Subject:	Priority Notification 35-TUL-16: Nine Fieldwoker Developed Symptoms In a Vineyard
Date:	Friday, May 27, 2016 12:09:53 PM
Attachments:	35-TUL-16 PENR.pdf

On May 26, 2016, nine farm labor contractor fieldworkers out of a crew of seventeen reported to their foremen symptoms of itchy eyes and headaches. Reportedly, one person was taken for medical attention. The fieldworkers, one of three crews, were performing cultural activities in a vineyard located in Tulare County. Only one crew reported having symptoms. Dusting sulfur was applied to the field 3 days earlier on 5/23/16 . Tulare CAC has begun investigating the incident.
