RE: Project: RCRA
Pace Project No.: 10316058

Dear Ericka Vallance:
Enclosed are the analytical results for sample(s) received by the laboratory between July 29, 2015 and July 30, 2015. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kabor Xiong

PROJECT NARRATIVE

Project: RCRA
Pace Project No.: 10316058

Method: **EPA 6010**
Description: 6010 MET ICP
Client: FMC
Date: August 11, 2015

General Information:
19 samples were analyzed for EPA 6010. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3010 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: MPRP/56575

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 10316058019

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 2038938)
  - Potassium
- MSD (Lab ID: 2038939)
  - Potassium

PROJECT NARRATIVE

Project: RCRA
Pace Project No.: 10316058

Method: **EPA 6020**
Description: 6020 MET ICPMS
Client: FMC
Date: August 11, 2015

General Information:
19 samples were analyzed for EPA 6020. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3020 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

QUALIFIERS

Project: RCRA
Pace Project No.: 10316058

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-M	Pace Analytical Services - Minneapolis

ANALYTE QUALIFIERS

M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
M6	Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

RE: Project: FMC RCRA
Pace Project No.: 10316268

Dear Ericka Vallance:
Enclosed are the analytical results for sample(s) received by the laboratory between July 30, 2015 and July 31, 2015. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kabor Xiong

PROJECT NARRATIVE

Project: FMC RCRA
Pace Project No.: 10316268

Method: **EPA 6010**
Description: 6010 MET ICP
Client: FMC
Date: August 13, 2015

General Information:
20 samples were analyzed for EPA 6010. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3010 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: MPRP/56575

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 10316058019

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 2038938)
  - Potassium
- MSD (Lab ID: 2038939)
  - Potassium

QC Batch: MPRP/56634

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 10316268014,10316268019

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 2038903)
  - Potassium
- MSD (Lab ID: 2038902)
  - Potassium
- MSD (Lab ID: 2038904)
  - Potassium

QUALIFIERS

Project: FMC RCRA
Pace Project No.: 10316268

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-M	Pace Analytical Services - Minneapolis
PASI-V	Pace Analytical Services - Virginia

ANALYTE QUALIFIERS

FS	The sample was filtered in the laboratory prior to analysis.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
M6	Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

FMC Corporation, Pocatello, Idaho

RCRA Groundwater Monitoring Program

Fourth Quarter 2015

SDGs 10328875 and 10329150

31 December 2015

Prepared by: Bruce K. Wallin, PhD

1. INTRODUCTION

This memo summarizes the Site Chemist's usability evaluation of the technically reviewed groundwater results generated by Pace Analytical Services, Inc., Minneapolis, MN (PASI-M) and Pace Analytical Services, Inc., Virginia, MN (PASI-V) for FMC's fourth quarter 2015 Resource Conservation and Recovery Act (RCRA) sampling event for the laboratory sample SDGs listed above. The samples were collected from 4-6 November 2015. All samples were analyzed for elements and wet chemistries.

For elements, laboratory analyses were performed on all samples in accordance with the U.S. Environmental Protection Agency (USEPA) SW-846 Methods 6010B (cadmium, potassium, and phosphorus (PASI-V)) and 6020 (arsenic and selenium), for chloride, fluoride, nitrate, and sulfate by Method 9056A, orthophosphate by SM4500P-E from Standard Methods for the Examination of Water and Wastewater, ammonia by Method 350.1, and fluoride from wells providing evidence of interference in method 9056A that were also analyzed by Method SM4500-F-C. All of the above methods are hereafter referred to as "Methods". A list of the parameters and associated methods utilized is provided in Table 1-1.

TABLE 1-1. FOURTH QUARTER 2015
RCRA MONITORING EVENT PARAMETERS AND ANALYTICAL METHODS

PARAMETER	SM (1) METHOD	MCAWW(2) METHOD	SW-846(3) METHOD
Cd, P, and K			6010B
As, Se			6020
ammonia - N		350.1	
chloride			9056A
fluoride	4500-F-C		9056A
nitrate			9056A
ortho-phosphate	4500-P E		
sulfate			9056A

NOTES:

(1) "Standard Methods for the Examination of Water and Wastewater",

(2) "Methods for Chemical Analysis of Water and Wastes", EPA-600/4-79-020, March 1983 and subsequent revisions.

(3) "Test Methods for Evaluating Solid Waste, Physical/ Chemical Methods", Third Edition, November 1996 and subsequent revisions.

The data were technically reviewed based on method specifications, and laboratory-developed performance criteria by adapting the procedures set forth in the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review, USEPA Office of Solid Waste and Emergency Response, EPA-540-R-04-004, October 2004, and USEPA Contract Laboratory Program National Functional Guidelines for Low Concentration Organic Data Review, Final, OSWER 9240.1-34, EPA540-R-00-006, June 2001 (Guidelines).

For all parameters, a Level III technical review was performed for these SDGs, which included a review/evaluation of all quality control summary forms. Raw data, preparation logs, instrument printouts, notebook records and forensic deliverables provided by the laboratory were not evaluated.

A detailed description and summary of these efforts is provided in the Technical Review Reports in Appendix A.

The following validation/usability report is the result of a collective assessment of all information associated with the analytical results available. The information includes the project-specific data quality objectives (DQOs) specified in the RCRA Interim Status Groundwater Monitoring Plan, as updated in the RCRA Post Closure Plans (FMC, 1999), as well as historical data, site knowledge, and the technical review results.

2. SUMMARY OF USABILITY ISSUES

The data technical review reports indicate which laboratory results are considered non-compliant when compared to the requirements set forth in the relevant documents. However, most of these exceptions are minor quality control problems and do not affect data usability. The cases where the exceptions may impact data usability are discussed in the following sections. In most cases these problems are typical analytical difficulties or are the result of sample matrix problems. A summary of data quality goals and observations is provided in Table 2-1.

DATA USABILITY SUMMARY

For samples 511131, 511114, 511156,511157, and 511601 only the fluoride result from the ISE method should be used since they were significantly higher than the IC result.

For this event no additional data were considered unusable.

TABLE 2-1 DATA QUALITY SUMMARY: FMC GROUNDWATER MONITORING PROGRAM
FOURTH QUARTER 2015 RCRA SAMPLING EVENT

DATA QUALITY INDICATOR	PURPOSE	METHOD OF MEASUREMENT & EVALUATION	GOAL	SUMMARY OF RESULTS
Precision	Reproducibility of results	1. Collocated samples	S & D >5RL, RPD <30, S &/or D <5RL, S-D <2RL	*All criteria were met - no flagging was required or deemed necessary.*
		2. Laboratory replicates	S & D >5RL, RPD <20, S &/or D <5RL, S-D <RL	*All criteria were met - no flagging was required or deemed necessary.*
Accuracy	Proximity of result to true value	1. Calibration	Meet method/guidance criteria	*SDG 10328875 CRI cadmium >110%. Positive result <2PQL in 511180 (J+). SDG 10328875 CRI selenium <90%. Result <2PQL in 511131 (J+).*
		2. Laboratory control samples	Meet lab-developed or method criteria	*All criteria were met - no flagging was required or deemed necessary.*
		3. Matrix spikes/Serial Dilutions	Meet lab-developed or method criteria	*Both SDGs all IC MS/MSD low. All results (J-). SDG 10329150 MS/MSD o-PO4 high. Positive results (J+). SDG 10329150 serial dilution K high. All results (J).*
Representativeness	Sample integrity and sampling precision	1. Collocated samples	S & D >5RL, RPD <30, S &/or D <5RL, S-D <2RL	*See Item 1 above.*
		2. Blanks	Sample results ND or >5X blank	*Positive results for NH3 in some samples flagged as not-detected (U) due to blank contamination Should be considered maximum potential concentrations.*
		3. Holding times	Per method	*No deviations requiring actions.*
		4. Preservation	Per method	*All criteria were met - no flagging was required or deemed necessary.*
Comparability	Consistent practices	Use of and adherence to appropriate analytical methods	Compliance with required USEPA methods	*Method compliance achieved, goal met for all samples.*
Completeness	Obtain intended information from the event	Comparison of planned vs usable data obtained	>90% of planned	*Completeness 100%*
Consistency	Expansion of historical database	Comparison with historical statistics	Meet completeness objective	*Modest outliers, no significant trends apparent. Continue evaluation.*

3. DATA VALIDATION RESULTS

To determine the ultimate utility of data, the following indicators were evaluated:

3.1 PRECISION, ACCURACY, REPRESENTATIVENESS, COMPARABILIITY, COMPLETENESS AND CONSISTENCY

3.1.1 PRECISION

Precision is a quantitative determination of the reproducibility of an analytical value. For this program, collocated samples are collected to assess overall precision of the sampling, preparation and analytical process, and matrix spike/matrix spike duplicates are required to address aliquoting reproducibility in order to provide information on matrix reproducibility otherwise unobtainable from samples reported below the reporting limits. Matrix spikes also provide an indication of the accuracy of native results: this will be discussed in the accuracy section.

The collocated samples further address the ability to obtain a representative sample of the medium studied, this will be discussed further in the representativeness section. For elemental parameters, the methods require the preparation of laboratory replicates at a specified frequency to address aliquoting precision.

For laboratory replicates the Guidelines specify the utilization of difference criteria for samples providing values below a limiting value and relative percent difference (RPD) criteria for samples providing values above a limiting value. The Guidelines utilize 5X the contract required detection limit (CRDL). These specifications are as follows:

When either one or both of the analyses provide results below the limiting value, the following criteria apply:

$$|S - R| \leq CRDL$$

Where: S = sample value
R = replicate sample value

When both of the analyses provide results above or equal to the limiting value, the following criteria apply:

$$RPD = (|S - R|/S + R)200 \leq 20$$

Where: RPD = Relative Percent Difference

The QAPjP provides an RPD specification of 20 percent for laboratory replicates for elements, but does not provide specific criteria for low level results or collocated samples. The Guidelines do not provide precision criteria for collocated samples. The technical reviewer utilized the 20 percent RPD criteria specified in the QAPjP and Guidelines and the low-level criteria above specified in the Guidelines with the substitution of the laboratory reporting limit (RL) for the CRDL where they differed. For collocated samples, the technical reviewer utilized the 2 RL and RPD <30 criteria specified in the USEPA Region I Laboratory Data Validation Functional Guidelines for Evaluating Inorganics Analyses, June 13, 1988.

For this event all replicate sample precision was within specification.

For this event the following are collocated samples:

SDG	SAMPLE	COLLOCATED SAMPLE
10328875	511124	511600
10329150	511156	511601

Note: All parameters were reported to standard laboratory reporting limits (PQL) which approximate estimated quantitation limits (EQL) specified in the methods. The technical reviewer utilized the PQL values to conduct the precision analysis.

For this event all collocated sample precision was within specification.

For all parameters, the laboratories reported to their practical quantitation limits (PQL) and for levels below the PQL to the method detection limit (MDL) flagged with a "J" qualifier. The MDL described in 40 CFR Part 136, Appendix B and incorporated by reference in SW-846, provides a precision of ± 100 percent. With some exceptions the PQL values used by the laboratory, approximate the estimated quantitation limit (EQL) which is established at approximately 5-10X the MDL in SW-846. At 5X the MDL the EQL precision is approximately ± 30 percent. As a result reported positive but below the PQL, but above the MDL should be considered estimates. ***The project manager is cautioned that the imprecision associated with the project-required reporting conventions must be taken into consideration when utilizing the data below the PQL.***

3.1.2 ACCURACY

Accuracy is the proximity of the reported analytical value to the true concentration in the sample. To estimate the proximity factor, laboratory control, laboratory blank and environmental samples are fortified with the parameter of interest, and for organics analysis, each sample is also fortified with surrogate indicators, and the level recovered, expressed as a percentage of the spiking level, is utilized. For laboratory control samples (LCS), the analytical values must be within either a published range or within laboratory or method established windows about the true concentration.

If these conditions are not met, the method is to be considered out of control, corrective action taken, and the entire process repeated with compliant LCS before the associated data can be reported. For elements, laboratory blanks are spiked with low-level reference materials for ICP (CRI). According to the Guidelines associated analytical values must fall within ± 20 percent of the true value or all the potential impact on all environmental sample results associated with the non-compliant CRI must be evaluated during technical review using professional judgment. The technical reviewer has considered that all

associated sample results reported at values <2PQL are evaluated for CRI recoveries <80 percent, both positive results and non-detects are flagged as estimated with the potential for low bias (J-), and for CRI recoveries >120 percent, positive results only are flagged as estimated with the potential for high bias (J+).

For the recovery of spiked parameter from environmental samples, the quantity of parameter matrix spiked (MS) must be large enough to be uniquely distinguishable from the level of native analyte present in the sample. When this condition exists, if the recovery value is outside established values, all associated environmental samples are flagged as estimated (J) with an indication of bias direction during technical review. The Guidelines establish that the native level of analyte must be less than four times the spiking level for valid accuracy estimation.

The formula utilized is as follows:

Percent Recovery = ((SSC - USC)/CS))100

Where: SSC = Spiked Sample Concentration
USC = Unspiked Sample Concentration
CS = Concentration Spiked

For elements, the QAPjP establishes acceptance criteria at 70-130 percent that are less stringent than the 75-125 percent specified in the Guidelines. The QAPjP does not specify accuracy criteria for water quality parameters. The technical reviewer has utilized the laboratory-derived limits, as required by SW-846 methods, and the more stringent 75-125 percent criteria specified in the Guidelines where laboratory-established limits were not provided for the water quality parameters.

For elements analyzed by ICP, the method requires assessment of matrix interference by performing serial dilution analyses in addition to the matrix spike indicated above. The Guidelines suggest that, for samples containing sufficient signal in the undiluted sample

(>50IDL) that the diluted result should be within 10 percent of the undiluted value to verify absence of interference.

Initial and continuing calibrations are performed to verify instrument performance and stability prior to and during the analysis of environmental samples. The Methods require that the initial calibration linearity coefficients are $\geq$ 0.995, the continuing calibration stabilities are within 90-110 percent and, for elements, the Guidelines require consideration of blanks indicating a negative instrument drift >|IDL|. The technical reviewer has utilized the flagging criteria suggested in the Guidelines for lack of linearity and continuing calibration stability, and has utilized professional judgment for actions for non-compliant instrument drift associated with samples with levels reported at <5 IDL.

For both SDGs several samples provided MS/MSD recoveries of all IC parameters below the lower limit. The results reported for these parameters in all environmental samples associated with the SDGs are flagged as estimated with the potential for low bias (J-). ***These results are considered usable when the bias factors are taken into account. Doing so will have no impact on the decision since no Standards are established for these parameters.***

For SDG 10329150 samples 511121 and 511108 provided MS/MSD recoveries of o-phosphate-P above the upper limit. The positive results reported for this parameter in all samples associated with the SDG are flagged as estimated with the potential for high bias (J+). ***These results are considered usable when the bias factors are taken into account. Doing so will have no impact on the decision since no Standard is established for this parameter.***

For SDG 10329150 sample 511123 provided an ICP serial dilution result for potassium 13.5% larger than the undiluted value. The results reported for this element in all environmental samples associated with the SDG are flagged as estimated (J). ***These***

results are considered usable when the bias factor is taken into account. Doing so will have no impact on the decision since no Standard is established for this element.

For SDG 10328875 the CRI provided a recovery of cadmium in excess of 110%. The positive result reported <2 PQL in sample 511180 is flagged as estimated with the potential for high bias (J+). ***This result is considered usable when the bias factor is taken into account. Doing so will have no impact on the decision since the un-adjusted value is below the Standard.***

For SDG 10328875 the CRI provided a recovery of selenium below 90%. The result reported <2 PQL in sample 511131 is flagged as estimated with the potential for low bias (J-). ***This result is considered usable when the bias factor is taken into account. Doing so will have no impact on the decision since the adjusted value is below the Standard.***

For this event all additional accuracy criteria were met.

3.1.3 REPRESENTATIVENESS

To perform a valid environmental assessment, the samples, when analyzed, must be representative of the media under study. Factors influencing representativeness include preparation of wells prior to sampling to obtain aliquots of the groundwater strata of interest. This is accomplished through purging of standing water to constant temperature, conductivity and pH prior to collecting the sample. Collocated samples are also collected to provide information regarding the ability to reproducibly collect a sample. If reproducibility is not obtained, representativeness is not verified. The sample must be collected with uncontaminated equipment, placed in uncontaminated containers, and not contaminated throughout the transport, receipt, storage, preparation and analytical processes. Evaluation of the potential for contamination is conducted through collection of field blanks, and utilization of laboratory process blanks. Once the sample has been collected, it is maintained in such a state that changes are not expected to occur in its

concentration of target parameters. This is accomplished by chemical and physical preservation, and minimization of time from collection to analysis.

A review of the sample receipt logs indicate that preservation requirements were met, therefore, no action was taken.

Blanks were reported with ammonia-N present at concentrations that generated action levels resulting in the flagging of the positive values reported for several samples as not-detected (U) at the reported values. ***These results are considered usable as maximum potential concentrations.***

3.1.4 COMPARABILITY

The characteristic of comparability reflects both the internal consistency of measurements and the expression of results in units that are consistent with other organizations reporting similar data. Each value reported for a given measurement should be similar to other values within the same data set and with other related data sets. Comparability was assured through the use of standardized sampling procedures and USEPA analytical methods.

3.1.5 COMPLETENESS

Completeness is a measure of the extent of attainment of usable data points from an investigation. For this program a completeness goal of 85 percent is established in the QAPjP. The ability to obtain a sample, (human) error and sample characteristics are major contributors to reduced completeness. For this investigation, all intended samples were collected and received by the laboratory. The laboratory analyzed all of the samples for all of the intended parameters. Completeness for this event is, therefore, 100 percent.

3.1.6 CONSISTENCY

Consistency is a measure of the reasonableness of data to those that have been previously generated. For this program, an extensive data base has been developed that allows the evaluation of analytical results that may represent historical outliers. Based on a comparison to the historical results, a few sporadic differences were noted for this monitoring event; however, the overall results are within the existing variance.

31 December 2015

Prepared by: Bruce K. Wallin, PhD

This memo summarizes the technical review of groundwater results generated by PASI-M and PASI-V for FMC's fourth quarter 2015 Resource Conservation and Recovery Act (RCRA) sampling event for the laboratory SDGs listed above. The samples associated with all SDGs were analyzed for elements and wet chemistries.

For elements laboratory analyses were performed in accordance with the U.S. Environmental Protection Agency (USEPA) SW-846 Methods, and for wet chemistries, methods from Standard Methods for Examining Water and Wastewater and Methods for Chemical Analysis of Water and Wastes, EPA-600/4-79-020, Revised March 1983. All of the above methods are hereafter referred to as "Methods". A list of the parameters and associated methods utilized is provided in Table 1-1.

TECHNICAL REVIEW REPORT

SDG 10328875

ELEMENTAL PARAMETERS

TECHINCAL REVIEW REPORT

SDG 10328875

ELEMENTAL PARAMETERS

The data evaluation was based on USEPA SW-846 Method 6010B for cadmium, and potassium, and 6020 for arsenic and selenium (Methods) and included the following parameters:

- calibration
- blanks
- * ICP interference check sample
- * matrix spike analysis
- duplicate sample analysis
- * laboratory control sample analysis
- * ICP serial dilution analysis
- * ICPMS internal standard analysis
- detection limits
- overall assessment

* All criteria were met for this parameter.

Table A-1 summarizes the technical review actions that are detailed below.

Data validation, described in SW-846 and the Guidelines, which includes an evaluation of the usability of technically reviewed results with respect to project Data Quality Objectives and site chemistry knowledge, is included in the Data Validation/Usability Report.

CALIBRATION:

Low-level check standards (CRI) providing recoveries not within 90-110% are tabulated below:

CRI DATE/TIME	ELEMENT	% RECOVERY
11-06/16:36	cadmium	115.2
11-13/15:02	potassium	88.7
11-16/21:30	selenium	85.0

Associated samples requiring action:

CRI DATE/TIME	ELEMENT	ASSOCIATED SAMPLES
11-06/16:36	cadmium	511180
11-16/21:30	selenium	511131

Action:

- For recovery above the upper limit positive result reported <2PQL is flagged as estimated with the potential for high bias (J+).
- For recovery below the lower limit result reported <2PQL is flagged as estimated with the potential for low bias (J-).

Comments:

Only calibrations bracketing samples associated with this SDG are evaluated.

BLANKS:

Comments:

Only calibration blanks bracketing the samples associated with the SDG were evaluated.

DUPLICATE SAMPLE ANALYSIS:

Comments:

For this SDG sample 511600 is collocated with sample 511124. For this collocated sample pair all precision limits specified in the QAPP were met.

DETECTION LIMITS:

For this SDG, the laboratory was required to report results to their method detection limit (MDL). The MDL (described in 40CFR Part 136, Appendix B and incorporated by reference in SW-846), provides an error band, by definition, of ± 100 percent. The Estimated Quantitation Limit (EQL), is established at 5-10X the MDL in SW-846.

Action:

- Positive results reported between the MDL and PQL are flagged as estimated (J).

Comments:

The data user is cautioned that these results may not be analytically reproducible or statistically valid.

OVERALL ASSESSMENT:

The positive result reported <2PQL for cadmium in sample 511180 is flagged as estimated with the potential for high bias (J+) due to non-compliant CRI recovery.

The result reported <2PQL for selenium in sample 511131 is flagged as estimated with the potential for low bias (J-) due to non-compliant CRI recovery.

Positive results reported between the MDL and PQL are flagged as estimated (J) due to uncertainty at the low level.

All additional QC results reviewed were within specification and no further actions or qualifiers were necessary.

TABLE A-1.

TECHNICAL REVIEW ACTION SUMMARY

SDG 10328875

Arsenic	
Cadmium	J1, J+1
Potassium	
Selenium	J1, J-1

If the field is left blank no actions or qualifications were necessary.

J1	-	Positive result is flagged as estimated (J) due to uncertainty at the low level.
J-1	-	Result <2PQL is flagged as estimated with the potential for low bias (J-) due to non-compliant CRI recovery.
J+1	-	Positive result <2PQL is flagged as estimated with the potential for high bias (J+) due to non-compliant CRI recovery.

TECHNICAL REVIEW REPORT

SDG 10329150

ELEMENTAL PARAMETERS

TECHINCAL REVIEW REPORT

SDG 10329150

ELEMENTAL PARAMETERS

The data evaluation was based on USEPA SW-846 Method 6010B for cadmium, potassium, and selected samples for phosphorus, and 6020 for arsenic and selenium (Methods) and included the following parameters:

- calibration
- blanks
- * ICP interference check sample
- matrix spike analysis
- duplicate sample analysis
- * laboratory control sample analysis
- ICP serial dilution analysis
- * ICPMS internal standard analysis
- detection limits
- overall assessment

* All criteria were met for this parameter.

Table A-2 summarizes the technical review actions that are detailed below.

Data validation, described in SW-846 and the Guidelines, which includes an evaluation of the usability of technically reviewed results with respect to project Data Quality Objectives and site chemistry knowledge, is included in the Data Validation/Usability Report.

<u>CALIBRATION</u>:

Comments:

Only calibrations bracketing samples associated with this SDG are evaluated.

BLANKS:

Blanks providing positive results and their associated 5X action levels are tabulated below:

BLANK ID.	ELEMENT	CONC. (mg/L)	ACTION LEVEL (mg/L)
CCB 11-16/19:10	potassium	0.191	0.955

Associated samples with positive results reported below the action level: NONE

Comments:

Only calibration blanks bracketing samples associated with the SDG were evaluated.

MATRIX SPIKE ANALYSIS:

Samples providing matrix spike (MS)/MS duplicate (MSD) recoveries or precision not within the laboratory-derived limits when the native level is reported at less than four times the spiking level are tabulated below:

SAMPLE ID.	ELEMENT	MS/MSD RECOVERY (%)
511123	potassium	/35

Action:

- None, see comments.

Comments:

For recovery no action is applied when only one of the MS/MSD pairs is out of specification.

Sample 511157 was also matrix spiked in duplicate and the native level of potassium exceeded four times the spiking level, therefore, this parameter could not be evaluated.

DUPLICATE SAMPLE ANALYSIS:

Comments:

For this SDG sample 511601 is collocated with sample 511156. For this collocated sample pair all precision limits specified in the QAPP were met.

For those samples analyzed for phosphorus by Methods 6010 and SM4500-P-E acceptable precision values were reported.

ICP SERIAL DILUTION ANALYSIS:

Samples with levels of element reported >50 PQL providing 5X serial dilution results differing by more than 10% (%D) are tabulated below:

SAMPLE ID.	ELEMENT	%D
511123	potassium	13.7

Action:

- Sample results reported for the element are flagged as estimated (J).

Comments:

The above action is applied to all environmental samples associated with the SDG.

The diluted value was larger than the undiluted value, therefore, low bias is indicated.

DETECTION LIMITS:

For this SDG, the laboratory was required to report results to their method detection limit (MDL). The MDL (described in 40CFR Part 136, Appendix B and incorporated by

reference in SW-846), provides an error band, by definition, of ± 100 percent. The Estimated Quantitation Limit (EQL) is established at 5-10X the MDL in SW-846.

Action:

- Positive results reported between the MDL and PQL are flagged as estimated (J).

Comments:

The data user is cautioned that these results may not be analytically reproducible or statistically valid.

For phosphorus by method 6010 the laboratory reported results in units of µg/L rather than mg/L which was used for the remainder of the elements.

OVERALL ASSESSMENT:

The results reported for potassium in all environmental samples associated with the SDG are flagged as estimated (J) due to non-compliant serial dilution reproducibility.

Positive results reported between the MDL and PQL are flagged as estimated (J) due to uncertainty at the low level.

All additional QC results reviewed were within specification and no further actions or qualifiers were necessary.

TABLE A-2.

TECHNICAL REVIEW ACTION SUMMARY

SDG 10329150

Arsenic	
Cadmium	J1
Potassium	J2
Selenium	J1

If the field is left blank no actions or qualifications were necessary.

J1	-	Positive result is flagged as estimated (J) due to uncertainty at the low level.
J2	-	Result is flagged as estimated (J) due to non-compliant serial dilution reproducibility.

TECHNICAL REVIEW REPORT

SDG 10328875

WET CHEMISTRIES

TECHNICAL REVIEW REPORT

SDG 10328875

WET CHEMISTRIES

The data evaluation was based on the procedures set forth in the Methods and included the following parameters:

* - holding times
* - calibration
  - blanks
  - matrix spike sample analysis
* - standard reference material analysis
  - duplicate sample analysis
* - detection limits
  - overall assessment

* All criteria were met for this parameter.

Data validation, described in SW-846 and the Guidelines, which includes an evaluation of the usability of technically reviewed results with respect to project Data Quality Objectives and site chemistry knowledge, is included in the Data Validation/Usability Report.

A glossary of data qualifier definitions is presented in Appendix B.

BLANKS:

Blanks reported with positive values and their associated 5X action levels are tabulated below:

BLANK ID.	PARAMETER	CONC. (mg/L)	ACTION LEVEL
CCB 11-18/18:16	ammonia-N	0.020	0.10
511CDI	ammonia-N	0.085	0.43
	o-PO_4 - P	0.0042	0.021

Associated samples with values reported positive but below the action level:

BLANK ID.	PARAMETER	ASSOCIATED SAMPLES
511CDI	ammonia-N	511131

Action:

- Positive result reported for the parameter in the associated sample is changed to not-detected at the reported value (U).

Comments:

Only calibration blanks bracketing samples in the SDG were evaluated.

The DI blank is reviewed in SDG 10329150.

MATRIX SPIKE SAMPLE ANALYSIS:

Samples providing matrix spike (MS) or MS duplicate (MSD) recoveries or precision not within the laboratory default limits when the native level is reported at less than four times the spiking level are tabulated below:

SAMPLE ID.	PARAMETER	MS/MSD RECOVERY (%)
511174	chloride	81/81
	fluoride (IC)	85/80
511127	chloride	74/74
	fluoride (IC)	84/89
	sulfate	80/80
511114	chloride	/87
	fluoride (IC)	87/86
	nitrate-N	88/88
	sulfate	89/89
	ammonia-N	116/

Action:

- For both MS and MSD recoveries below the lower limit sample results reported for the parameter are flagged as estimated with the potential for low bias (J-).

Comments:

The above actions are applied to all environmental samples associated with the SDG.

For sample 511174 the native levels of nitrate-N and sulfate and for sample 511127 the native level of nitrate-N exceeded four times the spiking level, therefore this parameter could not be evaluated.

DUPLICATE SAMPLE ANALYSIS:

Field Duplicates:

Comments:

For this SDG sample 511600 is collocated with sample 511124. For this collocated sample pair all precision limits specified in the QAPP were met.

Samples analyzed for fluoride by IC and ISE:

Samples 511178, 511131, and 511114 were analyzed by both methods and for samples 511131 and 511114 the ISE results were significantly lower than the IC method. Only the ISE results should be used for samples 511131 and 511114.

OVERALL ASSESSMENT:

For o-phosphate-P the laboratory filtered the samples prior to analysis.

The positive result reported for ammonia-N in sample 511131 is changed to not-detected at the reported value (U) due to blank contamination.

The results reported for all IC parameters in all environmental samples associated with the SDG are flagged as estimated with the potential for low bias (J-) due to non-compliant MS/MSD recoveries.

All additional QC criteria evaluated were within specification and no further actions or flagging were required or deemed necessary.

TECHNICAL REVIEW REPORT

SDG 10329150

WET CHEMISTRIES

TECHNICAL REVIEW REPORT

SDG 10329150

WET CHEMISTRIES

The data evaluation was based on the procedures set forth in the Methods and included the following parameters:

* - holding times
* - calibration
- blanks
- matrix spike sample analysis
* - standard reference material analysis
- duplicate sample analysis
- detection limits
- overall assessment

* All criteria were met for this parameter.

Data validation, described in SW-846 and the Guidelines, which includes an evaluation of the usability of technically reviewed results with respect to project Data Quality Objectives and site chemistry knowledge, is included in the Data Validation/Usability Report.

A glossary of data qualifier definitions is presented in Appendix B.

BLANKS:

Blanks reported with positive values and their associated 5X action levels are tabulated below:

BLANK ID.	PARAMETER	CONC. (mg/L)	ACTION LEVEL
CCB 11-23/15:01	ammonia-N	0.028	0.14
511CDI	ammonia-N	0.085	0.43
	o-PO_4 - P	0.0042	0.021
511701	ammonia-N	0.023	0.12

Associated samples with values reported positive but below the action level:

BLANK ID.	PARAMETER	ASSOCIATED SAMPLES	
511CDI	ammonia-N	511168	511165
		511BTS	
511701	ammonia-N	511165	511BTS

Action:

- Associated positive sample results are flagged as not-detected at the reported value (U).

Comments:

The data user is cautioned that for the field blanks the actions may not apply directly to the indicated samples (e.g. the contamination is in the blank water per-se).

MATRIX SPIKE SAMPLE ANALYSIS:

Samples providing matrix spike (MS)/MS duplicate (MSD) recoveries or precision not within the laboratory default limits when the native level is reported at less than four times the spiking level are tabulated below:

SAMPLE ID.	PARAMETER	MS/MSD RECOVERY (%)
511121	chloride	77/76
	fluoride (IC)	88/84
	nitrate-N	65/65
	sulfate	81/81
	o-phosphate-P	151/155

SAMPLE ID.	PARAMETER	MS/MSD RECOVERY (%)
511108	chloride	80/80
	fluoride (IC)	/88
	nitrate-N	58/57
	sulfate	82/83
	o-phosphate-P	205/204
511123	fluoride (IC)	76/82
	nitrate-N	68/67
	sulfate	78/78
511157	chloride	79/80
	fluoride (IC)	/87
	nitrate-N	86/88
	sulfate	72/73

Action:

- For both MS and MSD recoveries below the lower limit sample results reported for the parameter are flagged as estimated with the potential for low bias (J-).
- For both MS and MSD recoveries above the upper limit positive sample results reported for the parameter are flagged as estimated with the potential for high bias (J+).

Comments:

The above action is applied to all environmental samples associated with the SDG.

For sample 511123 the native level of sulfate exceeded four times the spiking level, therefore, this parameter could not be evaluated.

For recovery no action is taken when only one of the MS/MSD pairs is out of specification or mixed bias is indicated.

DUPLICATE SAMPLE ANALYSIS:

Field Duplicates.

Comments:

For this SDG sample 511601 is collocated with sample 511156. For this collocated sample pair all precision limits specified in the QAPP were met.

Samples analyzed for fluoride by IC, and ISE Methods:

Samples 511123, 511155, 511156, 511601, and 511157 were analyzed by both Methods. For samples 511123 and 511155 similar results were obtained from both Methods. For samples 511156, 511601, and 511157 the ISE Method provided lower results than the IC Method. For these samples only the results from the ISE Method should be used.

Samples analyzed for phosphorus by both ICP and SM 4500-P E Methods:

Samples 511121, 511122, 511108, and 511123 were analyzed by both Methods and similar results were obtained.

DETECTION LIMITS:

For this SDG, the laboratory was required to report results to their method detection limit (MDL). The MDL (described in 40CFR Part 136, Appendix B and incorporated by reference in SW-846), provides an error band, by definition, of $\pm$ 100 percent. The Estimated Quantitation Limit (EQL) is established at 5-10X the MDL in SW-846.

Action:

- Positive values reported between the MDL and PQL are flagged as estimated (J).

Comments:

Any positive values below the PQL contain inherently increasing error bands as the numbers become smaller. It is essential that the data user considers these statistical impacts on data quality at the low levels.

OVERALL ASSESSMENT:

For o-phosphate-P the laboratory filtered the samples prior to analysis.

The Field Rinse Blank and Culligan deionized water blanks were reported with ammonia-N present at concentrations that generated action levels resulting in the flagging of the positive results reported in samples 511168, 511165, and 511BTS as not-detected at the reported value (U).

Several samples provided MS/MSD recoveries of all IC parameters below the lower limit. The results reported for these parameter in all environmental samples associated with the SDG are flagged as estimated with the potential for low bias (J-).

Sample 511121 provided MS/MSD recoveries of o-phosphate-P above the upper limit. The positive results reported for this parameter in all environmental samples associated with the SDG are flagged as estimated with the potential for high bias (J+).

For samples 511156, 511157, and 511601 only the ISE results reported for fluoride should be used since they are significantly lower than the IC results.

Any values reported positive between the MDL and PQL are flagged as estimated (J) due to uncertainty at the low levels.

All additional QC criteria evaluated were within specification and no further actions or flagging were required or deemed necessary.

APPENDIX B

DEFINITION OF DATA QUALIFIERS

GLOSSARY OF DATA QUALIFIERS

J	-	The associated value is an estimated quantity.
R	-	The data are unusable.
U	-	The parameter is not detected at the reported value.
B	-	The value is above the MDL or IDL but below the RL, or CRDL

APPENDIX C

RE: Project: RCRA FMC
Pace Project No.: 10328875

Dear Ericka Vallance:
Enclosed are the analytical results for sample(s) received by the laboratory between November 05, 2015 and November 06, 2015. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kabor Xiong

PROJECT NARRATIVE

Project: RCRA FMC
Pace Project No.: 10328875

Method: **EPA 6010**
Description: 6010 MET ICP
Client: FMC
Date: November 19, 2015

General Information:
19 samples were analyzed for EPA 6010. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3010 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This report shall not be reproduced, except in full,

PROJECT NARRATIVE

Project: RCRA FMC
Pace Project No.: 10328875

Method: **EPA 6020**
Description: 6020 MET ICPMS
Client: FMC
Date: November 19, 2015

General Information:
19 samples were analyzed for EPA 6020. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3020 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

PROJECT NARRATIVE

Project: RCRA FMC
Pace Project No.: 10328875

Method: **EPA 300.0**
Description: 300.0 IC Anions
Client: FMC
Date: November 19, 2015

General Information:
19 samples were analyzed for EPA 300.0. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: WETA/25444

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 10328875001

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 2127601)
  - Fluoride
  - Nitrate as N
  - Sulfate
- MSD (Lab ID: 2127602)
  - Fluoride
  - Nitrate as N
  - Sulfate

M6: Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

- MS (Lab ID: 2127601)
  - Chloride
- MSD (Lab ID: 2127602)
  - Chloride

QC Batch: WETA/25466

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 10328875016,10328875019

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 2129316)
  - Fluoride

QUALIFIERS

Project: RCRA FMC
Pace Project No.: 10328875

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-M	Pace Analytical Services - Minneapolis

ANALYTE QUALIFIERS

FS	The sample was filtered in the laboratory prior to analysis.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
M6	Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

RE: Project: RCRA FMC
Pace Project No.: 10329150

Dear Ericka Vallance:
Enclosed are the analytical results for sample(s) received by the laboratory between November 06, 2015 and November 07, 2015. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kabor Xiong

PROJECT NARRATIVE

Project: RCRA FMC
Pace Project No.: 10329150

Method: **EPA 6010**
Description: 6010 MET ICP
Client: FMC
Date: November 23, 2015

General Information:
20 samples were analyzed for EPA 6010. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3010 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: MPRP/59493

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 10329150014,10329150019

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 2130821)
  - Potassium
- MSD (Lab ID: 2130820)
  - Potassium
- MSD (Lab ID: 2130822)
  - Potassium

R1: RPD value was outside control limits.

- MSD (Lab ID: 2130820)
  - Potassium

PROJECT NARRATIVE

Project: RCRA FMC
Pace Project No.: 10329150

Method: **EPA 6010C**
Description: 6010C MET ICP
Client: FMC
Date: November 23, 2015

General Information:
4 samples were analyzed for EPA 6010C. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3010 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

PROJECT NARRATIVE

Project: RCRA FMC
Pace Project No.: 10329150

Method: **EPA 6020**
Description: 6020 MET ICPMS
Client: FMC
Date: November 23, 2015

General Information:
20 samples were analyzed for EPA 6020. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3020 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

PROJECT NARRATIVE

Project: RCRA FMC
Pace Project No.: 10329150

Method: **EPA 350.1**
Description: 350.1 Ammonia
Client: FMC
Date: November 23, 2015

General Information:
20 samples were analyzed for EPA 350.1. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: WETA/25680

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 10329150014,10329150019,10329722004

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 2142229)
  - Nitrogen, Ammonia
- MSD (Lab ID: 2142230)
  - Nitrogen, Ammonia

Additional Comments:

Analyte Comments:

QC Batch: WETA/25680

E: Analyte concentration exceeded the calibration range. The reported result is estimated.

- MS (Lab ID: 2142225)
  - Nitrogen, Ammonia
- MSD (Lab ID: 2142226)
  - Nitrogen, Ammonia

QUALIFIERS

Project: RCRA FMC
Pace Project No.: 10329150

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-M	Pace Analytical Services - Minneapolis
PASI-V	Pace Analytical Services - Virginia

ANALYTE QUALIFIERS

E	Analyte concentration exceeded the calibration range. The reported result is estimated.
FS	The sample was filtered in the laboratory prior to analysis.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
M6	Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.
R1	RPD value was outside control limits.

Data Validation/Usability Report

Groundwater Samples

5 and 6 November, 2015 RCRA Event

FMC Idaho LLC, Pocatello, Idaho

ALS Work Order #: 34-1531446

Prepared by: Frederick S. Ordway

11 January 2014

INTRODUCTION

This memo summarizes the Site Chemistôs usability evaluation of the technically reviewed groundwater results generated by ALS Laboratory Group, for the SDG listed above. The samples were collected on 5 and 6 November 2015. Elemental Phosphorous (P4) laboratory analyses were performed in accordance with the U.S. Environmental Protection Agency (USEPA) SW-846 Method 7580 as described in the laboratory SOP.

The laboratory has modified Method 7580. Method 7580 provides for two different levels of sensitivity for determining P4 in water samples. One method has a sensitivity of 0.01 ug/L and consists of extracting a 500 mL water sample into 50 mL of diethyl ether and then back extracting with water to a final volume of 1.0 mL of diethyl ether. The other method provides sensitivity on the order of 0.1 ug/L and consists of extracting 30 mL of water into 3 mL of isooctane. The laboratory has modified the method to extract 120 mL of water into 3 mL of isooctane with a reported sensitivity of 0.016 ug/L based on the reported MDL with a concomitant reporting limit of 0.050 ug/L. The impacts of the modifications performed by the laboratory are detailed below.

A Level II technical review was performed for this SDG, which included a review/evaluation of all laboratory reporting forms, raw data, preparation logs, instrument printouts, notebook records and forensic deliverables provided by the laboratory. The data were technically reviewed based on method specifications, and laboratory-developed performance criteria by adapting the procedures set forth in the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review, USEPA Office of Solid Waste and Emergency Response, EPA-540/R-94-013, February 1994 and USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review, USEPA office of Solid Waste and Emergency Response, EPA540/R-94/012, February 1994 (Guidelines).

For elemental phosphorous, the data were evaluated for USEPA SW-846 Method 7580 which included the following parameters:

- data completeness
- holding times**
- calibration
- blanks**
- laboratory control sample**
- matrix spike/matrix spike duplicate
- compound quantitation and reported detection limits, and
- overall assessment

** Denotes all criteria for this parameter were met

COMPLETENESS

Not all of the pages in the report are paginated and the laboratory did not report the presence or absence of headspace (bubbles) in the samples upon receipt. All samples received were analyzed, reported and qualified as described below.

CALIBRATION:

Initial Calibration:

The laboratory performed the initial calibration on 27 October 2015 and utilized a second order 1/x regression model based on peak height for evaluating the data. The samples were analyzed beginning 11 November 2015 or approximately 20 days after calibration. Therefore the samples were not analyzed within the 12-hour time limit specified in the method[1] and all samples are qualified as estimated (J).

Regarding the choice of calibration model[2], per the method if the RSD is less than or equal to 20% over the calibration range then linearity through the origin may be assumed and the laboratory is to use this approach unless a priori knowledge is the basis for not assuming linearity through the origin. The RSD for the calibration curve associated with this analysis is 1.44% indicating support for assuming linearity through the origin. A comparison of results is provided in the Sample Result Verification section below; no action is required.

MATRIX SPIKE AND MATRIX SPIKE DUPLICATE

Sample 511157 B and C; Lab I.D.s 1531446013 and 153144014, respectively, were analyzed as the matrix spike and matrix spike duplicate and reported with compliant accuracy. The relative percent difference of 30.5% exceeded the 20% control limit and all samples are qualified as estimated (J).

SAMPLE RESULT VERIFICATION:

The validator obtained similar results to the laboratory when utilizing a seconded order 1/x weighted calibration model. As noted in the table below, slight differences were obtained using the average calibration factor calibration model.

Sample ID	Laboratory ID	Average RF Validator Calculated Result (ug/L)	2nd Order 1/x Validator Calculated Result (ug/L)	Laboratory Calculated Result (ug/L)	Lab Reported Result (ug/L)
511122	1531446004	0.645	0.6526	0.6524	0.65
511121A	1531446005	0.0165	0.0159	0.0160	0.016
511108A	1531446006	0.3499	0.3542	0.3543	0.35
511123	1531446007	0.0164	0.0157	0.0158	0.016

OVERALL ASSESSMENT:

All samples were extracted in isooctane utilizing a modified less sensitive extraction procedure.

[1] SW-846 Method 7580, Section 7.2, Revison 0, December 19960.016

[2] SW-846 Method 8000B, Section 7.5.1 and 7.5.2, Revision 2, December 1996

The sample results are qualified as estimated (J) due to use of a non-contemporaneous initial calibration and the use of a second order 1/x weighed calibration model as opposed to a linear average response factor model.

All samples are qualified as estimated (J) due to the imprecision (RPD = 30.5%) demonstrated in the matrix spike and matrix spike duplicate analysis.

Sample ID 511CDI, Laboratory ID 1531446001 is a Culligan DI Water Blank. Results were less than 0.016 ug/L; no action is required.

Sample ID 511701, Lab ID 1531446008 is a Rinse Blank. Results were less than 0.016 ug/L; no action is required.

Sample ID 511156, Laboratory ID 1531446010 and sample ID 511601, Laboratory ID 1531446011 are field duplicates, which had laboratory reported concentrations of less than 0.016 ug/L; no action is required.

APPENDIX A

Case Narrative

Method:	EPA 7580-White Phosphorus	**Client:**	Hydrometrics, Inc.
Analyst:	Christopher Winter	**Account:**	8001
Preparation SOP #:	OP-SW-7580	**Matrix:**	Water
Analysis SOP #:	OP-SW-7580		
Batch: EGC/6033	**HBN:159282**		
ALS Work Order: 1531466			

General Set Information: The field samples were received and batched for analysis.

Method Summary: This method was used to determine the concentration of white phosphorus in water and soil using a GC equipped with a DB-1 column and a F.P. detector with phosphorus lens.

Sample Preparation: **Water:** A 120 mL sample aliquot was extracted using 3.0 mL Iso-octane. Lot:U19A132 Horizon ID:25604.

Hold Times: Samples were extracted and analyzed within hold times.

Dilution(s): None.

Method QC (MB, LCS/LCSD): *Method Blank(s):* White phosphorus was not detected in the method blank greater than ½ the CRDL.

Laboratory Control Samples: All recoveries were within established limits.

Matrix QC (MS, MD, MSD): MS/MSD were prepared using client selected samples.

Instrument QC (ICV, CCV, etc): *Continuing Calibration Verification:* All continuing calibration verification standards passed the percent difference criteria. See the Continuing Calibration Verification Forms.

NC/CAR: None.

ALS Laboratory Group
ANALYTICAL CHEMISTRY & TESTING SERVICES
Environmental Division

Case Narrative

Sample Calculation: The analyte concentrations in the sample extract were determined by interpolation from 2nd order regressions of standard responses (peak height) vs. concentrations. Final concentrations in ug/L were determined from the equation:

$$C_S = \frac{C_E \bullet V_E \bullet DF}{V_S}$$

Where:

C_S	=	Analyte concentration in sample (ug/L)
C_E	=	Analyte concentration in extract (ug/mL)
V_E	=	Final volume of extract (mL)
DF	=	Dilution Factor
V_S	=	Initial volume of sample taken for preparation (L)

Miscellaneous Comments: Samples 1531446008, 009, 010, 011, and 012 results showed possible trace amount of P4 results less than the current method detection limits.

Comments

Quality Control: EPA 7580 - (HBN: 159282)

EPA7580: RPD outside of established limits for MS/MSD due to unstable nature of aqueous P4 spiking solution. MS/MSD recoveries are within limits individually. No further action was taken.

EPA7580: Samples 1531446008, 009, 010, 011, and 012 results show possible trace amounts of P4 in water samples which the results of are less than the current reporting limit.

Report Authorization (/S/ is an electronic signature that complies with 21 CFR Part 11)

General Lab Comments

The results provided in this report relate only to the items tested.
Samples were received in acceptable condition unless otherwise noted.
Samples have not been blank corrected unless otherwise noted.
This test report shall not be reproduced, except in full, without written approval of ALS.

ALS provides professional analytical services for all samples submitted. ALS is not in a position to interpret the data and assumes no responsibility for the quality of the samples submitted.

All quality control samples processed with the samples in this report yielded acceptable results unless otherwise noted.

ALS is accredited for specific fields of testing (scopes) in the following testing sectors. The quality system implemented at ALS conforms to accreditation requirements and is applied to all analytical testing performed by ALS. The following table lists testing sector, accreditation body, accreditation number and website. Please contact these accrediting bodies or your ALS project manager for the current scope of accreditation that applies to your analytical testing.

ANALYTICAL REPORT

Workorder: 34-1531446
Client: Hydrometrics, Inc.
Project Manager: Kevin W. Griffiths

Result Symbol Definitions

MDL = Method Detection Limit, a statistical estimate of method/media/instrument sensitivity.
RL = Reporting Limit, a verified value of method/media/instrument sensitivity.
CRDL = Contract Required Detection Limit
Reg. Limit = Regulatory Limit.
ND = Not Detected, testing result not detected above the MDL or RL.
< This testing result is less than the numerical value.
** No result could be reported, see sample comments for details.

Qualifier Symbol Definitions

U = Qualifier indicates that the analyte was not detected above the MDL.
J = Qualifier Indicates that the analyte value is between the MDL and the RL. It is also used to indicate an estimated value for tentatively identified compounds in mass spectrometry where a 1:1 response is assumed.
B = Qualifier indicates that the analyte was detected in the blank.
E = Qualifier indicates that the analyte result exceeds calibration range.
P = Qualifier indicates that the RPD between the two columns is greater than 40%.

Comments

EPA7580: RPD outside of established limits for MS/MSD due to unstable nature of aqueous P4 spiking solution. MS/MSD recoveries are within limits individually. No further action was taken.

EPA7580: Samples 1531446008, 009, 010, 011, and 012 results show possible trace amounts of P4 in water samples which the results of are less than the current reporting limit.

QC Data Approved and Reviewed by

Christopher Winter	Mila V. Potekhin	11/23/2015
Analyst	**Peer Review**	**Date**

Symbols and Definitions

* - Analyte above reporting limit or outside of control limits
▲ - Sample result is greater than 4 times the spike added
● - Sample and Matrix Duplicate less than 5 times the reporting limit

RPD - Relative % Difference (Spike / Spike Duplicate)
ND - Not Detected (U - Qualifier also flags analyte as not detected)
NA - Not Applicable
QC results are not adjusted for moisture correction, where applicable

ALS - SALT LAKE CITY-RELATED INFORMATION REPORT (CRIR)

COOLER OR CONTAINER INFORMATION CHECKLIST (Fill In or Circle) 1531446

Client Name: Hydrometrics

Project/Task/Site: FMC / Pocatello

Date/Time of Receipt: 11/10/2015 09:52

Number of Coolers Received: 4

Condition of Coolers:	Acceptable/Unacceptable	Temperature Control:	Present/Not Included
Cooler Custody Seals:	Present/Absent/NA Intact/Broken/NA	Location Temp Taken:	Control/Between Samples
Container Custody Seals:	Present/Absent/NA Intact/Broken/NA	Are all temperatures within project specific guidelines?	Yes/No/NA
Ice Present:	Yes/No/NA Frozen/Melted/NA	VOA Headspace Present?	Yes/No/NA

pH Check Performed:							
	Metals	Yes/No/NA	Total Phenolics	Yes/No/NA	NO3/NO2	Yes/No/NA
	Cyanide	Yes/No/NA	TPH – 418.1	Yes/No/NA	Oil & Grease	Yes/No/NA
	Sulfide	Yes/No/NA	COD	Yes/No/NA	Total Phosphorous	Yes/No/NA
	Ammonia	Yes/No/NA	TKN	Yes/No/NA	TOC Preserved	Yes/No/NA
					Gross A B, Gamma Spec	Yes/No/NA
Residual Chlorine Check Performed:	8270	Yes/No/NA	8310	Yes/No/NA	8330	Yes/No/NA
	8081	Yes/No/NA	8151	Yes/No/NA		

Cooler Received	ALS Cooler No.	Temp.	Cooler Received	ALS Cooler No.	Temp.	Cooler Received	ALSL Cooler No.	Temp.

Recipient's Name Sample Rockwing/Kevin Phone 801 266-7700
Company ALS Environmental
1 ☐ HOLD Weekday Print FedEx location address below. **NOT available for** FedEx First Overnight.
31 ☐ HOLD Saturday Print FedEx location address below. **Available ONLY for** FedEx Priority Overnight and FedEx 2Day to select locations.
Address 960 West LeVoy Drive Dept./Floor/Suite/Room
We cannot deliver to P.O. boxes or P.O. ZIP codes.
Address
Print FedEx location address here if a HOLD option is selected.
City Salt Lake City State UT ZIP 84123

4a Express Package Service * To most locations. *Packages up to 150 lbs.*
1 ☒ FedEx Priority Overnight Next business morning.* Friday shipments will be delivered on Monday unless SATURDAY Delivery is selected.
5 ☐ FedEx Standard Overnight Next business afternoon.* Saturday Delivery NOT available.
6 ☐ FedEx First Overnight Earliest next business morning delivery to select locations.* Saturday Delivery NOT available.
3 ☐ FedEx 2Day Second business day.* Thursday shipments will be delivered on Monday unless SATURDAY Delivery is selected.
20 ☐ FedEx Express Saver Third business day.* Saturday Delivery NOT available.

4b Express Freight Service ** To most locations. *Packages over 150 lbs.*
7 ☐ FedEx 1Day Freight Next business day.** Friday shipments will be delivered on Monday unless SATURDAY Delivery is selected. FedEx 1Day Freight Booking No.
8 ☐ FedEx 2Day Freight Second business day.** Thursday shipments will be delivered on Monday unless SATURDAY Delivery is selected.
83 ☐ FedEx 3Day Freight Third business day.** Saturday Delivery NOT available.

5 Packaging * Declared value limit $500.
6 ☐ FedEx Envelope* 2 ☐ FedEx Pak* Includes FedEx Small Pak, FedEx Large Pak, and FedEx Sturdy Pak. 3 ☐ FedEx Box 4 ☐ FedEx Tube 1 ☒ Other

6 Special Handling and Delivery Signature Options
3 ☐ **SATURDAY DELIVERY**
☐ No Signature Required Package may be left without obtaining a signature for delivery.
10 ☐ Direct Signature Someone at recipient's address may sign for delivery. *Fee applies.*
34 ☐ Indirect Signature If no one is available at recipient's address, someone at a neighboring address may sign for delivery. For residential deliveries only. *Fee applies.*

Does this shipment contain dangerous goods?
One box must be checked.
☒ No 4 ☐ Yes As per attached Shipper's Declaration. ☐ Yes Shipper's Declaration not required. 6 ☐ Dry Ice Dry Ice, 9, UN 1845 ____ x ____ kg
Dangerous goods (including dry ice) cannot be shipped in FedEx packaging or placed in a FedEx Express Drop Box. ☐ Cargo Aircraft Only

7 Payment *Bill to:* 11/10/2015 $9.52
Enter FedEx Acct. No. or Credit Card No. below. Obtain Recip. Acct. No. ☐
1 ☒ Sender Acct. No. in Section 1 will be billed. 2 ☐ Recipient 3 ☐ Third Party 4 ☐ Credit Card 5 ☐ Cash/Check
[redacted]
Total Packages ____ Total Weight ____ lbs. [redacted] Credit Card Auth.

†Our liability is limited to $100 unless you declare a higher value. See the current FedEx Service Guide for details.

Batch Information: HBN 159282 [EGC/6033]

Client: Hydrometrics, Inc.

Set ID: 1531446

Method: 7580 White Phosphorus

Matrix: Water

Initial Calibration: 10/28/2015

Samples analyzed: 11/12/2015 and 11/13/2015

Instrument: GC24 (FPD02): HP5890 with DB-1 (30m x 0.53mm ID x 1.536um film) column and FPD detector with phosphorus filter.

Injection volulme: 2.0 uL. Voltage: 80%. Injection temp: POCO. Detector temp: 325C.

GC Program: 80C for 6.0 min.

Sample QC : MB and LCS were prepared and analyzed. MS/MSD were produced using client selected samples.

Dilutions: None.

Surrogate: Method does not required a surrogate.

Standard & QC Prep:

	Isooctane 19563 (mL)	Sample (Water) (mL)	Phosphorus 0.250 ppm 29640 (mL)	Aqueous Spike P4-in Water for QC/MS/MSD

STD7	1.00		0.00800	
ICV (STD2)	3.00		0.200	29653-ICV prepared by Mila Potekhin
CCVs (STD2)	3.00		0.200	
Blanks	3.00	120		
LCSs	3.00	120	0.050	29848
Samples	3.00	120		
MS/MSD	3.00	120	0.050	29848

Miscellaneous comments: 1) Quantitation was performed using peak height and 2nd order curve.

2) Concentration of spiking solution 29848 was verified prior to sample analysis.

3) Solvent dispensing bottle top pump verified for 10mL = 10mL in volumetric cylinder prior to use.

4) Raw data can be found at: \\Alsltws012\tccs\winter\GCE24\DATA\24151112

GC/FPD Analyst Writeup for method: EPA-7580 P4(White Phosphorus) in water.
