RE: San Jacinto Waste Pits/090557-01.01

Dear Craig:

Enclosed are the results of the rush samples submitted to our laboratory on November 17, 2010. For your reference, these analyses have been assigned our service request number K1012914.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.caslab.com. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Case Narrative

COLUMBIA ANALYTICAL SERVICES, INC.

Client:	Integral Consulting, Incorporated	**Service Request No.:**	K1012914
Project:	San Jacinto Waste Pits/090557-01.01	**Date Received:**	11/17/10
Sample Matrix:	Sediment and Wipe		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier III validation deliverables including summary forms and all of the associated raw data for each of the analyses. When appropriate to the method, method blank results have been reported with each analytical test.

Sample Receipt

Twenty-eight sediment and three wipe samples were received for analysis at Columbia Analytical Services on 11/17/10. Except as noted on the cooler receipt and preservation form included in this data package the samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4°C upon receipt at the laboratory.

General Chemistry Parameters

No anomalies associated with the analysis of these samples were observed.

Total Metals

Sediment:
No anomalies associated with the analysis of these samples were observed.

Wipe:
Method Blank Exceptions:
The Method Blank contained low levels of Chromium above the Method Reporting Limit (MRL). In accordance with CAS QA/QC policy, all sample results less than twenty times the level found in the Method Blank were flagged as estimated. The samples were not re-extracted and re-analyzed because insufficient sample remained for additional testing.

No other anomalies associated with the analysis of these samples were observed.

Organochlorine Pesticides by EPA Method 8081A

Continuing Calibration Verification (CCV) Exceptions:
The analysis of Chlorinated Pesticides by EPA 8081 requires the use of dual column confirmation. When the CCV criterion is met for both columns, the lower of the two sample results is generally reported. The primary evaluation criteria were not met on the confirmation column for Decachlorobiphenyl in CCV 1125F004 and 1125F026. The results were reported from the column with an acceptable CCV. The data quality was not affected. No further corrective action was necessary.

Relative Percent Difference Exceptions:
The Relative Percent Difference (RPD) for alpha-BHC, gamma-BHC, Aldrin and Heptachlor in the replicate Laboratory Control Sample (LCS) analyses (KWG1012935-2 and KWG1012935-3) was outside control criteria. The analytes in question were not detected in the associated field samples. All spike recoveries in the LCS and DLCS

Approved by Gregory Delatte **Date** 12/1/10

were within acceptance limits, indicating the analytical batch was in control. The data was flagged to indicate the problem.

Elevated Detection Limits:
The detection limit was elevated for at least one analyte in a few samples. The chromatogram indicated the presence of non-target background components. The matrix interference prevented adequate resolution of the target compounds at the normal limit. The results were flagged to indicate the matrix interference.

Sample Confirmation Notes:
The confirmation comparison criteria of 40% difference for 4,4'-DDT was exceeded in a few samples . The lower of the two values was reported when there was an apparent interference on the alternate column that produced the higher value.

No other anomalies associated with the analysis of these samples were observed.

PCB Aroclors by EPA Method 8082

No anomalies associated with the analysis of these samples were observed.

Volatile Organic Compounds by EPA Method 8260B

No anomalies associated with the analysis of these samples were observed.

Semivolatile Organic Compounds by EPA Method 8270C

Sediment:
Relative Percent Difference Exceptions:
The Relative Percent Difference (RPD) criterion for 2,4-Dinitrophenol in the replicate Laboratory Control Sample(s) (LCS/DLCS) KWG1012700-3 and KWg1012700-4 was not applicable because the analyte concentration was not significantly greater than the Method Reporting Limit (MRL). Analytical values derived from measurements close to the detection limit are not subject to the same accuracy and precision criteria as results derived from measurements higher on the calibration range for the method.

Elevated Detection Limits:
The detection limits were elevated for numerous samples. The sample extracts were diluted prior to instrumental analysis due to relatively high levels of non-target background components. Clean-up of the extracts was performed within the scope of the method, but did not eliminate enough of the background components to prevent dilutions. Semi-quantitative screens were performed prior to final analysis. The results of the screening indicated the need to perform dilutions.

Sample Notes and Discussion:
Benzidine is searched for and quantitated as a Tentatively Identified Compound (TIC). Quantitative standards are not analyzed for this analyte.

Wipe:
Continuing Calibration Verification (CCV) Exceptions:
The upper control criterion was exceeded for N-Nitrosodimethylamine in CCV MS06\1129F004.D. The field samples analyzed in this sequence did not contain the analyte in question. Since the apparent problem indicated a potential high bias, the data quality was not affected. No further corrective action was required.

Surrogate Exceptions:
The control criteria were exceeded for Phenol-d6 and 2,4,6-Tribromophenol in FW0002. A re-analysis was not performed because insufficient sample was available. The low recovery equates to a potential low bias in associated analyte results. No further corrective action was possible.

Approved by _____ **Date** 12/1/10

Sample Notes and Discussion:
A Matrix Spike/Matrix Spike Duplicate (MS/MSD) was not extracted with this sample batch. A Laboratory Control Sample/Duplicate Laboratory Control Sample (LCS/DLCS) was analyzed and reported in lieu of the MS/MSD for these samples.

Benzidine is reported as a Tentatively Identified Compound (TIC). There were no quantitative standards analytes for this analyte.

No other anomalies associated with the analysis of these samples were observed.
