Case#: **42764**

SDG#: **F6AC0**

The EPA Region 6 Environmental Services Branch ESAT data review team has completed a review of the submitted Contract Laboratory Program (CLP) data package for the referenced site. The samples analyzed and reviewed are detailed in the attached Regional data review report. Substantial moisture content in the sediment samples required that the reporting limits be elevated. Some non-detects exceeded the desired reporting levels.

The data package is acceptable for regional use. Problems, if any, are listed in the report narrative. If you have any questions regarding the data review report, please contact me at (281) 983-2139.

COMMENTS:

I. LEVEL OF DATA REVIEW

Modified CADRE Review was performed for this data package.

II. CONTRACTUAL ASSESSMENT OF THE DATA PACKAGE

The CCS reported one holding time issue and several calibration issues, and the calibration issues caused data qualification.

III. TECHNICAL USABILITY ASSESSMENT OF THE DATA PACKAGE

Some results were qualified because of technical problems, and the significant problems are listed below.

A. LMVOA samples F6AD5, F6AD6, F6AD9RE, and F6AF7 had poor DMC performance.

B. LMVOA samples F6AC9, F6AD0, F6AD2, and F6AE0RE had low IS3 responses, rendering the associated results unusable.

C. Ten BNA samples had poor DMC performance, and several results were qualified as unusable for sample F6AD6 because of an extremely low DMC recovery.

ACTION ITEMS:

AREA OF CONCERN: LMVOA Samples F6AD5, F6AD6, F6AD9RE, and F6AF7 had poor DMC performance. Samples F6AC9, F6AD0, F6AD2, and F6AE0RE had low IS3 responses, rendering the associated results unusable. **BNA** Hexachlorocyclopentadiene, 2,4-dinitrophenol, 4,6-dinitro-2-methylphenol, and pentachlorophenol failed technical %D calibration criteria. Ten samples had poor DMC performance, and the extremely low SDMC9 recovery caused some results to be qualified as unusable for sample F6AD6. **PEST** The γ-BHC, heptachlor, aldrin, and endrin had low MS and/or MSD recoveries. One β-BHC result was qualified because of inconsistent two-column concentrations. **ARO** Aroclor-1260 had inconsistent two-column concentrations for two samples.

COMMENTS/CLARIFICATIONS
REGION 6 CLP QA REVIEW

CASE 42764 **SDG** F6AC0 **SITE** Delta Shipyard **LAB** MITKEM

COMMENTS: This SDG consisted of 20 soil samples for LMVOA, BNA, PEST, and ARO analyses following CLP SOW SOM01.2. BNA sample F6AD5 was analyzed at the medium level. The rest of the BNA samples and all LMVOA samples were low level samples. MS/MSD analyses were requested only for the PEST and ARO fractions, and sample F6AC0 was designated for this purpose as indicated on the COC Records.

The SOW requires that the soil sample results be adjusted for moisture content and dilution, which raised the QLs above the CRQLs listed in the SOW. The adjusted CRQLs were reported by the laboratory and are referred to as SQLs in this report.

The target compounds of concern are benzene, ethylbenzene, toluene, xylene, phenanthrene, fluoranthene, pyrene, benzo(a)anthracene, chrysene, benzo(b)fluoranthene, and benzo(a)pyrene with each having a desired detection limit of the CRQL specified in the SOW. Some target compounds of concern were reported at concentrations above the desired detection limits for BNA samples F6AD4, F6AD5, F6AD6, F6AD7, F6AE1, F6AE2, and F6AF2 although some of these concentrations were below the SQLs.

LMVOA samples F6AC9, F6AD0, F6AD2, F6AD9, and F6AE0 were reanalyzed because of unacceptable IS and/or DMC performance. The reanalyses had the same problems, demonstrating matrix effect. To minimize data qualification, the reviewer designated for use results for LMVOA samples F6AC9, F6AD0, F6AD2, F6AD9RE, and F6AE0RE unless otherwise specified. BNA sample F6AD6 was reanalyzed at dilution because of high naphthalene and 2-methylnaphthalene concentrations.

Modified CADRE Review was performed for this package as requested by the Region. For this review option, the CCS and CADRE primarily determine the laboratory contractual compliance and the technical usability of the sample results, respectively. The reviewer performs supplemental hardcopy forms checking and applies Region 6 guidelines, where necessary, to account for known limitations of the electronic review process. Therefore, the reviewer's final assessments may deviate from those found in the CADRE report. The CADRE narrative for the SDG is attached to this report as an addendum for additional information.

DATA ASSESSMENT: The QC problems affecting data usability are addressed below.

LMVOA

- The 1,4-dioxane failed the technical minimum RRF criteria for all calibrations. However, since the raw data for all calibrations demonstrated the instrument sensitivity at the CRQL, data qualification was unnecessary in the reviewer's opinion.

- The reviewer qualified as estimated and biased low the analyte results associated with VDMC10 for sample F6AD6 and VDMC4 for sample F6AD9RE because the recoveries for these DMCs were below the QC limits. Sample F6AD9RE also had a low VDMC10 recovery. To minimize data qualification, the reviewer recommends that results associated with VDMC10 be taken from sample F6AD9 where the VDMC10 recovery was acceptable.

- The reviewer qualified as estimated and biased high the 2-butanone result for sample F6AF7 and the methylcyclohexane result for sample F6AD5 because the associated DMCs had recoveries above the QC limits.

- The IS3 responses for samples F6AC9, F6AD0, F6AD2, and F6AE0RE were below the QC limits, so the reviewer qualified as unusable the analyte results associated with IS3 for these samples.

BNA

- The reviewer qualified the results for the following analytes as estimated for all samples because these analytes failed the technical %D criteria for the associated CCVs: hexachloro-cyclopentadiene, 2,4-dinitrophenol, 4,6-dinitro-2-methylphenol, and pentachlorophenol.

- The reviewer qualified the positive results as estimated and biased low and non-detect results as unusable for the analytes associated with SDMC9 for sample F6AD6 because this DMC had an extremely low recovery (<10%).

- The reviewer qualified as estimated and biased low the results associated with the DMCs for the samples listed below because these DMCs had recoveries below the QC limits.

Sample	DMC
F6AD6	SDMC16
F6AD7	SDMC7, SDMC16
F6AD8	SDMC7, SDMC16
F6AD9	SDMC7, SDMC16
F6AE0	SDMC16
F6AE2	SDMC9, SDMC16
F6AF3	SDMC12
F6AF5	SDMC9, SDMC12
F6AF6	SDMC12, SDMC15, SDMC16
F6AF7	SDMC9, SDMC12, SDMC15, SDMC16

PEST

- The γ-BHC, heptachlor, aldrin, and endrin had low MS and/or MSD recoveries on one or both columns. Therefore, the reviewer qualified the results for these analytes as estimated for unspiked sample F6AC0.

- The β-BHC result >SQL for sample F6AD5 was qualified as estimated because the two-column concentrations differed by more than 25%, indicating possible matrix interference.

ARO

The Aroclor-1260 results >SQLs for samples F6AD6 and F6AD8 were qualified as estimated because the two-column concentrations differed by more than 25%, indicating possible matrix interference.

OVERALL ASSESSMENT: Some results were qualified for eight LMVOA, all BNA, two PEST, and two ARO samples because of problems with calibration, DMC recovery, MS/MSD performance, IS performance, and/or compound quantitation. ESAT's final data qualifiers in the DST indicate the technical usability of all reported sample results. An Evidence Audit was conducted for the CSF, and the audit results were reported on the Evidence Inventory Checklist.

The laboratory was contacted for one CSF issue that did not impact the DST (see Resubmission Request), so the DST included in this report is the final version.
