Ocean Veritas PowerPoint Bullets for 6/1/2010
Operational Period: 6/20/2010 Sampling Period

- The crew reached the first station at 1230 hrs. Due to equipment problems, no CTD casts were completed on 6/20/2010. The crew is currently trying to implement a work-around for the CTD/Flourometer equipment issues, but a permanent fix will be to replace the malfunctioning parts which are expected to arrive sometime on 6/22.

- They were able to report the most recent results from rotifer toxicity bioassays on samples collected during the last successful cruise of this vessel. Only one treatment (OV053, 950m) reached 10% mortality, and no significant mortalities were recording from any (undiluted) field samples. Control mortalities were 3.3%, 6.7% and 6.7% for stations OV052, OV053 and OV054 respectively.
