REJECTIONS IN PHASE IB ANALYTICAL DATA

This appendix presents analytical (chemical) data rejected by laboratory analyses and data validation during Phase IB activities under the RCRA Facility Investigation at the CIBA-GEIGY facility in Cranston, RI. These analytical data are presented in tables. Rejected data are presented for all Media of Concern; no concentrations or detection limits are reported for rejected data. The sample numbering system was explained in Appendix B ("Data Management").

The format of rejected data included in this appendix was revised. Revised tables of rejected data now include rejection code numbers a rejection code number — indicating why the sample was rejected — for each rejected analyte. Rejection code numbers are defined in the Sample Rejection Key (next page).

Rejected data will not be replaced in the data base. Data gaps (caused by rejection of analytes during data validation) will be filled by re-sampling during the Phase II release characterization.

SAMPLE REJECTION KEY

Rejection Code No.	Reason for Rejection
1.	The initial and/or continuing calibration response factor (RF) values were outside the laboratory QC limits acceptable for acrolein; therefore, the non-detected results reported for this compound were rejected.
2.	The initial and/or continuing calibration RF values were outside the laboratory QC limits for 4-nitroquinoline-n-oxide; therefore, the non-detected results reported for this compound were rejected.
3.	The surrogate recovery for triphenyl phosphate was zero; therefore, the organophosphorous pesticide results reported for this sample were rejected.
4.	The organochlorine pesticide results for this sample were rejected because one or more pesticide surrogate recoveries were below acceptable QC limits.
5.	The matrix spike result for antimony was below acceptable QC requirements; therefore, the non-detected result reported for this compound was rejected.
6.	The matrix spike result for cyanide was below acceptable QC requirements; therefore, the non-detected result reported for this compound was rejected.
7.	The surrogate recoveries for volatile organics in this sample were lower than the QC limits; therefore, the non-detected results reported for these compounds were rejected.
8.	The surrogate recovery value for 2-fluorophenol was below acceptable laboratory QC limits; therefore, the non-detected results reported for these compounds were rejected.
9.	The recovery value of the spiking compound used to analyze the semivolatile fingerprint compounds was below the QC limits; therefore, the non-detected results reported for these compounds were rejected.

SAMPLE REJECTION KEY
(continued)

Rejection Code No.	Reason for Rejection
10.	The laboratory control sample for this sample had a recovery value for potassium that was below acceptable QC limits; therefore, the non-detected result reported for potassium in this sample was rejected.
11.	The matrix spike recovery for arsenic was below acceptable QC limits; therefore, the non-detected results reported for arsenic were rejected.
12.	The initial calibration response factors for dimethylphenethylamine and 4-nitroquinoline-n-oxide were below the acceptable QC limits; therefore, the non-detected results reported for these two compounds were rejected.
13.	The matrix spike/matrix spike duplicate results for Propazine, Tinuvin 327 and Tofranil were below acceptable QC limits; therefore, the non-detected results reported for these compounds in the unspiked sample were rejected.
14.	The surrogate recovery for triphenyl phosphate was below acceptable QC limits; therefore, the non-detected organophosphorous pesticide results reported were rejected.
15.	The extraction holding time for organochlorine pesticides was exceeded by 21 days; therefore, all organochlorine pesticide results reported for this sample were rejected.
16.	The matrix spike/matrix spike duplicate for heptachlor was outside QC limits; therefore, the non-detected result reported for heptachlor in this sample was rejected.
17.	The continuing calibration RF for butazolidin was below acceptable QC limits; therefore, the non-detected results reported for this compound were rejected.

SAMPLE REJECTION KEY
(continued)

Rejection Code No.	Reason for Rejection
18.	The initial and/or continuing average RFs for 4-nitroquinoline-n-oxide and pentachloronitrobenzene were below acceptable QC limits; therefore, the non-detected results reported for these compounds were rejected.
19.	The matrix spike recovery values for Irgasan DP-300, Propazine, Tinuvin 327 and Tofranil were below QC limits; therefore, the non-detected results reported for these compounds were rejected.
20.	The matrix spike/matrix spike duplicate results for dinoseb were below QC requirements; therefore, the non-detected results reported for this compound were rejected.
21.	The matrix spike/matrix spike duplicate results for pentachlorophenol were below QC requirements; therefore, the non-detected results reported for this compound were rejected.
22.	All semivolatile surrogate recoveries reported for this sample were below QC limits; therefore, all non-detected semivolatile results reported for this sample were rejected.
23.	Four of the semivolatile surrogate recoveries reported for this sample were below QC limits; therefore, all non-detected semivolatile results reported for this sample were rejected.
24.	The matrix spike result reported for famphur was below QC limits; therefore, the non-detected result reported for this compound was rejected.
25.	The matrix spike result reported for Tofranil was below acceptable QC limits; therefore, the non-detected result reported for this compounds was rejected.

SAMPLE REJECTION KEY
(continued)

Rejection Code No.	Reason for Rejection
26.	The continuing calibration for butazolidin reported an RF which was below the method QC limits of 0.05; therefore, the non-detected result reported for this compound was rejected.
27.	The matrix spike result reported for arsenic was below acceptable QC limits; therefore, the non-detected result reported for this compound was rejected.

INDICATOR AND REFERENCE DATA

This appendix presents data associated with the selection of indicator compounds (discussed in Chapter 11) for the RCRA Facility Investigation at the CIBA-GEIGY facility in Cranston, RI. These data are presented in 77 tables organized around six topics.

Chemicals Identified (by Location). Tables X-1 through X-15 summarize the chemicals that were both detected and identified at each location (e.g., SWMU, AOC, AAOI) in this Facility Investigation. Each table summarizes the data for one location, organized by Medium of Concern at that location and by organic versus inorganic chemicals within each Medium of Concern. The data presented for each chemical include frequencies of detection and ranges of detected concentrations.

Chemicals Tentatively Identified (by Location). Tables X-16 through X-30 summarize the tentatively identified compounds (TICs) at each location (e.g., SWMU, AOC, AAOI) in this Facility Investigation. Each table summarizes the data for one location, organized by Medium of Concern at that location and by organic versus inorganic chemicals within each Medium of Concern. The data presented for each chemical include frequencies of detection and ranges of detected concentrations.

Chemicals by Medium of Concern. Tables X-31 through X-43 reorganize the data in Tables X-1 through X-29 for twelve locations at which more than one Medium of Concern was investigated. Each table summarizes the ranges of concentrations of indicator chemicals (including TICs) for one location. Each table is organized by analyte, juxtaposing the media investigated at that location. This organization helps to reveal possible trends in transport of chemicals between the media.

Reference Data and Detection Limits. Table X-44 presents USEPA carcinogenic classifications and reference doses for all analytes; these values were used in selecting target chemicals. Tables X-45 and X-46 present, for all analytes, information about the number of samples analyzed, minimum and maximum detection limits, and selected USEPA reference values.

Target Chemicals Selected (by Location). Tables X-47 through X-61 summarize the target chemicals that were selected for each location in this Facility Investigation. Each table summarizes the data for one location.

Indicator Chemicals Selected (by Location). Tables X-62 through X-77 summarize the indicator chemicals to be analyzed for in Phase II.

Footnotes

ND Not Determined. No appropriate values were located. For some Class C carcinogens (e.g. acrolein) an chronic oral reference dose or surrogate value was used.

(a) EPA toxicity values and classifications were taken from IRIS and HEAST (EPA, 1991a, 1991b, 1992a, 1992b). Classifications in parentheses were adapted to the EPA classification scheme from information in "Fifth Annual Report on Carcinogens: Summary," National Toxicology Program, U.S. Department of Health and Human Services, Publication No. 89-239, 1989.

TABLE X-44 (CONTINUED): CARCINOGEN CLASSES, CANCER POTENCY FACTORS, AND REFERENCE DOSES

(b) For chemicals with no available toxicological data, reference values from a structurally similar compound were used. Exception to this are noted with (f).

(c) Butazolidin: Data were provided by CIBA-GEIGY. Butazolidin is approved for chronic use under the supervision of a physician. The minimum adult therapeutic dose is 100 mg. The NOAEL is estimated to be 20 mg/day. Using an uncertainty factor of 100, the estimated oral reference dose for a 70 kg adult is 3E-03mg/kg-day.

(d) Cobalt: Although US EPA (1992) concluded that the oral toxicity data were insufficient for derivation of an oral RfD for cobalt, the upper range of dietary intake, 0.06 mg cobalt per kg-day, can be used in place of an oral RfD in CERCLA and RCRA risk assessments.

(e) Copper: The value shown in HEAST (EPA, 1991) for chronic oral reference dose is 1.3 mg/L, which is close to the National Secondary Drinking Water Standard of 1 mg/L (40 CFR, Part 141, July 1991). The chronic human NOAEL is taken to be 1.3 mg/L. Using an uncertainty factor of 1, an adult body weight of 70 kg, and an intake of drinking water of 2 L/day, the oral reference dose for copper estimated to be 3.7E-02 mg/kg-day.

(f) 1,4-Dichloro-2-butene: The inhalation slope factor was used as a substitute for an oral slope factor because no published oral slope factor is currently available. This compound is highly lipid soluble and the absorbed dose for either the inhalation or oral route would be high and very similar. The liver would be a major site of metabolism by either route of exposure.

(g) N-Nitrosodimethylamine was used as a surrogate for direct alkylating carcinogens with a short-chain leaving group. Commonality of mechanism and potency for such agents is described by Williams and Weisburger ("Chemical Carcinogens", p. 140 of Chapter 5 in "Casarett and Doull's Toxicology: The Basic Science of Poisons," 3rd Edn., Eds. Klaasen et al., 1986).

(h) Irgasan DP-300: Data were provided by CIBA-GEIGY. Irgasan DP-300 was found to be without adverse effect when given orally to baboons at 30 mg/kg for 1 year. The chronic NOAEL was taken to be 30 mg/kg-day. Using an uncertainty factor of 100 and an adult body weight of 70 kg, the oral reference dose is estimated to be 4.3E-03 mg/kg-day.

(i) Phenacetin: The single adult dosage is 300 mg/day and this drug is intended for self-administration (Flower et al., "Analgesic Antipyretics and Anti-inflammatory Agents; Drugs employed in the Treatment of Gout," Chapter 29 in "Goodman and Gilman's The Pharmacological Basis of Therapeutics," 6th Edn., Eds. Gilman et al., 1980.) The NOAEL is taken to be 300 mg/day. Using an uncertainty factor of 10 and an adult body weight of 70 kg, the oral reference dose is estimated to be 4.3E-01 mg/kg-day.

(j) Tinuvin 327: Data were provided by CIBA-GEIGY. Tinuvin 327 was found to be without adverse effect when fed to rats at 5 ppm in the diet 2 years. Assuming rats consume 5% of their body weight each day as food (Anderson et al., Risk Analysis, 3: 277-295, 1983), the NOAEL was taken to be 0.25 mg/kg-day. Using an uncertainty factor of 100, the oral reference dose is estimated to be 2.5E-03 mg/kg-day.

(k) Tofranil: Data were provided by CIBA-GEIGY. Tofranil is approved for chronic use under the supervision of a physician. The minimum adult therapeutic dose is 30-50 mg. The chronic human NOAEL is taken to be 5 mg/day. Using an uncertainty factor of 100, the estimated oral reference dose for a 70 kg adult is 7.1E-04 mg/kg-day.

Footnotes:

ND A risk-based level was not determined.

(a) Risk-based levels were calculated using methodology proposed by EPA (1990), "40 CFR Parts 264, 265, 270, and 271, Corrective Action for Solid Waste Management Units at Hazardous Waste Management Facilities; Proposed Rule; Appendix E: Examples of Calculations of Action Levels," *Federal Register*, 55(145):30865-30873, 8 March 1990. If MCLs were available, these were used as the risk-based level.

(b) EPA (1991), "Standards for Owners and Operators of Hazardous Waste Treatment, storage, and Disposal Facilities, Appendix IX, Ground-Water Monitoring List," *Code of Federal Regulations*, Title 40, Chapter 1, Part 264, 1 July 1991.

(c) A Federal MCL, PMCL, or consent agreement MCL (whichever was lower) was used as the risk-based level.

Footnotes:

(a) Risk based levels were calculated using methodology proposed by EPA (1990), "40 CFR Parts 264, 265, 270, and 271; Corrective Action for Solid Waste Management Units at Hazardous Waste Management Facilities; Proposed Rule; Appendix E: Examples of Calculations of Action Levels," *Federal Register*, 55(145):30865-30873, 8 March 1990. Classifications of carcinogens, cancer potency factors, and oral reference doses were taken from Table X-44.

(b) Case 1: Risk-Based Level > Maximum Detection Limit.
Case 2: Risk-Based Level < Minimum Detection Limit.
Case 3: Minimum Detection Limit < Risk-Based Level < Maximum Detection Limit.
Case 4: No Risk-Based Value

(c) Range of measured background concentrations in surface soil.

DETECTION LIMIT EVALUATION

This appendix presents data used in evaluating Phase I detection limits for groundwater and soil (discussed in Chapter 11) for the RCRA Facility Investigation at the CIBA-GEIGY facility in Cranston, RI. These data are presented in 24 tables organized in 3 groups.

Tables AA-1 through AA-13. These tables present number of samples analyzed, number of non-detects, the range of detection limits for non-detected data, and a comparison of detection limits to risk-based screening levels for soil samples analyzed in Phase I. These tables are essentially the same as Table X-46, broken down on a SWMU-by-SWMU basis.

Tables AA-14 through AA-23. These tables present number of samples analyzed, number of non-detects, the range of detection limits for non-detected data, risk-based screening levels or MCLs, and RCRA-recommended sample quantitation limits for groundwater samples analyzed in Phase I. These tables are essentially Table X-45 broken down on a SWMU-by-SWMU basis.

Table AA-24. This table summarizes the detection limit analysis presented in Tables AA-1 through AA-13.

(a) Risk based levels were calculated using methodology proposed by EPA (1990), "40 CFR Parts 264, 265, 270, and 271; Corrective Action for Solid Waste Management Units at Hazardous Waste Management Facilities; Proposed Rule; Appendix E: Examples of Calculations of Action Levels," *Federal Register*, 55(145):30865-30873, 8 March 1990. Classifications of carcinogens, cancer potency factors, and oral reference doses were taken from Table X-44.

(b) Case 1: Risk-Based Level > Maximum Detection Limit.
Case 2: Risk-Based Level < Minimum Detection Limit.
Case 3: Minimum Detection Limit < Risk-Based Level < Maximum Detection Limit.
Case 4: No Risk-Based Value

(a) Risk based levels were calculated using methodology proposed by EPA (1990), "40 CFR Parts 264, 265, 270, and 271; Corrective Action for Solid Waste Management Units at Hazardous Waste Management Facilities; Proposed Rule; Appendix E: Examples of Calculations of Action Levels," *Federal Register*, 55(145):30865-30873, 8 March 1990. Classifications of carcinogens, cancer potency factors, and oral reference doses were taken from Table X-44.

(b) Case 1: Risk-Based Level > Maximum Detection Limit.
Case 2: Risk-Based Level < Minimum Detection Limit.
Case 3: Minimum Detection Limit < Risk-Based Level < Maximum Detection Limit.
Case 4: No Risk-Based Value

(a) Risk based levels were calculated using methodology proposed by EPA (1990), "40 CFR Parts 264, 265, 270, and 271; Corrective Action for Solid Waste Management Units at Hazardous Waste Management Facilities; Proposed Rule; Appendix E: Examples of Calculations of Action Levels," *Federal Register*, 55(145):30865-30873, 8 March 1990. Classifications of carcinogens, cancer potency factors, and oral reference doses were taken from Table X-44.

(b) Case 1: Risk-Based Level > Maximum Detection Limit.
Case 2: Risk-Based Level < Minimum Detection Limit.
Case 3: Minimum Detection Limit < Risk-Based Level < Maximum Detection Limit.
Case 4: No Risk-Based Value

(a) Risk based levels were calculated using methodology proposed by EPA (1990), "40 CFR Parts 264, 265, 270, and 271; Corrective Action for Solid Waste Management Units at Hazardous Waste Management Facilities; Proposed Rule; Appendix E: Examples of Calculations of Action Levels," *Federal Register*, 55(145):30865-30873, 8 March 1990. Classifications of carcinogens, cancer potency factors, and oral reference doses were taken from Table X-44.

(b) Case 1: Risk-Based Level > Maximum Detection Limit.
Case 2: Risk-Based Level < Minimum Detection Limit.
Case 3: Minimum Detection Limit < Risk-Based Level < Maximum Detection Limit.
Case 4: No Risk-Based Value

(c) Range of measured background concentrations in surface soil.

(a) Risk based levels were calculated using methodology proposed by EPA (1990), "40 CFR Parts 264, 265, 270, and 271; Corrective Action for Solid Waste Management Units at Hazardous Waste Management Facilities; Proposed Rule; Appendix E: Examples of Calculations of Action Levels," *Federal Register*, 55(145):30865-30873, 8 March 1990. Classifications of carcinogens, cancer potency factors, and oral reference doses were taken from Table X-44.

(b) Case 1: Risk-Based Level > Maximum Detection Limit.
Case 2: Risk-Based Level < Minimum Detection Limit.
Case 3: Minimum Detection Limit < Risk-Based Level < Maximum Detection Limit.
Case 4: No Risk-Based Value

(a) Risk based levels were calculated using methodology proposed by EPA (1990), "40 CFR Parts 264, 265, 270, and 271; Corrective Action for Solid Waste Management Units at Hazardous Waste Management Facilities; Proposed Rule; Appendix E: Examples of Calculations of Action Levels," *Federal Register*, 55(145):30865-30873, 8 March 1990. Classifications of carcinogens, cancer potency factors, and oral reference doses were taken from Table X-44.

(b) Case 1: Risk-Based Level > Maximum Detection Limit.
Case 2: Risk-Based Level < Minimum Detection Limit.
Case 3: Minimum Detection Limit < Risk-Based Level < Maximum Detection Limit.
Case 4: No Risk-Based Value

(a) Risk based levels were calculated using methodology proposed by EPA (1990), "40 CFR Parts 264, 265, 270, and 271; Corrective Action for Solid Waste Management Units at Hazardous Waste Management Facilities; Proposed Rule; Appendix E: Examples of Calculations of Action Levels," *Federal Register*, 55(145):30865-30873, 8 March 1990. Classifications of carcinogens, cancer potency factors, and oral reference doses were taken from Table X-44.

(b) Case 1: Risk-Based Level > Maximum Detection Limit.
Case 2: Risk-Based Level < Minimum Detection Limit.
Case 3: Minimum Detection Limit < Risk-Based Level < Maximum Detection Limit.
Case 4: No Risk-Based Value

ND A risk-based level was not determined.

(a) Risk-based levels were calculated using methodology proposed by EPA (1990), "40 CFR Parts 264, 265, 270, and 271, Corrective Action for Solid Waste Management Units at Hazardous Waste Management Facilities; Proposed Rule; Appendix E: Examples of Calculations of Action Levels," *Federal Register*, 55(145):30865-30873, 8 March 1990. If Federals MCLs or PMCLs were available, these were used as the risk-based level.

(b) EPA (1991), "Standards for Owners and Operators of Hazardous Waste Treatment, storage, and Disposal Facilities, Appendix IX, Ground-Water Monitoring List," *Code of Federal Regulations*, Title 40, Chapter 1, Part 264, 1 July 1991.

(c) A Federal MCL, PMCL, or consent agreement MCL (whichever was lower) was used as the risk-based level.

ND A risk-based level was not determined.

(a) Risk-based levels were calculated using methodology proposed by EPA (1990), "40 CFR Parts 264, 265, 270, and 271, Corrective Action for Solid Waste Management Units at Hazardous Waste Management Facilities; Proposed Rule; Appendix E: Examples of Calculations of Action Levels," *Federal Register*, 55(145):30865-30873, 8 March 1990. If Federals MCLs or PMCLs were available, these were used as the risk-based level.

(b) EPA (1991), "Standards for Owners and Operators of Hazardous Waste Treatment, storage, and Disposal Facilities, Appendix IX, Ground-Water Monitoring List," *Code of Federal Regulations*, Title 40, Chapter 1, Part 264, 1 July 1991.

(c) A Federal MCL, PMCL, or consent agreement MCL (whichever was lower) was used as the risk-based level.

ND A risk-based level was not determined.

(a) Risk-based levels were calculated using methodology proposed by EPA (1990), "40 CFR Parts 264, 265, 270, and 271, Corrective Action for Solid Waste Management Units at Hazardous Waste Management Facilities; Proposed Rule; Appendix E: Examples of Calculations of Action Levels," *Federal Register*, 55(145):30865-30873, 8 March 1990. If Federals MCLs or PMCLs were available, these were used as the risk-based level.

(b) EPA (1991), "Standards for Owners and Operators of Hazardous Waste Treatment, storage, and Disposal Facilities, Appendix IX, Ground-Water Monitoring List," *Code of Federal Regulations*, Title 40, Chapter 1, Part 264, 1 July 1991.

(c) A Federal MCL, PMCL, or consent agreement MCL (whichever was lower) was used as the risk-based level.

ND A risk-based level was not determined.

(a) Risk-based levels were calculated using methodology proposed by EPA (1990), "40 CFR Parts 264, 265, 270, and 271, Corrective Action for Solid Waste Management Units at Hazardous Waste Management Facilities; Proposed Rule; Appendix E: Examples of Calculations of Action Levels," *Federal Register*, 55(145):30865-30873, 8 March 1990. If Federals MCLs or PMCLs were available, these were used as the risk-based level.

(b) EPA (1991), "Standards for Owners and Operators of Hazardous Waste Treatment, storage, and Disposal Facilities, Appendix IX, Ground-Water Monitoring List," *Code of Federal Regulations*, Title 40, Chapter 1, Part 264, 1 July 1991.

(c) A Federal MCL, PMCL, or consent agreement MCL (whichever was lower) was used as the risk-based level.

ND A risk-based level was not determined.

(a) Risk-based levels were calculated using methodology proposed by EPA (1990), "40 CFR Parts 264, 265, 270, and 271, Corrective Action for Solid Waste Management Units at Hazardous Waste Management Facilities; Proposed Rule; Appendix E: Examples of Calculations of Action Levels," *Federal Register*, 55(145):30865-30873, 8 March 1990. If Federals MCLs or PMCLs were available, these were used as the risk-based level.

(b) EPA (1991), "Standards for Owners and Operators of Hazardous Waste Treatment, storage, and Disposal Facilities, Appendix IX, Ground-Water Monitoring List," *Code of Federal Regulations*, Title 40, Chapter 1, Part 264, 1 July 1991.

(c) A Federal MCL, PMCL, or consent agreement MCL (whichever was lower) was used as the risk-based level.

ND A risk-based level was not determined.

(a) Risk-based levels were calculated using methodology proposed by EPA (1990), "40 CFR Parts 264, 265, 270, and 271, Corrective Action for Solid Waste Management Units at Hazardous Waste Management Facilities; Proposed Rule; Appendix E: Examples of Calculations of Action Levels," *Federal Register*, 55(145):30865-30873, 8 March 1990. If Federals MCLs or PMCLs were available, these were used as the risk-based level.

(b) EPA (1991), "Standards for Owners and Operators of Hazardous Waste Treatment, storage, and Disposal Facilities, Appendix IX, Ground-Water Monitoring List," *Code of Federal Regulations*, Title 40, Chapter 1, Part 264, 1 July 1991.

(c) A Federal MCL, PMCL, or consent agreement MCL (whichever was lower) was used as the risk-based level.

ND A risk-based level was not determined.

(a) Risk-based levels were calculated using methodology proposed by EPA (1990), "40 CFR Parts 264, 265, 270, and 271, Corrective Action for Solid Waste Management Units at Hazardous Waste Management Facilities; Proposed Rule; Appendix E: Examples of Calculations of Action Levels," *Federal Register*, 55(145):30865-30873, 8 March 1990. If Federals MCLs or PMCLs were available, these were used as the risk-based level.

(b) EPA (1991), "Standards for Owners and Operators of Hazardous Waste Treatment, storage, and Disposal Facilities, Appendix IX, Ground-Water Monitoring List," *Code of Federal Regulations*, Title 40, Chapter 1, Part 264, 1 July 1991.

(c) A Federal MCL, PMCL, or consent agreement MCL (whichever was lower) was used as the risk-based level.

ND A risk-based level was not determined.

(a) Risk-based levels were calculated using methodology proposed by EPA (1990), "40 CFR Parts 264, 265, 270, and 271, Corrective Action for Solid Waste Management Units at Hazardous Waste Management Facilities; Proposed Rule; Appendix E: Examples of Calculations of Action Levels," *Federal Register*, 55(145):30865-30873, 8 March 1990. If Federals MCLs or PMCLs were available, these were used as the risk-based level.

(b) EPA (1991), "Standards for Owners and Operators of Hazardous Waste Treatment, storage, and Disposal Facilities, Appendix IX, Ground-Water Monitoring List," *Code of Federal Regulations*, Title 40, Chapter 1, Part 264, 1 July 1991.

(c) A Federal MCL, PMCL, or consent agreement MCL (whichever was lower) was used as the risk-based level.

ND A risk-based level was not determined.

(a) Risk-based levels were calculated using methodology proposed by EPA (1990), "40 CFR Parts 264, 265, 270, and 271, Corrective Action for Solid Waste Management Units at Hazardous Waste Management Facilities; Proposed Rule; Appendix E: Examples of Calculations of Action Levels," *Federal Register*, 55(145):30865-30873, 8 March 1990. If Federals MCLs or PMCLs were available, these were used as the risk-based level.

(b) EPA (1991), "Standards for Owners and Operators of Hazardous Waste Treatment, storage, and Disposal Facilities, Appendix IX, Ground-Water Monitoring List," *Code of Federal Regulations*, Title 40, Chapter 1, Part 264, 1 July 1991.

(c) A Federal MCL, PMCL, or consent agreement MCL (whichever was lower) was used as the risk-based level.

TABLE AA-23 (CONTINUED): DETECTION LIMITS FOR ANALYTES IN SWMU-12 GROUNDWATER

ND A risk-based level was not determined.

(a) Risk-based levels were calculated using methodology proposed by EPA (1990), "40 CFR Parts 264, 265, 270, and 271, Corrective Action for Solid Waste Management Units at Hazardous Waste Management Facilities; Proposed Rule; Appendix E: Examples of Calculations of Action Levels," *Federal Register*, 55(145):30865-30873, 8 March 1990. If Federals MCLs or PMCLs were available, these were used as the risk-based level.

(b) EPA (1991), "Standards for Owners and Operators of Hazardous Waste Treatment, storage, and Disposal Facilities, Appendix IX, Ground-Water Monitoring List," *Code of Federal Regulations*, Title 40, Chapter 1, Part 264, 1 July 1991.

(c) A Federal MCL, PMCL, or consent agreement MCL (whichever was lower) was used as the risk-based level.
