FedEx Shipping Label

To prepare your package for shipment, you need to do the following:

1. **Use the Print button in your browser to print this page to your laser printer.**
2. **Fold the first printed page in half and use as the shipping label. The second page is for your records, and contains both the terms and conditions of shipping, and information useful for tracking your package.**
3. **After printing the label, place it in a waybill pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.**

REPORTING CONVENTIONS

DATA QUALIFIERS:

Lab Qualifier	AFCEE Qualifier	Description
J	F	Indicates that the analyte is positively identified and the result is less than RL but greater than MDL.
N		Indicates presumptive evidence of a compound.
B	B	Indicates that the analyte is found in the associated method blank as well as in the sample at above QC level.
E	J	Indicates that the result is above the maximum calibration range.
*	*	Out of QC limit.

Note: The above qualifiers are used to flag the results unless the project requires a different set of qualification criteria.

ACRONYMS AND ABBREVIATIONS:

CRDL	Contract Required Detection Limit
RL	Reporting Limit
MRL	Method Reporting Limit
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
DO	Diluted out

DATES

The date and time information for leaching and preparation reflect the beginning date and time of the procedure unless the method, protocol, or project specifically requires otherwise.

LABORATORY REPORT FOR

CH2M HILL

TAR CREEK OU4

METALS

SDG#: 11B208

CASE NARRATIVE

Client : CH2M HILL

Project : TAR CREEK OU4

SDG : 11B208

METHOD 3050B/6010B
METALS BY TRACE ICP

A total of thirteen (13) soil samples were received on 02/18/11 for Metals analysis, Method 3050B/6010B in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Initial Calibration was established as prescribed by the method and was verified using a secondary source. Interference checks were performed and results were within required limits. Continuing calibration verifications and continuing calibration blanks were carried out at the frequency specified by the project. All calibration requirements were within acceptance criteria.

Method Blank
Method blank was analyzed at the frequency required by the project. For this SDG, one method blank was analyzed with the samples. Result was compliant to project requirement.

Lab Control Sample
A set of LCS/LCD was analyzed with the samples in this SDG.
Percent recoveries for IPB042SL/C were all within QC limits.

Matrix QC Sample
Matrix QC sample was analyzed at the frequency prescribed by the project.
Percent recoveries for B208-01M/S were within project QC limits.
In addition, serial dilution was analyzed for matrix interference evaluation.
Results were within method acceptance criteria.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter.
Sample B208-09 was reported at 3.94 dilution due to high concentration of interfering element Iron.

CASE NARRATIVE

Client : CH2M HILL

Project : TAR CREEK OU4

SDG : 11B208

METHOD 3050B/6010B
LEAD BY TRACE ICP

A total of four (4) soil samples were received on 02/18/11 for Lead analysis, Method 3050B/6010B in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Initial Calibration was established as prescribed by the method and was verified using a secondary source. Interference checks were performed and results were within required limits. Continuing calibration verifications and continuing calibration blanks were carried out at the frequency specified by the project. All calibration requirements were within acceptance criteria.

Method Blank
Method blanks were analyzed at the frequency required by the project. For this SDG, two (2) method blanks were analyzed with the samples. All results were compliant to project requirement. Refer to QC result summary forms for details.

Lab Control Sample
Two sets of LCS/LCD were analyzed with the samples in this SDG.
Percent recoveries for IPB043SL/C were all within QC limits.
Percent recoveries for IPB050SL/C were all within QC limits.

Matrix QC Sample
Matrix QC sample was analyzed at the frequency prescribed by the project.
Percent recoveries for B208-02M/S were within project QC limits.
In addition Analytical spike and serial dilution were analyzed for matrix interference evaluation. Results were within method acceptance criteria.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter.

All samples were oven-dried and passed through sieve # 60 prior to digestion.

Subject: Rush TAT needed for CP091-15-01
Importance: High

Hello Ye,

You should be receiving some Tar Creek samples in a day or 2 - please log in sample CP091-15-01 for a 3-day rush TAT for zinc and cadmium. Thanks!

FedEx Shipping Label

To prepare your package for shipment, you need to do the following:

1. **Use the Print button in your browser to print this page to your laser printer.**
2. **Fold the first printed page in half and use as the shipping label. The second page is for your records, and contains both the terms and conditions of shipping, and information useful for tracking your package.**
3. **After printing the label, place it in a waybill pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.**

REPORTING CONVENTIONS

DATA QUALIFIERS:

Lab Qualifier	Description
ND	For wet chemistry methods, indicates that the analyte is non detect at the RL. For metals and organics (Volatiles, Semi-volatiles, Pesticides, PCBs, Explosives), indicates that the analyte is non detect at the MDL.
J	Indicates that the analyte is positively identified and the result is less than RL but greater than MDL.
B	Indicates that the analyte is found in the associated method blank at or above the RL as well as in the sample at above QC level.
E	Indicates that the result is above the maximum calibration range.
N	Indicates presumptive evidence of a compound.
*	Out of QC limit.

Note: The above qualifiers are used to flag the results unless the project requires a different set of qualification criteria.

ACRONYMS AND ABBREVIATIONS:

Quality Control	
MBLK	Method Blank
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
Others	
CRDL	Contract Required Detection Limit
RL	Reporting Limit
MRL	Method Reporting Limit
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
DO	Diluted out

DATES

The date and time information for leaching and preparation reflect the beginning date and time of the procedure unless the method(s), protocol(s), or project(s) specifically requires otherwise.

REPORTING CONVENTIONS

Decimal places, trailing zeroes or the lack thereof appearing on the data should not be interpreted as indicative of the precision of the analytical procedure, but rather as a result of reporting format limitations.

LABORATORY REPORT FOR

CH2M HILL

TAR CREEK OU4

METALS

SDG#: 11C066

CASE NARRATIVE

Client : CH2M HILL

Project : TAR CREEK OU4

SDG : 11C066

METHOD 3050B/6010B
METALS BY TRACE ICP

A total of twenty (20) soil samples were received on 03/04/11 for metals analysis, Method 3050B/6010B in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Initial Calibration was established as prescribed by the method and was verified using a secondary source. Interference checks were performed and results were within required limits. Continuing calibration verifications and continuing calibration blanks were carried out at the frequency specified by the project. All calibration requirements were within acceptance criteria.

Method Blank
Method blank was analyzed at the frequency required by the project. For this SDG, one method blank was analyzed with the samples. Result was compliant to project requirement except Zinc was detected above 1/2LOQ. However, Zinc concentrations on all associated samples were detected at least 185 times the method blank concentration level, thus, no corrective action was taken.

Lab Control Sample
One set of LCS/LCD were analyzed with the samples in this SDG.
Percent recoveries for IPC013SL/C were all within QC limits.

Matrix QC Sample
Matrix QC sample was analyzed at the frequency prescribed by the project.
Percent recoveries for C066-20M/S were within project QC limits.
In addition Analytical spike and serial dilution were analyzed for matrix interference evaluation. Results were within method acceptance criteria.
Sample Analysis
Samples were analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter.

CASE NARRATIVE

Client : CH2M HILL

Project : TAR CREEK OU4

SDG : 11C066

METHOD 3050B/6010B
LEAD BY TRACE ICP

A total of five (5) soil samples were received on 03/04/11 for Lead analysis, Method 3050B/6010B in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Initial Calibration was established as prescribed by the method and was verified using a secondary source. Interference checks were performed and results were within required limits. Continuing calibration verifications and continuing calibration blanks were carried out at the frequency specified by the project. All calibration requirements were within acceptance criteria.

Method Blank
Method blank was analyzed at the frequency required by the project. For this SDG, one method blank was analyzed with the samples. Result was compliant to project requirement.

Lab Control Sample
A set of LCS/LCD was analyzed with the samples in this SDG.
Percent recoveries for IPC016SL/C were all within QC limits.

Matrix QC Sample
No matrix QC sample was designated for this SDG. Analytical spike and serial dilution were analyzed for matrix interference evaluation. Results were within method acceptance criteria.
Sample Analysis
Samples were analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter.

Samples were oven-dried and pass through sieve # 60 prior to digestion.

FedEx Shipping Label

To prepare your package for shipment, you need to do the following:

1. **Use the Print button in your browser to print this page to your laser printer.**
2. **Fold the first printed page in half and use as the shipping label. The second page is for your records, and contains both the terms and conditions of shipping, and information useful for tracking your package.**
3. **After printing the label, place it in a waybill pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.**

REPORTING CONVENTIONS

DATA QUALIFIERS:

Lab Qualifier	AFCEE Qualifier	Description
J	F	Indicates that the analyte is positively identified and the result is less than RL but greater than MDL.
N		Indicates presumptive evidence of a compound.
B	B	Indicates that the analyte is found in the associated method blank as well as in the sample at above QC level.
E	J	Indicates that the result is above the maximum calibration range.
*	*	Out of QC limit.

Note: The above qualifiers are used to flag the results unless the project requires a different set of qualification criteria.

ACRONYMS AND ABBREVIATIONS:

CRDL	Contract Required Detection Limit
RL	Reporting Limit
MRL	Method Reporting Limit
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
DO	Diluted out

DATES

The date and time information for leaching and preparation reflect the beginning date and time of the procedure unless the method, protocol, or project specifically requires otherwise.

LABORATORY REPORT FOR

CH2M HILL

TAR CREEK OU4

METALS

SDG#: 11C074

CASE NARRATIVE

Client : CH2M HILL

Project : TAR CREEK OU4

SDG : 11C074

METHOD 3050B/6010B
METALS BY TRACE ICP

A total of twenty (20) soil samples were received on 03/08/11 for Metals by ICP analysis, Method 3050B/6010B in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Initial Calibration was established as prescribed by the method and was verified using a secondary source. Interference checks were performed and results were within required limits. Continuing calibration verifications and continuing calibration blanks were carried out at the frequency specified by the project. All calibration requirements were within acceptance criteria.

Method Blank
Method blank was analyzed at the frequency required by the project. For this SDG, one method blank was analyzed with the samples. Result was compliant to project requirement.

Lab Control Sample
A set of LCS/LCD was analyzed with the samples in this SDG.
Percent recoveries for IPC017SX/Y were all within QC limits.

Matrix QC Sample
Matrix QC sample was analyzed at the frequency prescribed by the project.
Percent recoveries for C074-20G/H were within project QC limits.
In addition, analytical spike and serial dilution were analyzed for matrix interference evaluation. Results were within method acceptance criteria.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter.

CASE NARRATIVE

Client : CH2M HILL

Project : TAR CREEK OU4

SDG : 11C074

METHOD 3050B/6010B
LEAD BY TRACE ICP

A total of five (5) soil samples were received on 03/08/11 for Lead analysis, Method 3050B/6010B in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Initial Calibration was established as prescribed by the method and was verified using a secondary source. Interference checks were performed and results were within required limits. Continuing calibration verifications and continuing calibration blanks were carried out at the frequency specified by the project. All calibration requirements were within acceptance criteria.

Method Blank
Method blank was analyzed at the frequency required by the project. For this SDG, one method blank was analyzed with the samples. Result was compliant to project requirement.

Lab Control Sample
A set of LCS/LCD was analyzed with the samples in this SDG.
Percent recoveries for IPC019SL/C were all within QC limits.

Matrix QC Sample
No matrix QC sample was designated for this SDG. Analytical spike and serial dilution were analyzed for matrix interference evaluation. Results were within method acceptance criteria.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter.
All samples were oven dried and passed through sieve #60 prior to digestion.

Subject: Rush Tar Creek samples arriving tomorrow

Ye,

You should be receiving more soil samples from Tar Creek tomorrow and there will be several rush analyses needed.

Please put a 3-day rush TAT for zinc and cadmium on the following samples:
CB215-09-02
CB231-13-01
CB231-14-01
CP091-16-01
CP091-16-01FD
CP091-16-02

Thanks!

FedEx Shipping Label

To prepare your package for shipment, you need to do the following:

1. **Use the Print button in your browser to print this page to your laser printer.**
2. **Fold the first printed page in half and use as the shipping label. The second page is for your records, and contains both the terms and conditions of shipping, and information useful for tracking your package.**
3. **After printing the label, place it in a waybill pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.**

REPORTING CONVENTIONS

DATA QUALIFIERS:

Lab Qualifier	AFCEE Qualifier	Description
J	F	Indicates that the analyte is positively identified and the result is less than RL but greater than MDL.
N		Indicates presumptive evidence of a compound.
B	B	Indicates that the analyte is found in the associated method blank as well as in the sample at above QC level.
E	J	Indicates that the result is above the maximum calibration range.
*	*	Out of QC limit.

Note: The above qualifiers are used to flag the results unless the project requires a different set of qualification criteria.

ACRONYMS AND ABBREVIATIONS:

CRDL	Contract Required Detection Limit
RL	Reporting Limit
MRL	Method Reporting Limit
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
DO	Diluted out

DATES

The date and time information for leaching and preparation reflect the beginning date and time of the procedure unless the method, protocol, or project specifically requires otherwise.

LABORATORY REPORT FOR

CH2M HILL

TAR CREEK OU4

METALS

SDG#: 11C089

CASE NARRATIVE

Client : CH2M HILL

Project : TAR CREEK OU4

SDG : 11C089

METHOD 3050B/6010B
METALS BY TRACE ICP

A total of thirteen (13) soil samples were received on 03/09/11 for Metals by ICP analysis, Method 3050B/6010B in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Initial Calibration was established as prescribed by the method and was verified using a secondary source. Interference checks were performed and results were within required limits. Continuing calibration verifications and continuing calibration blanks were carried out at the frequency specified by the project. All calibration requirements were within acceptance criteria.

Method Blank
Method blank was analyzed at the frequency required by the project. For this SDG, one method blank was analyzed with the samples. Result was compliant to project requirement.

Lab Control Sample
A set of LCS/LCD was analyzed with the samples in this SDG.
Percent recoveries for IPC026SL/C were all within QC limits.

Matrix QC Sample
Matrix QC sample was analyzed at the frequency prescribed by the project.
Percent recoveries for C089-02M/S were within project QC limits.
In addition, analytical spike and serial dilution were analyzed for matrix interference evaluation. Results were within method acceptance criteria.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter.

ANALYSIS RUN LOG
for
ICP

Note: For samples and relevant QCs/Standards analyzed, refer to attached analytical sequence.

Start Date: 3/14/11 11:32
End Date: 3/14/11 20:23

Book #: AD8-018
Instrument No.: D8
Analytical Batch: 108C014
Analytical Sequence: S_11C6010 (VIS)
Method File: 11C6010 (VIS)
Database: Emax 13

SOP #	Rev. #
☑ EMAX-6010	7
☐ EMAX-6010C	1
☐ EMAX-200.7	1
☐ EMAX-	

Comments:

- C454-07 - Pb "J" flag. Li>LOR Li interfers w/ Pb. See printout.
- BS26-01 STLC: yellow sample. ∴ sample diluted 5X prior to analysis.
- C431-04T, 07T, 09T @ 10X Pb>LOR
- C431-08~~X~~T: needs rerun for Pb confirmation. TH 3/14/11
- C444-12T ~~over~~diluted @ 10X. TH 3/14/11
- CCB9 Pb>3X IDL, >MDL. ~~However~~ However, C431 samples detected >10X blank conc. level EXCEPT C431-08T. TH 3/14/11
- CCV12, CCV13 NO sample

CASE NARRATIVE

Client : CH2M HILL

Project : TAR CREEK OU4

SDG : 11C089

METHOD 3050B/6010B
LEAD BY TRACE ICP

A total of four (4) soil samples were received on 03/09/11 for Lead analysis, Method 3050B/6010B in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Initial Calibration was established as prescribed by the method and was verified using a secondary source. Interference checks were performed and results were within required limits. Continuing calibration verifications and continuing calibration blanks were carried out at the frequency specified by the project. All calibration requirements were within acceptance criteria.

Method Blank
Method blank was analyzed at the frequency required by the project. For this SDG, one method blank was analyzed with the samples. Result was compliant to project requirement.

Lab Control Sample
A set of LCS/LCD was analyzed with the samples in this SDG.
Percent recoveries for IPC024SL/C were all within QC limits.

Matrix QC Sample
No matrix QC sample was designated for this SDG. Analytical spike and serial dilution were analyzed for matrix interference evaluation. Results were within method acceptance criteria.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter.
Samples were oven-dried and passed through sieve # 60 prior to sample prep.

Comments:

- C454-07 - Pb "J" flag. Li>LOR Li interfers w/ Pb. See printout.
- B526-01 STLC: yellow sample. ∴ sample diluted 5X prior to analysis.
- C431-04T, 07T, 09T @ 10X Pb>LOR
- C431-08~~X~~T: needs rerun for Pb confirmation. TH 3/14/11
- C444-12T ~~TH 3/14/11~~ overdiluted @ 10X.
- CCB9 Pb>3XIDL, >MDL. ~~However~~ TH 3/14/11 however, C431 samples detected >10X blank conc. level EXCEPT C431-08T.

Subject: RE: Rush samples for Tar Creek this week

Yeah probably so on that one sample. I asked him to reanalyze several samples and that was probably one of them.

Please analyze cadmium only for CB215-10-01 and CB215-10-02

Subject: RE: Rush samples for Tar Creek this week

John,

Attached are the COCs for samples received today.

No analysis was marked for samples CB215-10-01 and CB215-10-02 in the COC. Please advise.
Also, sample (CB237-01-01 from your e-mail below) was not received. Perhaps, it's coming in another batch.
Ye

Ye,

In the next day or two you will receive some more samples from Tar Creek. Please put a rush 3-day TAT for the following samples for zinc and cadmium:

CB237-01-01
CB214-12A-01
CB214-12A-02

FedEx Shipping Label

To prepare your package for shipment, you need to do the following:

1. **Use the Print button in your browser to print this page to your laser printer.**
2. **Fold the first printed page in half and use as the shipping label. The second page is for your records, and contains both the terms and conditions of shipping, and information useful for tracking your package.**
3. **After printing the label, place it in a waybill pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.**

REPORTING CONVENTIONS

DATA QUALIFIERS:

Lab Qualifier	AFCEE Qualifier	Description
J	F	Indicates that the analyte is positively identified and the result is less than RL but greater than MDL.
N		Indicates presumptive evidence of a compound.
B	B	Indicates that the analyte is found in the associated method blank as well as in the sample at above QC level.
E	J	Indicates that the result is above the maximum calibration range.
*	*	Out of QC limit.

Note: The above qualifiers are used to flag the results unless the project requires a different set of qualification criteria.

ACRONYMS AND ABBREVIATIONS:

CRDL	Contract Required Detection Limit
RL	Reporting Limit
MRL	Method Reporting Limit
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
DO	Diluted out

DATES

The date and time information for leaching and preparation reflect the beginning date and time of the procedure unless the method, protocol, or project specifically requires otherwise.

LABORATORY REPORT FOR

CH2M HILL

TAR CREEK OU4

METHOD 3050B/6010B
METALS BY TRACE ICP

SDG#: 11C217

CASE NARRATIVE

Client : CH2M HILL

Project : TAR CREEK OU4

SDG : 11C217

METHOD 3050B/6010B
METALS BY TRACE ICP

A total of nineteen (19) soil samples were received on 03/22/11 for Metals analysis, Method 3050B/6010B in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Initial Calibration was established as prescribed by the method and was verified using a secondary source. Interference checks were performed and results were within required limits. Continuing calibration verifications and continuing calibration blanks were carried out at the frequency specified by the project. All calibration requirements were within acceptance criteria.

Method Blank
Method blank was analyzed at the frequency required by the project. For this SDG, one method blank was analyzed with the samples. Result was compliant to project requirement.

Lab Control Sample
A set of LCS/LCD was analyzed with the samples in this SDG.
Percent recoveries for IPC047SL/C were all within QC limits.

Matrix QC Sample
Matrix QC sample was analyzed at the frequency prescribed by the project.
Percent recoveries for C217-01M/S were within project QC limits.
In addition Analytical spike and serial dilution were analyzed for matrix interference evaluation. Results were within method acceptance criteria.
Sample Analysis
Samples were analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter.

CASE NARRATIVE

Client : CH2M HILL

Project : TAR CREEK OU4

SDG : 11C217

METHOD 3050B/6010B
LEAD BY TRACE ICP

A total of three (3) soil samples were received on 03/22/11 for Lead analysis, Method 3050B/6010B in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Initial Calibration was established as prescribed by the method and was verified using a secondary source. Interference checks were performed and results were within required limits. Continuing calibration verifications and continuing calibration blanks were carried out at the frequency specified by the project. All calibration requirements were within acceptance criteria.

Method Blank
Method blank was analyzed at the frequency required by the project. For this SDG, one method blank was analyzed with the samples. Result was compliant to project requirement.

Lab Control Sample
A set of LCS/LCD was analyzed with the samples in this SDG.
Percent recoveries for IPC051SL/C were all within QC limits.

Matrix QC Sample
No matrix QC sample was designated for this SDG. Analytical spike and serial dilution were analyzed for matrix interference evaluation. Results were within method acceptance criteria.
Sample Analysis
Samples were analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter.
Samples were oven-dried and pass through sieve # 60 prior to digestion

Comments: TH 3/25/11

- C217-16 ~~@~~ Fe >LDR. Since Fe interfers w/ Pb, sample needs dilution 5X TH 3/25/11
- CSUS-01 ran ~~@1X~~ due to yellow color. Based on dilution result, @1X, Fe would have been >LDR.

Subject: RE: Logins for Tar Creek

Ye,

That looks fine just please make sure the following samples get a 3-day rush TAT:

CB147-05-01 needs a 3-day rush TAT on zinc and cadmium
CB237-02-01 needs a 3-day rush TAT on zinc and cadmium
CP098-01-01 needs a 3-day rush TAT on zinc and cadmium

Also, you should be receiving some more samples today and I need to get rush 3-day TAT for zinc only (Pb and Cd can be standard) for the following samples:

CB231-16-01 needs a 3-day rush TAT on zinc
CB155-10-01 needs a 3-day rush TAT on zinc
CB155-10-02 needs a 3-day rush TAT on zinc
CB155-12-01 needs a 3-day rush TAT on zinc
CB155-12-02 needs a 3-day rush TAT on zinc

Also, I am back in the office now so you can stop cc'ing Hiroshi on the Tar Creek correspondence.
Thanks

Hi John,

Attached are the logins and COCs information for SDGs: 11D012 and 11D019. Please review and let me know if there are any corrections necessary.

Thanks.

FedEx Shipping Label

To prepare your package for shipment, you need to do the following:

1. **Use the Print button in your browser to print this page to your laser printer.**
2. **Fold the first printed page in half and use as the shipping label. The second page is for your records, and contains both the terms and conditions of shipping, and information useful for tracking your package.**
3. **After printing the label, place it in a waybill pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.**

REPORTING CONVENTIONS

DATA QUALIFIERS:

Lab Qualifier	AFCEE Qualifier	Description
J	F	Indicates that the analyte is positively identified and the result is less than RL but greater than MDL.
N		Indicates presumptive evidence of a compound.
B	B	Indicates that the analyte is found in the associated method blank as well as in the sample at above QC level.
E	J	Indicates that the result is above the maximum calibration range.
*	*	Out of QC limit.

Note: The above qualifiers are used to flag the results unless the project requires a different set of qualification criteria.

ACRONYMS AND ABBREVIATIONS:

CRDL	Contract Required Detection Limit
RL	Reporting Limit
MRL	Method Reporting Limit
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
DO	Diluted out

DATES

The date and time information for leaching and preparation reflect the beginning date and time of the procedure unless the method, protocol, or project specifically requires otherwise.

LABORATORY REPORT FOR

CH2M HILL

TAR CREEK OU4

METALS

SDG#: 11D029

CASE NARRATIVE

Client : CH2M HILL

Project : TAR CREEK OU4

SDG : 11D029

METHOD 3050B/6010B
METALS BY TRACE ICP

A total of twenty-six (26) soil samples were received on 04/06/11 for Metals analysis, Method 3050B/6010B in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Initial Calibration was established as prescribed by the method and was verified using a secondary source. Interference checks were performed and results were within required limits. Continuing calibration verifications and continuing calibration blanks were carried out at the frequency specified by the project. All calibration requirements were within acceptance criteria.

Method Blank
Method blanks were analyzed at the frequency required by the project. For this SDG, two (2) method blanks were analyzed with the samples. All results were compliant to project requirement. Refer to QC result summary forms for details.

Lab Control Sample
Two (2) sets of LCS/LCD were analyzed with the samples in this SDG.
Percent recoveries for IPD009SX/Y were all within QC limits.
Percent recoveries for IPD011SL/C were all within QC limits.

Matrix QC Sample
Matrix QC sample was analyzed at the frequency prescribed by the project.
Percent recoveries for D029-16G/H were within project QC limits.
In addition, analytical spike and serial dilution were analyzed for matrix interference evaluation. Results were within method acceptance criteria.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter.

EMAX LABORATORIES, INC.

ANALYSIS RUN LOG
for
ICP

Note: For samples and relevant QCs/Standards analyzed, refer to attached analytical sequence.

Start Date: 4/8/11 13:21

End Date: 4/8/11 18:03

SOP #	Rev. #
☑ EMAX-6010	7
☐ EMAX-6010C	1
☐ EMAX-200.7	1
☐ EMAX-	

Comments:

CS8-10 Ca>LDR. Needs dilution since Ca interfers w/ Pb.

Book #: AD8-019

Instrument No.: D8

Analytical Batch: 1D8D010

Analytical Sequence: S11D6010(V10)

Method File: 11D6010(V10)

Database: EMAX13

CASE NARRATIVE

Client : CH2M HILL

Project : TAR CREEK OU4

SDG : 11D029

METHOD 3050B/6010B
LEAD BY TRACE ICP

A total of six (6) soil samples were received on 04/06/11 for Lead analysis, Method 3050B/6010B in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Initial Calibration was established as prescribed by the method and was verified using a secondary source. Interference checks were performed and results were within required limits. Continuing calibration verifications and continuing calibration blanks were carried out at the frequency specified by the project. All calibration requirements were within acceptance criteria.

Method Blank
Method blanks were analyzed at the frequency required by the project. For this SDG, two (2) method blanks were analyzed with the samples. All results were compliant to project requirement. Refer to QC result summary forms for details.

Lab Control Sample
Two (2) sets of LCS/LCD were analyzed with the samples in this SDG.
Percent recoveries for IPD017SL/C were all within QC limits.
Percent recoveries for IPD020SL/C were all within QC limits.

Matrix QC Sample
No matrix QC sample was designated for this SDG. Analytical spike and serial dilution were analyzed for matrix interference evaluation. Results were within method acceptance criteria.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter.
Samples were oven-dried and passed through sieve # 60 prior to sample preparation.

FedEx Shipping Label

To prepare your package for shipment, you need to do the following:

1. **Use the Print button in your browser to print this page to your laser printer.**
2. **Fold the first printed page in half and use as the shipping label. The second page is for your records, and contains both the terms and conditions of shipping, and information useful for tracking your package.**
3. **After printing the label, place it in a waybill pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.**

OK - the samples in the jar are a three-point composite and since they couldn't composite the Encores they submitted three plugs so you can proceed with analysis.

If you can't use on of the frozen encores for percent moisture then just use the percent moisture from one of the composite jars. thanks

Importance: High

Ye, please hold off on those analyses. I was only expecting to see a single sample for all the various parameters so I'm surprised to see multiple sets of Encores and a different ID on the jars too. I'm wondering if that might be a sample ID error on the COC. I'm checking into it with the sampler and will get back with you shortly.

Hi John,

I missed to note in the e-mail below for a couple of things regarding the VOC samples in 11D182.

1) No extra jar was received to determine the percent moisture for the 3 samples. EnCores were frozen. If any extra Encore is left after the analyses are completed, we will use it for percent moisture.
2) No trip blank was received with the VOCs samples.

Please let me know if you have any questions. Thanks.

REPORTING CONVENTIONS

DATA QUALIFIERS:

Lab Qualifier	AFCEE Qualifier	Description
J	F	Indicates that the analyte is positively identified and the result is less than RL but greater than MDL.
N		Indicates presumptive evidence of a compound.
B	B	Indicates that the analyte is found in the associated method blank as well as in the sample at above QC level.
E	J	Indicates that the result is above the maximum calibration range.
*	*	Out of QC limit.

Note: The above qualifiers are used to flag the results unless the project requires a different set of qualification criteria.

ACRONYMS AND ABBREVIATIONS:

CRDL	Contract Required Detection Limit
RL	Reporting Limit
MRL	Method Reporting Limit
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
DO	Diluted out

DATES

The date and time information for leaching and preparation reflect the beginning date and time of the procedure unless the method, protocol, or project specifically requires otherwise.

LABORATORY REPORT FOR

CH2M HILL

TAR CREEK OU4

METHOD 5035/8260B
VOLATILE ORGANICS BY GC/MS

SDG#: 11D182

CASE NARRATIVE

Client : CH2M HILL

Project : TAR CREEK OU4

SDG : 11D182

SW 5035/8260B
VOLATILE ORGANICS BY GC/MS

A total of three (3) soil samples were received on 04/16/11 for Volatile Organics by GC/MS analysis, Method 5035/8260B in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
Samples were analyzed within the prescribed holding time.

Instrument Performance and Calibration
Instrument tune check was performed prior to calibration. Instrument mass ratios were within specification. Multi-calibration points were generated to establish initial calibration (ICAL). ICAL was verified using secondary source (ICV). Continuing calibration (CCV) was carried on at a frequency required by the project. All project calibration requirements were satisfied. Refer to calibration summary forms for ICAL, ICV and CCV for details.

Method Blank
Method blanks were analyzed at the frequency required by the project. For this SDG, two (2) method blanks were analyzed with the samples. All results were compliant to project requirement. Refer to QC result summary form for details.

Lab Control Sample
A set of LCS/LCD was analyzed with the samples in this SDG.
Percent recoveries for VOF3D07L/C were all within QC limits.

Matrix QC Sample
No matrix QC sample was designated in this SDG.

Surrogate
Surrogates were added on QC and field samples. Surrogate recoveries were within project QC limits.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter.

LABORATORY REPORT FOR

CH2M HILL

TAR CREEK OU4

METHOD 3550B/8270C
SEMI VOLATILE ORGANICS BY GC/MS

SDG#: 11D182

CASE NARRATIVE

Client : CH2M HILL

Project : TAR CREEK OU4

SDG : 11D182

SW 3550B/8270C
SEMI VOLATILE ORGANICS BY GC/MS

One (1) soil sample was received on 04/16/11 for Semi Volatile Organics by GCMS analysis, Method SW 3550B/8270C in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
The sample was analyzed within the prescribed holding time.

Instrument Performance and Calibration
Instrument tune check was performed prior to calibration. Instrument mass ratios as well as DDT breakdown were evaluated. Results were within acceptance criteria. Tailing factor for Benzidine and Pentachlorophenol were also verified and results were within the method limits. Multi-calibration points were generated to establish initial calibration (ICAL). ICAL was verified using secondary source (ICV). Continuing calibration (CCV) was carried on at a frequency required by the project. All project calibration requirements were satisfied. Refer to calibration summary forms for ICAL, ICV and CCV for details.

Method Blank
Method blank was analyzed at the frequency required by the project. For this SDG, one method blank was analyzed with the samples. Result was compliant to project requirement.

Lab Control Sample
A set of LCS/LCD was analyzed with the samples in this SDG.
Percent recoveries for SVD025SL/C were all within QC limits.

Matrix QC Sample
No matrix QC sample was designated in this SDG.

Surrogate
Surrogates were added on QC and field samples. Surrogate recoveries were within project QC limits.

Sample Analysis
The sample was analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter.

LABORATORY REPORT FOR

CH2M HILL

TAR CREEK OU4

METHOD 3550B/8270C SIM
SEMI VOLATILE ORGANICS BY GC/MS

SDG#: 11D182

CASE NARRATIVE

Client : CH2M HILL

Project : TAR CREEK OU4

SDG : 11D182

SW3550B/8270CSIM
SEMI VOLATILE ORGANICS BY GC/MS

One (1) soil sample was received on 04/16/11 for PAH BY 8270C SIM analysis, Method SW3550B/8270CSIM in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
The sample was analyzed within the prescribed holding time.

Instrument Performance and Calibration
Instrument tune check was performed prior to calibration. Instrument mass ratios as well as DDT breakdown were evaluated. Results were within acceptance criteria. Tailing factor for Benzidine and Pentachlorophenol were also verified and results were within the method limits. Multi-calibration points were generated to establish initial calibration (ICAL). ICAL was verified using secondary source (ICV). Continuing calibration (CCV) was carried on at a frequency required by the project. All project calibration requirements were satisfied. Refer to calibration summary forms for ICAL, ICV and CCV for details.

Method Blank
Method blank was analyzed at the frequency required by the project. For this SDG, one method blank was analyzed with the samples. Result was compliant to project requirement.

Lab Control Sample
A set of LCS/LCD was analyzed with the samples in this SDG.
Percent recoveries for SVD025SL/C were all within QC limits.

Matrix QC Sample
No matrix QC sample was designated in this SDG.

Surrogate
Surrogate was added on QC and field samples. Surrogate recoveries were within project QC limits.

Sample Analysis
The sample was analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter.

IS1 (DCB) = 1,4-Dichlorobenzene-d4
IS2 (NPT) = Naphthalene-d8
IS3 (ANT) = Acenaphthene-d10

AREA UPPER LIMIT = +100% of internal satndard area
AREA LOWER LIMIT = - 50% of internal standard area
RT UPPER LIMIT = +0.50 minutes of internal standard RT
RT LOWER LIMIT = -0.50 minutes of internal standard RT

Column used to flag internal standard area values with an asterisk
* Values outside of QC limits.

8C

SEMIVOLATILE INTERNAL STANDARD AREA AND RT SUMMARY

Lab Name: EMAX Inc
Lab Code: EMXT
Lab File ID: RDJ006
Instrument ID: TOE4

Project:TAR CREEK OU4
SDG No.: 11D182
Date Analyzed: 04/01/11
Time Analyzed: 10:18

LABORATORY REPORT FOR

CH2M HILL

TAR CREEK OU4

METHOD 3550B/8081A
PESTICIDES

SDG#: 11D182

CASE NARRATIVE

Client : CH2M HILL

Project : TAR CREEK OU4

SDG : 11D182

SW3550B/8081A
PESTICIDES

One (1) soil sample was received on 04/16/11 for Pesticides Organochlorine analysis, Method SW3550B/8081A in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
The sample was analyzed within the prescribed holding time.

Instrument Performance and Calibration
Instrument performance was checked prior to calibration. DDT and Endrin breakdown were within specification. Multi-calibration points were generated to establish initial calibration (ICAL). ICAL was verified using secondary source (ICV). Continuing calibration (CCV) was carried on at a frequency required by the project. All project calibration requirements were satisfied. Refer to calibration summary forms for ICAL, ICV and CCV for details.

Method Blank
Method blank was analyzed at the frequency required by the project. For this SDG, one method blank was analyzed with the samples. Result was compliant to project requirement.

Lab Control Sample
A set of LCS/LCD was analyzed with the samples in this SDG.
Percent recoveries for CPD024SL/C were all within QC limits.

Matrix QC Sample
No matrix QC sample was designated in this SDG.

Surrogate
Surrogates were added on QC and field samples. Surrogate recoveries were within project QC limits.

Sample Analysis
The sample was analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter. Positive sample results were confirmed by a second column. Relative percentage difference (RPD) between the two results were evaluated. If RPD is less than 40% and peaks are well defined the higher result is reported. Where RPD is greater than 40% the chromatogram is checked for anomalies and results are selected based on processed knowledge. If there is no evidence of any chromatographic ambiguity, the higher result is reported.

LABORATORY REPORT FOR

CH2M HILL

TAR CREEK OU4

METHOD 3550B/8082
PCBs

SDG#: 11D182

CASE NARRATIVE

Client : CH2M HILL

Project : TAR CREEK OU4

SDG : 11D182

SW3550B/8082
PCBS

One (1) soil sample was received on 04/16/11 for Polychlorinated Biphenyls (PCBs) analysis, Method SW3550B/8082 in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
The sample was analyzed within the prescribed holding time.

Calibration
Multi-calibration points were generated to establish initial calibration (ICAL). ICAL was verified using a secondary source (ICV). Continuing calibration (CCV) verifications were carried on a frequency specified by the project. All calibration requirements were within acceptance criteria.

Method Blank
Method blank was analyzed at the frequency required by the project. For this SDG, one method blank was analyzed with the samples. Result was compliant to project requirement.

Lab Control Sample
A set of LCS/LCD was analyzed with the samples in this SDG.
Percent recoveries for 60D024SL/C were all within QC limits.

Matrix QC Sample
No matrix QC sample was designated in this SDG.

Surrogate
Surrogates were added on QC and field samples. Surrogate recoveries were within project QC limits.

Sample Analysis
The sample was analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter.

LABORATORY REPORT FOR

CH2M HILL

TAR CREEK OU4

METALS / MERCURY

SDG#: 11D182

CASE NARRATIVE

Client : CH2M HILL

Project : TAR CREEK OU4

SDG : 11D182

METHOD 3050B/6010B
METALS BY TRACE ICP

A total of ten (10) soil samples were received on 04/16/11 for Metals analysis, Method 3050B/6010B in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Initial Calibration was established as prescribed by the method and was verified using a secondary source. Interference checks were performed and results were within required limits. Continuing calibration verifications and continuing calibration blanks were carried out at the frequency specified by the project. All calibration requirements were within acceptance criteria.

Method Blank
Method blank was analyzed at the frequency required by the project. For this SDG, one method blank was analyzed with the samples. Result was compliant to project requirement.

Lab Control Sample
A set of LCS/LCD was analyzed with the samples in this SDG.
Percent recoveries for IPD039SL/C were all within QC limits.

Matrix QC Sample
Matrix QC sample was analyzed at the frequency prescribed by the project.
Percent recoveries were within project QC limits except for one result qualified with [*] in D182-10 M/S summary form, most likely due to matrix interference. Check QC summary form for details.
In addition, analytical spike and serial dilution were analyzed for matrix interference evaluation. Results were within method acceptance criteria.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter.

Client : CH2M HILL

Project : TAR CREEK OU4

SDG : 11D182

METHOD 3050B/6010B
LEAD BY TRACE ICP

A total of three (3) soil samples were received on 04/16/11 for Lead analysis, Method 3050B/6010B in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Initial Calibration was established as prescribed by the method and was verified using a secondary source. Interference checks were performed and results were within required limits. Continuing calibration verifications and continuing calibration blanks were carried out at the frequency specified by the project. All calibration requirements were within acceptance criteria.

Method Blank
Method blank was analyzed at the frequency required by the project. For this SDG, one method blank was analyzed with the samples. Result was compliant to project requirement.

Lab Control Sample
A set of LCS/LCD was analyzed with the samples in this SDG.
Percent recoveries for IPD041SL/C were all within QC limits.

Matrix QC Sample
No matrix QC sample was designated for this SDG. Analytical spike and serial dilution were analyzed for matrix interference evaluation. Results were within method acceptance criteria.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter.
Samples were oven-dried and pass through sieve # 60 prior to digestion.

CASE NARRATIVE

Client : CH2M HILL

Project : TAR CREEK OU4

SDG : 11D182

METHOD 6020A
METALS BY ICP-MS

One (1) soil sample was received on 04/16/11 for Total Metals by ICP-MS analysis, Method 6020A in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
The sample was analyzed within the prescribed holding time.

Calibration
Initial Calibration was established as prescribed by the method and was verified using a secondary source. Interference checks were performed and results were within required limits. Continuing calibration verifications and continuing calibration blanks were carried out at the frequency specified by the project. All calibration requirements were within acceptance criteria.

Method Blank
Method blank was analyzed at the frequency required by the project. For this SDG, one method blank was analyzed with the samples. Result was compliant to project requirement.

Lab Control Sample
A set of LCS/LCD was analyzed with the samples in this SDG.
Percent recoveries for IMD014SL/C were all within QC limits.

Matrix QC Sample
Matrix QC sample was analyzed at the frequency prescribed by the project.
Percent recoveries were within project QC limits except for one result qualified with [*] in D182-14 M/S summary form, most likely due to matrix interference.
Check QC summary form for details.
In addition, analytical spike and serial dilution were analyzed for matrix interference evaluation. Results were within method acceptance criteria.

Sample Analysis
The sample was analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter.

CASE NARRATIVE

Client : CH2M HILL

Project : TAR CREEK OU4

SDG : 11D182

METHOD 7471A
MERCURY BY COLD VAPOR

One (1) soil sample was received on 04/16/11 for Mercury analysis, Method 7471A in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
The sample was analyzed within the prescribed holding time.

Calibration
Multi-calibration points were generated to establish initial calibration (ICAL). ICAL was verified using a secondary source. Continuing calibration verifications were carried out at the frequency specified by the project. All calibration requirements were within acceptance criteria.

Method Blank
Method blank was analyzed at the frequency required by the project. For this SDG, one method blank was analyzed with the samples. Result was compliant to project requirement.

Lab Control Sample
A set of LCS/LCD was analyzed with the samples in this SDG.
Percent recoveries for HGD016SL/C were all within QC limits.

Matrix QC Sample
No matrix QC sample was designated for this SDG. Analytical spike and serial dilution were analyzed for matrix interference evaluation. Results were within method acceptance criteria.

Sample Analysis
The sample was analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter.

I believe the ID and time on the jar are correct and the information on the chain should be changed to match it, but I am confirming that with the sampler. I should be able to let you know for sure tomorrow.

Ye,

Please proceed with total lead on 11G079 without drying/sieving – those samples are chat characterization samples.

On G077-21 what is the sample ID listed on the jar label?

Subject: Samples received today (Tar Creek)

John,

Attached are the COCs/SRFs information for SDGs: 11G077 and 11G079. A few discrepancies were noted. '

11G077

- Please verify the sample ID for G077-21. The ID on label does not match the one in the COC. Collection time also shows 10:55 on label matching collection time of CB223-11-01 instead of CB223-11-02.

-XRF cups will be used for the parameters. Samples will be dried and sieved for Pb.

11G079

- No XRF cups were received. Please confirm that we do not need to dry and sieve the samples prior to analysis for this SDG. Thanks.

Thanks.

Ye,

We need some more custody seals out at Tar Creek – could you please have someone send another 200 or so to the following address? Please ship for overnight delivery – you can use our Fed-Ex account number.

SHIP TO:
ATTN: Kendra Waltermire
Hampton Inn
115 South Deacon Turner Road
Miami, OK 74354
(618)514-2101

Also, you should receive some more Tar Creek samples today or tomorrow and there will be a couple of samples that I need to get rushed on a 3-day TAT. Please rush the following:
CB156-12-01 for zinc and cadmium
CB134-03-01 for zinc and cadmium

Thanks!

FedEx Shipping Label

To prepare your package for shipment, you need to do the following:

1. **Use the Print button in your browser to print this page to your laser printer.**
2. **Fold the first printed page in half and use as the shipping label. The second page is for your records, and contains both the terms and conditions of shipping, and information useful for tracking your package.**
3. **After printing the label, place it in a waybill pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.**

REPORTING CONVENTIONS

DATA QUALIFIERS:

Lab Qualifier	AFCEE Qualifier	Description
J	F	Indicates that the analyte is positively identified and the result is less than RL but greater than MDL.
N		Indicates presumptive evidence of a compound.
B	B	Indicates that the analyte is found in the associated method blank as well as in the sample at above QC level.
E	J	Indicates that the result is above the maximum calibration range.
*	*	Out of QC limit.

Note: The above qualifiers are used to flag the results unless the project requires a different set of qualification criteria.

ACRONYMS AND ABBREVIATIONS:

CRDL	Contract Required Detection Limit
RL	Reporting Limit
MRL	Method Reporting Limit
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
DO	Diluted out

DATES

The date and time information for leaching and preparation reflect the beginning date and time of the procedure unless the method, protocol, or project specifically requires otherwise.

LABORATORY REPORT FOR

CH2M HILL

TAR CREEK OU4

METALS

SDG#: 11G077

CASE NARRATIVE

Client : CH2M HILL

Project : TAR CREEK OU4

SDG : 11G077

METHOD 3050B/6010B
METALS BY TRACE ICP

A total of twenty-four (24) soil samples were received on 07/13/11 for Metals analysis, Method 3050B/6010B in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Initial Calibration was established as prescribed by the method and was verified using a secondary source. Interference checks were performed and results were within required limits. Continuing calibration verifications and continuing calibration blanks were carried out at the frequency specified by the project. All calibration requirements were within acceptance criteria.

Method Blank
Method blanks were analyzed at the frequency required by the project. For this SDG, two (2) method blanks were analyzed with the samples. All results were compliant to project requirement. Refer to QC result summary forms for details.

Lab Control Sample
Two (2) sets of LCS/LCD were analyzed with the samples in this SDG.
Percent recoveries for IPG026SL/C were all within QC limits.
Percent recoveries for IPG027SL/C were all within QC limits.

Matrix QC Sample
Matrix QC samples were analyzed at the frequency prescribed by the project.
Percent recoveries for G077-01G/H were within project QC limits.
Percent recoveries for G077-24M/S were within project QC limits.
In addition, analytical spike and serial dilution were analyzed for matrix interference evaluation. Results were within method acceptance criteria.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter.

EMAX LABORATORIES, INC.

ANALYSIS RUN LOG
for
ICP

Note: For samples and relevant QCs/Standards analyzed, refer to attached analytical sequence.

Start Date: 7/15/11 16:30

End Date: 7/15/11 20:11

SOP #	Rev. #
☑ EMAX-6010	7
☑ EMAX-6010C	1
☐ EMAX-200.7	2
☐ EMAX-	

Comments:

Boron not reportable. Boron in S0, (carryover from previous run).

Book #: AD8-020

Instrument No.: D8

Analytical Batch: 1D86011

Analytical Sequence: S-1166010(V21)

Method File: 1166010(V21)

Database: Emax14

CASE NARRATIVE

Client : CH2M HILL

Project : TAR CREEK OU4

SDG : 11G077

METHOD 3050B/6010B
LEAD BY TRACE ICP

A total of three (3) soil samples were received on 07/13/11 for Lead analysis, Method 3050B/6010B in accordance with USEPA SW-846, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Initial Calibration was established as prescribed by the method and was verified using a secondary source. Interference checks were performed and results were within required limits. Continuing calibration verifications and continuing calibration blanks were carried out at the frequency specified by the project. All calibration requirements were within acceptance criteria.

Method Blank
Method blank was analyzed at the frequency required by the project. For this SDG, one method blank was analyzed with the samples. Result was compliant to project requirement.

Lab Control Sample
A set of LCS/LCD was analyzed with the samples in this SDG.
Percent recoveries for IPG028SL/C were all within QC limits.

Matrix QC Sample
No matrix QC sample was designated for this SDG. Analytical spike and serial dilution were analyzed for matrix interference evaluation. Results were within method acceptance criteria.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. All project requirements were met otherwise anomalies were discussed within the associated QC parameter.
Samples were oven-dried and passed through sieve #60 prior to digestion.
