Assessment

EPA is the lead agency investigating an unpleasant odor with associated health symptoms in John Day. The EPA team will be performing a door-to door survey of households and businesses in the area over the weekend.

Surveillance

OPHD is monitoring emergency department visits and has offered support to EPA investigation. Oregon DEQ is integral to response.

Communications

EPA will update their website on the response as information becomes available [http://www.epaosc.org/johnday]http://www.epaosc.org/johnday.

EPA is developing FAQ and listing EPA and LHD contacts for consumer questions.

EPA will share talking points and OPHD will identify a spokesperson as more information about odors becomes available.
