one more note regarding these samples - please store the remaining material after removing the subsample needed for the total lead because we may need to run the #200 sieved zinc on some of these new samples as well. I am working on getting the list of samples from November that we need the #200 zinc run on and will send that to you as soon as I can.

Can you have your procurement guys look into purchasing a #200 sieve for use on the project and charging it to us on the lab invoice? And let me know how much we are looking at for that when you find out?

Importance: High

oh - and I confirm - these samples are "Chat Characterization" samples and do not need to undergo the dry/sieve process prior to analysis. These are continuation of the chat samples that you received 11/14, 11/19, 11/25, 12/5, and 12/11 of last year and like those we will need you to crush them prior to analysis to diameter sizes of 1/4" or so if they are not already that small. If I recall the chat samples from November were already 1/4" or so in diameter and therefore didn't require any additional crushing so I'm guessing these will be similar.

If it was clearly apparent that the soil remained intact and independent with no cross-contamination then yes proceed with analysis.

Also, the guys are out of jars at the site and still need to collect some more samples - can you please ship them out 2 or 3 more cases of 4oz jars? And include a stack of COCs for them to use as well. Please have them delivered to the following address:

ATTN: Chuck Dougherty
Hampton Inn
115 S. Deacon Turner Road
Miami, OK 74354

Subject: 10C101

John,

We received the samples from Tar Creek.

Samples C101-04 and -18 were received broken, but the soil is still intact inside the broken jars. Our sample custodian transferred the soil into new jars to prevent from cross-contamination. I had these two samples logged in for the analysis. Please let me know if you want us to cancel.

Client sample ID for sample C101-08 does not match between the label and COC. We will default it to the ID recorded in the COC.

Could you please confirm that these samples do not need to be dried and sieved prior to analysis?

Thanks.

REPORTING CONVENTIONS

DATA QUALIFIERS:

Lab Qualifier	AFCEE Qualifier	Description
J	F	Indicates that the analyte is positively identified and the result is less than RL but greater than MDL.
N		Indicates presumptive evidence of a compound.
B	B	Indicates that the analyte is found in the associated method blank as well as in the sample at above QC level.
E	J	Indicates that the result is above the maximum calibration range.
*	*	Out of QC limit.

Note: The above qualifiers are used to flag the results unless the project requires a different set of qualification criteria.

ACRONYMS AND ABBREVIATIONS:

CRDL	Contract Required Detection Limit
RL	Reporting Limit
MRL	Method Reporting Limit
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
DO	Diluted out

DATES

The date and time information for leaching and preparation reflect the beginning date and time of the procedure unless the method, protocol, or project specifically requires otherwise.

LABORATORY REPORT FOR

CH2M HILL

TAR CREEK OU4

METHOD 3050B/6010B
LEAD BY TRACE ICP

SDG#: 10C101

CASE NARRATIVE

Client : CH2M HILL

Project : TAR CREEK OU4

SDG : 10C101

METHOD 3050B/6010B
LEAD BY TRACE ICP

A total of thirty-one (31) soil samples were received on 03/06/10 for Lead analysis, Method 3050B/6010B in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Initial Calibration was established as prescribed by the method and was verified using a secondary source. Interference checks were performed and results were within required limits. Continuing calibration verifications and continuing calibration blanks were carried out at the frequency specified by the project. All calibration requirements were within acceptance criteria.

Method Blank
Method blanks were analyzed at the frequency required by the project. For this SDG, two (2) method blanks were analyzed with the samples. All results were compliant to project requirement. Refer to QC result summary forms for details.

Lab Control Sample
A set of LCS/LCD was analyzed with the samples in this SDG.
Percent recoveries for IPC017SL/C were all within QC limits.
Percent recoveries for IPC018SL/C were all within QC limits.

Matrix QC Sample
Matrix QC sample was analyzed at the frequency prescribed by the project.
Percent recoveries were within project QC limits except for one result qualified with [*] in C101-13 M/S summary form , most likely due to matrix interference. Check QC summary form for details.
Percent recoveries were within project QC limits except for one result qualified with [*] in C101-21 M/S summary form , most likely due to matrix interference. Check QC summary form for details.
In addition Analytical spike and serial dilution were analyzed for matrix interference evaluation. Results were within method acceptance criteria.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter.

FedEx Shipping Label

To prepare your package for shipment, you need to do the following:

1. **Use the Print button in your browser to print this page to your laser printer.**
2. **Fold the first printed page in half and use as the shipping label. The second page is for your records, and contains both the terms and conditions of shipping, and information useful for tracking your package.**
3. **After printing the label, place it in a waybill pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.**

REPORTING CONVENTIONS

DATA QUALIFIERS:

Lab Qualifier	AFCEE Qualifier	Description
J	F	Indicates that the analyte is positively identified and the result is less than RL but greater than MDL.
N		Indicates presumptive evidence of a compound.
B	B	Indicates that the analyte is found in the associated method blank as well as in the sample at above QC level.
E	J	Indicates that the result is above the maximum calibration range.
*	*	Out of QC limit.

Note: The above qualifiers are used to flag the results unless the project requires a different set of qualification criteria.

ACRONYMS AND ABBREVIATIONS:

CRDL	Contract Required Detection Limit
RL	Reporting Limit
MRL	Method Reporting Limit
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
DO	Diluted out

DATES

The date and time information for leaching and preparation reflect the beginning date and time of the procedure unless the method, protocol, or project specifically requires otherwise.

LABORATORY REPORT FOR

CH2M HILL

TAR CREEK OU4

METALS

SDG#: 10K360

CASE NARRATIVE

Client : CH2M HILL

Project : TAR CREEK OU4

SDG : 10K360

METHOD 3050B/6010B
METALS BY TRACE ICP

A total of six (6) soil samples were received on 11/30/10 for Metals analysis, Method 3050B/6010B in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Initial Calibration was established as prescribed by the method and was verified using a secondary source. Interference checks were performed and results were within required limits. Continuing calibration verifications and continuing calibration blanks were carried out at the frequency specified by the project. All calibration requirements were within acceptance criteria.

Method Blank
Method blank was analyzed at the frequency required by the project. For this SDG, one method blank was analyzed with the samples. Result was compliant to project requirement.

Lab Control Sample
A set of LCS/LCD was analyzed with the samples in this SDG.
Percent recoveries for IPL009SL/C were all within QC limits.

Matrix QC Sample
No matrix QC sample was designated for this SDG. Analytical spike and serial dilution were analyzed for matrix interference evaluation. Results were within method acceptance criteria.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter.

METHOD 3050B/6010B
LEAD BY TRACE ICP

One (1) soil sample was received on 11/30/10 for Lead analysis, Method 3050B/6010B in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
The sample was analyzed within the prescribed holding time.

Calibration
Initial Calibration was established as prescribed by the method and was verified using a secondary source. Interference checks were performed and results were within required limits. Continuing calibration verifications and continuing calibration blanks were carried out at the frequency specified by the project. All calibration requirements were within acceptance criteria.

Method Blank
Method blank was analyzed at the frequency required by the project. For this SDG, one method blank was analyzed with the samples. Result was compliant to project requirement.

Lab Control Sample
A set of LCS/LCD was analyzed with the samples in this SDG.
Percent recoveries for IPL009SL/C were all within QC limits.

Matrix QC Sample
No matrix QC sample was designated for this SDG. Analytical spike and serial dilution were analyzed for matrix interference evaluation. Results were within method acceptance criteria.

Sample Analysis
The sample was analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter.
Sample was oven-dried and passed through sieve # 60 prior to digestion.

Subject: Laboratory Report
Project: Tar Creek OU4

Enclosed is the Laboratory report for samples received on 12/04/10.
The data reported relate only to samples listed below :

Sample ID	Control #	Col Date	Matrix	Analysis
CP091-04-01	L075-01	11/21/10	SOIL	CADMIUM
CP091-04-02	L075-02	11/21/10	SOIL	CADMIUM
CP091-05-01	L075-03	11/22/10	SOIL	CADMIUM
CP091-05-02	L075-04	11/22/10	SOIL	CADMIUM
CP093-S1-01-01	L075-05	11/23/10	SOIL	LEAD
				METALS BY ICP
				METALS SIEVE AND OVEN DRY SOIL
CP093-S1-01-02	L075-06	11/23/10	SOIL	CADMIUM
CP093-S2-01-01	L075-07	11/21/10	SOIL	LEAD
				METALS BY ICP
				METALS SIEVE AND OVEN DRY SOIL
CP093-S2-01-02	L075-08	11/21/10	SOIL	CADMIUM

The results are summarized on the following pages.

Please feel free to call if you have any questions concerning
these results.

Sincerely yours,

Caspar J. Pang
Laboratory Director

FedEx Shipping Label

To prepare your package for shipment, you need to do the following:

1. **Use the Print button in your browser to print this page to your laser printer.**
2. **Fold the first printed page in half and use as the shipping label. The second page is for your records, and contains both the terms and conditions of shipping, and information useful for tracking your package.**
3. **After printing the label, place it in a waybill pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.**

REPORTING CONVENTIONS

DATA QUALIFIERS:

Lab Qualifier	AFCEE Qualifier	Description
J	F	Indicates that the analyte is positively identified and the result is less than RL but greater than MDL.
N		Indicates presumptive evidence of a compound.
B	B	Indicates that the analyte is found in the associated method blank as well as in the sample at above QC level.
E	J	Indicates that the result is above the maximum calibration range.
*	*	Out of QC limit.

Note: The above qualifiers are used to flag the results unless the project requires a different set of qualification criteria.

ACRONYMS AND ABBREVIATIONS:

CRDL	Contract Required Detection Limit
RL	Reporting Limit
MRL	Method Reporting Limit
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
DO	Diluted out

DATES

The date and time information for leaching and preparation reflect the beginning date and time of the procedure unless the method, protocol, or project specifically requires otherwise.

LABORATORY REPORT FOR

CH2M HILL

TAR CREEK OU4

METALS

SDG#: 10L075

CASE NARRATIVE

Client : CH2M HILL

Project : TAR CREEK OU4

SDG : 10L075

METHOD 3050B/6010B
METALS BY TRACE ICP

A total of eight (8) soil samples were received on 12/04/10 for Metals by ICP analysis, Method 3050B/6010B in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Initial Calibration was established as prescribed by the method and was verified using a secondary source. Interference checks were performed and results were within required limits. Continuing calibration verifications and continuing calibration blanks were carried out at the frequency specified by the project. All calibration requirements were within acceptance criteria.

Method Blank
Method blank was analyzed at the frequency required by the project. For this SDG, one method blank was analyzed with the samples. Result was compliant to project requirement.

Lab Control Sample
A set of LCS/LCD was analyzed with the samples in this SDG.
Percent recoveries for IPL015SL/C were all within QC limits.

Matrix QC Sample
No matrix QC sample was designated for this SDG. Serial dilution was analyzed for matrix interference evaluation. Results were within method acceptance criteria.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter.

METHOD 3050B/6010B
LEAD BY TRACE ICP

A total of two (2) soil samples were received on 12/04/10 for Lead analysis, Method 3050B/6010B in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Initial Calibration was established as prescribed by the method and was verified using a secondary source. Interference checks were performed and results were within required limits. Continuing calibration verifications and continuing calibration blanks were carried out at the frequency specified by the project. All calibration requirements were within acceptance criteria.

Method Blank
Method blank was analyzed at the frequency required by the project. For this SDG, one method blank was analyzed with the samples. Result was compliant to project requirement.

Lab Control Sample
A set of LCS/LCD was analyzed with the samples in this SDG.
Percent recoveries for IPL016SL/C were all within QC limits.

Matrix QC Sample
No matrix QC sample was designated for this SDG. Serial dilution was analyzed for matrix interference evaluation. Results were within method acceptance criteria.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter.

FedEx Shipping Label

To prepare your package for shipment, you need to do the following:

1. **Use the Print button in your browser to print this page to your laser printer.**
2. **Fold the first printed page in half and use as the shipping label. The second page is for your records, and contains both the terms and conditions of shipping, and information useful for tracking your package.**
3. **After printing the label, place it in a waybill pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.**

REPORTING CONVENTIONS

DATA QUALIFIERS:

Lab Qualifier	AFCEE Qualifier	Description
J	F	Indicates that the analyte is positively identified and the result is less than RL but greater than MDL.
N		Indicates presumptive evidence of a compound.
B	B	Indicates that the analyte is found in the associated method blank as well as in the sample at above QC level.
E	J	Indicates that the result is above the maximum calibration range.
*	*	Out of QC limit.

Note: The above qualifiers are used to flag the results unless the project requires a different set of qualification criteria.

ACRONYMS AND ABBREVIATIONS:

CRDL	Contract Required Detection Limit
RL	Reporting Limit
MRL	Method Reporting Limit
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
DO	Diluted out

DATES

The date and time information for leaching and preparation reflect the beginning date and time of the procedure unless the method, protocol, or project specifically requires otherwise.

LABORATORY REPORT FOR

CH2M HILL

TAR CREEK OU4

METALS

SDG#: 10L076

CASE NARRATIVE

Client : CH2M HILL

Project : TAR CREEK OU4

SDG : 10L076

METHOD 3050B/6010B
METALS BY TRACE ICP

A total of seven (7) soil samples were received on 12/04/10 for Metals analysis, Method 3050B/6010B in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Initial Calibration was established as prescribed by the method and was verified using a secondary source. Interference checks were performed and results were within required limits. Continuing calibration verifications and continuing calibration blanks were carried out at the frequency specified by the project. All calibration requirements were within acceptance criteria.

Method Blank
Method blank was analyzed at the frequency required by the project. For this SDG, one method blank was analyzed with the samples. Result was compliant to project requirement.

Lab Control Sample
A set of LCS/LCD was analyzed with the samples in this SDG.
Percent recoveries for IPL015SL/C were all within QC limits.

Matrix QC Sample
Matrix QC sample was analyzed at the frequency prescribed by the project.
Percent recoveries for L076-07M/S were within project QC limits.
In addition, analytical spike and serial dilution were analyzed for matrix interference evaluation. Results were within method acceptance criteria.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter.

CASE NARRATIVE

Client : CH2M HILL

Project : TAR CREEK OU4

SDG : 10L076

METHOD 3050B/6010B
LEAD BY TRACE ICP

A total of two (2) soil samples were received on 12/04/10 for Lead analysis, Method 3050B/6010B in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Initial Calibration was established as prescribed by the method and was verified using a secondary source. Interference checks were performed and results were within required limits. Continuing calibration verifications and continuing calibration blanks were carried out at the frequency specified by the project. All calibration requirements were within acceptance criteria.

Method Blank
Method blank was analyzed at the frequency required by the project. For this SDG, one method blank was analyzed with the samples. Result was compliant to project requirement.

Lab Control Sample
A set of LCS/LCD was analyzed with the samples in this SDG.
Percent recoveries for IPL016SL/C were all within QC limits.

Matrix QC Sample
Matrix QC sample was analyzed at the frequency prescribed by the project.
Percent recoveries for L076-04M/S were within project QC limits.
Serial dilution was analyzed for matrix interference evaluation. Results were within method acceptance criteria.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter.

Subject: Laboratory Report
Project: Tar Creek OU4

Enclosed is the Laboratory report for samples received on 01/11/11.
The data reported relate only to samples listed below :

Sample ID	Control #	Col Date	Matrix	Analysis
CB231-04-01	A092-03	01/08/11	SOIL	LEAD METALS SIEVE AND OVEN DRY SOIL

The results are summarized on the following pages.

Please feel free to call if you have any questions concerning
these results.

Sincerely yours,

Caspar J. Pang
Laboratory Director

Subject: RE: Missing sample data

OK then yes please proceed with the lead analysis. 7-day TAT should be fine. Thanks

Subject: RE: Missing sample data

those samples only had the jar and no XRF cup right? If the lead wasn't selected on the chain that must have been a mistake because for those samples that come in without the XRF cup we definitely need all 3 metals

Subject: FW: Missing sample data

John,

The sample was not logged in for lead since it was not "x' marked in the COC. We still have the sample to perform the test for lead. We will be reporting this additional result for the sample under 11A092A. Thanks.

Ye

Linh,

The results you sent me for SDG #11A092 were missing lead for sample CB231-04-01. Can you please resend with that result included?

REPORTING CONVENTIONS

DATA QUALIFIERS:

Lab Qualifier	Description
ND	For wet chemistry methods, indicates that the analyte is non detect at the RL. For metals and organics (Volatiles, Semi-volatiles, Pesticides, PCBs, Explosives), indicates that the analyte is non detect at the MDL.
J	Indicates that the analyte is positively identified and the result is less than RL but greater than MDL.
B	Indicates that the analyte is found in the associated method blank at or above the RL as well as in the sample at above QC level.
E	Indicates that the result is above the maximum calibration range.
N	Indicates presumptive evidence of a compound.
*	Out of QC limit.

Note: The above qualifiers are used to flag the results unless the project requires a different set of qualification criteria.

ACRONYMS AND ABBREVIATIONS:

Quality Control	
MBLK	Method Blank
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
Others	
CRDL	Contract Required Detection Limit
RL	Reporting Limit
MRL	Method Reporting Limit
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
DO	Diluted out

DATES

The date and time information for leaching and preparation reflect the beginning date and time of the procedure unless the method(s), protocol(s), or project(s) specifically requires otherwise.

REPORTING CONVENTIONS

Decimal places, trailing zeroes or the lack thereof appearing on the data should not be interpreted as indicative of the precision of the analytical procedure, but rather as a result of reporting format limitations.

LABORATORY REPORT FOR

TAR CREEK OU4

METAL

SDG#: 11A092A

CASE NARRATIVE

Client : CH2M HILL

Project : TAR CREEK OU4

SDG : 11A092A

METHOD 3050B/6010B
LEAD BY TRACE ICP

One (1) soil sample was received on 01/11/11 for Lead analysis, Method 3050B/6010B in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
The sample was analyzed within the prescribed holding time.

Calibration
Initial Calibration was established as prescribed by the method and was verified using a secondary source. Interference checks were performed and results were within required limits. Continuing calibration verifications and continuing calibration blanks were carried out at the frequency specified by the project. All calibration requirements were within acceptance criteria.

Method Blank
Method blank was analyzed at the frequency required by the project. For this SDG, one method blank was analyzed with the samples. Result was compliant to project requirement.

Lab Control Sample
A set of LCS/LCD was analyzed with the samples in this SDG.
Percent recoveries for IPA036SL/C were all within QC limits.

Matrix QC Sample
Matrix QC sample was analyzed at the frequency prescribed by the project.
Percent recoveries for A092-03M/S were within project QC limits.
Serial dilution was analyzed for matrix interference evaluation. Results were within method acceptance criteria.

Sample Analysis
The sample was analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter.

Sample was oven-dried and passed through sieve # 60 prior to digestion.

John,

I apologize for the error on the IDs. We will make the corrections and e-mail you the revised report. Thanks.

Ye

Subject: Revisions needed

Linh and Ye,

It was brought to my attention that the samples in SDG #11A092-11 through 11A092-18 were reported as samples CB091-06-01, CB091-06-02, etc. and the "CB091" should have been "CP091" per the chain. Please revise these reports to change these sample IDs from CB091-06-01 to CP091-06-01 and so forth for those 8 samples. Thanks.

FedEx Shipping Label

To prepare your package for shipment, you need to do the following:

1. **Use the Print button in your browser to print this page to your laser printer.**
2. **Fold the first printed page in half and use as the shipping label. The second page is for your records, and contains both the terms and conditions of shipping, and information useful for tracking your package.**
3. **After printing the label, place it in a waybill pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.**

REPORTING CONVENTIONS

DATA QUALIFIERS:

Lab Qualifier	AFCEE Qualifier	Description
J	F	Indicates that the analyte is positively identified and the result is less than RL but greater than MDL.
N		Indicates presumptive evidence of a compound.
B	B	Indicates that the analyte is found in the associated method blank as well as in the sample at above QC level.
E	J	Indicates that the result is above the maximum calibration range.
*	*	Out of QC limit.

Note: The above qualifiers are used to flag the results unless the project requires a different set of qualification criteria.

ACRONYMS AND ABBREVIATIONS:

CRDL	Contract Required Detection Limit
RL	Reporting Limit
MRL	Method Reporting Limit
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
DO	Diluted out

DATES

The date and time information for leaching and preparation reflect the beginning date and time of the procedure unless the method, protocol, or project specifically requires otherwise.

LABORATORY REPORT FOR

CH2M HILL

TAR CREEK OU4

METALS / MERCURY

SDG#: 11A146

CASE NARRATIVE

Client : CH2M HILL

Project : TAR CREEK OU4

SDG : 11A146

METHOD 3050B/6010B
METALS BY TRACE ICP

A total of seven (7) soil samples were received on 01/19/11 for Metals by ICP analysis, Method 3050B/6010B in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Initial Calibration was established as prescribed by the method and was verified using a secondary source. Interference checks were performed and results were within required limits. Continuing calibration verifications and continuing calibration blanks were carried out at the frequency specified by the project. All calibration requirements were within acceptance criteria.

Method Blank
Method blank was analyzed at the frequency required by the project. For this SDG, one method blank was analyzed with the samples. Result was compliant to project requirement except Zinc was detected >RL. However, all associated samples were detected >100x the method blank concentration level. Thus, no further correction action was implemented.

Lab Control Sample
A set of LCS/LCD was analyzed with the samples in this SDG.
Percent recoveries for IPA031SL/C were all within QC limits.

Matrix QC Sample
Matrix QC sample was analyzed at the frequency prescribed by the project.
Percent recoveries for A146-07M/S (Cadmium) were within project QC limits.
In addition, analytical spike and serial dilution were analyzed for matrix interference evaluation. Results were within method acceptance criteria.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter.

CASE NARRATIVE

Client : CH2M HILL

Project : TAR CREEK OU4

SDG : 11A146

METHOD 3050B/6010B
LEAD BY TRACE ICP

A total of two (2) soil samples were received on 01/19/11 for Lead analysis, Method 3050B/6010B in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Initial Calibration was established as prescribed by the method and was verified using a secondary source. Interference checks were performed and results were within required limits. Continuing calibration verifications and continuing calibration blanks were carried out at the frequency specified by the project. All calibration requirements were within acceptance criteria.

Method Blank
Method blank was analyzed at the frequency required by the project. For this SDG, one method blank was analyzed with the samples. Result was compliant to project requirement.

Lab Control Sample
A set of LCS/LCD was analyzed with the samples in this SDG.
Percent recoveries for IPA036SL/C were all within QC limits.

Matrix QC Sample
No matrix QC sample was designated for this SDG. Serial dilution was analyzed for matrix interference evaluation. Results were within method acceptance criteria.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter.

Samples were oven dried and sieved through # 60 sieve prior to digestion.

FedEx Shipping Label

To prepare your package for shipment, you need to do the following:

1. **Use the Print button in your browser to print this page to your laser printer.**
2. **Fold the first printed page in half and use as the shipping label. The second page is for your records, and contains both the terms and conditions of shipping, and information useful for tracking your package.**
3. **After printing the label, place it in a waybill pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.**

REPORTING CONVENTIONS

DATA QUALIFIERS:

Lab Qualifier	AFCEE Qualifier	Description
J	F	Indicates that the analyte is positively identified and the result is less than RL but greater than MDL.
N		Indicates presumptive evidence of a compound.
B	B	Indicates that the analyte is found in the associated method blank as well as in the sample at above QC level.
E	J	Indicates that the result is above the maximum calibration range.
*	*	Out of QC limit.

Note: The above qualifiers are used to flag the results unless the project requires a different set of qualification criteria.

ACRONYMS AND ABBREVIATIONS:

CRDL	Contract Required Detection Limit
RL	Reporting Limit
MRL	Method Reporting Limit
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
DO	Diluted out

DATES

The date and time information for leaching and preparation reflect the beginning date and time of the procedure unless the method, protocol, or project specifically requires otherwise.

LABORATORY REPORT FOR

CH2M HILL

TAR CREEK OU4

METALS

SDG#: 11A195

CASE NARRATIVE

Client : CH2M HILL

Project : TAR CREEK OU4

SDG : 11A195

METHOD 3050B/6010B
METALS BY TRACE ICP

A total of eleven (11) soil samples were received on 01/22/11 for Metals by ICP analysis, Method 3050B/6010B in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Initial Calibration was established as prescribed by the method and was verified using a secondary source. Interference checks were performed and results were within required limits. Continuing calibration verifications and continuing calibration blanks were carried out at the frequency specified by the project. All calibration requirements were within acceptance criteria.

Method Blank
Method blank was analyzed at the frequency required by the project. For this SDG, one method blank was analyzed with the samples. Result was compliant to project requirement.

Lab Control Sample
A set of LCS/LCD was analyzed with the samples in this SDG.
Percent recoveries for IPA043SL/C were all within QC limits.

Matrix QC Sample
Matrix QC sample was analyzed at the frequency prescribed by the project.
Percent recoveries for A195-11M/S were within project QC limits.
In addition, analytical spike and serial dilution were analyzed for matrix interference evaluation. Results were within method acceptance criteria.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter.
Sample A195-04 was reported at DF5 due to high concentration of interfering element (Fe).

CASE NARRATIVE

Client : CH2M HILL

Project : TAR CREEK OU4

SDG : 11A195

METHOD 3050B/6010B
LEAD BY TRACE ICP

A total of three (3) soil samples were received on 01/22/11 for Lead analysis, Method 3050B/6010B in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Initial Calibration was established as prescribed by the method and was verified using a secondary source. Interference checks were performed and results were within required limits. Continuing calibration verifications and continuing calibration blanks were carried out at the frequency specified by the project. All calibration requirements were within acceptance criteria.

Method Blank
Method blank was analyzed at the frequency required by the project. For this SDG, one method blank was analyzed with the samples. Result was compliant to project requirement.

Lab Control Sample
A set of LCS/LCD was analyzed with the samples in this SDG.
Percent recoveries for IPA044SL/C were all within QC limits.

Matrix QC Sample
No matrix QC sample was designated for this SDG. Serial dilution was analyzed for matrix interference evaluation. Results were within method acceptance criteria.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter.
Samples were oven-dried and passed through sieve # 60 prior to sample preparation.

Subject: Rush CB046-06A

Ye,

When you receive sample CB046-06A please put a 3-day rush TAT for zinc and cadmium. Thanks!

FedEx Shipping Label

To prepare your package for shipment, you need to do the following:

1. **Use the Print button in your browser to print this page to your laser printer.**
2. **Fold the first printed page in half and use as the shipping label. The second page is for your records, and contains both the terms and conditions of shipping, and information useful for tracking your package.**
3. **After printing the label, place it in a waybill pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.**

REPORTING CONVENTIONS

DATA QUALIFIERS:

Lab Qualifier	AFCEE Qualifier	Description
J	F	Indicates that the analyte is positively identified and the result is less than RL but greater than MDL.
N		Indicates presumptive evidence of a compound.
B	B	Indicates that the analyte is found in the associated method blank as well as in the sample at above QC level.
E	J	Indicates that the result is above the maximum calibration range.
*	*	Out of QC limit.

Note: The above qualifiers are used to flag the results unless the project requires a different set of qualification criteria.

ACRONYMS AND ABBREVIATIONS:

CRDL	Contract Required Detection Limit
RL	Reporting Limit
MRL	Method Reporting Limit
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
DO	Diluted out

DATES

The date and time information for leaching and preparation reflect the beginning date and time of the procedure unless the method, protocol, or project specifically requires otherwise.

LABORATORY REPORT FOR

CH2M HILL

TAR CREEK OU4

METALS

SDG#: 11A209

CASE NARRATIVE

Client : CH2M HILL

Project : TAR CREEK OU4

SDG : 11A209

METHOD 3050B/6010B
METALS BY TRACE ICP

A total of fourteen (14) soil samples were received on 01/25/11 for Metals by ICP analysis, Method 3050B/6010B in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Initial Calibration was established as prescribed by the method and was verified using a secondary source. Interference checks were performed and results were within required limits. Continuing calibration verifications and continuing calibration blanks were carried out at the frequency specified by the project. All calibration requirements were within acceptance criteria.

Method Blank
Method blank was analyzed at the frequency required by the project. For this SDG, one method blank was analyzed with the samples. Result was compliant to project requirement.

Lab Control Sample
A set of LCS/LCD was analyzed with the samples in this SDG.
Percent recoveries for IPA044SL/C were all within QC limits.

Matrix QC Sample
No matrix QC sample was designated for this SDG. Analytical spike and serial dilution were analyzed for matrix interference evaluation. Results were within method acceptance criteria.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter.

CASE NARRATIVE

Client : CH2M HILL

Project : TAR CREEK OU4

SDG : 11A209

METHOD 3050B/6010B
LEAD BY TRACE ICP

A total of four (4) soil samples were received on 01/25/11 for Lead analysis, Method 3050B/6010B in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Initial Calibration was established as prescribed by the method and was verified using a secondary source. Interference checks were performed and results were within required limits. Continuing calibration verifications and continuing calibration blanks were carried out at the frequency specified by the project. All calibration requirements were within acceptance criteria.

Method Blank
Method blank was analyzed at the frequency required by the project. For this SDG, one method blank was analyzed with the samples. Result was compliant to project requirement.

Lab Control Sample
A set of LCS/LCD was analyzed with the samples in this SDG.
Percent recoveries for IPA048SL/C were all within QC limits.

Matrix QC Sample
No matrix QC sample was designated for this SDG. Serial dilution was analyzed for matrix interference evaluation. Results were within method acceptance criteria.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter.
All samples were oven-dried and passed through sieve # 60 prior to digestion.

FedEx Shipping Label

To prepare your package for shipment, you need to do the following:

1. **Use the Print button in your browser to print this page to your laser printer.**
2. **Fold the first printed page in half and use as the shipping label. The second page is for your records, and contains both the terms and conditions of shipping, and information useful for tracking your package.**
3. **After printing the label, place it in a waybill pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.**

REPORTING CONVENTIONS

DATA QUALIFIERS:

Lab Qualifier	AFCEE Qualifier	Description
J	F	Indicates that the analyte is positively identified and the result is less than RL but greater than MDL.
N		Indicates presumptive evidence of a compound.
B	B	Indicates that the analyte is found in the associated method blank as well as in the sample at above QC level.
E	J	Indicates that the result is above the maximum calibration range.
*	*	Out of QC limit.

Note: The above qualifiers are used to flag the results unless the project requires a different set of qualification criteria.

ACRONYMS AND ABBREVIATIONS:

CRDL	Contract Required Detection Limit
RL	Reporting Limit
MRL	Method Reporting Limit
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
DO	Diluted out

DATES

The date and time information for leaching and preparation reflect the beginning date and time of the procedure unless the method, protocol, or project specifically requires otherwise.

LABORATORY REPORT FOR

CH2M HILL

TAR CREEK OU4

METALS

SDG#: 11A219

CASE NARRATIVE

Client : CH2M HILL

Project : TAR CREEK OU4

SDG : 11A219

METHOD 3050B/6010B
METALS BY TRACE ICP

A total of eleven (11) soil samples were received on 01/26/11 for Metals by ICP analysis, Method 3050B/6010B in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Initial Calibration was established as prescribed by the method and was verified using a secondary source. Interference checks were performed and results were within required limits. Continuing calibration verifications and continuing calibration blanks were carried out at the frequency specified by the project. All calibration requirements were within acceptance criteria.

Method Blank
Method blank was analyzed at the frequency required by the project. For this SDG, one method blank was analyzed with the samples. Result was compliant to project requirement.

Lab Control Sample
A set of LCS/LCD was analyzed with the samples in this SDG.
Percent recoveries for IPA048SL/C were all within QC limits.

Matrix QC Sample
Matrix QC sample was analyzed at the frequency prescribed by the project.
Percent recoveries for A219-11M/S were within project QC limits.
In addition, analytical spike and serial dilution were analyzed for matrix interference evaluation. Results were within method acceptance criteria.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter.

CASE NARRATIVE

Client : CH2M HILL

Project : TAR CREEK OU4

SDG : 11A219

METHOD 3050B/6010B
LEAD BY TRACE ICP

A total of three (3) soil samples were received on 01/26/11 for Lead analysis, Method 3050B/6010B in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Initial Calibration was established as prescribed by the method and was verified using a secondary source. Interference checks were performed and results were within required limits. Continuing calibration verifications and continuing calibration blanks were carried out at the frequency specified by the project. All calibration requirements were within acceptance criteria.

Method Blank
Method blank was analyzed at the frequency required by the project. For this SDG, one method blank was analyzed with the samples. Result was compliant to project requirement.

Lab Control Sample
A set of LCS/LCD was analyzed with the samples in this SDG.
Percent recoveries for IPA049SL/C were all within QC limits.

Matrix QC Sample
Matrix QC sample was analyzed at the frequency prescribed by the project.
Percent recoveries were within project QC limits except for one result qualified with [*] in A219-03 M/S summary form, most likely due to matrix interference. Check QC summary form for details.
Serial dilution was analyzed for matrix interference evaluation. Results were within method acceptance criteria.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter.
Samples were oven dried and passed through sieve #60 prior to digestion.
