November 29, 2018

Ms. Jennifer Tufts
Remedial Project Manager
U.S. Environmental Protection Agency, Region 4
61 Forsyth Street, SW, 11th Floor
Atlanta, Georgia 30303

Subject: **Final Expanded Site Inspection Report, Revision 1**
National Fireworks OU00 ESI
Cordova, Shelby County, Tennessee
EPA Identification No. TNSFN0407047
EPA Contract No. EP-S4-14-03
TDD No. TT-10-006

Dear Ms. Tufts:

The Tetra Tech, Inc. (Tetra Tech) Superfund Technical Assessment and Response Team (START) submits the enclosed final expanded site inspection (ESI), revision 1, report regarding the National Fireworks OU00 site in Cordova, Shelby County, Tennessee. The ESI report includes figures (Appendix A); tables (Appendix B); field logbook notes, field sample collection sheets, and boring logs (Appendix C); a photographic log (Appendix D); the U.S. Environmental Protection Agency (EPA) Contract Laboratory Program (CLP) and Tetra Tech-procured laboratory analytical data packages (Appendix E); Tetra Tech's review of field quality control samples for Contract Laboratory Program (CLP) laboratory data packages (Appendix F); and Tetra Tech's Stage 4 data validation report regarding the procured analytical data package (Appendix G). Revision 1 of the ESI report incorporates updated drinking water population information obtained from the Memphis Light, Gas, and Water Division.

If you have any questions or comments regarding this submittal, please call me at (678) 775-3101.

Sincerely,

Quinn Kelley
Tetra Tech START IV Project Manager

1.0 INTRODUCTION

The U.S. Environmental Protection Agency (EPA) tasked the Tetra Tech, Inc. (Tetra Tech) Superfund Technical Assessment and Response Team (START) to conduct an expanded site inspection (ESI) at National Fireworks (NF) in Cordova, Shelby County, Tennessee. The ESI was completed under Contract No. EP-S4-14-03, Technical Direction Document (TDD) No. TT-10-006.

The primary objective of an ESI is to evaluate eligibility of a site for placement on the National Priorities List (NPL). The NPL includes sites where a release or threatened release of hazardous substances poses a risk to public health or the environment serious enough to warrant further investigation and possible remediation under the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA) and the Superfund Amendments and Reauthorization Act of 1986.

Information gathered during the ESI is used to generate a preliminary Hazard Ranking System (HRS) score, the primary criterion EPA uses to decide whether a site should be placed on the NPL. ESIs generally occur at sites where additional environmental sampling is necessary to fulfill HRS documentation requirements. An additional function of an ESI may be to address site issues not adequately resolved in previous investigations.

Objectives of this ESI are as follows:

- Obtain and review relevant file material.
- Document current site conditions.
- Collect soil and groundwater samples to establish representative background levels.
- Collect samples to document observed releases to the groundwater migration pathway and to identify the source of a chlorinated solvent groundwater plume.
- Evaluate target populations along the groundwater migration pathway.
- Obtain any other missing HRS data.

The remainder of this ESI report is organized as follows:

- Section 2.0 discusses the site background, including the site description, environmental setting, operational history, and findings from previous investigations.
- Section 3.0 describes ESI field activities during the week of June 18, 2018, and deviations from the final quality assurance project plan (QAPP) dated May 16, 2018 (Reference [Ref.] 1].
- Section 4.0 discusses analytical support, methodology, validation, data quality, and data qualifiers.

- Section 5.0 indicates sampling locations and analytical results.
- Section 6.0 discusses the groundwater migration pathway, as well as the geologic setting, hydrogeologic setting, groundwater sampling locations and analytical results, and targets associated with this pathway.
- Section 7.0 summarizes the ESI report and presents conclusions.
- Section 8.0 lists sources referenced during development of the ESI report.
- Appendices include the following;
    - Appendix A: Figures
    - Appendix B: Tables
    - Appendix C: Field logbook notes, field sample collection sheets, and boring logs
    - Appendix D: Photographic log
    - Appendix E: EPA Contract Laboratory Program (CLP) and Tetra Tech-procured laboratory analytical data packages
    - Appendix F: Tetra Tech's review of field quality control (QC) samples for CLP laboratory data packages
    - Appendix G: Tetra Tech Stage 4 data validation report of the procured analytical data package.

2.0 SITE BACKGROUND

This section discusses the site background, including the site description, environmental setting, and findings from previous investigations.

2.1 SITE DESCRIPTION, ENVIRONMENTAL SETTING, AND OPERATIONAL HISTORY

The approximately 260-acre NF property is in Cordova, Shelby County, Tennessee (Ref. 2, p. 1) (see Figure 1 in Appendix A). The NF property is bounded to the north by Macon Road, with the Acme Brick Company and Eagle Heights Community Church beyond; to the east by Grays Creek; to the south by residential properties; and to the west by residential properties, with Buckeye Road beyond (see Figure 2 in Appendix A). The NF property is zoned for industrial use and is surrounded by land zoned for industrial, commercial, and residential uses (Ref. 3). Geographic coordinates at the approximate center of the NF property are latitude 35.160556° north and longitude 89.751068° west (see Figure 1 in Appendix A).

The NF property is divided into three operable units (OU): NF OU1 is a former burn pit owned by Cordova Investment Partners, Ltd., in the southwestern portion of the site; NF OU2 is the Security Signals, Inc. (SSI) property in the northern portion of the site, and NF OU00 encompasses the remainder

of the former NF property. NF OU2 is currently addressed under an Administrative Order of Consent between SSI and EPA. This ESI focuses on the source of a chlorinated solvent plume beneath NF OU00 identified during the remedial investigation (RI) at NF OU2 (Ref. 13, pp. 4-1, 4-2).

From 1941 to 1945, NF manufactured various munitions for the Departments of the Army and Navy. The buildings were spaced throughout the 260-acre site because of the explosiveness of the products used. The munitions NF manufactured included flares, grenades, smoke pots, 20-millimeter (mm) and 40-mm rounds, and incendiary bombs (Refs. 2, pp. 2, 3; 4, pp. 5, 6, 7). Chemicals possibly mixed and used in ordnance production at the site included trinitrotoluene (TNT); hexahydro-1,3,5-trinitro-1,3,5-triazine (RDX); 2,4,6-trinitrophenylmethylnitramine (tetryl); ammonium nitrate; fulminated mercury; and white phosphorus. Former employees stated that at the southeastern corner of the site, pyrotechnical compounds were mixed for use in manufacture of various munitions (Refs. 2, p. 8; 4, pp. 6, 8). NF OU1 (former burn pit) was used to burn materials of unknown composition (Ref. 4, p. 6).

In 2008, the EPA Photographic Interpretation Center (EPIC) prepared an aerial photographic analysis of the NF property. The EPIC study reviewed and evaluated site features on aerial photographs dated 1937 to 2004. According to the EPIC study, improvements on the site had been constructed sometime between 1937 and 1957 (Ref. 5, pp. 1, 2). By 1957, a complex of buildings, a railroad spur, unpaved roads, a possible incinerator, possible pipeline, and horizontal tanks were present (Ref. 5, pp. 14, 15). By 1973, new building additions, open storage areas, and two impoundments, or pits, just west of the current SSI property were present (Ref. 5, pp. 25, 27).

SSI, the 22-acre NF OU2, was established in 1948 to manufacture fuses, ignition cartridges, and other pyrotechnic devices (Ref. 6, pp. 2, 3). In 1968, SSI expanded operations to include a screw machine, parts, and metal fabrication. Since 1996, SSI operations have included manufacture of machined metal products, including automotive valves and air conditioning compressor parts from raw material bar stock. The machined metal parts are produced in screw machines, with cutting oil used as coolant. No pyrotechnic products have been manufactured by SSI since 1997 (Ref. 6, p. 3).

2.2 PREVIOUS INVESTIGATIONS

Several investigations occurred at the site between 1999 and 2009 (Ref. 7, pp. 7 through 10). Analytical results from multi-media environmental samples collected during these investigations revealed concentrations of hazardous substances above background concentrations as follows: volatile organic compounds (VOC), including 1,1-dichloroethane (DCA), 1,1-dichloroethene (DCE), cis-1,2-DCE,

tetrachloroethene (PCE), and trichloroethene (TCE), among others; polynuclear aromatic hydrocarbons (PAH), including benzo(a)anthracene, benzo(a)pyrene, and phenanthrene, among others; pesticides, including aldrin, dieldrin, heptachlor, and alpha- and gamma-chlordane, among others; polychlorinated biphenyls (PCB); explosives, including octahydro-1,3,5,7-tetranitro-1,3,5,7-tetrazocine (HMX, an explosive); dioxins and furans; perchlorate; and metals, including antimony, beryllium, cadmium, chromium, copper, lead, mercury, nickel, and zinc, among others (Refs. 7, pp. 21 through 34, 42 through 46; 8, pp. 11, 12; 9, pp. 10 through 14, 16 through 21, 23 through 33, 38 through 42, 44 through 46; 10, pp. 4 through 7).

The RI at NF OU2 included Phase I completed in 2008, Phase II completed in 2009, Phase III completed in in 2011, and supplemental sampling in 2012 and 2013 (Ref. 13, pp. 1-13, 1-15, 1-16). The RI identified two TCE groundwater plumes (A and B) that appeared to originate off NF OU2 (Ref. 13, pp. 4-1, 4-2). Monitoring well MW-7 (Plume A), along the western boundary of the central portion of NF OU2, was installed in 2008 to 43 feet below ground surface (bgs), and was sampled in 2008, 2011, 2012, and 2013. TCE was detected in MW-7 at 1,700 micrograms per liter (µg/L) in 2008, at 1,300 µg/L in 2011, at 590J (estimated) µg/L in 2012, and at 645 µg/L in 2013 (Ref. 13, pp. 2-12, 2-33, 4-1, 4-108 to 4-111, 5-19, Figure 4-11). Monitoring well SS-GW-01 (Plume B, divided into Source B1 and Source B2), along the western boundary of the northern portion of NF OU2, was installed in 2005 to 33 feet bgs and was sampled in 2008, 2011, 2012, and 2013. TCE was detected in SS-GW-01 at 830 µg/L in 2008, at 690 µg/L in 2011, at 510 µg/L in 2012, and at 514 µg/L in 2013 (Ref. 13, pp. 2-12, 2-33, 4-116, 4-117, 5-19, Figure 4-11). The EPA Maximum Contaminant Level (MCL) for TCE is 5 µg/L (Ref. 14, p. 7).

In July 2016, Tetra Tech conducted an ESI at NF OU1, collecting surface and subsurface soil and groundwater samples. Additionally, Tetra Tech advanced four exploratory borings at and in the vicinity of NF OU1 to determine whether the Jackson-Upper Claiborne confining unit, which serves as the upper confining unit for the Memphis Sand aquifer in the area of NF OU1, was present, thin, or absent (Ref. 10, p. 4). Analytical results from soil samples indicated elevated concentrations of antimony, cadmium, cobalt, copper, lead, manganese, mercury, zinc, 2,6-dinitrotoluene, dioxins, and furans, among others (Ref. 10, p. 16). Analytical results from groundwater samples indicated elevated concentrations of PCE, TCE, cis-1,2-DCE, mercury, perchlorate, and dioxins and furans. Exploratory borings indicated discontinuity in the Jackson-Upper Claiborne confining unit within a 2-mile radius of NF OU1, and interconnection of the surficial aquifer and the Memphis Sand aquifer (Ref. 10, p. 19).

3.0 EXPANDED SITE INSPECTION ACTIVITIES

This section outlines field observations and sampling procedures at the site, as well as deviations from the final QAPP. ESI sampling accorded with the EPA-approved final QAPP dated May 16, 2018 (Ref. 1).

3.1 SAMPLE COLLECTION, METHODOLOGY, AND PROCEDURES

During the ESI (week of June 18, 2018), Tetra Tech collected surface and subsurface soil and groundwater samples. Numbers, types, and locations of collected samples are listed in Table 1 in Appendix B and as follows:

- 42 soil samples (including two duplicates and two background) from 20 locations (including one background location) (see Figure 3 in Appendix A)
- 21 groundwater samples (including one duplicate and one background) from 20 temporary well locations (including one background location) (see Figure 3 in Appendix A)
- Three groundwater samples (including one duplicate) from two permanent monitoring wells (see Figure 4 in Appendix A).

To allow comparisons of background concentrations to analyte concentrations detected in on-site and off-site samples, Tetra Tech collected background soil and groundwater samples at a location outside of the influence of the site, about 1,500 feet northwest of MW-7 (see Figure 3 in Appendix A).

Tetra Tech applied sample collection procedures outlined in the final QAPP (Ref. 1). All soil and groundwater samples were collected in accordance with the EPA Region 4 Science and Ecosystem Support Division (SESD) Field Branches Quality System Technical Procedures (FBQSTP) for *Soil Sampling* (SESDPROC-300-R3), August 2014; and *Groundwater Sampling*, SESDPROC-301-R4, April 2017 (Refs. 15; 16). Field logbook notes and field sample collection sheets pertaining to the ESI sampling event are in Appendix C.

3.2 DEVIATIONS FROM THE QUALITY ASSURANCE PROJECT PLAN

During the field event, conditions at the site led to some deviations from the sampling plan proposed in the final QAPP. Some sampling locations were moved slightly due to access issues. Significant changes in sampling locations are described below. Deviations in the field were documented in logbook notes and field sheets (see Appendix C), and are summarized as follows:

- Station IDs NF08 to NF16 already existed; therefore, Station IDs listed in the final QAPP (NF08 to NF27) were changed to NF17 to NF36.
- Background location NF35 was moved to about 150 feet northwest of SSI monitoring well MW-7 in an effort to determine from which direction contamination in MW-7 was coming. As a result, NF35 is no longer considered a background location.
- NF33 was moved to the Acme Brick Company property to avoid the busy Lenow Road.
- NF27 was moved to a former pit area, just west of SSI monitoring well SS-GW-01.
- The temporary well installed at the NF27 soil sampling location did not produce any water; therefore, a second temporary monitoring well was installed about 50 feet northeast of the original NF27 location, and the NF27 groundwater sample was collected at this new location.
- Due to slow recharge, groundwater quality parameters were not recorded at NF18, NF19, NF23, NF26, NF28, NF31, NF32, and NF36, and entire well volume was used for the groundwater sample at each of these locations.
- To ensure productive wells, temporary monitoring wells at Stations NF25 and NF31 were installed with 10-foot screens instead of 5-foot screens because the borings contained a very thin water-bearing zone or non-distinct water table.
- The clay lithology present above the water table prevented collection of soil gas samples. START installed soil gas implants in the proposed borings, but upon purging, these implants were found to hold a vacuum of -10 inches of mercury for 3 minutes, a condition indicative of non-viable implants, and the implants thus were abandoned.

4.0 ANALYTICAL SUPPORT AND DATA QUALITY

This section outlines analytical support, methodology, and validation, as well as analytical data quality and data qualifiers. The EPA CLP and Tetra Tech-procured analytical data packages are in Appendix E, the Tetra Tech field QC sample review of CLP data is in Appendix F, and the Tetra Tech Stage 4 data validation report is in Appendix G.

4.1 ANALYTICAL SUPPORT, METHODOLOGY, AND VALIDATION

The EPA CLP analyzed soil and groundwater samples for EPA Target Compound List (TCL) VOCs in accordance with the CLP Statement of Work (SOW) for Organic Superfund Methods, Multi-Media, Multi-Concentration, SOM02.4, October 2016 (Ref. 17). The EPA Region 4 SESD Laboratory analyzed soil and groundwater samples for mercury in accordance with EPA SW-846 Method 7473 (soil) and EPA Method 245.1 (water), as described in the EPA Analytical Services Branch (ASB) Laboratory Operations and Quality Assurance Manual (LOQAM) (Ref. 18). EPA Region 4 SESD reviewed all data in accordance with the CLP SOW SOM02.4, EPA ASB LOQAM, and EPA guidelines (Appendix E, pp. E-2, E-153). To determine whether additional qualifications were warranted, Tetra Tech reviewed all field duplicate and field QC blank samples (equipment and field) in accordance with the EPA CLP

National Functional Guidelines (NFG) for Superfund Organic Methods Data Review, USEPA-540-R-2017-002, January 2017; and the EPA CLP NFG for Inorganic Superfund Data Review, USEPA-540-R-2017-001, January 2017 (Refs. 19; 20). Based on results of Tetra Tech's review, additional qualifiers were added to the analytical data where appropriate (see Appendix F).

Tetra Tech procured TestAmerica Laboratories, Inc. (TestAmerica), in West Sacramento, California, to analyze the soil and groundwater samples for perfluoroalkyl substances (PFAS) in accordance with EPA Method 537 (modified) (Ref. 21). A Level IV data package meeting the standards of the EPA CLP was requested from TestAmerica, including a case narrative, chain-of-custody forms, sample results, QC summary forms, and the raw data. The TestAmerica analytical data package as received from the laboratory is in Appendix E. Once the data package for the soil and groundwater samples was received from the laboratory, Tetra Tech reviewed it for completeness and conducted a Stage 4 data validation. The data validation process included a review of the method and instrument information, as well as quality assurance (QA)/QC comparisons of data listed in the electronic data deliverables to data listed in the electronic portable document format copy of the analytical data package. Analytical results from the soil and groundwater samples were validated in accordance with the EPA Guidance for Labeling Externally Validated Laboratory Analytical Data for Superfund Use (January 2009); the EPA NFGs for Superfund Organic Data Review, USEPA-540-R-2017-002, January 2017; and the above-referenced method (Refs. 19; 21; 22). The Tetra Tech Stage 4 data validation report is in Appendix G.

4.2 ANALYTICAL DATA QUALITY AND DATA QUALIFIERS

Text and analytical data tables presented in this report list some concentrations of parameters as qualified with a "J," indicating that identification of the analyte is acceptable but the reported value is an estimate. "J" qualified parameters may also include a "+," indicating a high bias. Some sample results are reported with an "R" qualifier, meaning that presence or absence of the analyte cannot be determined from the data because of severe QC problems; the data are rejected and considered unusable. Some sample results are reported with a "U" qualifier. For CLP data, the "U" qualifier means that concentration of the analyte was not detected at or above the method reporting limit (MRL); the reported value is the sample-specific, laboratory-derived MRL for the constituent. The "UJ" notation indicates that concentration of the analyte was not detected above the laboratory-derived MRL, which is considered approximate as a result of deficiencies in one or more QC criteria. The Tetra Tech-procured laboratory report indicates some results as "ND," which means that the concentration of the analyte was not detected above the reporting limit (RL). These results are presented in the tables (Appendix B) as the RL with a "U" qualifier. An analyte concentration is considered elevated if it equals or exceeds three times detected background concentration

or equals or exceeds the sample-specific and analyte-specific MRL or RL for non-detect background sample results. Laboratory analytical data sheets are in Appendix E.

5.0 SOURCE SAMPLING

This section discusses the source area evaluated at the site and sampling locations and analytical results from samples collected within the source area. Tetra Tech screened the soil cores for VOCs with a photoionization detector (PID) prior to sampling. Tetra Tech collected two soil samples from each location. The depth intervals sampled at each location were determined in the field based on the highest PID readings or, if zero, at the discretion of the on-site geologist. Source samples were analyzed for TCL VOCs, PFASs, and mercury. Analytical results from all samples were compared to background concentrations. Additionally, results from source samples were compared to EPA Regional Screening Levels (RSL) for industrial soil, May 2018 (Ref. 23). The discussion below addresses only the hazardous constituents associated with former site operations and the hazardous constituents that may pose a threat to human health or the environment. Only the highest concentrations of each contaminant of concern are discussed.

Source and background soil sampling locations are depicted on Figure 3 in Appendix A, and are described in Table 1 in Appendix B. Analytical results are summarized in Tables 2, 3, and 4 in Appendix B. Source and background soil sampling activities accorded with the EPA Region 4 SESD FBQSTP for *Soil Sampling* (SESDPROC-300-R3), August 2014 (Ref. 15).

5.1 BACKGROUND SOIL SAMPLING LOCATIONS

Two soil samples were collected at background location NF36. Subsurface soil sample NF36-SS-01 was collected within 5 to 7 feet bgs, and subsurface soil sample NF36-SS-02 was collected within 16 to 20 feet bgs (see Figure 3 in Appendix A). Because former background location NF35 had been moved, soil sample NF33-SS-01, collected within 0 to 2 feet bgs at NF33, was designated as the background sample for comparison to surface soil samples.

5.2 SURFACE SOIL SAMPLING LOCATIONS AND RESULTS

Tetra Tech collected 12 surface soil samples (including two duplicates) within the site (see Figure 3 in Appendix A). Analytical results indicated elevated concentrations of VOCs, including cis-1,2-DCE (up to 60J micrograms per kilogram [µg/kg]) and TCE (up to 310J µg/kg); PFAS, including

perfluorooctanesulfonic acid (PFOS) (up to 0.014 milligrams per kilogram [mg/kg]); and mercury (up to 0.10 mg/kg; among others. No analyte concentration was detected above an EPA RSL for industrial soil (Ref. 23). Analytical results from surface soil samples are summarized in Table 2 in Appendix B.

5.3 SUBSURFACE SOIL SAMPLING LOCATIONS AND RESULTS

Tetra Tech collected 14 subsurface soil samples at intervals between 2 and 10 feet bgs (see Figure 3 in Appendix A). Analytical results indicated elevated concentrations of VOCs, including cis-1,2-DCE (up to 860 µg/kg), trans-1,2-DCE (up to 270 µg/kg), TCE (up to 730 µg/kg), and vinyl chloride (at 4.8 µg/kg), among others. No analyte concentration was detected above an EPA RSL for industrial soil (Ref. 23). Analytical results from those 14 subsurface soil samples are summarized in Table 3 in Appendix B.

Tetra Tech collected 13 subsurface soil samples at intervals between 12 and 27 feet bgs (see Figure 3 in Appendix A). Analytical results indicated elevated concentrations of VOCs, including cis-1,2-DCE (up to 63 µg/kg), TCE (up to 420 µg/kg), and vinyl chloride (at 4.9J µg/kg); PFAS, including perfluorobutanesulfonic acid (PFBS) (at 0.00025 mg/kg); and mercury (up to 0.074 mg/kg); among others. No analyte concentration was detected above an EPA RSL for industrial soil (Ref. 23). Analytical results from those 13 subsurface soil samples are summarized in Table 4 in Appendix B.

5.4 SOURCE CONCLUSIONS

Tetra Tech collected 12 surface soil and 27 subsurface soil samples within NF OU00 and surrounding area, and one background surface soil sample and two background subsurface soil samples northwest of the NF property (see Figure 3 in Appendix A). Analytical results indicated elevated concentrations of cis-1,2-DCE, trans-1,2-DCE, TCE, vinyl chloride, PFOS, PFBS, and mercury, among others. No analyte concentration was detected above an EPA RSL for industrial soil.

6.0 GROUNDWATER MIGRATION PATHWAY

This section discusses the groundwater migration pathway and targets associated with the groundwater migration pathway, and draws pathway-specific conclusions. Sampling locations and analytical results from samples collected along the groundwater migration pathway are also discussed.

Temporary monitoring wells were installed and developed in accordance with the EPA Region 4 SESD FBQSTP for the *Design and Installation of Monitoring Wells* (SESDGUID-101-R1), January 2013 (Ref.

24). Groundwater sampling activities involved application of low flow techniques in accordance with the EPA Region 4 SESD FBQSTP for *Groundwater Sampling* (SESDPROC-301-R4), April 2017 (Ref. 16). Groundwater sampling locations are depicted on Figure 3 in Appendix A. Analytical results from groundwater samples were compared to 2018 EPA MCLs (Ref. 14). The complete set of EPA CLP and procured laboratory analytical data sheets is in Appendix E.

6.1 GEOLOGIC SETTING

The site is in the western portion of Tennessee within the Gulf Coastal Plain physiographic province (Ref. 25, p. 5)—near the axis of the Mississippi embayment syncline, which plunges southward at a gradient of about 10 feet per mile and generally follows the course of the Mississippi River (Ref. 26, p. O13). The natural topography at the site consists of rolling hills; however, significant portions of the site have been leveled for redevelopment (Ref. 27, pp. 29, 30). Depths of soil, alluvium, and terrace deposits removed from the site vary from approximately 1 foot to more than 15 feet (Ref. 28, Appendix C, Photograph Nos. 20, 21, and 23). Currently, the site has two topographic highs, one in the south-central portion of the site where the MMD Tower is located, and one in the northwestern portion of the site, off of Rebel and Cordova Park Roads. These two locations are assumed not to have been leveled, and thus the natural topography has been retained at these locations (Ref. 27, p. 72). The site is underlain in descending order by some or all of the following stratigraphic units: alluvium and terrace deposits, the Jackson Formation, the Claiborne Group, and the Wilcox Group (Ref. 26, pp. O9, O10).

Regionally, the alluvium is 0 to 200 feet thick and composed of sand, clay, silt, and gravel; is confined to narrow strips along the principal streams in the area; and is subject to flooding and reworking in most places (Ref. 26, p. O13). The coarsest material generally is near present stream channels, and the finest is near edges of the deposits (Ref. 26, p. O13). The alluvium is lithologically similar to underlying terrace deposits, and the contact cannot be identified from geophysical logs (Ref. 26, p. O13).

Terrace deposits underlie the alluvium and are composed primarily of coarse-grained quartz sand; fine-grained, iron-stained quartz; and chert gravel (Ref. 26, p. O12). Thin lenses of clay are common in the lower portion of the terrace deposits, and the bottom 3 inches to 4 feet of sand and gravel generally are cemented with limonite (Ref. 26, p. O12). Terrace deposits occur as an irregular belt parallel to the Mississippi River and along the larger streams in the area. The deposits thin toward the east and are absent in many places as a result of erosion or nondeposition. Regionally, the terrace deposits range from a few feet to about 160 feet thick (Ref. 26, p. O12). Thicknesses of alluvium and terrace deposits beneath the site range from a few feet to about 38 feet (Refs. 26, p. O12; 11).

The Jackson Formation underlies the terrace deposits and is about 60 feet thick in the vicinity of the site (Ref. 25, p. 8). The Jackson Formation is composed primarily of clay, silt, sand, and lignite (Ref. 29, p. 5). The clay layers of the Jackson Formation are dark gray to greenish-gray, dark blue, or dark brown (Ref. 26, p. O12). Two facies have been identified within the formation: an upper, nonmarine facies, and an underlying marine facies. The nonmarine facies contains abundant fossil plants and leaves and seams of lignite commonly 10 feet thick (Ref. 26, p. O12). The marine facies follows the course of the Mississippi River and extends northward about 25 miles into Lauderdale County. The marine facies contains glauconite, foraminifera, shark teeth, and bones of sea animals (Ref. 26, p. O12). During the 2016 ESI, the top of the Jackson Formation was encountered within approximately 31 to 47 feet bgs at NFEXP01 (Ref. 11, Appendix C, Boring Logs). The formation is approximately 59 feet thick 2 miles east of the site (Ref. 25, p. 15). Regionally, the Jackson Formation overlies and confines the Claiborne Group, which contains the Memphis Sand, also known as the "500-foot" sand (Ref. 26, p. O12).

The Claiborne Group, represented in the Memphis area by the 500-foot sand, is present in two lithologically different portions separated by clay beds about 150 feet thick in some areas (Ref. 26, p. O11). Both electrical logs and drillers logs of area wells show that the lower portion varies greatly in thickness and contains a larger number of clay beds that are thicker and more extensive than those in the upper portion (Ref. 26, p. O11). However, even the thickest clay beds in the Claiborne Group are not continuous, and no particular bed can be considered a hydrologic boundary between the upper and lower portions; therefore, the Claiborne Group is considered a single hydrologic unit (Ref. 26, p. O11). Generally, the Claiborne Group is characterized by medium- to coarse-grained sand in the upper portion, with a gradation to fine- to medium-grained sand in the lower portion (Ref. 26, p. O11). The Claiborne Group is about 800 feet thick and is encountered at about 180 feet bgs in the area of the site (Ref. 26, p. O12).

The Wilcox Group underlies the Claiborne Group, and three lithologically distinct units are present within the group based on drillers' logs and geophysical logs of wells in the Memphis area. The three units of the Wilcox Group are the upper clay unit, the middle sand unit, and the lower clay unit (Ref. 26, p. O9). The upper clay unit of the Wilcox Group is known as the Flour Island Formation and consists of dark gray or brown lignitic clay that contains local lenses of silty and sandy clay from 1 to 50 feet thick. Thin beds of fine-grained sand cemented with iron oxide form consolidated layers a few inches thick in some areas of the upper clay unit (Refs. 26, p. O9; 30, p. 6). The Flour Island Formation varies greatly in regional thickness and ranges from 200 to 395 feet thick in the south-central part of Shelby County (Refs. 26, p. O11; 30, p. 6). The middle sand unit, known as the Fort Pillow Sand or the "1,400-foot" sand, consists predominantly of unconsolidated, well-sorted, fine- to medium-grained sand and is about

300 feet thick in the vicinity of NF OU00 (Refs. 26, p. O11; 30, p. 6). The lower unit of the Wilcox Group, known as the Old Breastworks Formation, consists of clay, silt, sand, and lignite. The Old Breastworks Formation is about 300 feet thick in the area of NF OU00 (Ref. 30, p. 6).

6.2 HYDROGEOLOGIC SETTING

The alluvium and terrace deposits comprise the surficial aquifer, which is approximately 27 to 46 feet thick at the site (Refs. 25, p. 7; 26, p. O13). Recharge to the surficial aquifer occurs primarily through infiltration of precipitation (Ref. 25, p. 24). Water levels in monitoring wells at and near the site screened in the surficial aquifer were measured during the ESI and ranged from 2.81 feet bgs in monitoring well NFMW1 (SS-GW-01), on the northwestern portion of the SSI property, to 22.4 feet bgs in monitoring well NF28, just north of the site (see Figure 3 in Appendix A and Table 5 in Appendix B). Groundwater in the surficial aquifer at and in the immediate vicinity of the site flows to the southeast (Ref. 13, Figure 3-8).

The Jackson Formation and the upper portion of the Claiborne Group comprise the Jackson-Upper Claiborne confining unit, which serves as the upper confining unit for the Memphis Sand aquifer in the area of the site (Ref. 25, p. 7). The confining unit is considered to be that interval of sediment between the base of the surficial aquifer and the top of the first prominent sand of the Memphis Sand aquifer (Ref. 25, p. 18). A discontinuity or "window" occurs when the confining unit (the Jackson-Upper Claiborne, in this case) is thin or absent, thereby allowing downward migration of contaminants from one aquifer system to another (Ref. 25, pp. 27, 28, Plate 1). The Jackson-Upper Claiborne confining unit is thin, but present, at the site, and is about 17 feet thick. Exploratory borings were advanced during the 2016 ESI near Grays Creek (which forms the eastern boundary of the site) in an effort to determine whether the confining unit is present, thin, or absent in the vicinity of the site. Thickness of the confining unit was 16 feet at EXP-01, 10 feet at EXP-02, absent at EXP-03, and 8 feet at EXP-04 (Ref. 10, C-35 to C-47). Notably, thickness of the Jackson-Upper Claiborne unit at these locations is estimated because the exploratory borings were not advanced deeper than approximately 50 feet bgs. The Jackson-Upper Claiborne confining unit is absent about 1,000 feet southeast of the site, along the eastern edge of Grays Creek, as shown in exploratory boring EXP-03 (Ref. 10, pp. A-4, C-39 to C-42). As a result, the surficial aquifer and the Memphis Sand aquifer are interconnected within a 2-mile radius of the site.

The Memphis Sand aquifer is between the Jackson-Upper Claiborne confining unit and the Flour Island confining unit (Ref. 25, pp. 6, 9), ranges in thickness from about 500 to 800 feet in the site vicinity, and dips toward the northwest at a rate of about 13 feet per mile (Ref. 26, p. O18). It supplies approximately

95 percent of the water used in the Memphis area for municipal and industrial water supplies (Ref. 30, p. 39). The aquifer is encountered at about 120 feet bgs in Cordova, Tennessee (Ref. 25, Plate 2). Groundwater flow in the Memphis Sand aquifer in the vicinity of the site is greatly influenced by cones of depression created by surrounding wellfields, and horizontal flow is toward the center of the nearest depression (Ref. 25, p. 28). Recharge to the aquifer generally occurs from precipitation along the outcrop belt, where it is at or near the surface or where the Jackson-Upper Claiborne confining unit is thin or absent, thereby allowing downward infiltration (Ref. 25, p. 27 and Plate 1). A recharge component locally enters the Memphis Sand aquifer by downward leakage from the surficial aquifer or the Jackson-Upper Claiborne confining unit where the aquifer is confined and head differences are favorable (Ref. 25, p. 28).

The Flour Island confining unit underlies the Memphis Sand aquifer and serves as the lower confining unit for the Memphis Sand aquifer and the upper confining unit for the Fort Pillow Sand aquifer (Ref. 30, p. 7). The Fort Pillow Sand aquifer is about 300 feet thick in the vicinity of the site, thins toward the north and northeast of the Memphis area, and is the principal aquifer providing water for municipal and industrial supplies west of the Mississippi River. However, it supplies only about 5 percent of the municipal and industrial supplies in the Memphis area. The Old Breastworks Formation underlies and confines the Fort Pillow Sand aquifer in the site vicinity. The Old Breastworks confining unit is about 180 to 350 feet thick in the site vicinity (Ref. 30, p. 6).

6.3 GROUNDWATER SAMPLING LOCATIONS AND RESULTS

During the 2018 ESI, Tetra Tech collected 21 groundwater samples (including one duplicate and one background) from 20 temporary monitoring wells installed throughout the site and off site. Tetra Tech also collected three groundwater samples (including one duplicate) from two permanent monitoring wells within NF OU2—SS-GW-01 and MW-7.

Analytical results from temporary monitoring well groundwater samples (NF17 to NF35) indicated elevated concentrations of VOCs, including 1,1,2-trichloroethane (TCA) (up to 44 µg/L), 1,1-DCA (up to 1,100 µg/L), 1,2-DCA (17J µg/L), 1,1-DCE (up to 1,500 µg/L), cis-1,2-DCE (up to 3,800 µg/L), trans-1,2,-DCE (up to 780 µg/L), PCE (up to 150 µg/L), TCE (up to 28,000 µg/L), and vinyl chloride (up to 150 µg/L); PFAS, including PFBS (up to 0.78 µg/L), PFOS (up to 0.052 µg/L), and perfluorooctanoic acid (PFOA) (up to 0.11 µg/L); and mercury (up to 1.4 µg/L); among others. Additionally, 1,1,2-TCA, 1,1-DCA, 1,2-DCA, 1,1-DCE, cis-1,2-DCE, trans-1,2-DCE, PCE, TCE, and vinyl chloride, among others, were detected in temporary monitoring wells at concentrations above their respective EPA MCLs (Ref.

14). Analytical results from temporary well groundwater samples are summarized in Table 6 in Appendix B.

Analytical results from NF OU2 permanent monitoring well groundwater samples (NFMW1 and NFMW7) indicated elevated concentrations of VOCs, including 1,1,2-TCA (up to 1.1 µg/L), 1,1-DCA (up to 2.5 µg/L), 1,1-DCE (up to 4.3 µg/L), cis-1,2-DCE (up to 780J µg/L), trans-1,2,-DCE (up to 11 µg/L), TCE (up to 430J µg/L), and vinyl chloride (up to 39 µg/L). Additionally, cis-1,2-DCE, TCE, and vinyl chloride were detected in permanent monitoring wells at concentrations above their respective EPA MCLs (Ref. 14). Analytical results from permanent monitoring well groundwater samples are summarized in Table 6 in Appendix B.

Figure 4 in Appendix A presents the temporary and permanent monitoring well groundwater samples with contaminants detected above the EPA MCLs.

6.4 GROUNDWATER MIGRATION PATHWAY TARGETS

Memphis Light, Gas, and Water Division (MLGW) operates 130 wells in multiple wellfields. MLGW supplies water to about 229,285 residential connections (Ref. 31, p. 2). Based on the U.S. Census Bureau, Shelby County has 2.63 persons per household (2012 through 2016) (Ref. 32). Therefore, 603,019.55 persons are provided water by MLGW (229,285 residential connections x 2.63 persons per household). The MLGW Shaw Wellfield is southeast of the site and is the only MLGW wellfield within 4 miles of the site. Seventeen municipal wells comprise the Shaw Wellfield: one is within a 0.5- to 1-mile radius, 11 are within a 1- to 2-mile radius, and five are within a 2- to 3-mile radius of the site (Refs. 31, p. 4; 33). Fourteen of the 17 wells are completed in the Memphis Sand aquifer at depths ranging from 355 to 899 feet bgs. Three wells (751, 755, 761) are completed in the Fort Pillow Sand aquifer at depths ranging from 1,161 to 1,225 feet bgs. The Fort Pillow Sand aquifer wells are within a 1- to 2-mile radius of the site, and are not evaluated (Refs. 31, p. 4; 33). Water from the Shaw Wellfield is blended with water from the other wellfields before it is distributed, and none of the Shaw Wellfield wells produces more than 40 percent of the total water supply (Ref. 31, p. 2). Therefore, each well was assumed to serve about 4,638.61 persons (603,019.55 persons ÷ 130 wells).

The estimated population within a 4-mile radius of the NF OU00 site that uses groundwater as a drinking water source is distributed as follows: 0 to 0.25 mile, 0 people; 0.25 to 0.50 mile, 0 people; 0.50 to 1 mile, 4,638.61 people; 1 to 2 miles, 37,108.88 people; 2 to 3 miles, 23,193.05 people; and 3 to 4 miles,

0 people (Refs. 31, pp. 2, 4, 5; 32; 33). Private drinking water wells reportedly are present within a 4-mile radius of the site, but their exact locations and depths are unknown (Ref. 2, p. 10).

6.5 GROUNDWATER CONCLUSIONS

The groundwater pathway is of concern at the site because (1) a discontinuity in the Jackson-Upper Claiborne confining unit has been identified within a 2-mile radius, and (2) site-related contamination has been documented in groundwater wells completed in the surficial aquifer system.

A discontinuity or "window" occurs when the confining unit (the Jackson-Upper Claiborne, in this case) is thin or absent, thereby allowing downward migration of contaminants from one aquifer system to another. The Jackson-Upper Claiborne confining unit is thin at the site, about 17 feet thick. Exploratory borings were advanced during the 2016 ESI near Grays Creek, which forms the eastern boundary of the site, in an effort to determine whether the confining unit is present, thin, or absent in the vicinity of the site. The Jackson-Upper Claiborne confining unit is absent about 1,000 feet southeast of the site, along the eastern edge of Grays Creek, as shown in exploratory boring EXP-03. Therefore, the Jackson-Upper Claiborne confining unit is not continuous within a 2-mile radius of the site, and the surficial aquifer and the Memphis Sand aquifer are interconnected.

Within 4 miles of the site, MLGW withdraws groundwater from the Memphis Sand and Fort Pillow aquifers to supply drinking water to about 64,940.54 people. Notably, this population includes only the 14 MLGW Shaw Wellfield wells that withdraw water from the Memphis Sand aquifer. Analytical results from groundwater samples indicate elevated concentrations of 1,1,2-TCA, 1,1-DCA, 1,2-DCA, 1,1-DCE, cis-1,2-DCE, trans-1,2-DCE, PCE, TCE, vinyl chloride, PFBS, PFOS, PFOA, and mercury, among others.

7.0 SUMMARY AND CONCLUSIONS

From 1941 to 1945, NF manufactured various munitions for the Departments of the Army and Navy. The munitions NF manufactured included flares, grenades, smoke pots, 20-mm and 40-mm rounds, and incendiary bombs. Chemicals possibly mixed and used in ordnance production at the site were TNT, RDX, tetryl, ammonium nitrate, fulminated mercury, and white phosphorus.

Soil samples collected at the site contained elevated concentrations of cis-1,2-DCE, trans-1,2-DCE, TCE, vinyl chloride, PFOS, PFBS, and mercury, among others. Groundwater samples collected from the

surficial aquifer underlying and adjacent to the site contained elevated concentrations of 1,2-TCA, 1,1-DCA, 1,2-DCA, 1,1-DCE, cis-1,2-DCE, trans-1,2-DCE, PCE, TCE, vinyl chloride, PFBS, PFOS, PFOA, and mercury, among others.

This ESI was conducted to determine the source of a chlorinated solvent groundwater plume within and upgradient of the NF property; therefore, the groundwater migration pathway was the only pathway evaluated. The groundwater migration pathway is the pathway of greatest concern based on the hazardous substances associated with the site and the location of the MLGW Shaw Wellfield. Exploratory borings advanced within a 2-mile radius of the site indicated that the Jackson-Upper Claiborne confining unit is not continuous within a 2-mile radius of the site, and the surficial aquifer and the Memphis Sand aquifer are interconnected.

NF24	NF24-SS-01	4 to 6	Grab	About 800 feet west of SS-GW-01	Determine presence or absence of contamination
	NF24-SS-02	21 to 23			
	NF24-GW-01	20 to 25			
NF25	NF25-SS-01	2 to 4	Grab	About 500 feet northwest of MW-7	Determine presence or absence of contamination
	NF25-SS-02	12 to 14			
	NF25-GW-01	10 to 20			
NF26	NF26-SS-01	0 to 2	Grab	About 750 feet northwest of MW-7	Determine presence or absence of contamination
	NF26-SS-02	8 to 10			
	NF26-GW-01	15.05 to 20.05			
NF27	NF27-SS-01	2 to 4	Grab	About 100 feet west of SS-GW-01, near former pit area	Determine presence or absence of contamination
	NF27-SS-02	4 to 6			
	NF27-GW-01	22.5 to 27.5			

TABLE 1
NATIONAL FIREWORKS OU00 ESI
SOIL AND GROUNDWATER SAMPLING LOCATIONS

Station ID	Sample ID	Depth (feet bgs)	Sample Type	Sample Location[1]	Rationale
NF28	NF28-SS-01	8 to 10	Grab	About 700 feet northwest of SS-GW-01	Determine presence or absence of contamination
	NF28-SS-02	25 to 27			
	NF28-GW-01	28 to 32			
NF29	NF29-SS-01	0 to 2	Grab	About 1,050 feet northwest of SS-GW-01	Determine presence or absence of contamination
	NF29-SS-02	12 to 14			
	NF29-GW-01	20 to 25			
NF30	NF30-SS-01	5 to 7	Grab	About 1,200 feet northwest of SS-GW-01	Determine presence or absence of contamination
	NF30-SS-02	12 to 14			
	NF30-GW-01	16 to 21			
NF31	NF31-SS-01	4 to 6	Grab	About 900 feet northwest of MW-7	Determine presence or absence of contamination
	NF31-SS-02	12 to 14			
	NF31-GW-01	10 to 20			
NF32	NF32-SS-01	0 to 2	Grab	About 1,100 feet northwest of MW-7	Determine presence or absence of contamination
	NF32-SS-02	2 to 4			
	NF32-GW-01	5 to 10			
NF33	NF33-SS-01	0 to 2	Grab	About 1,200 feet northwest of SS-GW-01	Determine presence or absence of contamination
	NF33-SS-02	12 to 14			
	NF33-GW-01	18.5 to 23.5			
NF34	NF34-SS-01	0 to 2	Grab	About 1,100 feet northwest of SS-GW-01	Determine presence or absence of contamination
	NF34-SS-02	20 to 22			
	NF34-GW-01	15 to 20			
NF35	NF35-SS-01	0 to 2	Grab	About 150 feet northwest of MW-7	Determine presence or absence of contamination
	NF35-SS-02	4 to 5			
	NF35-GW-01	7.1 to 12.1			
NF36	NF36-SS-01	5 to 7	Grab	About 1,400 feet northwest of MW-7	Background location for comparison to other samples
	NF36-SS-02	16 to 20			
	NF36-GW-01	20 to 25			

Notes:

[1] Plume A is associated with monitoring well MW-7, and Plume B is associated with monitoring well SS-GW-01.

TABLE 6
NATIONAL FIREWORKS OU00 ESI
ANALYTICAL RESULTS FOR GROUNDWATER SAMPLES

Notes:

[a]	May 2018 EPA Regional Screening Level (HQ=1) Tapwater
DUP	Duplicate
EPA	U.S. Environmental Protection Agency
FTS	Fluoro telomer sulfonic acid
GW	Groundwater
J	The identification of the analyte is acceptable; the reported value is an estimate.
J+	The analyte was positively identified, but the reported value is an estimate with a high bias.
MCL	2018 Maximum Contaminant Level
µg/L	Micrograms per liter
MW	Monitoring well
NE	Not established
NF	National Fireworks
R	Presence or absence of the analyte can not be determined from the data due to severe quality control problems. The data are rejected and considered unusable.
U	The analyte was not detected at or above the reporting limit.
UJ	The analyte was not detected at or above the reporting limit, which is considered approximate due to deficiencies in one or more quality control criteria.
BOLD	Bolded values are elevated, meaning that the values are three times the concentration of detected constituents in the background sample or greater than or equal to the non-detect concentration in the background sample.
BOLD	Bolded and shaded values are elevated and equal or exceed the EPA MCL.

Rite in the Rain

A patented, environmentally responsible, all-weather writing paper that sheds water and enables you to write anywhere, in any weather.

Using a pencil or all-weather pen, *Rite in the Rain* ensures that your notes survive the rigors of the field, regardless of the conditions.

June 18, 2018

13:50 - Tetra Tech, Quinn Kelley, Chris Jones, Carter Owens, Geoie Krull, and Adam Acker arrived at 9509 Macon Rd. EPA RPM, Jennifer Tufts onsite. Owner of Security Signals, Susan Lee, is onsite. Organize supplies and discuss plan.

14:15 - Set up at location, SS-GW-01.

NOTE: See field forms for sampling information.

1430 GPRS is onsite to conduct the geophysical survey. START Jones accompanies GPRS to sampling locations. EPA RPM Tufts continues to get access to sampling locations. START Krull leaves to pick up START Snyder at the airport. START Kelley, Owens, & Acker collect groundwater sample from Security Signals, Inc. (SSI) MW-1.

1530 START Kelley, Owens, & Acker attempt to locate SSI MW-7.

1630 START can't locate MW-7. SSI Owner Susan Lee shows START an easier way to access the area. START may need a metal detector.

1745 START done for the day.

Scale: 1 square = Quinn Kelley 6/18/18

6/19/18

0800 START on site. Conduct H&S briefing. Prepare for day's activities. Meet drillers on site. GPRS will be back on site later to finish the GPR survey. Team 1 consists of START Kelley, Jones, & Owens. Team 2 consists of START Snyder, Acker, & Krull.

0900 Team ~~2~~ 1 sets up at NF20. See field forms for additional sample information.

1015 Team ~~2~~ 1 sets up at NF26.

1115 Team ~~2~~ 1 sets up at NF34.

1200 Team ~~2~~ 1 breaks for lunch.

1300 Team ~~2~~ 1 begins groundwater sampling at NF34, while driller sets up at NF29.

1430 Team ~~2~~ 1 begins groundwater sampling at NF29. Employees of the brickyard move materials so that the drill rig can access NF33, which has been moved to the brickyard property to avoid the busy Lenow Rd.

1550 Team ~~2~~ 1 sets up at NF33.

Scale: 1 square = Quinn Kelley 6/19/18

4 6/19/18

1630 Team 1 ~~2~~ QK begins groundwater sampling at NF33. The well is purged dry & allowed to recharge before sampling. While Team 2 waits for NF33 to recharge, START Jones accompanies GPRS to finish the GPR survey of the remaining sampling locations.

1800 START done for the day. The wells at NF20 & NF26 are slow to fill, so they will be plugged & sampled tomorrow. START returns to the hotel to process samples & pack them into coolers for shipment.

Quin Keely 6/19/18

Scale: 1 square =

6/20/18 5

0730 START onsite. Conduct H2S briefing. Meet with drillers.

0815 Team 1 ~~2~~ QK sets up at NF17. See field forms for additional sample information.

1000 Team 1 ~~2~~ QK sets up at NF27, which has been moved to the former pit area at EPA RPM Tufts' request. The new location of NF27 is about 75 feet west of SS1 monitoring well SS-GW-01.

1100 Team 1 ~~2~~ QK sets up at NF21.

1200 Team 1 ~~2~~ QK breaks for lunch.

1300 Team 1 ~~2~~ QK sets up at NF20 to collect the groundwater sample. Meet with Ensafe Griffin Heard, SS1's subcontractor. She will be collecting split samples.

1400 Team 1 ~~2~~ QK sets up at NF19, which has been moved slightly to just west of SS1 monitoring well MW-7.

1445 Team 1 ~~2~~ QK sets up at NF35, which has been moved to just NW of SS1 monitoring well MW-7 at EPA RPM Tufts' request.

 6/20/18

1545 Team 1 collects groundwater from NF19, which is slow to recharge.

1620 Team 1 collects groundwater from NF26.

1730 START done for the day. Return to hotel to process samples & pack them into coolers for shipment.

Quin Kelly 6/20/18

Scale: 1 square =

6/21/18

0730 START on site. Conduct H&S briefing. Meet drillers.

0800 Team 1 at NF27. The temp well installed at the NF27 soil sampling location has not produced any water; therefore, at the request of EPA RPM Tufts, Team 1 installs another well about 50 feet NE of the original NF27.

0830 This well produces water, so Team 1 samples it. In summary, the soil samples for NF27 were collected from a different location than the groundwater sample for NF27.

1030 Using a metal detector provided by Ensafe Heard, Team 1 attempts to locate SSI monitoring well MW-7.

1130 Team 1 has located MW-7 & collects a groundwater sample plus a duplicate.

1230 Team 1 breaks for lunch.

1300 Team 1 drives to all locations to ensure wells have been abandoned properly. Team 1 collects GPS coordinates for all locations.

Drill Start Date:	6/20/2018		
Drill Finish Date:	6/20/2018		
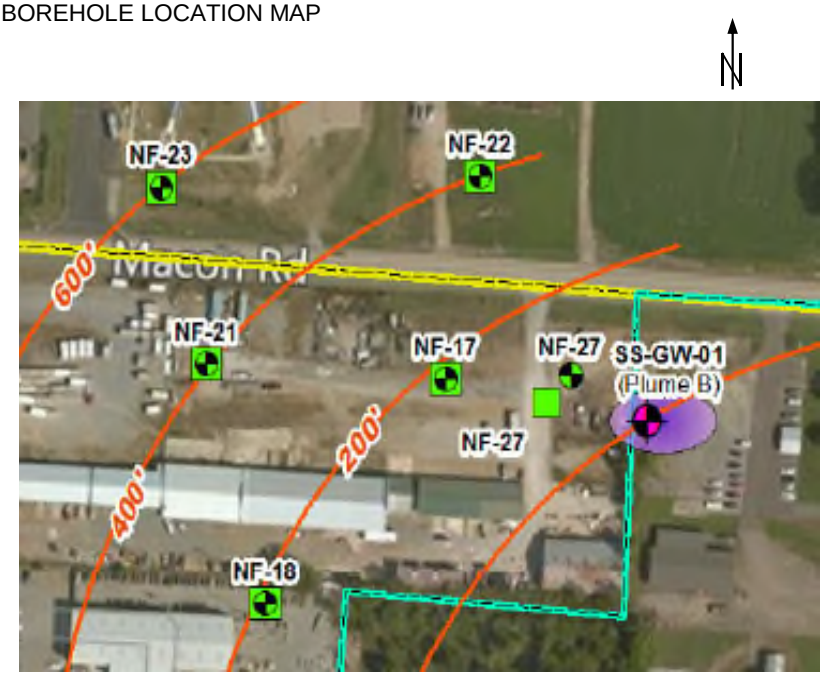
Total Borehole Depth (feet bgs):	36		

BOREHOLE LOCATION MAP



NOTES/REMARKS

Soil sample collected from 2-4 feet and 4-6 feet below ground surface interval.

Tetra Tech installed a temporary well at this location to approximately 36 feet bgs. The well did not readily produce water; after 24 hours no water had accumulated in the temporary well. Therefore, this location was abandoned and moved approximately 20 feet Northeast of the original location. Tetra Tech collected soil samples from the original location and groundwater samples from the offset location.

Groundwater measured at approximately 8.3 feet below ground surface at the offset location.

MEMORANDUM

SUBJECT: FINAL Analytical Report
Project: 18-0455, National Fireworks
Superfund Remedial

FROM: Jeff Wilmoth
Quality Assurance Section, Chemist

THRU: Sandra Aker, Chief
Quality Assurance Section

TO: Jennifer Tufts

Attached are the final results for the analytical groups listed below. These analyses were performed in accordance with the associated contract Statement Of Work (SOW). In general, project data quality objectives have not been used to evaluate these data prior to release by the Quality Assurance Section. For a listing of specific data qualifiers and explanations, please refer to the Data Qualifier Definitions included in this report.

Analyses Included in this report:	Method Used:
Volatile Organics (VOA)	
Volatile organic compounds	CLP VOA (Soil)
Volatile organic compounds	CLP VOA (Water)

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
Region 4 Science and Ecosystem Support Division
980 College Station Road, Athens, Georgia 30605-2700
D.A.R.T. Id: 18-0444
Project: 18-0455, National Fireworks - Reported by Jeff Wilmoth

Report Narrative for Work Order: C183012 Analysis: VOA

Site Name: National Fireworks, Cordova, TN
CLP Case No. 47684, ELEMENT Sample Nos. C183012-01 through -71.
C182905-01, -02 (PES only)

Organic Analysis: Chemtech Consulting Group, Mountainside, NJ

The ESAT Work Team reviewed data for 27 water and 44 soil samples analyzed for Trace Volatiles or Low/Medium Volatiles per CLP Statement of Work SOM02.4.

The samples were collected between 6/19/18 and 6/21/18, and received by the laboratory between 6/20/18 and 6/22/18. The final data package was received on 7/13/18 by the USEPA Quality Assurance Section, Region 4 SESD. The analytical results were reported in five sample delivery groups (SDGs) by the laboratory. In addition to the field samples, the laboratory analyzed two performance evaluation samples (PESs) for evaluating the laboratory's performance with using the methods.

A Stage 4 validation consisting of an electronic/manual review (S4VEM) was performed on the organic samples submitted for this case. The data package presents acceptable technical performance with qualifications.

The laboratory satisfied all contractual and technical holding time limits. All results associated with either erratic initial calibration (ICAL) or continuing calibration (CCAL) performance were flagged "J" with the appropriate Element qualifier (CLP16 and/or QC-1/QC-2). Additionally, the %D between the ICAL and a required second source verification standard exceeded 20% for Dichlorodifluoromethane, Methyl Acetate, 2-Butanone (Methyl Ethyl Ketone), and 1,2-Dibromo-3-chloropropane. The associated Dichlorodifluoromethane, Methyl Acetate, 2-Butanone, and 1,2-Dibromo-3-chloropropane results were qualified "J" (QC-3). Deuterated Monitoring Compounds (DMCs) were used as surrogates in each sample for GC/MS analysis to monitor extraction efficiency.

Some samples contained high concentrations of target analytes that exceeded the established calibration ranges. Accordingly, carryover potential between samples was evaluated as part of this review. No sample carryover was observed based on information contained in the data packages. However, only analytical runs reported by the laboratory were available for review.

Data quality factors requiring qualification of results are discussed below:

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
Region 4 Science and Ecosystem Support Division

Project: 18-0455, National Fireworks - Reported by Jeff Wilmoth

Trace Volatiles (Waters)

1. Poor responses were observed for Acetone, Methyl Acetate, 2-Butanone and/or 1,2-Dibromo-3-chloropropane in ICALs and/or CCALs performed. All associated Acetone, Methyl Acetate, 2-Butanone, and/or 1,2-Dibromo-3-chloropropane results for samples C183012-01, 02, 05, 06, 07, 11, 14, 18, 21, 24, 27, 30, 33, 36, 39, 42, 45, 48, 51, 54, 57, 60, 63, 66, 69, 70, and 71 that were not detected were qualified "UR" and all positive results were qualified "J" (CLP17 and/or CLP32). A poor response was observed for the lowest ICAL standard only for 2-Butanone associated with samples C183012-07 and 71 resulting in higher reporting limits to avoid "UR" qualification.

2. The Vinyl Chloride and 1,1-Dichloroethene results exceeded the established calibration range for the original analysis of sample C183012-39 and were qualified "J" (CLP02). The concentration present in this sample was diluted out in the subsequent diluted analysis performed.

3. A high recovery was observed for the DMC 1,1-Dichloroethene-d2 in samples C183012-06, 07, 36, and 39. The associated positive results were qualified "J" (QS-5).

4. A low recovery was observed for the DMC 1,1-Dichloroethene-d2 in samples C183012-01, 02, 05, 45, 60, 63, 66, 69, and 70. All associated results were qualified "J" (QS-3).

5. A recovery of less than 10% was observed for the DMC 2-Butanone-d5 in sample C183012-39. The associated positive Acetone result was qualified "J" and the associated not-detected 2-Butanone result was qualified "UR" (QS-4).

Low/Medium Volatiles (Soils)

1. Low area counts were observed for the internal standard 1,4-Dichlorobenzene-d4 in samples C183012-09, 13, 41, and 64. The associated results were all not detected and qualified "UJ" (QI-1).

2. The reporting limits were elevated for Methylene Chloride in samples C183012-16 and 41 since the laboratory reported results did not exceed 10X that found in the associated storage blank (U, CLP11).

3. Soil trip blank sample C183012-03 contained Acetone (57 µg/kg) and 2-Butanone (14 µg/kg). Field QC samples were not used to qualify data pursuant to Region 4 policy. Accordingly, data users are responsible for evaluating any potential impact to data usability.

4. A high recovery was observed for the DMC 2-Butanone-d5 in samples C183012-13 and 19. The associated positive Acetone results were qualified "J" (QS-5).

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
Region 4 Science and Ecosystem Support Division
980 College Station Road, Athens, Georgia 30605-2700
D.A.R.T. Id: 18-0444
Project: 18-0455, National Fireworks - Reported by Jeff Wilmoth

5. The Trichloroethene results for samples C183012-12 and 25 and the cis-1,2-Dichloroethene result for sample C183012-38 exceeded the established calibration range for the original undiluted analyses performed and were qualified "J" (CLP02). These results were either below the established calibration ranges or were not detected due to concentrations present for the diluted analyses (Methanol extract) performed.

Data qualification factors are explained by the Region 4 - specific qualifier definitions which are included elsewhere in this report. Further details are provided in the complete data review report, which is on file in the Region 4 SESD Records Center.

DATA QUALIFIER DEFINITIONS

U	The analyte was not detected at or above the reporting limit.
CLP01	Concentration reported is less than the lowest standard on calibration curve
CLP02	Concentration reported is greater than the highest standard on calibration curve
CLP11	Storage blank contaminant
CLP15	TIC Results Reported as Identified by Lab - IDs Not Verified
CLP16	Initial Calibration Response Erratic
CLP17	Initial Calibration Relative Response Outside Method Control Limits
CLP32	Continuing Calibration Relative Response Outside Method Control Limits
J	The identification of the analyte is acceptable; the reported value is an estimate.
N	There is presumptive evidence that the analyte is present; the analyte is reported as a tentative identification.
NJ	Presumptive evidence that analyte is present; reported as a tentative identification with an estimated value.
QC-1	Analyte concentration low in continuing calibration verification standard
QC-2	Analyte concentration high in continuing calibration verification standard
QC-3	Analyte calibration criteria not met
QI-1	Internal standard was outside of method control limits.
QS-3	Surrogate recovery is lower than established control limits.
QS-4	Surrogate recovery less than 10%
QS-5	Surrogate recovery is higher than established control limits
R	The presence or absence of the analyte can not be determined from the data due to severe quality control problems. The data are rejected and considered unusable.

ACRONYMS AND ABBREVIATIONS

CAS Chemical Abstracts Service

Note: Analytes with no known CAS identifiers have been assigned codes beginning with "E", the EPA ID as assigned by the EPA Substance Registry System (www.epa.gov/srs), or beginning with "R4-", a unique identifier assigned by the EPA Region 4 laboratory.

MDL Method Detection Limit - The minimum concentration of a substance (an analyte) that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero.

MRL Minimum Reporting Limit - Analyte concentration that corresponds to the lowest demonstrated level of acceptable quantitation. The MRL is sample-specific and accounts for preparation weights and volumes, dilutions, and moisture content of soil/sediments.

TIC Tentatively Identified Compound - An analyte identified based on a match with the instrument software's mass spectral library. A calibration standard has not been analyzed to confirm the compound's identification or the estimated concentration reported.

4SESD-ASB

MEMORANDUM

SUBJECT: FINAL Analytical Report
Project: 18-0444, National Fireworks
Superfund Remedial

FROM: Jeffrey Hendel
ASB Inorganic Chemistry Section Chief

THRU: Danny France, Chief
Analytical Support Branch

TO: Jennifer Tufts

Attached are the final results for the analytical groups listed below. These analyses were performed in accordance with the Analytical Support Branch's (ASB) Laboratory Operations and Quality Assurance Manual (ASB LOQAM) found at www.epa.gov/region4/sesd/asbsop. Any unique project data quality objectives specified in writing by the data requestor have also been incorporated into the data unless otherwise noted in the Report Narrative. Chemistry data have been verified based on the ASB LOQAM specifications and have been qualified by this laboratory if the applicable quality control criteria were not met. Verification is defined in Section 5.2 of the ASB LOQAM. For a listing of specific data qualifiers and explanations, please refer to the Data Qualifier Definitions included in this report. The reported results are accurate within the limits of the method(s) and are representative only of the samples as received by the laboratory.

Analyses Included in this report:	Method Used:	Accreditations:
Physical Properties (PHYSP)		
Physical Properties	EPA 200.2 (Soil)	ISO
Total Metals (TMTL)		
Total Mercury	EPA 245.1 (Water)	ISO
Total Mercury	EPA 7473 (Soil)	ISO

Sample Disposal Policy

Due to limited space for long term sample storage, ASB's policy is to dispose of samples on a periodic schedule. Air samples collected in summa canisters will be disposed of 30 days following the issuance of this report. All other sample media including original samples, sample extracts and or digestates will be disposed of, in accordance with applicable regulations, 60 days from the date of this report.

This sample disposal policy does not apply to criminal samples which are held until the laboratory is notified by the criminal investigators that case development and litigation are complete.

These samples may be held in the laboratory's custody for a longer period of time. If samples require storage beyond the 60-day period, please contact the Sample Control Coordinator by e-mail at R4SampleCustody@epa.gov.

Project: 18-0444, National Fireworks - Reported by Jeffrey Hendel

DATA QUALIFIER DEFINITIONS

U	The analyte was not detected at or above the reporting limit.
H-2	PT or QC sample. Holding time met when calculated from preparation or analysis.
J	The identification of the analyte is acceptable; the reported value is an estimate.
Q-1	The original extraction of this sample yielded QC recoveries outside control limits. It was re-extracted after the recommended maximum holding time.
QC-5	Calibration check standard less than method control limits.
QM-1	Matrix Spike Recovery less than method control limits
QM-3	Matrix Spike Precision outside method control limits

ACRONYMS AND ABBREVIATIONS

CAS Chemical Abstracts Service

Note: Analytes with no known CAS identifiers have been assigned codes beginning with "E", the EPA ID as assigned by the EPA Substance Registry System (www.epa.gov/srs), or beginning with "R4-", a unique identifier assigned by the EPA Region 4 laboratory.

MDL Method Detection Limit - The minimum concentration of a substance (an analyte) that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero.

MRL Minimum Reporting Limit - Analyte concentration that corresponds to the lowest demonstrated level of acceptable quantitation. The MRL is sample-specific and accounts for preparation weights and volumes, dilutions, and moisture content of soil/sediments.

TIC Tentatively Identified Compound - An analyte identified based on a match with the instrument software's mass spectral library. A calibration standard has not been analyzed to confirm the compound's identification or the estimated concentration reported.

ACCREDITATIONS:

ISO ASB is accredited by ISO/IEC 17025, including an amplification for forensic accreditation through ANSI-ASQ National Accreditation Board.

Refer to the certificate and scope of accreditation AT-1644 at:
http://www.epa.gov/aboutepa/about-region-4s-science-and-ecosystem-support-division-sesd

NR The EPA Region 4 Laboratory has not requested accreditation for this test.

Notes and Definitions for QC Samples

U	The analyte was not detected at or above the reporting limit.
J	The identification of the analyte is acceptable; the reported value is an estimate.
MRL-2	MRL verification for Non-Potable Water matrix
MRL-3	MRL verification for Soil matrix
QC-5	Calibration check standard less than method control limits.
QM-1	Matrix Spike Recovery less than method control limits

Client: Tetra Tech EM Inc.
Project/Site: National Fireworks

TestAmerica Job ID: 320-40571-1

Qualifiers

LCMS

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
I	Value is EMPC (estimated maximum possible concentration).
*	Isotope Dilution analyte is outside acceptance limits.
F1	MS and/or MSD Recovery is outside acceptance limits.
E	Result exceeded calibration range.
F2	MS/MSD RPD exceeds control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Job Narrative
320-40571-1

Comments
No additional comments.

Receipt
The samples were received on 6/22/2018 9:05 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 0.4º C and 0.5º C.

Receipt Exceptions
For sample NF36-GW-01 (320-40571-41), the chain of custody (COC), 2 containers are listed but only 1 container was received.

LCMS
Method(s) 537 (modified): The concentration of Perfluorobutanesulfonic acid (PFBS) associated with the following sample exceeded the instrument calibration range: NF31-GW-01 (320-40571-31). These analytes have been qualified; however, the peaks did not saturate the instrument detector. The samples were diluted to bring all results within the calibration range and both sets of data were reported.

Method(s) 537 (modified): The concentration of Perfluoropentanoic acid (PFPeA) and Perfluorobutanoic acid (PFBA) associated with the following sample exceeded the instrument calibration range: NF20-GW-01 (320-40571-9). These analytes have been qualified; however, the peaks did not saturate the instrument detector. The samples were diluted to bring all results within the calibration range and both sets of data were reported.

Method(s) 537 (modified): Results for samples NF20-GW-01 (320-40571-9) and NF31-GW-01 (320-40571-31) were reported from the analysis of a diluted extract due to high concentration of the target analyte in the analysis of the undiluted extract. The dilution factor was applied to the labeled internal standard area counts and these area counts were within acceptance limits.

Method(s) 537 (modified): The following samples were diluted to bring the concentration of target analytes within the calibration range: NF20-GW-01 (320-40571-9) and NF31-GW-01 (320-40571-31). Elevated reporting limits (RLs) are provided.

Method(s) 537 (modified): The matrix spike / matrix spike duplicate (MS/MSD) recoveries for 4:2 FTS for preparation batch 320-232121 and analytical batch 320-232800 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method(s) 537 (modified): The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 320-232121 and analytical batch 320-233989 were outside control limits for 4:2 FTS. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.Method(s) 537 (modified): Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for M2-6:2FTS in the following sample: NF26-GW-01 (320-40571-21). Re-analysis was performed with concurring results. Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries.

Method(s) 537 (modified): The matrix spike / matrix spike duplicate (MS/MSD) recoveries for 4:2 FTS for preparation batch 320-232150 and analytical batch 320-232788 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method(s) 537 (modified): The matrix spike / matrix spike duplicate (MS/MSD) precision for Perfluoropentanoic acid (PFPeA) and Perfluorobutanoic acid (PFBA) forpreparation batch 320-232150 and analytical batch 320-232788 was outside control limits. The associated laboratory control sample / laboratory sample control duplicate (LCS/LCSD) precision was within acceptance limits.

Method(s) 537 (modified): Isotope Dilution Analyte (IDA) recovery for M2-6:2FTS is above the method recommended limit for the following samples: NF18-GW-01 (320-40571-5) and NF32-GW-01 (320-40571-33). Re-analysis was performed with concurring results. Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries.

Method(s) 537 (modified): Isotope Dilution Analyte (IDA) recovery for M2-6:2FTS is above the method recommended limit for the following samples: NF35-GW-01 (320-40571-39) and NF35-SS-01 (320-40571-40). Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries.

Method(s) 537 (modified): The Isotope Dilution Analyte (IDA) recovery associated with the following sample is below the method recommended limit for 13C2-PFTeDA: NF28-GW-01 (320-40571-25). Re-analysis was performed with concurring results. Generally, data quality is not considered affected if the IDA signal-to-noise ratio is greater than 10:1, which is achieved for all IDA in the sample.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
Method(s) 3535: The listed samples required centrifugation after the addition of surrogate due to excessive turbidity which was causing the solid phase extraction columns to become clogged.
NF17-GW-01 (320-40571-1), NF17-GW-01-DUP (320-40571-2), NF19-GW-01 (320-40571-7), NF20-GW-01 (320-40571-9),

NF21-GW-01 (320-40571-11), NF22-GW-01 (320-40571-13), NF23-GW-01 (320-40571-15), NF24-GW-01 (320-40571-17), NF25-GW-01 (320-40571-19), NF27-GW-01 (320-40571-23[MS]), NF28-GW-01 (320-40571-25), NF29-GW-01 (320-40571-27), NF30-GW-01 (320-40571-29), NF32-GW-01 (320-40571-33), NF33-GW-01 (320-40571-35[MS]), NF33-GW-01 (320-40571-35[MSD]) and NF35-GW-01 (320-40571-39)

Batches: 320-232121, 320-232150

Method(s) 3535: The sample extracts contained orange residue on the bottom of extraction tube for samples NF17-GW-01 (320-40571-1), NF20-GW-01 (320-40571-9), NF21-GW-01 (320-40571-11) and NF25-GW-01 (320-40571-19).
Batch:320-232121

Method(s) 3535: During the eluting process approximately 2 mL of extraction solvent from the Laboratory Control Sample Duplicate and NF22-GW-01 (320-40571-13) leaked from the sample column into the chamber due to an under-tightened fitting under the lid of the manifold.

Method(s) 3535: The extracts for samples NF33-GW-01 (320-40571-35), NF33-GW-01 (320-40571-35[MS]), NF33-GW-01 (320-40571-35[MSD]) and NF34-GW-01 (320-40571-37) were cloudy at final volume.
Batch:320- 232150

Method(s) 3535: The extract was yellow at final volume for sample NF35-GW-01 (320-40571-39).
Batch:320- 232150

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: Tetra Tech EM Inc.
Project/Site: National Fireworks

TestAmerica Job ID: 320-40571-1

Laboratory: TestAmerica Sacramento

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	EPA Region	Identification Number	Expiration Date
Oregon	NELAP	10	4040	01-29-19

The following analytes are included in this report, but are not accredited/certified under this accreditation/certification:

Analysis Method	Prep Method	Matrix	Analyte
537 (modified)	3535	Water	4:2 FTS
537 (modified)	3535	Water	Perfluorononanesulfonic acid (PFNS)
537 (modified)	3535	Water	Perfluoropentanesulfonic acid (PFPeS)

Method Summary

Client: Tetra Tech EM Inc.
Project/Site: National Fireworks

TestAmerica Job ID: 320-40571-1

Method	Method Description	Protocol	Laboratory
537 (modified)	Fluorinated Alkyl Substances	EPA	TAL SAC
D 2216	Percent Moisture	ASTM	TAL SAC
3535	Solid-Phase Extraction (SPE)	SW846	TAL SAC
SHAKE	Shake Extraction with Ultrasonic Bath Extraction	SW846	TAL SAC

Protocol References:

ASTM = ASTM International

EPA = US Environmental Protection Agency

SW846 = "Test Methods For Evaluating Solid Waste, Physical/Chemical Methods", Third Edition, November 1986 And Its Updates.

LC11CIPF3OUdS_00002

h: 4/16/18 E-484

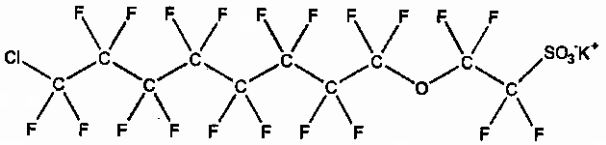
WELLINGTON LABORATORIES

CERTIFICATE OF ANALYSIS DOCUMENTATION

PRODUCT CODE: 11Cl-PF3OUdS **LOT NUMBER:** 11ClPF3OUdS0916

COMPOUND: Potassium 11-chloroeicosafluoro-3-oxaundecane-1-sulfonate

STRUCTURE: **CAS #:** 83329-89-9



MOLECULAR FORMULA: $C_{10}F_{20}ClSO_4K$ **MOLECULAR WEIGHT:** 670.69

CONCENTRATION: 50.0 ± 2.5 µg/ml (K Salt) **SOLVENT(S):** Methanol

47.1 ± 2.4 µg/ml (11Cl-PF3OUdS anion)

CHEMICAL PURITY: >98%

LAST TESTED: (mm/dd/yyyy) 09/30/2016

EXPIRY DATE: (mm/dd/yyyy) 09/30/2021

RECOMMENDED STORAGE: Store ampoule in a cool, dark place

DOCUMENTATION/ DATA ATTACHED:

Figure 1: LC/MS Data (TIC and Mass Spectrum)
Figure 2: LC/MS/MS Data (Selected MRM Transitions)

ADDITIONAL INFORMATION:

- See page 2 for further details.
- This compound is a minor component of the commercial formulation known as F-53B.

FOR LABORATORY USE ONLY: NOT FOR HUMAN OR DRUG USE

Certified By: B.G. Chittim **Date:** 10/19/2016 (mm/dd/yyyy)

Wellington Laboratories Inc., 345 Southgate Dr. Guelph ON N1G 3M5 CANADA
519-822-2436 • Fax: 519-822-2849 • info@well-labs.com

INTENDED USE:

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compound it contains.

HAZARDS:

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

SYNTHESIS / CHARACTERIZATION:

Where possible, all of our products are synthesized using single-product unambiguous routes. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

HOMOGENEITY:

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be <5% RSD. New solution lots of existing products are compared to older lots in the same manner, which further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers.

UNCERTAINTY:

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, $u_c(y)$, of a value y and the uncertainty of the independent parameters $x_1, x_2, \ldots x_n$ on which it depends is:

$$u_c(y(x_1, x_2, \ldots x_n)) = \sqrt{\sum_{i=1}^{n} u(y, x_i)^2}$$

where x is expressed as a relative standard uncertainty of the individual parameter.

The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of ±5% (calculated with a coverage factor of 2 and a level of confidence of 95%) is stated on the Certificate of Analysis for all of our products.

TRACEABILITY:

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly tested by an external ISO/IEC 17025 accredited calibration company. In addition, their calibration is verified prior to each weighing using NIST and/or NRC traceable external weights. All volumetric glassware used is of Class A tolerance and has been tested according to the appropriate ASTM procedures, which are ultimately traceable to NIST. For certain products, traceability to international interlaboratory studies has also been established.

EXPIRY DATE / PERIOD OF VALIDITY:

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

LIMITED WARRANTY:

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

QUALITY MANAGEMENT:

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO GUIDE 34 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

519-822-2436 • Fax: 519-822-2849 • info@well-labs.com

INTENDED USE:

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compound it contains.

HAZARDS:

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

SYNTHESIS / CHARACTERIZATION:

Where possible, all of our products are synthesized using single-product unambiguous routes. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

HOMOGENEITY:

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be <5% RSD. New solution lots of existing products are compared to older lots in the same manner, which further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

UNCERTAINTY:

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, $u_c(y)$, of a value y and the uncertainty of the independent parameters $x_1, x_2, \ldots x_n$ on which it depends is:

$$u_c(y(x_1, x_2, \ldots x_n)) = \sqrt{\sum_{i=1}^{n} u(y, x_i)^2}$$

where x is expressed as a relative standard uncertainty of the individual parameter.

The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of ±5% (calculated with a coverage factor of 2 and a level of confidence of 95%) is stated on the Certificate of Analysis for all of our products.

TRACEABILITY:

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly tested by an external ISO/IEC 17025 accredited calibration company. In addition, their calibration is verified prior to each weighing using calibrated NIST and/or NRC traceable external weights. All volumetric glassware used is calibrated, of Class A tolerance, and has been tested according to the appropriate ASTM procedures, which are ultimately traceable to NIST. For certain products, traceability to international interlaboratory studies has also been established.

EXPIRY DATE / PERIOD OF VALIDITY:

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

LIMITED WARRANTY:

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

QUALITY MANAGEMENT:

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO GUIDE 34 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

N-Methylperfluorooctanesulfonamidoacetic Acid Solution/Mixture of Linear and Branched Isomers

PRODUCT CODE:	br-NMeFOSAA
LOT NUMBER:	brNMeFOSAA0118
CONCENTRATION:	50.0 ± 2.5 µg/ml
SOLVENT(S):	Methanol/Water (<1%)
DATE PREPARED: (mm/dd/yyyy)	01/10/2018
LAST TESTED: (mm/dd/yyyy)	01/17/2018
EXPIRY DATE: (mm/dd/yyyy)	01/17/2023
RECOMMENDED STORAGE:	Refrigerate ampoule

DESCRIPTION:

The chemical purity has been determined to be ≥98% N-methylperfluorooctanesulfonamidoacetic acid (linear and branched isomers). The full name, structure and percent composition for each of the identified isomeric components are given in Table A.

DOCUMENTATION/ DATA ATTACHED:

Table A: Isomeric Components and Percent Composition by ^{19}F-NMR
Figure 1: LC/MS Data (TIC and Mass Spectrum)
Figure 2: LC/MS Data (SIR)
Figure 3: LC/MS/MS Data (Selected MRM Transitions)

ADDITIONAL INFORMATION:

- See page 2 for further details.
- Contains 4 mole eq. of NaOH to prevent conversion of the acetic acid moiety to its respective methyl ester.

FOR LABORATORY USE ONLY: NOT FOR HUMAN OR DRUG USE

Wellington Laboratories Inc., 345 Southgate Dr. Guelph ON N1G 3M5 CANADA
519-822-2436 • Fax: 519-822-2849 • info@well-labs.com

INTENDED USE:

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compounds it contains.

HANDLING:

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

SYNTHESIS / CHARACTERIZATION:

Our products are synthesized using single-product unambiguous routes whenever possible. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

HOMOGENEITY:

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be <5% RSD. New solution lots of existing products, as well as mixtures and calibration solutions, are compared to older lots in a similar manner. This further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

UNCERTAINTY:

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, $u_c(y)$, of a value y and the uncertainty of the independent parameters $x_1, x_2, \ldots x_n$ on which it depends is:

$$u_c(y(x_1, x_2, \ldots x_n)) = \sqrt{\sum_{i=1}^{n} u(y, x_i)^2}$$

where x is expressed as a relative standard uncertainty of the individual parameter.

The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of ±5% (calculated with a coverage factor of 2 and a level of confidence of 95%) is stated on the Certificate of Analysis for all of our products.

TRACEABILITY:

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an external ISO/IEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISO/IEC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISO/IEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

EXPIRY DATE / PERIOD OF VALIDITY:

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

LIMITED WARRANTY:

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

QUALITY MANAGEMENT:

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO 17034 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

CERTIFICATE OF ANALYSIS DOCUMENTATION

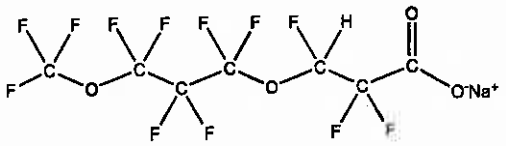
PRODUCT CODE: NaDONA
LOT NUMBER: NaDONA0318
COMPOUND: Sodium dodecafluoro-3H-4,8-dioxanonanoate

STRUCTURE:

CAS #: 958445-44-8 (ammonium salt)



MOLECULAR FORMULA: $C_7HF_{12}O_4Na$
MOLECULAR WEIGHT: 400.05
CONCENTRATION: 50 ± 2.5 µg/ml (Na Salt)
SOLVENT(S): Methanol, Water (<1%)

CHEMICAL PURITY: >98%
LAST TESTED: (mm/dd/yyyy) 03/26/2018
EXPIRY DATE: (mm/dd/yyyy) 03/26/2023
RECOMMENDED STORAGE: Store ampoule in a cool, dark place

DOCUMENTATION/ DATA ATTACHED:

Figure 1: LC/MS Data (TIC and Mass Spectrum)
Figure 2: LC/MS/MS Data (Selected MRM Transitions)

ADDITIONAL INFORMATION:

- See page 2 for further details.
- Product is commercially known as ADONA.
- Contains 4 mole eq. of NaOH to prevent conversion of the carboxylic acid to the methyl ester.

FOR LABORATORY USE ONLY: NOT FOR HUMAN OR DRUG USE

Certified By: _____ **Date:** 03/27/2018 (mm/dd/yyyy)
B.G. Chittim, General Manager

Wellington Laboratories Inc., 345 Southgate Dr. Guelph ON N1G 3M5 CANADA
519-822-2436 • Fax: 519-822-2849 • info@well-labs.com

INTENDED USE:

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compound it contains.

HANDLING:

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

SYNTHESIS / CHARACTERIZATION:

Our products are synthesized using single-product unambiguous routes whenever possible. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

HOMOGENEITY:

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be <5% RSD. New solution lots of existing products are compared to older lots in the same manner, which further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

UNCERTAINTY:

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, $u_c(y)$, of a value y and the uncertainty of the independent parameters $x_1, x_2, \ldots x_n$ on which it depends is:

$$u_c(y(x_1, x_2, \ldots x_n)) = \sqrt{\sum_{i=1}^{n} u(y, x_i)^2}$$

where x is expressed as a relative standard uncertainty of the individual parameter.

The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of ±5% (calculated with a coverage factor of 2 and a level of confidence of 95%) is stated on the Certificate of Analysis for all of our products.

TRACEABILITY:

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an external ISO/IEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISO/IEC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISO/IEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

EXPIRY DATE / PERIOD OF VALIDITY:

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

LIMITED WARRANTY:

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

QUALITY MANAGEMENT:

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO 17034 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

CERTIFICATE OF ANALYSIS DOCUMENTATION

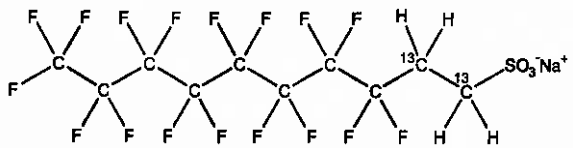
PRODUCT CODE: M2-8:2FTS **LOT NUMBER:** M282FTS0118

COMPOUND: Sodium 1H,1H,2H,2H-perfluoro-[1,2-$^{13}C_2$]decane sulfonate

STRUCTURE: **CAS #:** Not available



MOLECULAR FORMULA: $^{13}C_2{}^{12}C_8H_4F_{17}SO_3Na$ **MOLECULAR WEIGHT:** 552.15

CONCENTRATION: 50.0 ± 2.5 µg/ml (Na salt) **SOLVENT(S):** Methanol
47.9 ± 2.4 µg/ml (M2-8:2FTS anion)

CHEMICAL PURITY: >98% **ISOTOPIC PURITY:** ≥99% ^{13}C (1,2-$^{13}C_2$)

LAST TESTED: (mm/dd/yyyy) 01/24/2018

EXPIRY DATE: (mm/dd/yyyy) 01/24/2023

RECOMMENDED STORAGE: Refrigerate ampoule

DOCUMENTATION/ DATA ATTACHED:

Figure 1: LC/MS Data (TIC and Mass Spectrum)
Figure 2: LC/MS/MS Data (Selected MRM Transitions)

ADDITIONAL INFORMATION:

- See page 2 for further details.
- The native 8:2FTS contains 4.22% of ^{34}S (due to natural isotopic abundance) therefore both native 8:2FTS and M2-8:2FTS will produce signals in the m/z 529 to m/z 509 channel during SRM analysis. We recommend using the m/z 529 to m/z 81 transition to monitor for M2-8:2FTS during quantitative analysis as it will be free of any native contribution (see Figure 2).

FOR LABORATORY USE ONLY: NOT FOR HUMAN OR DRUG USE

Certified By: _____ **Date:** 01/26/2018 (mm/dd/yyyy)
B.G. Chittim, General Manager

Wellington Laboratories Inc., 345 Southgate Dr. Guelph ON N1G 3M5 CANADA
519-822-2436 • Fax: 519-822-2849 • info@well-labs.com

INTENDED USE:

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compound it contains.

HANDLING:

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

SYNTHESIS / CHARACTERIZATION:

Our products are synthesized using single-product unambiguous routes whenever possible. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

HOMOGENEITY:

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be <5% RSD. New solution lots of existing products are compared to older lots in the same manner, which further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

UNCERTAINTY:

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, $u_c(y)$, of a value y and the uncertainty of the independent parameters $x_1, x_2, \ldots x_n$ on which it depends is:

$$u_c(y(x_1, x_2, \ldots x_n)) = \sqrt{\sum_{i=1}^{n} u(y, x_i)^2}$$

where x is expressed as a relative standard uncertainty of the individual parameter.

The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of ±5% (calculated with a coverage factor of 2 and a level of confidence of 95%) is stated on the Certificate of Analysis for all of our products.

TRACEABILITY:

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an external ISO/IEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISO/IEC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISO/IEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

EXPIRY DATE / PERIOD OF VALIDITY:

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

LIMITED WARRANTY:

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

QUALITY MANAGEMENT:

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO 17034 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

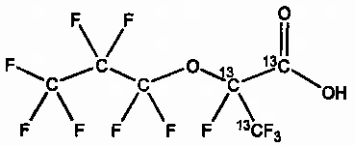
PRODUCT CODE: M3HFPO-DA **LOT NUMBER:** M3HFPODA0518

COMPOUND: 2,3,3,3-Tetrafluoro-2-(1,1,2,2,3,3,3-heptafluoropropoxy)-$^{13}C_3$-propanoic acid

STRUCTURE: **CAS #:** Not available



MOLECULAR FORMULA:	$^{13}C_3{}^{12}C_3HF_{11}O_3$	**MOLECULAR WEIGHT:**	333.03
CONCENTRATION:	50 ± 2.5 µg/ml	**SOLVENT(S):**	Methanol
CHEMICAL PURITY:	>98%	**ISOTOPIC PURITY:**	≥99% ^{13}C ($^{13}C_3$)
LAST TESTED: (mm/dd/yyyy)	05/18/2018		
EXPIRY DATE: (mm/dd/yyyy)	05/18/2021		
RECOMMENDED STORAGE:	Store ampoule in a cool, dark place		

DOCUMENTATION/ DATA ATTACHED:

Figure 1: LC/MS Data (TIC and Mass Spectrum)
Figure 2: LC/MS/MS Data (Selected MRM Transitions)

ADDITIONAL INFORMATION:

- See page 2 for further details.
- Contains ~ 1.5% of two constitutional isomers.
- Product is commercially known as GenX.

FOR LABORATORY USE ONLY: NOT FOR HUMAN OR DRUG USE

Certified By: _____ **Date:** 05/25/2018 (mm/dd/yyyy)
B.G. Chittim, General Manager

Wellington Laboratories Inc., 345 Southgate Dr. Guelph ON N1G 3M5 CANADA
519-822-2436 • Fax: 519-822-2849 • info@well-labs.com

INTENDED USE:

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compound it contains.

HANDLING:

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

SYNTHESIS / CHARACTERIZATION:

Our products are synthesized using single-product unambiguous routes whenever possible. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

HOMOGENEITY:

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be <5% RSD. New solution lots of existing products are compared to older lots in the same manner, which further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

UNCERTAINTY:

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, $u_c(y)$, of a value y and the uncertainty of the independent parameters $x_1, x_2, \ldots x_n$ on which it depends is:

$$u_c(y(x_1, x_2, \ldots x_n)) = \sqrt{\sum_{i=1}^{n} u(y, x_i)^2}$$

where x is expressed as a relative standard uncertainty of the individual parameter.

The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of ±5% (calculated with a coverage factor of 2 and a level of confidence of 95%) is stated on the Certificate of Analysis for all of our products.

TRACEABILITY:

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an external ISO/IEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISO/IEC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISO/IEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

EXPIRY DATE / PERIOD OF VALIDITY:

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

LIMITED WARRANTY:

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

QUALITY MANAGEMENT:

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO 17034 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

INTENDED USE:

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compound it contains.

HANDLING:

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

SYNTHESIS / CHARACTERIZATION:

Our products are synthesized using single-product unambiguous routes whenever possible. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

HOMOGENEITY:

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be <5% RSD. New solution lots of existing products are compared to older lots in the same manner, which further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

UNCERTAINTY:

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, $u_c(y)$, of a value y and the uncertainty of the independent parameters $x_1, x_2, \ldots x_n$ on which it depends is:

$$u_c(y(x_1, x_2, \ldots x_n)) = \sqrt{\sum_{i=1}^{n} u(y, x_i)^2}$$

where x is expressed as a relative standard uncertainty of the individual parameter.

The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of ±5% (calculated with a coverage factor of 2 and a level of confidence of 95%) is stated on the Certificate of Analysis for all of our products.

TRACEABILITY:

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an external ISO/IEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISO/IEC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISO/IEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

EXPIRY DATE / PERIOD OF VALIDITY:

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

LIMITED WARRANTY:

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

QUALITY MANAGEMENT:

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO 17034 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

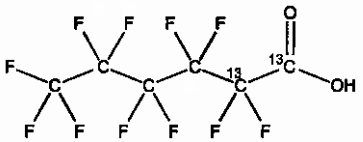
13C2-Perfluorohexanoic ac

WELLINGTON LABORATORIES

CERTIFICATE OF ANALYSIS DOCUMENTATION

PRODUCT CODE: MPFHxA
LOT NUMBER: MPFHxA1017
COMPOUND: Perfluoro-n-[1,2-$^{13}C_2$]hexanoic acid
STRUCTURE:
CAS #: Not available



MOLECULAR FORMULA: $^{13}C_2{}^{12}C_4HF_{11}O_2$
MOLECULAR WEIGHT: 316.04
CONCENTRATION: 50 ± 2.5 µg/ml
SOLVENT(S): Methanol, Water (<1%)
CHEMICAL PURITY: >98%
ISOTOPIC PURITY: ≥99% ^{13}C (1,2-$^{13}C_2$)
LAST TESTED: (mm/dd/yyyy) 10/27/2017
EXPIRY DATE: (mm/dd/yyyy) 10/27/2022
RECOMMENDED STORAGE: Store ampoule in a cool, dark place

DOCUMENTATION/ DATA ATTACHED:

Figure 1: LC/MS Data (TIC and Mass Spectrum)
Figure 2: LC/MS/MS Data (Selected MRM Transitions)

ADDITIONAL INFORMATION:

- See page 2 for further details.
- Contains 4 mole eq. of NaOH to prevent conversion of the carboxylic acid to the methyl ester.
- Contains < 0.1% of perfluoro-n-hexanoic acid and < 0.3% of perfluoro-n-octanoic acid.

FOR LABORATORY USE ONLY: NOT FOR HUMAN OR DRUG USE

Certified By: _____ **Date:** 10/30/2017 (mm/dd/yyyy)
B.G. Chittim, General Manager

Wellington Laboratories Inc., 345 Southgate Dr. Guelph ON N1G 3M5 CANADA
519-822-2436 • Fax: 519-822-2849 • info@well-labs.com

INTENDED USE:

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compound it contains.

HAZARDS:

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

SYNTHESIS / CHARACTERIZATION:

Where possible, all of our products are synthesized using single-product unambiguous routes. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

HOMOGENEITY:

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be <5% RSD. New solution lots of existing products are compared to older lots in the same manner, which further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

UNCERTAINTY:

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, $u_c(y)$, of a value y and the uncertainty of the independent parameters $x_1, x_2, \ldots x_n$ on which it depends is:

$$u_c(y(x_1, x_2, \ldots x_n)) = \sqrt{\sum_{i=1}^{n} u(y, x_i)^2}$$

where x is expressed as a relative standard uncertainty of the individual parameter.

The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of ±5% (calculated with a coverage factor of 2 and a level of confidence of 95%) is stated on the Certificate of Analysis for all of our products.

TRACEABILITY:

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly tested by an external ISO/IEC 17025 accredited calibration company. In addition, their calibration is verified prior to each weighing using calibrated NIST and/or NRC traceable external weights. All volumetric glassware used is calibrated, of Class A tolerance, and has been tested according to the appropriate ASTM procedures, which are ultimately traceable to NIST. For certain products, traceability to international interlaboratory studies has also been established.

EXPIRY DATE / PERIOD OF VALIDITY:

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

LIMITED WARRANTY:

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

QUALITY MANAGEMENT:

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO GUIDE 34 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

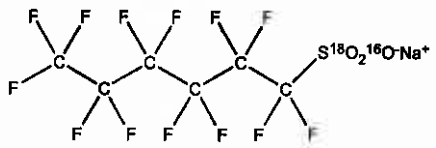
WELLINGTON LABORATORIES

CERTIFICATE OF ANALYSIS DOCUMENTATION

PRODUCT CODE: MPFHxS
LOT NUMBER: MPFHxS0318
COMPOUND: Sodium perfluoro-1-hexane[$^{18}O_2$]sulfonate

STRUCTURE:
CAS #: Not available



MOLECULAR FORMULA: $C_6F_{13}S^{18}O_2{}^{16}ONa$
MOLECULAR WEIGHT: 426.10
CONCENTRATION: 50.0 ± 2.5 µg/ml (Na salt)
47.3 ± 2.4 µg/ml (MPFHxS anion)
SOLVENT(S): Methanol
CHEMICAL PURITY: >98%
ISOTOPIC PURITY: >94% ($^{18}O_2$)
LAST TESTED: (mm/dd/yyyy) 03/22/2018
EXPIRY DATE: (mm/dd/yyyy) 03/22/2023
RECOMMENDED STORAGE: Store ampoule in a cool, dark place

DOCUMENTATION/ DATA ATTACHED:

Figure 1: LC/MS Data (TIC and Mass Spectrum)
Figure 2: LC/MS/MS Data (Selected MRM Transitions)

ADDITIONAL INFORMATION:

- See page 2 for further details.
- The response factor for MPFHxS ($C_6F_{13}S^{18}O_2{}^{16}O^-$) has been observed to be up to 10% lower than for PFHxS ($C_6F_{13}S^{16}O_3^-$) when both compounds are injected together. This difference may vary between instruments.
- Contains ~ 1.0% of sodium perfluoro-1-octane[$^{18}O_2$]sulfonate ($^{18}O_2$-PFOS) and ~ 0.3% of sodium perfluoro-1-heptane[$^{18}O_2$]sulfonate ($^{18}O_2$-PFHpS).
- Due to the isotopic purity of the starting material ($^{18}O_2$ >94%), MPFHxS contains ~ 0.3% of PFHxS. This value agrees with the theoretical percent relative abundance that is expected based on the stated isotopic purity.

13C4-Perfluorooctanesulfo

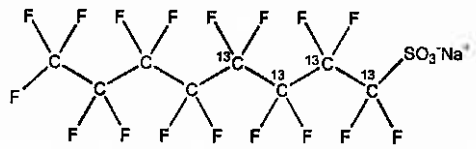
WELLINGTON LABORATORIES

CERTIFICATE OF ANALYSIS DOCUMENTATION

PRODUCT CODE: MPFOS **LOT NUMBER:** MPFOS0218

COMPOUND: Sodium perfluoro-1-[1,2,3,4-$^{13}C_4$]octanesulfonate

STRUCTURE: **CAS #:** Not available



MOLECULAR FORMULA: $^{13}C_4{}^{12}C_4F_{17}SO_3Na$ **MOLECULAR WEIGHT:** 526.08

CONCENTRATION: 50.0 ± 2.5 µg/ml (Na salt) **SOLVENT(S):** Methanol
47.8 ± 2.4 µg/ml (MPFOS anion)

CHEMICAL PURITY: >98% **ISOTOPIC PURITY:** ≥99% ^{13}C (1,2,3,4-$^{13}C_4$)

LAST TESTED: (mm/dd/yyyy) 02/15/2018

EXPIRY DATE: (mm/dd/yyyy) 02/15/2023

RECOMMENDED STORAGE: Store ampoule in a cool, dark place

DOCUMENTATION/ DATA ATTACHED:

Figure 1: LC/MS Data (TIC and Mass Spectrum)
Figure 2: LC/MS/MS Data (Selected MRM Transitions)

ADDITIONAL INFORMATION:

- See page 2 for further details.
- Contains ~ 0.6% Sodium perfluoro-1-[1,2,3-$^{13}C_3$]heptanesulfonate.

FOR LABORATORY USE ONLY: NOT FOR HUMAN OR DRUG USE

Certified By: _____ **Date:** 02/20/2018 (mm/dd/yyyy)
B.G. Chittim, General Manager

Wellington Laboratories Inc., 345 Southgate Dr. Guelph ON N1G 3M5 CANADA
519-822-2436 • Fax: 519-822-2849 • info@well-labs.com

INTENDED USE:

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compound it contains.

HANDLING:

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

SYNTHESIS / CHARACTERIZATION:

Our products are synthesized using single-product unambiguous routes whenever possible. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

HOMOGENEITY:

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be <5% RSD. New solution lots of existing products are compared to older lots in the same manner, which further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

UNCERTAINTY:

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, $u_c(y)$, of a value y and the uncertainty of the independent parameters $x_1, x_2, \ldots x_n$ on which it depends is:

$$u_c(y(x_1, x_2, \ldots x_n)) = \sqrt{\sum_{i=1}^{n} u(y, x_i)^2}$$

where x is expressed as a relative standard uncertainty of the individual parameter.

The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of ±5% (calculated with a coverage factor of 2 and a level of confidence of 95%) is stated on the Certificate of Analysis for all of our products.

TRACEABILITY:

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an external ISO/IEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISO/IEC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISO/IEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

EXPIRY DATE / PERIOD OF VALIDITY:

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

LIMITED WARRANTY:

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

QUALITY MANAGEMENT:

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO 17034 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

INTENDED USE:

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compound it contains.

HAZARDS:

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

SYNTHESIS / CHARACTERIZATION:

Where possible, all of our products are synthesized using single-product unambiguous routes. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

HOMOGENEITY:

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be <5% RSD. New solution lots of existing products are compared to older lots in the same manner, which further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

UNCERTAINTY:

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, $u_c(y)$, of a value y and the uncertainty of the independent parameters $x_1, x_2, \ldots x_n$ on which it depends is:

$$u_c(y(x_1, x_2, \ldots x_n)) = \sqrt{\sum_{i=1}^{n} u(y, x_i)^2}$$

where x is expressed as a relative standard uncertainty of the individual parameter.

The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of ±5% (calculated with a coverage factor of 2 and a level of confidence of 95%) is stated on the Certificate of Analysis for all of our products.

TRACEABILITY:

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly tested by an external ISO/IEC 17025 accredited calibration company. In addition, their calibration is verified prior to each weighing using calibrated NIST and/or NRC traceable external weights. All volumetric glassware used is calibrated, of Class A tolerance, and has been tested according to the appropriate ASTM procedures, which are ultimately traceable to NIST. For certain products, traceability to international interlaboratory studies has also been established.

EXPIRY DATE / PERIOD OF VALIDITY:

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

LIMITED WARRANTY:

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

QUALITY MANAGEMENT:

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO GUIDE 34 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

The relative response factors of the analyte of interest in each solution are required to be <5% RSD. New solution lots of existing products are compared to older lots in the same manner, which further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

UNCERTAINTY:

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, $u_c(y)$, of a value y and the uncertainty of the independent parameters $x_1, x_2, \ldots x_n$ on which it depends is:

$$u_r(y(x_1, x_2, \ldots x_n)) = \sqrt{\sum_{i=1}^{n} u(y, x_i)^2}$$

where x is expressed as a relative standard uncertainty of the individual parameter.

The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of ±5% (calculated with a coverage factor of 2 and a level of confidence of 95%) is stated on the Certificate of Analysis for all of our products.

TRACEABILITY:

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly tested by an external ISO/IEC 17025 accredited calibration company. In addition, their calibration is verified prior to each weighing using calibrated NIST and/or NRC traceable external weights. All volumetric glassware used is calibrated, of Class A tolerance, and has been tested according to the appropriate ASTM procedures, which are ultimately traceable to NIST. For certain products, traceability to international interlaboratory studies has also been established.

EXPIRY DATE / PERIOD OF VALIDITY:

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

LIMITED WARRANTY:

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

QUALITY MANAGEMENT:

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO GUIDE 34 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

FOR LABORATORY USE ONLY: NOT FOR HUMAN OR DRUG USE

Certified By: _____ **Date:** 09/07/2017 (mm/dd/yyyy)

B.G. Chittim, General Manager

Wellington Laboratories Inc., 345 Southgate Dr. Guelph ON N1G 3M5 CANADA
519-822-2436 • Fax: 519-822-2849 • info@well-labs.com

INTENDED USE:

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compound it contains.

HAZARDS:

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

SYNTHESIS / CHARACTERIZATION:

Where possible, all of our products are synthesized using single-product unambiguous routes. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

HOMOGENEITY:

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be <5% RSD. New solution lots of existing products are compared to older lots in the same manner, which further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

br-PFHxSK

Potassium Perfluorohexanesulfonate Solution/Mixture of Linear and Branched Isomers

PRODUCT CODE:	br-PFHxSK
LOT NUMBER:	brPFHxSK0117
CONCENTRATION:	50.0 ± 2.5 µg/ml (total potassium salt)
	45.5 ± 2.3 µg/ml (total PFHxS anion)
SOLVENT(S):	Methanol
DATE PREPARED: (mm/dd/yyyy)	01/03/2017
LAST TESTED: (mm/dd/yyyy)	01/04/2017
EXPIRY DATE: (mm/dd/yyyy)	01/04/2022
RECOMMENDED STORAGE:	Store ampoule in a cool, dark place

DESCRIPTION:

The chemical purity has been determined to be ≥98% perfluorohexanesulfonate linear and branched isomers. The full name, structure and percent composition for each of the identified isomeric components are given in Table A.

DOCUMENTATION/ DATA ATTACHED:

Table A: Isomeric Components and Percent Composition by ^{19}F-NMR
Figure 1: LC/MS Data (TIC and Mass Spectrum)
Figure 2: LC/MS Data (SIR)
Figure 3: LC/MS/MS Data (Selected MRM Transitions)

ADDITIONAL INFORMATION:

- See page 2 for further details.
- Contains ~ 0.5% of perfluoro-1-pentanesulfonate and ~ 0.2% of perfluoro-1-octanesulfonate.
- CAS#: 3871-99-6 (for linear isomer; potassium salt).

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

LIMITED WARRANTY:

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

QUALITY MANAGEMENT:

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO GUIDE 34 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

ADDITIONAL INFORMATION:

- See page 2 for further details.
- Contains 4 mole eq. of NaOH to prevent conversion of the carboxylic acid to the methyl ester.
- Contains ~ 0.1% of perfluoro-n-octanoic acid (PFOA), < 0.1% of perfluoro-n-heptanoic acid (PFHpA), and < 0.1% of perfluoro-n-undecanoic acid (PFUdA).

FOR LABORATORY USE ONLY: NOT FOR HUMAN OR DRUG USE

Certified By: _____ **Date:** 07/24/2017 (mm/dd/yyyy)
B.G. Chittim, General Manager

Wellington Laboratories Inc., 345 Southgate Dr. Guelph ON N1G 3M5 CANADA
519-822-2436 • Fax: 519-822-2849 • info@well-labs.com

INTENDED USE:

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compound it contains.

HAZARDS:

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

SYNTHESIS / CHARACTERIZATION:

Where possible, all of our products are synthesized using single-product unambiguous routes. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

HOMOGENEITY:

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be <5% RSD. New solution lots of existing products are compared to older lots in the same manner, which further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

UNCERTAINTY:

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, $u_c(y)$, of a value y and the uncertainty of the independent parameters $x_1, x_2, \ldots x_n$ on which it depends is:

$$u_c(y(x_1, x_2, \ldots x_n)) = \sqrt{\sum_{i=1}^{n} u(y, x_i)^2}$$

where x is expressed as a relative standard uncertainty of the individual parameter.

The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of ±5% (calculated with a coverage factor of 2 and a level of confidence of 95%) is stated on the Certificate of Analysis for all of our products.

TRACEABILITY:

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly tested by an external ISO/IEC 17025 accredited calibration company. In addition, their calibration is verified prior to each weighing using calibrated NIST and/or NRC traceable external weights. All volumetric glassware used is calibrated, of Class A tolerance, and has been tested according to the appropriate ASTM procedures, which are ultimately traceable to NIST. For certain products, traceability to international interlaboratory studies has also been established.

EXPIRY DATE / PERIOD OF VALIDITY:

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

LIMITED WARRANTY:

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, $u_c(y)$, of a value y and the uncertainty of the independent parameters $x_1, x_2, \ldots x_n$ on which it depends is:

$$u_c(y(x_1, x_2, \ldots x_n)) = \sqrt{\sum_{i=1}^{n} u(y, x_i)^2}$$

where x is expressed as a relative standard uncertainty of the individual parameter.

The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of ±5% (calculated with a coverage factor of 2 and a level of confidence of 95%) is stated on the Certificate of Analysis for all of our products.

TRACEABILITY:

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly tested by an external ISO/IEC 17025 accredited calibration company. In addition, their calibration is verified prior to each weighing using calibrated NIST and/or NRC traceable external weights. All volumetric glassware used is calibrated, of Class A tolerance, and has been tested according to the appropriate ASTM procedures, which are ultimately traceable to NIST. For certain products, traceability to international interlaboratory studies has also been established.

EXPIRY DATE / PERIOD OF VALIDITY:

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

LIMITED WARRANTY:

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

QUALITY MANAGEMENT:

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO GUIDE 34 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

br-PFOSK

Potassium Perfluorooctanesulfonate Solution/Mixture of Linear and Branched Isomers

PRODUCT CODE:	br-PFOSK
LOT NUMBER:	brPFOSK0117
CONCENTRATION:	50 ± 2.5 µg/ml (total potassium salt)
	46.4 ± 2.3 µg/ml (total PFOS anion)
SOLVENT(S):	Methanol
DATE PREPARED: (mm/dd/yyyy)	01/09/2017
LAST TESTED: (mm/dd/yyyy)	01/12/2017
EXPIRY DATE: (mm/dd/yyyy)	01/12/2022
RECOMMENDED STORAGE:	Store ampoule in a cool, dark place

DESCRIPTION:

The chemical purity has been determined to be ≥98% perfluorooctanesulfonate linear and branched isomers. The full name, structure and percent composition for each of the isomeric components are given in Table A.

DOCUMENTATION/ DATA ATTACHED:

Table A: Isomeric Components and Percent Composition by ^{19}F-NMR
Figure 1: LC/MS Data (TIC and Mass Spectrum)
Figure 2: LC/MS Data (SIR)
Figure 3: LC/MS/MS Data (Selected MRM Transitions)

ADDITIONAL INFORMATION:

- See page 2 for further details.
- A 5-point calibration curve was generated using linear PFOS (potassium salt) and mass-labelled PFOS as an internal standard to enable quantitation of br-PFOSK using isotopic dilution.
- CAS#: 2795-39-3 (for linear isomer; potassium salt).

FOR LABORATORY USE ONLY: NOT FOR HUMAN OR DRUG USE

Wellington Laboratories Inc., 345 Southgate Dr. Guelph ON N1G 3M5 CANADA
519-822-2436 • Fax: 519-822-2849 • info@well-labs.com

INTENDED USE:

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compounds it contains.

HAZARDS:

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

SYNTHESIS / CHARACTERIZATION:

Where possible, all of our products are synthesized using single-product unambiguous routes. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

HOMOGENEITY:

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be <5% RSD. New solution lots of existing products are compared to older lots in the same manner, which further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers.

UNCERTAINTY:

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, $u_c(y)$, of a value y and the uncertainty of the independent parameters $x_1, x_2, \ldots x_n$ on which it depends is:

$$u_c(y(x_1, x_2, \ldots x_n)) = \sqrt{\sum_{i=1}^{n} u(y, x_i)^2}$$

where x is expressed as a relative standard uncertainty of the individual parameter.

The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of ±5% (calculated with a coverage factor of 2 and a level of confidence of 95%) is stated on the Certificate of Analysis for all of our products.

TRACEABILITY:

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly tested by an external ISO/IEC 17025 accredited calibration company. In addition, their calibration is verified prior to each weighing using NIST and/or NRC traceable external weights. All volumetric glassware used is of Class A tolerance and has been tested according to the appropriate ASTM procedures, which are ultimately traceable to NIST. For certain products, traceability to international interlaboratory studies has also been established.

EXPIRY DATE / PERIOD OF VALIDITY:

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

LIMITED WARRANTY:

INTENDED USE:

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compound it contains.

HAZARDS:

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

SYNTHESIS / CHARACTERIZATION:

Where possible, all of our products are synthesized using single-product unambiguous routes. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

HOMOGENEITY:

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be <5% RSD. New solution lots of existing products are compared to older lots in the same manner, which further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

UNCERTAINTY:

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, $u_c(y)$, of a value y and the uncertainty of the independent parameters $x_1, x_2, \ldots x_n$ on which it depends is:

$$u_c(y(x_1, x_2, \ldots x_n)) = \sqrt{\sum_{i=1}^{n} u(y, x_i)^2}$$

where x is expressed as a relative standard uncertainty of the individual parameter.

The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of ±5% (calculated with a coverage factor of 2 and a level of confidence of 95%) is stated on the Certificate of Analysis for all of our products.

TRACEABILITY:

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly tested by an external ISO/IEC 17025 accredited calibration company. In addition, their calibration is verified prior to each weighing using calibrated NIST and/or NRC traceable external weights. All volumetric glassware used is calibrated, of Class A tolerance, and has been tested according to the appropriate ASTM procedures, which are ultimately traceable to NIST. For certain products, traceability to international interlaboratory studies has also been established.

EXPIRY DATE / PERIOD OF VALIDITY:

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

LIMITED WARRANTY:

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

QUALITY MANAGEMENT:

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO GUIDE 34 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be <5% RSD. New solution lots of existing products are compared to older lots in the same manner, which further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

UNCERTAINTY:

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, $u_c(y)$, of a value y and the uncertainty of the independent parameters $x_1, x_2, \ldots x_n$ on which it depends is:

$$u_c(y(x_1, x_2, \ldots x_n)) = \sqrt{\sum_{i=1}^{n} u(y, x_i)^2}$$

where x is expressed as a relative standard uncertainty of the individual parameter.

The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of ±5% (calculated with a coverage factor of 2 and a level of confidence of 95%) is stated on the Certificate of Analysis for all of our products.

TRACEABILITY:

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly tested by an external ISO/IEC 17025 accredited calibration company. In addition, their calibration is verified prior to each weighing using calibrated NIST and/or NRC traceable external weights. All volumetric glassware used is calibrated, of Class A tolerance, and has been tested according to the appropriate ASTM procedures, which are ultimately traceable to NIST. For certain products, traceability to international interlaboratory studies has also been established.

EXPIRY DATE / PERIOD OF VALIDITY:

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

LIMITED WARRANTY:

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

QUALITY MANAGEMENT:

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO GUIDE 34 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

CERTIFICATE OF ANALYSIS DOCUMENTATION

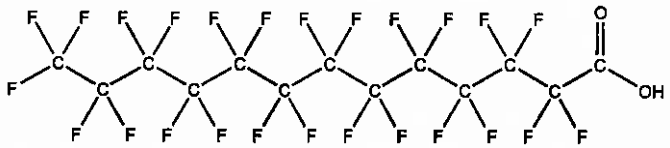
PRODUCT CODE: PFTrDA
COMPOUND: Perfluoro-n-tridecanoic acid

LOT NUMBER: PFTrDA0517

STRUCTURE:

CAS #: 72629-94-8



MOLECULAR FORMULA: $C_{13}HF_{25}O_2$
CONCENTRATION: 50 ± 2.5 µg/ml

MOLECULAR WEIGHT: 664.11
SOLVENT(S): Methanol
Water (<1%)

CHEMICAL PURITY: >98%
LAST TESTED: (mm/dd/yyyy) 05/02/2017
EXPIRY DATE: (mm/dd/yyyy) 05/02/2022
RECOMMENDED STORAGE: Store ampoule in a cool, dark place

DOCUMENTATION/ DATA ATTACHED:

Figure 1: LC/MS Data (TIC and Mass Spectrum)
Figure 2: LC/MS/MS Data (Selected MRM Transitions)

ADDITIONAL INFORMATION:

- See page 2 for further details.
- Contains 4 mole eq. of NaOH to prevent conversion of the carboxylic acid to the methyl ester.
- Contains ~ 0.1% of PFUdA ($C_{11}HF_{21}O_2$), ~ 0.4% of PFDoA ($C_{12}HF_{23}O_2$), and ~ 0.1% of PFTeDA ($C_{14}HF_{27}O_2$).

FOR LABORATORY USE ONLY: NOT FOR HUMAN OR DRUG USE

Certified By: _____ **Date:** 05/04/2017 (mm/dd/yyyy)
B.G. Chittim, General Manager

Wellington Laboratories Inc., 345 Southgate Dr. Guelph ON N1G 3M5 CANADA
519-822-2436 • Fax: 519-822-2849 • info@well-labs.com

INTENDED USE:

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compound it contains.

HAZARDS:

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

SYNTHESIS / CHARACTERIZATION:

Where possible, all of our products are synthesized using single-product unambiguous routes. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

HOMOGENEITY:

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be <5% RSD. New solution lots of existing products are compared to older lots in the same manner, which further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.
