1. There is a scrubber on the system which they claim 99% control. They didn't have release parameters readily available to share so I am unable to update those for you. If you have additional questions, let me know and I will call the consultant back again.

As for St. Anthony's Hospital and Swedish Covenant Hospital, Suzanne was unable to find a permit in Illinois and they aren't listed in TRI so we struggled with who to call to question their emissions. IEPA had previously verified and stated the following:

> Yes, all the ETO sources were reviewed. Probably just missed stating that for those two in the spreadsheet. No changes were made since that is what they reported on their annual emission report.

Today I called both hospitals and their operators directed me to their sterilization departments. I left messages for both managers and will let you know what they say once I hear back from them.

Margaret

I will review Pelron more closely and get back to you but the lat longs provided in your list attached to this email were to the facility next door. As for Custom Hard Chrome, I know that this is for 2014 but even though Illinois reviewed the data, I wanted to let you know that this source was closed now. You can include this in the errata update. I will see what I can find out about the hospitals in same track.

Subject: RE: List of point sources impacting 2014 NATA v1 tract risks

Hi Margaret
Thanks for the changes – no I don't need them in a change sheet. However I have some follow up questions/issues.

1) Regarding Pelron, there are 4 separate release points – are they all at this lat/lon? Note I show in the figure the census block receptor locations with respect to the source. (you need to look at both slides

to see the top 3 receptors). Before I make the change, I wanted to make sure this change reflects the storage tanks release point which is the one for the one emitting ethylene oxide (first one in the below table). Could these storage tanks be farther south than what you provided or is the yellow oval I put on the figure the most accurate location)?

	GIS Release Point ID	Agency Release Point ID	Program System Code	Release Point Description	Status	Release Point Type	Stack Height (FT)	Stack Diameter (FT)
	37261412	0002	ILEPA	6 Storage tanks	Operating	Vertical	8	0.33
	37261312	0006	ILEPA	6200 Gallon blend tank	Operating	Vertical	15	0.3
	37261212	0001	ILEPA	7 Reactors	Operating	Vertical	6	0.2
	37261112	0005	ILEPA	CL Brooks boiler	Operating	Vertical	24	1.3

2) For custom Hard Chrome—You indicated that this facilty closed in 2015/6. this is the 2014 NATA so we would need changes to 2014 emissions. Do you have any changes to 2014? In the past we included information on post-2014 emissions in our "Errata-updates" list but we don't change the 2014 emissions unless they are incorrect. I see that this facility (and 3 others) have a large impact on tract 17031819100 (per the below table). Do you have any changes for the hospitals which also contribute to that tract? Many hospitals no longer use ethylene oxide (I have determined this based on the comments I've gotten back from other states) and if they do, in lower quantities than were reported to the NEI for 2014.

I have one facility that closed and one slight modification to the lat long.

Custom Hard Chrome – Rosemont IL. Closed in 2015/6 and sold building to Rosemont.
http://www.dailyherald.com/article/20161218/news/161218941/

Pelron Corp – Lyons, IL the lat long was slightly off. Lat: 41.805678, Long: -87.817320

Let me know if you need it in an official change sheet.

Subject: List of point sources impacting 2014 NATA v1 tract risks

Hello EPA NATA Regional Leads:

We've put together a list of facilities that we need you to review or coordinate with states to review to make sure the emissions are correct. These are facilities that contribute to tract risks for tracts > 100 in a million risk based on the modeling of the 2014 NEI v1 emissions.

The file (excel) is on SharePoint: https://usepa.sharepoint.com/sites/oar_Work/NATAREVIEW/DocumenationInstructions/Priorty%20Facility%20List%20-based%20on%20tract%20risk.xlsx?d=waf2688ed4912470eba2be30fe30f7f65 You can download by saving it to your hard-drive and it will be easier to filter that way.

Please review the facilities that do not have a "Y" in column I ("State Reviewed Data") or do not have a NOTE that indicates that they were put on the TRI list – the ones with the TRI note are being looked at by Velu Senthil of the TRI Program (and he will coordinate with TRI Regional Office leads). In addition to emissions, please also look at the geographic coordinates and release parameters which are in the VIEW3 files on SharePoint (or you can use the NATA Map App).

Our target is to have the entire list reviewed by the **end of June**. **These data are for sharing only with state/local/tribal (S/L/T) agency and S/L/T should not share them outside their agency.**

Thanks

Madeleine

Hi Kelly
There are 2 more facilities (listed below) that I don't have a record of your reviewing. Can you let me know if these emissions (columns highlighted in yellow) are correct? These facilities cause the tract risk to exceed 100 in a million:

Note that details on the process/release point (modeling file) ethylene oxide emissions are attached.

Thanks!!!

Subject: ethylene oxide emissions - NATA review

Hi Kelly,

A number of Louisiana facilities have ethylene oxide (EtO) emission estimates that could result in highly elevated tract risks. As we indicated in our January 2014 NATA modeling update (email from Sally Dombrowski 1/27/2017), the cancer health benchmark for Ethylene Oxide (EtO) was updated by EPA in December 2016 (https://cfpub.epa.gov/ncea/iris2/chemicalLanding.cfm?substance_nmbr=1025) and cancer risk levels for this pollutant are approximately 50 times higher.

In terms of annual emissions, the largest is Union Carbide, at about 15 tons EO emissions.

State or Tribe	FIPS	County	EIS facility_id	agy_facility_id	facility_name	Permitted Emissions	Reported to ERIC 2014
Louisiana	22089	St. Charles	7202911	2083	Union Carbide Corp - St Charles Operations	48.839	15.0347600000
Louisiana	22047	Iberville	7451011	27495	BCP Ingredients Inc	5.08	2.5017094370
Louisiana	22047	Iberville	5504811	3263	Taminco US Inc	1.74	1.1494700000
Louisiana	22095	St. John the Baptist	5287111	13560	Air Products Performance Manufacturing Inc - Reserve Plant	1.89	1.6109500000
Louisiana	22005	Ascension	8465611	2049	BASF Corp - Geismar Site	17.13	7.1451525350
Louisiana	22019	Calcasieu	8468011	3271	Sasol Chemicals (USA) LLC - Lake Charles Chemical Complex	20.69	6.3227405000

These (along with a few others)are all on the "Jan2017 Update" of the SharePoint check list
https://usepa.sharepoint.com/sites/oar_Work/NATAREVIEW/2014Facility/Data/CheckList/checklist.xlsx?d=w276998ab32364c90a67e05342b2904ac

Have you verified the emissions and release parameters for these facilities?

Subject: RCG Facilities

Hi Darcie and Madeleine,

Attached, please find the facility100 list with RCG applicability added to Column E. There are 49 facilities total. See tab "RCG only" for the list of unique EIS IDs and the states where these sites are located. It looks like we have 10 facilities in TX, 9 in LA, 4 in WV, and 3 or less in 17 other states. If we could get Madeleine's contact information for the states shown in the "RCG only" tab, that would be great.

Thanks,
Tegan

Hi All

Here's some information Nevine from Region 6 shared with me at the conference– it conflicts with Louisiana's statement that the facilities are all within their permit limits. One follow up for Region 6 is to make sure it is the latest-greatest permit which reminded me that for the emissions changes you have, they need to be 2014 emissions, not an earlier or later year.

Thanks

Baxter Healthcare Corporation
Permit #: 0544-AR-13
AFIN: 03-00002

Total Allowable Emissions

The following table is a summary of emissions from the facility. This table, in itself, is not an enforceable condition of the permit.

TOTAL ALLOWABLE EMISSIONS		
Pollutant	Emission Rates	
	lb/hr	tpy
PM	1.3	3.8
PM_{10}	1.0	2.7
$PM_{2.5}$	See Note*	
SO_2	1.0	0.8
VOC	99.9	94.6
CO	6.9	26.4
NO_x	9.0	31.6
Ethylene Oxide (EtO)**	1.23	5.5
Ethylene Glycol	1.0	0.05
Single HAP	-	9.5
Total HAP	-	23.75

*$PM_{2.5}$ limits are source specific, if required. Not all sources have $PM_{2.5}$ limits.
** HAPs included in the VOC totals. Other HAPs are not included in any other totals unless specifically stated.

Oxide Plant
Agency Interest No.: 2083 Permit No. 476-V4
Union Carbide Corporation - St Charles Operations
Taft, St. Charles Parish, Louisiana

Background

Union Carbide Corporation (UCC), a subsidiary of the Dow Chemical Company, owns and operates Taft/Star Manufacturing Complex, an existing chemical manufacturing facility that began operation prior to 1969. The Union Carbide Corp - St Charles Operations operates the Oxide I and Oxide II Plants under separate permits, Permit Nos. 476-V3 issued October 22, 2010, and 373-V4 issued March 22, 2013, respectively.

This permit is the renewal and modification for the Title V Permit No. 476-V3 for the Oxide I Plant, and also incorporates the Oxide II Plant sources (flares) into the Oxide I Plant Title V permit, thus consolidating both Title V permits into one Title V Permit No. 476-V4 considered as only the Oxide Plant.

St. Gabriel Plant
Agency Interest No.: 3263
Taminco US LLC
St. Gabriel, Iberville Parish, Louisiana

Background

Taminco US LLC, a subsidiary of Eastman Chemical Company, owns and operates the St. Gabriel Plant located at 3790 Highway 30 in Iberville Parish, Louisiana. The site (formerly Air Products and Chemicals, Inc.) had an ownership transfer to Taminco US Inc. on October 17, 2006. Taminco US Inc. changed its company name to Taminco US LLC on December 1, 2015. The facility previously operated under Permit No. 1280-00031-V12, issued December 22, 2015.

Origin

A permit application and Emission Inventory Questionnaire were submitted by Taminco US LLC on May 12, 2016, requesting a Part 70 operating permit renewal and modification. Additional information dated November 14, 2016 was also received.

Estimated emissions in tons per year are as follows:

AIR PERMITS DIVISION
LOUISIANA DEPARTMENT OF ENVIRONMENTAL QUALITY

Air Products Performance Manufacturing, Inc. - Reserve Plant
Agency Interest No.: 13560
Air Products Performance Manufacturing, Inc.
Reserve, St. John the Baptist Parish, Louisiana

BACKGROUND

Air Products Manufacturing, Inc. (Air Products) owns and operates the Reserve Plant, an alkoxylate alcohols production facility, located about five miles west of Reserve, Louisiana. The site was originally permitted under Permit No. 1960, issued to Alcolac, Inc. Previously, the plant was grandfathered. Shell Chemical Company acquired ownership of the Reserve Plant on February 20, 1991; TOMAH Reserve, Inc. (Tomah), purchased the site August 1, 1999. Air Products became the owner/operator of the Reserve Plant in October 2007.

The facility currently operates under Permit No. 2580-00023-06 dated November 14, 2011 and amended June 20, 2014.

ORIGIN

A permit application and Emission Inventory Questionnaire (EIQ) dated September 8, 2016, were received requesting a minor modification of the permit. Additional information dated October 13 and 20, 2016 was also received.

Estimated emissions from this facility in tons per year are as follows:

Pollutant	Before	After	Change
PM_{10}	2.54	2.55	+0.01
$PM_{2.5}$[a]	--	2.55	+2.55

AIR PERMITS DIVISION
LOUISIANA DEPARTMENT OF ENVIRONMENTAL QUALITY

Shell Chemical Company –Geismar Plant
M Unit
Agency Interest No.: 1136
Shell Chemical LP
Geismar, Ascension Parish, Louisiana

Shell Chemical LP proposes to renew/modify the current permit as follows:

1. Increase the production of M-Unit based on reduced batch times, improved reliability and flexibility with feed and product movements;
2. Delete Acetic Storage Tank T-M111, Emission Point 08E-12, because this tank was never built;
3. Incorporate M5 Jet System Vent J-M241 and M6 Jet System Vent J-M251, currently permitted as Insignificant Activity, as emission sources;
4. Remove the Organic Compound requirements or LAC 33:III.Chapter 21 from M1-M6 Hotwell Vents, Emission Points 09-83 and 11-83, because they meet the exemption requirements;
5. Updated the NESHAP, 40 CFR 63 Subpart PPP based on the requirements promulgated on March 27, 2014, as appropriate;
6. Incorporate the requirements of NESHAP, 40 CFR 63 Subpart PPP for Heat Exchangers, Emission Point HON CWHE.

Estimated emissions from the M Unit in tons per year are as follows:

AIR PERMITS DIVISION
LOUISIANA DEPARTMENT OF ENVIRONMENTAL QUALITY

GLYCOL II PLANT
THE DOW CHEMICAL COMPANY
AI NO. 1409
PLAQUEMINE, IBERVILLE PARISH, LOUISIANA

Background

The Dow Chemical Company operates the Glycol II Plant. Permit No. 2203 was issued on August 5, 1993. The Permit No. 2203 (M-1), dated February 5, 2001, the Permit No. 2203 –V0, dated January 3, 2005, Permit No 2203-V1, dated June 20, 2005 and Permit No. 2203 –V2, dated July 8, 2010. Currently, the facility operates under Permit No. 2203-V3, dated December 22, 2010 and an amended on June 12, 2014.

This is the Part 70 operating permit for the facility.

Origin

The Dow Chemical Company submitted an application dated December 18, 2014 requesting a Part 70 permit renewal/modification. Additional information dated February 19, 2015, April 9, 2015 and June 18, 2015 were also received.

(1) Emission point identification - either specific equipment designation or emission point number from plot plan.

(2) Specific point source name. For fugitive sources, use area name or fugitive source name.

(3) VOC - volatile organic compounds as defined in Title 30 Texas Administrative Code § 101.1

EO – ethylene oxide

PO - propylene oxide

(4) Compliance with annual emission limits (tons per year) is based on a 12 month rolling period.

(5) Emission rate is an estimate and is enforceable through compliance with the applicable special condition(s) and permit application representations.

(6) Only one blend tank will be filled at any one time.

(7) VOC includes EO and PO emissions

Permit Amendment

Source Analysis & Technical Review

Company	**Midwest Sterilization Corporation**	Permit Number	55557
City	**Laredo**	Project Number	**166447**
County	**Webb**	Account Number	**N/A**
Project Type	**Amend**	Regulated Entity Number	**RN103376901**
Project Reviewer	**Mr. Patrick Agumadu, P.E.**	Customer Reference Number	**CN602788465**
Site Name	**Ethylene Oxide Sterilizer**		

Project Overview

Midwest Sterilization Corporation (MSC) is requesting an amendment authorization to increase ethylene oxide (EtO) usage rates from 2,500 pounds per day (lb/day) to 3,000 lb/day and from 912,500 lb/yr to 1,095,000 lb/yr. To achieve this increase, MSC is requesting to add a new sterilization chamber (bringing the total on site to eight) and an increase in charged EtO portable cylinders on site from 50 to 60. This project will result in emission changes as shown in Emission Summary Table.

Emission Summary

Subject: RE: Chem sector RTR modeling
Attachments: Facility List for NATA Run No. 3 - new EIS only.xlsx; Facility List for NATA Run - All EIS From List.xlsx

Hi Mark,

Attached, please find EIS IDs for the third (and final) batch. If you could run all the batches on the same run with the new EO values, that would be great. I wasn't sure if you needed just the new EIS IDs, or a list of all EIS IDs from this new run + the previous two runs, so I've attached both options here. The labels should be self-explanatory.

Let me know if you have any questions and thanks again for your help!

Facility List for NATA Run No. 3 ... Facility List for NATA Run - All E...

Best,
Tegan

From: Morris, Mark

Subject: RE: Chem sector RTR modeling

OK. When the third batch is ready just let us know, and let us know if you want results just for batch 3 or you want to redo all of them to get them all on the same run date (that is, so all results reflect the ethylene oxide change, for example).

Thanks

Mark Morris

You guys don't need to come to meeting today if you don't want to. The only thing Tegan was going to pass along is that we are going to have a third batch of facilities to run for risk. Thanks.

2014 NATA Modeling Update – January 2017

In September 2016 EPA released preliminary 2014 NATA point source data for our EPA regional office and State/local and tribal (S/L/T) partners to review. More information on this review can be found on the 2014 NATA SharePoint Point Source Risk Review site at:

[HYPERLINK "https://usepa.sharepoint.com/sites/oar_Work/NATAREVIEW/2014Facility/SitePages/Home.aspx"]

In December 2016 EPA remodeled the point source data using an updated modeling approach (i.e., receptors, meteorology) as well as updated health benchmark data. This resulted in approximately 350 additional facilities now being classified as having a potential for elevated risk (those with cancer risk greater than 10-in-1 million or HI greater than 2). Changes in risk levels at many of these facilities are the result of an updated cancer health benchmark for Ethylene Oxide (EtO) which was released by EPA in December 2016 (https://cfpub.epa.gov/ncea/iris2/chemicalLanding.cfm?substance_nmbr=1025). Cancer risk levels for this pollutant are approximately 50 times higher than those projected in the September 2016 point source risk estimates. Many of these EtO sources are associated with sterilizing operations in the health care industry sector.

We are asking our EPA regional office and S/L/T partners to review the additional potential elevated risk facilities and process along with those identified in the September 2016 point source model runs. To further aid in this review we are providing the following additional documents on the SharePoint site (provided above):

- NATA 2014 Point max risk and hi Comparison File Summary.xlsx
  - This file lists both the September 2016 and December 2016 MIR and HI for each facility included in the 2014 NATA analysis.
- View3_additional_Jan2017.xlsx
  - Detailed Sub Facility Data (View 3) for additional potential elevated risk facilities. This file contains the information for just the 350 additional facilities nationwide.
- ChgProcess_additional_Jan2017.xlsx and ChgRelPt_additional_Jan2017.xlsx
  - Change sheets to submit updates for additional potential elevated risk facilities. This file contains the information for all 350 additional facilities nationwide.
- Checklist.xlsx
  - Revised checklist (additional facilities exceeding 100-in-1 million or HI of 5) are in the "ADDED" tab.

All
Attached is a file of facilities that I checked for emissions review history (who reviewed, what they found). Other than TRI and SPPD, I don't have a record that indicates that the facility verified the emissions. For facilities in which states verified the emissions, the states did not provide information on how this was done.

Ex. 5 Deliberative Process (DP)

Subject: RE: 2014 NATA version 2 - DRAFT ethylene oxide point source risks
Attachments: Copy of ForRegions_EtOReview_V2NATA_031518 (003).xlsx

Darcie: I was asked by my manager to follow up on a facility with ethylene oxide emissions that we did not contact in March. Van Diest Supply Company in Webster City, Iowa revised their emissions of ethylene oxide in May. They actually revised several years of inventory and submitted them to the state at that time.

In V1 and V2 of NATA the emissions for this facility were 1.27 tons for 2014.
The 2014 revised facility total for ethylene oxide is 0.000336 tons.

I am not sure if this is all too late to be useful, but I was asked to check with this facility on Monday afternoon.

If you have any questions, please let me know.

Subject: RE: 2014 NATA version 2 - DRAFT ethylene oxide point source risks

Darcie,

Stephanie Doolan and I called the 2 facilities that were listed for region 7 to contact. The main focus of the calls ended up beigng to explain the NATA process is to the facility contacts. We do not have anything extraordinary to report, but I did add comments to the spreadsheet in column R in the text of this email if you prefer.

Penford: Emissions are correct. Stack height is actually 49 feet rather 40 feet in EIS. Source is considering doing a new stack test.

BCP: Source indicated emissions are all fugitive. May have revise emissions estimate, SD gave 30 days. Asked about IRIS numbers and SD offered to email link.

Please let me know if you have follow up questions.

Subject: 2014 NATA version 2 - DRAFT ethylene oxide point source risks

Hello –

You are receiving this email because you are a member of the ATRA EtO group or a NATA Regional Office lead or both. Either way, you know that in version 1 of the 2014 NATA we saw ethylene oxide emissions from point sources driving risks at the census tract level. Since that time, you have reviewed the data, worked with your states to review the data, and provided revisions back to us. We have incorporated those changes from V1 of the 2014 NATA and in preparation for version 2, have re-modeled the EtO-emitting point sources first. This is your first look at those results. **Please remember that risk results are not to be shared outside the Agency**.

The attached pdf document provides: 1) a summary of the events of the emissions review, 2) a regional count of facilities in the attached spreadsheet, and 3) an explanation of the data fields in the attached spreadsheet file. The attached spreadsheet contains a list of facilities that had a census *block* level cancer risk greater than 100-in-1 million in either version 1 (column J) or version 2 (column K). These are all provided so you can see how any data changes impacted the risk results. As you will see, there are still some facilities where we have estimated a census *tract* level cancer risk of greater than 100-in-1 million in version 2. These are indicated with a "Y" in column K. (An exact risk number is not provided because the estimates only take into account the AERMOD modeling; CMAQ is not yet complete so we have not combined the two results and we have given you our best estimate.)

We know that some of you are actively working with your states on the data review. Thank you for your time and effort doing that! There are some columns in the spreadsheet that may help focus your conversations, for example, column N, which provides information on how the EtO emissions were calculated for the process with the most emissions. And, our engineers are also working through their contacts to continue to verify the emissions and other inputs to the modeling. (If you need to contact them, Jennifer (chemical manufacturing) and Jonathan (sterilizers) are in the "CC" field.) There are columns in the spreadsheet to indicate what has been done and what type of changes have been received or are expected. **However, without additional information, there will likely be little change to these results.** If you have received additional info or revisions, please work with Madeleine to get those to us.

As you continue to work through this situation, please let us know if there's anything we can do to help or if there's additional data you need. We are happy to walk through this on the next ATRA call or set up a special purpose call. As always, if you have questions please feel free to contact me, Ted (palma.ted@epa.gov, 919-541-5470), or Madeleine (strum.madeleine@epa.gov, 919-541-2383).

Thank you,
Darcie

Subject: [EXTERNAL] RE: 2014 ATEI - 2701500039

Cheryl,

It was very nice to talk with you. I will use the following to summarize our effort on the review of 2014 emissions for ethylene oxide from the 3M - New Ulm - Electrical Products Division:

1. The originally reported emissions of EtO, 0.09 Tons, are right.
2. The emissions originally were reported for SCC 30800699. It should be for SCC 31502001.
3. The release of emissions was through 4 each ¾" copper lines housed within a 4.75"pipe running through the roof of the building, ~10 foot high. The exhaust velocity would be close to 0 due to the elbow in the release point (goose neck). The exhaust temperature is 131F.
4. 3M will shut down the operation in June 2017.

Please let me know if I missed anything. I really appreciate your help.

Subject: RE: 2014 ATEI - 2701500039

Chun Yi,
I am sorry for the confusion. I added in the exhaust #5 which is the EtO cabinet that we store the small canisters of EtO which we also exhaust.

During testing, they hook up the ¾" cooper line to the exhaust. Each one of them exhaust to the roof.

The EtO cabinet that is also exhausted (Exhaust fan #5), has a 3" vent that goes into a different stack (#8). Theoretically, there should not be any EtO in the cabinet but we exhaust as a precaution.

I just left you a voice mail. I am in meetings all morning and won't be available until 1pm.
Please let me know if you still want to talk more about this.
Thanks,
Cheryl

To: Cheryl Emery <cbemery@mmm.com>
Subject: [EXTERNAL] RE: 2014 ATEI - 2701500039

Cheryl,

Thanks a lot for your review. I will not change the emission value but the SCC. Do you have any idea regarding the stack parameters for the process? How many stacks do you have for the process? We have default values as follows:

Type	Description	Stack Height (FT)	Stack Diameter (FT)	Exit Gas Flow Rate (ACFM)	Exit Gas Temperature (°F)
Vertical	Imitation stack (default for SCC '30800699')	33.3	1.7	3254.88	173.8
Vertical	Imitation stack (default for SCC '31502001')	40.77	1.224	1055.34	99.876

Originally, we used one imitation stack for SCC30800699. If you don't have any data, we will use one stack for SCC31502001.

Subject: [EXTERNAL] 2014 ATEI - 2701500039

Cheryl,

Although we are working on the 2016 EI now, EPA is using the 2014 AT emissions for the national air toxics assessment (NATA). EPA released an updated cancer health benchmark for Ethylene Oxide (EtO) in December 2016 (https://cfpub.epa.gov/ncea/iris2/chemicalLanding.cfm?substance_nmbr=1025).It was noticed that you reported 0.09 Tons of EtO emissions for Rubber and Miscellaneous Plastics Products, Other Fabricated Plastics (SCC 30800699). The emissions resulted in high health risks. Could you check and make sure the reported value is right? Thanks.

Subject: increase in EtO emissions of 17 tons

Hi, I wasn't sure who I should send this to so I included you both.

On the R6 ppt slides for today's call, I noticed that for the Port Neches, tx plant the review column says "no changes" and under review it says "TCEQ - no changes". For the Santa Teresa NM plant, the review column says "emissions decreased."

I have reviewed the TRI data for both plants and:

Ex. 5 Deliberative Process (DP)

Hi Anupa,

While not reflected in NATA, we received additional information from the Union Carbide St. Charles Facility that we are still evaluating and discussing with the facility. When we complete our analysis, if there are any changes, we will share them with you. We have not received any other emissions changes.

Subject: RE: Emissions data

Hi Anupa -

Thanks for your question. You're right, we have spoken with our AA, but the conversation is not yet over.

Regarding the emissions, as I shared with you previously, there are no new emissions, with the exception of a minor one (20 lbs out of 7 tons) for Texas Operations in Longview TX and possibly some updated emissions from Union Carbide St. Charles. We've been expecting some, so I've copied Jennifer Caparoso on this because if we have received new emissions for that facility, she will have them.

Thanks,
Darcie

Subject: Emissions data

Hi Darcie,
Now that the Wehrum briefing is done, my management is asking if it would be possible for us to get the updated emissions data for the 9 facilities in R6? We have the 2014 emissions inventory data, but we would like to get the updates to the emissions that may have been provided by the companies.

Thank you,
Anupa

Sent from my iPhone

On Aug 9, 2018, at 3:25 PM, Jay, Michael <Jay.Michael@epa.gov> wrote:

Mike,

R7 agrees with current listing of our 4 sources on the list as candidates for further consideration on next steps. I am sending this on behalf of Mark Smith our acting Division Director and John Smith, our Deputy Director who are both out of office and will return next week.

Region 7 Interactions with EtO facilities

- Region 7 has reported during NATA national workgroup calls on our actions to contact, verify, and/or inspect three of the four facilities on the ADD list as follows:
  - Penford Products,
  - BCP Verona
  - Midwest Sterilization
- R7 staff did not contact the fourth facility, Van Diest, in Webster City, Iowa, because the v. 2 modeling tract-level risk was significantly less than that of the other three facilities discussed above (16 in-one-million). In addition, it was not on the original list of facilities OAQPS requested us to contact.
- R7 contacted Penford Products on 3-28-18 and BCP Verona on 3-29-18, and BCP Verona contacted us again later on 4-29-18. We verified that the reported emissions of EtO for both facilities are accurate and informed them of the Census Tract level risk due to EtO. We discussed the potential for voluntary emissions reductions. The facilities were interested, but didn't make any commitments.
- R7 staff conducted an air compliance inspection at the largest facility, Midwest Sterilization on 5-22-18. The facility was found in compliance with its minor source air permit. We had post-inspection calls with the facility on 7-13-18 and 7-24-18. Prior to our visit, we considered suggesting the Region 5 approach of routing the sterilizer back vent emissions to the existing scrubber, but at the inspection, we found that the facility had considered that route. The facility had conducted testing in 2005 which showed emissions of less than 0.08 pounds of EtO per pound of EtO charged. That testing continues to date using a gas chromatograph. The inspection results verified the reported emissions for this facility.

Subject: EtO facilities in elevated risk tracts
Attachments: facs in high risk tracts with EtO emissions.xlsx

Here are the facilities that have EtO emissions in the 106 tracts nationwide with total risk >= 100 in a million. The list does not include facilities that may be just outside a high risk tract and potentially drive the risk of that tract. I have joined all the tract risk data to the list of facilities for the tract it is in.
This was all done by the map app, but don't try this at home.

Attachments: EtO Facs in High and Adj Tracts.xlsx

Here's another list, done the same way as before, but now also grabbing facilities in or adjacent to the 100 in a million (total risk) tracts. This list includes the MSA ones you noted below.
I'm sure the facilities you noted that are in the attached list but not on the MSA list are just those with low emissions that don't really drive anything, but still get included because they are in the tracts and they have nonzero emissions...

Subject: RE: EtO info update

Hi Darcie,

My response has two parts:

1. For a record of all contacts we have made for each RCG facility, please refer to the "MASTER_ETOX_v1_v2_highrisk_comparison" spreadsheet on the SharePoint site. See the "Contacts" column for notes on who was contacted and if a response was received.
2. Here, I have elaborated on the responses received thus far from 11 total facilities, some with changes to EO, some with changes to release parameters, and some with no changes. All facilities that received changes are MON facilities, so you should be able to pull all updates from the MON modeling file:

Facility ID	Facility Name	State	City	Region	MACT	Response
5383511	VAN DIEST SUPPLY COMPANY	Iowa	WEBSTER CITY	7	MON	Contact provided updated EO emissions and release parameters. See MON modeling file for changes made.
8467311	The Dow Chemical Co - Louisiana Operations	Louisiana	Plaquemine	6	MON, OLD, HON, Ethylene	Received missing EO emissions and updated release parameters (velocities, heights) using 2016 emissions data they provided. See MON modeling file for updates, which include 2016 EO emissions. They also provided 2014 emissions if you prefer these numbers, let me know if you would like me to send.
7281511	BCP INGREDIENTS-VERONA PLANT	Missouri	VERONA	7	(not HON, MON, OLD, MCM, or Ethylene)	Facility said all emissions are fugitives. May revise emissions - deadline end of April. R7 emailing IRIS link to facility.
3965211	SOLVAY USA INC	South Carolina	CHARLESTON	4	MON, OLD	SC DEHC reviewed information and did not make changes. Planning site visit on April 25th and will follow up.

4941511	TEXAS OPERATIONS	Texas	LONGVIEW	6	MON, OLD, HON, Ethylene	Contact did not provide any changes to EO emissions, do not know if we will receive any.
5782311	UNION CARBIDE CORP -SO CHARLESTON FAC.	West Virginia	SOUTH CHARLESTON	3	MON, OLD, HON, PPP	Provided release parameter updates but no changes to EO emissions.
5504811	Taminco US Inc	Louisiana	St. Gabriel	6	(not HON, MON, OLD, MCM, or Ethylene)	Corporate environmental contact only responded to state that this facility is a minor source of HAP and not subject to MON or OLD. Did not provide updates to EO.
6884411	UNION CARBIDE CORPORATION-INSTITUTE	West Virginia	INSTITUTE	3	MON, HON	Appear to have provided changes to release point parameters only for EO units, but not to EO emissions. Refer to MON modeling file to obtain changes.
7202911	Union Carbide Corp - St Charles Operations	Louisiana	Taft	6	MON, OLD, HON, Ethylene, PPP	Provided changes to EO emissions. Zeroed out two records with rationale provided, also added 10 records of missing EO emissions to the file. Refer to MON modeling file to obtain changes.
8465611	BASF Corp - Geismar Site	Louisiana	Geismar	6	MON, OLD, HON	Provided changes to EO emissions. Reduced EO emissions from CO2 removal system from 5.3522 tpy to 4.28 tpy, with rationale for change included. Refer to MON modeling file to obtain changes.
8468011	Sasol Chemicals (USA) LLC - Lake Charles Chemical Complex	Louisiana	Westlake	6	MON, HON, Ethylene	Contact reviewed EO emissions and has no changes.

Please let me know if you have any questions.

Best,
Tegan

Hi All
On my end, Ron Ryan provided me Jennifer's lat/lon changes and none of them affected the high priority ethylene oxide facilities.
Region 2 provided me Edwards Life Science facility (Puerto Rico) release parameter changes which had a negligible impact on the concentrations at the MIR receptor.

I don't believe I've seen any other post v2 NEI corrections. Please let me know if I might have missed something.

Subject: EtO info update

Hi –

Erika mentioned that NCEA/ORD and Region 6 are going to be meeting in the next couple weeks to talk about ethylene oxide. In preparation for that, she asked for an update on the status of activities related to ethylene oxide. For example, how many facilities have responded to your inquiries by providing revised data? What are the latest conversations you've had with the trade associations? I don't have a specific request of you today, but please be prepared and know that a request along these lines is coming soon. It is possible that we'll need to put together an updated status pager, or it is possible that we just need to get together and answer her questions. I'll let you know the logistics and specific questions when I know them. Stay tuned!

Thanks,
Darcie

Hi James –

We are taking a closer look at a handful of ethylene oxide emitting facilities that have block risks > 100-in-1 million in version 2 NATA. Madeleine has already gone in and commented on any emissions or parameter changes. We are going to look at receptor changes or locations. Can you please provide the gridded met data that each facility had in the modeling? We can talk about the format and/or logistics on Monday.

Thanks,
Darcie

Subject: RE: List of 26 facilities 08 15 18.xlsx

Thanks! Here's the version I sent to Clint to use for a discussion with him this afternoon – still to be scheduled. One thing to note is that Peter suggested we use the latest block (and, if available) tract level information for Solvay. We could include a footnote on these values, if necessary, to indicate that they reflect more current (not NATA) data.

Mike

That's fine if that facility is a no. Thanks for checking these over!

We are presenting it as our best estimate, so if we aren't perfect in our estimates, that is okay.

Subject: RE: EO Facilities

I have one lingering issue –the facility below has a "**V1 Max Tract Cancer Risk (in 1 million)(from EthOx specific tract file)**" >100 but the formula results in less than 100 in a million for v2 (hybrid adjusted and pre-hybrid adjusted are both below 95). I made this one a "No" because I think the V1 tract risk is probably dominated by something other than ethylene oxide and it isn't even the Priority facility list we sent out during the NATA review.

Facility ID	Facility Name	State	City	Address	EPA Region	V1 MIR @ block (in 1 million)	V2 MIR @ block (in 1 million)	V1 Max Tract Cancer Risk (in 1 million) (from EthOx specific tract file)
6885911	BAYER MATERIALSCIENCE - SOUTH CHARLESTON	West Virginia	SOUTH CHARLESTON	437 MACCORKLE AVE.,SW	03	157.840	162.412	208.492

Hi Ted
I took a look at the file on SharePoint. Looks like all those columns were removed and I couldn't find the intermediate calcs (I cant find the file I downloaded yesterday).

I just have one comment ---are we confident that these 5 facilities, that had no emissions changes and impacted v1 tract risk do not impact v2 tract risk? I think it is correct – but was just double checking.

Facility ID	Facility Name	State	City	Address	EPA Region	V1 MIR @ block (in 1 million)	V2 MIR @ block (in 1 million)	V1 Max Tract Cancer Risk (in 1 million) (from EthOx specific tract file)	Is Census Tract Risk expected to be > 100 in 1-million in V2?
3736811	SHELL TECHNOLOGY CENTER HOUSTON	Texas	HOUSTON	3333 HWY 6 SOUTH	06	422	291	195	No

I like the simple approach but I there may have been one more adjustment that would bring in a few additional to focus on. Could we possibly have used Steve's value if it was higher (to be conservative) ? I recall we did say if it was 95, we count it (round) as 100.

I cant seem to find the file that had all the methodologies. I was thinking that might help me refresh my memory. Or just go with what you had.

Madeleine

Subject: Eo Facilities

We need to resolve the discussion we had about the best way to apply the hybrid to the EO Tract risk, I suggest that we just use the V1 ratio (I think you proposed that too) we can take the file on Sharepoint that has ETOX_max_tract_cancerrisk_withpol and apply there and re-sum the tract risk or maybe keep it simple and just apply the EO ratio to the total tract risk and assume it's mostly EO anyway?

Need to resolve this quickly

Subject: OAR AA Briefing Today RE: EtO facilities in 2014 NATA

All,

Will was contacted by OAQPS late yesterday and told that the AA will be briefed today about the 2014 NATA risk modeling results, and, particularly, about risks from ethylene oxide facilities. As I emailed you about earlier (see below), Region 7 has the highest block risk in the nation for the BCP facility in Verona, MO, but the tract risk is much lower. For Midwest Sterilization Corp in Cape

Girardeau, the tract risk is the highest in R7 also due to EtO emissions. *The risk from EtO is higher in the 2014 NATA release because the IRIS toxicity value was re-evaluated and lowered by 40%.*

Please let me know if you have any questions. Will and I will keep you posted about when to expect the public release of the 2014 NATA and any briefing materials that are prepared to support that release.

Thank you!

Cc: Stone, William <stone.william@epa.gov>; Johnson, Karen T. <Johnson.Karent@epa.gov>
Subject: RE: EtO facilities in MO / 2014 NATA Update

Will and I have been looking at the tract level risks and below is the information he put together for me. The Cape Girardeau Co. facility has the highest risk of the EtO facilities and of all facilities in the four-state region. As you can see from the previous email which contained the facility-specific risk, the tract level risk is much less, but still significant. We have discussed the facility with MDNR and Karen Johnson has put it on the 2018 inspection list. Will and I have joined a NATA sub-group to discuss and share information on EtO facilities.

Please let us know if you have questions or comments. Unless there is a "game-changer" that I don't know about now, these facilities will be the highest risk facilities in the public release of the 2014 NATA. With the help of the subgroup, we'll be ready with an internal briefing to prepare us for the public release and any questions we may receive. Look forward (or not!) to a briefing closer to the release date.

\Stephanie, I downloaded the 4 files. I started with cancer risk by poll. We have a couple that stand out. Here's all the tracts above 60 per million.

State	EPA Region	County	FIPS	Tract	Population	Total Cancer Risk (per million)
MO	EPA Region 7	Cape Girardeau	29031	29031880400	6908	193.882
IA	EPA Region 7	Linn	19113	19113002200	1832	81.258
MO	EPA Region 7	Lawrence	29109	29109470300	5445	78.071
IA	EPA Region 7	Linn	19113	19113002600	2416	69.474
MO	EPA Region 7	Cape Girardeau	29031	29031880500	9040	67.215
MO	EPA Region 7	Cape Girardeau	29031	29031880200	3822	64.518
MO	EPA Region 7	Cape Girardeau	29031	29031000000	75674	60.969

MO	EPA Region 7	Cape Girardeau	29031	29031880300	4387	60.649

It looks like Ethylene oxide is biggest contributor here.

ETHYLENE OXIDE
164.920

7703311	Midwest Sterilization Corp-Jackson	29031	Missouri	2004.322124

Just an FYI. There are two facilities in Missouri that are showing greater than 100 in one mil risk for ethylene oxide. Above is an excerpt from an xls file from OAQPS of all EtO facilities. Keep in mind this is facility risk at this point. In about another month, we'll have the modeled data in the app by census tract, which could change the picture. This is something new this year for the 2014 NATA b/c EPA lowered the IRIS toxicity value by a factor of 50. MDNR has been made aware and they say that the emissions are correct. Karen put the Midwest Sterilization Corp facility on the target list. My understanding is that these facilities are within their permitted limits as minor sources. When we see how they model at the census tract level, I'll report back. I was just surprised that we had the highest risk EtO facility in the nation.

Thank you!

Hi Erika –

Attached are a draft of the slides for tomorrow's meeting with region 6 staff. (Please remember that there are additional changes we will make for Bill.)

We've added back in the context and background and moved the national results to the appendix. Mark is making two maps and there are placeholders for them. One is the broad map zoomed into Region 6 and the other will be the ~50 km around Denka (which should pick up at least 2 EtO facs.) We also added info on the facilities in the R6 MSAs. And, we added in some comms-related items.

Let us know what comments you have.

Thanks,
Darcie

Hi Kristal –

Will you please attach these to the 3 pm NATA meeting today?

Thank you!
Darcie

National Air Toxics Assessment (NATA): 2014 Results Summary

Briefing for Region 6

June 14, 2018

Key Messages

- NATA is a screening tool that identifies areas for further analysis
  - It does not single out one area of the country as having the highest risks
  - It uses estimates of emissions and computer models to approximate risks; it is not designed to determine actual health risks to individual people
- In the 2014 NATA results, Region 6 has 8 MSAs with cancer risks ≥ 100-in-1 million
  - Risks in all MSAs are driven by ethylene oxide emissions (except New Orleans-Metairie, which is also driven by chloroprene)
- OAR is currently discussing ways to address these risks

What is NATA?

- Screening-level characterization of air toxics across the nation
  - Nationwide assessment with census **tract** resolution (about 74,000 tracts)
  - Based on air quality modeling of emissions from: stationary, mobile, biogenic sources, and fires using the National Emissions Inventory
  - Ambient and exposure concentration estimates for 175 HAP plus diesel particulate matter (DPM)
  - Cancer and noncancer risk estimates for about 140 Clean Air Act hazardous air pollutants (HAP) with health data based on chronic exposures
- This is the 6th NATA (2014 NATA)
  - Previous assessments for inventory years 1996, 1999, 2002, 2005, 2011
- Primary NATA Uses
  - Planning tool for EPA, state/local/tribal organizations
    - To identify locations of interest for further study
    - To prioritize pollutants and emission sources/types
    - To inform monitoring programs
  - Serve partner needs by developing innovative data and communication tools

Limitations

- Emissions, modeled ambient concentrations, and estimated inhalation exposures are only from sources of outdoor origin via the inhalation route of exposure
- Results are more uncertain at finer geographic scales
  - Surrogates used to allocate mobile and nonpoint source emissions
- Results should not be used to compare risks among different areas of the country
  - Underlying emissions data vary in level of detail from state to state
- Results should not be compared among NATAs
  - Changes in results are due to actual emission changes as well as the use of different modeling and emissions processing techniques. In addition, other assessment inputs, such as meteorological data and health benchmark values, change over time.

2014 NATA Analytical Steps

Compile National Emissions Inventory (2014 NEI)

2014 NEI includes both stationary, mobile and natural sources (fires, biogenics).

NATA includes 175 HAP and diesel particulate from mobile sources.

Estimate ambient concentrations of air toxics across U.S.

Uses CMAQ and AERMOD to predict census tract ambient concentrations nationwide.

Estimate population exposures

Includes an exposure model (HAPEM7) to account for human activity data, commuting patterns, and near roadway exposures.

Characterize potential public health risks from inhalation

Census tract level cancer and noncancer risks nationwide.

Improvements & Updates for 2014

- Inventory:
  - ***Updated spatial allocation for mobile and nonpoint sources***
  - NEI improved in many areas e.g., oil & gas, onroad, nonroad, commercial marine vessels
  - Areas outside CMAQ domain (AK, HI, PR, VI) better characterized for AERMOD modeling
  - New emissions processing tool built for preparing AERMOD emissions
- Photochemical/Dispersion Modeling:
  - In CMAQ: improved boundary conditions and carbon tetrachloride treatment; nine more HAP modeled than in 2014
  - More spatially refined meteorology using prognostic meteorological modeling (WRF)
- Exposure Modeling:
  - New features of HAPEM 7, including updated population and commuting patterns, activity pattern data, and four additional commuting-related microenvironments
- Risk Characterization:
  - ***Updated health benchmarks – ethylene oxide, acrolein, benzo(a)pyrene***
- Outreach:
  - Updated Map App features
  - Potential story map

Pre-Release Results

Do not cite, quote or release

The NATA team is still performing QA/QC
of the data prior to public release

MSAs with Elevated Cancer Risks

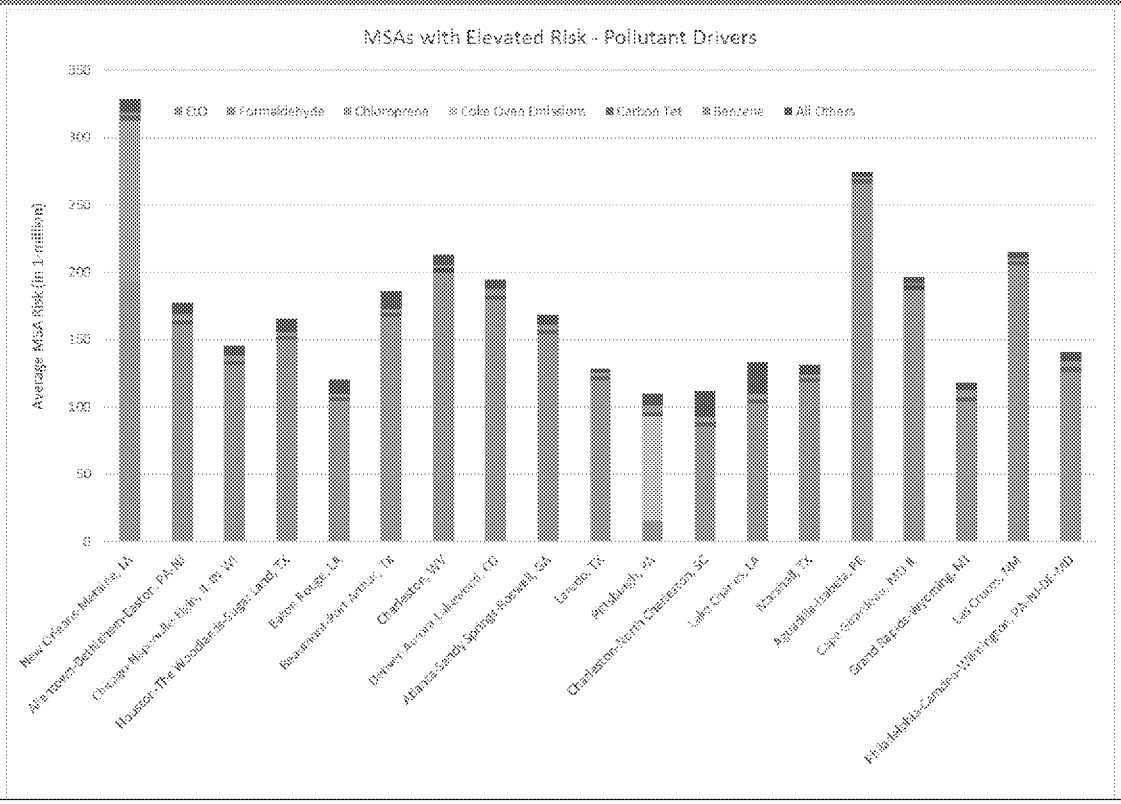
Laredo, TX	***3***	***100***			

** With the exception of New Orleans-Metairie, LA (chloroprene) and Pittsburgh, PA (coke oven emissions), the primary risks are driven by emissions of ethylene oxide from point sources.

† The following 5 MSAs were also in the 2011 NATA as MSAs with elevated cancer risks: Chicago-Naperville-Elgin, IL-IN-WI; Denver-Aurora-Lakewood, CO; New Orleans-Metairie, LA; Philadelphia-Camden-Wilmington, PA-NJ-DE-MD, and Pittsburgh, PA.

MSAs with Elevated Cancer Risks – Pollutant Drivers

2014 NATA Version 2



Ethylene Oxide Risks

- EtO emissions from point sources contribute at least 50% of cancer risks ≥ 100-in-1 million in 98 (of 106) census tracts in 18 (of 19) MSAs
- 93% of tracts with elevated risks are in four regions: 52% in Region 6, 25% in Region 3, 11% in Region 5, and 5% in Region 4
- 19 EtO facilities drive these risks: 10 sterilizers and 9 chemical plants
- Data review activities:
  - OAQPS contacted trade associations and facilities
  - Regional staff also contacted states and facilities
  - Any revised data received to date has been incorporated into NATA or evaluated for appropriateness for inclusion

Region 6 MSAs with Elevated Cancer Risks

2014 NATA Version 2

MSA Name	# Tracts
New Orleans-Metairie, LA	19
Beaumont-Port Arthur, TX	8
Laredo, TX	3
Marshall, TX	2
Lake Charles, LA	2
Baton Rouge, LA	9
Las Cruces, NM	1
Houston-The Woodlands-Sugar Land, TX	11

Facilities in LA w/ Elevated Risks

2014 NATA Version 2

MSA Area Name	Facility	Type of Facility	Potential Applicable MACT to Risk Driving Emissions	Review
New Orleans-Metairie, LA	Denka	Chemical plant	n/a	n/a
	BCP Ingredients	Chemical plant	NOT (HON, MON, OLD, MCM, or Ethylene Prod.)	Facility. No changes.
	Union Carbide St. Charles	Chemical plant	HON, Polyols	Facility. TBD.
Lake Charles, LA	Air Products Reserve Plant	Chemical plant	NOT (HON, MON, OLD, MCM, or Ethylene Prod.)	LA DEQ. No changes.
Baton Rouge, LA	Taminco	Chemical plant	NOT (HON, MON, OLD, MCM, or Ethylene Prod.)	LA DEQ. No changes.

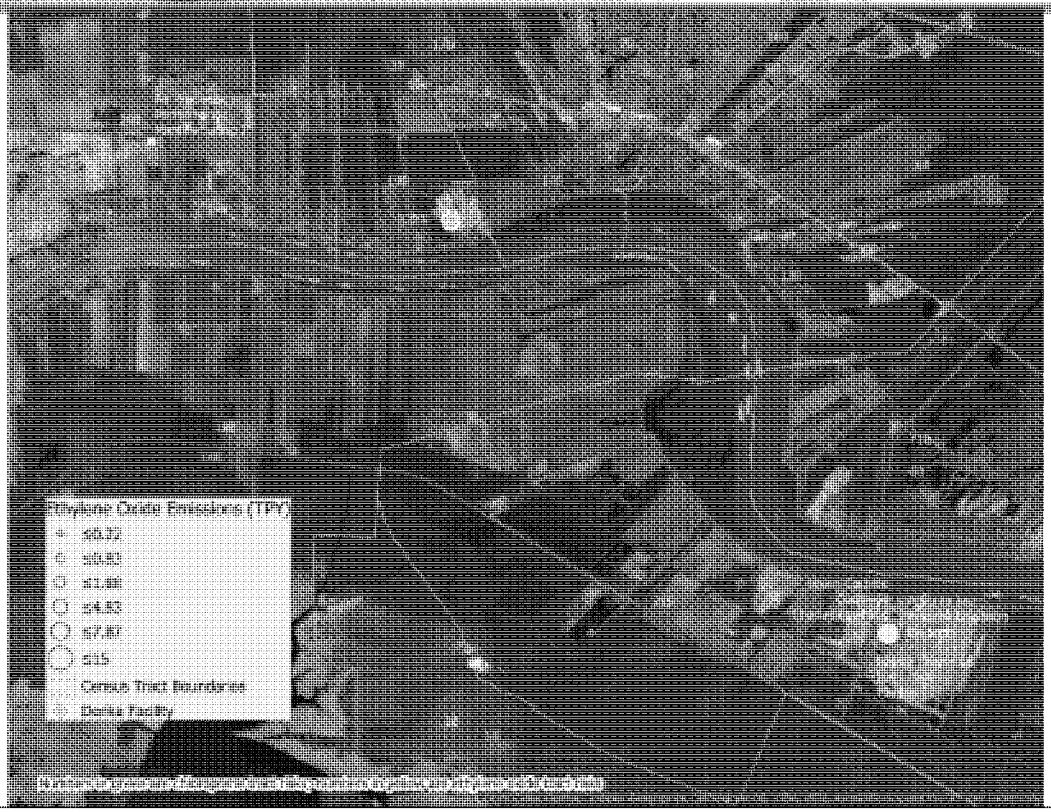
Facilities in TX/NM w/Elevated Risks

2014 NATA Version 2

MSA Area Name	Facility	Type of Facility	Potential Applicable MACT	Review
Beaumont-Port Arthur, TX	PORT NECHES PLANT	Chemical plant	HON	TCEQ. No changes.
Laredo, TX	Midwest Sterilization Corp	Sterilizer	EtO Emis. Stds for Sterilization Facs (Subpart O)	TRI. No changes.
Marshall, TX	TEXAS OPERATIONS	Chemical plant	HON	Fac. Minor changes.
Houston-The Woodlands-Sugar Land, TX	SHELL TECHNOLOGY CENTER HOUSTON	Chemical plant	NOT (HON, MON, OLD, MCM, or Ethylene Prod)	TCEQ. No changes.
Las Cruces, NM	Santa Teresa Facility	Sterlilizer	EtO Emis. Stds for Sterilization Facs (Subpart O)	Emissions reduced after 2014.

Census Tracts Near LaPlace, LA w/ Elevated Cancer Risks from EtO and Chloroprene

2014 NATA Version 2



Moving Forward

- Planned Release: Mid-August 2018
- Steps Before Release:
  - June/July -- briefings for Office Directors, AAs, and Regions
    - June 21 – OAR Management
    - June 25 (week of) – OAR/R6 Leadership
  - ~June 22 – share NATA results with regions
  - June/July – develop communications materials, webpages
    - Outreach to affected facilities, state agencies, etc.
  - Early August -- share results with state/local/tribal agencies for 2-week preview period

Communications and Outreach

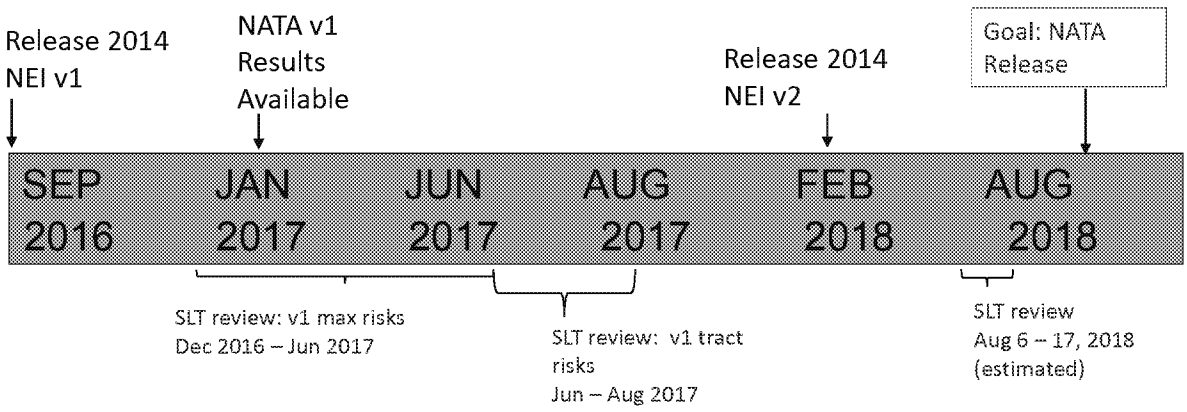
- HQ plans to prepare general materials on NATA and ethylene oxide, including:
  - Qs & As
  - Talking Points
  - Fact Sheet(s)
- We stand ready to support the region with developing any materials specific to their states/localities, including:
  - Regional talking points
  - Draft press releases
  - Other targeted materials as needed

Appendix

Results, Outreach, and Documentation

- Tabular results by pollutant and source type:
  - Emissions (facility, grid, county level)
  - Modeled ambient concentrations (census tract, county, state, national)
    - 175 individual pollutants included; 38 source group summaries
    - 49 pollutants included in hybrid analysis (modeled in CMAQ)
  - Exposure concentrations (census tract, county, state, national)
    - 175 pollutants; 38 source group summaries
  - Cancer and noncancer risk driver summaries (census tract, county, state, national)
    - 71 carcinogens and 106 noncarcinogens; 38 source group summaries
    - Cancer risks in 1 million (MIR); Noncancer risks expressed as Hazard Index (HI)
  - Generally used by researchers, data-savvy users
- Visual display of tabular results in interactive Map App
  - Can help users identify the sources and pollutants that contribute to potential risks in their community
  - Available on tablets and smartphones
  - Often used by the press
- Webpages with methods, results, FAQs and other references
- Technical support document and related documentation

Process & S/L/T Outreach



About 40 States participated in NATA Review

National Cancer Risk Results

- Population-weighted, national-average cancer risk estimated to be **30-in-1 million**
- 106 tracts and 470,000 people estimated to have a cancer risk ≥ 100-in-1 million
- 19 MSAs estimated to have at least 1 census tract ≥ 100-in-1 million
- Tracts ≥ 100 in-1 million primarily driven by point source emissions
  - 57 of 106 tracts have risks ≥ 100-in-1 million from ethylene oxide ***alone***
- Other tract-level pollutant drivers include chloroprene, coke oven emissions, formaldehyde, chromium (VI) compounds
- Secondary formation (formaldehyde and acetaldehyde) estimated to contribute about 65 percent of the cancer risk nationwide

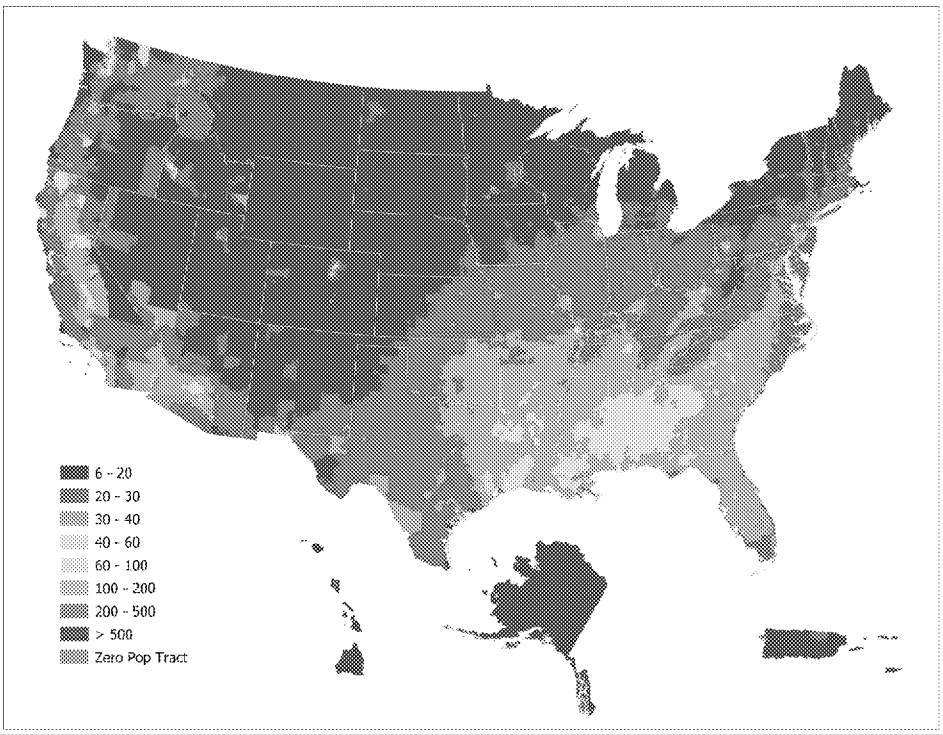
2011 NATA Results

- National-average cancer risk: 40-in-1 million
- 120 tracts, 500,000 people estimated to have cancer risk ≥ 100-in-1 million
- 12 MSAs with tracts ≥ 100-in-1 million

National Average Cancer Risk

2014 NATA Version 2

(30-in-1 million)



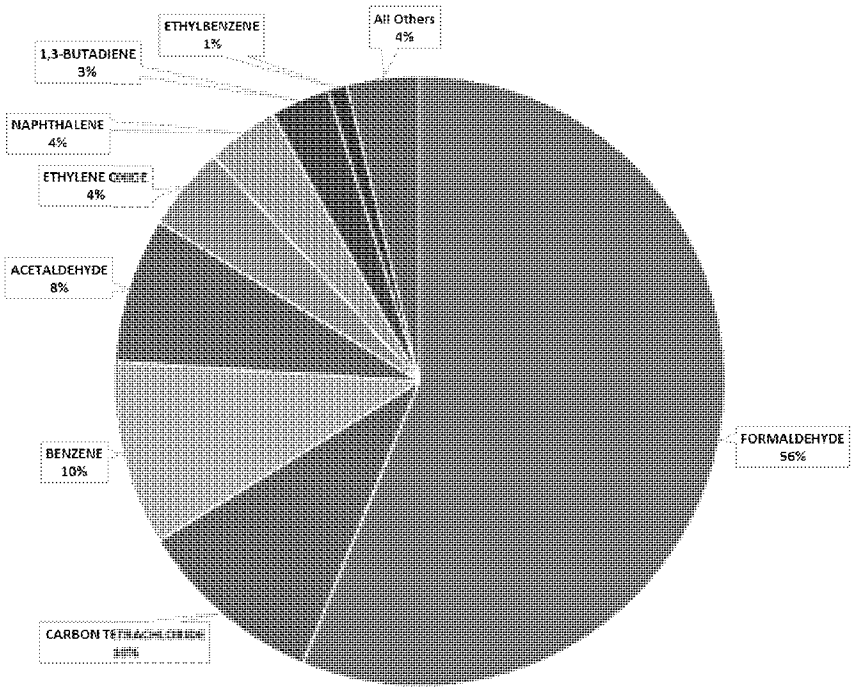
27

National Average Cancer Risk

2014 NATA Version 2

Pollutant Contributions (30-in-1 million)

Ethylene oxide (stationary source pollutant) is a new risk driver in 2014

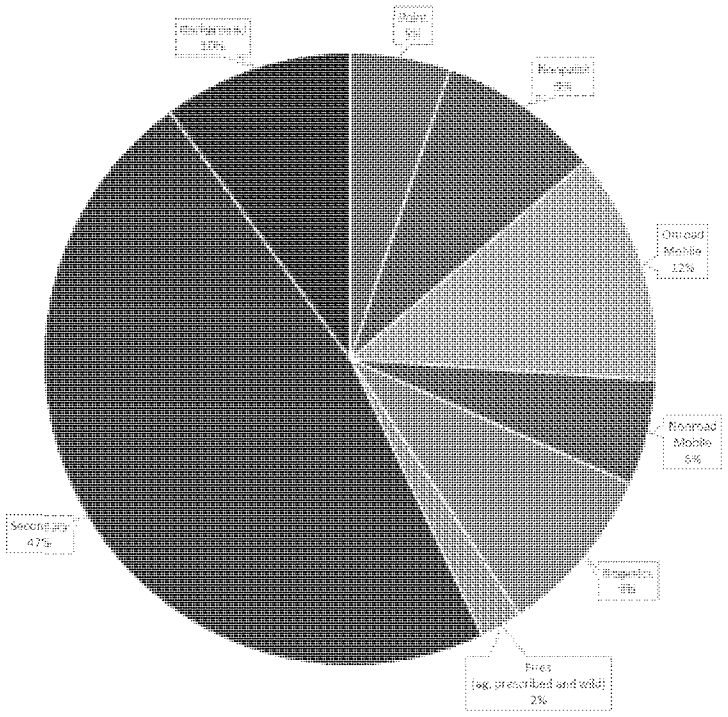


28

National Average Cancer Risk

2014 NATA Version 2

Source Contributions (30-in-1 million)



National Noncancer Risks

- Respiratory
  - National noncancer (respiratory) Hazard Index (HI) is estimated to be 0.4
    - HI is the sum of hazard quotients for individual pollutants
    - RfC > 1 indicates potential for noncancer health effects
  - 10 tracts and 29,000 people estimated to have a HI >1
  - Formaldehyde, acetaldehyde, and **acrolein** compose nearly 80 percent of the HI
  - Secondary formation accounts for about 50 percent of the HI

Ws 65000 tracts > 1 and 270 million people.

It includes the corrected IA facilities. We can do a quick look at the spreadsheet before sending to HEID. Maybe send to them later today or tomorrow?

I don't have but we could easily add those in to tract risks if James provides them by tract for EO
We were just going to footnote the table to say it is not in but if that data is handy it can be added so the final tract value is closer!

Subject: FW: scatter plot/historgram of EtO facilities/emissions

Hi Marc –

Robin is going to call you to provide some additional context for this request.

Ex. 5 Deliberative Process (DP) Can we please have a file with a list of them? It will need to contain (and whatever else you think might be useful – scc code?):

- EIS ID

- Name
- Address
- State
- Region
- Emissions of EtO

This is needed as soon as possible, in order to provide additional information on the topic.

Thanks,
Darcie

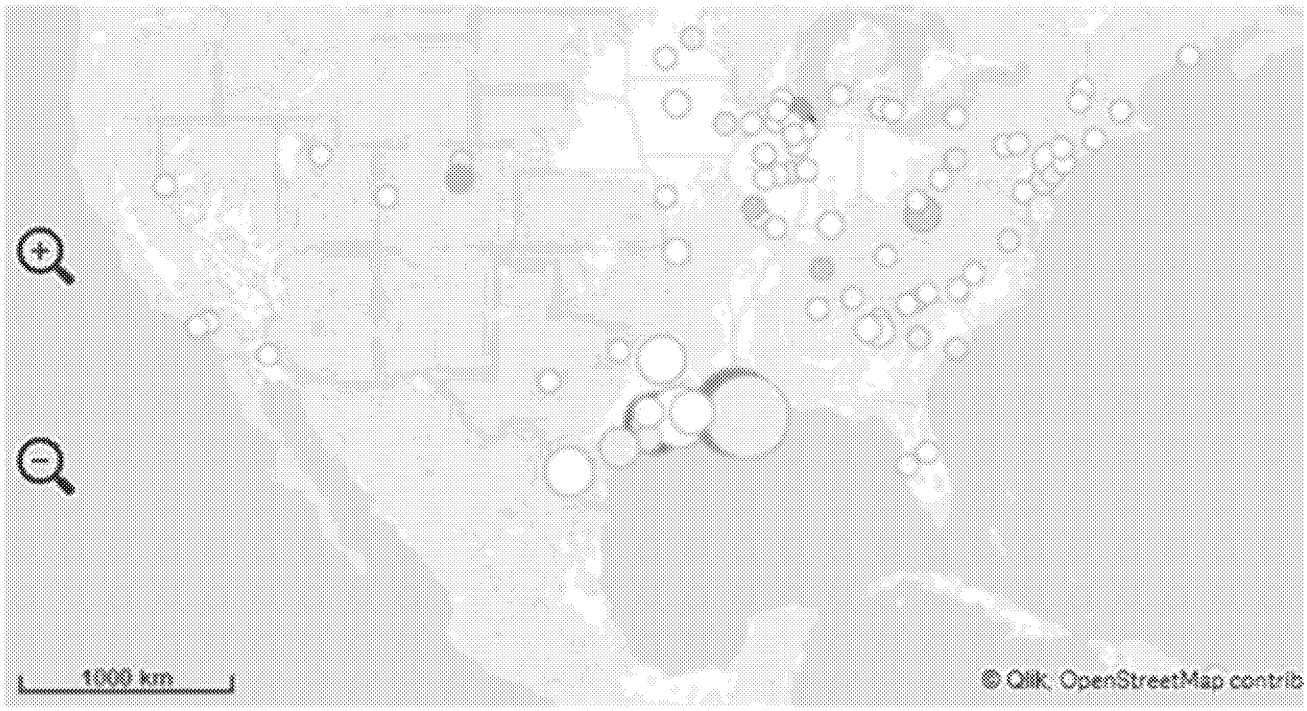
FYI here's what the story map (which is NOT public yet) shows (it has a 0.01 ton cut off and groups multiple sources into bubbles.

Ethylene Oxide



Point sources are clustered into 59km bubbles, select a bubble to zoom and view individual point sources

Importance: High

On the first one -- Chun Yi said the changes she had made are more correct than v1 and this unit actually shut down in 2016. She doesn't care what we use however, so might as well leave it as is and bring it up to the team and see what everyone else wants to do.

---------- here is what Chun Yi got from the facility----------
Cheryl,

It was very nice to talk with you. I will use the following to summarize our effort on the review of 2014 emissions for ethylene oxide from the 3M - New Ulm - Electrical Products Division:

1. The originally reported emissions of EtO, 0.09 Tons, are right.
2. The emissions originally were reported for SCC 30800699. It should be for SCC 31502001.
3. The release of emissions was through 4 each ¾" copper lines housed within a 4.75"pipe running through the roof of the building, ~10 foot high. The exhaust velocity would be close to 0 due to the elbow in the release point (goose neck). The exhaust temperature is 131F.
4. 3M will shut down the operation in June 2017.

Please let me know if I missed anything. I really appreciate your help.

Subject: RE: Nonroad AERMOD Helper Files -- Back to Point

We're going to have to focus back on POINT. WE got the EO modeling results and there are weird increases in concentrations. JT figured out the first one and he said the 2nd one moved by 600 m. I can check which lat/lon is more correct. We'll have to go through the others. So it isn't an emissions processing issue but rather some of the NATA

changes appear problematic. The one in Puerto Rico that I did is especially alarming because I thought the change would have caused risks to decrease.

I am not sure the best way to change the helper files but I will work on trying to fill in the fix (probably won't get to all by Monday) and then maybe we can figure it out.

Subject: Nonroad AERMOD Helper Files

I have the NONRD12 run group helper files. The location file is QA'd if it is needed right now before I finish up the QA of the other helper files:
/work/EMIS/em_v7.2/2014platform/2014fd_nata_aermod/aermod/locations/NONRD12_locations.csv

I mentioned to Madeleine a note about the QA of the parameters: the vertices of the met grid cells are aligned with the 12km Lambert grid. The UTM cell vertices may not appear to be spaced 12km apart due to the differences in the projections. I'm going to put together a GIS plot of the lat/lons and the 2 projections to verify that they are aligned and space correctly because my automated checks give results that show differences ~1/2 km from the expected cell side lengths.

Subject: RE: velocities/diameters/lat lons

There are 5 that have zero velocities at some release points. None overlap with the list of 22 facilities that have distances more than 5 meters from their FF10 lat lon.

facility_id	facility_name
7202911	Union Carbide Corp - St Charles Operatio
8468011	Sasol Chemicals (USA) LLC - Lake Charles
5520211	INEOS Oxide - A Division of INEOS Americ
8467311	The Dow Chemical Co - Louisiana Operatio
1440511	U.S. VETERANS AFFAIRS MEDICAL CENTER

One of the above (zero velocity) -Sasol- is on my DON'T KNOW WHY IT CHANGED list . So I suspect the zero velocity is why it changed.

I still don't know why Van Diest changed between v1 and v2 unless it is the change from FUG to POINTHOR.

Iowa	19079	Hamilton	5383511	VAN DIEST SUPPLY COMPANY	32532	Pesticide and Other Agricultural Chemical Manufacturing	1.27	1.27	0.058839594	0.36336531	517.55

There are 22 EtO facilities to rerun if we want to correct the locations > 5 meters due to SMOKE changing the lat lons. I will also check if there are EtO facilities with 0 velocity or diameter and add it to this list of 22.

JB – James won't rerun today but we should work on the helper file so if we decide to rerun it will be ready Monday am.

JT – also would be useful to understand why risks changed where emissions didn't for the 2 I couldn't figure out.

Subject: RE: velocities/diameters/lat lons

The attached spreadsheet, pointv2_aermod_inven_locations_gt5, shows the sources with a UTM location difference > 5 m between the helper file location and the location calculated directly from the inventory lat/lon. This is just a subset of the complete spreadsheet, which is too large to include.

The other spreadsheet, pointv2_aermod_point_params, shows the stack parameters in the AERMOD helper files (aer) vs the inventory values (inv) in inventory units (ft, ft/s, etc.). There is some precision difference from calculating the AERMOD helper files back to the inventory units.
In cases where helper file velocity is zero the inventory velocity is < 0.016 ft/s. In general we only see large % diff in small values.

JB says the max lat lon difference is 10 meters. JT and I think that is not worth rerunning. Do you all agree?

On the rounding I think only the zeroes are the issue. JB will compare the real velocities with the 0 and we can see if we want to rerun them. We should do the same with the diameters. I can see if any zero velocities are ethylene oxide facilities.

JT: can you check on whether AERMOD will change a 0 velocity to some minimum number? Same for 0 diameter?
JT will also see if he can determine why v1 and v2 conc are different for the ones I couldn't figure out.

Attachments: v1concs.zip

Well I couldn't write the logic to choose the concentration where there the poll doesn't have (or has a 0) cancer risk but has noncancer resp and where it doesn't have noncancer resp where it has noncancer neuro -- so there are 3 concentrations. "conc_can","conc_neurov1","conc_respv1"

I found somewhat lack of consistency (cancer pollutants with nonzero emissions and"conc_can" = 0 but nonzero noncancer risk in a few situation) but I think for this quick check if you want a conc just use cancer risk first, if it there is none or if it is 0 use noncancer resp and if there is neither then use noncancer neuro.

Some polls have no health benchmarks so you wouldn't be able to compute a concentration for them.

James

1st file has v1 max facility risk (cancer, resp and neuro) by facility and pollutant.
2nd file has the benchmarks to convert risk to concentration.

I think you already have a program to do that but if you want me to merge the benchmarks and compute the concentrations and put it in the first file I can do it. Let me know.

The formula is cancer risk/cancerbenchmark (column D) = v1 concentration
If cancer risk benchmark is dividebyzero then we could either use noncancer risk/noncancerbenchmark (column E) = v1 concentration
Or just do the v1/v2 concentration comparison for the cancer pollutants.

Ok. I can send you it by pollutant/facility – it is very large. Would it be possible for you to include the source id of the max risk? That will help us focus on which source to look at if we wanted to explore the release parameters (for situations in which total emissions haven't changed but risks did).

So I thought a comparison was also a good idea and we did it for EtO and in a very roundabout way, it caused me to find my Iowa error. We also saw the impacts of receptor changes and release parameter changes. The question is do we do it for the other pollutants/rest of the facilities.

For the 2nd round of EtO, I didn't do a comparison other than to see that one I thought would be lowered due to the helper file rounding/lat lon issues was in fact even higher (but not significantly).

So we can do a comparison for all facilities but do you think we should be taking time to look at them before sending to HEID and if not, maybe we just wait for the risk results and compare those?

James are you set up to do a comparison like the one you did for EtO (max receptor concentration)?

Subject: RE: How is the ethylene oxide run going?

I think a quick look. As long as the values (other than the 2 Iowa) are close to what we had before we are good to go.

It includes the corrected IA facilities. We can do a quick look at the spreadsheet before sending to HEID. Maybe send to them later today or tomorrow?

That's great. Does that include the 2 iowa facilities? Should we send to HEID directly or do that comparison to v1 and look at it?
Should look somewhat like the previous except the Sasol Chemicals (USA) LLC - Lake Charles Chemical Complex should be closer to the v1 value.

Subject: RE: How is the ethylene oxide run going?

Well I couldn't write the logic to choose the concentration where there the poll doesn't have (or has a 0) cancer risk but has noncancer resp and where it doesn't have noncancer resp where it has noncancer neuro -- so there are 3 concentrations. "conc_can","conc_neurov1","conc_respv1"

I found somewhat lack of consistency (cancer pollutants with nonzero emissions and"conc_can" = 0 but nonzero noncancer risk in a few situation) but I think for this quick check if you want a conc just use cancer risk first, if it there is none or if it is 0 use noncancer resp and if there is neither then use noncancer neuro.

Some polls have no health benchmarks so you wouldn't be able to compute a concentration for them.

James

1st file has v1 max facility risk (cancer, resp and neuro) by facility and pollutant.
2nd file has the benchmarks to convert risk to concentration.

I think you already have a program to do that but if you want me to merge the benchmarks and compute the concentrations and put it in the first file I can do it. Let me know.

The formula is cancer risk/cancerbenchmark (column D) = v1 concentration
If cancer risk benchmark is dividebyzero then we could either use noncancer risk/noncancerbenchmark (column E) = v1 concentration
Or just do the v1/v2 concentration comparison for the cancer pollutants.

Ok. I can send you it by pollutant/facility – it is very large. Would it be possible for you to include the source id of the max risk? That will help us focus on which source to look at if we wanted to explore the release parameters (for situations in which total emissions haven't changed but risks did).

Subject: RE: How is the ethylene oxide run going?

So I thought a comparison was also a good idea and we did it for EtO and in a very roundabout way, it caused me to find my Iowa error. We also saw the impacts of receptor changes and release parameter changes. The question is do we do it for the other pollutants/rest of the facilities.

For the 2nd round of EtO, I didn't do a comparison other than to see that one I thought would be lowered due to the helper file rounding/lat lon issues was in fact even higher (but not significantly).

So we can do a comparison for all facilities but do you think we should be taking time to look at them before sending to HEID and if not, maybe we just wait for the risk results and compare those?

James are you set up to do a comparison like the one you did for EtO (max receptor concentration)?

Attachments: comp_etox.xlsx

Here's a spreadsheet of V1 concentrations vs. V2 concentrations with V1 and V2 emissions along with percent differences (v2-v1) of concentrations. I've sorted by descending difference and highlighted in yellow some of the high ones. The first row is so different because the ETOX stack at the facility had changes in stack parameters. The stack height went from 10 m to 3 m Stack temperature decreased from 351 to 328 K, velocity from 7.28 m/s to 0.24 m/s and diameter from 0.51 to 0.12 m. I'm looking at the others as well but wanted to go ahead and send to you.

Attachments: E-trends-toxics-NOAAlink-test_17May2017.docx; Copy of Priorty Facility List 17May17 V3.xlsx; AQADHEIDBrainstormToxicsDetailMay172017.docx

Follow up – Action items from today's meeting

1. E-trends write up of NOAA data (see attached). The idea is to access the write up from a link below the tile plot
2. Tile plot questions
    a. Why is tile plot N/A for 1,3 butadiene in Atlanta GA?: due to non-detects
    b. Why does tile plot show increases in manganese in VT? – manganese annual averages increase from around 0.001 ug/m3 (2004 thru 2009) and then at 2010 shoot up to 0.002 and hover at that level through 2015. Data are nearly all above MDL (and there are no non-detects).
    c. Comments from team on tile plot were provided to Arthur Zuco who replied via email earlier today.
3. List of facilities that are (v1 NATA) causing v1 high tract risks is attached. Most are NOT hospitals using ethylene oxide but there are some on the list. Filter column AB on "Ethylene Oxide" and 43 of them are Ethylene Oxide emitting facilities. These 43 facilities include chemical plants, hospitals (less than 10 of them) and commercial sterilizers. We've not yet gotten all the emissions changes, but I did get (and didn't yet mark) a significant emissions change (lower emissions) for one of the hospitals – Montefiore in the Bronx.
4. Elizabeth (in an email she sent earlier today) provided the write-up for a 6-month HEID detail to our division (working with our team) to pursue air toxics data being used in Google Earth Engine/ other areas. For your convenience I attach it here (3rd attachment). She also sent links to learn more about the Google Earth Engine:

    "GEE: The main page has a 2 minute generic intro video: https://earthengine.google.com/ and then I liked this real-live nerdy-scientist guy talking about how it works (i.e., how we might use it): https://developers.google.com/earth-engine/ (3 minutes)
    When GEE team members came to EPA in March, we met with Karin and Nick: http://earthenginesummit2015.earthoutreach.org/speaker-bios. "

Let me know if I missed anything

Subject: RE: ethylene oxide pollutant code for requested facility list

Madeleine,

The summary for ETOX by both source and facility ID is attached.

Subject: ethylene oxide pollutant code for requested facility list

Hi James
I requested a list of facilities (EIS ID) covered by the helper files (after you are done with the helper files) that emit ethylene oxide.
Pollutant code is below

75218	Ethylene Oxide

Madeleine Strum | U.S. Environmental Protection Agency | 109 TW Alexander Drive, RTP, NC 27711

Attachments: OtherHiRiskEndpoints_cbR2_Copy of NATA 2014 Point max risk and hi Comparison File Summary 012317.xlsx

Thanks NATA Regional leads for sharing information on the NATA facility review. A lot of effort and progress is underway. In addition to what was presented, I also recall Kyle (Region 8) working with some Tribes (who have worked on the review) and Stephanie (Region 7) helping Iowa.

Please continue your efforts to focus on the check list. Once we get the announcement reviewed and the data posted, I will send out an email about (Agenda item 2b) the additional facilities to be added to the checklist (~50 facilities) due to the change in ethylene oxide URE and updated modeling (MET data).

Two follow up items:

1) TRI list of facilities that we're asking for assistance from Velu Senthil of the TRI program is at https://usepa.sharepoint.com/sites/oar_Work/NATAREVIEW/DOCUMENTS/Forms/AllItems.aspx Feel free to add facilities to the list or send them to me to add.
2) **Ex. 5 Deliberative Process (DP)**

As always, feel free to call me or Ted for questions/further discussion.

Location: RTP-OAQPS-Ex. 6 Personal Privacy (PP) -AQAD/Phone-Line/RTP-OAQPS-BLDG-C <RTP-OAQPS-Ex. 6 Personal Privacy (PP) -AQAD@epa.gov>

Start: 1/24/2017 8:00:00 PM
End: 1/24/2017 9:00:00 PM
Show Time As: Tentative

Required Attendees: Lancey, Susan; Gross-Davis, CarolAnn; Bellizzi, Carol; Chow, Alice; Louis, Egide; King, Suzanne; Nwia, Jacqueline; Cain, Alexis; Brown, Steven; Doolan, Stephanie; Johnson, Karen T.; Olson, Kyle; Davidson, Ken; Narvaez, Madonna; Wroble, Julie; Fry, Jessica; Forde, Raymond; Smuts, MaryBeth; Margaret Sieffert; Palma, Ted; Morris, Mark; Lutz, Craig; RTP-OAQPS-Ex. 6 Personal Privacy (PP) AQAD/Phone-Line/RTP-OAQPS-BLDG-C; Myers, Jeff D - DNR
Optional Attendees: Phillips, Sharon; Thurman, James; Eyth, Alison; Smith, Darcie

Agenda

1. NATA facility risk update
    a. Correction to process change sheets (emissions needed to be summed to process level where there were multiple release points per process)- I posted corrected change sheets. This didn't impact any agency that has already provided comments (I checked) so no re-work needed.
    b. Updated modeling of v1 point sources and URE change for ethylene oxide results (see attached files)— PLEASE DONT SEND THESE ATTACHMENTS OUT – WERE STILL WORKING ON THE NOTE AND WOULD LIKE YOUR FEEDBACK AS WELL. No re-work on what has already been reviewed, the impact is that some agencies will have additional facilities to review.
2. Status of NATA Review – below table indicates S/L/T that have started or are done
3. Observations/findings from your/ or your S/L/T reviews
4. How to get comments by deadline; particularly for highest priority facilities – those that are on the SharePoint checklist – and that will be appended (MIR>100 in a million or HI >5)

Here's some information about S/L/T that have provided changes/filled in the checklist or that have been working on it.

State or Tribe	# of facilities on Original (September) Checklist	Count of State Reviewed Data?	done or activity by S/L/T?	SLT Done but additional facilities need review

Alabama	13		Jefferson county provided lat lon changes but didn't fill out check list	1 Additional facility in Jefferson County Others maybe in Alabama
Alaska	1		DONE-no facilities meet checklist threshold	
Arizona	3			
Arkansas	9			
California	33			
Colorado	7			
Connecticut	1			
Florida	15			
Georgia	4			
Idaho	3	3	DONE - ID reviewed all 3, had no data changes, but nothing higher than 2011 NATA	
Illinois	7	7		8 facilities newly greater than 100. In addition, 1 facility from 200 to 480 (were no changes for that facility, and in 2011 it was 1).
Indiana	9		INDEM submitted changes for 2 of the 9 facilities on the checklist but didn't fill out the checklist.	2 facilities newly greater than 100 - one was on checklist already due to noncancer.
Iowa	8		Iowa has been analyzing and emailed 1 change (2015 emissions were a lot lower than 2014 TRI)	3 facilities newly greater than 100.
Kansas	13			

Kentucky	12	1	1 of 2 Jefferson county facilities were checked. The one that wasn't checked is from TRI. Madeleine added to TRI list. No KY facilities were checked.	
Louisiana	7			
Maine	2			
Maryland	1			
Massachusetts	1		Working on it (TRI source) but not yet done.	
Michigan	13			
Minnesota	10			
Mississippi	14			
Missouri	10			
Montana	3			
Nebraska	11			
Nevada	1			
New Jersey	5			
New Mexico	1			
New York	3			
Nez Perce Tribe of Idaho	1	1	DONE	
North Carolina	18			
Ohio	24	1	miami county (39109) is done.	
Oklahoma	22			
Oregon	5	5	DONE-see comment	may want to re-look at facility which went to 233
Pennsylvania	38			
South Carolina	18			
Southern Ute Indian Tribe	1	1	see comment	1additional checklist facility: has respiratory HI > 5.
Tennessee	11	1		Knox county has 1 more facility to review –

				respiratory HI just over 5. State of TN hasn't looked at anything yet so didn't tally the additional ones.
Texas	29			
Utah	3			
Vermont	1			
Virginia	3			
Washington	5			
West Virginia	6			
Wisconsin	8			
Wyoming	5			

Appointment

To: Strum, Madeleine [Strum.Madeleine@epa.gov]; Fox, Tyler [Fox.Tyler@epa.gov]; Houyoux, Marc [Houyoux.Marc@epa.gov]; Phillips, Sharon [Phillips.Sharon@epa.gov]; Thurman, James [Thurman.James@epa.gov]; Eyth, Alison [Eyth.Alison@epa.gov]; RTP-OAQPS-Ex. 6 Personal Privacy (PP) AQAD/Phone-Line/RTP-OAQPS-BLDG-C [RTP-OAQPS-Ex. 6 Personal Privacy (PP) AQAD@epa.gov]

Location: RTP-OAQPS-C335I/RTP-OAQPS-BLDG-C

Start: 8/7/2018 4:00:00 PM
End: 8/7/2018 4:30:00 PM
Show Time As: Busy

Recurrence: (none)

Draft Agenda

1. Kelly will provide NATA roll out update to Marc and Tyler since Marc, Tyler and Darcie are unable to attend Thursday NATA GL meeting.
2. On Friday HEID, SPPD, AQAD (Ned) – developed list following Regional feedback on criteria on prong 1 of Next steps on EtO approach
3. Region 8 facility on list – lat lons off by 300 meters or so. Remodeled AERMOD (seems like it will still be high) did not redo hybrid.
4. TRI getting 0 emissions reported for 2017 TRI by sterilizers that think they were never subject to TRI reporting so are stopping their reporting now.
5. Post modeling change for the solvent EtO emissions will be done after SLT preview
6. Model eval in progress
7. FY19 NATA budget – did not work out with larger team at this point
    a. 215 for processing emissions for CMAQ sensitivity, AERMOD point, and CMAQ&AERMOD final and tool updates
    b. Still gathering nonCONUS MET info and CMAQ runs (will be more due to nonCONUS testing/implementation)

Darcie

Here is a data download from RSEI with TRI data, I was not able to pull any FRS ID information in from the web-site (TRI). Let me know if you need me to go over the file with you. I also pulled how the air emissions were derived for EO, ie by measurements, mass balance, emission factors, or other methods. Gives you an idea in regards to quality of the data used

From: Morris, Mark [Morris.Mark@epa.gov]
Sent: 7/26/2018 2:25:14 PM
To: Riha, Kristin [Riha.Kristin@epa.gov]
CC: Palma, Ted [Palma.Ted@epa.gov]; Smith, Darcie [Smith.Darcie@epa.gov]; Langdon, Robin [Langdon.Robin@epa.gov]
Subject: EtO sources and risks near tribal areas
Attachments: Tribes Near EtO Emitters.xlsx; Tribal_Tracts_Risks.xlsx

Hey, I looked at all EtO point source emitters (no emissions cutoff) and found the nearest tribal boundary to each source. The attached file, "Tribes Near EtO Emitters", gives each facility and the nearest tribal boundary (in meters), sorted by increasing distance (zero distance indicates the facility is within the boundaries). There are 654 sources nationwide, but some are very low emitters. There are only 5 emitters within tribal boundaries. Overall, the median distance is about 60 km (37 miles). Some of the emissions are so low that they can be ignored. I highlighted in red those emissions that exceed a screening level associated with 1 in a million risk (2E-4 TPY) for a very near exposure (200 m distance). Of course, that doesn't mean that there are people this close to any of these facilities. The shortest distance (source to tribal boundary) associated with a facility with relatively high emissions (somewhat arbitrary cutoff of 0.1 TPY, which catches a little more than 10% of all sources) is about 8 km. The shortest distance to a facility emitting 1 TPY or more is about 35 km.

On risks, I found all tracts that intersect tribal boundaries in the continental US (there are no EtO point sources in Alaska). The attached file, "Tribal_Tracts_Risks",
gives the 2222 tracts that intersect tribal boundaries, along with the associated NATA risk from EtO, the total tract risk (from all HAP), and the risks from the different source groups (from all HAP). This file is sorted in decreasing level of EtO risk. The highest EtO risk is 9 in a million, which is about a quarter of the total risk (from all HAP) for that particular tract. Only 29 tracts have EtO risk > 1 in a million.

It is important to note that there are source types other than point sources that have EtO emissions in NEI, mainly solvents/coatings and waste disposal. These other source types are modeled in NATA as 12km square area sources, rather than emissions at point locations. Although the point sources dominate the emissions for the most part, there are some cases where the other source types can contribute. For example, the tract with the highest estimated EtO risk of 9 in a million is associated with solvents/coatings.

Feel free to forward this email to internal people of interest.

Monitoring Options for Sterigenics, Willowbrook Illinois

Background

Current ambient monitoring methods for ethylene oxide can detect to 0.09 ug/m3, which is not low enough to capture concentrations of concern for long-term exposures.

Typically, ambient monitoring has been used in the air toxics program to validate a model-estimated concentration, especially in situations where there are uncertainties in emissions estimates. The standard (to date) for this type of monitoring has been EPA's Compendium Method TO-15, which is a method where air samples are collected in specially prepared canisters and analyzed by Gas Chromatography/Mass Spectrometry (GC/MS). However, with the December 2016 downward revision to the unit risk estimate for ethylene oxide (EtO), the use of TO-15 for this measurement may no longer be suitable for evaluating chronic risk from exposure to low ambient concentrations as the method detection limit for this compound using TO-15 is approximately 0.09 ug/m3.

EPA is working to develop new techniques for ambient monitoring of ethylene oxide.

Although ambient sampling using TO-15 can often provide an empirical measurement of risk for many pollutants, for EtO the use of a modeled measurement is more beneficial because of the limitations associated with the detection capabilities of TO-15. Ambient sampling is typically funded and performed by the regulated entity to evaluate both the occurrence of risk, as well as to document the effect of any changes made at the facility to address the risk. EPA is pursuing new ambient sampling and analytical techniques that may allow us to measure EtO at lower concentrations. The timing for developing the sampling and analytical techniques is currently not certain.

Monitoring Options

Given limitations in current ambient monitoring methods, directly monitoring the source at the point(s) of emissions may provide the most useful information for purposes of evaluating emissions and risk.

One alternative to ambient monitoring is to use the provisions of Section 114 of the Clean Air Act (CAA) to require a facility to measure the emissions (i.e., through stack testing) at all emissions points that emit EtO at that facility. This option is best suited for facilities with limited fugitive emissions points and presents a pathway to validate the actual emissions from the emissions points at a facility. The data generated from a stack testing program at a facility and subsequent monitoring events (e.g., parametric or continuous emissions monitoring) could then be paired with high-quality meteorological data collected during to better model the expected concentrations of EtO present in the surrounding community and potentially quantify the predicted risk.

Stack testing should be conducted under specific conditions for purposes of evaluating risk. For facilities with fugitive emissions of EtO, ambient monitoring within the facility fenceline and/or one-time traditional LDAR approach program will help supplement any stack testing.

While we understand that many facilities perform periodic stack testing on their emissions points to demonstrate compliance with an applicable federal or state rule, the nature of these tests is not necessarily designed to evaluate risk. These stack tests may not necessarily be reflective of the actual emissions during normal operation -- these tests are often performed at the edge of the operating window in worst-case conditions to demonstrate the likelihood of compliance at all

conditions under which the unit operates. We recommend that any stack test associated with the Section 114 request should be performed during representative normal operations and should include parametric monitoring that can be used to tie the emissions to a process parameter. Beyond stack testing, any sampling required should be accompanied by a long-term continuous emissions monitoring program to better understand the temporal variability of the emissions. Furthermore, for those facilities with expected fugitive emissions of EtO, it will be beneficial to require these facilities to collect ambient monitoring within the fenceline and/or conduct a one-time traditional leak detection and repair (LDAR) approach program to supplement any emissions testing.

An example stack test program is summarized below in Table 1 and Table 2. These examples do not include parametric monitoring requirements. The parametric monitoring should be tied to product throughput and/or the performance characteristics of the control device.

Table 1: Summary of Outlet Emissions Measurement Methods and Alternative Methods

Pollutant	Required Method	Possible Alternative Method	Target Reported Units of Measure
Ethylene Oxide/Propylene Oxide[b]	U.S. EPA Method 320 with a minimum sample time of 4 hours per run and a nominal detection level of less than 0.5 ppm. All compounds quantified by Method 320 must be validated according to Section 13.0 of Method 320.	U.S. EPA Method 18[a]. All compounds quantified by Method 18 meet the recovery study specified in Section 8.4 of Method 18.	Lbs/hr and ppmvd
O_2/CO_2	U.S. EPA Method 3A. Simultaneous with each pollutant test run.	U.S. EPA Method 3B	% volume, dry
Moisture	U.S. EPA Method 4. Simultaneous with each pollutant test run.	U.S. EPA Method 320	% volume
Flowrate	U.S. EPA Method 2. Simultaneous with each pollutant test run.	U.S. EPA Method 2A, 2B, 2C, or 2D	ascfm and dscfm

[a] Minimum Detection Limits for this method must be empirically derived and developed according to the procedures found in Section 15 of U.S. EPA Method 301.
[b] Depending on the source type, additional compounds can be considered.

EPA-R6-2021-005139 6.7.2022 Prod ED_005994A_00001077-00002

Table 2: 30-Day THC Monitoring[c]

Pollutant	Recommended Method	Alternative Method	Target Reported Units of Measure
THC	U.S. EPA Method 25A continuously for 30 days. Calibrate the measuring instrument with ethylene oxide. The low level and high level calibration gases (see sections 7.1.3 and 7.1.5 of Method 25A) must bracket the measured concentrations or a maximum high level calibration gas (see section 7.1.5 of Method 25A) of 10 ppm ethylene oxide must be used.	U.S. EPA Method 320 although in lieu of a total hydrocarbon, ethylene oxide will be measured continuously.	ppmvw

[c] To potentially reduce the cost, the 30-day monitoring could be performed on the point source with the highest expected mass emissions as determined from the stack test results.

Facilities in Region 3 w/Elevated Risks

MSA Area Name (City/State)	Facility Name	Type of Facility	Potentially Applicable MACT Associated with EtO Emissions	Reason
Allentown-Bethlehem-Easton, PA-NJ (Allentown, PA)	B Braun Med Inc	Sterilizer	Subpart O – EtO Emissions Standards for Sterilization Facilities	State – no changes
Charleston, WV (Institute, WV)	Union Carbide Corporation – Institute	Chemical plant	MON, HON	Facility – parameter changes
Philadelphia-Camden-Wilmington, PA-NJ-DE-MD (New Castle, DE)	Croda Inc	Chemical plant	NA – area source	State – no changes
Pittsburgh, PA (Clairton, PA)*	USS/Clairton Works	Coke oven	Coke ovens	

* For the Pittsburgh, PA area the primary risks are driven by coke oven emissions from point sources.

Facilities in Region 4 w/Elevated Risks

MSA Area Name (City/State)	Facility Name	Type of Facility	Potentially Applicable MACT Accordance with Dec Emissions	Review
Atlanta-Sandy Springs-Roswell, GA (Covington, GA)	C R Bard	Sterilizer	Subpart O – EtO Emissions Standards for Sterilization Facilities	Facility/TRI – no changes
Atlanta-Sandy Springs-Roswell, GA (Smyrna, GA)	Griffith Micro Science Inc.	Sterilizer (?)		
Charleston-North Charleston, SC (Charleston, SC)	Solvay (Lanxess)	Chemical plant	MON	Ongoing with region, state, and facility

Facilities in Region 5 w/ Elevated Risks

NSA Area Name (City/State)	Facility Name	Type of Facility	Potentially Applicable MACT Associated with EtO Emissions	Review
Grand Rapids-Wyoming, MI (Grand Rapids, MI)	Medtronic, Inc., Sterile Systems Operation	Sterilizer	Subpart O – EtO Emissions Standards for Sterilization Facilities	Region – no changes
Chicago-Naperville-Elgin, IL-IN-WI (Willowbrook, IL)	Sterigenics US LLC	Sterilizer	Subpart O – EtO Emissions Standards for Sterilization Facilities	Region working with facility
Chicago-Naperville-Elgin, IL-IN-WI (Waukegan, IL)	Medline Industries Inc Northpoint Services Div	Sterilizer	Subpart O – EtO Emissions Standards for Sterilization Facilities	State – no changes

Facilities in Region 6 (LA) w/Elevated Risks

MSA Area (Name (State))	Facility Name	Type of Facility	Potentially Applicable Rules Associated with EIS Changes	Review
New Orleans-Metairie, LA (LaPlace, LA)*	Denka	Chemical plant	NA	NA
New Orleans-Metairie, LA (New Hampton, LA)	BCP Ingredients	Chemical plant	NA – area	Facility - no changes
New Orleans-Metairie, LA (Hahnville, LA)	Union Carbide St. Charles	Chemical plant	HON, Polyols	Facility – emissions changes for a flare
Lake Charles, LA (Reserve, LA)	Air Products Reserve Plant (Evonik)	Chemical plant	NA – area	LA DEQ - no changes
Baton Rouge, LA (St. Gabriel, LA)	Taminco – St Gabriel Plant	Chemical plant	NA – area	LA DEQ - no changes

* For the LaPlace, LA area the primary risks are driven by emissions of chloroprene.

Facilities in Region 6 (TX/NM) w/Elevated Risks

Risk Screening Playbook	Facility Name	Type of facility	Potentially Applicable NESHAP Approved with EPA Concurrence	Source
Beaumont-Port Arthur, TX (Port Neches, TX)	PORT NECHES PLANT	Chemical plant	HON	TCEQ - no changes

Hi Jackie,

Kelly asked me to make some edits to the facilities spreadsheet. Ex. 5 Deliberative Process (DP)

Ex. 5 Deliberative Process (DP)

I've attached a new version of the spreadsheet here. In HEID, we're calling this list (currently of 14) the "follow-up list," mainly to differentiate it from the list of facilities with higher tract-level risks. So I added that to the end of the file name, mainly for our benefit. It's tough to keep up with all the lists floating around!

Thanks for your help with this.

Thanks Kelly. That's an Important clarification to my draft shorthand. I won't use this phrasing elsewhere.

One edit:
GTE 100

- Ex. 5 Deliberative Process (DP)

NATA does not indicate problems, it tells us where we might look further to better understand the risk.

Attachments: EO Block Risks 20142.xlsx

Hi, Jennifer.
We recently completed modeling for the 2014 NATA point sources. We were interested ourselves in the impact of the new value, so we used these screening model results to estimate that. Ex. 5 Deliberative Process (DP)

Ex. 5 Deliberative Process (DP)

Ex. 5 Deliberative Process (DP) We don't release the block-level data to the public, so please don't forward the attached outside of EPA.
Thanks

Importance: High

hi, Mark. i am the current project manager for EPA's IRIS assessment on the carcinogenicity of ethylene oxide (EtO). you may recall that i contacted you in 2005 about ambient exposure levels of EtO, and you provided me with the information that maximum modeled levels are on the order of 1-2 ug/m^3 (~0.5 – 1 ppb). do you have any more recent information about ambient EtO levels, and are these maximum modeled levels equivalent to estimates of "fence line" exposures around commercial sterilization facilities? thank you for any additional information that you can provide, and if possible, we would really appreciate a quick reply, as we have a "fire drill" to provide some exposure information to our upper managers tomorrow afternoon. thanks!! jennifer

Subject: NATA data for chemical facilties
Attachments: ChemFac_NATA_Join_Set1_All.xlsx

All,

We have taken the SPPD list of chemical facilities and joined the 2014 NATA version 1 point source risk results to it. The NATA v1 results are the maximum cancer risk and noncancer HI values at census block level. **These are data that are not and should not be released to the public. The census-block-level results are released only to state/local/tribal reviewers for the purpose of review/correction before the final v2 release, where the block values are aggregated up to census tract level before public release**. We used the EIS facility ID for matching purposes, and by our count 3140 of the 5811 facilities in your list have the EIS ID field populated. As we discussed in the 5/18 meeting, we pulled the NATA data for the 3140 now, and will pull the remainder later when EIS IDs are available.

We have included detailed data (at the facility/emission point/pollutant level) for facilities with cancer risk > 10 in 1 million, or noncancer respiratory or neurological HI > 2. For facilities with risks below these criteria, we included only the total facility cancer risk, and respiratory and neurological HI values (we did not generate the finer detailed data for the lower risk facilities). There are several things to note about the NATA v1 data. First, the data came from two model runs – one last September and one last December. The main difference between the runs was the updating of the cancer unit risk estimate for ethylene oxide (which went up 56-fold). Facilities with data from the December run will have a "Y" in the "RecentRun" field. Because we had already generated detailed results for higher risk facilities in the September run, we did not update those results because those facilities had already been identified as higher risk for other things – the December run added some additional facilities to the high risk list because of the EO change and other things, but the point being made is that the detailed results for the facilities with data from the September run will **not** reflect the updated EO URE. Of the 3140 facilities, 579 of them (18%) did not match with the NATA data. We looked into a sample of these, and many were not in the 2011 NATA either, but some were with insignificant emissions. Some facilities may not match because they emit only criteria pollutants, or because there were no reported emissions for the year 2014, or other reasons, and the only way to know would be to do a detailed analysis of them all, which likely isn't worth the time.

Another thing to note about the NATA results (as compared to the RTR results we normally provide) is that the census blocks have not received the QA they otherwise get during an RTR assessment. So, there will be some results higher than they should be because there are likely some census blocks within facility boundaries, and some results are lower than they should be because there may be residences closer to a facility than the census block centroid, and in the RTR process we add more receptors to reflect closer residences.

Some explanation of the data fields. All those that have an "SPPD" prefix are from the SPPD facility list, and all other fields are from the NATA data. Columns O, P, and Q give the overall (considering all sources and pollutants) facility risk, respiratory HI, and neurological HI, respectively, at the census block with the highest value of each metric. So, these overall values are repeated over all the rows for that facility. Columns S, T, and U give the facility risk and HIs for each pollutant (so, for a given facility with multiple sources emitting benzene, for example, the facility benzene risk will be repeated across multiple rows). Columns V, W, and X give the risk and HIs for a source/pollutant combination, and columns Y, Z, and AA give the risk and His by source (considering all pollutants).

Given the uncertainties in the NATA analysis, like the block location issue, the NATA results are viewed as screening values. However, we think the data can be useful in focusing SPPD in data collection and quality assurance. We

understand that SPPD will likely focus on the higher risk facilities to ensure that they are in a source category, and that the data are accurate. However, as we have mentioned, attention should also be given to facilities with lower modeled risks. There is likely some level of analysis that can be done (for example, random checking of some lower risk facilities) to help ensure that the facilities with lower modeled risks have been adequately characterized, and that we don't ignore cases where unreported or underreported emissions, or a census block issue, or some other issue creates a false negative. Without some level of review of lower risk facilities, we potentially set ourselves up for the discovery of issues during the public comment process.

Please let us know if you have questions on these data.

Mark

Subject: NATA - Updated List
Attachments: Facility checklist_Aug13 Final.edit.xlsx

INTERNAL – NOT READY FOR RELEASE

Hi all,
Attached is an updated list of facilities where we plan to seek additional information as part of our effort to address emissions of ethylene oxide. Please use this list for planning your outreach.

The majority of the facilities on this list were selected because they have a NATA block level risk of more than 1,000 in 1 million. While block level risk does not appear on the mapping application on the NATA website, it is an input into calculating risk at the census tract.

There are two facilities on the list that do not have a risk greater than 1,000 in 1 million. Those were identified based on work done in Region 5, and through the review of an air emissions rule for chemical manufacturing (the Solvay facility in Region 4).

I'm happy to answer any questions.
Thanks.
-Alison

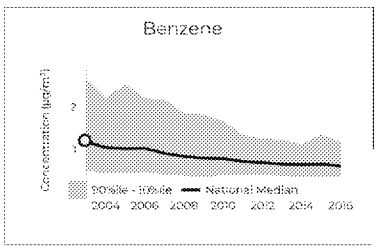
2014 National Air Toxics Assessment (NATA) Preview

August 16, 2018 Webinar

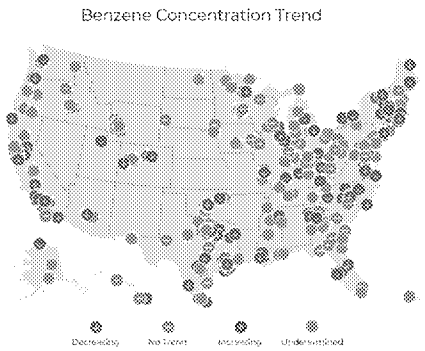
What is NATA?

- The National Air Toxics Assessment, or NATA, is EPA's thorough review of air toxics in the United States, based on modeled air quality.
- NATA uses the best science and emissions data available to estimate health risks from air toxics.
- NATA is national in scale and intended as a *screening tool.*
- NATA can be used by the EPA and states/locals and tribes to help determine what pollutants or areas of the country to investigate further, to better understand risks.
- NATA should not be used:
  - to pinpoint risk or exposure values at a specific place (like a home or school);
  - to characterize or compare risks or exposures at local levels (such as between neighborhoods);
  - as the sole basis for risk reduction plans or regulations, or
  - to control specific sources or pollutants

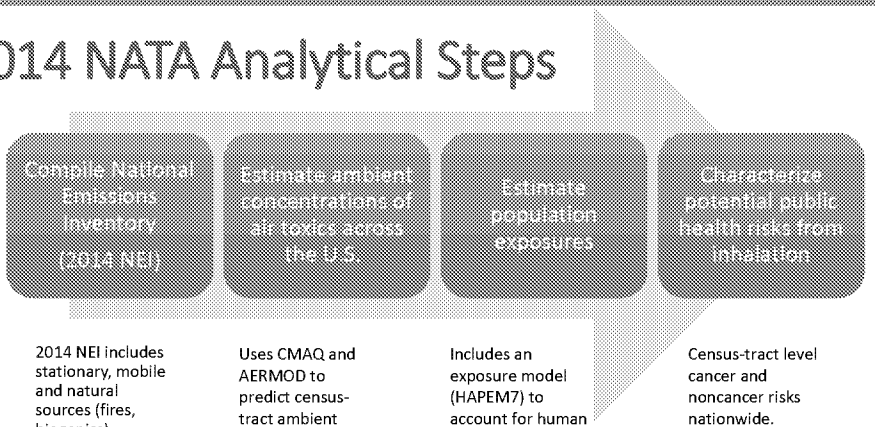
National air toxics trends are downward



Our Nation's Air: Status and Trends Through 2017 : Benzene (2003 – 2017)



2014 NATA Analytical Steps



2014 NEI includes stationary, mobile and natural sources (fires, biogenics).

NATA includes 180 listed air toxics plus diesel particulate matter (PM)

Uses CMAQ and AERMOD to predict census-tract ambient concentrations nationwide.

Includes an exposure model (HAPEM7) to account for human activity data, commuting patterns, and near-roadway exposures.

Census-tract level cancer and noncancer risks nationwide.

What data are included in NATA?

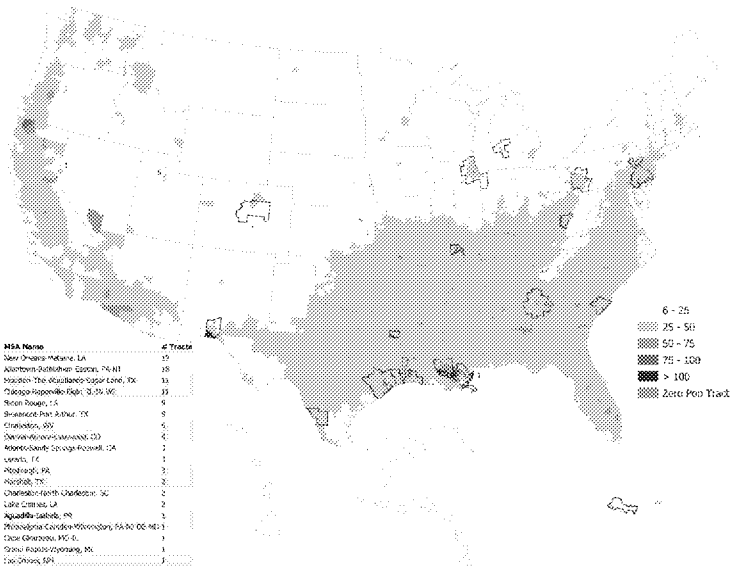
- NATA assessments provide screening-level estimates of the risk of cancer and other serious health effects from breathing (inhaling) air toxics.
- This helps show which air toxics and source types may contribute to health risks in certain places.
- NATA results are reported at the census tract level.
- The 2014 NATA includes estimates of ambient and exposure concentrations for 180 listed air toxics plus diesel PM, which we assess for noncancer effects only.

How can states/locals and tribes use NATA?

- States/locals and tribes can use NATA results to:
  - prioritize pollutants and emission source types;
  - identify locations for further, more detailed study;
  - get a starting point for local assessments;
  - focus community efforts;
  - inform monitoring programs;
  - prioritize sensitive locations for outdoor air toxics monitoring.

- Using NATA as an initial screening tool, air agencies can then study areas in more detail, focusing on where the risks to people may be greatest.
  - They may also choose to perform a smaller-scale local assessment, which allows them to use more detailed data than we can in NATA.

2014 NATA Results: National Average Cancer Risk



MSA Name	# Tracts
New Orleans-Metairie, LA	19

Laredo, TX	3	100			

** With the exception of New Orleans-Metairie, LA (chloroprene) and Pittsburgh, PA (coke oven emissions), the primary risks are driven by emissions of ethylene oxide from point sources.

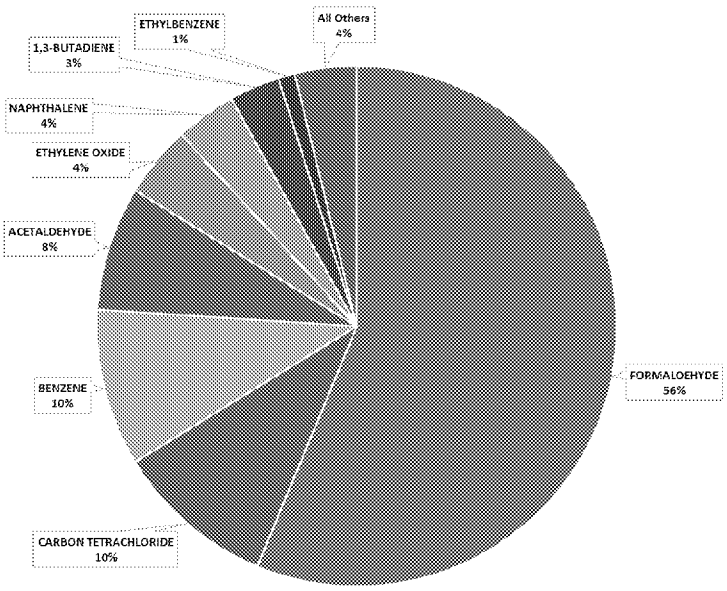
† The following 5 MSAs were also in the 2011 NATA as MSAs with elevated cancer risks: Chicago-Naperville-Elgin, IL-IN-WI; Denver-Aurora-Lakewood, CO; New Orleans-Metairie, LA; Philadelphia-Camden-Wilmington, PA-NJ-DE-MD; and Pittsburgh, PA.

What NATA tells us

- National average cancer risk estimated to be 30-in-1 million.
- Fewer than 1% of the census tracts in the country (106 tracts in 19 metropolitan statistical areas) have an estimated cancer risk of ≥ 100-in-1 million.
- Tracts with estimated cancer risks of ≥ 100-in-1 million are primarily driven by point source emissions of ethylene oxide, chloroprene, and coke oven emissions.
- Secondary formation (formaldehyde and acetaldehyde) estimated to contribute about half of the national average cancer risk.
  - Secondary formation is from both anthropogenic (stationary and mobile) sources as well as biogenic sources.

National Average Cancer Risk Pollutant Contributions (30-in-1 million)

2014 NATA



10

New risk estimates for ethylene oxide

- EPA completed its review of available health information for ethylene oxide and classified ethylene oxide as a known human carcinogen in December 2016.
  - This work included an increase in the potency estimates for ethylene oxide, which are used to inform risk estimates in 2014 NATA.
- The 2014 NATA results suggest that ethylene oxide is a potential concern in several areas across the country.
- EPA has begun to gather additional information in identified areas, focusing first on those areas with the largest estimated potential for risk.

Next Steps

- 2014 NATA will be rolled out soon, on the following website: *https://www.epa.gov/nata*
- To keep you informed as the EPA works to address ethylene oxide, a separate website will be updated regularly. The address will be *https://www.epa.gov/ethylene-oxide*
- We will send you a link to the preview SharePoint site this afternoon.

The National Emissions Inventory (NEI)

OAQPS, Air Quality Assessment Division,
Emissions Inventory and Analysis Group

Outline

Part 1

- NEI regulatory background
- NEI goals and drivers
- NEI details and highlights
- How we help State/Local/Tribes (SLTs) calculate and submit emissions
- NEI improvements and results
- NEI program new initiatives / 2017 NEI development
- 2017 NEI production timeline

Part 2

- 2014 NEI Report Story Map – communicating the data

NEI Regulatory Background

- Clean Air Act (CAA) 110 (a)(2)(F) authorizes EPA administrator to collect emissions data as needed to support NAAQS program
- CAA 182(a)(3) requires triennial emissions for O_3 nonattainment areas
- Air Emissions Reporting Rule (AERR)
  - Criteria air pollutants and precursors (CAPs) required
  - Hazardous Air Pollutants (HAPs) and Greenhouse Gases (GHGs) voluntary
  - Point sources for NAAQS major sources (potential-to-emit thresholds) and voluntarily lower, with Lead at 0.5 tons/year actual
  - Events (fires) voluntary
  - All other sources (mobile + nonpoint) county level
  - Complete triennial inventory with annual very-large (Type A) point sources

NEI Five Key Goals

- Complete: All emissions to the atmosphere included, whether regulated or unregulated, for all counties/tribes including Puerto Rico and the Virgin Islands
- Represents the year of the inventory
- Uses best available information
- Transparent - includes the emissions origin
  (who provided, factor, activity, method)
- Timely

4

Fast slide: summarize that v2 release comes down to "good enough" vs policy driver like NATA

NEI Drivers - Uses by SLTs

- NAAQS and Regional Haze Implementation
  - Starting point for State Implementation Plan (SIP) inventory requirements for O_3, $PM_{2.5}$, transport, and regional haze SIPS
    - Planning inventories
    - Modeling inventories
  - NAAQS Designations: emissions (along with monitoring data) are among the most important factors in designation tools used by SLTs
- Emissions trends – national and state
  - NEI trends website
  - ECOS ("ECOS Results" metrics) website: interactive tool where NEI is one of four display measures for showing state-level environmental progress

NEI Drivers - Uses by EPA and Others (1 of 2)

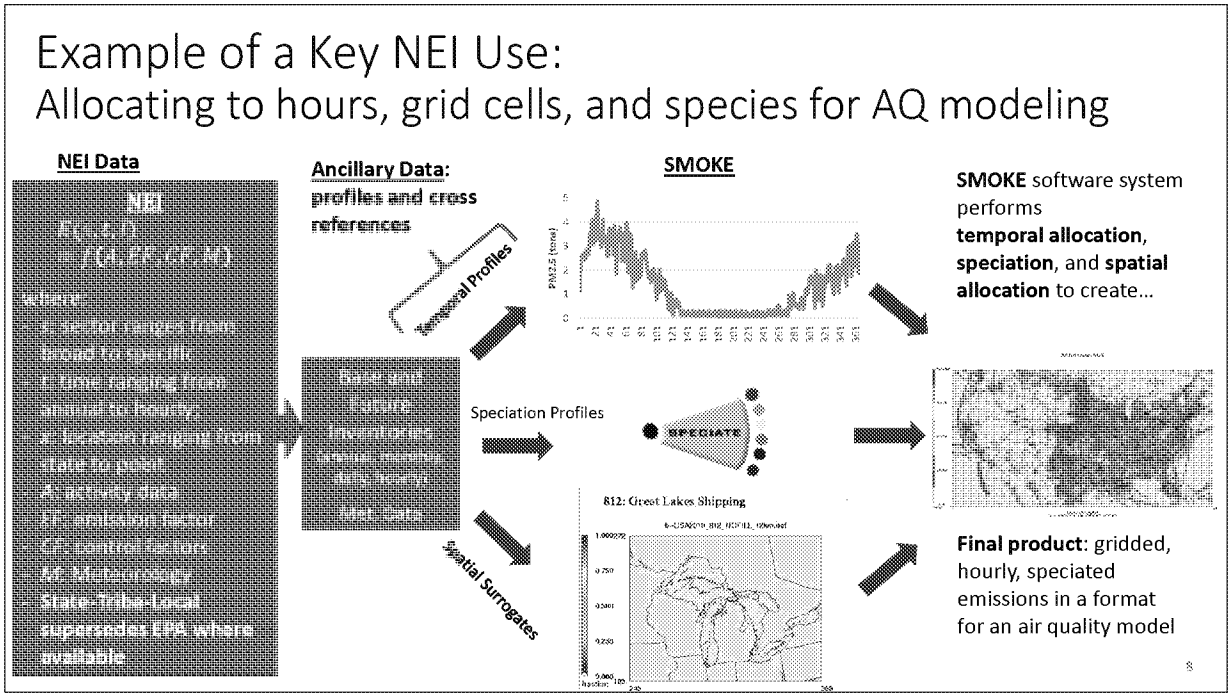
- Air quality modeling
  - NAAQS Regulatory and Regional Haze: Transport rules, NAAQS Regulatory Impact Analysis (RIA), OTAQ RIAs, international transport
  - National Air Toxics Assessment (NATA) – risk results used by SLTs
  - Technology Review (RTR): starting point
  - ORD air quality model development
  - Centers for Disease Control and Prevention (CDC) air quality analysis
  - Global modeling inventories used by international community
- Emissions trends – national and state
  - Air trends report
  - ORD Report on the Environment
  - International agreements
  - Public and press requests

6

International examples: (e.g., CLRTAP, US-Canada AQ Agreement, Arctic Monitoring and Assessment Programme (AMAP), Commission for Environmental Cooperation (CEC))

NEI Drivers - Uses by EPA and Others (2 of 2)

- Other NAAQS uses: NAAQS policy assessments and integrated science assessments (ORD)
- Monitoring: siting purposes
- Public information via NEI website
  - 2014 NEI Report Story Map (next)
  - NEI query tools, technical support documentation, submittal instructions, guidance, plan, instructions
  - Emissions processes for EPA's air quality modeling
- Data quality analysis
  - OECA Enforcement and Compliance History (ECHO) web tool for regulated facilities
  - TRI – missing or significant facility differences



NEI important to international community: methods/factors are often used as example for others

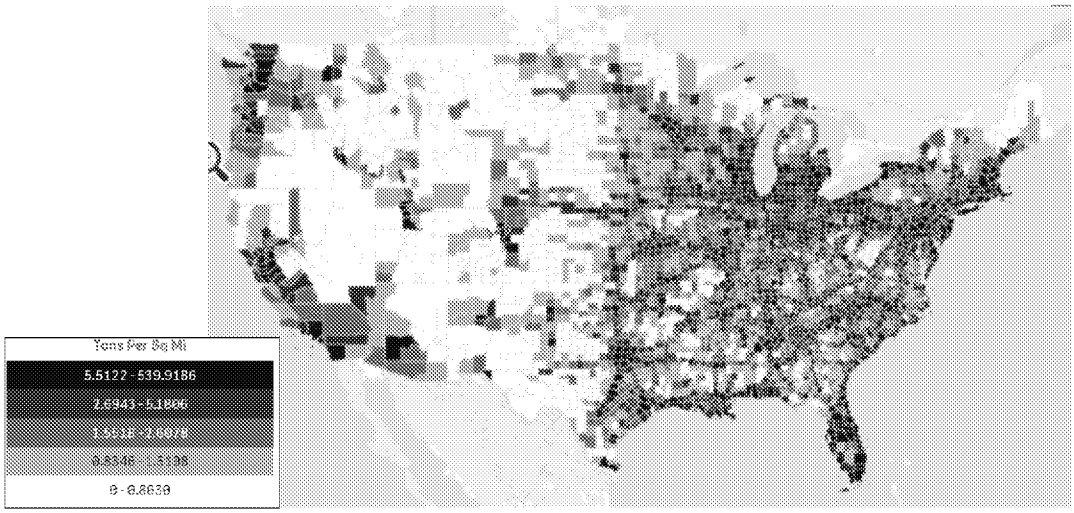
NEI Details

- Types of emission sources included and resolution
  - Point sources (facility-process for ~87,000 facilities)
    - Examples include electric generation and industrial facilities
  - Nonpoint sources (county-process)
    - Onroad mobile sources: exhaust, evaporative, brake and tire wear, road dust
    - Nonroad mobile sources: equipment (e.g., lawnmowers, construction, farm, mining), aircraft, ships, and railroads
    - Biogenic soil and vegetation (county-process)
    - Other nonpoint sources: residential heating, gas stations, animal waste, solvents
  - Wild and Prescribed Fires (daily-point "Events")
- HAPs, GHGs and Black Carbon
  - EPA augments to make HAPs more complete (e.g., Toxics Release Inventory data)
  - GHGs not provided in NEI for point and nonpoint – defer to OAP's inventory
  - Elemental carbon, organic carbon and diesel particulate matter are computed by EPA using factors applied to $PM_{2.5}$. We assume black carbon = elemental carbon.

3

Another fast slide: don't spend too much time on this slide

2014 NEI NOX Mobile Emissions (from Story Map)

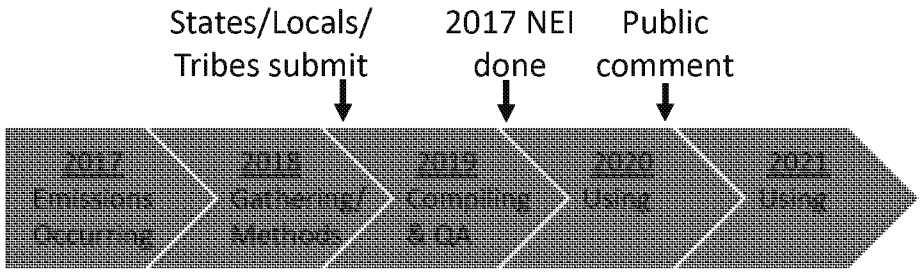


Screenshot of NOX Mobile: Story Map demo to follow

NEI Program Highlights

- Full annual inventory w/ associated "modeling platform" every 3 years
  - Updated methods and models (e.g., MOVES for onroad/nonroad)
  - New sources: oil/gas processes, composting, BBQs, animal dust
  - Activity inputs for nonpoint, mobile and fires
  - Quality and completeness continuous improvement
- Annual inventory available internally but not publicly-released
  - Point: updated CAMD EGUs, TRI and SLTs-submitted
  - Fires and mobile sources
  - All other sources are usually carried forward
- Collaborators outside OAQPS
  - EPA Offices/Programs: OTAQ, TRI, ORD, GHGRP, CAMD
  - Non-EPA: USFS, NOAA, BOEMS, international organizations, SLTs!

2017 NEI Timeline



- Proposed 2017 NEI timeline:
  - Data submitted within 12 months by SLTs
  - Public release within 27 months (merges S/L/T and EPA data)
  - Public comments
  - Use in air quality modeling 24-36 months
  - Subsequent versions typical in previous NEIs ideally not needed for the 2017 NEI

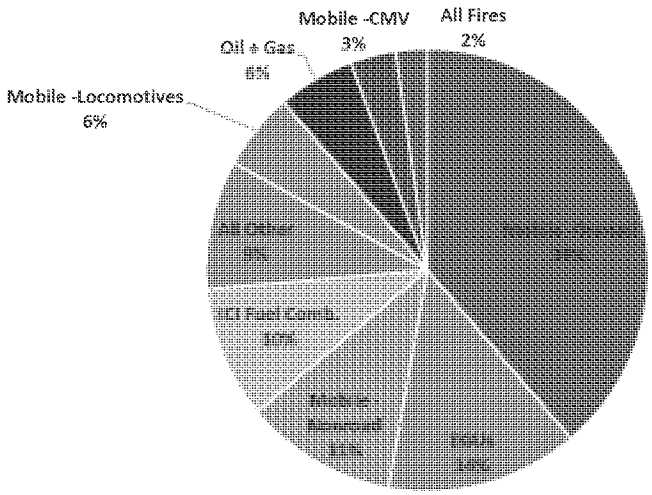
12

Keep, useful to illustrate how the comprehensive NEI fits in the calendar

How We Help SLTs Calculate and Submit Emissions

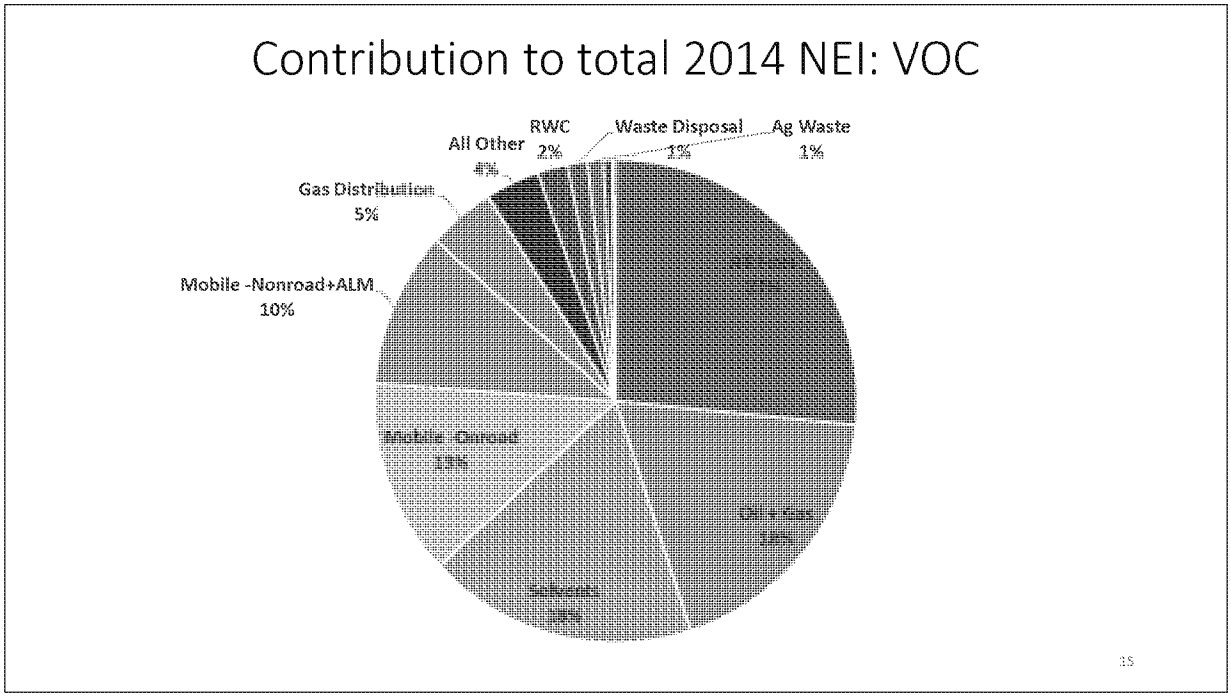
- NEI Development Plan, instructions, trainings w/ webinars
- Nonpoint: EPA methods and 30+ tools
  - County-specific estimates using state-of-science methods
  - SLT collaboration to improve methods
  - For SLT use for submission and as fallback for EPA
- Mobile: models and inputs w/ OTAQ
  - We provide vehicle miles traveled, fuels, speed distributions, aircraft LTOs, CMV port/underway activity
- Satellite-based fire emissions w/ ORD + US Forest Service methods, SLT inputs
- Option to "accept EPA data" by emissions sector (for all but point sources)
- Biannual International Emissions Inventory Conference – 1.5 days trainings, 3 days sessions and workgroup meetings

Contribution to total 2014 NEI: NOX

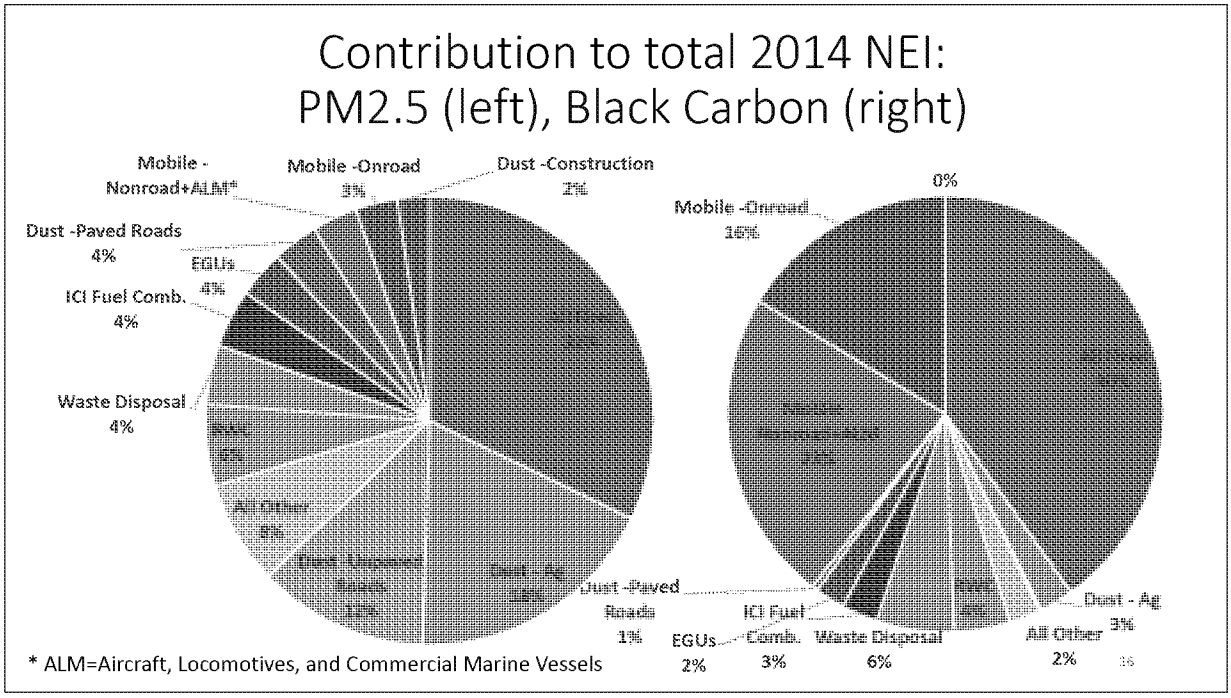


14

"Other" is sources like: res NG heating, cement manuf, other Ips, aircraft, open burning

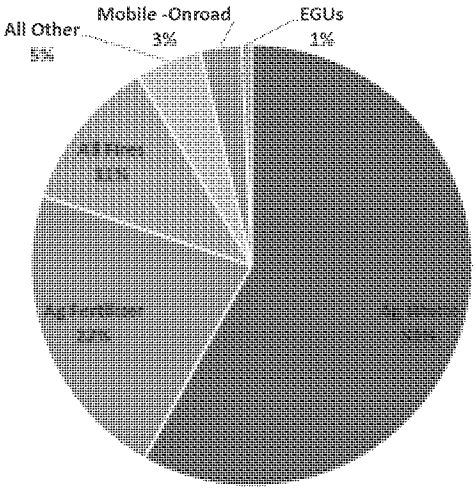


Other: backyard BBQs, Ind processes like pulp and paper, chem manuf



"Other": Comm Cooking, Backyard BBQs, Ips like mining, pulp and paper, metal production

Contribution to total 2014 NEI: NH3



Other: res NG heating, waste disposal, IP manufacturing, RWC

Improvements in the 2014 NEI

- Oil and gas production and exploration: better inputs and methods, updated GHG Reporting Program data (OAP)
- Residential wood combustion & solvents: better inputs and methods
- Commercial marine vessels: "bottom up" inventory method
- Aircraft estimates based on Federal Aviation Administration model and airport-specific modeling
- New version of MOVES model (OTAQ): nonroad equipment emissions with better HAP estimates
- Agricultural NH3 livestock waste/fertilizer: new process-based/"bi-directional flux" models
- Agricultural field burning estimates: better reconciliation with prescribed burning, new method removed false detects, and include range land fire estimates (ORD)
- New categories: composting and backyard charcoal grilling
- Emissions Inventory System (EIS): Improved SLT submittal and QA procedures, transparency via new nonpoint survey
- Increased engagement with SLTs on Nonpoint inventory development created a more efficient process and resource allocation for EPA and SLTs

Oil and gas production and exploration: More state/local input data, improved source characterization (e.g., gas composition data, conventional vs unconventional production) and speciation data
Residential wood combustion:
Improved appliance allocations regionally and to counties
Improved characterization of primary vs secondary and recreational burning
Introduction of local-level woodstove certification profiles and burn bans
Commercial marine vessels: based on discrete data points/activity
Agricultural field burning estimates based on point / day-specific data for modeling
Solvents: better point source reconciliation
EIS: NP survey indicated to EPA what SLTs intended to submit, led to more-automated EPA/SLT data reconciliation, more EIS Reports –comparison and feedback
Engagement w/ SLTs: SLTs knew what EPA was prioritizing, progress and methods of NP EPA tools and had a (limited) role in shaping them to suit their needs (NOMAD calls and trainings)

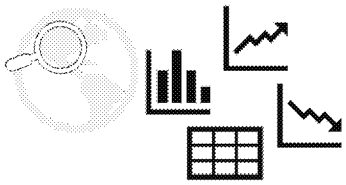
NEI Program New Initiatives for 2017 NEI

- Implementing results of November 2016 LEAN event
  - Streamlined EPA nonpoint tools w/ continuous SLT engagement on development via "NOMAD" (nonpoint) workgroups
  - Implement streamlined approach that will need less future contractor support
  - Goal: One version of the nonpoint inventory
- 2016 Emissions Modeling Platform development (for Regional Haze support) with SLTs and others feeding into 2017 NEI development
- Continued collaboration for data and methods improvements
  - Oil and gas production (SLTs, OAP)
  - Residential wood combustion (SLTs, CEC)
  - Industrial and commercial/institutional fuel combustion (SLTs)
  - Updated MOVES model (primarily nonroad) and inputs (SLTs, CRC, OTAQ)
  - Commercial marine vessels (OTAQ, SLTs, LADCO)
  - Fire emissions factors and PM composition data (ORD, USFS)
  - Agricultural livestock and fertilizer NH_3 (ORD)
  - Estimating emissions from new sources such as agricultural silage (SLTs)

Core NEI Team

- Jennifer Snyder: Nonpoint Overall, including Oil/Gas & Solvents
- Tesh Rao: Fires and Ag Livestock, Black Carbon
- Laurel Driver: Onroad and Nonroad Mobile Sources
- Ron Ryan: Point sources
- Madeleine Strum: CAER, Air Toxics/NATA and Speciation
- Sally Dombrowski: CAER, SLT Support and Training
- Rhonda Thompson: Nonpoint Dust and Ag Fertilizer
- Rich Mason: Team Lead, Residential Wood & Nonpoint ICI Fuel Combustion

2014 NEI Report Story Map



- Reports for previous NEI releases, e.g., 2008, 2011, were stand-alone static documents containing limited emission summaries, though the data was available online.
- New interactive communication tool will allow users to explore the 2014 NEI v2 data released in February 2018 using new user-friendly technology.
- Highly visual tool with graphs, tables, and maps that summarize national and state emission trends and emission profiles for states and counties based on the 2014 NEI v2 data.
  - Users can explore the emissions data and answer basic questions they have about the NEI and emission trends by looking at what the data shows for national, state, and local areas.

21

Uses the Agency data analytics software standard 'Qlik'. Some examples of other EPA Qlik applications:
Toxics Release Inventory (OCSPP); Enforcement and Compliance History Online (OECA); OAR OTAQ (Fuels ABT Credit Data).

Appendix

2014 NEI Report Story Map: Additional Details

- The Report distills a considerable amount of data detail inherent to the NEI and provides emission summaries for the criteria pollutants and 5 select HAPs.
  - CAP-related emissions: CO, NH3, NOx, Pb, PM (PM_{10}, $PM_{2.5}$, and black carbon), SO2, VOC
  - HAPs (5): acrolein, benzene, chromium VI, ethylene oxide, formaldehyde

    These 5 are examples of emissions which contribute to national or regional levels of cancer or non-cancer health risks based on the National Air Toxics Assessment (NATA)
- The Report is not a query tool for accessing all details of the entire 2014 NEI data. NEI data access query tools and detailed data files remain available on the EPA NEI program website.
- Anticipate a broad user audience including NEI stakeholders, i.e., data contributors, developers, and users; and the public, e.g., general browsers, air quality savvy neighbors, high-school and college students.
- A tour of the draft Report was provided to the Regional Office/OAQPS emission inventory coordination group.
- Next step: Release…. pending approval and post on the NEI program website.
