West Fertilizer Plant Explosion
Summary of Mobile Air Monitoring Data
Reporting Period 04/18/2013

EPA conducted mobile air monitoring in the residential neighbor hoods surrounding the incident location. EPA monitored for carbon monoxide (CO), ammonia (NH_3), volatile organic compounds (VOCs), lower explosive limit (LEL), and oxygen (O_2). A summary of the air monitoring data collected during this reporting period is provided below.

Table 1 – Summary of Mobile Air Monitoring Locations

Collection Time	Parameter	Count of Readings	Count of Detects	Average Concentration	Maximum Detection	Units
11:50 - 12:30	CO	335	0	0.0	0.0	ppm
