APPENDIX C
QUALITY CONTROL DATA

KEY TO FLAGS USED AS DATA QUALIFIERS IN APPENDIX C

Flag	Definition
U	Indicates that the analysis was performed but the analyte was not detected. The minimum detection limit for the sample (not the method detection limit) is reported (e.g., 10U).
J	Indicates an estimated value. This flag is used when a target analyte is detected at a level less than the lower limit of quantification. If the limit of quantification is 10 µg/L and a concentration of 3 µg/L is calculated, the concentration is reported as 3J.
B	Indicates that the analyte was found in the associated blank as well as in the sample. It indicates possible/probable blank contamination. This flag is used for both tentatively identified compounds and positively identified Target Compound List (TCL) compounds.
E	Indicates that the compound was detected at a concentration exceeding the calibration range and was subsequently analyzed at a dilution.
I	Indicates interference.
=	No data qualifier required; reliable result.
*	Outside QC limits per EPA contract laboratory procedure SOW requirements; surrogates standards, spike recoveries, and reproducibilities outside SOW requirements.

OTHER APPENDIX C ABBREVIATIONS

D	diluted out
Fl	flag (data qualifier)
Ma	matrix
MG/KG	milligrams per kilogram (mg/kg)
MG/L	milligrams per liter (mg/L)
NC	not calculated
NR	not requested
NS	not spiked
S	soil
UG/KG	micrograms per kilogram (µg/kg)
UG/L	micrograms per liter (µg/L)
W	water

NOTE: The terms "blank leachate," "leach blank," and "leachate blank" are used interchangeably in Appendix C.
