Case Narrative

Volatile Organics - Volatile organics were determined by purge and trap GC/MS using guidance provided in Method 8260. The instrumentation used was a Tekmar Dynamic Headspace Concentrator interfaced with a Hewlett-Packard Model 5972A GC/MS/DS.

The client requested a Method Detection Limit Study to be performed for both 2,4,4-Trimethyl 1-Pentene and 2,4,4-Trimethyl 2-Pentene. The results are tabulated below.

2,4,4-Trimethyl 1-Pentene MDL=0.39ug/l
2,4,4-Trimethyl 2-Pentene MDL=0.42ug/l

Seven replicates were run at a concentration of 5.00ug/l to determine this MDL. The recommended Practical Quantitation Limit (PQL) for sample reporting will be 5.00 ug/L unless the client needs a lower detection limit for their project.

No problems were encountered.
