TETRA TECH

September 4, 2015

Mr. Anthony LaMaster
START Contracting Officer
U.S. Environmental Protection Agency, Region 7
11201 Renner Blvd.
Lenexa, KS 66219

Subject: Monthly Progress Report, August 2015
START 4, EPA Region 7, Contract No. EP-S7-13-06

Dear Mr. LaMaster:

Tetra Tech, Inc. (Tetra Tech) submits the attached monthly progress report for the period July 27, 2015 to August 23, 2015. This report summarizes current task orders committed to Tetra Tech and progress toward their completion.

If you have any questions or comments regarding this submittal, please contact me at (816) 412-1754.

Sincerely,

Ted Faile

Ted Faile, PG, CHMM

TETRA TECH

TECHNICAL PROGRESS REPORT

PROGRAM MANAGEMENT ACTIVITIES

The United States Environmental Protection Agency (EPA) Contracting Officer and Project Officer, and the Tetra Tech, Inc., (Tetra Tech) Superfund Technical Assessment and Response Team (START) Program Manager communicated regularly during August 2015 to review general contract requirements and project status, as well as administrative, technical, and equipment resources. These communications ensure that the contract operates smoothly and that EPA receives optimum service.

The Tetra Tech START Program Manager, Site Assessment (SA) Manager, Response/Removal Manager, and Quality Assurance (QA) Manager met regularly to discuss project status and budgets, and to plan for upcoming project activities. The managers ensured that resources were assigned appropriately, assessment activities were integrated, and quality services were performed for EPA. They confirmed accordance of program activities with contract requirements, the contract-specific quality management plan (QMP), and the quality assurance project plan (QAPP). In addition, START project managers (PM) met with EPA task managers to discuss project activities and project-related problems and resolutions.

Staffing/Subcontracting

Along with the Tetra Tech professional staff, personnel from a team subcontractor of Tetra Tech—Seagull Environmental Technologies, Inc.—provided support for the contract. Non-team subcontractors and vendors were also procured in accordance with applicable federal acquisition regulations to facilitate various Tetra Tech START activities.

Equipment

- Eagle Instruments, Inc., provides long-term leased equipment to Tetra Tech, including state-of-the-art instruments that assist START personnel with response, removal, and assessment.
- Tetra Tech START maintains government-furnished equipment—including a mercury vacuum, self-contained breathing apparatus, and other items.
- Tetra Tech START keeps maintenance and logbook schedules for each piece of equipment to ensure its proper maintenance and availability for use at any time.
- To save on vehicle rental costs, Tetra Tech START leases vehicles on a long-term basis to support ongoing projects.

WLLFOIA4312 - 001 - 0056402

- Tetra Tech START obtains data from local vendors and subcontractors (rental equipment, analytical laboratories, and so on) to ensure the best service and competitive pricing.

Quality Assurance

Tetra Tech START members have implemented contract activities in accordance with the START Region 7 QMP and QAPP. START also developed the START Region 7 emergency response plan (ERP) and trained its staff on response protocol to carry out response activities as quickly and effectively as possible. The ERP was implemented by responders in the Kansas City and St. Louis offices.

Health and Safety

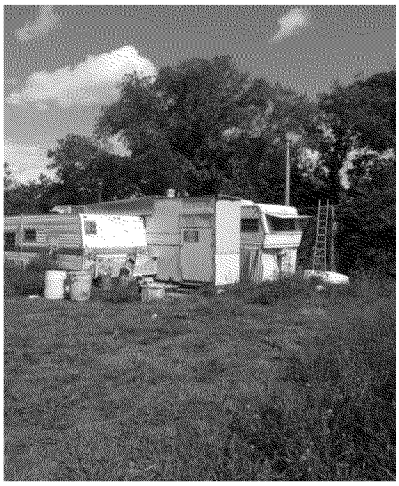
Contract activities continue to comply with EPA and Occupational Safety and Health Administration (OSHA) requirements, when applicable. Tetra Tech START responders are trained properly in special requirements: nuclear, biological, and chemical (NBC) responses; level A personal protective equipment (PPE); and confined-space entry.

Training

Tetra Tech START held and participated in brownbag training sessions and exercises during August 2015.

Project Highlights

Mercury Spill Response, Tonganoxie, Kansas



Tetra Tech START was tasked by EPA Region 7 Superfund Division to assist with a response at the Mercury-Evans Road site, at 18019 258th Street near Tonganoxie, KS. The resident reported that on August 14, 2015, elemental mercury from a small glass container had spilled on her clothes and onto the floor of the trailer home. The source of the mercury was unclear. The resident subsequently (some days later) called Poison Control to inquire about cleanup procedures. She then called 911, and Leavenworth County Emergency Management (LEM) Director, Chuck Magaha, responded. Elemental mercury was observed on the floor and in a plastic container in the

WLLFOIA4312 - 001 - 0056403

trailer. The Kansas Department of Health and Environment (KDHE) was contacted by LEM for assistance. EPA was then contacted by KDHE for assistance.

EPA and START mobilized to the site on August 19, 2015. Following a meeting with the resident, Mr. Magaha, and a Leavenworth County Health Department representative, small plastic scoops and a hand-held asperator were used to collect elemental beads from the trailer floor. The trailer had been ventilated since August 14th. On August 20, 2015, EPA and START returned to the site, and the floor was vacuumed by use of a specialized vacuum cleaner fitted with a high-efficiency particulate air (HEPA) filter to collect mercury micro-beads. The carpet in one end of the trailer was also removed. Later in the day, START and EPA conducted air monitoring using a Lumex RA-915+ Mercury Vapor Analyzer (Lumex) within the breathing zone. The Lumex readings ranged from 4,500 to 6,100 nanograms per cubic meter (ng/m^3), exceeding the standard residential action level of 1,000 ng/m^3. A high-volume fan was used to pull air from the trailer, and additional screening was conducted to identify "hot spots." At areas within corners, under built-in cabinets, and under the linoleum, Lumex readings ranged from 10,000 to greater than 30,000 ng/m^3. The special vacuum that had been used could not pull the micro-beads from under these areas. Destructive measures would be required to clean up the remaining elemental mercury. EPA and START conducted no additional cleanup activities. The county and EPA are evaluating additional response. LEM arranged for proper disposal of the collected elemental mercury and mercury-contaminated materials.

Financial Information

During the reporting period, EPA issued eleven new site-specific task orders (TO) and one new subtask to the contract. Relevant and required contract procedures were followed in implementing TOs. A cumulative amount of $17,332,805.35 has been obligated since inception of the contract base period. During the reporting period, approximately 4,744 hours and $445,325.16 were charged against the contract. The average fully-loaded rate for the period was $93.87/hour. The fully-loaded rate includes all labor, travel, other direct costs (ODC), and subcontractor costs associated with fixed-rate projects for the period.

WLLFOIA4312 - 001 - 0056404

PROJECT SUMMARIES

Task Order No. 0001.000: Emergency Response Activities, Regional

Status: Open
Period of Performance: 06/20/13 to 06/10/16

EPA tasked Tetra Tech START to implement a notification system enabling EPA to contact an emergency response (ER) team directly via cellular telephone in an emergency. This has been established and includes two responders on call 24 hours a day, 7 days a week—in both the Kansas City, Missouri (KCMO), and St. Louis, Missouri (MO), offices. All core response staff have met applicable OSHA training requirements and know response-related procedures and equipment. They are also familiar with the Incident Command System (ICS), counter-terrorism (CT) activities, clandestine drug labs, and other possible ER scenarios.

- The primary responder is a more experienced responder who is the PM for a given response.
- The secondary responder is a more junior staff member who assists in response activities as needed.

The response teams are ready to assist EPA with all phases of ERs, including notification, assessment, sampling and analysis, recovery, general technical support, preparation of summary reports, and any one or all of the 52 tasks listed in the contract Performance Work Statement (PWS) under "A: Response." START responders received an ER manual developed by START that addresses policies and procedures pertaining to ERs. Under this TO, START also maintains the readiness state of leased equipment and government-furnished property at the START warehouse, as well as EPA equipment at the Region 7 Training and Logisitics Center (TLC) in KCMO, and at the EPA warehouse in Fenton, MO.

Task Order No. 0001.007.004: Former Twin State Battery & Charger, Newton, North Carolina

Status: Open

EPA tasked Tetra Tech START to conduct an ER involving improper use of waste water from an underground storage tank (UST) at 2625 North Stewart Avenue in Newton, North Carolina. The waste water had been generated from cleaning of forklift batteries. North Carolina Department of Environment and Natural Resources (NCDENR) previously had issued violations for misuse of hazardous materials while the business was operational. The business was evicted by the property owner for failure to

WLLFOIA4312 - 001 - 0056406

maintain lease payments in December 2013. During NCDENR response activities, the UST was observed to hold approximately 4 feet of wastewater. NCDENR Hazardous Waste Section (HWS) utilized an x-ray fluorescence (XRF) spectrometer to screen sludge collected from the UST. Results indicated elevated levels of lead and chromium. Based on XRF screening results and the financial problems of the responsible owner, NCDENR requested support from EPA. The EPA On-scene Coordinator (OSC) subsequently requested that Tetra Tech START provide technical support. EPA also requested support from Emergency and Rapid Response Services (ERRS) contractor ERL to conduct removal activities.

Tetra Tech START arrived at the site on May 6, 2014, and conducted ER activities that day. Tetra Tech START was tasked with: (1) providing technical support to EPA during the ER, (2) generating written and photographic documentation of response activities, (3) conducting a removal site evaluation (RSE) by screening soil using an XRF spectrometer, and (4) collecting soil/wastewater samples at the site.

No technical activity occurred during the August 2015 reporting period.

Task Order No. 0001.007.010: Emergency Preparedness, Region 4
Status: Open

EPA tasked Tetra Tech to conduct readiness support activities to maintain readiness of the Region 4 START and EPA response team under the Region 7 START contract. Activities were to include maintenance of equipment and supplies, participation in exercises and drills, and facilitation of trainings and exercises, as directed by EPA.

No activities occurred during the August 2015 reporting period.

Task Order No. 0001.018: El Dorado Pipeline Spill, El Dorado, Kansas
Status: Open

EPA tasked Tetra Tech Region 7 START to respond to a diesel pipeline spill in El Dorado, KS. START provided technical assistance for oil spill response activities at the site from May 4 through 6, 2015. The spill had occurred when a 10-inch diesel pipeline operated by Magellan Midstream Partners, LLC split just north of Magellan's El Dorado Terminal. The spill was reported in the early morning hours of May 4, 2015. A pressure drop on the pipeline was noted,

WLLFOIA4312 - 001 - 0056407

and visual inspection revealed that a release had occurred, resulting in a release of diesel fuel to nearby Constant Creek. Spill response contractors for Magellan were mobilized and began oil spill containment and recovery actions. Those actions involved construction of underflow dams, deployment of boom, and collection of diesel fuel. Magellan also performed air monitoring to protect workers, as well as to determine impacts on ambient air quality within the spill area. No air quality readings above applicable standards were noted. During the response, START oversaw and documented site activities. Followup START activities associated with the response were conducted under Task 0100.

Task Order No. 0001.020: Mercury – Evans Road, Tonganoxie, Kansas
Status: Open

Tetra Tech START was tasked by EPA to assist with a response at the Mercury-Evans Road site, at 18019 258th Street near Tonganoxie, KS. The resident reported that on August 14, 2015, elemental mercury from a small glass container had spilled on her clothes and onto the floor of the trailer home. The source of the mercury was unclear. The resident subsequently (some days later) called Poison Control to inquire about cleanup procedures. She then called 911, and Leavenworth County Emergency Management (LEM) Director, Chuck Magaha, responded. Elemental mercury was observed on the floor and in a plastic container in the trailer. The Kansas Department of Health and Environment (KDHE) was contacted by LEM for assistance. EPA was then contacted by KDHE for assistance.

EPA and START mobilized to the site on August 19, 2015. Following a meeting with the resident, Mr. Magaha, and a Leavenworth County Health Department representative, small plastic scoops and a hand-held asperator were used to collect elemental beads from the trailer floor. The trailer had been ventilated since August 14th. On August 20, 2015, EPA and START returned to the site, and the floor was vacuumed by use of a specialized vacuum cleaner fitted with a HEPA filter to collect mercury micro-beads. The carpet in one end of the trailer was also removed. START and EPA conducted air monitoring using a Lumex RA-915+ Mercury Vapor Analyzer (Lumex) within the breathing zone. The Lumex readings ranged from 4,500 to 6,100 nanograms per cubic meter (ng/m3), exceeding the standard residential action level of 1,000 ng/m3. A high-volume fan was used to pull air from the trailer, and additional screening was conducted to identify "hot spots." At areas within corners, under built-in cabinets, and under the linoleum, Lumex readings ranged from 10,000 to greater than 30,000 ng/m3. The special vacuum that had

WLLFOIA4312 - 001 - 0056408

been used could not pull the micro-beads from under these areas. Destructive measures would be required to clean up the remaining elemental mercury. EPA and START conducted no additional cleanup activities. The county and EPA are evaluating additional response. LEM arranged for proper disposal of the collected elemental mercury and mercury-contaminated materials.

Task Order No. 0002.000: Brownfields Support, Regional

Status: Open
Period of Performance: 06/20/13 to 06/10/16

EPA tasked Tetra Tech START to assist the TBA program that addresses abandoned, idle, or underused industrial and commercial facilities. Assessments were to accord with EPA 540-F-96-028, entitled *Guidance for Performing Site Inspections Under CERCLA*, and with other applicable guidance documents. Primary objectives of the assessments were to determine the nature and extent of on-site contamination, assess risks posed by the contamination, develop potential cleanup alternatives, and estimate costs of cleanup options for site redevelopment.

Task Order No. 0002.019.005: Winnebago Tribe, Old Town Dump, Winnebago, Nebraska

Status: Open

EPA tasked Tetra Tech START to perform a Phase I and Phase II Environmental Site Assessment (ESA) of the property. START was to submit a completed Property Profile Form (PPF) for the property as part of the Phase II ESA Report. The site may include a lift station, and if the Winnebago Tribe decides to have an asbestos survey and lead-based paint (LBP) survey performed, START may be asked to undertake those activities. The Phase I ESA was to identify any recognized environmental conditions (REC) in accordance with ASTM International (ASTM) Standard E 1527-13, *Standard Practice for Phase I Environmental Site Assessments*, and include an inventory of household hazardous waste and hazardous waste identified at the site. The Phase II ESA was to further assess the site in accordance with ASTM Standard E 1903-97-11, *Standard Guide for Phase II Environmental Site Assessments*.

During the August 2015 reporting period, START continued writing the Phase II Report.

WLLFOIA4312 - 001 - 0056409

Task Order No. 0002.019.008: Old Gas Station and Radiator Shop, Pasadena Hills, Missouri
Status: Open

EPA tasked Tetra Tech START to conduct a Phase I and Phase II ESA at this former service station.

During the August 2015 reporting period, START received analytical data from subsurface soil, groundwater, and asbestos samples collected during the Phase II ESA at the subject property, and began preparing the Phase II ESA report.

Task Order No. 0002.019.010: Former Weir Zinc Site, Pittsburg, Kansas
Status: Open

EPA tasked Tetra Tech START to conduct a Phase I and a Phase II ESA at the former Weir City Zinc site in Pittsburg, KS. The Phase I ESA was to identify RECs to the subject property. The Phase II ESA was to include sampling for LBP and collection of samples from various surfaces, materials, and debris suspected to contain asbestos within any existing site structure(s). In addition, the Phase II work was to include sampling to fill data gaps from previous investigations at the site. Following the Phase II ESA, START was to prepare an ABCA of the site based on possible future uses of the site and sampling results.

During the May reporting period, START submitted the Phase I ESA and the Phase II QAPP to EPA. In response to a KDHE comment on the Phase II QAPP, EPA asked START to include in the document information regarding collection of samples to undergo toxicity characteristic leaching procedure (TCLP) analysis. These data were to be used to support the ABCA included in the final report.

During the June 2015 reporting period, START resubmitted the Phase II QAPP to address the KDHE comment regarding TCLP analysis.

During the August reporting period, START prepared for the Phase II ESA fieldwork, scheduled for the week of August 24.

WLLFOIA4312 - 001 - 0056410

Task Order No. 0002.019.011: Winnebago – Harden and Cedar Properties, Winnebago, Nebraska
Status: Open

EPA tasked Tetra Tech START to conduct a Phase I and Phase II ESA of the properties. The Phase I ESA was to identify any RECs to the subject properties in accordance with ASTM Standard E 1527-13, *Standard Practice for Phase I Environmental Site Assessments*, and to inventory household hazardous waste and other hazardous waste identified at the site. The Phase II ESA was to further assess the site, including confirming or eliminating any RECs identified during the Phase I ESA, in accordance with ASTM Standard E 1903-97-11, *Standard Guide for Phase II Environmental Site Assessments*.

During the August 2015 reporting period, START began writing the Phase II ESA report regarding the Harden Property. START submitted the Phase II ESA report regarding the Cedar Property.

Task Order No. 0002.019.012: St. Louis Development Corporation, St. Louis, Missouri
Status: Open

EPA tasked Tetra Tech START to conduct Phase I ESAs and Phase II ESAs focused on petroleum substances at four sites on behalf of the St. Louis Development Corporation (SLDC). The sites are at the following locations in St. Louis, MO: 2801 Lafayette, 5908-5926 N Broadway, 6101 Michigan, and 2255 California. These sites were formerly used as filling stations or for commercial and/or industrial uses. START was to perform Phase I and Phase II ESAs at the four sites, as well as LBP investigations and asbestos sampling of various surfaces, materials, and debris in the buildings. This project possibly would include removal of USTs at some of the sites, which would require sampling of soil beneath the tanks and possibly of material within the tanks. START was requested to meet with the SLDC managers, EPA Region 7 staff, and the EPA ERRS Contractor to discuss histories of the sites, scopes of the Phase I and Phase II ESAs, and potential or planned future site uses. A Phase I and Phase II ESA report was to be prepared regarding each site, and a completed Property Profile Form was to be submitted with each final report. A Tier One Risk Assessment of each property for possible future development was also to be completed.

WLLFOIA4312 - 001 - 0056411

During the August 2015 reporting period, START submitted the draft QAPP for EPA review detailing activities and sampling to occur during the Phase II ESAs, likely in September 2015.

Task Order No. 0002.019.014: NCMRWC Building Assessments (7 Parcels), Milan, Missouri
Status: Open

EPA tasked Tetra Tech START to conduct Phase II Targeted Brownfields Assessments (TBA) of seven properties (also referred to as "subject properties") associated with the planned development of East Locust Creek Reservoir. The planned reservoir and subject properties are in Sullivan County, MO. The East Locust Creek Reservoir project is led by NCMRWC. The scope of the Phase II TBA was to include inspections of the structures on the seven properties for presence of ACM. Suspected ACM was to be sampled to quantify asbestos therein. The Phase II TBA was to include an inventory of household hazardous waste (HHW) at the properties.

During the August reporting period, START began preparing the Phase II TBA report summarizing sampling activities and findings. The Phase II TBA report will be submitted to EPA in early September 2015.

Task Order No. 0002.019.015: KCMO Municipal Farms, Kansas City, Missouri
Status: Open

EPA tasked Tetra Tech START through the TBA program to assist the City of Kansas City, MO, with the following services for the Municipal Farm priority development areas:

1. Perform a geotechnical investigation to: (a) develop site geological profiles; (b) acquire other information necessary to determine suitability or unsuitability of priority areas for grading, cultivation, and support of structural improvements and infrastructure (roads, buildings, etc.); and (c) otherwise help develop more refined estimates of the areal extent of developable land.

2. At sites where soil cultivation is recommended, conduct soil coring and analyses to determine specific soil characteristics, including an analysis of agronomic parameters and depths and qualities of available topsoil.

3. Investigate groundwater resources to estimate availability, quality, and potential rates of production of groundwater at the site as a potential economical source of irrigation for agricultural uses.

WLLFOIA4312 - 001 - 0056412

4. Investigate local hydrology to estimate direction, rate, and volume of precipitation and stormwater on site to assist with planning and design of green infrastructure and possible water storage features for priority site development.

5. Conduct a survey of the areal extent and conditions of the former Botsford Mine to determine conditions and stability of the mine; to clearly delineate the land surface area that overlays the mine; to identify potential sink holes, collapses, and danger zones; and otherwise to identify areas that may and may not be safely used and developed.

6. Update the *Infrastructure Analysis of Municipal Farm* by mapping exact locations and determining conditions of on-site and off-site public and regulated utilities infrastructure.

In June 2015, an initial meeting with EPA involved discussion of the scope of work. During the meeting, it was decided that item 6 would not be included in the scope of work because future development plans had not been determined.

In July 2015, START submitted a cost estimate for completing items 1 through 5. START awaited response from EPA as to the proposed costs and how to proceed.

During the August reporting period, two of the tasks above (numbers 2 and 3) were approved and assigned as a separate TO (number 0115).

Task Order No. 0002.019.016: Marshall Habilitation Center, Marshall, Missouri
Status: Open

EPA tasked Tetra Tech START to perform a Phase I and a Phase II ESA of the Marshall Habilitation Center site, as well as LBP and asbestos sampling on various surfaces, materials, and debris in the buildings, if necessary. START was also to conduct a hazardous materials inventory of the site, and prepare an ABCA based on results of the Phase II and potential future uses of the site. A completed Property Profile Form was to be included with the Phase II report.

During the August 2015 reporting period, START continued writing the Phase I ESA report.

Task Order No. 0003.000: Planning & Preparedness - RRT, Regional

Status: Open
Period of Performance: 07/01/13 to 06/10/16

EPA tasked Tetra Tech START to provide technical support to assist with exercises, training, and research for the Region 7 Regional Response Team (RRT), and maintain the Regional Integrated

WLLFOIA4312 - 001 - 0056413

Contingency Plan (RICP), as per Sections II.B, II.D and III of the START Contract Performance Work Statement.

During the August reporting period, START completed minutes for the Joint Region 5/7 RRT Spring 2015 Meeting. The minutes included outcomes from a tabletop exercise developed by START and delivered during the meeting. Several updates were made to the RICP, including contact information for state and federal agencies, and inclusion of up-to-date facility data tables. In preparation of the Region 7 RRT Fall 2105 Meeting, START developed an RRT meeting registration and document share site. START posted read-ahead documents to this site, as well as the EPA's "osc.org" website. Multiple updates were made to the RRT contacts list and preparations were made to push the list to the "osc.org" site normally used for RRT administration.

START also participated in the monthly teleconference meeting of the Chem EO Workgroup and began development of meeting minutes. At the request of EPA, the teleconference was attended by START geographic information systems (GIS) staff to gather information needed to initiate development of a web-based mapping application for use by Chem EO Workgroup members. Additionally, START continued support of the Omaha/Council Bluffs (O/CB) Subarea during the August reporting period. START coordinated with EPA and subarea members to identify meeting space, develop presentations, and schedule a meeting for late October. In connection with this meeting, START GIS personnel worked to complete a web-based mapping application for the O/CB Subarea. At the direction of EPA Region 7, GIS personnel also identified data sets in the Region 7 Response & Planning Viewer (Flex Viewer) to be shared with organizations working with EPA Region 5. Finally, START clerical staff provided minor administrative support for the Greater St. Louis Subarea's meeting activities.

Task Order No. 0004.000: Equipment-Warehouse Support, Regional

Status: Open
Period of Performance: 06/20/13 to 06/10/16

EPA tasked Tetra Tech START to conduct maintenance, tracking and accountability of vehicles, equipment, materials and supplies at the EPA Training and Logistics Center (TLC) in Kansas City, Missouri, and the EPA equipment warehouse in Fenton, Missouri. START was also tasked to ensure 24/7 readiness of equipment at the TLC. Specific tasks associated with Response Readiness, Equipment Maintenance, General Warehouse Support and Vehicle Maintenance are provided in the Task Order Statement of Work.

WLLFOIA4312 - 001 - 0056414

During the August 2015 reporting period, START conducted weekly operational checks of EPA's core ER/CT response equipment with EPA responders, performed maintenance on EPA response equipment, updated/prepared Equipment Operating Guides, provided support for work with the Comprehensive Emergency Response Equipment Tracking System (CERETS) and Equipment Tracking Module (ETM) as necessary, and conducted general TO management activities.

In addition, an inventory of equipment and associated parts, maintenance records, equipment checkout, etc., was maintained on a daily basis to ensure that appropriate databases are current. START maintained and/or calibrated all equipment in conformance to manufacturer's recommendations, and recorded the maintenance in the inventory system within 24 hours of completion. START also received and inspected all incoming equipment and associated materials, and ensured that the equipment was ready and available for emergency response.

Task Order No. 0005.000: Oil Support Activities, Regional

Status: Open
Period of Performance: 06/20/13 to 06/10/16

EPA tasked Tetra Tech START to assist activities relating to the oil program in accordance with Section 311(j)(5) of the Clean Water Act and Section 2101 of Title 46, *Code of Federal Regulations* (CFR):

- *Oil Spill Response Activities*—Provision by Tetra Tech START of a staff of personnel trained for timely response to releases of petroleum-related materials. The team will respond to any incident 24 hours a day, 7 days a week
- *Spill Prevention, Control, and Countermeasures (SPCC) Activities*—Facility surveys and inspections of SPCC plans by Tetra Tech START to determine compliance with EPA oil pollution prevention regulations
- *Facility Response Plan (FRP) Reviews*—Inspections of FRPs to determine compliance with EPA oil pollution prevention regulations
- *Contingency Planning*—Development of contingency plan exercises, compilation of response resources, acquisition of environmentally sensitive area location information, plume modeling, and provision of technical support to state or local responses
- *Organizations*—Support organizations that develop specific contingency plans related to EPA's oil program.

START has personnel trained and experienced in all these functions, and competent to respond efficiently to EPA as needed.

WLLFOIA4312 - 001 - 0056415

During the August reporting period, START updated flex viewer applications and oil program related tasks, continued development of FRP Facilities data management and integration, transferred information from the R7 Response and Planning Viewer to the new ER Cloud for development of new applications, and provided support for the R7 Response and Planning Viewer to different OSCs.

Task Order No. 0006.000: Chemical Safety Audits/Accident Investigations, Regional

Status: Open
Period of Performance: 06/20/13 to 06/10/16

EPA tasked Tetra Tech START to conduct Clean Air Act (CAA) risk management plan (RMP) inspections at selected facilities within EPA Region 7.

No technical activity occurred during the August 2015 reporting period.

Task Order No. 0007.000: West Lake Landfill, Bridgeton, Missouri

Status: Open
Period of Performance: 06/20/13 to 06/10/16

EPA originally tasked Tetra Tech START to procure a laboratory to analyze 24 groundwater samples for isotopic thorium, isotopic uranium, radium-226, and radium-228. Laboratory procurement was completed, and sampling occurred during the week of July 8, 2013, with an additional sample collected on July 18, 2013.

In May 2015, this TO was modified, tasking START to procure additional, more specialized laboratory support. Specifically, START was tasked to procure laboratory analytical services for pyrolytic radiological testing methods for soil samples, and to assist EPA in developing data quality objectives (DQO) for these analyses; to obtain the appropriate sample material from the potentially responsible party (PRP); and to coordinate with the National Analytical Radiation Environmental Laboratory (NAREL) for QA support, as necessary. START met with the EPA OSC, EPA Remedial Project Manager (RPM), and other EPA technical support personnel, and began communications with multiple laboratories to determine potential analytical methods for meeting project objectives.

During the August 2015 reporting period, START continued coordinating with EPA on development of draft DQOs.

WLLFOIA4312 - 001 - 0056416

Task Order No. 0011.000: WCLD – Old Mines, Washington County, Missouri
Status: Open
Period of Performance: 07/01/13 to 06/10/16

EPA tasked Tetra Tech START to attempt to acquire permissions for access to properties on a list provided by EPA for remedial activities. EPA also tasked START to sample at any remaining residential properties within the project area.

EPA tasked START to (1) mail requests for access permission to all residents at whose properties soil sampling results had exceeded 399 parts per million (ppm) of lead, (2) call remaining residents in blocks of 50 properties 2 weeks after mailing those requests for access permission, (3) attempt to obtain access permission by going door-to-door at remaining properties, and (4) log all attempts to obtain access permission. START mailed the access requests during October 2013. EPA requested that START not call or attempt to obtain access permission by going door-to-door at properties from which access agreements had not been received, because permission for access to enough properties had been gained at that time. The attempts were to continue when again tasked by EPA. During January 2014, EPA requested that START review the access list and include in it all properties with laboratory soil data exceeding 399 ppm of lead. The access list was revised and submitted to EPA.

During the August 2015 reporting period, START performed routine database management.

Task Order No. 0012.000: WCLD – Potosi, Washington County, Missouri
Status: Open
Period of Performance: 07/01/13 to 06/10/16

EPA tasked Tetra Tech START to assist with obtaining permission for access to approximately 770 properties that qualify for remedial soil cleanup within the project area. START was to send mail-outs, conduct a phone campaign, and finally go door to door to obtain signed access agreements from all property owners. START also was to assist in collecting surface soil and groundwater samples at an undetermined number of properties within the project area.

Approximately 120 signed access permission letters were received through the mail after the original mail-out in October 2013. START then began knocking on doors of property owners whose mailing addresses were not known in order to inform them of the upcoming remedial action and to gain access permission. Permission to access was gained at an additional 82 properties through the mail and by knocking on doors, bringing the total number of accessible properties to 202. Of the accessible

WLLFOIA4312 - 001 - 0056417

properties, 46 host children ages 6 or younger. For the time being, attempts to obtain access permission were put on hold while EPA prepared to begin remedial activities.

During the August 2015 reporting period, START updated access files and performed routine database management.

Task Order No. 0013.000: WCLD – Richwoods, Washington County, Missouri
Status: Open
Period of Performance: 07/01/13 to 06/10/16

EPA tasked Tetra Tech START to assist with obtaining permission for access to approximately 50 properties that qualify for remedial soil cleanup within the project area. START was to send mail-outs, conduct a phone campaign, and finally go door to door to collect signed access agreements from all property owners. START also was to assist in collecting surface soil and groundwater samples at an undetermined number of properties within the project area.

To date, 28 residents/owners of properties have signed access permission agreements, and 13 have refused to grant access permission. Residents/owners of 24 properties still have not signed or refused to sign access permission agreements, including those associated with 18 properties recently added because lab results had indicated lead concentrations exceeding 399 ppm of lead in soil. The RPM will continue attempts to gain permission for access to these properties, and may ask START for assistance in that regard.

During the August 2015 reporting period, START updated access files and performed routine database management.

Task Order No. 0018.000: MGE – Marshall FMGP, Marshall, Missouri
Status: Open
Period of Performance: 07/03/13 to 06/10/16

EPA tasked START to assist with assessment and investigation activities at the Missouri Gas and Electric Company – Marshall former manufactured gas plant (FMGP) site in Marshall, MO. These activities possibly were to include soil and groundwater sampling. START was to prepare and assist with implementation of a QAPP, obtain documentation of permission for site access, identify relevant site characteristics, and upon completion of field sampling activities, develop a report summarizing the findings. Between November 2014 and May 2015, START conducted fieldwork activities including collecting groundwater, sub-surface soil, soil gas, and indoor air samples.

WLLFOIA4312 - 001 - 0056418

No technical activity occurred during the August 2015 reporting period. START plans to meet with EPA regarding drafting of a report and future site activities.

Task Order No. 0020.000: Northwestern Metal Company, Lincoln, Nebraska
Status: Open
Period of Performance: 07/15/13 to 06/10/16

EPA tasked Tetra Tech START to conduct a removal assessment focused on residential soil lead levels and related contaminants. In addition to field screening and sampling residential soils for laboratory analysis for metals, START was to collect samples to be analyzed for bioavailability and speciation of lead. START was to review EPA and NDEQ files to examine environmental data obtained during previous investigations, and to develop additional maps showing current data points and concentrations. All data were to be compiled and stored in a data management system and GIS format, allowing interaction among multiple entities and easy manipulation of graphic data. All field activities and information generated were to be compiled in a site assessment report.

During the August 2015 reporting period, START sent 37 archived soil samples to EPA ORD for speciation analysis per request of the EPA PM. START created XRF screening maps of the eight properties sampled by EPA during the last reporting period. START also undertook statistical analysis at request of the EPA PM.

Task Order No. 0021.000: Carter Carburetor – PRP-Lead Removal, St. Louis, Missouri
Status: Open
Period of Performance: 07/16/13 to 06/10/16

EPA tasked Tetra Tech START to assist EPA in conducting oversight and air monitoring during PRP-lead removal activities associated with the CBI and Willco buildings at the Carter Carburetor site in St. Louis, MO. START's primary duty would be to provide air monitoring along the perimeter(s) of the site or work areas that would detect release of unacceptable quantities of pollutants from the site or work areas. Pollutants monitored were to depend on work activity at the time. The prime activities and expected order of precedence at the site are:

1. CBI Debris Removal and Building Preparation.

2. CBI Asbestos Abatement.

3. CBI Polychlorinated Biphenyls (PCB) Removal.

WLLFOIA4312 - 001 - 0056419

4. CBI Building Demolition.

5. CBI First Floor Slab Removal and Assessment.

6. Willco Asbestos Abatement.

7. Willco PCB Removal.

8. Die Cast Area PCB Removal.

9. Trichloroethene (TCE) Area In-Situ Treatment.

Oversight generally was to involve monitoring and documenting PRP activities in detail. Oversight could also involve review of PRP work plans as appropriate and as directed by the OSC.

During the August 2015 reporting period, START continued with on-site support, including air sampling and oversight of the PRP's excavation and demolition activities. START also collected soil samples on site for analysis for PCBs.

Task Order No. 0022.000: WCLD – Furnace Creek, Furnace Creek, Missouri
Status: Open
Period of Performance: 07/16/13 to 06/10/16

EPA tasked Tetra Tech START to conduct surface soil, groundwater, and limited subsurface soil sampling at approximately 270 potential residential properties in the southwest portion of Washington County known as the Palmer sampling area. START was also to provide a detailed log of attempts to obtain permission for access to residential properties for sampling to assist EPA in determining the approximate number of residential properties within the sampling area. During two previous projects, a PA in 2010 and an SI in 2012, soil and groundwater had been sampled at 113 properties within the Palmer sampling area. The total number of properties sampled as of June 2014 was 185; the number of properties determined by START to be non-residential (summer homes/vacant/church/etc.) was 98. Owners at 73 properties had declined granting permission to access for sampling. Access permission to sample had not been granted at 60 remaining properties where no contacts with these property owners had occurred; three attempts to contact these owners had been logged for these properties. The total revised home count in the Furnace Creek – Palmer sampling area as of June 2014 was 416. With 98 of these properties believed to be non-residential, the revised residential property count was 318.

WLLFOIA4312 - 001 - 0056420

During the August 2015 reporting period, START performed routine database management.

Task Order No. 0024.000: WCLD – Potosi, Potosi, Missouri
Status: Open
Period of Performance: 07/16/13 to 06/10/16

EPA tasked Tetra Tech START to manage removal activities at time-critical properties within the project area. START was to assist EPA and the ERRS contractor with attempts to obtain access permissions for removals, site walks, pre- and post-excavation sampling, documentation, and oversight at approximately 27 properties during soil excavation activities. START was also to assist EPA in gaining access to install water filters at properties currently provided with bottled water.

During the August 2015 reporting period, START continued oversight of soil removal activities.

Task Order No. 0025.000: Valley Park TCE, Valley Park, Missouri
Status: Open
Period of Performance: 07/29/13 to 06/10/16

EPA tasked Tetra Tech START to provide technical support for vapor intrusion (VI) sampling at the Valley Park TCE site in Valley Park, MO. Vapor mitigation systems were installed at a residence and business within the site boundary during late July and early August 2013.

Following installation of those systems, START collected indoor air samples to determine current contaminant concentrations in order to evaluate effectiveness of the systems. Sampling activities occurred at the site during the week of August 12, 2013.

No technical activities occurred during the August 2015 reporting period.

Task Order No. 0026.000: Cherokee Zinc Company, Weir, Kansas
Status: Open
Period of Performance: 08/05/13 to 06/10/16

EPA tasked Tetra Tech START to provide removal assessment services at the Cherokee Zinc Company in Weir, KS. Specific elements of the task assignment included creating maps and a Google Earth platform (or equivalent) to base all field activities. START was to assess lead, arsenic, zinc, and cadmium concentrations at the site and surrounding properties according to Region 7 protocol and the Lead Handbook. START was to coordinate site access, conduct XRF field screening, and send confirmation

WLLFOIA4312 - 001 - 0056421

samples to the Region 7 laboratory. START was to provide a removal assessment report summarizing all field and laboratory activities and results.

During the August 2015 reporting period, START conducted a regression analysis of the XRF data versus the laboratory data. START created XRF screening maps and updated a spreadsheet containing information regarding residents of homes screened so that EPA can prepare and submit homeowners' reports pertaining to data obtained at their properties.

Task Order No. 0027.000: Herculaneum Lead Smelter, Herculaneum, Missouri

Status: Open
Period of Performance: 08/12/13 to 06/10/16

This project is a continuation of work initiated under START 3, in which Tetra Tech START was tasked to provide general technical support and assist in overseeing PRP contractors conducting an RA at the Herculaneum Lead Smelter site in Herculaneum, MO. START continues to oversee remediation at properties with lead levels exceeding 400 ppm. START was to document costs incurred by the contractor for the response action; obtain, analyze, and validate data in accordance with EPA standard methods for sample analysis; procure laboratory services and prepare a written trip report; oversee the PRP during sampling and excavations; collect confirmation samples; prepare a statistical analysis of recontamination trends; and perform other oversight activities as directed by the RPM.

From July 24 through August 18, 2015, excavations were completed at 11 properties. No properties underwent interior cleaning. Twelve properties have undergone interior cleanings, and since September 17, 2013, 158 properties have undergone excavations.

Task Order No. 0028.000: RMP Inspections, Regional

Status: Open
Period of Performance: 08/15/13 to 06/10/16

EPA tasked Tetra Tech START to conduct CAA RMP inspections at selected facilities within EPA Region 7. Inspection activities were to begin after provision to START by EPA of a list of facilities to inspect. During November 2013, the lead RMP inspector for START attended the EPA-sponsored training course: "Understanding Codes, Standards & Mechanical Integrity for RMP Inspectors."

During the August 2015 reporting period, START inspected the Frenchman Valley Coop and Omnium St. Joseph facilities. START is scheduled to conduct the remaining inspections in September.

WLLFOIA4312 - 001 - 0056422

Task Order No. 0029.000: West Hwy 6 and Hwy 281, Hastings, Nebraska
Status: Open
Period of Performance: 08/13/13 to 06/10/16

EPA tasked Tetra Tech START to continue operations of soil vapor extraction (SVE) and groundwater extraction systems at this site. Activities possibly were to include quarterly sampling of SVE wells and system discharge, and of groundwater extraction wells and system discharge (post-treatment); preparation of daily operations reports; payment of utilities (electric and gas); maintenance and repair of system components as directed by EPA; and preparation of quarterly sampling reports and other status reports as requested by EPA.

During the August 2015 reporting period, START conducted routine daily system inspections, addressed various operations issues, reviewed daily operations reports, and paid utility invoices. START also began preparing reports regarding quarterly sampling of monitoring wells and remedial systems (SVE and groundwater extraction), conducted in July 2015. START will continue to conduct daily inspections of the systems and coordinate with the on-site Operations Supervisor as necessary.

Task Order No. 0030.000: PCE Former Dry Cleaner, Atlantic, Iowa
Status: Open
Period of Performance: 08/13/13 to 06/10/16

EPA tasked Tetra Tech START to assist in completing removal assessment activities at the Atlantic Water Supply (Atlantic) site in Atlantic, Iowa. During September 2013, this task was amended to include further support to the removal program such as an expanded VI investigation and installation of several deep monitoring wells to help validate the groundwater model and better define the groundwater plume emanating from the former drycleaners/Iowa Department of Transportation materials testing laboratory. In May 2014, START reviewed the technical memorandum from Lockheed Martin regarding well placement. In July, START began development of a drilling SOW to install two and possibly three deep monitoring wells that were to be completed in the Dakota sandstone aquifer. START initiated development of a QAPP for sampling the wells once completed. START also researched a new technology referred to as Self-sustaining Treatment for Active Remediation (STAR). This technology involves subsurface heating of contaminants by application of a smoldering process to thermally desorb and/or destroy contaminants. In August, the SOW was sent to prospective state-certified well drillers to competitively procure a well installation contract. In September 2014, START traveled to Atlantic to install three monitoring wells (completed in the Dakota Sandstone aquifer).

WLLFOIA4312 - 001 - 0056423

In August, START expended time summarizing all activities since submittal of the revised removal assessment report.

Task Order No. 0032.000: Hwy AA TCE Wells, Jasper County, Missouri
Status: Open
Period of Performance: 08/14/13 to 06/10/16

EPA tasked Tetra Tech START to conduct assessment activities at this site with two TCE-contaminated private wells. START provided EPA with preliminary aerial photograph maps and a table of the known sample locations, as well as a list of area residences likely to have wells or known to be on a public water supply. START completed a map showing all the previously sampled locations in the site area, and delivered this to EPA in January 2014.

During the August 2015 reporting period, START revised the draft QAPP and submitted the final QAPP to EPA.

Task Order No. 0035.000: Aurora Groundwater, Aurora, Nebraska
Status: Open
Period of Performance: 08/19/13 to 06/10/16

EPA tasked Tetra Tech START to collect drinking water samples at residences in Aurora where groundwater from wells had exhibited elevated concentrations of carbon tetrachloride. These residences host carbon filtration systems, but additional systems were to be installed to help reduce carbon tetrachloride levels. In May 2014, START received the analytical results from samples collected during March 2014, and began preparing the final report.

In August 2014, START continued preparing a report describing sampling activities and analytical data. Analytical results indicated elevated levels of carbon tetrachloride in drinking water, which would require further carbon filtration system modifications and further sampling activities. Future sampling activities and corresponding analytical results were to be added to the report to generate a comprehensive final report.

In May 2015, additional filtration was installed at one residence. START collected pre- and post-filtration samples from the residence on May 21, 2015.

WLLFOIA4312 - 001 - 0056424

During the August 2015 reporting period, START continued preparing a final report for this TO. The report was to include data from the May 2015 sampling event. Completion of the final report is anticipated during the September 2015 reporting period.

Task Order No. 0036.000: Products of America, Sedalia, Missouri
Status: Open
Period of Performance: 08/20/13 to 06/10/16

EPA tasked Tetra Tech START to conduct site assessment activities at the Products of America site in Sedalia, MO. Specific elements of the task assignment were to include reviewing the Missouri Department of Natural Resources (MDNR) PA/SI Removal Assessment Report, conducting a site visit with the OSC, and photo documenting site conditions. START was to write a site report covering required RAs and any necessary sampling. If sampling would be needed, START would also generate a QAPP for the field work.

No technical activity occurred during the August 2015 reporting period. START awaits further direction from the EPA PM regarding future sampling strategy.

Task Order No. 0037.000: General Motors – Sioux City, Sioux City, Iowa
Status: Open
Period of Performance: 08/20/13 to 06/10/16

EPA tasked Tetra Tech START to provide continued support for a groundwater hydraulic capture system (HCS) in operation at the facility. START was to pay utilities associated with operating the HCS, conduct regular system checks, collect samples as requested by EPA, and complete reports and other duties as required.

During the August 2015 reporting period, START continued to monitor HSC data reported weekly by the City's technicians, and paid utility invoices. START began preparation of a trip report regarding the June groundwater sampling event. The City requested that the HCS be shut down during sewer construction work in the area.

Task Order No. 0041.000: WCLD – Old Mines Removal, Washington County, Missouri
Status: Open
Period of Performance: 09/06/13 to 06/10/16

EPA tasked Tetra Tech START to help coordinate the following: installations of water treatment systems at properties with lead-contaminated wells, monitoring of RAs, collection of samples pre-excavation for

WLLFOIA4312 - 001 - 0056425

TCLP analysis, other required analytical activities, and communications with property owners on site. Tetra Tech START also was to conduct additional sampling of soil and drinking water at residential properties, as well as soil, sediment, and surface water sampling at potential source areas.

No technical activity occurred during the August 2015 reporting period.

Task Order No. 0042.000: WCLD – Richwoods Removal, Washington County, Missouri

Status: Open
Period of Performance: 09/06/13 to 06/10/16

EPA tasked Tetra Tech START to assist EPA with continued removal activities at properties with lead-contaminated private wells—including soil excavation and sampling, and oversight during water filter installations.

No technical activity occurred during the August 2015 reporting period.

Task Order No. 0044.000: Highway 3 PCE, LeMars, Iowa

Status: Open
Period of Performance: 09/11/13 to 06/10/16

EPA tasked Tetra Tech START to assist with removal assessment activities at the Highway 3 PCE site in Le Mars, Iowa. These activities were to include conducting air monitoring in buildings within the downtown Le Mars area, and overseeing installations of vapor mitigation systems in buildings where concentrations exceed project screening levels. In 2008, tetrachloroethene (PCE) had been detected in two groundwater samples collected as part of an investigation at the adjacent Le Mars Coal Gas Plant site. During two subsequent projects—a pre-CERCLIS assessment in 2009 and PA in 2011—soil, groundwater, and air samples had been collected to help delineate the plume of affected groundwater and the extent of contamination.

During the August 2015 reporting period, START assisted EPA in collection of VI samples from the site area. Those activities included collection of indoor air and sub-slab soil gas samples. Samples were submitted to both the EPA Region 7 laboratory in Kansas City, KS, and the EPA Region 7 mobile laboratory operated by EPA personnel. Soil sampling is planned for late September 2015. Following that sampling event, a summary report will be completed to summarize VI and soil sampling activities and results.

WLLFOIA4312 - 001 - 0056426

Task Order No. 0045.000: Chicago Heights VOC Plume, Overland, Missouri
Status: Open
Period of Performance: 09/23/13 to 06/10/16

EPA tasked Tetra Tech START to assist EPA with oversight of the PRP's contractor during sampling events, including VI sampling and possible soil and groundwater sampling at residences.

No technical activity occurred during the August 2015 reporting period.

Task Order No. 0053.000: Cleburn Street Well, Grand Island, Nebraska
Status: Open
Period of Performance: 12/12/13 to 06/10/16

EPA tasked Tetra Tech START to support RA activities at the Cleburn Street Well site. Under this TO, START was to install one or more vapor mitigation systems (VMS) within a former dry cleaner building to remove the threat of subsurface vapors derived from soil and groundwater contamination. The building has been divided for use as a storage space and church activities, and also houses equipment (for SVE and groundwater extraction) installed in 1998 to remediate soil and groundwater. This RA was to ensure protection of those portions of the building used for church activities and storage. A VMS was installed during the February 2014 reporting period, and the SVE system was shut down at that time. The groundwater extraction/treatment system had been shut down in 2012. The VMS will continue to operate pending future response actions at the site.

During the August 2015 reporting period, START reviewed and paid utility invoices for gas, electric, and telephone services for that portion of the building housing the remediation equipment. START also prepared and submitted a QAPP for direct-push technology (DPT) groundwater and soil sampling to be conducted during the August 2015 reporting period. This sampling will proceed under TOs 0053 and 0083.

Task Order No. 0054.000: Iowa Dress Club, Oskaloosa, Iowa
Status: Open
Period of Performance: 12/18/13 to 06/10/16

EPA tasked Tetra Tech START to assist with assessment activities at the Iowa Dress Club site in Oskaloosa, Iowa. These activities possibly were to include soil, groundwater, and air sampling. START perhaps would be tasked to prepare or assist with implementation of a QAPP, obtain site access

WLLFOIA4312 - 001 - 0056427

documentation, identify relevant site characteristics, and upon completion of field sampling activities, develop a report summarizing the findings.

No technical activity occurred during the August 2015 reporting period. START awaits direction from EPA regarding future project activities.

Task Order No. 0055.000: PCE/TCE Northeast Contamination

Status: Open
Period of Performance: 01/27/14 to 06/10/16

EPA tasked Tetra Tech START to provide removal assessment support by sampling private wells at the site. Private well sampling occurred during the week of February 10, 2014. In April 2014, EPA collected additional samples at the site. Preparation of a trip report and data summary regarding the February sampling event was suspended pending those results. In July 2014, START submitted a trip report and data summary regarding samples collected during February and April 2014.

During the August 2015 reporting period, START assisted EPA with collection of VI samples at two locations overlying the groundwater plume.

Task Order No. 0056.000: PCE Southeast Contamination

Status: Open
Period of Performance: 01/29/14 to 06/10/16

EPA tasked Tetra Tech START to provide removal assessment support by sampling private wells at the site. Private well sampling occurred during the week of February 10, 2014. In April 2014, EPA collected additional samples at the site. Preparation of a trip report and data summary regarding the February sampling event was suspended pending those results.

During the August 2015 reporting period, START continued preparation of a trip report regarding the June 2015 VI sampling. START also made preparations for the September VI sampling event.

Task Order No. 0057.000: Valley Park TCE – OU 2 (RI/FS), Valley Park, Missouri

Status: Open
Period of Performance: 03/17/14 to 06/10/16

EPA tasked Tetra Tech START to conduct assessment activities and a Remedial Investigation / Feasibility Study (RI/FS) at the Valley Park TCE OU 2 site in Valley Park, Missouri. Assessment

WLLFOIA4312 - 001 - 0056428

activities and the RI/FS were to focus on contaminated soils beneath a property owned by Valley Technologies, Inc., and on the areawide groundwater contaminant plume.

In June 2014, START submitted a draft sampling and analysis plan (SAP) for EPA review. In July, EPA provided comments on the draft SAP, and START began revising the SAP. In August 2014, START submitted the final SAP and prepared for field activities. In September 2014, START collected soil and groundwater samples within the Valley Technologies, Inc. source area and vicinity. In November 2014, four permanent monitoring wells were installed.

In June 2015, START submitted an updated SAP that incorporated the new groundwater data and proposed additional soil and groundwater sampling adjacent to and within the footprint of the Valley Technologies, Inc. building.

During the August reporting period, START addressed EPA comments on the updated SAP and provided a final updated SAP. START is coordinating upcoming sampling with EPA, anticipated to begin in October or November 2015.

Task Order No. 0058.000: West Lake Landfill, Bridgeton, Missouri

Status: Open
Period of Performance: 03/31/14 to 06/10/16

EPA tasked Tetra Tech START to provide support with removal assessment activities at the Westlake Landfill site in Bridgeton, Missouri. The 200-acre site is at 13570 St. Charles Rock Road in the Earth City Industrial Park area. It is surrounded by commercial/industrial and agricultural land on the eastern edge of the Missouri River floodplain. From 1939 to 1985, limestone was quarried on the site. Beginning in 1962, portions of the property were used for landfilling of municipal solid waste and construction debris. Two areas became radiologically contaminated in 1973 when soils mixed with uranium ore processing residues were used as daily cover in the landfilling operation. An adjacent property has also been impacted by erosional migration of radiologically-contaminated material from the landfill proper. Also present on the site is the Bridgeton Sanitary Landfill, which ceased operation in 2005. This sanitary landfill did not receive any of the radiologically-contaminated soil.

START was tasked to prepare a QAPP for establishing a perimeter air sampling and monitoring network in the communities surrounding the site, and to assist with the network setup, data acquisition and analysis, and database management.

WLLFOIA4312 - 001 - 0056429

In March 2015, EPA tasked START to reduce the air monitoring network at four of the five sites to include only real-time monitoring of gamma radiation by use of Genitron probes, and monthly total radiation measurements by use of thermoluminescent dosimeter (TLD) badges. Monitoring at Site 4 (Spanish Village Park) continued with the particulate filters for radiological parameters, Radiello passive sampling for volatile organic compounds (VOC) via Method TO17, and sampling for hydrogen sulfide. Plans were for the monitoring efforts to continue at this reduced capacity until the end of May and for demobilization of START and EPA from the site in June. At that time, acquisition of baseline monitoring data would have been occurring for more than 1 year. If subsequent remedial activities at the landfill would pose possibility of potential impacts on air quality, EPA possibly would task START to re-establish the entire monitoring network.

During the August reporting period, all sampling and monitoring had ceased and plans to demobilize the site office trailer and all equipment from the site by September 2 were being implemented. The site office trailer is being maintained through September 2 for use by EPA OSCs conducting oversight of PRP activities currently ongoing at the Westlake Landfill property. START and EPA worked on demobilizing all of the equipment remaining in the trailer to the EPA Region 7 warehouses in Kansas City and Fenton, Missouri, as well as returning equipment borrowed from the EPA National Center for Radiological Field Operations (NCRFO) in Las Vegas, Nevada. In addition, START continued preparation of a final data summary for this project.

Task Order No. 4063.000: Beech Creek, Waynesboro, Tennessee

Status: Open
Period of Performance: 05/12/14 to 06/10/16

EPA Region 4 requested that Tetra Tech START observe and monitor contractor activities at this Superfund site near and north of the intersection of Clifton Turnpike and U.S. Highway 64 west of the City of Waynesboro, in unincorporated Wayne County, Tennessee. These START activities pertain to the phases of the project carried out by ENVIRON (PRP contractor) that involve time-critical removal action (TCRA) activities at the site. This task is a continuation of work under the Region 4 START contract.

The site is defined as beginning at the fence near the north end of the former Old Waynesboro City Dump and including the creek bed, banks, and floodplain of Beech Creek following Beech Creek 0.6 mile to the north. Contamination at the Beech Creek site is attributed to alleged disposal of waste liquid PCBs, spent and broken electrical capacitors containing PCBs, and other PCB-contaminated wastes in the Old

WLLFOIA4312 - 001 - 0056430

Waynesboro City Dump between approximately 1969 and 1972. The Old Waynesboro City Dump was closed in 1982. As part of closure activities, the former landfill was covered with a 2-foot clay cap and topsoil, and the former landfill and settling pond were fenced.

EPA issued to the responsible party an Administrative Order on Consent (AOC), effective February 20, 2014, which specified required RAs. Tetra Tech START was tasked to monitor and document activities of the contractor, collect multimedia samples as needed, and submit a final report summarizing completed RAs.

During the August 2015 reporting period, Tetra Tech START monitored the following: construction of haul roads on site, four material management bins for containment, and a water treatment system sump; and office space fencing and fencing around the materials handling pad. START also conducted project management activities including observation and documentation of contractor activities, document review, cost reconciliation, and review of Removal Cost Management System (RCMS) 1900/55 reports.

Task Order No. 0065.000: West Alton TCE Wells, West Alton, Missouri
Status: Open
Period of Performance: 05/19/14 to 06/10/16

EPA tasked Tetra Tech START to conduct an RA at the West Alton TCE wells site in West Alton, MO. Tasks were to include collecting confirmation water samples at homes where water had been contaminated with TCE and other VOCs. Confirmation water samples were to be collected following installations of carbon filters in these homes by ERRS. START was to prepare a QAPP and HASP, collect water samples, monitor site activities, secure laboratory services (if needed), document costs incurred by the contractor for the response action, prepare a written trip report summarizing findings, and conduct other activities as specified by the OSC.

During the August 2015 reporting period, no technical activity occurred. START awaits a request from EPA to re-sample a property following installation of a new filter by ERRS.

Task Order No. 0067.000: LaClede Coal Gas, St. Louis, Missouri
Status: Open
Period of Performance: 05/30/14 to 06/10/16

EPA tasked Tetra Tech START to conduct an SI to determine the extent of previously documented releases, previously undocumented releases, and the nature of the associated threats at the Laclede Coal Gas FMGP. As well, START was to conduct Hazard Ranking System (HRS) preliminary scoring and an

WLLFOIA4312 - 001 - 0056431

RSE. Specific elements of the task assignment included reviewing existing document and reports, determining current ownership of parcels of land associated with the former FMGP operations, identifying easements associated with the area of interest, developing a site contact/ownership list, performing a site reconnaissance, and developing a detailed field sampling plan/QAPP to support the SI. START was to assist with obtaining site access, perform sampling, coordinate with the Region 7 EPA lab for sample analysis, consolidate site data and prepare an SI report, calculate a preliminary HRS score for the site, complete the RSE form using data gathered during the SI, and provide site maps and site data management.

During the August 2015 reporting period, START began writing the Site Investigation report. START received results from the Region 7 EPA laboratory for soil, groundwater, and product samples collected during the June 2015 reporting period. Surface water and sediment sampling have not yet occurred because of abnormally high water levels on the Mississippi River.

Task Order No. 0070.000: Hwy 275 and 288th Street, Valley, Nebraska

Status: Open
Period of Performance: 06/10/14 to 06/10/16

EPA tasked Tetra Tech START to provide removal assessment support by sampling private and public wells at the site. A TCE groundwater plume from an unidentified source had been investigated at this site in the early 2000s, and whole-house filtration systems were installed at three residences and a business in 2005. In July 2014, START prepared and submitted a QAPP for private well sampling, which was originally planned for August 2014. At the request of EPA the well sampling was postponed until winter 2015. Well sampling was to be completed in conjunction with DPT sampling to identify potential source areas. In February 2015, groundwater samples were collected from multiple intervals at 15 DPT temporary wells and from 5 private wells.

During the August 2015 reporting period, START continued preparation of a trip report regarding the February and June 2015 sampling events.

Task Order No. 4071.000: Industrial Products Corporation Removal, Mt. Pleasant, Tennessee

Status: Open
Period of Performance: 06/18/14 to 06/10/16

EPA tasked Tetra Tech START to oversee sampling and removal activities at the Industrial Products Corporation at 107 Boswell Street, Mt. Pleasant, Maury County, Tennessee. The site encompasses

WLLFOIA4312 - 001 - 0056432

approximately 3.2 acres within a mixed industrial/commercial and residential neighborhood. The site is bounded north by three lots, east by the Tennessee Southern Railroad corridor property, southwest by a single lot, and west by Boswell Street. The site is oriented in a northeast-southwest direction along Boswell Street. The site was used by the owner as a commercial insulation and roofing product distribution facility until February 2009. Industrial Products Corporation has since moved its business operation to Columbia, Tennessee. The site is currently vacant.

Tennessee Department of Environment and Conservation (TDEC) historical records indicate that rock wool manufacturing occurred on the property for an unknown duration, ending in the early 1970s. Slag and coke were the raw materials used in the rock wool manufacture process at the site. Slag wastes from the nearby phosphate furnaces were brought to the property and stockpiled on site. Slag was also purchased from the St. Joseph Lead Company of Herculaneum, MO. The process involved melting the slag and coke, and blowing air through the molten material to produce rock wool insulation. This process generated dust. TDEC attempted to bring the facility into air release compliance, but the company discontinued the rock wool production due to expense and difficulty meeting the air pollution regulations. It is believed that during active site operations, dust was released to ambient air and was deposited on nearby properties.

During the August 2015 reporting period, preparation of a draft report continued.

Task Order No. 4072.000: Rome Powerhouse, Rome, Georgia

Status: Open
Period of Performance: 06/18/14 to 06/10/16

EPA Region 4 asked Tetra Tech START to oversee removal activities at the site, including preparing a cost estimate, QAPP, and HASP; conducting air sampling and hazardous categorization, as needed; preparing draft and final reports summarizing removal activities; and tracking costs in RCMS.

Asbestos-containing debris was found outside an abandoned power house in Rome, Floyd County, Georgia. Samples of debris previously collected by EPA contained asbestos at concentrations as high as 25 percent. The power house is adjacent to a residential community and other operational businesses.

During the August 2015 reporting period, Tetra Tech START communicated with the EPA Task Monitor and conducted project management.

WLLFOIA4312 - 001 - 0056433

Task Order No. 4074.000: CBRN Preparedness, Region 4
Status: Open
Period of Performance: 07/08/14 to 06/10/16

EPA Region 4 tasked Tetra Tech to provide technical support for Homeland Security and Preparedness activities. Activities were to include assistance in developing exercises related to chemical, biological, radiological, and nuclear (CBRN) response; help in developing outreach and plans related to CBRN preparedness; and assistance in developing and delivering CBRN-related trainings.

During the August 2015 reporting period, Tetra Tech coordinated with the OSC regarding tasking, attended Southern Exposure Exercise conference calls, revised the Decon Gel Evaluation Report based on the OSC's comments, reviewed information associated with U.S./Israeli radiation decon testing, conducted project management and cost tracking, and entered costs into RCMS.

Task Order No. 0075.000: PCE Southeast RI/FS, York, Nebraska
Status: Open
Period of Performance: 07/02/14 to 06/10/16

EPA tasked Tetra Tech START to conduct an RI/FS of the site. Previous investigations by START had identified groundwater contaminated with PCE and related degradation products originating in the downtown York area and impacting private drinking water wells near the southeastern city limits of York.

During the August 2015 reporting period, START conducted Phase 1 field activities consisting of groundwater sampling at multiple depths at about 40 locations.

Task Order No. 0076.000: Southwest Jefferson County Mining Site, Jefferson County, Missouri
Status: Open
Period of Performance: 07/08/14 to 06/10/16

EPA tasked Tetra Tech START to acquire homeowner access permission for sampling residential and non-residential properties within the 100-year flood plain of the Big River, screen those properties for lead by use of a portable XRF spectrometer, sample residential groundwater in private wells, and compile site data in Oracle. A site-specific HASP was completed by START. As directed by EPA, two separate QAPPs were to be completed by START that were to include sampling protocols for residential and non-residential properties. A site-specific residential QAPP was submitted to EPA in August 2014.

During the August reporting period, no technical activity occurred.

WLLFOIA4312 - 001 - 0056434

Task Order No. 0078.000: Franklin County Lead, Franklin County, Missouri
Status: Open
Period of Performance: 07/28/14 to 06/10/16

EPA tasked Tetra Tech START to assist EPA in support of a proposed SI, HRS Preliminary Score (if required), and RSE. START was to assist with identifying residential properties to be sampled, obtain access permissions, perform sampling, coordinate analysis, and keep records of data within a system organized by address and name.

During the August 2015 reporting period, START performed soil and groundwater sampling and follow-up sampling at several residential properties.

Task Order No. 0079.000: Johnson County Industrial Airport, Olathe, Kansas
Status: Open
Period of Performance: 07/28/14 to 06/10/16

EPA tasked Tetra Tech START to conduct an SI of the Johnson County Industrial Airport (former Olathe Naval Air Station [NAS]). In August 2014, START reviewed historical documents and began preparing a QAPP describing sampling activities. In September 2014, START conducted a site visit. A site specific QAPP was submitted in October 2015 and approved in November 2015. Field work occurred in March 2015. During the May 2015 reporting period, START received analytical results from sampling during March 2015.

During the August reporting period, START completed and delivered the SI report to EPA.

Task Order No. 4082.000: TVA Kingston Ash Recovery Project, Harriman, Tennessee
Status: Open
Period of Performance: 09/10/14 to 06/10/16

EPA tasked Tetra Tech START to conduct quarterly split groundwater sampling; provide logbook and photographic documentation of site activities; prepare daily work orders for split groundwater sampling; prepare and submit quarterly data comparison reports; provide community involvement support to the Task Monitor, as needed; and track costs in RCMS.

During the August 2015 reporting period, Tetra Tech START communicated with the EPA Task Monitor.

WLLFOIA4312 - 001 - 0056435

Task Order No. 0083.000: Cleburn Street Well, Grand Island, Nebraska
Status: Open
Period of Performance: 09/30/14 to 06/10/16

EPA tasked Tetra Tech START to conduct remedial design investigation activities at the Cleburn Street Well site in Grand Island, Nebraska (NE). Activities were to include a DPT groundwater investigation to assess the current footprint of the groundwater plume associated with OU 2, and installation of one or more monitoring wells. The number and locations of monitoring wells were to be contingent on results of the DPT investigation.

During the August 2015 reporting period, START prepared and submitted a QAPP addendum for DPT groundwater and soil sampling. This sampling was completed during the week of August 17, 2015, and was intended to assist in design of future RAs at the site, and also to determine potential for VI at buildings downgradient of OU 2. This sampling is under TOs 0053 and 0083.

Task Order No. 0084.000: PCE Former Dry Cleaner HRS, Atlantic, Iowa
Status: Open
Period of Performance: 10/22/14 to 06/10/16

EPA tasked Tetra Tech START to prepare an HRS documentation record regarding the Atlantic Water Supply site in Atlantic, Iowa, a rural community in Cass County, about 75 miles west of Des Moines, Iowa. The apparent source of the contamination is a former dry cleaning facility at 1205 East 7th Street.

During the August reporting period, START addressed EPA headquarters comments on the revised submittal.

Task Order No. 0086.000: Osage and Walnut, Coffeyville, Kansas
Status: Open
Period of Performance: 01/08/15 to 06/10/16

EPA tasked Tetra Tech START to conduct a Site Re-Assessment of the Osage and Walnut site in Coffeyville, KS. The Site Re-Assessment was to summarize previous site investigations through comprehensive databases, spreadsheets, mapping, visual displays, and technical evaluation. The Osage and Walnut site was identified during quarterly groundwater monitoring of the Miller Brothers Oil Company property with support from the Kansas Petroleum Storage Tank Release Trust Fund. Analyses of groundwater samples revealed presence of TCE. Subsequently, KDHE conducted multiple investigations to determine the source and extent of TCE contamination. KDHE concluded that a release

WLLFOIA4312 - 001 - 0056436

of TCE and other chlorinated solvents had occurred upgradient of the Osage and Walnut site, with the likely source being the Coffeyville Re-Con, Inc., facility. During February 2015, START completed an initial version of a site-specific ArcGIS Viewer for Flex application (Flexviewer), a customized GIS-enabled web-mapping application. START compiled site information for completion of a Site Re-Assessment report summarizing site history and previous investigations.

In addition to the Site Re-Assessment, START was to assist EPA with a removal assessment of the Re-Con site (the TCE source property). The removal assessment was to include inventorying unknown waste containers, collecting samples for field screening purposes, and collecting samples for disposal profiling.

Because of issues in obtaining property access, the initial site reconnaissance originally planned for April 2015 was delayed. Completion of the QAPP was expected after completion of the site reconnaissance. Field work for the removal assessment was anticipated during summer 2015.

During the August 2015 reporting period, START coordinated with staff and potential vendors for title search activities.

Task Order No. 0088.000: Southwest Jefferson County Mining Site, Hillsboro, Missouri
Status: Open
Period of Performance: 02/03/15 to 06/10/16

This TO now includes all activities previously conducted under TO 0009.000. EPA tasked Tetra Tech START to attempt to acquire access to properties on a list provided by EPA for remedial activities. This effort was to include a mailing to all residents of properties with soil lead concentrations exceeding 400 ppm in at least one sampling cell. After the mailings, START was to call residents who did not respond, or try to obtain access in person if needed. Access to approximately 500 properties was to be sought. START was also tasked to sample approximately 100 additional properties as specified by EPA. START was to work with the EPA Task Monitor and EPA Data Manager to ensure successful uploading of historical data obtained via the START contract and previous EPA sampling efforts. A site-specific HASP and QAPP were submitted by START.

During the August 2015 reporting period, START performed the following tasks:

- Mailed forms requesting access for excavating and sampling to homeowners who had requested these activities of EPA.

WLLFOIA4312 - 001 - 0056437

- Together with EPA, developed lists of 25 lake communities and subdivisions suspected to host contamination. (Lists were being generated of properties sampled, access permissions denied, and access permissions not yet obtained for sampling within those specified lake communities and subdivisions.)

- Mailed to 23 lake communities and one Hauler list in the SW quadrant the following numbers of letters requesting permission to sample:

  - Briarwood: 15
  - Cedar Hill Lakes: 131
  - Cedar Trace: 28
  - Clover Lake: 83
  - Cole Lake: 19
  - Gwenmill Lake: 12
  - Hauler: 69
  - Keleman Farms: 29
  - Lake Adelle: 146
  - Lake Bono Del: 12
  - Lake Lorraine: 112
  - Lake Tranquil: 83
  - Lakes of Deerwood: 79
  - Lakeland: 10
  - Medley Valley: 19
  - Osage Trail: 83
  - Raintree: 126
  - Sennawood Village: 71
  - Summerset: 65
  - Sunrise Lake: 116
  - Tamarack: 103
  - Valle Lake: 209
  - Ware Lake: 105
  - Wauwanoka: 144.

All returned access agreements are mailed to EPA to input into Oracle. START has received from EPA a list of properties for which sampling permission has been granted via these mailings. Field sheets for these properties have been created. Some returned access agreements were sent to START by EPA to input into Oracle.

Tasks previously conducted under TO 9:

As of August 20, 2015, soil sampling had occurred at 2,488 properties (under all Jefferson County assessment TOs). To date, 788 drinking water wells also have been sampled.

During the August reporting period, START performed the following tasks:

WLLFOIA4312 - 001 - 0056438

- Collected pre-excavation samples, such as drip zone samples, at properties where site walks had occurred. Processed and screened the samples for lead, and sent updated field sheets to EPA and its contractor, Prudent Technologies, Inc. Loaded updated field sheets into the Oracle database.

- Collected and processed samples from properties where homeowners had requested sampling.

- Continued to upload site information into EPA's Oracle database.

- Prepared and shipped samples to the EPA Region 7 laboratory.

- Prepared and mailed letters to homeowners conveying sampling results.

Task Order No. 0089.000: Big River Mine Tailings, Desloge, Missouri
Status: Open
Period of Performance: 02/04/15 to 06/10/16

EPA tasked Tetra Tech START to assist with removal assessments at as many as 200 additional properties, and with oversight of remedial activities at as many as 300 properties. Oversight of the remedial contractor began on March 9, 2015. Work was to include obtaining permission to access for sampling and remediation, sampling yards for determination of lead contamination, conducting confirmation sampling at yards undergoing remediation, and storing, tracking, and distributing high-efficiency particle attenuation (HEPA) vacuums to residents. HEPA vacuums were to be supplied by EPA.

During the August 2015 reporting period, START performed the following tasks:

- Conducted site walkthroughs at residential properties with EPA and Environmental Restoration personnel.

- Obtained signed remedial access agreements.

- Collected additional screening samples prior to remedial activities at residential properties, as needed.

- Began obtaining signed screening access for residential properties in Terre du Lac. To date, a total of 31 properties have been screened in Terre du Lac.

WLLFOIA4312 - 001 - 0056439

- Returned phone calls to property owners and discussed project activities with property owners who visited the field office.

- Continued delivery of HEPA vacuums to property owners.

- Sampled residential properties and prepared to-scale property drawings. To date, START has sampled 704 properties for lead-contaminated surface soils. Of this total, 90 properties (13 percent) contained lead at concentrations below the EPA screening level (SL) of 400 milligrams per kilogram (mg/kg), 146 residences (21 percent) contained lead between 400 and 799 mg/kg outside the drip zone and city easements, and 468 residences (66 percent) contained lead above 800 mg/kg outside the drip zone and city easements. These data are based on the highest average XRF reading for lead among the areas screened at each residential property.

- Oversaw remedial activities by Environmental Restoration (to date, excavation has been completed at 65 residential properties).

- Distributed post-excavation data to EPA and Environmental Restoration personnel.

- Prepared soil and groundwater samples for delivery to the EPA Region 7 laboratory.

Task Order No. 0090.000: IA/NE FMGP, Norfolk, Nebraska
Status: Open
Period of Performance: 02/09/15 to 06/10/16

EPA tasked Tetra Tech START to revise and update the HRS package for the Iowa/Nebraska Light and Power FMGP site in Norfolk, NE. An HRS documentation package dated October 2010 had been prepared by Tetra Tech but was never submitted to headquarters for review. START was to review and revise the package as necessary to update new data that may have been acquired at the site, and population information. START also was to apply any new values from the recently revised Superfund Chemical Data Matrix (SCDM).

In July 2015, START addressed EPA's comments on the draft HRS package. The revised documentation record was submitted to the National Priorities List (NPL) coordinator on July 30, 2015.

During the August reporting period, START addressed EPA headquarters comments on the revised submittal.

WLLFOIA4312 - 001 - 0056440

Task Order No. 0091.000: Beatrice FMGP, Beatrice, Nebraska
Status: Open
Period of Performance: 02/09/15 to 06/10/16

EPA tasked Tetra Tech START to revise and update the HRS package for the Beatrice FMGP site in Beatrice, NE. An HRS documentation package dated March 2011 had been prepared by Tetra Tech but was never submitted to headquarters for review. START was to review and revise the package as necessary to update it with new data that may have been acquired at the site, and with population information. START also was to apply new values from the recently revised SCDM.

During the August 2015 reporting period, START addressed EPA's comments on the draft HRS package. The revised documentation record was submitted to the NPL coordinator on August 7, 2015. START also addressed subsequent EPA headquarters comments on the revised submittal.

Task Order No. 0092.000: CPR Train Derailment, Balltown, Iowa
Status: Open
Period of Performance: 02/10/15 to 06/10/16

EPA tasked Tetra Tech Region 7 START to assist the OSC with a response to a denaturized ethanol spill from a train derailment, and to provide site characterization and documentation of assessment and cleanup activities. Individual tasks included providing analytical services, documenting chronology of events, compiling press clippings, conducting air monitoring, performing sampling, documenting the release, documenting site access, identifying the source and nature of the incident, preparing an incident/trip report, providing maps and sketches, monitoring cleanup activities, preparing a HASP, providing photo and video documentation, and identifying water intakes impacted by the spill.

At 1120 hours Central Time, Wednesday, February 4, 2015, 15 railcars of a southbound Canadian Pacific freight train derailed on the right descending bank of the Mississippi River, 10 miles north of Dubuque, Iowa, near Baltown, Iowa. Approximately 50,000 gallons of denatured (3-5% natural gasoline) ethanol was discharged, impacting the Mississippi River. Three railcars ignited as a result of the derailment. Up to eight railcars containing ethanol derailed, also potentially involved in the discharge. Local, state, and federal responders mobilized to the scene and coordinated response efforts.

START was on scene from February 5 through 11, 2015, documenting site activities and assisting EPA. START and EPA collected a sample of denatured ethanol from a derailed rail car and submitted it to the Iowa Hygienic Laboratory in Coralville, Iowa. START received analytical results from the ethanol

WLLFOIA4312 - 001 - 0056441

sample and submitted those results to EPA. START wrote a HASP and was to develop the ER trip report.

During the August 2015 reporting period, START submitted the ER trip report.

Task Order No. 0093.000: Omaha (ex) AF Z71, Omaha, Nebraska
Status: Open
Period of Performance: 03/03/15 to 06/10/16

EPA tasked Tetra Tech Region 7 START to conduct an abbreviated preliminary assessment (APA) of this site of a former Air Force Station. For the project, sampling of surface soils was to occur to determine whether any contaminants of concern had been released at the site, and groundwater samples were to be collected from private wells in the vicinity to assess impacts on groundwater and associated drinking water supplies that may be related to the site.

During the August 2015 reporting period, START coordinated sampling activities to occur during the next reporting period.

Task Order No. 0094.000: Vienna Wells, Vienna, Missouri
Status: Open
Period of Performance: 03/04/15 to 06/10/16

EPA tasked Tetra Tech Region 7 START to provide field support for supplemental soil sampling in support of an RI by the U.S. Geological Survey (USGS) of the Vienna Wells site in Vienna, MO. The site consists of three contaminated public water supply wells where VOCs had been released to the surface and subsurface soils, with the suspect source area being an old hat factory where solvents containing PCE had been used for cleaning fabrics and pelts. Intent of the sampling was to better determine the degree and extent of contamination across the vicinity of the site, and to provide data so EPA could perform a risk assessment of the site. START was tasked to assist with packaging, data management, and shipping of surficial and subsurface soil samples collected by EPA. Samples were to be shipped to the EPA Region 7 laboratory in Kansas City, KS, for analysis. An 80-day turnaround time was planned by the EPA Region 7 lab due to the large volume of samples (~250) submitted under this effort. START was to provide a letter report with data summary and figures documenting sample locations upon receipt of the data packages from EPA.

During March 2015, START prepared a HASP and procured supplies necessary for the field work. Sampling began during the week of March 23, 2015, and continued through April 6, 2015. A total

WLLFOIA4312 - 001 - 0056442

of 228 soil samples were collected during this effort and submitted to the EPA Region 7 lab for analyses for VOCs, semivolatile organic compounds (SVOC), pesticides/polychlorinated biphenyls (PCB), and Resource Conservation and Recovery Act (RCRA) metals.

During the August reporting period, START neared completion of the final report with data summary, with intent to submit this to EPA for review in early September.

Task Order No. 0095.000: BF Byproducts, Cabool, Missouri

Status: Open
Period of Performance: 04/06/15 to 06/10/16

EPA tasked Tetra Tech Region 7 START to assist with an emergency RA at this site in Cabool, MO, where a release of used vegetable oil had occurred to the ground surface, two holding ponds, and downgradient drainageways. The release and current conditions at the site presented a threat to the Big Piney River, less than 2 miles away. EPA activated its Region 7 ERRS contractor to vacuum oil/water from the holding ponds and excavate stained soils from the holding ponds and other spill areas. During the cleanup, over 100,000 gallons of recovered liquids and over 850 tons of excavated soils were transported off site for proper disposal. START provided written and photographic documentation of response activities throughout the emergency response and removal action, which was completed in May 2015.

During the August 2015 reporting period, START submitted a summary report to EPA.

Task Order No. 0096.000: Former United Zinc & Associated Smelters, Iola, Missouri

Status: Open
Period of Performance: 04/08/15 to 06/10/16

EPA tasked Tetra Tech Region 7 START to perform a title search and provide a copy of a Sanborn map and any subsequent maps of the smelters originally known as Lanyon Zinc #1 and #2 owned by Lanyon Zinc Company. Currently, the property on which Lanyon Zinc #1 and #2 stood is called "IMP Boats."

During the July 2015 reporting period, Tetra Tech worked with the First Title Company in Iola, KS, to obtain all title search documents. All title searches have been sent to Tetra Tech START.

During the August reporting period, START worked on completing the report to be submitted to EPA.

WLLFOIA4312 - 001 - 0056443

Task Order No. 0097.000: Southwest Jefferson County OU 4, House Springs, Missouri
Status: Open
Period of Performance: 04/08/15 to 06/10/16

EPA tasked Tetra Tech Region 7 START to provide technical support for a removal assessment at the Southwest Jefferson County OU 4 site in House Springs, MO. EPA was contacted by Jefferson County officials due to concerns regarding the structural integrity of a low water dam at Rockford Beach on Big River, where lead-contaminated sediments had been identified. Habitat for an endangered mussel species occurs along the stream that could be impacted by elevated levels of lead. This removal assessment is intended to evaluate current circumstances and acquire information necessary to determine if a Superfund RA would be needed to stabilize the situation until long-term remedial actions can be implemented. In June 2015, START prepared a document outlining alternatives for stabilization of the low water dam, along with associated costs. This document was used by EPA to assist in preparation of an Action Memorandum for an RA to stabilize the dam.

In July 2015, START accompanied the EPA PM to conduct two reconnaissances of the site. An ERRS manager was present for the first site reconnaissance to discuss logistics and options for construction aspects of the project. During the second reconnaissance, representatives from MDNR, U.S. Army Corps of Engineers (USACE), U.S. Fish and Wildlife Service (USFWS), ERRS, and Jefferson County Parks and Recreation were present to discuss EPA's plans and offer suggestions for modifications to meet the recommendations of their agencies. In addition, START and ERRS took water depth measurements upstream and downstream of the dam during the second reconnaissance.

During the August 2015 reporting period, START planned for a follow-up reconnaissance during the next reporting period. That reconnaissance was to involve a Tetra Tech engineer who would provide technical guidance during the project. START was also to develop figures representing the current condition of the dam and general construction plans to stabilize the structure. Those figures were to be included in a summary report to be provided to all involved agencies for further comment before initiation of construction activities. Stabilization efforts are anticipated during fall 2015.

Task Order No. 0098.000: Data Management, Regional
Status: Open
Period of Performance: 04/09/15 to 06/10/16

EPA tasked Tetra Tech START to help develop data management plans (DMP) and procedures, provide data management support using emerging technologies, assist with operation and maintenance of Region

WLLFOIA4312 - 001 - 0056444

7 Flex and JavaScript viewers, and attend data management workshops. EPA has also tasked START to assist with development of capabilities to communicate and transmit field-acquired and other forms of data by use of a number of technologies, and to incorporate these capabilities with other existing technologies. START is hosting and maintaining a number of EPA Region 7 Flex viewers. START is evaluating use of systems such as the EPA FAST data collection system and the ESRI Collector application for site and ER work.

In April 2015, START attended a kickoff meeting to establish roles and responsibilities for the Data Management TO, and to identify tasks. START also adjusted and tested the EPA Environmental Response Team (ERT) Cloud hosting environment.

During the August reporting period, START continued support of the ER QAPP DMP development, addressing new workflows established after discussions with OSC Mahler. START also finalized the installation of the Viper Reporting Tool on the ER Cloud and will be testing with the current deployment of the Carter Carburetor Viper setup. During this reporting period, START also finalized the setup for the Scribe polling services as well as simple mail transfer protocol (SMTP) for generating e-mails for various service and server job tracking purposes. START also developed an enterprise geodatabase for use with web-based mapping and field data collection applications.

Task Order No. 0099.000: Caney Residential Yards, Caney, Missouri

Status: Open
Period of Performance: 04/10/15 to 06/10/16

EPA tasked Tetra Tech Region 7 START to support a removal assessment at the Caney Residential Yards site in Caney, KS. The purpose of the investigation was to determine impacts on residential soil from previous smelting operations in Caney. The removal assessment was to focus on up to 200 residential properties surrounding two former lead and zinc smelters—the Owens Zinc smelter and the American Zinc, Lead, and Smelting Company. KDHE investigations at the former smelter sites had identified elevated concentrations of lead, cadmium, and zinc. Removal assessment activities were to include: collection of surface and subsurface soil samples from residences, screening of soil samples by use of an XRF spectrometer, submittal of approximately 10% of samples for laboratory confirmation analysis, and submittal of a small subset of samples for lead speciation. A site-specific QAPP was submitted on April 22, 2015, detailing planned sampling activities. Removal Assessment activities began on May 26, 2015.

WLLFOIA4312 - 001 - 0056445

In July 2015, START completed initial removal assessment activities at the Caney Residential Yards site. Initial assessment activities included sampling surface and subsurface soils at residences near the two former smelters to determine concentrations of lead, cadmium, and zinc. EPA and START visited 160 residences, gaining sampling access to 97 properties. On July 7, 2015, START delivered assessment samples to the EPA Region 7 laboratory in Kansas City, KS. Fifty-four samples were submitted for analyses for lead, cadmium, and zinc via Method 6010. Six samples were submitted for analysis for bioaccessible lead via Method 3122.3.

During the August reporting period, analytical data were received from the EPA Region 7 laboratory. START completed an initial comparison of analytical data to XRF spectrometer screening values. ProUCL 5.0.00, an EPA-sanctioned statistical analysis software, was used to identify outliers in the data. ProUCL identified one outlier and this datum was removed. Next a regression coefficient was calculated as required by the *Superfund Lead-Contaminated Residential Sites Handbook.* The calculation resulted in an r^2 of 0.8456—within acceptable ranges.

Task Order No. 0100.000: El Dorado Pipeline Spill, El Dorado, Kansas

Status: Open
Period of Performance: 05/11/15 to 06/10/16

EPA tasked Tetra Tech Region 7 START to respond to a diesel pipeline spill in El Dorado, KS. START provided technical assistance for oil spill response activities at the site from April 4 through 6, 2015. The spill occurred when a 10-inch diesel pipeline operated by Magellan Midstream Partners, LLC split just north of Magellan's El Dorado Terminal. The spill was reported in the early morning hours of April 4, 2015. A pressure drop on the pipeline was noted, and visual inspection revealed that a release had occurred, resulting in a release of diesel fuel to nearby Constant Creek. Spill response contractors for Magellan were mobilized and began oil spill containment and recovery actions. Those actions involved construction of underflow dams, deployment of boom, and collection of diesel fuel. Magellan also performed air monitoring to protect workers, as well as to determine impacts on ambient air quality within the spill area. No air quality readings above applicable standards were noted. During the response, START oversaw site activities and recorded documentation.

During the August 2015 reporting period, START continued preparation of an ER report for submittal to EPA.

WLLFOIA4312 - 001 - 0056446

Task Order No. 0101.000: PCE Former Dry Cleaner, Atlantic, Iowa
Status: Open
Period of Performance: 05/24/15 to 06/10/16

EPA tasked Tetra Tech Region 7 START to provide technical support during removal activities at the site.

During the June 2015 reporting period, START oversaw soil excavations in the parking lot where previous ground penetrating radar had identified an anomaly, and in the highway north of the site.

No technical activity occurred during the August reporting period.

Task Order No. 0102.000: PCE Chestnut Street, Atlantic, Iowa
Status: Open
Period of Performance: 06/15/15 to 06/10/16

EPA tasked Tetra Tech Region 7 START to conduct removal assessment activities at the PCE Chestnut Street site in Atlantic, Iowa. The site had been identified during VI sampling at the adjacent PCE Former Dry Cleaners site during March 2015. The purpose of the removal assessment was to define the extent of PCE contamination in the surrounding area through more extensive VI sampling, as well as groundwater and soil sampling.

During the August 2015 reporting period, START assisted EPA with VI sampling at the site. Sampling included collection of indoor air and sub-slab soil gas samples. Samples were analyzed by both the EPA Region 7 laboratory in Kansas City, KS, and the EPA Region 7 mobile laboratory operated on site by EPA personnel. Soil and groundwater sampling activities are planned for early October 2015, with intent to identify potential contaminant source areas and delineate the extent of PCE-contaminated groundwater.

Task Order No. 0103.000: Analytical Services Support, Regional
Status: Open
Period of Performance: 07/22/15 to 06/10/16

EPA tasked Tetra Tech START to provide analytical services support for all START projects. This support involves subcontracting laboratories that furnish services such as specialized analyses and quick turnaround times. The TO includes the following:

- Conduct project planning and support.
- Research additional subcontract laboratories for inclusion on the pre-qualified laboratory list.

WLLFOIA4312 - 001 - 0056447

- Update existing pre-qualified laboratory certifications.
- Prepare and submit quarterly reports.
- Evaluate and track laboratory QA and quality control (QC) procedures.
- Perform on-site audits of pre-qualified laboratories.

Laboratory services procured during August 2015 are described in detail in the START 4 Analytical Services Quarterly Report.

Task Order No. 0104.000: Missouri Site Assessment, Regional
Status: Open
Period of Performance: 07/22/15 to 06/10/16

EPA tasked Tetra Tech START to provide assistance on CERCLA-related assessments in Missouri.

Task Order No. 0104.001: Stakeholder Pb Data Sharing, Regional
Status: Open

No technical activity occurred during the August 2015 reporting period. START awaits further instruction from the EPA Task Monitor regarding this project.

Task Order No. 0104.002: KCS&R on Guinotte, Kansas City, Missouri
Status: Open

EPA tasked Tetra Tech START to conduct a PA at the former Kansas City Smelting & Refining (KCS&R) site on Guinotte Avenue in Kansas City, MO. Historical data indicate that former site operations included a lead furnace and lead pipe casting. The site currently operates as The Yard River Market Cross-Fit training facility, which includes activities for children. Project tasks for START were to include the following: review of existing site documents and reports, preparation of site-specific QAPP and HASP, acquisition of access permission from the property owner for assessment activities, collection of soil and interior dust samples for analysis, and preparation of a PA trip report.

START completed the site-specific HASP on May 27, 2015. Field work was conducted on June 1, 2015.

During the August reporting period, START continued preparing the PA report.

WLLFOIA4312 - 001 - 0056448

Task Order No. 0105.000: Nebraska Site Assessment, Regional
Status: Open
Period of Performance: 07/27/15 to 06/10/16

EPA tasked Tetra Tech START to provide assistance on CERCLA-related assessments in Nebraska.

Task Order No. 0105.001: Ogallala Groundwater – Source Investigation, Ogallala, Nebraska
Status: Open

EPA tasked Tetra Tech START to support ongoing remedial activities by conducting extensive groundwater sampling to identify potential contributing source areas within the known footprint of the groundwater plume at the Ogallala Groundwater contamination site, OU 1—including sampling at Humphrey Auto Sales, Ogallala Recycling, the former Ogallala City Dump, TCE Potential Spill Area, Grain Elevator 1, Grain Elevator 2, and an industrial area at River and Spruce Streets. Technical efforts at these potential source areas were to include various stages of investigation from PA to ESI. In October 2013, START began preparation of a QAPP for the groundwater investigation. City officials were contacted to obtain maps of sewer, water, and property lines. The QAPP for groundwater sampling was submitted to EPA for review on November 13, 2013. During January 2014, START collected groundwater samples at 48 DPT locations throughout the City of Ogallala. Data were received in February, and START began to tabulate the information. Data regarding sample locations, depths, and concentrations were sent to graphics personnel who then began work on a 3-dimensional visualization. Coordinates of existing monitoring wells obtained from the PRP group were to be added to the visualization and figures. During March 2014, split sample data were received from the responsible party consultant, Stantec. These data were entered into a spreadsheet and compared to the results generated by the EPA laboratory. The final report of findings from the sitewide investigation was delivered to EPA on June 17, 2014.

During the August 2015 reporting period, START worked on completing the remaining sub-site reports.

WLLFOIA4312 - 001 - 0056449

Task Order No. 0105.002: Lincoln (ex) Radio Beacon Annex, Martell, Nebraska
Status: Open

START was tasked by the EPA to sample soil, temporary well groundwater, and domestic well groundwater near the Former Lincoln Radio Beacon Annex site at the northwest corner of the intersection of Southwest 29th Street and West Bennett Road, Martell, Nebraska.

START completed field work during July 2015.

During the August reporting period, START began preparing the PA report.

Task Order No. 0106.000: Former United Zinc and Associated Smelters, Iola, Kansas

Status: Open
Period of Performance: 07/27/15 to 06/10/16

EPA tasked Tetra Tech START to support a Removal Assessment at the Former United Zinc and Associated Smelters site in Iola, KS. The purpose of the investigation was to determine the impact on residential soil from previous smelting operations in Iola. Removal Assessment tasks were to include, but not be limited to, collection of surface soil samples (0 to 2 inches below ground surface [bgs]) at approximately 50 residences to determine lead, zinc, and cadmium concentrations. START was to target residences for sampling based on proximity to other properties affected by former smelting activities. Concentrations of metals of concern were to be determined via field screening by use of XRF analyzers, and via laboratory analysis.

During the August 2015 reporting period, a QAPP was developed for field activities anticipated during fall 2015.

Task Order No. 0107.000: Kansas Site Assessment, Regional

Status: Open
Period of Performance: 07/29/15 to 06/10/16

EPA tasked Tetra Tech START to provide assistance during CERCLA-related assessments in Kansas.

Task Order No. 0107.001: Walker (ex) AFB, Walker, Kansas
Status: Open

EPA tasked Tetra Tech START to conduct a PA at the Walker (ex) Air Force Base (AFB) in Walker, KS, and to prepare an HRS scoring memorandum. In July 2014, Tetra Tech START contacted the EPA task monitor to request existing site files, and EPA requested additional

WLLFOIA4312 - 001 - 0056450

information on the site from KDHE. START subsequently downloaded all available KDHE documents from its website for review.

During the August 2015 report period, START continued drafting the PA report.

Task Order No. 0108.000: Chem EO Technical Support, Regional
Status: Open
Period of Performance: 07/29/15 to 06/10/16

On August 1, 2013, President Obama signed the Chemical Facility Safety & Security Executive Order (Chem EO) to improve safety and security of chemical facilities and reduce risks from hazardous chemicals to workers and communities. A Chem EO Workgroup was assembled with representation from federal and state emergency planning, preparedness, and response organizations across the Region. EPA tasked Tetra Tech START to provide administrative and technical support for the Chem EO Workgroup activities, including: assisting with coordination of Chem EO Workgroup meetings and conference calls; documenting Chem EO Workgroup meetings, conference calls, and other events; consolidating and maintaining any supporting documents or materials (standard operating procedures [SOP], pamphlets, outreach materials, etc.) provided by Workgroup members in support of the EO, and posting these to the Chem EO share-site at www.epaosc.org/chemeo7; photo-documenting meetings or other events (if requested by the EPA Task Monitor); assisting with preparing and editing procedural documents related to planning and implementation of Chem EO initiatives developed by the Workgroup; and assisting with development and maintenance of Chem EO website resources and applications, which will be populated on the share site at www.epaosc.org/chemeo7.

During the August 2015 reporting period, START participated in a teleconference meeting of the Chem EO Workgroup, developed draft meeting minutes, and distributed minutes to workgroup members for review. START also coordinated with EPA on preliminary steps to develop a web-based mapping application for the workgroup—including identification of technologies and databases to be used, outreach to obtain data from workgroup member agencies, and initial development of the application.

Task Order No. 0109.000: Siouxland Subarea, Regional
Status: Open
Period of Performance: 07/29/15 to 06/10/16

EPA tasked Tetra Tech START to provide technical assistance to support ongoing and future activities within the Siouxland Subarea. The following is a list of potential tasks for START:

WLLFOIA4312 - 001 - 0056451

- Support quarterly meetings (Send email notices, attend meetings, take notes, develop and email minutes [within 2 weeks of meetings]).
- Support ethanol spills exercise tentatively scheduled for spring of 2016 (create website for registration, send notices, collect and standardize ppts, develop and present sections as needed, develop After Action Report [within one month of the exercise]).
- Support planned TransCanada exercise scheduled for October 2015 at Gavins Point (send notices, attend exercise).
- Update Subarea plan and email list, distribute pertinent information to group as needed.

During the August reporting period, START updated the subarea contacts list and coordinated with members on future planning activities.

Task Order No. 0110.000: St. Louis Subarea, Regional
Status: Open
Period of Performance: 07/29/15 to 06/10/16

EPA tasked Tetra Tech START to provide technical assistance to support ongoing and future activities within the St. Louis Subarea. The following is a list of potential tasks for START:

- Support semi-annual meetings (send email notices, secure facilities, ensure conference call capabilities, attend meetings, take notes, develop and email minutes [within 2 weeks of meetings]).
- Use river response strategies and format the strategies to be compatible with Subarea plan format [within 6 months of receiving the format from EPA]).
- Provide technical assistance during an industry table top exercise.
- Update Subarea plan and email list, and distribute pertinent information to group as needed.

No technical activity occurred during the August reporting period.

Task Order No. 0111.000: Iowa Site Assessment, Regional
Status: Open
Period of Performance: 08/04/15 to 06/10/16

EPA tasked Tetra Tech START to provide assistance on CERCLA-related assessments in Iowa.

WLLFOIA4312 - 001 - 0056452

Task Order No. 0111.001: MLK Parkway, Des Moines, Iowa
Status: Open

EPA tasked Tetra Tech START to conduct a PA at the former dry cleaning site in Des Moines, Iowa. Reports from previous investigations were to be reviewed, and a QAPP describing anticipated sampling activities was to be developed. Upon finalization of the QAPP, a schedule was to be established for sampling activities.

Sampling activities were conducted on May 19 and 20, 2015. The 10 soil samples and 8 water samples collected were delivered to the Region 7 EPA laboratory on May 21, 2015. Fewer groundwater samples were delivered to the laboratory than had been planned because enough groundwater to sample had not been encountered at all proposed sampling locations.

During the August reporting period, START continued preparing the report and HRS scoring memo.

Task Order No. 0111.002: Tanglefoot Lane, Bettendorf, Iowa
Status: Open

EPA tasked Tetra Tech START to assist with a PA/SI at the Tanglefoot Lane site in Bettendorf, Iowa. The site is a disposal area formerly used by multiple local waste generators, and believed to be a source of chlorinated volatile organic compounds (VOC) in groundwater based on previous sampling results. Reports from previous investigations were to be reviewed, and a QAPP describing anticipated sampling activities was to be developed. Upon finalization of the QAPP, a schedule was to be established for the sampling activities.

During the August 2015 reporting period, START submitted a HASP and Analytical Services Request (ASR) for PA fieldwork. Fieldwork is scheduled for the September reporting period.

Task Order No. 0112.000: Citizen's Gas and Electric, Council Bluffs, Iowa
Status: Open
Period of Performance: 08/06/15 to 06/10/16

EPA tasked Tetra Tech START to provide technical support on removal assessment activities associated with the site. Previous investigations have indicated presence of PAHs below the ground surface of the site and in groundwater samples. START will conduct an SI to include sampling of groundwater, surface soil, and subsurface soil. Potential tasks under this TO are organized within four possible phases: Phase

WLLFOIA4312 - 001 - 0056453

I: Information Gathering and Coordination; Phase II: Planning; Phase III: Field Data Collection and Documentation; and Phase IV: HRS-Related Activities.

During the August 2015 reporting period, START contacted the EPA PM about scheduling a coordination and scoping meeting. The meeting has been set for September 3, 2015.

Task Order No. 0113.000: Caney Residential Yards – Title Search, Caney, Kansas

Status: Open
Period of Performance: 08/06/15 to 06/10/16

EPA tasked Tetra Tech START to procure chain-of-title documentation regarding three parcels in Caney, KS that include areas historically utilized by the Owens Zinc Smelter. Tetra Tech subcontracted Chautauqua Hills Abstract & Title, Inc., (Chautauqua Title) to produce the chain-of-title documents. Results are expected during the September reporting period.

Task Order No. 0114.000: Former United Zinc and Associated Smelters, Iola, Kansas

Status: Open
Period of Performance: 08/17/15 to 06/10/16

EPA tasked Tetra Tech START to support a removal action at the Former United Zinc and Associated Smelters site in Iola, KS. The purpose of the removal was to address elevated levels of metals in surface soils that threaten human health at approximately 350 residential properties. START will document excavation activities, conduct XRF screening to indicate when action levels have been achieved, collect soil samples for laboratory analysis, and maintain a database with site-related information. Field activities are expected to begin during fall 2015.

During the August 2015 reporting period, START coordinated with the EPA PM to discuss plans for the project.

Task Order No. 0115.000: KC Municipal Farms Ag and GW Assessment, Kansas City, Missouri

Status: Open
Period of Performance: 08/17/15 to 06/10/16

EPA tasked Tetra Tech START to perform an agricultural analysis and groundwater resource study at the KCMO Municipal Farms site in Kansas City, Missouri. Specifically, START will 1) conduct soil coring and analyses to determine specific soil characteristics, including an analysis of agronomic parameters and the depths and qualities of available topsoil, on priority development sites where soil cultivation is

WLLFOIA4312 - 001 - 0056454

recommended; and 2) conduct a groundwater resource study to estimate the availability, quality and potential rates of production for groundwater at the site as a potentially economical source of irrigation for agricultural uses.

No technical activity occurred during the August reporting period. START will begin work on the QAPP and HASP during the next reporting period.

WLLFOIA4312 - 001 - 0056455
